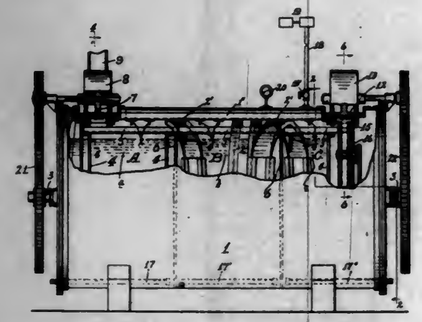
A holding device for writing implements comprising a finger which has one end fastened to the implement, said finger, from its said fastened end being rounded and continued in a straight plane which is parallel with that of the implement, a flat spring fixedly secured to the inner face of the curved portion of the finger and projecting a distance beyond the finger and having its outer end curved outwardly, a short bolt screwed through the finger having an inner enlarged end to contact with the outer face of the spring and having its outer end provided with a head which is peripherally knurled.

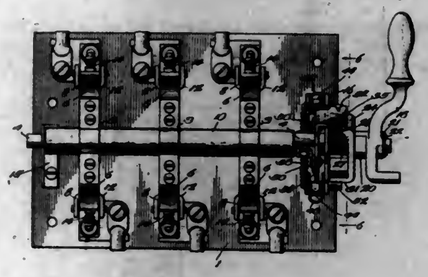
1,754,583. TIRE-BUILDING MACHINE. WILLIAM B. SWERN, Kokomo, Ind., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 23, 1926. Serial No. 130,883. 9 Claims. (Cl. 154—10.)



1. In a machine of the character described, the combination of a drum rotatably mounted, a fabric roll support,

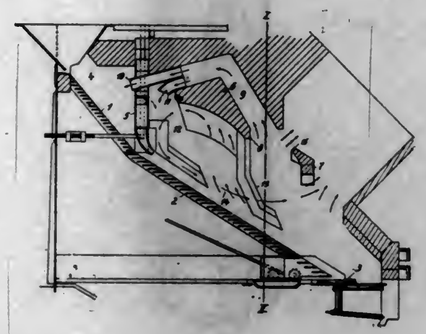
a liner support, power means for rotating the liner support for separating the liner from the fabric, and guiding and

spacing means interposed between the drum and said supports for looping the fabric after liner separation for insuring substantially uniform stress therein.



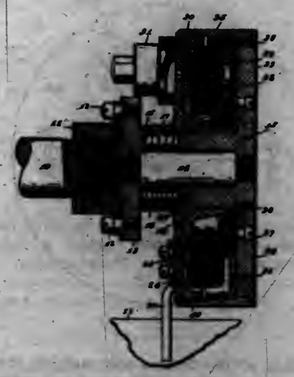
1,754,584. METHOD OF STERILIZING CANNED GOODS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Sept. 29. 1920. Serial No. 413,588. 11 Claims. (Cl. 99—8.)

5. The method of sterilizing canned goods which comprises introducing them initially to a region in which the temperature is higher than that required for sterilization and keeping them therein until they have been raised to said sterilizing temperature; then at once transferring them into a second region communicating with the first region and in which the temperature is maintained at that required for sterilization and keeping them therein until sterilized; supplying the heat to both regions through a heated liquid medium; and establishing fluid pressure in both regions on said liquid medium, whereby interchange of heat between the regions is prevented.



6. The method of sterilizing canned goods consisting in introducing the goods initially to a region in which the temperature is higher than that required for sterilization and keeping them therein until they have been raised to said sterilizing temperature; then at once transferring them into a second region communicating with the first region and in which the temperature is maintained at that required for sterilization and keeping them therein until sterilized; and then at once transferring them into a third region communicating with the second region and in which a cooling temperature is maintained. all of said regions being kept under pressure above atmospheric and said pressure utilized to prevent interchange of heat between the regions.

1,754,585. ELECTRIC SWITCH. HERMON L. VAN VALKENBURG, Milwaukee, Wis., assignor, by mesne assignments, to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed June 4, 1924. Serial No. 717,677. 9 Claims. (Cl. 200—70.)



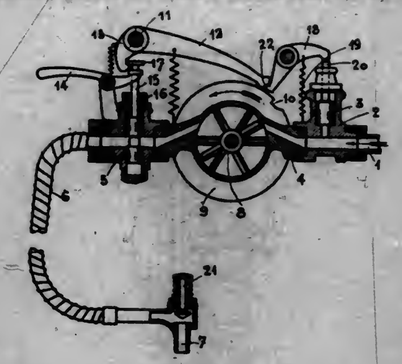
1. In a snap switch mechanism having a shaft, a rotary switch arm coaxial therewith, a rotary disc rigidly connected to the shaft for rotating it and having two shoulders facing in opposite directions, a single spring operative upon said disc in either of two directions and making one way engagement contact therewith. a rotary handle for tensioning said spring, two detents, each having a fixed pivot at one end and at the other end adapted to engage one of the shoulders on the disc for temporarily holding the latter, and two rotary cams arranged on the handle and having acting surfaces which are eccentric to the handle axis and adapted to engage the respective detents between their ends for lifting them from the shoulders release the disc and switch arm, said spring having a coil encircling said shaft and being supported by it.

1,754,586. COMBUSTION METHOD FOR FUELS. ERNST VÖLCKER, Bernburg, Germany. Filed Mar. 1, 1923, Serial No. 622,160. and in Germany Mar. 23, 1922. 5 Claims. (Cl. 110—52.)

1. In a furnace, the combination with a grate for supporting fuel to be burnt in the furnace and an outlet flue in the rear of the furnace for the exit of hot gases from the furnace, of a deflecting member interposed in the path of the hot gases flowing through said outlet and guiding means arranged in the furnace adapted to cooperate with said deflecting member for guiding a portion of said gases to the front of the furnace so as to enable said portion of the gases to be returned thereto by their kinetic energy.

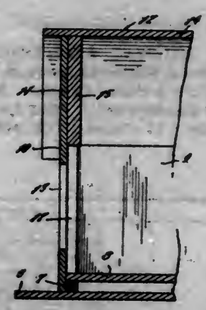
1,754,587. MAGNETIC CHUCK. JARL M. WEYDELL, Indianapolis, Ind., assignor of one-half to Edward E. Stout. Filed June 24, 1927. Serial No. 201,151. 4 Claims. (Cl. 175—367.)

1. A magnetic chuck, comprising a rotatable member having two magnetically separate magnetic portions, each of said magnetic portions having poles spaced from the poles of the other portion, one of said magnetic portions having a hub and the other a rim providing an annular space between them, a stationary magnetic member located in said annular space and in close proximity to and magnetically between said hub and rim, and a stationary magnetizing coil in magnetising relation to said stationary magnetic member and to said magnetic portions.



1,754,588. IDENTIFICATION PLATE. BRUCE R. WAIGHT, Windsor, Vt. Filed Jan. 17, 1927. Serial No. 161,518. 2 Claims. (Cl. 40—140.)

1. In a device of the class described, the combination with a plurality of dished character plates each having laterally extending rim flanges, of a common dished frame for the plates, said frame having an outwardly extending rim flange and having a plurality of aligned apertures into each of which one of said character plates may be interchangably projected with its flange in retaining engagement with the inner surface of the common frame, and with the back of said first mentioned flanges in engagement with a fixed support, and with the character supporting surface of the plates projected through the apertures from the rear thereof and means adapted to secure the frame to said support by its rim flange.

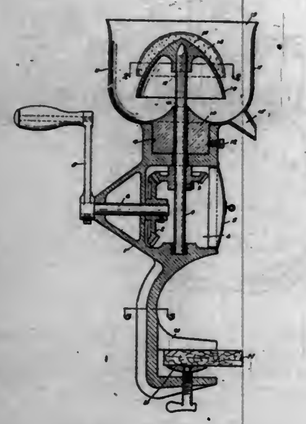


1,754,589. LIQUID-MEASURING DEVICE PROVIDED WITH A CONTINUOUS COUNTER. HERMANN WYDLER, Bern, Switzerland, assignor to the Firm Sauser S. A., Soleure, Switzerland. Filed Feb. 18, 1929, Serial No. 340,916, and in Switzerland Feb. 20, 1928. 4 Claims. (Cl. 221—101.)

1. In a liquid dispensing device and in combination a discharge conduit, a passage-counter inserted into this conduit and associated means whereby the counter can only be stopped at the zero position of a measuring unity, throttling means at the delivery end of said conduit

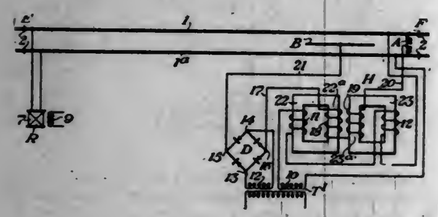
and means adapted to engage with said stopping means of the counter whenever said throttling means are made operative.

1,754,590. PORTABLE HOUSE. ELMER L. ALLEN, Queens Village, N. Y. Filed Jan. 12, 1929. Serial No. 331,987. 1 Claim. (Cl. 46—37.)



In a portable structure of the class described, a base, a frame fastened to said base at points spaced inwardly from the marginal edges of the base, a floor fastened to said frame having its marginal edges flush with the marginal faces of the frame, a wall structure embracing the frame and floor and resting down on the base, corner posts embodied in said wall structure, said corner posts having their upper edges terminating flush with the upper edges of the side walls and having their lower edges resting on the floor, and a removable roof on said wall structure, the end walls of the wall structure including upper end extensions functioning as gables, said roof being of gable form and including upwardly converging fibrous pieces fastened to an intermediate and a pair of outer transversely extending triangular wooden gable pieces, the outermost wooden gable pieces being arranged against the inner surfaces of the gable extension of said end walls and resting down upon the corner post and end walls.

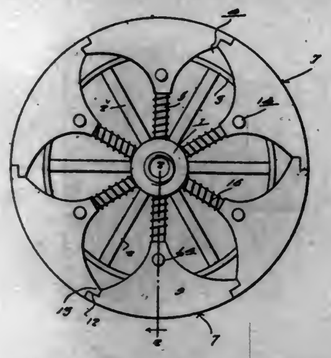
1,754,591. CITRUS-FRUIT-JUICE EXTRACTOR. GUY B. BAKER, Red Bluff, Calif. Filed June 29, 1927. Serial No. 202,822. 2 Claims. (Cl. 146—3.)



1. A citrus fruit juice extractor comprising a frame having two recesses therein, a shaft extending through both recesses and being rotatably carried by said frame,

a second shaft extending into the lower recess, a crank handle secured to the second shaft, gears secured to both shafts and meshing with each other, said gears being disposed in the lower recess, a cover for closing the lower

recess, a cup having a projection receivable in the upper recess and having an outlet drain disposed at its bottom, and a juice-extracting member mounted on said first shaft and being disposed within the cup, said member being nonperforate.

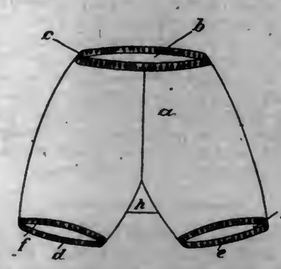


1,754,592. RAILWAY SIGNALING APPARATUS. CHARLES R. BEALL, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1928. Serial No. 245,890. 13 Claims. (Cl. 246—40.)

1. In a signal system involving a section of railway track having a source of track circuit voltage connected with the rails of the section, an auxiliary conductor in contact with the track ballast, and a transformer having its primary interposed between said source and one of the track rails, and the terminals of its secondary connected with said conductor and a track rail.

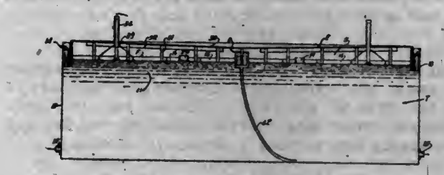
1,754,593. AUTOMOBILE WHEEL. NAT BENFORD, Cleveland, Ohio. Filed Sept. 15, 1928. Serial No. 306,231. 1 Claim. (Cl. 152—30.)

An automobile wheel including a hub having a series of spokes extending radially therefrom and a tire supporting rim mounted on the other ends of the spokes and a tire mounted on the rim a series of stems extending radially from the hub between the adjacent spokes and in longitudinal alignment therewith, the outer ends of the stems terminating inwardly of the rim and each being formed with a longitudinal slot, a series of tire and rim encircling shoes, each shoe including an arcuate shaped plate for circumferential disposition upon the tread portion of the tire, outwardly of each stem, inwardly extending flanges formed at the side edges of the plates terminating adjacent the opposite sides of the stems at the free end portions thereof, a bolt extending through



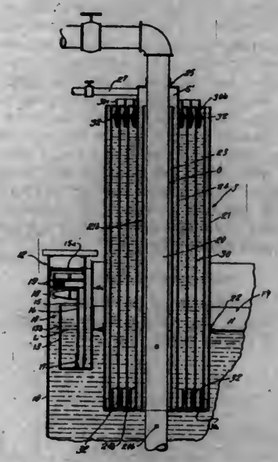
the inner ends of the flanges and slidable through the slot of the adjacent slotted stem, and an expansible coil spring encircling each slotted stem for disposition between the hub and the bolt for normally urging each shoe outwardly.

1,754,594. SERVING DISH. JOHN H. BENS, North Attleboro, Mass. Filed Aug. 10, 1929. Serial No. 385,008. 6 Claims. (Cl. 62—10.)



1. In a container, a sealed compartment comprising the outer wall of the container and containing a refrigerating medium consisting of a compressible and absorbent material moistened with water to be frozen.

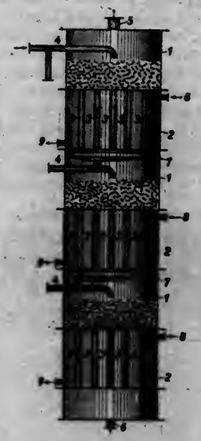
1,754,595. LADY'S BREECHES. KURT JOSEF BERNSTEIN, Chemnitz, Germany, assignor to Marschel Frank Sachs Aktiengesellschaft in Chemnitz, Chemnitz, Germany. Filed Jan. 28, 1928, Serial No. 250,311, and in Germany Feb. 5, 1927. 1 Claim. (Cl. 2—224.)



A nether garment of the kind set forth, comprising two parts formed as outer and inner breeches each including a waist band, crotch and leg portions, and stitched to one another at the waistband and at the edges or ends of the leg portions, so that the crotch portions can be readily drawn out.

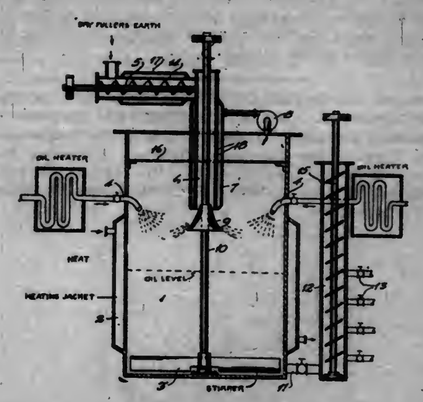
1,754,596. TANK-ROOF STRUCTURE. CHARLES F. H. BOHNHARDT, Lynwood, Calif., assignor to Julian A. Campbell, Long Beach, Calif. Filed Dec. 5, 1928. Serial No. 324,040. 8 Claims. (Cl. 220—26.)

1. In a structure of the character described, a tank containing liquid, a floating roof adapted to float on the liquid, an expansion roof spaced above the floating roof, the space between said roofs being closed to the atmosphere and in communication with said liquid.



1,754,597. OIL-TANK EXPANSION JOINT. CHARLES F. H. BOHNHARDT, Lynwood, Calif., assignor to Julian A. Campbell, Long Beach, Calif. Filed Dec. 5, 1928. Serial No. 324,041. 8 Claims. (Cl. 220—26.)

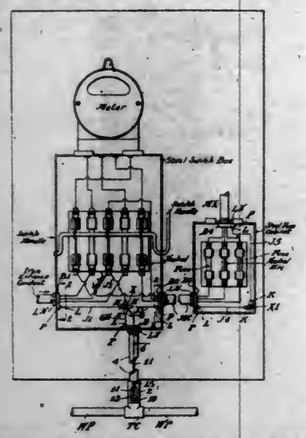
1. In a structure of the character described, a fluid container having a top closure, a vertical conduit communicating with the interior of the container and extending through said closure, the closure being spaced from said conduit and vertically movable relative thereto, and a vertically expansible joint between the conduit and said closure, said joint preventing fluid escape from the container between the conduit and top closure during their relative vertical movement.



1,754,598. METHOD OF DEODORIZING FATS AND FATTY OILS. HERMANN BOLLMANN, Hamburg, Germany, assignor, by mesne assignments, to Mary Fulford Foster, Washington, D. C., trustee. Filed Feb. 27, 1925, Serial No. 12,186, and in Germany Sept. 3, 1924. 2 Claims. (Cl. 87—12.)

1. A method of deodorising fatty oils which comprises atomising the same by superheated steam into a compartment in which a pressure below atmospheric is maintained, allowing the oil to flow over heating surfaces to vaporise moisture, and collecting the said oil, and repeating said cycle of operations until the said oil is sufficiently

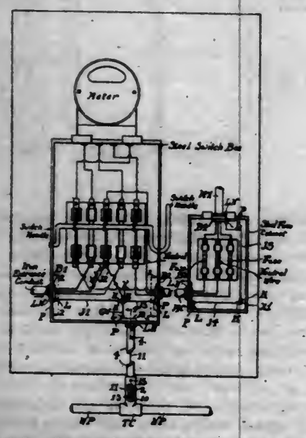
purified, and drawing off said oil, all while continuously maintaining a pressure below atmospheric in the treating vessel by drawing off the steam carrying vaporised impurities, from the top of said compartment.



1,754,599. METHOD OF BLEACHING FATTY OILS, MINERAL OILS, AND THE LIKE. HERMANN BOLLMANN, Hamburg, Germany. Filed Dec. 16, 1925, Serial No. 75,743, and in the Netherlands Nov. 18, 1925. 5 Claims. (Cl. 87—12.)

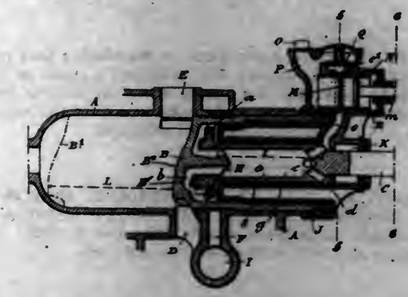
1. A method of bleaching fatty oils, mineral oils and the like by means of fuller's earth, which consists in causing the fuller's earth and oil to come into intimate contact both in small quantities at a time both the oil and fuller's earth being in a finely subdivided state, whereby a minimum quantity of fuller's earth suffices for bleaching.

4. A process of removing coloring matters from oil which comprises spraying preheated oil and directing a current of finely divided preheated bleaching earth, against the spray of preheated oil produced in the said first step and allowing contact of the said oil and fuller's earth while in a heated state, until said earth has sufficiently removed the coloring matter from the oil.



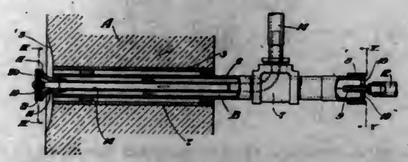
1,754,600. ELECTRICAL CONNECTING SYSTEM. STEPHEN W. BORDEN, Summit, N. J., assignor, by mesne assignments, to Crouse-Hinds Company. Filed Jan. 22, 1925, Serial No. 3,913. Renewed Feb. 24, 1930. 20 Claims. (Cl. 247—1.)

1. A bonding system for an electrical conduit and a metal box which includes a bonding fitting for the conduit, said fitting being formed with an annular portion for the exterior of the conduit and with a threaded screw-hole having therein a screw-threaded conductor positioned to press the conduit against the annular portion, combined with means forming direct electrical contact between the fitting and the box irrespective of the conduit threads.



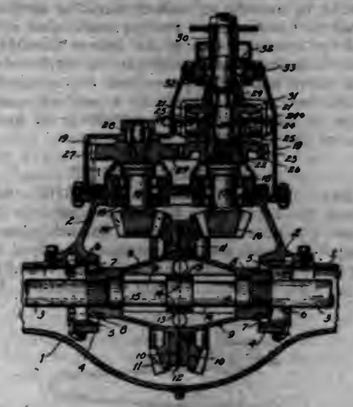
2. A bonding system for an electrical conduit and an electrical conductor both of which enter a conduit box, which includes a bonding fitting for the end of the conduit, said fitting being formed with an annular portion for the exterior of the conduit and a threaded screw-hole having therein a screw-threaded conductor positioned to press the conduit against the annular portion, combined with means forming direct electrical contact between the fitting and the conductor within the box.

1,754,601. ELECTRICAL CONNECTING DEVICE FOR ELECTRICAL CONNECTING SYSTEMS. STEPHEN W. BORDEN, Summit, N. J., assignor, by mesne assignments, to Crouse-Hinds Company. Original application filed Jan. 22, 1925, Serial No. 3,913. Divided and this application filed July 11, 1925. Serial No. 42,869. 2 Claims. (Cl. 247—1.)



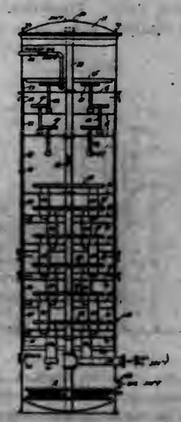
1. An article of manufacture, for the end of a threaded electric conduit which conduit extends through a wall of a box, comprising an annular member formed with a projecting portion provided with screw-threaded means securing the annular member against loosening, said projecting member being provided with screw-threaded means for attaching an electric conductor thereto, the axes of both said screw-threaded means being at a substantial angle to the wall of the box.

1,754,602. STEAM ENGINE PARTICULARLY APPLICABLE TO COMBINED INTERNAL-COMBUSTION AND STEAM ENGINES. EUGÈNE BRILLIÉ, Paris, France. Filed June 24, 1927, Serial No. 201,191, and in France July 2, 1926. 1 Claim. (Cl. 60—14.)



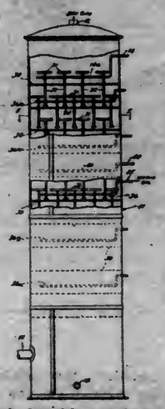
In a combined internal combustion and steam engine of the class described, a cylinder, a piston sliding in said cylinder, a piston rod having a hollow cylindrical portion secured to said piston and extending the length thereof, said piston rod having also a reduced portion, a sleeve mounted in the cylinder and surrounding the hollow piston rod, said sleeve having an internal diameter slightly exceeding the diameter of the hollow rod, a stuffing box surrounding the reduced portion of the rod, a steam inlet communicating with the space between said sleeve and said reduced portion, said hollow portion having an aperture adjacent said reduced portion and communicating with said space, and a steam outlet in said cylinder communicating with said hollow portion.

1,754,603. FURNACE GAS BURNER. CHARLES J. BROWN, Donora, Pa. Filed May 28, 1928. Serial No. 281,217. 1 Claim. (Cl. 158—7.)



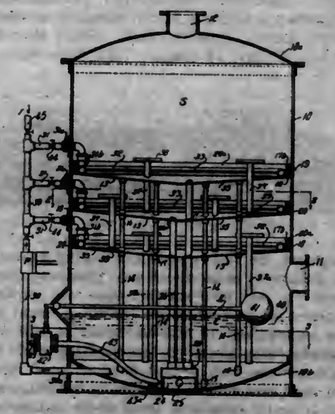
The combination with a furnace wall having a concave recess therein and an opening through said wall centrally of said recess and a sleeve mounted in said wall, of a burner mounted in said sleeve and spaced from the side walls thereof, said burner comprising a gas and air mixing tube open at each end, a gas supply tube projecting into the rear end of said tube and adapted to produce an aspirating effect to draw primary air through the open rear end of the mixing tube, a secondary air tube leading from a source of air under pressure and mounted centrally within said mixing tube and terminating adjacent the forward end thereof, a mushroom-like head mounted on the forward end of said secondary air tube and spaced from the forward end and side wall of said mixing tube so as to provide a passageway for the mixture of air and gas from said mixing tube, said head having its rear face curved so as to deflect the air and gas mixture on a line extending approximately 90 degrees to the burner axis, and said head having its forward face grooved to form an air passage, a plurality of openings from said groove to the interior of said head through which the secondary air under pressure is adapted to pass, and a baffle plate secured to the forward end of said head and extending beyond said groove, said plate having a rearwardly projecting inwardly beveled flange adapted to cooperate with the peripheral edge of said head to form a restricted outlet for the secondary air and to direct said air back on an angle against the flow of air and gas mixture from said mixing tube so as to force the burning mixture rearwardly against the furnace wall.

1,754,604. AUTOMOTIVE DRIVING CONSTRUCTION. LAURENCE R. BUCKENDALE, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed May 17, 1929. Serial No. 363,922. 9 Claims. (Cl. 74—99.)



1. An automotive axle construction comprising a hollow housing, axle shafts arranged in said housing, gears journaled in said housing and cooperating with the adjacent ends of the respective axle shafts for driving the same, and a member for rotatably supporting the adjacent ends of said gears.

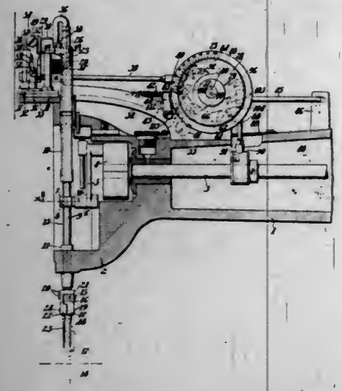
1,754,605. STILL. JULIAN A. CAMPBELL, Long Beach, Calif. Filed Apr. 19, 1927. Serial No. 184,866. 5 Claims. (Cl. 261—114.)



1. Fractionating apparatus, comprising a vertical shell, a vertical central standpipe extending through the length of the shell and closed at its upper end, liquid delivery openings in the standpipe at an intermediate level adapted to deliver liquid into an intermediate part of the shell, a series of perforated horizontal plates vertically spaced in the shell below said intermediate part, said plates surrounding the standpipe, froth-breaking pans arranged above said plates, liquid delivery tubes extending down from the froth-breaking pans to deliver liquid from them to points above plates below, a series of horizontal perforated plates vertically spaced in the shell above said intermediate part and surrounding the vertical standpipe, froth breaking pans located above said last mentioned plates, liquid delivery tubes extending downwardly from said pans through the corresponding plates to deliver liquid above the plates next below, the liquid delivery tube of the lowermost one of said last mentioned pans delivering liquid directly into said intermediate part of the shell, and means to introduce a reflux liquid above the uppermost one of said last mentioned plates.

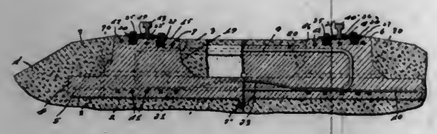
1,754,606. STABILIZING ABSORPTION SYSTEM. JULIAN A. CAMPBELL, Long Beach, Calif. Filed Apr. 19, 1927. Serial No. 184,868. 10 Claims. (Cl. 196—11.)

9. The method of absorbing and stabilizing liquids having different vapor tensions, that includes passing vapor laden gases upwardly through a downwardly moving stream of absorbing liquid, supplying heat from an extraneous source to the lower portion of said downwardly moving stream above the point of gas introduction thereto, whereby the lower portion of the stream is maintained at a comparatively higher temperature than the upper part.



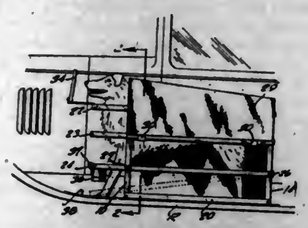
1,754,607. SCRUBBER. JULIAN A. CAMPBELL, Long Beach, Calif. Filed Nov. 5, 1928. Serial No. 317,346. 10 Claims. (Cl. 261—114.)

1. A device of the character described embodying a vertical shell, a horizontally extending perforated plate



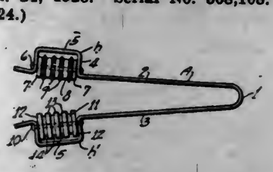
within the shell, a liquid inlet for delivering comparatively light liquid on top said plate, a gas inlet for introducing gas containing comparatively heavy liquid particles beneath the plate, the gas body flowing upward through the plate perforations and the heavy liquid particles being held in the light liquid on said plate, means associated with said plate for separately removing the liquid, and means for conducting said light liquid downward through the plate.

1,754,608. SEWING-MACHINE NEEDLE-CONTROLLING MECHANISM. FREDERIC M. CARD, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 9, 1925. Serial No. 35,854. 11 Claims. (Cl. 112—221.)



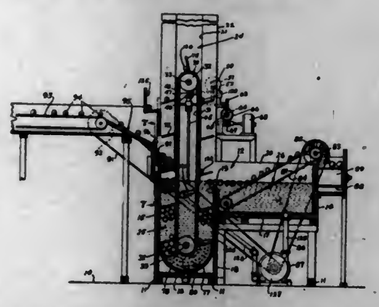
1. In a sewing machine, the combination with two needle bars, actuating mechanism for reciprocating said needle-bars, and controlling means for uncoupling one of said needle-bars from its actuating mechanism during the operation of the machine, of a latch-lever for holding said controlling means in needle-bar uncoupled position, a latch-lever releasing tappet, a tappet adjusting member, an indicator-disk, means including a spring for yieldingly locking said adjusting member to said indicator-disk, and operating mechanism brought into effective action by the operation of said controlling means for intermittently rotating said indicator-disk and tappet to release said latch-lever.

1,754,609. RAILWAY-ROADBED CONSTRUCTION. PAUL CHIPMAN, Detroit, Mich., assignor of one-half to Frank H. Alfred, Detroit, Mich. Filed May 6, 1929. Serial No. 360,897. 7 Claims. (Cl. 238—7.)



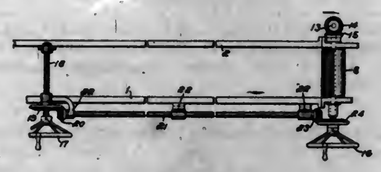
1. A support for railway rails including a platform of concrete, girders of concrete on said platform, cross walls of concrete on said platform between said girders, reinforcing means for said platform including metal members extending transversely of and embedded in said platform, said members being provided intermediate their ends between said girders with arched portions, and reinforcing means for said girders and cross walls including elements extending laterally from said cross walls and embedded in said girders.

1,754,610. ANIMAL CARRIER. ALBERT S. CLAYTON, Santa Ana, Calif. Filed Sept. 10, 1928. Serial No. 304,913. 9 Claims. (Cl. 224—29.)



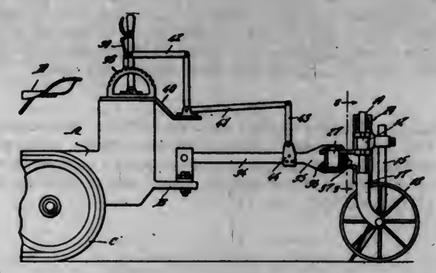
5. An animal carrier comprising intersecting frames cooperating to provide an animal confining enclosure, and adapted to be secured on a running board of an automobile, means for rendering one of the frames movable in such manner as to provide an opening in the carrier of sufficient size to permit passage of the animal, and means for securing said one of the frames in a position wherein the opening is decreased in size sufficiently to prevent the escape of the animal.

1,754,611. POCKET CHECK PROTECTOR. ROBERT G. CLYNE, St. Louis, Mo.; Mercantile-Commerce Bank and Trust Company of St. Louis, administrator of said Robert G. Clyne, deceased, assignor to Clyne Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 24, 1928. Serial No. 308,108. 5 Claims. (Cl 101—24.)



1. In a pocket-check protector, as a new article of manufacture, co-operating rollers for rollably engaging therebetween the check to be protected, and an independently rotatable toothed roller for cutting the so engaged check on relative movement of the check and protector.

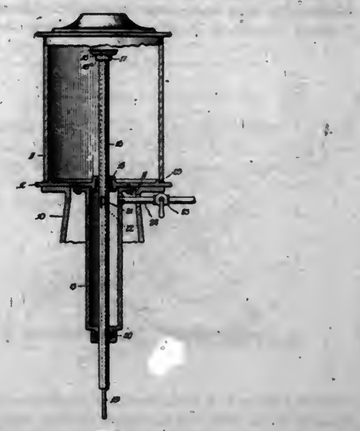
1,754,612. LIQUID-BATH APPARATUS. CHARLES B. COOK, Los Angeles, Calif. Filed Oct. 11, 1926. Serial No. 140,737. 16 Claims. (Cl. 146—196.)



16. In a device for treating fruit, a tank comprising a divided compartment for a treating fluid, an elevating conveyor arranged to travel up and down in said compartment, said conveyor including a pair of spaced chain members, conveyor flights on said chains said flights acting in conjunction with the walls of said compartment to provide pockets, and sprockets mounted in said tank for said chains.

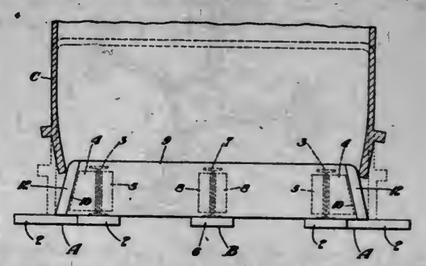
1,754,613. LOOM SHEDDING-MECHANISM CONTROL. RANDOLPH CROMPTON, Worcester, Mass., assignor to Crompton, Inc., Boston, Mass., a Corporation of Delaware. Filed July 9, 1926. Serial No. 121,398. 2 Claims. (Cl. 139—77.)

1. In a loom of the type having a plurality of harnesses, shedding means, pattern mechanism therefor at one side of the loom, and means at said loom side whereby the weaver may operate the harnesses manually, the combination therewith of a cross-shaft rotatably mounted on the loom, a pinion on said shaft at the pattern mechanism side of the loom, a gear meshing with said pinion and operatively connected with the manual harness-operating means at said loom side, an auxiliary manual member at the opposite side of the loom, a gear adjacent and operable by said auxiliary manual member, and a pinion on the adjacent portion of said shaft and meshing with said last named gear, whereby the weaver may optionally and similarly operate the harnesses from said opposite side of the loom.



1,754,614. CULTIVATOR ATTACHMENT FOR TRACTORS. THOMAS RICHARD CUMMINGS, Walnut Grove, Calif. Filed May 1, 1929. Serial No. 359,603. 2 Claims. (Cl. 97—47.)

1. A cultivator attachment for tractors comprising a wheeled frame, earth digging elements secured to said frame, an arm extending from said frame and being pivotally connected to the tractor, and means for raising said wheeled frame to disengage the earth digging element, said wheeled frame consisting of a pair of parallel members, one of said members having the arm projecting therefrom, the other member being adapted to support the wheels, and a coupling between the first mentioned member and the second mentioned member and within which the second mentioned member is movable.

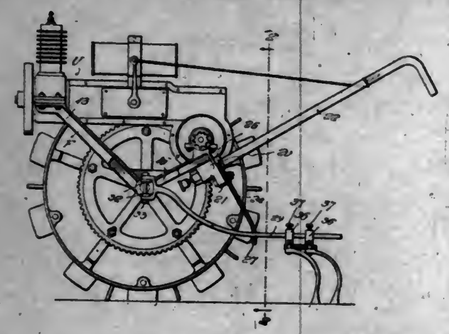


1,754,615. VISIBLE PUMP. LEO DEUTSCH, Beaver, Pa., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md., a Corporation of Maryland. Filed July 18, 1927. Serial No. 206,575. 2 Claims. (Cl. 225—100.)

1. In a device of the character described, the combination of a measuring chamber, a fluid reservoir associated therewith, and means communicating with said reservoir for controlling flow of fluid from said chamber to said reservoir, said means including measuring means and valve means for controlling the flow of fluid into said

first named means and reservoir and a draw-off means from said reservoir, said valve means being operable externally of said chamber and said reservoir.

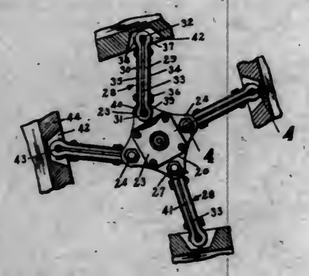
1,754,616. METHOD OF AND APPARATUS FOR STRAIGHTENING ANNEALING BOXES. ALLEN W. EARL, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey. Filed July 21, 1927. Serial No. 207,478. 3 Claims. (Cl. 153—32.)



1. The method of straightening warped annealing box covers, which consists in providing a rigid base having upwardly extending and inwardly inclined side and end walls, said walls having an outside dimension at the bottom substantially the same as the inside dimension of the unwarped annealing box covers, an outside dimension at the top of less than the inside dimension of the warped annealing box covers, heating said warped covers, positioning said covers over the upper end of said base, applying pressure to the top of said cover to force said cover down over said base, and then permitting said cover to cool while on said base to prevent rewarping during the cooling thereof.

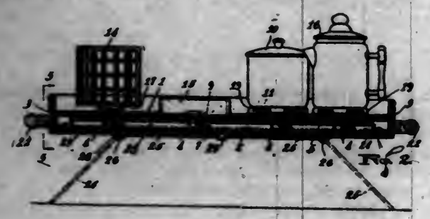
2. A straightener for annealing box covers comprising a supporting structure having upwardly extending and inwardly inclined supporting faces, a pair of straightening plates mounted on said supporting structure and inclined against said supporting faces, said plates having their end faces beveled upwardly and inwardly, and a second pair of straightening plates mounted against the end faces of said first named plates.

1,754,617. GARDEN TRACTOR. HERMAN E. ESCH and EMMOR A. BUCHANAN, Cherryvale, Kans. Filed June 7, 1929. Serial No. 369,185. 5 Claims. (Cl. 97—48.)



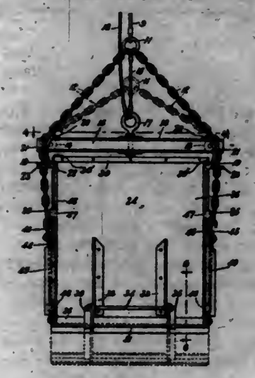
1. In a garden tractor, a power unit, two V-shaped side frames disposed substantially in vertical planes at

opposite sides of said power unit and having wheels driven by said unit, the front and rear arms of said frames being secured to said unit, said rear arms having rearwardly inclined bearings, handles having their lower ends ro-



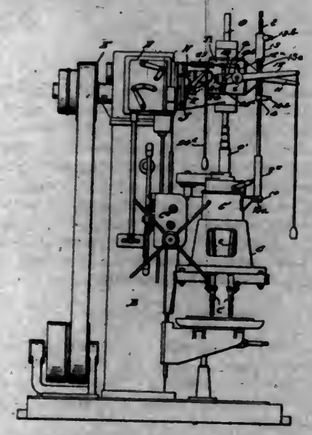
tatably received in said bearings, implement-guiding levers fulcrumed to the rear portions of said arms, and means operatively connecting said handles and said levers to effect swinging of the latter upon rotation of said handles.

1,754,618. CONNECTING ROD FOR AIR PUMPS. STANLEY L. FISHER, Chester, Conn., assignor to Pratt Read Player Action Company, Deep River, Conn. Filed Apr. 4, 1927. Serial No. 180,873. 22 Claims. (Cl. 74—17.)



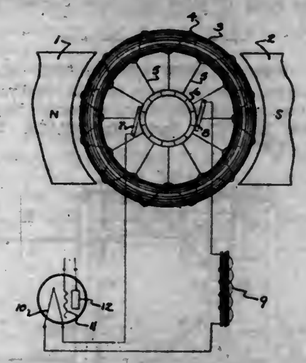
1. A connecting rod for an air pump or the like, comprising a rigid central body portion and bearings on the opposite ends thereof and extending substantially freely outwardly therefrom, said bearings being wholly composed of sound deadening material.

1,754,619. ELECTRIC SERVICE TRAY. HARRY G. FORD, San Francisco, Calif. Filed Jan. 19, 1929. Serial No. 333,637. 9 Claims. (Cl. 219—43.)



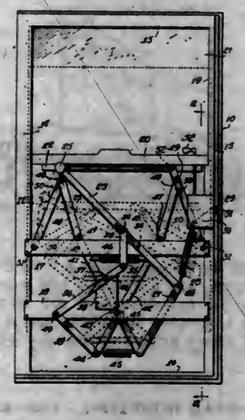
1. An electric service tray, comprising an upper part, a lower part removably secured to the upper one, outlet sockets carried by the lower part, a switch for each socket carried by the lower part, the upper part having openings therein for receiving the sockets and the switches, the rims of the openings being beaded and fitted snugly against the sockets and the switches, electric units having terminals receivable in the sockets, supporting aprons for each unit and extending below the bottoms of the terminals, wiring carried by the bottom part and being electrically connected with said sockets and switches, and a cover for the wiring and being carried by the lower part.

1,754,620. BATCH BOX AND GRAPPLING MEANS THEREFOR. EUGENE P. FORRESTEL, Buffalo, N. Y. Filed Apr. 4, 1929. Serial No. 352,529. 9 Claims. (Cl. 294—71.)



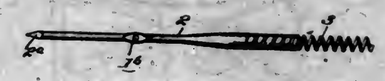
1. In combination with a batch box a grappling means therefor, comprising a bail having gravity hooks at its opposite ends for supporting the batch box, said batch box having bottom doors, link mechanism at the sides of the box and connected with the doors, chains trained over the ends of the bail and adapted to be connected to the link mechanism, the upper ends of said chains adapted to be connected to a cable whereby the doors will be held closed, and a second cable adapted to be connected with the bail whereby when the load is transferred from the one cable to the other the doors may swing open.

1,754,621. TAPPING OR LIKE MACHINE. WILLIAM R. FOX and HOWARD D. CORWIN, Jackson, Mich., assignors to Fox Machine Company, Jackson, Mich., a Corporation of Michigan. Filed Apr. 3, 1925. Serial No. 20,458. 17 Claims. (Cl. 10—137.)



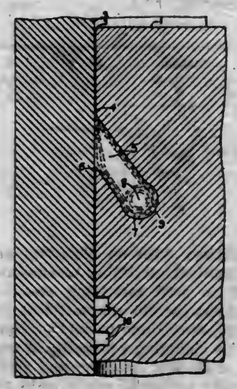
10. In combination in a tapping machine, a travelling head carrying a tool, reversing gearing for changing the direction of movement of the head, a main clutch for driving the machine, means in which power is stored by the movement of the head, and controlling means whereby at a prescribed point in the movement of the head, the power stored in said means is applied to throw out the main clutch and reverse the gearing to change the direction of the head, said controlling means including a lock for the reversing gearing to hold it against reversal while the power is being stored, and a contact moving with the head and releasing said lock at said prescribed point, substantially as described.

1,754,622. PREVENTING COMMUTATOR NOISES IN RADIO. EDWARD G. GAGE, Brooklyn, N. Y., assignor to Radio Patents Corporation, New York, N. Y. Filed Mar. 23, 1923. Serial No. 627,002. 1 Claim. (Cl. 171—97.)



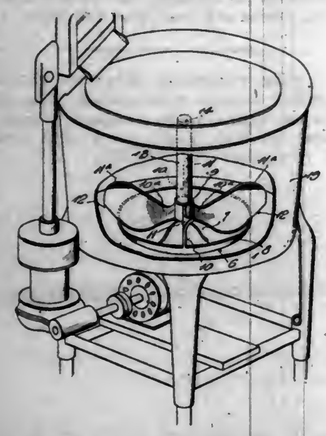
The method of generating an effectively smooth direct current with a commutator machine having a plurality of alternating current sources and corresponding commutator segments consisting in running the commutator at such a speed that the frequency of commutator ripple is below the limit of audibility.

1,754,623. WINDOW-OPERATING MECHANISM. PAUL S. GEUSS, Easton, Pa. Filed June 22, 1928. Serial No. 287,556. 6 Claims. (Cl. 268—127.)



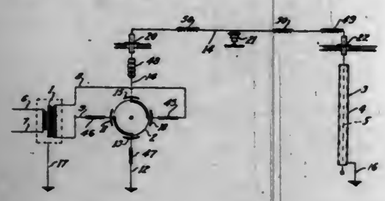
1. A device of the character described comprising a pair of lever arms of equal length pivotally supported at their lower ends and having their upper ends adapted to support a vertically slidable window at spaced points along the lower edge thereof, a pair of levers pivotally supported intermediate their ends, means pivotally connecting one end of each lever of said pair to one of said lever arms, spring means connected at opposite ends to said pair of levers, and means for swinging the opposite ends of said pair of levers toward and away from each other.

1,754,624. TIRE PLUGGING METHOD AND MEANS THEREFOR. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 6, 1928. Serial No. 267,985. 5 Claims. (Cl. 152—27.)



4. Means for inserting plugs in tire casings comprising a needle and a cylindrical wire helix rigidly carried by one end of said needle, said helix comprising a plurality of closely arranged helical coils having a plug receiving opening formed by said coils.

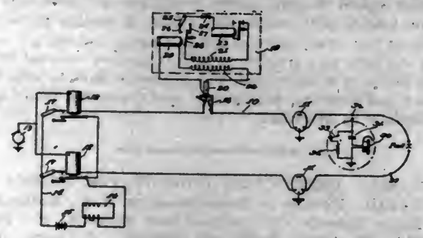
1,754,625. PISTON RING. PAUL J. HENNING and WILBUR H. JUDY, Buenos Aires, Argentina. Filed Sept. 8, 1927. Serial No. 218,302. 3 Claims. (Cl. 74—109.)



1. A piston for a cylinder adapted to contain a fluid under pressure, said piston having a relatively loose fit in the cylinder to provide a passage for fluid therebetween, and means for reversing the direction of flow of said fluid and directing the fluid against the fluid passing between the cylinder and piston to oppose the passage thereof, said means for reversing the direction of flow of the fluid comprising a groove in the piston communicating with the passage between the cylinder and piston, the groove being inclined towards that end of the piston from which the fluid passes and being provided with a concave bottom.

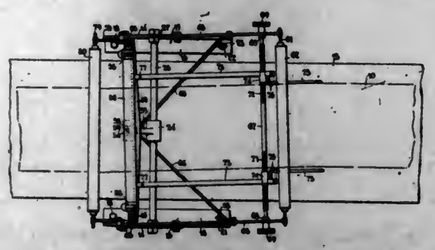
1,754,626. WASHING-MACHINE IMPELLER. RICHARD J. HOLZHAUSEN, Westport, Conn. Filed Jan. 3, 1930. Serial No. 418,327. 7 Claims. (Cl. 259—101.)

1. An oscillatory washing machine impeller mounted on a vertical axis and embodying substantially radial blades at least two of which are pitched oppositely; whereby upon turning of the impeller in either direction, one of said blades will create downward movement of water and the other will create upward movement of water.



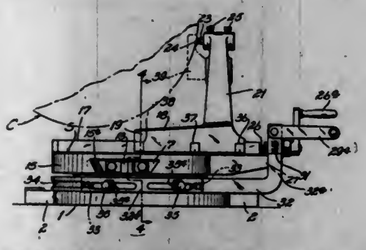
1,754,627. APPARATUS FOR THE PREVENTION OF HIGH-FREQUENCY RADIATION. JOHN J. JAKOSKY, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 30, 1925. Serial No. 78,472. 3 Claims. (Cl. 250—16.)

1. In combination with an electrical precipitation installation, mechanical rectifying means, an electrical circuit connected to said rectifying means for supplying alternating current thereto, an electrical circuit connected to said rectifying means and to said precipitation installation, said circuits including a plurality of capacity branches in connection with said rectifier and including portions providing effective radiating means, said rectifying means tending to produce high frequency oscillations in said circuits, means for preventing radiation of high frequency waves from said effective radiating means comprising a choke coil included in each of said circuit portions and presenting a sufficient high frequency impedance to effectively prevent high frequency oscillations therein.



1,754,628. LOCATING FAULTS ON MESSENGER-CALL CIRCUITS. GEORGE W. JANSON, Nutley, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1924. Serial No. 734,784. 4 Claims. (Cl. 175—183.)

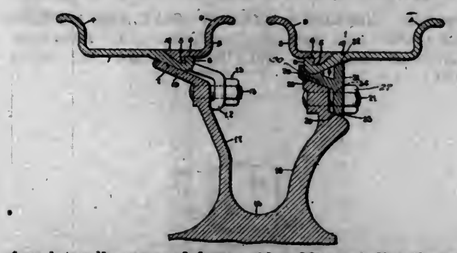
1. In a line testing system, an induction coil comprising a primary and a secondary winding, a tone current generating circuit connected to the primary winding, a relay connected to the secondary winding and controlling the operation of the tone current generating circuit, and



means adapted to be connected to the line at any point for causing the relay to close said tone current generating circuit.

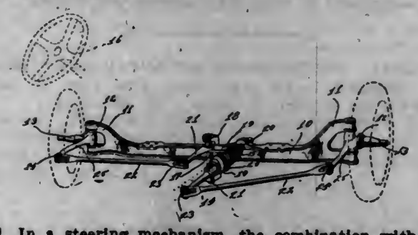
1,754,629. WEB-GUIDING APPARATUS. RAPHAEL S. KIRK, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 12, 1927. Serial No. 232,828. 20 Claims. (Cl. 271—2.6.)

1. An apparatus for automatically straightening a continuous web of material carried by a conveyor comprising a frame secured to the conveyor frame and a web supporting and guiding member pivotally mounted on the frame.



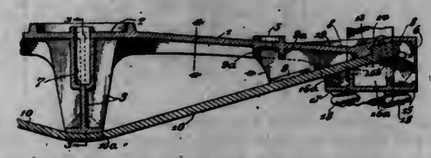
1,754,630. DRESSING DEVICE FOR GRINDING WHEELS. PAUL KLAMP and JOHN J. WOOLLEY, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,096. 11 Claims. (Cl. 125—11.)

1. A dressing device comprising a base, a way rotatably supported thereon, and a dressing tool supported on said way for rotation therewith and for sliding movement thereon along a circular arc whose center is offset with respect to the rotary axis of said rotary member.



1,754,631. WHEEL MOUNTING. FRED R. KLAUS, Warren, Ohio, assignor to Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 23, 1927. Serial No. 177,647. 3 Claims. (Cl. 301—19.)

3. A vehicle wheel structure comprising a wheel body having a conical supporting face, an adjacent shoulder, a split adaptor ring having an internal bearing face for registering with said conical supporting face, a second internal bearing face for registering with said shoulder, an external rim supporting saddle directly overlying said first conical supporting face, an external rim supporting



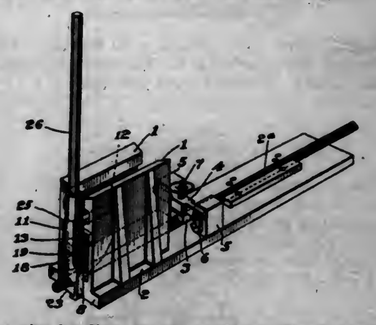
face laterally removed from said saddle and directly overlying said shoulder, and means for forcing said adaptor ring laterally across said supporting face and said shoulder to expand positively said ring into interlocking relation with said rim.

1,754,632. STEERING-GEAR MECHANISM. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed Mar. 14, 1927. Serial No. 175,360. 3 Claims. (Cl. 280—96.)

1. In a steering mechanism, the combination with an axle having steering knuckles adjacent the ends thereof, of a shaft supported by said axle intermediate the ends thereof and extending transversely of the same, bell crank levers mounted upon said shaft, links establishing a connection between one arm of said levers and the knuckles aforesaid, and a driving member connected to the other arm of said bell crank lever for actuating the same to effect an operation of said steering knuckles.

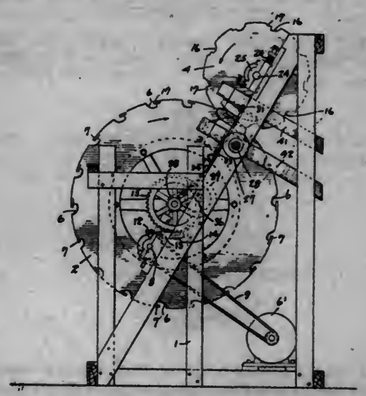
1,754,633. TRUCK BOLSTER. MARK H. MARTIN, Reading, Pa., assignor to Birdsboro Steel Foundry & Machine Company, Birdsboro, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1928. Serial No. 325,492. 4 Claims. (Cl. 105—280.)

1. A truck bolster comprising a compression member and end column guide castings connected integrally with each other, said compression member having projections upon its under side near its opposite ends forming outwardly facing shoulders and said end castings comprising spaced depending walls, a tension member the outer ends of which extend between the said walls and terminate inwardly of the outer ends of the said compression member and the outer ends of said tension member being thickened to provide inwardly facing shoulders upon their upper sides which engage the outwardly facing shoulders upon the under side of said compression member, and



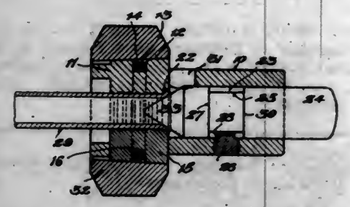
castings located between the said walls and having side and intermediate portions in contact with the under sides of the opposite end portions of the said tension member.

1,754,634. BODY BOLSTER. MARK H. MARTIN, Reading, Pa., assignor to Birdsboro Steel Foundry & Machine Company, Birdsboro, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1928. Serial No. 325,493. 10 Claims. (Cl. 105—230.)



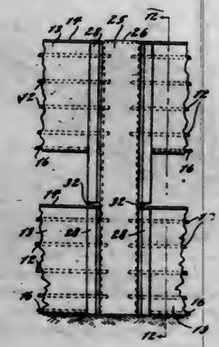
1. In a body bolster for railway cars, a bottom cover plate for said bolster comprising a single steel casting, said casting including side bearings integral therewith.

1,754,635. BENDING APPARATUS. BERNARD J. MCCARTHY, Jamaica Plain, Mass. Filed July 18, 1928. Serial No. 292,443. 4 Claims. (Cl. 153—40.)



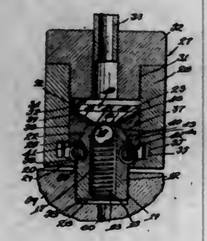
1. In a pipe bending apparatus, the combination with a rotatable form, having a horizontal shaft and a clevis for clamping the pipe to the form, and standards between which the form rotates having a track under which the ends of the shafts are positioned, of means for rotating the form on the shaft and reciprocating the shaft along the track to apply the form progressively to the portion of the pipe to be bent.

1,754,636. FRUIT PITTER. ALVAN B. MCCOLLOM, San Francisco, Calif. Filed May 9, 1927. Serial No. 189,978. 6 Claims. (Cl. 146—28.)



1. A fruit pitter comprising a pair of discs for cutting the flesh of a fruit and for holding the stone of the fruit, said discs being movable toward and away from each other for adapting said discs to hold stones of various sizes.

1,754,637. PIPE-FLANGING TOOL. CYRIL A. MCGOUGH, Altoona, Pa. Filed July 28, 1927. Serial No. 209,050. 7 Claims. (Cl. 153—79.)

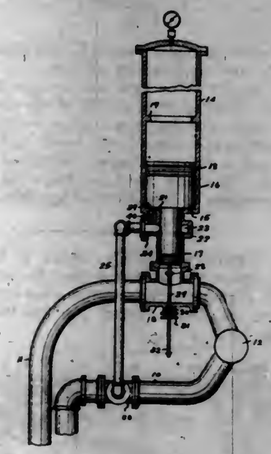


3. In a pipe-flanging tool, a plurality of radially movable segmental pipe-gripping members each having a tapered outer face, a ring having a tapered bore receiving said members whereby longitudinal movement of said ring relative to said members forces the latter into gripping engagement with a pipe positioned between said members, and means for flanging the end of a pipe gripped between said members.

1,754,638. CONCRETE FORM AND STRUCTURE. FRED J. MEAD, East Orange, N. J. Filed May 26, 1926. Serial No. 111,724. 4 Claims. (Cl. 25—125.)

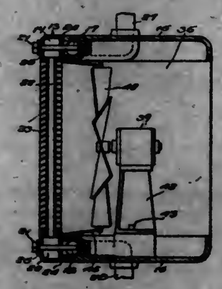
4. In a device of the character described, posts having grooves facing each other, spaced plates extending between the posts on each side of said grooves, and means for closing the lower end of the space between the plates.

1,754,639. COUPLING. EDWIN C. MEYER, Los Angeles, Calif. Filed June 1, 1927. Serial No. 195,688. 12 Claims. (Cl. 285—169.)



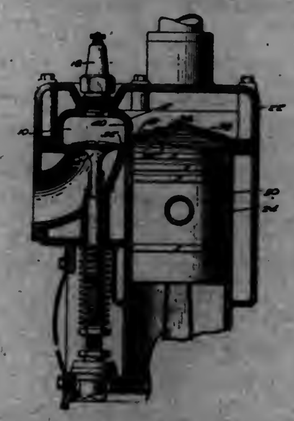
10. A coupling comprising in combination a chuck like structure having a passage therethrough with a piston slidable in said passage, a nipple insertable in the discharge end of the chuck, means in the chuck to engage the nipple, said piston and nipple having co-engaging surfaces and surfaces exposed to pressure of material forced through the chuck and nipple, the area of the piston exposed to said pressure acting in the line of movement of the piston being greater than the area of the nipple exposed to said pressure.

1,754,640. COMBINED WINDOW SEAT AND REFRIGERATOR. MOZ MIZRAHI, New York, N. Y. Filed Aug. 22, 1928. Serial No. 301,279. 4 Claims. (Cl. 312—101.)



3. A device of the character described, including a window attachment, comprising a seat and a back to support a person seated in the window, a closure having a top, a front, and side walls to removably coact with the attachment to provide an enclosure for the reception of articles, and means to secure the closure to said attachment and to pull the closure into snug engagement with the attachment to make the enclosure weathertight.

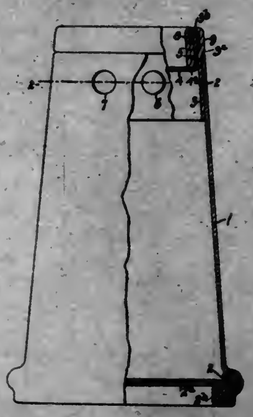
1,754,641. PRESSURE-RELIEF APPARATUS. HENRY G. MOBLEY, League City, Tex. Filed June 21, 1926. Serial No. 117,220. 5 Claims. (Cl. 137—78.)



1. In a pressure control system including a low pressure line and a high pressure line, a cylinder connected into said high pressure line and having its outer end enlarged, a floating plunger-like valve in said cylinder, formed to conform to the contour of and to work in said cylinder, a by-pass controlled by said valve and connecting the reduced end of said cylinder into the low pressure line and having a port through which it is also connected into the enlarged end of the cylinder and a check valve controlling said port and arranged to permit the discharge of fluid from said cylinder into said by-pass.

1,754,642. HEATING UNIT. ARTHUR B. MODINE, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 26, 1926. Serial No. 97,751. 24 Claims. (Cl. 257—137.)

4. Apparatus of the kind described comprising a frame having a plurality of spaced U-shaped passages therein, a radiator core secured to the frame and having upper and lower tanks, the upper tank communicating at two spaced points with one of said passages and the lower tank communicating at two spaced points with another of said passages, a fan for advancing a column of air through said core, means carried by the frame for driving the fan, and means adjustably connecting said frame to a fluid supply pipe, one of said passages communicating with said pipe through said connecting means.



1,754,643. ANTIDETONATION CYLINDER HEAD FOR INTERNAL-COMBUSTION ENGINES. ARLINGTON MOORE, New York, N. Y. Filed Jan. 3, 1927. Serial No. 158,484. 18 Claims. (Cl. 123—191.)

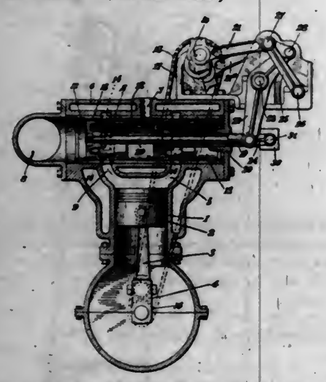
1. A cylinder head for four-cycle L-head internal combustion engines, having relatively high combustion chamber portions over the valves and over the cylinder bore respectively, and having a relatively low passage therebetween on the side adjacent to the intake valve and a relatively high passage therebetween on the side adjacent to the exhaust valve.

1,754,644. PAPER BOTTLE. ARLINGTON MOORE, New York, N. Y. Filed May 29, 1926. Serial No. 112,486. 8 Claims. (Cl. 229—7.)

1. A paper container comprising a multi-ply tubular body portion having the intermediate portion of the blank contiguous to the end portions thereof provided with an off-set forming shoulders at the opposite sides of the offset abutting said end portions; said intermediate and

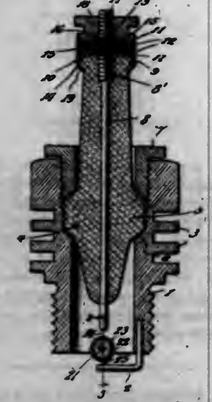
end portions being consolidated together under high pressure to form a body portion of substantially uniform thickness throughout having substantially smooth continuous inner and outer surfaces.

1,754,645. ELECTRIC MOTOR. ALFRED E. OSWALD, Hackensack, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 30, 1920, Serial No. 427,346. Divided and this application filed Aug. 18, 1925. Serial No. 50,928. 2 Claims. (Cl. 172—276.)



1. As a new article of manufacture, the combination of a plate insulating material, electrical contacts mounted thereon for electrically engaging the terminals of the armature coils, field coils and auxiliary coils of a convertible motor, wires supported on the plate electrically connecting the contacts together, and a separate plate secured over said contact-plate and forming therewith a box having top, sides and ends constituted of said separate plate and a bottom constituted of the contact-plate, said box enclosing said wires.

1,754,646. ELECTRIC-CURRENT-OUTLET MEMBER. THOMAS CARR POWELL, Chicago, Ill. Filed Nov. 15, 1928. Serial No. 319,594. 1 Claim. (Cl. 72—343.)

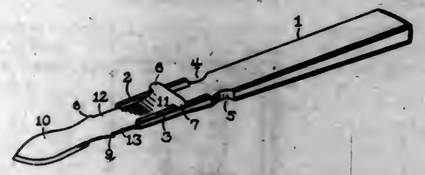


An electric-current outlet member having a pair of prong sockets in its exposed end and also having adjacent to and at opposite sides of said pair of sockets portions contrasting in color to the remainder of the member; said portions being in a diametrical line with the sockets and within the plane of the exposed end of the member.

1,754,647. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. CLIFTON REEVES, Trenton, N. J. Filed Jan. 22, 1925, Serial No. 4,100. Renewed Apr. 17, 1929. 14 Claims. (Cl. 123—188.)

1. An internal combustion engine having a cylinder provided with inlet and exhaust ports, a valve adapted to travel back and forth across one of said ports to open and close the same, an actuating mechanism positively connected to said valve, said actuating mechanism including means for accelerating the motion of the valve as it passes the port, a second valve for the other of said ports, and a separate actuating mechanism for said second mentioned valve.

1,754,648. SPARK PLUG. JOHN P. RITCHEY, Wichita, Kans. Filed July 28, 1928. Serial No. 295,944. 8 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell, a body of insulating material therein, a main electrode in the body, a ground electrode carried by the shell, a cap secured to the upper end of the body, a plurality of superposed mica discs confined in the cap and having openings therein, alternate discs having metallic discs in their openings and spaced the thickness of a mica disc to produce spark gaps.

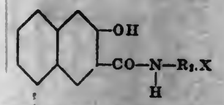
1,754,649. SWEETENING PROCESS. GENTRY LLOYD ROWSEY, Amarillo, Tex. Filed Apr. 13, 1927. Serial No. 183,624. 4 Claims. (Cl. 196—29.)

1. An improved method of sweetening gasolines and kerosenes which comprises agitating the oil with a suspension of preformed lead sulphide in a caustic soda solution while bringing air into intimate contact with the mixture.

1,754,650. SURGEON'S KNIFE. NILS SEAHOLM, Mount Vernon, N. Y. Filed Oct. 26, 1926. Serial No. 144,330. 4 Claims. (Cl. 30—9.)

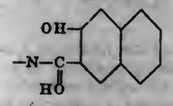
1. A surgeon's knife including the combination with a handle having a blade seat projecting forwardly therefrom, there being a relatively narrow section between the handle proper and the blade seat, of a pair of oppositely disposed guards on said blade seat for locating and retaining said blade and a blade for mounting between said guards on said seat having a pair of diverging and aligned tongues at the inner extremity of said blade normally engaging the inner extremities of said guard and projecting outward between the blade seat and the handle to serve as finger pieces whereby to raise the inner end of said blade so as to permit said finger pieces to slide upon their respective guards and thereby release said blade from said seat and handle.

1,754,651. METHOD OF TREATING CASEIN AND PRODUCT OF SAID METHOD. PHILIP SCHIDROWITZ, London, England, assignor of one-half to James B. Crockett, Cambridge, Mass. Filed Dec. 8, 1928. Serial No. 324,805. 4 Claims. (Cl. 252—8.)



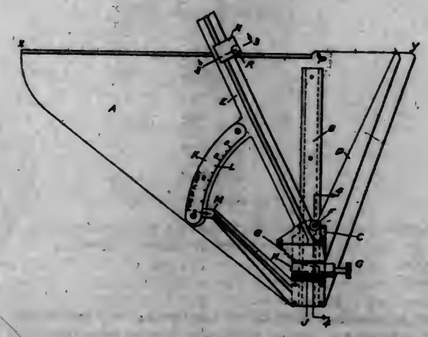
1. A fluid alkaline solution of casein containing piperidine.

1,754,652. AZO DYESTUFFS AND PROCESS OF PRODUCING THE SAME. OTTO SOHST, Hochst-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 26, 1926, Serial No. 118,850, and in Germany July 7, 1925. 6 Claims. (Cl. 260—95.)



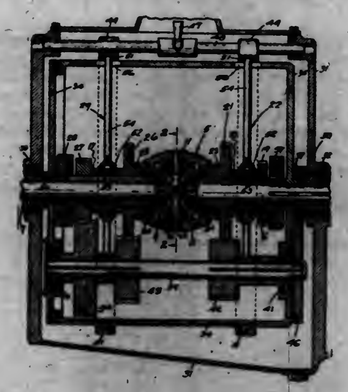
1. Process consisting in causing the diazo compound of a base of the general formula:

wherein R_1 stands for an alkyl or aralkyl group, and wherein the hydrogen atoms of the aryl groups may be substituted, to act upon an acid amide of the following composition:



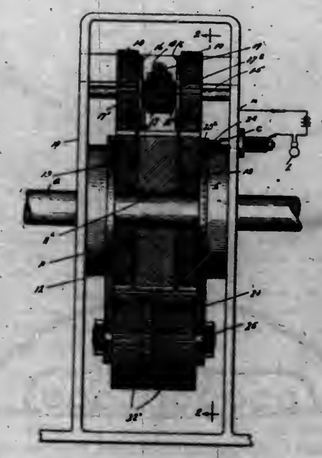
wherein X stands for hydrogen or the atomic grouping

and R_2 for an aryl group the hydrogen atoms of which may be substituted.



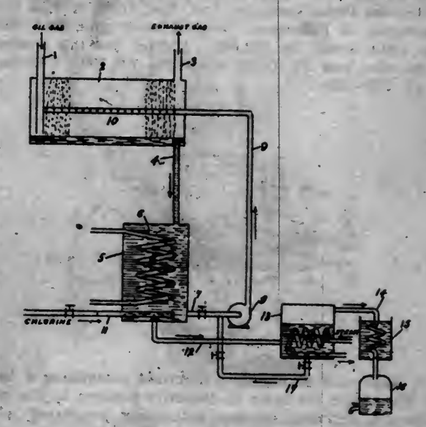
1,754,653. PREDICTING DEVICE. THOMAS J. STEPHENS, U. S. Army, Fort Monroe, Va. Filed Dec. 7, 1926. Serial No. 153,185. 5 Claims. (Cl. 235—61.5.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A predicting device embodying a base plate having a fixed zero on its reading edge corresponding to present position of a target, a carrier movable on the base plate normal to the reading edge through the zero point, a fixed and a pivoted arm on the carrier intersecting the reading edge of the plate and respectively establishing a constant angle and a varying angle with the normal through the



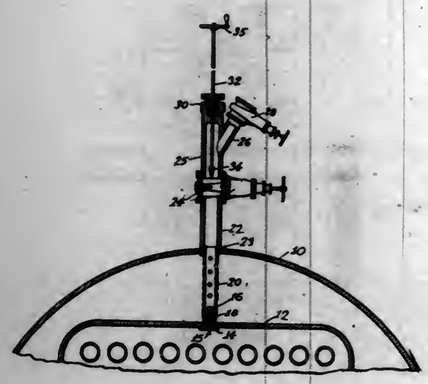
zero point, an arcuate extension on the pivoted arm having a graduated scale interpreting values of a function of the present position of the target, a pointer on the carrier against which said scale is read, a slidable marker on the pivoted arm and means for rotating said arm.

1,754,654. TRANSMISSION. BYRON STEVENS, Oakland, Calif. Filed Apr. 17, 1928. Serial No. 270,630. 7 Claims. (Cl. 77—34.)



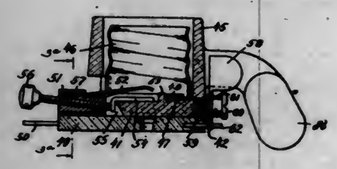
1. In a transmission, a driving shaft, a driven shaft, differential gears connecting the shafts, a differential housing operatively connected to said differential gears and rotatable on said shafts; sliding gears on said housing being selectively engageable therewith for imparting various speeds of rotation to said housing in the direction of the rotation of the driving shaft, driving gears for rotating said sliding gears, means for supporting said driving gears, said supporting means being fulcrumed on the driving shaft and being rotated thereby for moving said driving gear around the shaft; and means on said fulcrumed means for imparting to said driving gears a rotary movement around their own axis in the direction of the driving shaft rotation, thus rotating said sliding gears at a speed determined by the difference between the speed of rotation of said fulcrumed means and of said driving gears and by the gear ratio between the driving gears and the sliding gears.

1,754,655. CONTROLLING MEANS. HORACE F. STEVENS, Kenilworth, N. J. Filed May 26, 1925. Serial No. 32,902. 8 Claims. (Cl. 74—53.)



3. The combination with a driven rotary element, of an automatically controlled safety lock therefor, comprising an oscillatory element adapted to be swung and retained out of its normal position, when said rotary element revolves, and to return by gravity into its normal position, when said rotary element comes to a full stop, means operatively connected to said rotary element and means operatively connected to said oscillatory element and capable of interlocking with said first named means to lock said rotary element, when the latter is stopped.

1,754,656. METHOD OF CHLORINATING UNSATURATED HYDROCARBONS. CHARLES J. STROSACKER, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed May 16, 1928. Serial No. 278,351. 13 Claims. (Cl. 260—162.)

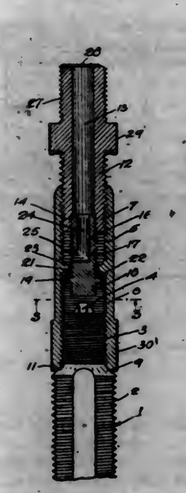


1. A method of chlorinating unsaturated hydrocarbons which comprises reacting upon hydrocarbons of the ethylene series with antimony pentachloride in the presence of a solvent containing the chlorinated product of the reaction.

1,754,657. DEVICE FOR REPLACING SAFETY PLUGS OF STEAM BOILERS. CECIL H. SWEET and EDWIN FORREST HURST, Brea, Calif. Filed Feb. 8, 1928. Serial No. 252,928. 3 Claims. (Cl. 122—504.3.)

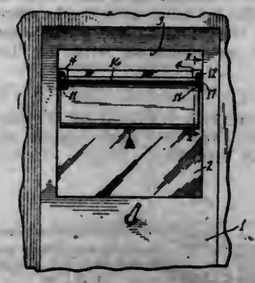
1. The combination with a boiler and its crown sheet, of a bushing constituting a plug seat fitted in an opening in the crown sheet and a lower tube provided with openings in its wall and having its lower end engaging the bushing and extending through the steam and water space of the boiler to the exterior thereof, a second tube secured to the upper end of said lower tube provided at its upper end with a stuffing box, a reamer rod passing through the stuffing box for reaming the bushing seat, a valve intermediate the ends of said second tube, and a valve controlled conduit leading to said second named tube above its valve for guiding a plug into the second named tube, whereby the plug may be seated in the bushing on a manipulation of the valves without removing any parts of the mechanism.

1,754,658. LAMP FOR PROJECTING APPARATUS. THEODORE F. UHLEMANN, Glen Morris, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Nov. 3, 1920, Serial No. 393,602. Divided and this application filed Aug. 23, 1924. Serial No. 733,703. 7 Claims. (Cl. 173—358.)



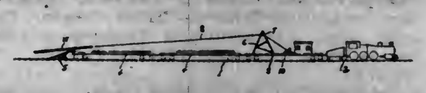
1. Apparatus of the class described comprising a base for supporting the lamp in operative position in the projector, a carrying member detachably associated with said base, a socket for the projecting lamp mounted on said carrying member, a terminal within said socket for making contact with the base of the lamp and means external to said terminal and having a variable length projecting into said socket for positively forcing said terminal into contact with the lamp base.

1,754,659. CASEMENT-SASH HINGE. THOMAS H. WALKER, Hollywood, Calif. Filed Mar. 7, 1928. Serial No. 259,775. 8 Claims. (Cl. 16—133.)



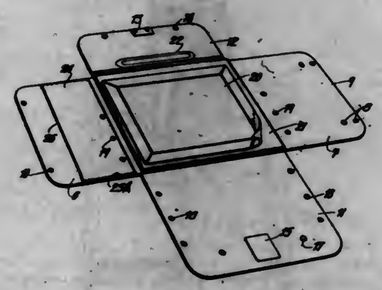
1. A casement sash hinge comprising in combination a first leaf and a second leaf each having knuckles with a pintle therethrough, the knuckles being arranged for relative sliding movement of their leaves on the pintle relative to each other, a rocking latch pivotally mounted on one of the leaves, such latch being adapted to interengage between the knuckles of the two leaves and to hold such leaves in a plurality of positions.

1,754,660. VALVE CAP. ARDEN D. WHIPPLE, Oakland, Calif., assignor to Clara M. Hutchinson, Piedmont, Calif. Filed Mar. 19, 1928. Serial No. 262,795. 1 Claim. (Cl. 152—12.)



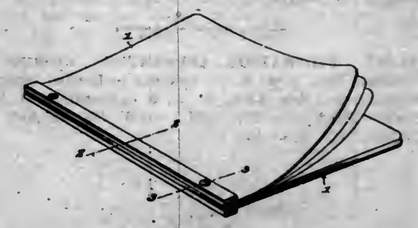
A valve cap comprising a sleeve having an internally left hand screw thread at its outer end and an internally right hand screw thread at its inner end, a nipple in screw-threaded engagement with the outer end of the sleeve, a plug having an axial bore and a communicating transverse bore in screw-threaded engagement with the nipple, an annular flange carried by the plug and spaced from the transverse bore and an annular flange internally of the sleeve and intermediate the screw-threaded portions for cooperation with the flange of the plug to form a seal.

1,754,661. WINDOW-SHADE FIXTURE. CHARLES H. WOOD, Oakland, Calif. Filed Nov. 1, 1926. Serial No. 145,428. 7 Claims. (Cl. 156—24.)



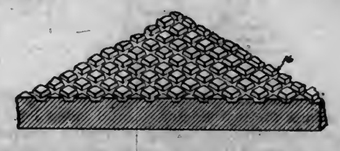
1. A shade support of the character described comprising an inverted channel formed with a V-shaped cut in one leg thereof to present a resilient V-shaped tongue, a projection extending inwardly from said tongue, and a bracket fastened to one face of said channel, a perforated lip extending at right angles to said bracket and adapted to support one end of a shade roller therein; and a lug extending from the channel behind said lip to form an abutment for the end of said roller.

1,754,662. METHOD AND APPARATUS FOR REMOVING RAILS FROM RAILROAD TRACKS. RAY WOODBURY and RAY L. MARTIN, Portland, Oreg., and GEORGE B. DOANE, Jr., Summit, N. J. Filed Jan. 29, 1929. Serial No. 335,900. 8 Claims. (Cl. 104—2.)



1. Apparatus for removing rails from railroad tracks, said apparatus in conjunction with a railroad vehicle for carrying such rails, and a plurality of rails to be loaded residing at unequal distances from said vehicle, comprising a moving cable, means for attaching such rails to said cable one after another commencing with the most remote in order that they may travel therewith, and an inclined apron up which the aforesaid rails travel to be received by said vehicle.

1,754,663. CARRYING CASE. ALFRED A. ADAMS, Brooklyn, N. Y. Filed Dec. 2, 1926. Serial No. 152,205. 1 Claim. (Cl. 150—1.6.)



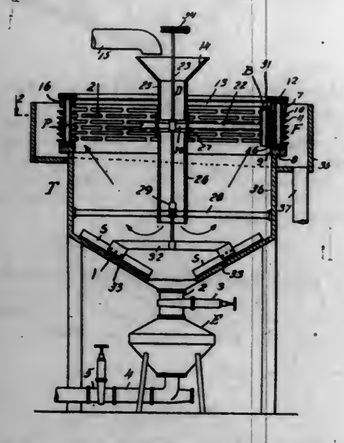
A carrying case for lodge regalia comprising a body section of rectangular configuration, a stuffed cushion of substantially the same area as the body section and mounted thereon, side and end flaps integral with the body section, a handle on one of said end flaps, a pocket in one of the side flaps and means for securing the side and end flaps together in overlapping relation whereby the flaps are held in close relation with the cushion.

1,754,664. LOOSE-LEAF BINDER. CLIFTON C. ANDREWS, Shaker Heights, Ohio. Filed June 14, 1928. Serial No. 285,330. 3 Claims. (Cl. 129—13.)

1. A loose leaf binder including a cover member of thin, flexible material and a narrow stiffener member, one edge portion of said cover being wrapped about and secured to said stiffener member with the edge projecting between the stiffener and the portion of the cover wrapped thereabout, the length of the cover in the direction of the length of the stiffener being substantially as great as the length of said stiffener.

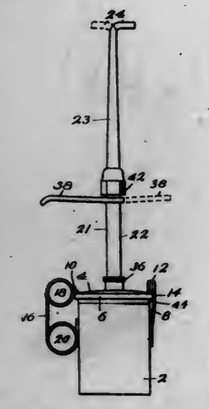
1,754,665. STEAM-PRESS-HEAD CONSTRUCTION. LEON P. ANTHONY, Los Angeles, Calif., assignor of fifty per cent to Mary Adeline Reynolds, Los Angeles, Calif. Filed Sept. 26, 1928. Serial No. 308,491. 2 Claims. (Cl. 68—9.)

1. A press element comprising a flat plate having its surface provided with a plurality of fine cuts forming narrow ridges to produce a roughened surface to eliminate the gloss in pressing fabrics, the cuts being spaced apart a distance corresponding to that of the cuts of a finger nail file.



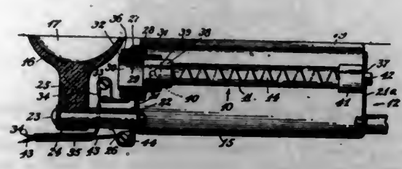
1,754,666. STOCKING PROTECTOR. EDWARD B. BISHOP, Haverhill, Mass. Filed Nov. 9, 1928. Serial No. 318,266. 1 Claim. (Cl. 36—2.)

A stocking protector comprising a body of flexible sheet material fashioned to fit against and cover the back only of a stocking from the calf thereof to the upper part of the heel and having adjacent its lower end and at opposite sides thereof front edges occupying positions immediately at the rear of the protuberances of the ankle joint of the



wearer whereby said body is held against rotative displacement on the leg, and means extending across the front of the stocking for holding said body in position against the leg of the wearer.

1,754,667. FILTRATION APPARATUS. CHARLES T. CABRERA, New York, N. Y., assignor to Electro Dialyzer Corporation, New York, N. Y., a Corporation of New York. Filed July 26, 1928. Serial No. 295,585. 7 Claims. (Cl. 210—45.)

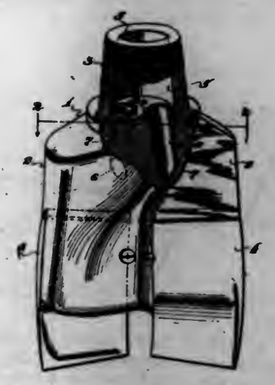


1. In a device for treating solid laden liquids, a container, means for introducing a solid laden liquid to said container, a continuous hollow extension secured to and extending completely around the upward edges of the side walls of said container, said extension having a plurality of openings in the inner and outer walls thereof, and a plurality of superimposed separately removable filtering partitions disposed within said hollow extension.

1,754,668. OIL CAN. RALPH L. CARY, Simpson, Kans., assignor of one-third to E. M. Brown, Salina, Kans. Filed Apr. 28, 1928. Serial No. 273,607. 3 Claims. (Cl. 221—50.)

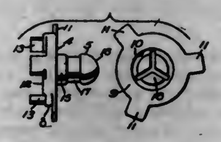
1. A device of the character described consisting of a container having one end open, a removable cap for said open end provided with a peripheral bifurcated projection, latch means secured to the container and extending upwardly between said bifurcated projection for engaging over the cap to secure the latter upon the container and prevent it from turning upon the container, a catch secured to the container at a point opposite said latch means and adapted to coact with the latter in holding the cap upon the container, and a nozzle associated with the cap and communicating with the interior of the container.

1,754,669. HEATER. JOSEPH H. COHEN, Bridgeport, Conn. Filed Aug. 28, 1925. Serial No. 53,005. 8 Claims. (Cl. 219—19.)



8. A heating attachment for windshields, comprising an elongated electrical heating element, a reflector at the side of the heating element remote from the windshield said reflector extending below and above said heating element, means including a suction cup at each end of the reflector for securely fastening the attachment to a windshield, and means for connecting the heating element to a source of electricity.

1,754,670. ARTIFICIAL FLOWER AND METHOD OF MAKING SAME. JAMES B. CROCKETT, Cambridge, Mass., assignor to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Dec. 24, 1927. Serial No. 242,526. 7 Claims. (Cl. 18—48.)



1. The method of producing leaves, petals or other parts for use in the manufacture of artificial flowers, which consists of laying a sheet of previously formed rubber containing vulcanizing agents and an ultra accelerator on to a suitably shaped impression or form and vulcanizing the same in applied position at normal or slightly elevated temperatures and atmospheric pressure.

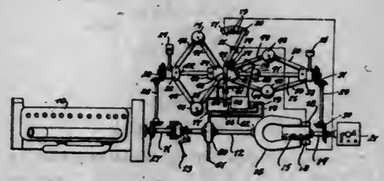
1,754,671. DRILL BIT. JOHN DAHL, Dallas, Tex., assignor to Dahl Bit Corporation, Dallas, Tex. Filed June 15, 1928. Serial No. 285,521. 1 Claim. (Cl. 255—61.)

In a drill bit, a shank having angular bores and bushings in the bores having circular outwardly extending flanges on their upper ends and having depending projections on the under faces of the flanges, the bushings having their lower ends bevelled to lie flush with the periphery of the shanks, the bores at the upper ends thereof having lateral recesses to receive the projections, the recesses and projections being located and related so that when the projections lie in the recesses the bevelled ends of the bushings are held flush with the shank.

1,754,672. FASTENER. DIDRICK DYRSSEN, Malden, Mass. Original application filed July 21, 1927, Serial No. 207,413. Divided and this application filed Apr. 14, 1928. Serial No. 269,992. 8 Claims. (Cl. 24—213.)

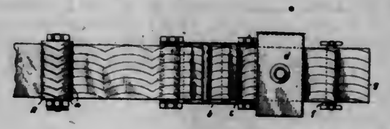
1. A stud unit including a socket-engaging part and a casing part assembled with each other, said casing part including a tubular portion, a base provided by said socket-engaging part and located within said tubular portion of the casing part and attaching means provided at each end of the tubular portion for securing the stud unit to a suitable support, the attaching means at one end of the tubular portion being adapted to engage one side of the support and the attaching means at the other end being adapted to engage the opposite side of the support.

1,754,678. ICE-PICK HOLDER. JOHN H. ERNST, Jr., Brooklyn, N. Y. Filed May 29, 1926. Serial No. 112,451. 3 Claims. (Cl. 248—20.)



1. In a device of the character described a body portion, an angular portion at one end thereof, consisting of an outwardly turned portion of said body portion, and a sheaf and guide near the opposite end consisting of turned in edges of the body portion, said angular portion having an aperture through which a pointed implement such as ice pick may be passed and said aperture being substantially in line with the sheaf, and a downwardly and inwardly turned member adjacent the opening constructed and arranged to guide the point in the direction of the first named guide.

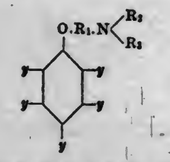
1,754,674. ILLUMINATED MOVING-PICTURE THEATER. DWIGHT FARNUM, Los Angeles, Calif., assignor of twenty-five per cent to William Conlogue Woodard and thirty-seven and one-half per cent to W. Hall Crowell, Los Angeles, Calif. Filed Apr. 18, 1927. Serial No. 183,394. 2 Claims. (Cl. 240—8.)



1. A moving picture theater having a screen at one end for exhibiting pictures, a ceiling having a structure formed with inverted stepped characteristics, lighting fixtures positioned in relation to the ceiling adjacent the angles of the steps, the downwardly extending part of the inverted steps casting a shadow on the screen whereby the screen is mained in a shadow and the ceiling, walls and floor of the main body of the theater has a general illumination.

1,754,675. ELECTROMAGNETIC TRANSMISSION. JOHN G. FRANK, Buffalo, N. Y. Filed May 3, 1928. Serial No. 274,736. 10 Claims. (Cl. 172—284.)

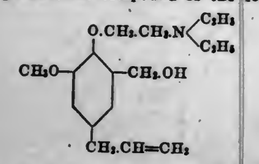
1. An electro-magnetic transmission including a driving shaft, a driven shaft, an electro-magnetic coupling between said shafts, a rheostat in circuit with said coupling, and fluid pressure means actuated through motion derived from said driving shaft for actuating said rheostat to cut out the resistance in said circuit to overcome the starting load and means for subsequently rendering said last named means inoperative.



1,754,676. FRICTION BLOCK FOR BRAKES, FRICTION CLUTCHES, AND THE LIKE. HEINRICH CONSTANTIN GEORGI, Berlin-Zehlendorf-West, Germany, assignor to Deutsche Asbestwerke A.-G., Berlin-Zehlendorf, Germany, a Joint Stock Company. Filed May 11, 1929, Serial No. 362,312, and in Germany Dec. 12, 1927. 3 Claims. (Cl. 154—2.)

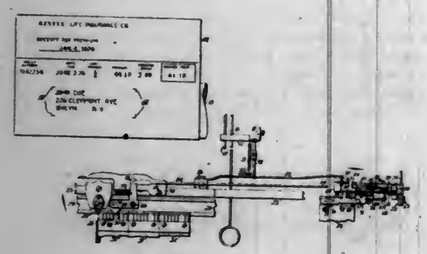
1. The herein described method of manufacturing friction blocks for brakes, friction clutches, and the like, which consists in cutting a sheet of fibrous material longitudinally into elongated strips each consisting of a series of coherent blanks of the desired form of the block, folding the said strips into piles of superposed blanks, and compressing the piles into a coherent block.

1,754,677. DIALKYLAMINO-ALKYLETHERS OF ALKYLOLPHENOLS. HANS HAHL, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed July 18, 1927, Serial No. 206,793, and in Germany July 29, 1926. 6 Claims. (Cl. 260—127.)



1. As new products the compounds of the general formula:

wherein one y stands for an alkylol group, the other y's for hydrogen, alkyl, alkylol or unsaturated aliphatic residues, R_1 for an alkylene radicle, R_2 and R_3 for alkyl radicles containing less than 3 carbon atoms each.

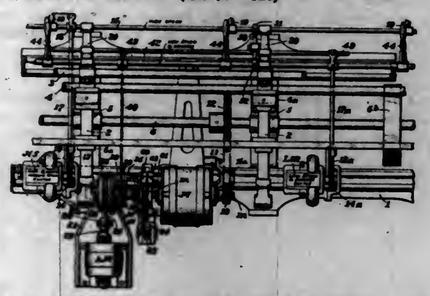


1,754,678. NEW DIALKYLAMINO-ALKYLETHERS OF ALKYLPHENOLS. HANS HAHL, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Original application filed July 18, 1927, Serial No. 206,793, and in Germany July 29, 1926. Divided and this application filed May 16, 1928. Serial No. 278,343. 1 Claim. (Cl. 260—127.)

As a new product the compound of the formula:

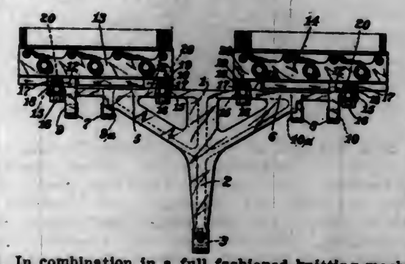
which is a weakly yellow colored oil boiling under a pressure of 12 mm. at 213–215° C., giving a crystallized salt with hydrochloric acid and possessing valuable physiological properties.

1,754,679. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,273. 8 Claims. (Cl. 235—59.)



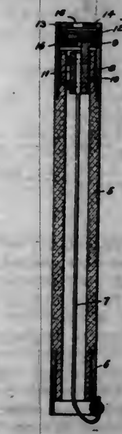
1. In a combined typewriting and computing machine including a carriage and a cross totalizer arranged to register numbers written across a work sheet in a plurality of columns, clearance proof mechanism including a tripper part, a part tripped thereby and means acting when said part is so tripped to test said cross totalizer for clearance, one of said parts traveling with said carriage, said parts being constructed and arranged to test said cross totalizer for clearance once during the travel of the carriage in letter feed direction and once during the return motion of said carriage.

1,754,680. FULL-FASHIONED-KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1927, Serial No. 187,614. Renewed Nov. 2, 1929. 25 Claims. (Cl. 66—82.)



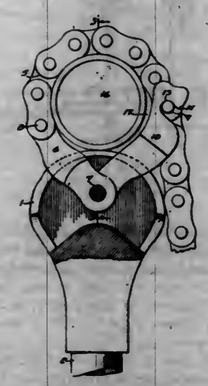
24. In combination in a full fashioned knitting machine, power means for driving the machine, automatic brake means for arresting the power drive when the power is cut off, and for releasing said power drive as a consequence of throwing the power on, and manually controlled means accessible to the operator at various stations along the machine front for throwing the power on and off, substantially as described.

1,754,681. FULL-FASHIONED-KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1928, Serial No. 317,046. Renewed Nov. 2, 1929. 27 Claims. (Cl. 66—82.)



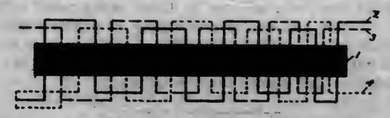
1. A full fashioned knitting machine having a slow speed motor and a high speed motor for driving it and a safety device for automatically locking either motor against operation until the other motor is thrown out of operation, substantially as described.

1,754,682. FULL-FASHIONED-KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1928. Serial No. 318,183. 2 Claims. (Cl. 66—82.)



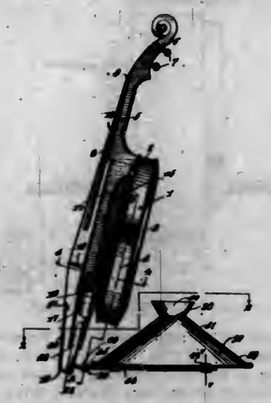
1. In combination in a full fashioned knitting machine, a support for the needles with means for reciprocating said support vertically and for moving the same forwardly and backwardly, and a pair of needle clamping bars on said support, said support having a pair of spaced apart openings for each needle bar, the members of each pair of openings being located near the ends of the bar to which they belong, and clamping bolts passing through the openings, said openings being larger in diameter than the diameter of the bolts to permit movement of adjustment of the bolts in all directions radially in respect to the axis of the openings, and means at each end of each bar for adjusting said bar, whereupon the clamping bolts may be set to hold the bar in its adjusted position, said clamping bolts forming the sole means of connecting the needle bar with its support and permitting adjustment of the bar bodily to or from the knitting plane, or pivoted movement in respect thereto or lengthwise adjustment.

1,754,683. FUSE. NORRIS C. HUSTED, Niles, Ohio. Filed July 24, 1925. Serial No. 45,813. 9 Claims. (Cl 200—127.)



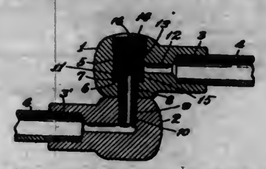
1. In an expulsion fuse, a hollow cylindrical body, terminals at each end of said body, a valve housing at the upper end of said body and connected to the upper terminal, a plug within said valve body and a fuse wire connected at its upper end to the valve body and at its lower end to the lower terminal.

1,754,684. WRENCH. OSCAR JOHNSON, New York, N. Y. Filed Mar. 5, 1927. Serial No. 173,163. 6 Claims. (Cl. 81—70.)



1. A wrench comprising, a head provided with an operating handle, a master link, a flexible member connected at one end to the master link, a locking member provided at one end with means to positively lock it with the flexible member, both the master link and the locking member being mounted upon the same pivot in the head, and said head having a gradually curved cam surface having points at different radial distances from the pivot.

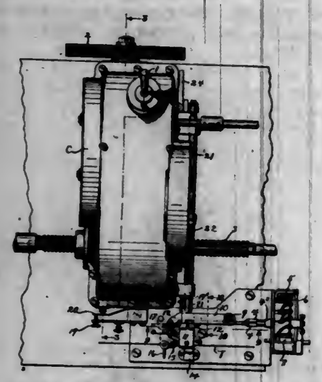
1,754,685. ELECTRIC WINDING WITH VARIABLE PITCH. ABRAM S. KANTER, Moscow, Union of Soviet Socialist Republics, assignor to State Electrotechnical Trust, Moscow, Russia. Filed May 10, 1928, Serial No. 276,570, and in Germany Apr. 6, 1927. 2 Claims. (Cl. 172—290.)



1. A polyphase motor element comprising the combination with a magnetic core, of an insulated multipolar polyphase winding, so distributed that the distance between consecutive phase belts increases progressively.

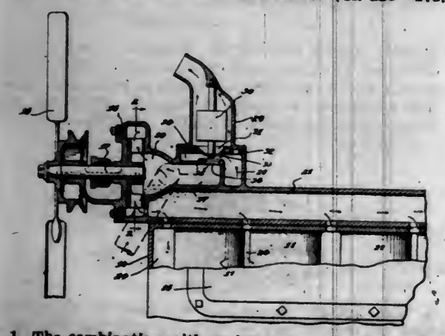
1,754,686. VIOLIN. HERMAN M. LENTZ, Renville, Minn. Filed Dec. 31, 1928. Serial No. 329,492. 6 Claims. (Cl. 84—294.)

1. In a stringed musical instrument of the violin type, a body, a finger-board supporting neck thereon having a hollow, resonant continuation extending from its inner end over the belly of the instrument body, the said continuation having a resonant sound-wave outlet extension, a tail unit associated with the extension and including an element for the connection of the strings of the instrument, a bridge upon the said neck continuation, the tail unit further including a vibratory arm of resilient metal, an amplifier, and means connecting the arm with the amplifier for transmitting tone vibrations thereto.



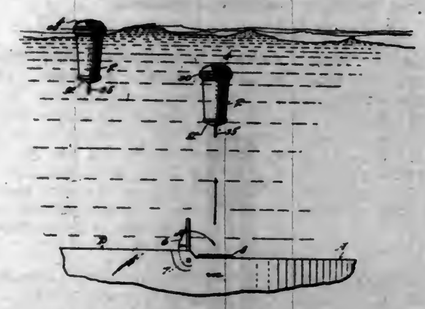
1,754,687. HOSE KNUCKLE. WILLIAM J. MACLELLAN, Bellflower, Calif., assignor of one-fourth to himself, one-fourth to G. W. Fournier, one-fourth to William M. Land, and one-fourth to Joseph H. Rogers. Filed Feb. 24, 1925. Serial No. 11,137. 1 Claim. (Cl. 285—103.)

A hose knuckle comprising two members adapted to receive the ends of hose sections and provided with elongated ports, one of said knuckle members being provided with a socketed bore of substantially uniform diameter and



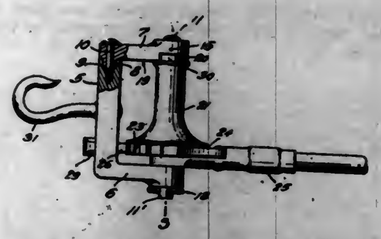
in communication with its port and extending through the knuckle and provided with an annular shoulder, a washer in the socket in engagement with the shoulder, a threaded seat formed in the other knuckle member in alignment with said socketed bore and in communication with its respective port, a pin having an axial opening extending throughout the length thereof, and provided with a flat head, said pin being passed through said washer in one of the knuckle members and screwed to the threaded seat in the other knuckle member, and having its head in engagement with said washer, a coil spring mounted in the socketed bore with one end in direct engagement with the head of said pin, and a screw plug of uniform diameter mounted in the outer end of said socketed bore in engagement with the other end of said spring whereby the compression on said spring may be adjusted.

1,754,688. MACHINE FOR REPRODUCING AND TRANSMITTING PICTURES. MAYNARD LESLIE DEEDES MCFARLANE, New York, N. Y., and HARRY GUY BARTHOLOMEW, London, England. Filed Oct. 7, 1926. Serial No. 140,048. 11 Claims. (Cl. 178—5.)



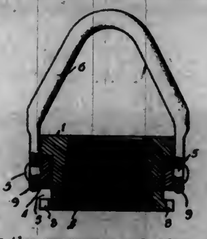
1. In a machine for reproducing and transmitting pictures, the combination of a threaded shaft, a revoluble member having an internal threading adapted to co-operate with the threading of the said shaft, a drive shaft, and connecting means intermediate said drive shaft and said externally threaded shaft, and between said drive shaft and said internally threaded member, whereby the said externally threaded shaft can be given a differential longitudinal movement.

1,754,689. COOLING SYSTEM. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corp., Detroit, Mich., a Corporation of Michigan. Filed June 7, 1926. Serial No. 114,308. 15 Claims. (Cl. 123—173.)



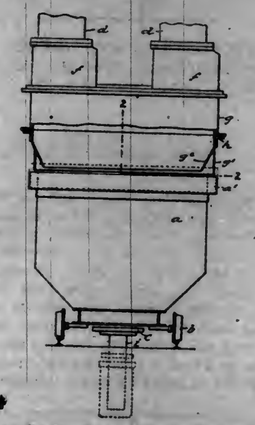
1. The combination with an internal combustion engine, of a cooling system therefor including, a water pump, means for initially conducting the cooling water therefrom longitudinally through a portion of the cylinder head prior to entering the cylinder jackets and means for returning the water to the said pump through the cylinder head.

1,754,690. SUBMARINE ESCAPEMENT APPARATUS. JOSEPH E. MARTIN and PERCIVAL A. MARTIN, Newark, N. J. Filed Feb. 16, 1928. Serial No. 254,728. 5 Claims. (Cl. 114—16.7.)



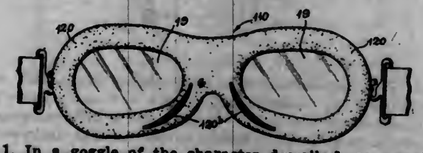
1. A submarine vessel including a hull having an interior compartment, a water-tight chamber within the hull having an aperture leading to the exterior of the vessel and an opening leading from said compartment, a water-tight closure for said aperture, a water-tight closure for said opening, a buoyant escapement housing within the said chamber comprising a lower body portion and a normally detached upper body portion, means for assembling said upper body portion to said lower body portion in a water-tight manner, means for admitting water to said chamber, means to eject said escapement housing through said aperture, and means for draining water from said chamber.

1,754,691. WINDLASS. OSKAR MELBYE, Sedro Woolley, Wash. Filed Jan. 17, 1929. Serial No. 338,040. 2 Claims. (Cl. 254—164.)



1. A windlass comprising, in combination, a U-shaped frame formed with a transverse bar and two apertured arms at the ends thereof, one of said arms being rigid with the bar and the other arm swiveled to the bar for movement in a plane longitudinal of the frame, said swivel connection comprising a boss rigid with the associated arm and rotatable in a recess provided in the bar, a slot provided in the inner side face of said swiveled arm, a transversely arranged shaft engaging in the apertures of both arms, a drum loosely mounted on said shaft, said drum being provided with a hub element adapted to be engaged by the swiveled arm within the slot thereof, an operating lever mounted upon the shaft, and pawl-and-ratchet devices for transmitting motion from the lever to rotate the drum.

1,754,692. BIT LIFTER. CHARLES S. MILLER, Ballinger, Tex. Filed Oct. 3, 1928. Serial No. 310,132. 5 Claims. (Cl. 294—86.)

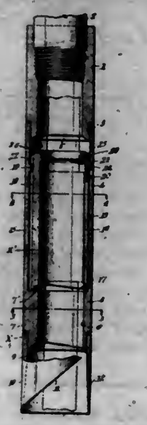


1. A device for the purpose set forth comprising a head having an internally threaded bore and an external annular groove, a yoke fitted within the groove and movable therein around the head, a bail swiveled upon the yoke, and means to lock the yoke to the head for movement therewith.

1,754,693. RETORT FOR THE DISTILLATION OF COAL AND OTHER SOLID CARBONACEOUS SUBSTANCES. CHARLES HENRY PARKER, Codsall, England, assignor to Low Temperature Carbonisation Limited, London, England. Filed June 4, 1927, Serial No. 196,599, and in Great Britain June 7, 1926. 2 Claims. (Cl. 214—18.)

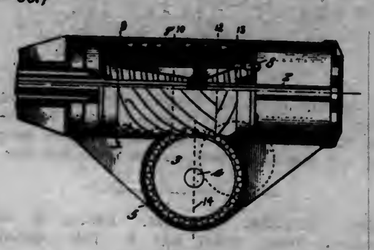
1. Means for discharging retorts comprising an intermediate casing into which the retort residue passes on discharge therefrom, a downward annular extension from the said intermediate casing, a skip adapted to run on rails to bring the said skip beneath the said extension, an annular channel provided at the upper part of the said skip and adapted for the reception of a sealing substance and for the admission within it of the said annular extension, and means for raising and lowering said skip to cause the said extension to pass into and out of the said annular channel, substantially as described.

1,754,694. GOGGLES. HERMAN NEUWIRTH, Brooklyn, N. Y. Filed June 28, 1920. Serial No. 374,348. 3 Claims. (Cl. 2—14.)



1. In a goggle of the character described, an annular cushioning member having a flexible fin projecting from the face contacting surface thereof adapted to contact with and shaped to conform to a depressed portion of the wearer's face.

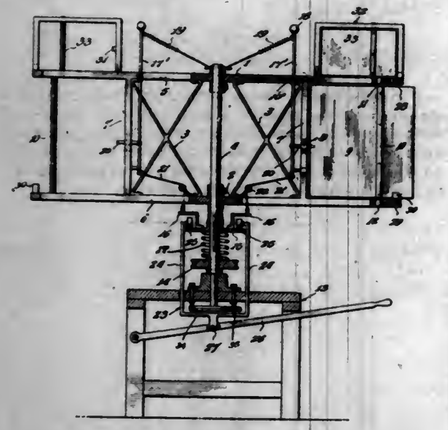
1,754,695. SHOE-LASTING DEVICE. HERBERT H. ROOSA, Lincoln, Nebr. Filed Jan. 17, 1929. Serial No. 333,147. 4 Claims. (Cl. 12—107.)



1. A shoe lasting device comprising a body portion substantially in the form of a relatively rigid plate, and a multiplicity of points attached thereto, said points being arranged to be forced through the upper by a blow struck on the body portion, for securing the upper temporarily in position during the lasting of the shoe.

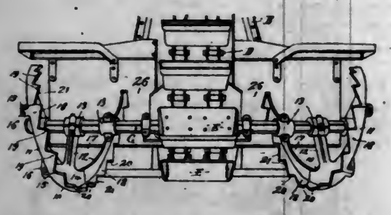
1,754,696. FISHING TOOL. JOHN M. SAULS, Seminole Okla. Filed Dec. 4, 1928. Serial No. 323,618. 12 Claims. (Cl. 294—92.)

1. A fishing tool including a barrel, means associated with the barrel whereby the latter may be rotated to engage a "fish," means for locking said barrel and its associated means against relative movement, and means for forming a seal between the barrel and "fish."



1,754,697. CHANGE-SPEED GEARING. ROMEO SAGLIONI, Caltagirone, Italy. Filed Apr. 11, 1927, Serial No. 182,816, and in Italy Apr. 14, 1926. 3 Claims. (Cl. 74—36.)

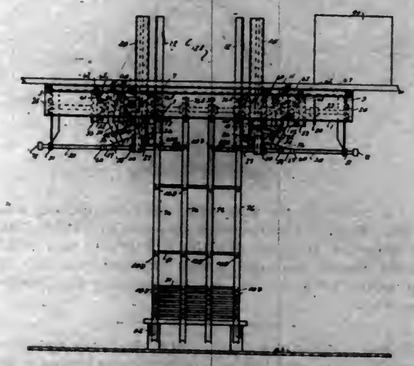
1. Change-speed gearing, comprising a driving shaft, a sleeve shiftable axially thereon in either direction and



formed with a single one-piece screw of varying pitch, a driven shaft, a wheel secured to the driven shaft and provided with a set of teeth for engagement with said screw, and a spring constantly acting on one end of the screw sleeve to force it in one direction.

1,754,698. WIND MOTOR. WALTER S. SCHLOTZHAUER, Douglas, Ariz. Filed July 28, 1927. Serial No. 209,055. 4 Claims. (Cl. 170—26.)

1. A wind motor including a drive shaft, hubs carried by the shaft, spokes carried by the hubs, standards connecting the spokes and having guides carried thereby, vanes pivotally connected between the spokes, latch bars slidable in the guides for engaging the vanes to arrest the swinging movement thereof, levers pivotally connected to certain of the spokes and with the latch bars, yieldable connections between the shaft and levers, said levers being operable by centrifngal force to withdraw the latches to permit free swinging of the vanes, and independent means for swinging the levers for disengaging the latches from the vanes.

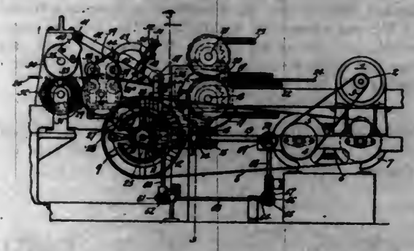


1,754,699. LOADING MACHINE. LOUIS F. SNYDER, Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1929. Serial No. 359,512. 12 Claims. (Cl. 37—190.)

1. A feeding device for loading machines including a rotatably mounted spirally disposed radial feeding web portion having a lateral flange at the outer periphery thereof, and said flange having teeth in its free edge.

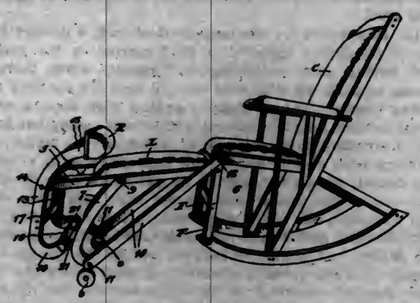
1,754,700. VENEER STACKER. EMMET G. STACK, Marshfield, Oreg. Filed Mar. 6, 1928. Serial No. 259,512. 13 Claims. (Cl. 214—6.)

1. A machine for building loads of veneers and the like, comprising: a base; a series of stock hoppers suspended therefrom and adaptable to receive stock at their upper end; means adjacent to their lower end operable to discharge the stock simultaneously from the several hoppers in predetermined quantities; means whereby stickers are



placeable where wanted to receive the discharged stock; two spaced drive shafts carried by the base; a series of lowering means depending from the drive shafts in operable relation whereby the stickers and imposed stock are positioned in the load being built.

1,754,701. RECEDE AND SET WORKS. EMMET G. STACK, Marshfield, Oreg. Filed May 22, 1928. Serial No. 279,741. 6 Claims. (Cl. 143—114.)



1. In a sawmill carriage recede and set in combination with the headblocks and knees and the set shaft for moving the knees, a driving means including: a driving sprocket operating the set shaft; an idler sprocket mounted on means pivoting about the axis of the driving sprocket and engaging a chain supported by its ends parallel to the travel of the sawmill carriage, so that said means and the idler sprocket may be operated to raise the chain into engagement with the teeth of the driving sprocket whereby the chain acts as a rack for the driving sprocket during the movement of the carriage in either direction.

1,754,702. WEB-CUTTING MACHINE. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Nov. 30, 1928. Serial No. 322,986. 23 Claims. (Cl. 164—68.)

1. The combination with web-cutting mechanism and mechanism for feeding a web thereto, said mechanisms being adapted to be cooperatively operated at different speeds, of means variable with changes in speed of said mechanisms for varying the amount of web extending between the web-feeding and web-cutting mechanisms.

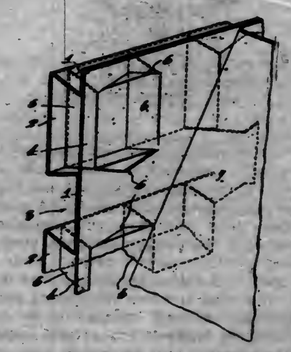
1,754,703. FRONT-PROPELLING ROCKING-CHAIR. EDGAR L. SWINDLER, San Antonio, Tex., assignor of one-third to Nettie Lillian Swindler, San Antonio, Tex. Filed May 28, 1929. Serial No. 365,371. 6 Claims. (Cl. 155—70.)

1. In combination with a rocking chair; a leg support extending forwardly from the chair and having longitudinal side bars, two legs pivoted at their upper ends to said side bars on transverse axes, floor-engaging rollers on the lower ends of said legs, two rearwardly inclined bars pivoted on transverse axes to the lower ends of said legs, and means pivoting the rear ends of said inclined bars and the rear ends of the aforesaid side bars to the upper front portion of the rocking chair on transverse axes.

1,754,704. SWIMMER'S DEVICE. JOHN L. WILCOX, Seattle, Wash. Filed May 7, 1928. Serial No. 275,612. 1 Claim. (Cl. 9—21.)

As a new article of manufacture, a swimming mit of sheet metal or other like stiff material and comprising a body portion of a general oblong shape with an extension at one end thereof to engage the wrist of the wearer, said body portion being formed with an air tight chamber therein of less length and width than the length and width of the body to provide marginal flanges at the front and side edges respectively of the body, a bridge member rigid with the body and extending transversely thereof and in spaced relation therewith to receive the hand and permitting freedom of movement to the thumb and fingers of the hand, and means provided upon the body extension for firmly securing the same to the wearer's wrist.

1,754,705. RAILWAY CAR. WILLIAM E. WINN, Toledo, Ohio. Filed May 19, 1928. Serial No. 279,019. 19 Claims. (Cl. 105—228.)



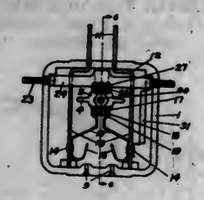
1. A railway car body bolster having portions adapted to be secured to opposite sides of the car center sill and provided with top and bottom plate members and with a plurality of transverse webs connecting the plate members, the webs and plate members being provided with marginal flanges.

1,754,706. HANDLE FOR MANUALLY-PROPELLED IMPLEMENTS. CHARLES A. XARDELL, Utica, N. Y., assignor to The Bossert Corporation, Utica, N. Y., a Corporation. Filed Nov. 27, 1925. Serial No. 71,681. 1 Claim. (Cl. 287—54.)

In a two-piece, T-shaped handle the combination of a main handle consisting of one piece of sheet metal formed into a tube with opposite portions of the tube cut away at the upper end of the handle and forming edges in the line of the main handle adapted to receive the thrust from a cross handle and with the remaining portions of the main handle at that end extended and meeting and secured to each other forming an eye and a cross handle consisting of one piece of sheet metal formed into a tube and permanently and rigidly secured in said eye and seating directly against said edges whereby end thrust is transmitted directly to a longitudinally extending portion of the main handle, said cross-handle being pre-formed to have its central portion closely fit within the eye of the main handle and to have portions of enlarged diameter immediately beyond the eye to prevent longitudinal movement of the cross-handle relative to the eye.

1,754,707. MATERIAL FOR BUILDING AND OTHER PURPOSES. LUDWIG S. BAIRD, Portland, Oreg. Filed Jan. 19, 1929. Serial No. 333,601. 16 Claims. (Cl. 72—116.)

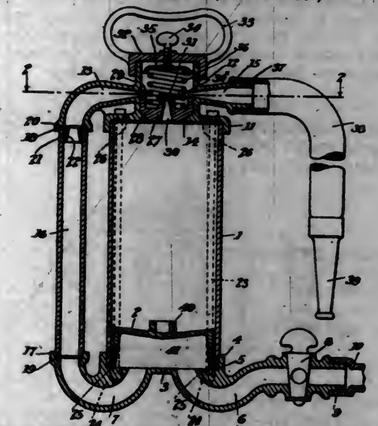
15. In material of the class described, a sheet having parallel corrugations constituting alternate ribs and



grooves, a reinforcing sheet over one face of said corrugated sheet, flaps carried by said reinforcing sheet and projecting into said ribs and lying transversely thereof, thereby providing spaced transverse partitions in the length of the ribs.

1,754,708. APPARATUS FOR CLEANING AUTOMOTIVE POWER PLANTS. IRA J. BEVINS, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 99,788. 1 Claim. (Cl. 299—107.)

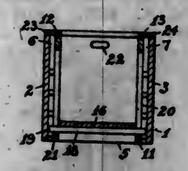
In a jet nozzle, a hose bibb, a substantially rigid tube extending from the end of said bibb, said bibb having a portion of lesser diameter than its main body to which the fluid conductor hose may be attached and a central bore extending therethrough, said central bore serving as a fluid duct to and as a mounting for said tube, said rigid tube having a straight portion adjacent its attachment to said bibb an outwardly curved portion at the end of said straight portion, a reverse curved portion extending from said outwardly curved portion and a terminal portion relatively shorter than any of the aforesaid portions and angularly offset from the common plane of said curved portions.



1,754,709. COMBINATION CONNECTER AND LIGHTNING ARRESTER. LEON S. BEACH, East Orange, N. J. Filed June 11, 1929. Serial No. 370,084. 20 Claims. (Cl. 175—80.)

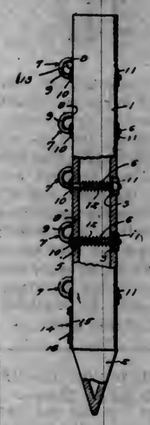
1. An arrester including a two-part casing of insulating material, a metallic stud passing through said casing and serving to hold the two parts together as well as a grounding stud, a pair of spaced metallic members disposed within the casing away from said stud, but having associated contacting members extending toward the stud and supporting a piece of silicon carbide between their ends and against said stud, said casing having openings in one wall thereof, said contacting members also having portions disposed in alignment with said openings to be engaged by sliding plug members inserted through said openings, said metallic members having ends protruding from the casing for engagement with a lighting socket member, a metallic member extending across the interior part of the casing but spaced from said stud and said pair of metallic members, contact studs connected to the ends of said cross member and protruding through the casing to receive the incoming and outgoing ends of an antenna circuit, an arm extending from said cross member terminating in a holder, and a piece of silicon carbide carried in said holder against said stud.

10. In a device for the purpose described, a divided casing of insulating material, a stud carried by the casing and having ends projecting on opposite sides thereof, means cooperating with said ends to hold the parts of the casing together and to clamp a ground wire thereto, electrical contact members housed within said casing but having protruding parts, certain of which are to make connections with an antenna circuit and others with a lighting circuit, means for passing an extension plug through the wall of the casing into contact with said other contact members, and spark gap means within the casing for both circuits, said means including said stud as a grounding device, and a filter condenser within the casing connected from the antenna circuit to at least one of the contact members adapted to be connected to the lighting circuit.



1,754,710. HYDRAULIC SPRAYER. JOHN D. DAVENPORT, Laurel Canyon, Calif. Filed Apr. 23, 1928. Serial No. 272,206. 3 Claims. (Cl. 299—85.)

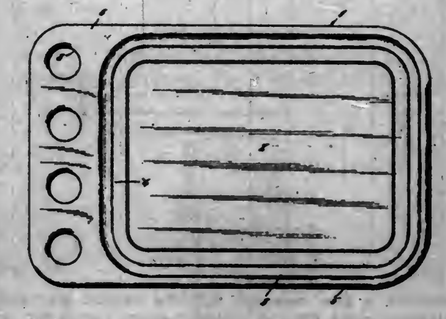
1. A mixer and spray comprising a solution cylinder, a piston in said cylinder above which solution is placed, the lower end of said cylinder being formed with an inlet and an outlet, a mixing chamber on the upper end of said cylinder provided with an inlet and an outlet, a pipe connecting the cylinder outlet and the inlet of the mixing chamber, a valve in said mixing chamber provided with a port leading from the upper end of said cylinder into said mixing chamber, means for restricting the passage in said pipe to provide a back pressure in the lower end of said cylinder to raise the piston and force solution from the cylinder through said port into the mixing chamber when water under pressure is allowed to pass through said cylinder inlet, the lower end of the cylinder, cylinder outlet, said pipe, said mixing inlet, mixing chamber and mixing outlet, whereby the solution is mixed in said chamber and forced out through said mixing chamber outlet, a spring for normally holding said valve below said inlet and said outlet of said mixing chamber, and means on said piston for engaging said valve and moving it against the tension of said spring to close the inlet and outlet of said mixing chamber when all the solution in said cylinder is forced therefrom.



1,754,711. DISPLAY CASE. BERNARD R. GAY, Cleveland, Ohio. Filed Nov. 12, 1917. Serial No. 282,841. 6 Claims. (Cl. 217—64.)

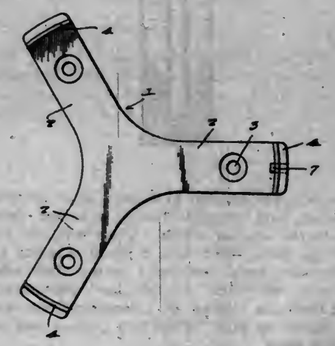
6. In a display case, the combination of a frame, a case within the frame, the case being adapted to move forwardly and vertically relative to the frame, the case having a vertically movable bottom, the frame having racks at its rear end and near its forward end, the racks extending in a forward horizontal direction, said bottom being fixed to transverse beams, the ends of the beams ex-

tending beyond the edges of said bottom and adapted to rest upon said racks, the case having slots for receiving said extending ends of said beams, and the lower ends of said slots serving to support the extending ends of said beams for causing movement of said bottom when said case is lifted vertically.



1,754,696. FISHING TOOL. JOHN M. SAULS, Seminole, GARTNER, Carroll, Nebr. Filed Feb. 14, 1929. Serial No. 339,987. 3 Claims. (Cl. 256—54.)

2. The combination with a fence post body, of a wire holder comprising a substantially J-shaped bolt having the long side thereof reciprocably extended through the post body, a nut carried upon the terminal of said long end and slidably mounted in one wall of the body, and a spring surrounding the bolt and interposed between said nut and an opposite wall of the body and acting to draw the hooked end of the bolt against an outer face of the body to maintain a fence wire in position thereagainst, said nut being mounted to reciprocate with the bolt in an aperture in the wall of the post of the same configuration as and snugly receiving itself.

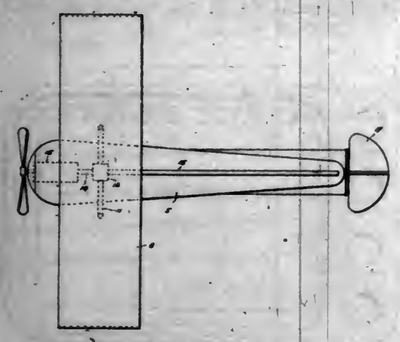


1,754,713. SERVING TRAY. CLIFTON H. GREEN, Nashville, Tenn. Filed Dec. 18, 1928. Serial No. 325,830. 1 Claim. (Cl. 65—53.)

In a serving tray of the class described, a bottom of substantially rectangular shape, upstanding side and end walls connected together at their adjacent ends to form a continuous rim, a lateral extension formed on the upper edge of one of the walls and extending for the full length thereof, said extension being provided with a series of spaced ice cream cone receiving and supporting openings, the upper edges of the remaining walls being rolled, the edge of the extension being rolled, the upper face of said

extension lying in the same horizontal plane with the upper edge portion of each of the walls that extend upwardly from the bottom of the tray.

1,754,714. BRACKET. LORENZ GUNDRUP, Springfield, Ill. Filed Feb. 23, 1926. Serial No. 90,220. 1 Claim. (Cl. 248—20.)

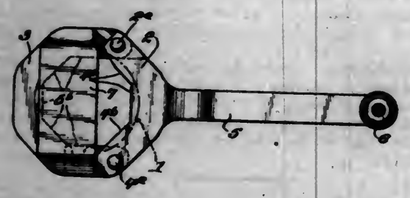


As a new article of manufacture, a bracket constructed from a single piece of metal and including a central portion, and a plurality of equi-distantly spaced arms extending radially from the central portion, the arms and the central portion all being disposed in the same horizontal plane, an upstanding ear formed on the outer end of each arm, the inner face of each ear being curved, one of the upstanding ears being of greater height than the other ears, and a stationary transverse pin extending inwardly from the longer ear and disposed in a plane above the upper edges of the other ears as and for the purpose described.

1,754,715. AEROPLANE. ISAAC E. HANSON, Oklahoma City, Okla. Filed Apr. 9, 1928. Serial No. 268,571. 2 Claims. (Cl. 244—31.)

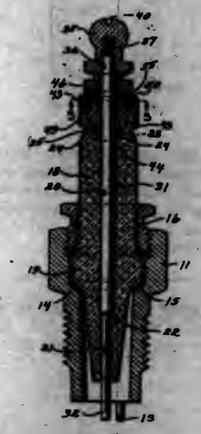
1. In an aeroplane of the class described, a fuselage, a pair of wings mounted on the fuselage, air chambers on the wings, pipes connecting the air chambers, branches

leading inwardly from the pipes, an exhaust pipe, a drum about the exhaust pipe with which the branches com-



municate, a pipe connected with the exhaust pipe and extending along the top of the fuselage rearwardly to terminate at the rear end thereof.

1,754,716. ANTICATHODE FOR DISCHARGE TUBES. GILLES HOLST, GOTTFRIED BRUNO JONAS, and ALBERT BOUWERS, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Mar. 8, 1926, Serial No. 93,174, and in the Netherlands Apr. 17, 1925. 5 Claims. (Cl. 250—35.)

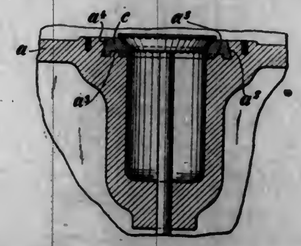


1. An electrode adapted to be used as an anticathode in X-ray tubes, said electrode having a hollow chrome-iron portion to the edge of which a glass wall can be sealed, said portion being filled with a metal of great heat conductivity, said metal bearing a metal block adapted to emit X-rays, the metal of great heat conductivity being shut off from the interior of a discharge tube when used therein partly by said chrome-iron portion and partly by said metal block.

1,754,717. HUB-CAP WRENCH. ROBERT L. HUGHENS, Atlanta, Ga. Filed Apr. 29, 1929. Serial No. 358,884. 1 Claim. (Cl. 81—98.)

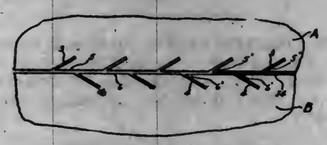
A wrench for hub caps having a handle and diverging arms forming jaw faces extending therefrom, an outer substantially U-shaped member having jaw faces on its inner side and pivoted at one end to one of said diverging arms, the other end of said U-shaped member adapted to be locked to the other of said diverging arms, said U-shaped member having a bridge integrally attached thereto in offset relation to the open space of the jaws of said U-shaped member on opposite sides thereof.

1,754,718. SPARK PLUG. EARL J. JOHNSON, Silverbow, Mont. Filed Feb. 11, 1927. Serial No. 167,556. 2 Claims. (Cl. 123—169.)



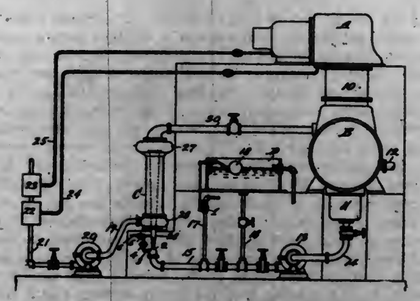
1. A spark plug, an insulating core having an axial way therethru and elongated keyways extending longitudinally of and opening into the way at the outer end of the core, a stem removably extending thru the way, and retaining means for the stem comprising a plug embodying elongated keys slidably fitting in said keyways with the outer ends of the keys flush with the outer end of the core and an externally threaded extension projecting past the outer ends of the keys, a retaining cap embodying a plate portion in overlying engagement with the outer ends of the keys and a ring portion for crimped engagement circumferentially of the core, and a terminal head carried by the outer end of said stem for threaded connection with the threaded extension of said plug.

1,754,719. WATERSHED FOR DOORS AND METHOD OF MAKING IT. LOUIS H. LEHMAN, Philadelphia, Pa. Filed Sept. 27, 1926. Serial No. 137,837. 4 Claims. Cl. 20—16.)



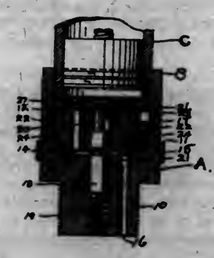
1. A water shed for doors, comprising a body portion having upwardly extending spaced flanges, one of which is slotted, the top face of said body portion inclining laterally and towards one end of the water shed.

1,754,720. EXPANDED VALVE SEAT. AUGUST H. LEIPERT, College Point, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Original application filed June 5, 1928, Serial No. 282,988. Divided and this application filed May 4, 1929. Serial No. 360,361. 4 Claims. (Cl. 251—167.)



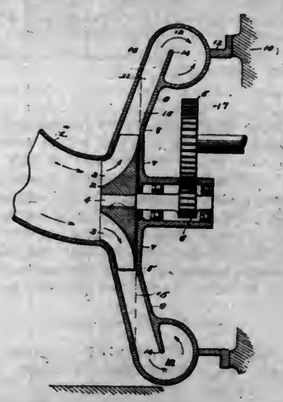
3. A valve seat construction comprising a cylinder casting formed with an annular groove, an undercut portion formed in the vertical wall of the groove, a rib formed on the horizontal walls of the groove and protruding thereinto, and a valve seat in the groove.

1,754,721. METHOD OF WELDING. WALTER R. LINDEN, Palisades Park, N. J., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed Mar. 9, 1926. Serial No. 93,518. 12 Claims. (Cl. 113—112.)



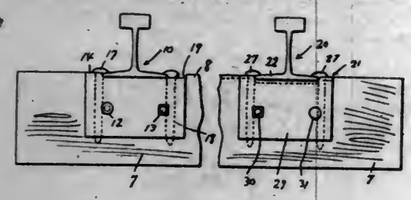
1. A method of butt-welding metal sheets that comprises cutting slots at intervals into the sheet edges to be united; disposing such slotted edges in opposed relation with the open ends of the slots in one sheet opposite the tongues formed between the open ends of the slots in the other sheet; and depositing weld metal along such opposed edges and in said slots.

1,754,722. EVAPORATING OR DEGASIFYING APPARATUS. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 3, 1925. Serial No. 47,671. 7 Claims. (Cl. 183—2.5.)



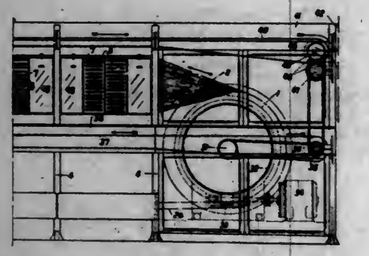
1. A degasifier having a vertical tube with a receiving water inlet at the lower end, a vapor and gas chamber at the upper end and into which the tube opens, means for carrying off the vapor and gas from said chamber and maintaining a predetermined pressure therein, a steam inlet for supplying heating steam to the water column, and means for controlling the amount of steam supplied to the water column in accordance with the water flow to the tube.

1,754,723. GREASE-GUN CONNECTION. ROBERT E. MCGAHEY, Alexandria, Va. Filed Oct. 16, 1928. Serial No. 312,813. 4 Claims. (Cl. 284—4.)



1. A grease gun connection comprising rotatably separable units, one unit providing a conduit, a valve mounted to slide longitudinally of the unit and transversely across the conduit and to open and close said conduit at the limits of its movement, a spindle carried by said valve and extending slidably through one of said units, means carried by the other unit for engaging the spindle and moving the valve, said last mentioned unit having a passage at all times in communication with the conduit at any relative rotary position of the parts.

1,754,724. SUPERCHARGER CONSTRUCTION. GEORGE J. MEAD, Hartford, Conn., assignor to The Pratt & Whitney Aircraft Co., Hartford, Conn. Filed Oct. 18, 1926. Serial No. 142,332. 4 Claims. (Cl. 230—127.)

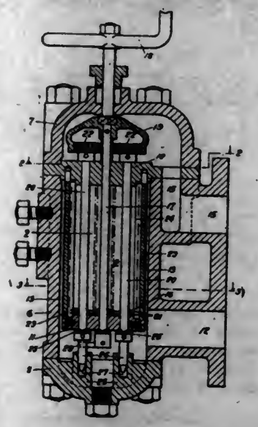


1. A supercharger for internal combustion engines including a diffuser casing, a fuel inlet pipe, an impeller within the diffuser casing, a shaft for the impeller, and speed multiplying gearing for the impeller shaft, the said diffuser casing slanting from the fuel inlet pipe toward said gearing, the said impeller terminating within the inner and outer extremities of the diffuser casing in such manner that the line of vertical axis of the impeller crosses the diffuser casing at a point intermediate the inner and outer extremities thereof, and beyond the impeller therein, for the purposes set forth.

1,754,725. RAIL CHAIR. JOHN M. POWERS, Valley Falls, N. Y. Filed June 18, 1929. Serial No. 371,843. 1 Claim. (Cl. 238—299.)

A rail chair of the character described comprising a web portion having transversely extending slots adjacent its longitudinal marginal sides for the passage of anchoring spikes, said web portion being further provided, on its upper face, with a longitudinally extending raised marginal portion providing a rail engaging shoulder intersecting the respective slot, all of the slots being of a size to permit the spikes to be shifted therein to permit the rail to be shifted laterally and secured in shifted position on the web portion.

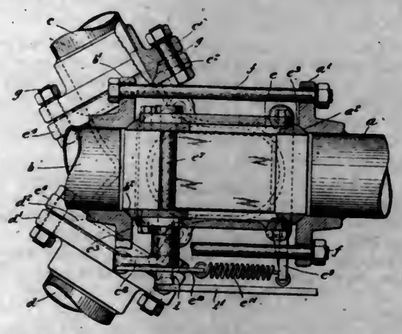
1,754,726. APPARATUS FOR SORTING LETTERS, PACKETS, AND OTHER ARTICLES. ALEXANDER GEORGE STRATHERN, Glasgow, Scotland. Filed May 2, 1929, Serial No. 359,978, and in Great Britain May 18, 1928. 3 Claims. (Cl. 198—42.)



1. Apparatus for sorting letters, packets or other articles comprising a housing provided with a series of slotted grids, a driving pulley at one end of said housing, a plurality of endless bands arranged in superposed relation upon said pulley and diverging from the upper side of said pulley so that the upper flights of said bands are spaced apart, said upper flights extending substantially horizontally along said housing opposite the slots in said grids, and chutes located at the return bends of said bands for collection of letters or the like delivered by said bands.

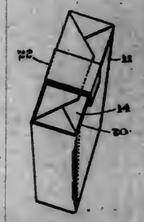
1,754,727. SEALING COMPOUND. HENRY B. SWAAB, Philadelphia, Pa. Filed May 16, 1929. Serial No. 363,719. 5 Claims. (Cl. 106—8.)

5. A composition for sealing joints comprising a body material consisting of asbestos, molasses and a preservative.



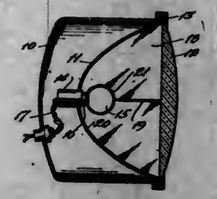
1,754,728. FILTERING OR LIKE DEVICE. HERBERT ALEXANDER THOMPSON, Morpeth, England, assignor of one-half to Swinney Brothers Limited, Morpeth, England, a Corporation of Great Britain. Filed Feb. 14, 1929, Serial No. 339,976, and in Great Britain Jan. 17, 1929. 4 Claims. (Cl. 210—152.)

1. In a filter device, the combination of a plurality of annular laminations spaced along a main spindle, said laminations being movable axially of but rotatable with said main spindle, a subsidiary parallel spindle mounted internally of said laminations in fixed bearings, scraper elements which are movable axially on said subsidiary spindle but rotatable therewith, said scraper elements



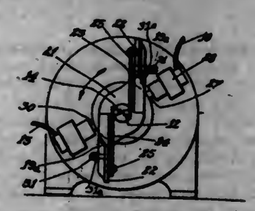
being arranged to extend into the spaces between said laminations, means applying a suitable tension to the assembly of laminations and scraper elements, and means interconnecting said spindles to provide synchronous rotational movement thereof.

1,754,729. HEATER VALVE. HAROLD G. TRAVER, Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 10, 1926. Serial No. 128,342. 1 Claim. (Cl. 137—69.)



In a device for directing the flow of exhaust gases in a motor vehicle, in combination, a straight hollow center section, flanges on and surrounding said section near the ends thereof, convexly curved faces of circular cross-section on the flanges, straight aligned sections of an exhaust pipe at opposite ends of the center section and normally in line therewith, flanges on and surrounding said pipes near the ends thereof, concavely curved recesses on the last-named flanges normally receiving the first-named flanges in abutment throughout their respective curved surfaces, bolts connecting the flanges on the said sections of the exhaust pipes through holes formed in the flanges to hold them against the center section to make gas-tight joints, the diameters of the bolts being appreciably smaller than those of the holes, a pipe rigidly attached to and opening into the center section, and a valve means in the center section adapted to direct exhaust gases either through said last-named pipe or straight through the aligned sections of the exhaust pipe.

1,754,730. CIGARETTE PACKAGE. JOHN H. VAN SICKELS, Montreal, Quebec, Canada, assignor to British-American Tobacco Company Limited, New York, N. Y., a Corporation of England. Filed Mar. 12, 1927. Serial No. 174,820. 4 Claims. (Cl. 206—46.)

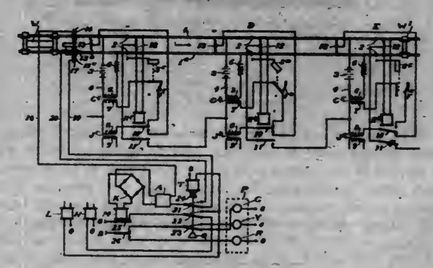


1. A cigarette package comprising inner and outer flexible paper sheets folded to provide wrappers completely enclosing the cigarettes, the outer wrapper being provided with a preformed notch through which one corner only of the inner wrapper is exposed whereby the tearing of the inner wrapper to expose the cigarettes is facilitated.

1,754,731. HEADLIGHT. ALBERT J. WALKER, Hamilton, Ontario, Canada. Filed May 23, 1929. Serial No. 365,328. 4 Claims. (Cl. 240—48.2.)

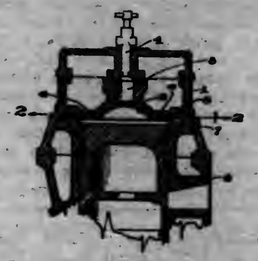
1. The combination with a headlight reflector; of a pair of partitions intersecting each other at right angles and fitted in the reflector with the line of intersection coaxial with the reflector, said partitions being connected to fold flat one on the other throughout their extent.

1,754,732. ELECTRICAL VOLTAGE REGULATOR. CHARLES WOLF, Worcester, Mass. Filed Apr. 6, 1928. Serial No. 267,912. 11 Claims. (Cl. 171—229.)



1. In a voltage regulating apparatus, a power supply circuit, a generator supplying said circuit, a field circuit for said generator, means for varying the value of the strength of the generator field including a pair of relatively movable yieldingly supported contact members and a rotary element with said contact members symmetrically disposed thereon with respect to the axis of rotation of said element and with both of said members movable away from each other in response to an increase in the centrifugal force developed by the rotation of said element.

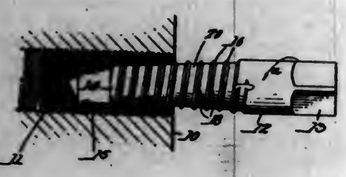
1,754,733. AEROPLANE GLIDER FUSELAGE. LESTER N. YOHE, New Oxford, Pa. Filed Apr. 27, 1929. Serial No. 358,684. 7 Claims. (Cl. 244—30.)



1. In an aircraft, a stream line fuselage having a concaved lower side, and laterally projecting airfoils having their lower surfaces at their inner ends aligning with the side edges of the concaved lower side of the fuselage.

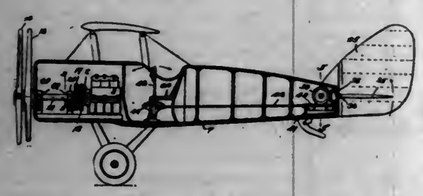
1,754,734. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. WALTER P. ALLEN, Jersey City, N. J., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1926. Serial No. 141,974. 7 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising means for at times supplying alternating current to the track rails in series but not in multiple, and for at other other times supplying alternating current to the track rails in multiple but not in series, apparatus on a train receiving energy from the track rails and including a manually operable member for conditioning the apparatus to be effectively responsive to current flowing in the track rails in series or to current flowing in the track rails in multiple, and governing mechanism on the train controlled by said apparatus and arranged to retard the train unless the apparatus is conditioned to respond to the current flowing in the track rails at the point occupied by the train.



1,754,735. INTERNAL-COMBUSTION ENGINE. JAMES C. BARNABY, Westerleigh, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Dec. 30, 1927, Serial No. 243,509. Divided and this application filed July 27, 1929. Serial No. 381,594. 5 Claims. (Cl. 123—32.)

1. An internal combustion engine including a cylinder a cylinder head and a piston and having a combustion



chamber therein of less diameter than the cylinder bore, said cylinder head provided with a plurality of angularly disposed grooves in its under surface opening out at their inner ends into the said combustion chamber, said piston and cylinder head co-operating towards the end of the compression stroke to force gas from the perimetric portion of the cylinder through said grooves into said combustion chamber.

1,754,736. SCREW EXTRACTOR. ELMER J. BRYANT, Greenfield, Mass., assignor to Greenfield Tap & Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Dec. 28, 1929. Serial No. 417,217. 6 Claims. (Cl. 81—71.)

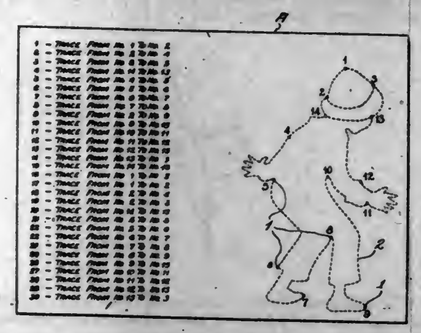
1. A screw extractor comprising a shank having a tapered end portion, said end portion being provided with a thread of the opposite hand to the screw to be extracted and being longitudinally fluted, and the threads being spaced apart on said end portion to provide a spiral tapering blank surface of substantial widths between the threads.

1,754,737. AEROPLANE. WILLIAM EDWARD BURKS, Kerrville, Tex. Filed July 21, 1928. Serial No. 294,471. 1 Claim. (Cl. 244—29.)

The combination with a fuselage and a rudder mounted to swing laterally relative thereto, of a transverse shaft extending loosely through the rudder and journaled on the fuselage, elevators carried by the end portions of said shaft and at opposite sides of the rudder, said elevators being spaced to permit lateral swinging of the rudder, a gear secured to and rotatable with the transverse shaft, a guide fixedly mounted in the fuselage, a rack mounted to slide in the guide, an intermediate gear constantly in mesh with the gear on the shaft and with the rack for transmitting motion from the rack to the shaft, an actuating lever, and means extending straight from the lever to the rack for transmitting motion to the rack and the parts actuated thereby.

1,754,738. GAME. EUGENE F. CALLE, Brooklyn, N. Y. Filed Apr. 20, 1928. Serial No. 271,524. 5 Claims. (Cl. 273—130.)

1. A game including a series of cards, each bearing indications so arranged that when connected in predetermined sequence the outline of a figure will be formed, each indication having an identifying character, dice, and a



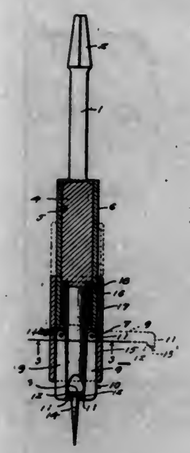


table on each card containing the sums of possible casts of the dice and the values thereof in terms of indications to be connected.

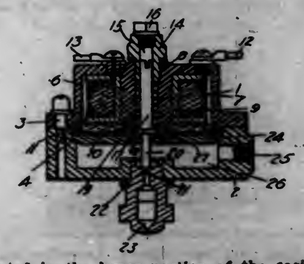
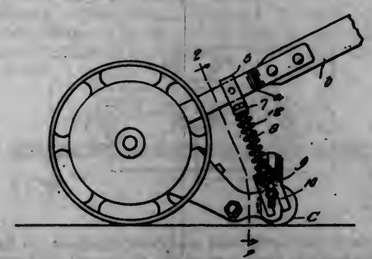
1,754,739. SCREW-HOLDING SCREW DRIVER. JOSEPH E. CALVERT, Livingston, Mont. Filed July 16, 1929. Serial No. 378,778. 2 Claims. (Cl. 145—52.)



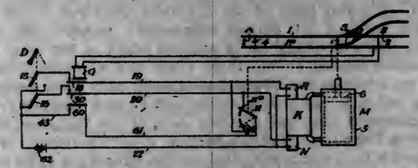
1. A screw holding screw driver, comprising a driver shank having a threaded portion, a sleeve having threaded engagement with said portion for movement longitudinally of the shank, screw holding elements carried by the sleeve adjacent the working end of the shank, and an outer sleeve shiftable on and longitudinally of the first sleeve for engaging and holding the screw holding elements in a desired position, said outer sleeve having limited movement upon the first mentioned sleeve controlled by a pin carried by one of the sleeves slidably engaging in a slot in the other sleeve.

1,754,740. MAGNETIC VALVE. ALICK CLARKSON, Stratford, Ontario, Canada, assignor to Brooks Steam Motors, Limited, Stratford, Ontario, Canada, a Company of Canada. Filed Oct. 6, 1928. Serial No. 310,846. 3 Claims. (Cl. 137—139.)



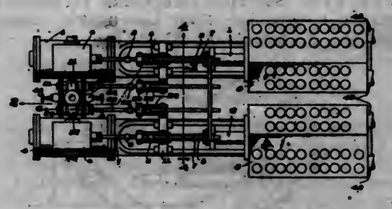
1. A liquid fuel valve comprising a casing, an electromagnet located in the upper portion of the casing, a core forming part of the casing extending through the magnet

and having a central orifice, a spring resisted stem supported within the orifice, an extension to the stem forming a needle valve, a needle valve seat coacting with the needle



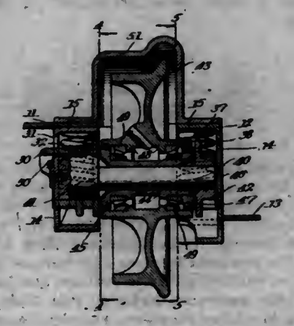
valve located in the lower portion of the casing, a disc armature engaging the stem when drawn upward by the magnet and a spray nozzle carried by the casing through which the oil is fed from the valve seat.

1,754,741. PRESSURE-EXERTING ATTACHMENT FOR LAWN-MOWER ROLLERS. POPE COBB and ARTHUR S. ROSE, Brownsville, Tenn. Filed Feb. 4, 1928. Serial No. 251,908. 2 Claims. (Cl. 56—249.)



1. An attachment for lawn mowers wherein the lawn mower embodies a roller supporting structure, comprising a pair of inverted substantially U-shaped brackets adapted to be secured over the handle carrying bars of the lawn mower in a rigid manner, a laterally extending tongue formed on the free end of the outermost arm of each of said brackets, additional brackets adapted to be secured adjacent the ends of the lawn mower roller supporting structure, each of said last mentioned brackets being formed at its upper end with a laterally disposed tongue, bolts slidably disposed through the tongue of the U-shaped brackets, the heads of the bolts engaging with the said last mentioned tongues, the threaded ends of said bolts being secured to the laterally disposed tongues of the respective brackets adapted to be carried by the roller supporting structure, and expansible coil springs convoluted about the bolts for disposition between the respective pairs of tongues for exerting a downward pressure on the roller of the lawn mower.

1,754,742. APPARATUS FOR CONTROLLING RAILWAY SWITCHES. DELBERT F. COBOURN, Portsmouth, Oh'o, assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 14, 1929. Serial No. 362,925. 2 Claims. (Cl. 246—258.)

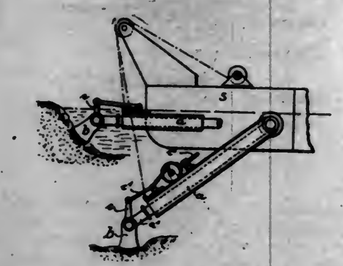


1. In combination, a switch valve comprising a first and a second magnet, a railway switch operable to a first or a second position as controlled by said first or said second magnet respectively, a relay controlled by traffic conditions and having a front contact and a back contact, a switch contact closed when said switch is in said first position, a second switch contact closed when said switch is in said second position, a first circuit for said first magnet controlled by said front contact of said relay, a second circuit for said first magnet including said back contact of said relay and said first switch contact, a circuit for said second magnet, and a second circuit for said second magnet including said back contact of said relay and said second switch contact.

1,754,743. PUMPING ENGINE. PAUL DIEDERICHS, Brooklyn, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Jan. 24, 1927. Serial No. 163,028. 11 Claims. (Cl. 121—114.)

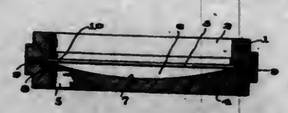
1. The combination, with a pair of direct acting pump engines, each having a steam valve gear, of a duplex valve gear connected in series with said valve gears of the engines for controlling flow of motive fluid to the single valve gears, and by-passes to permit passage of a limited amount of motive fluid to said single valve gears independently of the duplex valve gear.

1,754,744. JOURNAL-BOX MOUNTING. GLENN E. EDMUNDS, Franklin, Ohio, assignor to The Bonney-Floyd Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 29, 1929. Serial No. 359,050. 13 Claims. (Cl. 105—169.)



1. In a mining car, a truck of the independent stub axle type comprising inner and outer side frames, each of said frames having seats therein, a journal box arranged to be removably mounted on said seats, yieldable means for normally urging said journal box into engagement with said seats, a stub axle carried by said journal box, and a wheel mounted on said axle.

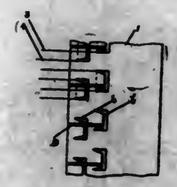
1,754,745. ROLLING STRIP METAL. CHARLES H. ELLIOTT, Youngstown, Ohio, assignor to Republic Iron and Steel Company, Youngstown, Ohio, a Corporation of New Jersey. Filed June 13, 1929. Serial No. 370,685. 7 Claims. (Cl. 80—60.)



1. In the method of rolling metal in backed mills, the steps consisting in passing material through successive roll stands, engaging its edges between stands to guide it and maintaining it sufficiently flat in the several passes to permit of controlling it by side guides.

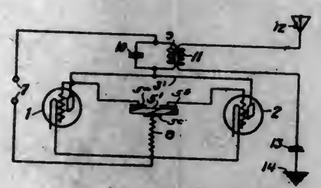
1,754,746. SUCTION DREDGER. FRIEDRICH EWIG, Brunswick, Germany. Filed June 6, 1928. Serial No. 283,350. 6 Claims. (Cl. 37—58.)

3. In a suction dredge, the combination with a suction pipe, of a nozzle mounted adjacent the lower end of the pipe, a rotatable shaft carried by said pipe, and a crank driven by said shaft and connected to said nozzle for imparting reciprocating movement thereto during the dredging operation.



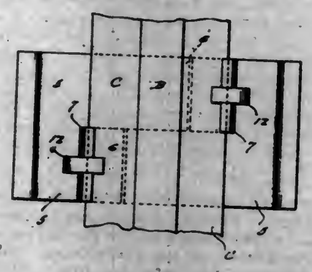
1,754,747. VALVE. HARRY A. FELDBUSH, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 18, 1928. Serial No. 293,685. 2 Claims. (Cl. 251—119.)

1. The combination of a valve seat having one or more ports, one or more thin elastic plate forming valves free to permit uniform bending, an abutment block having abutment surfaces for said valve plates, and wear resisting buttons inserted in the abutment block at each end of each of the abutment surfaces, said buttons having part of their upper surfaces milled to continue and form the terminals of the abutment surfaces, said milled surfaces terminating in abrupt shoulders whereby the entire abutment surfaces will be inwardly of the valve seat engaging surface of the abutment block.



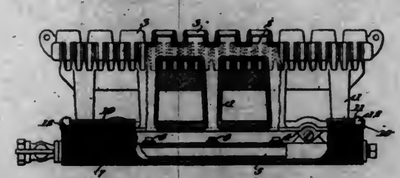
1,754,748. ELECTRIC INSECT DESTROYER. ANSON J. FROST, Spokane, Wash. Filed July 9, 1926. Serial No. 121,478. 7 Claims. (Cl. 43—112.)

1. An electric insect destroyer comprising a frame, insulating strips at the opposite sides of said frame, each of said strips being provided with two rows of slots, the slots of one row being staggered with respect to the slots of the other row, said strips being provided with



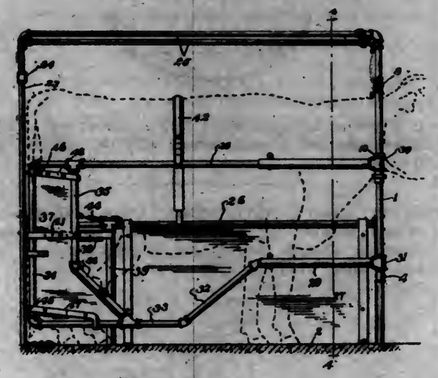
slots extending from one edge of the strips and through a slot in each of the rows of slots and wires supported in said first named slots.

1,754,749. SHORT-WAVE GENERATOR. FELIX GERTH, Berlin-Tempelhof, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Jan. 9, 1928, Serial No. 245,554, and in Germany Jan. 13, 1927. 3 Claims. (Cl. 250—36.)



1. In a push-pull tube generator, wherein, in addition to the normal frequency there is present a double frequency, an oscillating circuit connected in the anode circuit and tuned to this double frequency, and a utilization circuit to which said oscillation circuit is coupled.

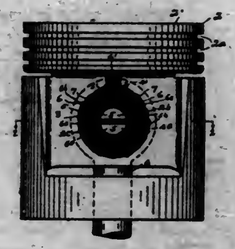
1,754,750. RAIL PLATE. HARRY L. GORDION, The Dalles, Oreg. Filed July 8, 1929. Serial No. 376,660. 2 Claims. (Cl. 238—290.)



1. In a rail plate of the character described, a pair of plate sections for partial engagement between the rail base and supporting tie at opposed edges of the base, extensions formed at the inner edges and at opposed ends of each section for disposition adjacent each other beneath the rail base and means at the end of each extension for engagement over the adjacent edge of the rail base, said means being formed with a vertical notch for registry with a notch in the opposite plate section whereby a spike may be driven through said registering notches for engagement with the base of the rail.

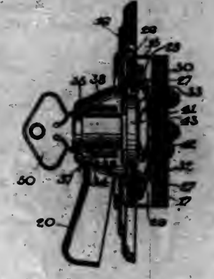
1,754,751. AIR FILTER FOR GAS BURNERS. GEORGE L. GRAYSON and CURTIS E. KNIGHT, Athens, Ohio, assignors to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed July 15, 1926. Serial No. 122,660. 7 Claims. (Cl. 158—99.)

1. The combination with the burner manifold and the spaced gas supply manifold of a radiant gas heater, of an air strainer comprising wire gauze extending along and surrounding the gas manifold, and wire gauze end flaps closing the ends of the strainer, whereby foreign particles are separated from all air entering the burner manifold.



1,754,752. COW STALL. JAMES F. GRIM, Comstock, Nebr., assignor of one-half to Louie E. Grim, Comstock, Nebr. Filed Aug. 10, 1926. Serial No. 128,439. 3 Claims. (Cl. 119—27.)

1. An apparatus for the purpose set forth comprising an open frame consisting of a pair of fixed front posts, a pair of fixed rear posts, the rear posts being spaced apart a greater distance than the front posts, cross bars rigidly connecting the front posts, a cross bar rigidly connecting the rear posts near their upper ends, diagonally disposed braces rigidly connecting the upper ends of the front and rear posts, a side bar rigidly connecting the front and rear posts at one side of the frame and located at an intermediate point in the height thereof, and a gate forming a closure for the opposite side of the frame and mounted upon the front post at the said side, said gate extending the full length of the frame and means whereby the rear free end of the gate may be held to said side bar or at a set distance therefrom.

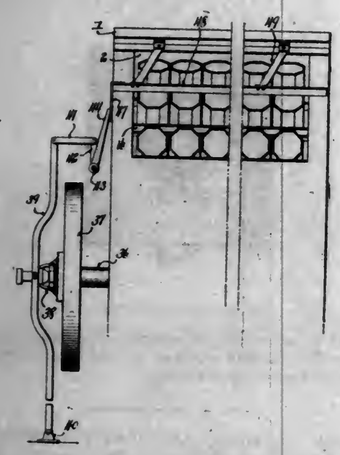


1,754,753. SELF-ADJUSTING WRIST PIN. CHARLES A. ISELIN, Fulton, N. Y., assignor of one-half to Erving Iselin, Syracuse, N. Y. Filed Nov. 4, 1929. Serial No. 404,683. 5 Claims. (Cl. 74—108.)

1. A non-expansible wrist-pin formed with spaced longitudinal grooves in its external surface, the facing sides of said grooves being radial, springs engaging said radial sides, and take-up bars loosely disposed in said grooves

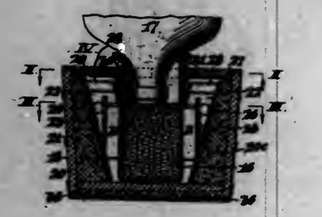
adapted to be moved in opposite directions laterally by the tension of said springs to take up looseness due to the wearing of the wrist-pin.

1,754,754. LIGHTING AND IGNITION SWITCH. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Continuation of application Serial No. 753,890, filed Dec. 4, 1924. This application filed Apr. 15, 1925. Serial No. 23,269. 6 Claims. (Cl. 200—11.)



1. In a switch, a switch-case having a closed end, a front-plate secured to the end of the switch-case, a handle member having an outwardly extending flange fitting in a space between the front-plate and the end of the switch-case, a lock barrel fitting in an opening of the handle member and bearing on the end of the switch-case, a lock sleeve surrounding the lock barrel and engaging the end of the switch-case so as to be incapable of turning, and a spring between the lock sleeve and the handle member.

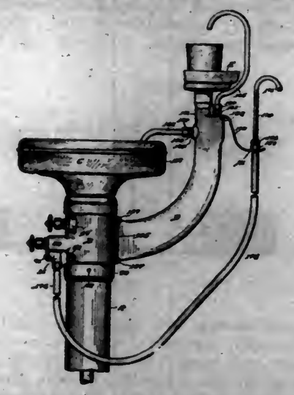
1,754,755. BOTTLE-WASHING MACHINE. HERMANN KRAUSE, Menomonee Falls, Wis., assignor, by mesne assignments, to Stout Manufacturing Company, Menomonee Falls, Wis. Filed July 7, 1927. Serial No. 204,074. 2 Claims. (Cl. 192—125.)



1. A bottle washing machine comprising a compartment housing bottle cleaning means and having an entrance opening, bottle advancing means located within said compartment and adapted to receive bottles through said entrance opening, a transversely mounted guard bar controlling the operation of said bottle advancing means and mounted adjacent said advancing means, whereby said

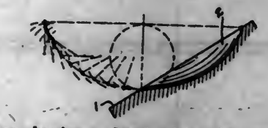
guard bar will be struck by a bottle displaced from said bottle advancing means, and a pair of links pivoted at one

end to a stationary portion of the machine and pivoted at the other end to said bar, whereby lateral swinging of said bar is permitted.



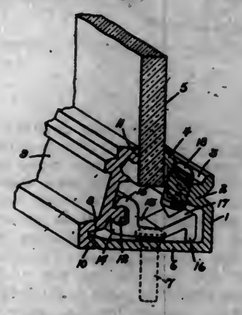
1,754,756. LIQUID COOLER. THOMAS S. MERRYLEES, Yeadon, Pa. Filed Aug. 10, 1928, Serial No. 298,675. Renewed Sept. 7, 1929. 12 Claims. (Cl. 62—91.5.)

1. Conversion means of the character described for liquid coolers of the fountain type—wherein an ice receptacle surrounds a jar receiving the liquid to be cooled from an inverted supply container—comprising a body of thermo-insulation to fill the space around the jar within the receptacle aforesaid but with provision of flanking chambers each just large enough to accommodate a standardized unit block of solidified carbon dioxide in contact with the jar.



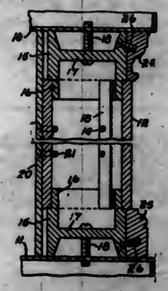
1,754,757. FOUNTAIN CUSPIDOR. CLARENCE W. MOORE, Roslyn, Pa., assignor to Ritter Dental Manufacturing Company, Inc., Rochester, N. Y., a Corporation of Delaware. Filed Nov. 30, 1926. Serial No. 151,736. 27 Claims. (Cl. 4—263.)

1. In a cuspidor a unitary drainage and distributing head comprising a cast metal body having a plurality of communicating drainage passages including a main substantially vertical passage, the walls of the passages being formed of the cast metal, a water distributing system disposed within the cast metal of the head out of contact with the drainage passages and formed in part at least of pre-formed conduits and valve seats, a water inlet being disposed in the lower part of the head toward one side thereof, the discharge from said head being sub-



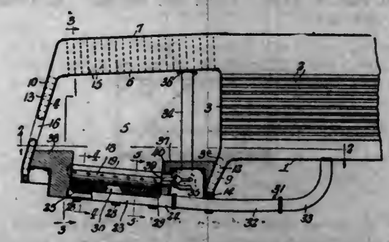
stantially perpendicular to the main drainage passage and on a side of the head peripherally spaced from the water inlet.

1,754,758. INTERNAL-COMBUSTION ENGINE. CHARLES H. MUCKENHIRN, Detroit, Mich. Filed Sept. 1,1928. Serial No. 303,392. 11 Claims. (Cl. 123—191.)



1. A piston having a head with a depression therein with said depression being formed with the curvature of a cycloid.

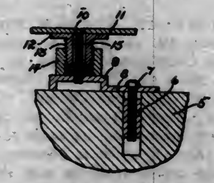
1,754,759. SASH CONSTRUCTION. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Feb. 29, 1928. Serial No. 257,804. 7 Claims. (Cl. 20—56.4.)



1. In a sash construction, a front clamping member and a rear clamping member having coengaging edges, the line of engagement constituting an axis about which one of said members is relatively adjustable to clamp the glass, a draw plate, and means acting upon the draw plate to effect the clamping action, said draw plate and one of the clamping members having coengaging portions, one of said portions forming flanges curved toward each other and having opposed coaxial cylindrical faces of equal radii and the other of said portions forming a bead with convex faces fitting within said cylindrical faces to constitute a hinge connection.

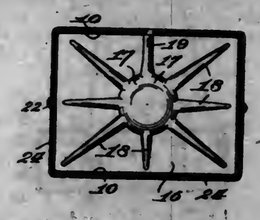
1,754,760. CORNER-BAR CONSTRUCTION FOR STORE FRONTS AND THE LIKE. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed June 2, 1928. Serial No. 282,831. 3 Claims. (Cl. 189—78.)

1. In a construction of the class described, a hollow substantially cylindrical column, anchors secured in abutting relation to the ends of said column and having reduced portions extending beyond the abutting surfaces and fitting into the ends of the column to prevent lateral displacement of the same, said column being in two sections, one of said sections having internal flanges lapping the interior face of the other section and secured thereto, said reduced portions of the anchors having recesses into which the end portions of said flanges fit, and rails secured to said column for mounting glass holding members.



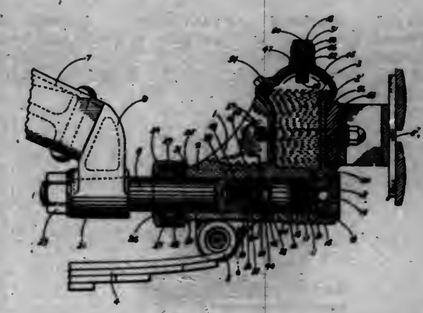
1,754,761. LOCOMOTIVE BOILER. ARTHUR WM. NELSON, Park Ridge, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed June 18, 1928. Serial No. 286,444. 4 Claims. (Cl. 122—68.)

1. A locomotive boiler construction embodying therein a barrel and a firebox having sheets forming parts of the front, rear and side water legs of the boiler, a pair of relatively flat hollow water heating and circulating elements disposed in the firebox and each extending downwardly and inwardly from an associated side sheet, means providing an intake for boiler water from the barrel of the boiler connected to the inner rear end portion of each element and other means providing an outlet for the outer front end portion of each element and opening through one of the sheets of the firebox and discharging into adjacent boiler water space.



1,754,762. ADJUSTABLE FRAME SETTING. CHARLES G. NELSON, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed July 18, 1928. Serial No. 293,704. 2 Claims. (Cl. 20—12.)

1. In a building construction having an opening, the combination of a fixed member adjacent the opening, a nut normally bearing against said fixed member, a screw threaded into said nut but normally terminating short of said fixed member, a seat comprising the head of said screw, a jamb member resting against said seat, said nut being adjustable to vary the distance between said jamb

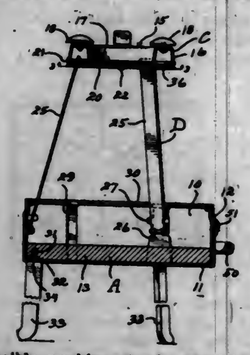


member and said fixed member, and a screw threaded fastening member connecting the jamb member directly to said fixed member and adjustable to secure the jamb member tightly against said seat, said screw having a central bore through which the fastening member freely passes.

1,754,763. THERAPEUTIC PAD. JOSEPH MARCUS NUNNALLY, Hollywood, Calif. Filed Feb. 13, 1928. Serial No. 254,022. 4 Claims. (Cl. 128—254.)

1. In a therapeutic pad, a frame, a porous member arranged in said frame and having an exposed face, a heating element within the holder behind said porous member and a frame carried by said holder and adapted to be moved forwardly therefrom beyond the exposed face of said porous member.

1,754,764. FLUID-SEALING MEANS. JOHN A. OLSON, Cleveland, Ohio, assignor to Ruth M. Olson, Cleveland, Ohio. Filed May 18, 1929. Serial No. 364,035. 8 Claims. (Cl. 74—109.)



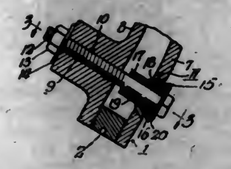
1. A fluid pressure device comprising a cylinder and a piston movable therein, said piston having an expandable annular flange extending from one end thereof, said annular flange being weakened circumferentially near its base and also axially and having an inclined inner surface, a cap movable relatively toward and away from the piston, and packing means to prevent the ingress of fluid under pressure into the space between the cap and the piston, said packing means including a flexible packing member interposed between the flange and the cap and

engaging the said inclined inner surface, to expand the flange into fluid sealing contact with the cylinder walls when fluid pressure is exerted against the cap to move the latter toward the piston.

1,754,765. COKING COAL. SAMUEL W. PARR and THOMAS B. LAYNG, Urbana, Ill., assignors, by mesne assignments, to Urbana Coke Corporation, Urbana, Ill., a Corporation of Delaware. Filed Oct. 31, 1918, Serial No. 260,541. Renewed Sept. 21, 1923. 30 Claims. (Cl. 202—9.)

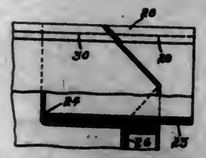
1. A process of coking coal which comprises heating the material uniformly throughout its mass to a temperature below but near that at which it becomes viscous before applying a coking temperature to any substantial part thereof, fusing the material to a pasty condition throughout its mass while quiescent and then coking the mass.

1,754,766. COLLAPSIBLE CIGAR STAND. STANTON PHILLIPS, Atlantic City, N. J. Filed Apr. 1, 1929. Serial No. 351,788. 6 Claims. (Cl. 248—41.)



1. A collapsible smoking stand comprising a receiving case embodying an annular body portion, legs pivotally connected at their lower ends to the inner side of the annular body and collapsible into the body, an ash tray slidably fitting over the upper end of the legs when the legs are extended, and means rotatably carried by the ash tray for locking engagement with the upper end of said legs.

1,754,767. HANDLE ATTACHMENT. RUSSELL R. POTTER, New York, N. Y., assignor, by direct and mesne assignments, to Durable Brush Co., Inc., a Corporation of New York. Filed Oct. 7, 1927. Serial No. 224,537. 1 Claim. (Cl. 306—10.)



In a device of the class described, in combination with an article to be provided with a handle, of a handle attachment comprising a handle provided with a metal strip secured to one end thereof and having an extending portion adapted to be secured to the article, said article being provided with a groove in which said metal strip is snugly positioned, the extending portion of said metal strip positioned in said groove being snugly engaged throughout its length by the side walls of said groove to prevent relative turning of said parts, fastening means on said article adapted to secure said strip securely in position in said groove and also permitting the same to be removed therefrom and to be reversed in position.

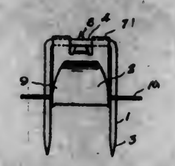
1,754,768. LIQUID-DISCHARGE NOZZLE. HARRY W. PROTZELLER, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Feb. 23, 1927. Serial No. 170,295. 5 Claims. (Cl. 299—130.)

1. A liquid discharge nozzle embodying therein a casing having a discharge orifice therein, a valve member extending through said orifice and normally out of engagement therewith, and means providing a rigid support for said member and upon which it is capable of a limited lateral floating movement so as to be centered with respect to said orifice by the pressure of the liquid being discharged.

1,754,769. VALVE BAG AND METHOD OF MAKING THE VALVE. JOHN C. REDINGTON, Geneva, Ill., assignor, by mesne assignments, to St. Regis Paper Company, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1928. Serial No. 260,437. 15 Claims. (Cl. 150—9.)

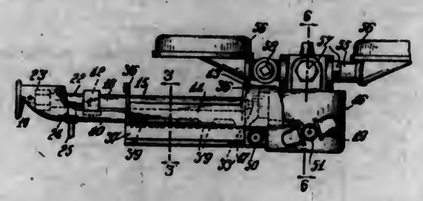
3. A valve bag comprising a tubular portion having one corner folded in to form an inlet opening and a valve-flap extending from the folded-in corner, said flap having its end extending outward through said opening.

1,754,770. FASTENER. HARRY A. SALLOP, New York, N. Y. Filed June 28, 1927. Serial No. 202,118. 1 Claim. (Cl. 24—217.)



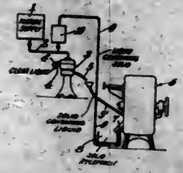
A fastener device comprising a head having a substantially rectangular opening, the wall of which is slit at spaced points to allow portions of the wall to be flexed laterally to allow a stud element to be snapped thereby for movement into abutting relation with the non flexible portion of the wall.

1,754,771. PROCESS OF MAKING CURVED ROOFING ELEMENTS AND PRODUCT THEREOF. LESTER KIRSCHBRAUN, Chicago, Ill., assignor to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 1, 1923, Serial No. 665,805. Renewed Dec. 24, 1927. 24 Claims. (Cl. 92—67.)



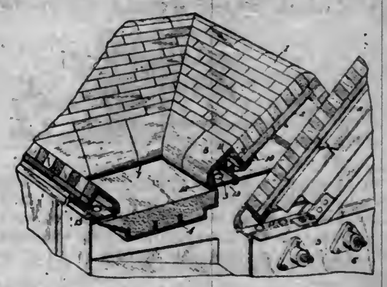
1. A process of producing roofing elements having curved surfaces comprising sheeting a fibrous stock into a wet web, forming said sheeted fibrous stock into a tube from the wet web, drying the tube and slitting the same longitudinally and transversely into roofing elements of predetermined size and configuration.

1,754,772. FASTENER. HARRY A. SALLOP, New York, N. Y. Original application filed Jan. 5, 1928, Serial No. 244,707. Divided and this application filed Jan. 21, 1929. Serial No. 333,993. 3 Claims. (Cl. 24—150.)



1. A fastener comprising a double pointed pin having a U-shaped head including a cross bar, a plate having a fastener element and a hinged member applied to the cross bar between the limbs of the pin and a locking element on the plate extending rearwardly therefrom.

1,754,773. GAS GENERATOR AND DISTRIBUTOR. GUSTAVE F. SCHMIDT, Hollywood, Calif. Filed Dec. 12, 1927. Serial No. 239,350. 12 Claims. (Cl. 158—53.)

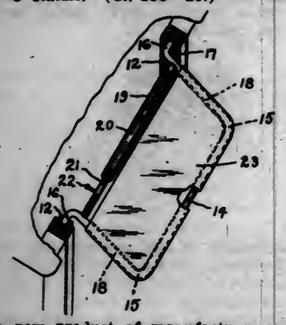


1. A device of the character described comprising a chambered casting provided with a mixing chamber, a distributing chamber having communication with the mixing chamber, a pilot feeding chamber having communication with said mixing chamber in advance of the point of communication between the mixing chamber and distributing chamber, a metallic tube mounted at one side of the casting adjacent to the inlet end of the mixing chamber, a non-porous non-metallic tube arranged within and in snug fitting relation with said metallic tube and having minute oil passages therethrough arranged out of contact with said metallic tube, said passages at the discharge ends of the tubes terminating in a common passage of larger dimensions to permit expansion of the vaporized oil, and a valve provided with a stem disposed through and in close fitting relation with said inner tube for controlling the discharge of the vaporized fuel into said mixing chamber.

1,754,774. SEPARATION OF MIXTURES. LAURENCE P. SHARPLES, Chester, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 16, 1927. Serial No. 233,607. 9 Claims. (Cl. 233—18.)

1. In the separation of mixtures of solids with liquids the process comprising, progressively subjecting the mixture to the influence of centrifugal force and thereby separating it by sedimentation into a substantially pure liquid component and a second component comprising substantially all of the solid constituent of the mixture and some of the liquid, centrifugally discharging said second component continuously from the periphery of the body of substances under the influence of centrifugal force, while separately discharging said first component from the influence of centrifugal force, and subjecting said second component to the influence of centrifugal force and thereby separating it into a substantially liquid-free solid component and a component comprising liquid containing some of the solid.

1,754,775. LINING BORDER. MAX C. SHERMAN and LEIGH P. HOYT, Philadelphia, Pa., assignors to Frank H. Dunbar, Cleveland, Ohio. Filed Feb. 25, 1926. Serial No. 90,471. 8 Claims. (Cl. 110—1.)

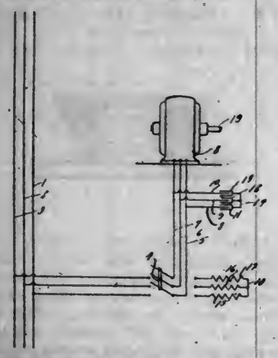


1. A furnace bottom having a refractory lining and provided with an opening therethrough, and recessed metal blocks engaging the lining and surrounding the opening, the recess opening outwardly of the furnace bottom.

1,754,776. CLOSURE FOR BOTTLES OR BAGS. STANLEY J. STANLEY, New York, N. Y. Filed Apr. 11, 1928. Serial No. 269,079. 3 Claims. (Cl. 150—3.)

2. In a closure for bottle necks, a neck having an outturned flange, a stopper for said neck, a shoulder projecting outwardly from said stopper to overlie said flange, said shoulder formed of a material including hard resin and having a strong affinity for rubber, a rubber gasket interposed between said flange and shoulder, and the said neck and stopper provided with means for bringing the shoulder forcibly against said gasket.

1,754,777. SUNSHADE FOR VEHICLES. FRED STONE, Gladewater, Tex. Filed Aug. 24, 1925. Serial No. 51,977. 5 Claims. (Cl. 156—15.)

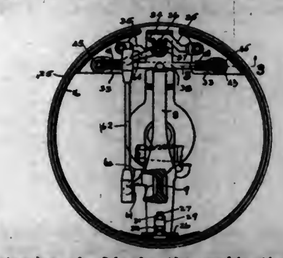


1. As a new product of manufacture, an awning for automobiles comprising a U-shaped wire frame, the end portions of the arms directed laterally outwardly and the extremities directed downwardly at right angles to said lateral portions and at a substantially acute angle to the major portions of said arms, said extremities being resilient, a connecting strip between the arms adjacent the lateral bends, and a covering for said frame, said covering being connected at its ends with said arms and along one longitudinal side with the bight portion of the frame.

1,754,778. RAIL CLEANER AND GUARD FOR RAILROAD SPREADERS. VSEVOLOD G. TRELLIS, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Dec. 24, 1926. Serial No. 156,795. 6 Claims. (Cl. 37—105.)

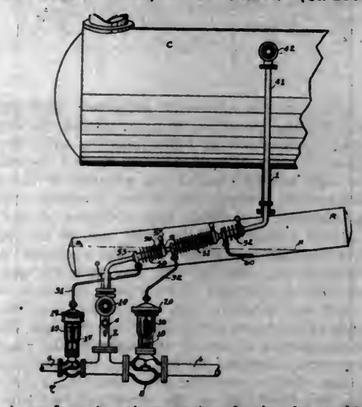
4. In combination with a railroad spreader including a front plow and apron and a main spreader wing terminating rearwardly of said apron, a rail cleaner guard positioned between but independent of said wing and said apron, and means for vertically guiding said rail cleaner guard.

1,754,779. DYNAMO-ELECTRIC CONTROL SYSTEM. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 14, 1925. Serial No. 75,314. 8 Claims. (Cl. 172—274.)



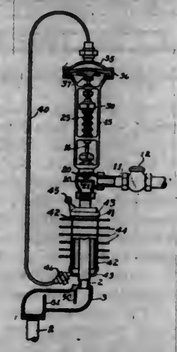
1. In a motor control system, a polyphase alternating current motor, a condenser, a power line, a resistance, and means to connect the motor and condenser with the power line, or in parallel with the resistance.

2. In a motor control system, a multi-speed polyphase alternating current motor of the induction type having different circuits for different speeds, a condenser, a resistance, a power line, and means to connect the power line and condenser with any one of said circuits or to close one of said circuits through the resistance and condenser, said resistance and condenser being in parallel.



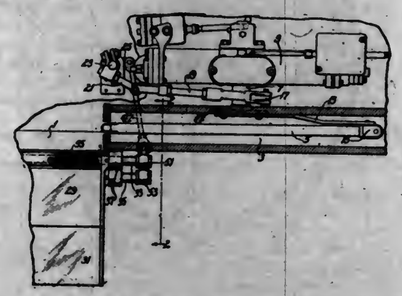
3. In a motor control system, the combination with a polyphase alternating current motor having a winding provided with a set of terminals, of dynamic braking means for said motor, said braking means comprising a resistance for each phase, means for connecting said resistance and winding upon the disconnection of said winding from a source of energy, and a static condenser for each phase permanently connected to said winding and parallel to the resistance, whereby said winding is excited by said condenser.

1,754,780. MULTIPLE WHEEL BRAKE FOR AUTOMOTIVE VEHICLES. FRED A. TRUESDELL, Cleveland, Ohio, assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1922. Serial No. 586,134. 6 Claims. (Cl. 188—194.)



1. In a steering wheel brake, the combination of an axle, a steering knuckle, a steering wheel, a brake drum attached to said wheel, a brake for said drum, and brake operating mechanism comprising an operating member mounted on the steering knuckle, a member mounted on said axle, and an intermediate member connected to said other two members an dnormally having its axis parallel to the axis of the steering knuckle but being adapted to be moved angularly during the turning of said wheel to gradually release the brake in direct proportion to the wheel turning movement.

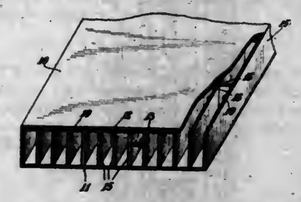
1,754,781. DRAINAGE CONTROL. JOSEPH M. BARRETT, Fostoria, Ohio, assignor to The Swartwout Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 19, 1926. Serial No. 149,439. 25 Claims. (Cl. 236—56.)



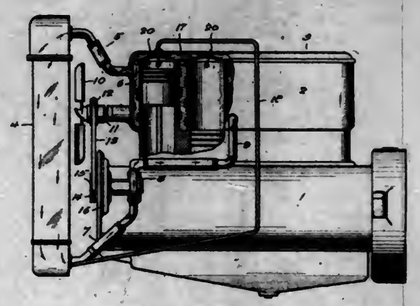
1. A condensate return system having in combination a receiver, a plurality of pressure generators associated therewith, discharge lines leading from the receiver, a plurality of valves controlling the discharge lines, said valves being arranged to operate successively in said lines, a plurality of means inculding pressure responsive devices connecting the valves with the generators whereby one valve is operable in varying degrees within a range of predetermined condensate levels in the receiver and a second valve becomes operative within a higher range of condensate levels to increase the discharge from the receiver while the first valve is maintained in a maximum open condition.

1,754,782. AIR-RELIEF VALVE. JOSEPH M. BARRETT, Fostoria, Ohio, assignor to The Swartwout Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 26, 1926. Serial No. 150,867. 10 Claims. (Cl. 236—64.)

1. In an air relief valve for a chamber containing steam, the combination of a valve, a conduit leading from the chamber to the valve, means tending to force the valve open, pressure responsive means for closing the valve, means including a compartment containing an expansible fluid surrounding the conduit between the chamber and the valve adapted to create a pressure depending upon the heat content of the fluid in the conduit, whereby the valve is actuated according to the heat content of the fluid in the conduit.



1,754,783. STEP. JOHN ROBERT BLACKHALL, Joliet, Ill. Filed May 9, 1927. Serial No. 189,869. 3 Claims. (Cl. 105—437.)

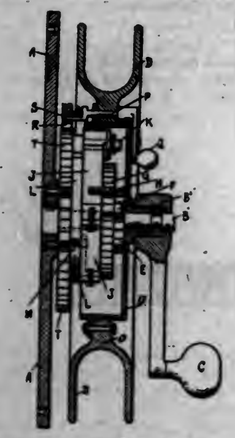


1. The compound folding step comprising two steps hinged below an entrance, means for simultaneously folding said steps from extended positions to folded positions and means for separately counter-balancing the weight of each step.

1,754,784. COMPOSITE FIBER BOARD. MORRIS BORSODI, Brooklyn, N. Y. Filed July 16, 1927. Serial No. 206,308. 1 Claim. (Cl. 154—2.)

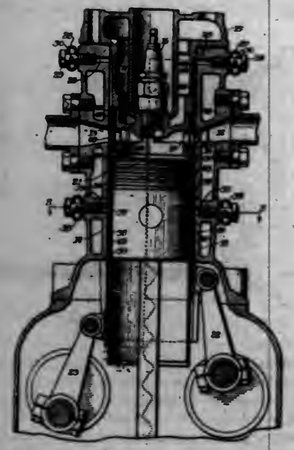
The method of forming composite structures comprising two parallel spaced apart boards and spacing and reinforcing ribs interposed between said boards and united therewith by a cementitious material, which consists in, first, clamping the ribs in spaced relation in a form so as to permit the major portions of said ribs to extend beyond said form, second, dipping the exposed portions of said ribs into a cementitious material and placing the said ribs with the form uppermost onto one of said boards to permit the cementitious material to run down the faces of said ribs onto said board to form, when dried, ridges along the contact lines of said ribs and said board, third, drying the cementitious material, fourth, inverting the structure so obtained and dipping the free portions of said ribs into a cementitious material, fifth, placing the ribs with the first board thereon onto a second board and permitting the cementitious material to run down the faces of said ribs onto said second board to form, when dry, ridges along the contact lines of said ribs and said second board, and, sixth, permitting the cementitious material applied to said ribs during the second dipping operation to dry.

1,754,785. INTERNAL-COMBUSTION ENGINE. ROBERT F. BROWN, Baltimore, Md. Filed June 28, 1927. Serial No. 202,145. 3 Claims. (Cl. 123—170.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. The combination with an internal combustion engine having a water jacket surrounding the cylinder and compression chamber, of a water cooling system including a radiator, connections between the upper part of the cylinder water jacket and the top of the radiator and between the lower part of the cylinder water jacket and the lower part of the radiator adapted to produce circulation of the cooling fluid in the water jacket surrounding the cylinder only and a steam outlet pipe at the top of the compression chamber water jacket, connected with said water cooling system.

1,754,786. WINCH. THOMAS ADAMS EAST, Wallington, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 29, 1924, Serial No. 746,465, and in Great Britain Oct. 30, 1923. 6 Claims. (Cl. 254—186.)

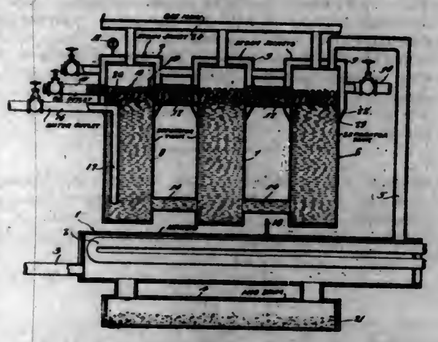


1. In a winch, the combination of a frame, a spindle, and a drum mounted thereon, with an escapement movement actuated by the said drum, comprising an escapement wheel, a rocker arm and pallet pins mounted thereon, and an oscillator connected to said rocker arm, a ratchet carried by said drum and pawls carried by said escapement wheel

for causing said escapement movement to become inoperative upon rotation of said drum in one direction, a second

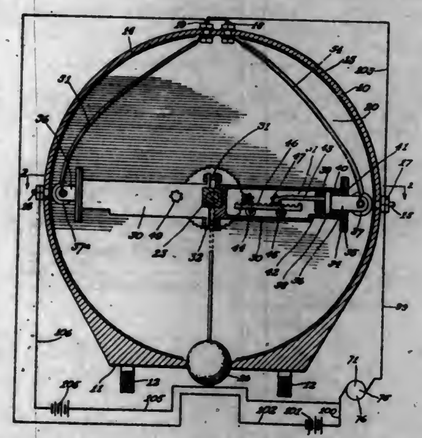
ratchet mounted upon said frame, a second pawl carried by the said drum and means for causing said latter ratchet and pawl to become inoperative at will.

1,754,787. SLIDING VALVE CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. HOWARD A. FLOGAUS, Detroit, Mich., assignor to Ralph L. Skinner, Detroit, Mich. Filed May 26, 1928, Serial No. 280,775. Renewed Sept. 14, 1929. 6 Claims. (Cl. 123—196.)



1. In an internal-combustion engine, the combination of a cylinder, a cylindrical sleeve inside of said cylinder, a piston reciprocatory in said sleeve, a valve slidable between and lengthwise of said cylinder and sleeve, means to reciprocate said valve, means to lubricate said valve, and means to withdraw the excess lubricant from the space along an edge of said valve.

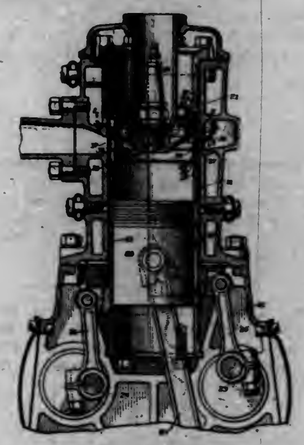
1,754,788. PURIFYING LIGHT-METAL ALLOYS. JOHN A. GANN, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 13, 1923. Serial No. 651,431. 8 Claims. (Cl. 75—17.)



1. A method of purifying magnesium and alloys thereof, which comprises washing the molten metal by agitating and intermingling in a molten bath of a suitable flux and then separating.

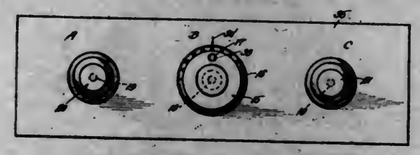
1,754,789. OIL SEPARATOR. HARVEY H. GRACEY, Fort Worth, Tex. Filed Oct. 6, 1925, Serial No. 60,856. Renewed Jan. 11, 1930. 5 Claims. (Cl. 196—5.)

1. In a separator for treating a mixture of oil, water and gas, the combination of a plurality of containers for the mixture, having connections opening communication between the same near the upper end of the containers operating to permit the mixture at the upper levels and in which the oil predominates, to flow horizontally between the containers, means for connecting the containers at a point near their lower ends operating to open communication between the same and permit the liquid at the lower levels in which the water predominates, to flow horizontally between the containers, and heating means confined to the upper ends of the containers at and above the level of the first mentioned connections for heating the upper ends only of the containers in the vicinity of the said upper levels.



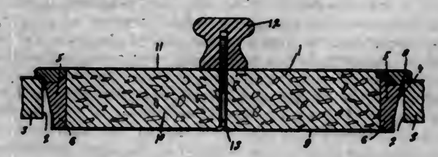
1,754,790. AUTOMATIC CONTROL DEVICE FOR AIRCRAFT. CHRISTIAN GROH, Caldwell, N. J. Filed Nov. 4, 1927. Serial No. 231,053. 31 Claims. (Cl. 244—29.)

1. In an aeroplane having a control surface, a member rigid with the aeroplane, a pendulum pivotally mounted on said member, a support rigid with said pendulum, contact shoes adjacent the ends of said support, members slidable in said support and adapted to contact with said shoes, means carried by said support for moving said slidable members along said support upon rotational movement of said rigid member, draft means connected to said control surface, electrical motive means, said draft means being attached to said motive means, a source of electrical energy, said motive means, slidable members, and



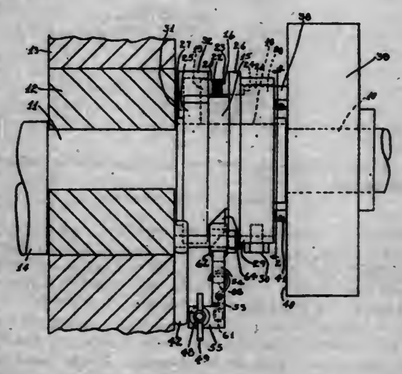
contact shoes being in electrical circuit with said source, said circuit being closed upon contact of one of said slidable members with its adjacent shoe.

1,754,791. INTERNAL-COMBUSTION ENGINE. GEORGE HILL, West Windsor, Ontario, Canada, assignor to Ralph L. Skinner, Detroit, Mich. Filed Feb. 9, 1929. Serial No. 338,643. 3 Claims. (Cl. 123—75.)



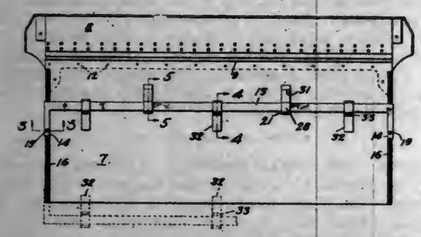
1. In an internal-combustion engine, the combination of an outer cylinder having inlet and exhaust ports, an inner cylinder inside of and spaced inwardly away from said outer cylinder and supported from below with its upper end below said cylinder ports, a piston reciprocatory in said inner cylinder, a connecting-rod joined to said piston and adapted to be connected to a crank-shaft, a split expansible sealing-ring bearing on the upper end of said inner cylinder and having an overlapping joint at its split, said sealing-ring having inlet and exhaust ports in substantial register with said cylinder-ports, an endless hold-down ring bearing on the upper edge of said sealing ring, a cylinder-head for said outer cylinder, spring means bearing on said cylinder-head and hold-down ring to maintain pressure-tight bearings between said sealing-ring and inner cylinder and between said hold-down ring and sealing-ring, expansion ring means between said cylinder-head and hold-down ring preventing fluid pressures in the cylinder from reaching said spring means, inlet and exhaust valves between and slidable lengthwise of said inner and outer cylinders, and means to reciprocate said valves, the joints between said sealing-ring and inner cylinder and hold-down ring being at substantially right-angles to the axis of said cylinder.

1,754,792. INDICATING DEVICE FOR RADIORECEIVERS. CHARLES L. HOPKINS, River Forest, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1925. Serial No. 56,623. 12 Claims. (Cl. 175—41.5.)



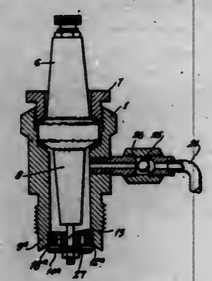
1. In a radio receiving set, a front panel, two independently adjustable elements spaced with respect to each other longitudinally of said panel which should occupy definite positions relative to each other for selective wave length reception, two movable indicator members, means for connecting said indicator members with said adjustable elements respectively, said indicator members being located near enough together so as to be conveniently observed together, the path of movement of the two indicator members being such that their relative positions indicates the relative position of the adjustable elements, and a fixed index cooperating with one of said movable indicator members to indicate the absolute position of one of said adjustable elements.

1,754,793. ICE-CREAM-CABINET CLOSURE. FREDERICK R. JEFFERYS, Cleveland, Ohio, assignor to The Aetna Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 1, 1928. Serial No. 303,477. 8 Claims. (Cl. 220—24.)



1. In a closure for ice cream cabinets, the combination of a disc shaped member, an outside supporting ring of hard rubber surrounding said disc, and an integrally formed soft rubber cone shaped portion of larger diameter at the upper portion of said ring, and a soft rubber flange at the top of said ring extending outwardly from said cone shaped portion.

1,754,794. CLUTCH. WILLIAM H. KAPPES, Cincinnati, Ohio, assignor to The Verdin, Kappes & Verdin Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 21, 1927. Serial No. 234,617. 5 Claims. (Cl. 192—25.)

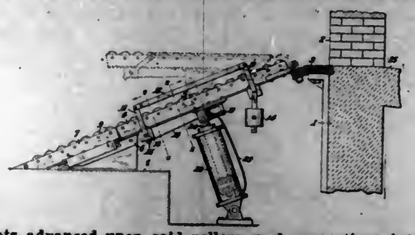


1. In a device of the class described the combination of a constantly revolving driving pin, a retractible clutch block adapted to be engaged by the driving pin, the clutch block having formed thereon an inclined face, a bracket, an arm pivotally mounted on the bracket, a shoe having an inclined face carried by the arm, the inclined face on the shoe being complementary to the inclined face carried by the clutch block and normally in engagement with the face on the clutch block to keep said clutch block in a retracted position, a lug on the arm, a floating lever having one end pivotally connected to the bracket, a nut on the free end of the lever, a spring carried by the lever and having its opposite ends in abutment on the lug and on the nut yieldingly resisting movement of the arm about its pivotal mounting and yieldingly resisting separation of the inclined faces.

1,754,795. TRANSFER BOARD FOR PRINTING PRESSES. EDWARD D. LAWRENCE, Oakland, Calif. Filed Aug. 23, 1928. Serial No. 301,573. 2 Claims. (Cl. 271—58.)

1. A transfer board of the character described comprising a movable plate arranged to have a sheet for printing introduced thereon from over one edge of the plate and removed therefrom over another edge, and means adjustable bodily towards and away from and in a plane substantially parallel to the last named edge and arranged to serve as a stop for an edge of said sheet to prevent the reverse movement of said sheet during the movement of the plate and prior to the removal of the sheet therefrom.

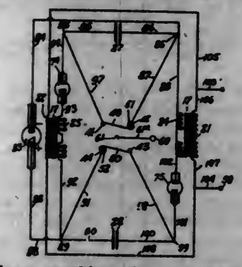
1,754,796. METHOD OF AND APPARATUS FOR KEEPING SPARK PLUGS CLEAN. WILLIAM MCELROY, Brooklyn, N. Y. Filed Dec. 31, 1928. Serial No. 329,616. 4 Claims. (Cl. 123—169.)



1. A spark plug, the central gap electrode of which is carborundum.

1,754,797. PROCESS OF PRODUCING ANHYDROUS ALUMINUM HALIDE FROM A DOUBLE HALIDE OF ALUMINUM AND AMMONIUM. CLAUDE G. MINER, Berkeley, Calif. Filed June 28, 1926. Serial No. 119,234. 14 Claims. (Cl. 23—93.)

1. A process of producing an anhydrous aluminum halide which comprises reacting a double halide of aluminum and ammonium with a phosphorous halide metathesis agent at an elevated temperature to produce anhydrous aluminum halide vapor and a non-volatile residue.



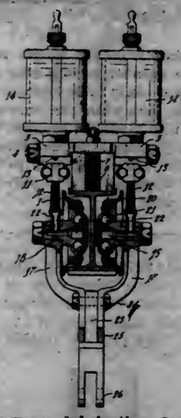
1,754,798. CONVEYER. HOWARD MINER and DUNCAN GRANT, Toronto, Ohio, assignors to Follansbee Brothers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1929. Serial No. 332,379. 1 Claim. (Cl. 214—18.)

In a device of the character described, a conveyer having one end pivotally mounted adjacent to the entrance door of a furnace, said conveyer having a frame and rollers mounted on said frame, said conveyer being normally disposed in an inclined position and adapted to have metal sheets pushed thereon from the floor, a power cylinder associated with said conveyer, a control valve for said cylinder, levers pivoted on said frame adjacent to the opposite ends of the latter, a bar pivotally mounted at its opposite ends upon corresponding ends of said levers, means normally maintaining said levers in upright position wherein their said ends and the thereon mounted bar are elevated above the level of said rollers, said levers and said bar being adapted to be moved to lowered positions by

sheets advanced upon said rollers, and connections intermediate one of said levers and said control valve whereby the latter is normally maintained closed and whereby movement of said levers to lowered positions effects opening of said valve for actuating said cylinder to elevate the conveyer to horizontal position.

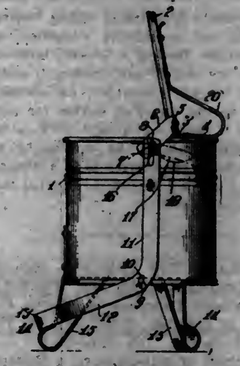
1,754,799. X-RAY MACHINE. ARTHUR MUTSCHELLER, New York, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed Sept. 20, 1926. Serial No. 136,420. 13 Claims. (Cl. 250—84.)

5. In an X-ray machine the combination, with an X-ray tube, of a pair of secondary windings, a pair of valve tubes, one for each secondary winding, a pair of condensers, one for each secondary winding, and a switch connected with all of said secondary windings, valve tubes and condensers, said switch having two normal positions, one for the double purpose of connecting said secondary windings and said valve tubes in series with each other relatively to said X-ray tube and bridging said condenser across the same, the other for the double purpose of throwing said condenser out of action and connecting in parallel with each other, relatively to said X-ray tube, two parallel circuits each containing one of said secondary windings and one of said valve tubes.



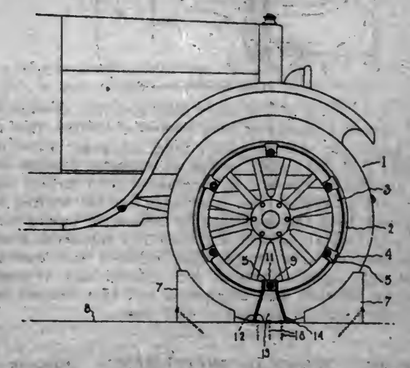
1,754,800. DUPLEX ELECTRIC WAFFLE IRON. EDWARD S. PRESTON, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1929. Serial No. 334,840. 15 Claims. (Cl. 53—10.)

1. A waffle iron or the like comprising a base section, a middle section hinged to the base section, a top section



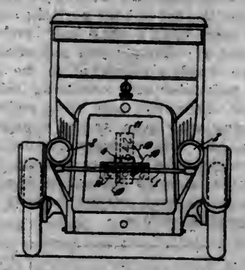
hinged to the middle section, and releasable latching means normally latching the upper section to the middle section to permit these sections to be swung conjointly about the hinged connection of the middle section to the base section, in combination with a handle fastened to one of the upper two sections; the latching means including an actuating member extending slidably through and supported by the said handle.

1,754,801. LUBRICATOR FOR TROLLEY CONVEYERS. ALEXIS R. PRIBIL, Saginaw, Mich. Filed June 9, 1928. Serial No. 284,252. 3 Claims. (Cl. 184—5.)



3. A trolley conveyer lubricating device comprising in combination a trolley rail, trolley wheels adapted to be propelled along said rail, a plurality of arms adapted to be connected together by a chain, axles mounted in the upper ends of said arms and adapted to rotatively support said wheels, bearings supported on said axles, a hollow bore formed in each of said axles, oil receiving cups mounted in said arms and said axles and communicating with said hollow bores, a bracket mounted on said rail, a forked arm pivotally mounted on said bracket, oil containers carried by said forked arms, brushes carried by said forked arm and adapted to be saturated with oil from said containers, and means for resiliently holding said forked arm in a position whereby said brushes are wiped by said oil receiving cups as said trolleys move along said rail.

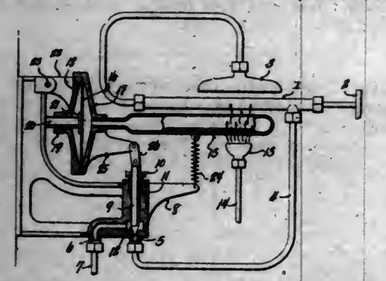
1,754,802. WASTE CAN. WALTHER RASTER, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1927. Serial No. 230,723. 5 Claims. (Cl. 220—86.)



1. A receptacle equipped with a hinged cover and supporting legs at least one of the latter presenting an outwardly extending shoulder portion, a pair of downwardly extending arms at the hinged end of said cover, a stop member arranged to limit the opening movement of said cover, a substantially L-shaped lever presenting two upwardly extending arms engaged with the arms of said cover and pivotally secured at its elbow portions to the receptacle body, the middle portion of said lever disposed for engagement with the shoulder of said leg to limit its pivotal movement in one direction coincidentally with the attainment of the limit of opening movement of said cover, the interengaging portions of said arms of the cover and lever being arranged to cause the same to describe respective arms intersecting each other at the points of limit of swing of said lever and cover.

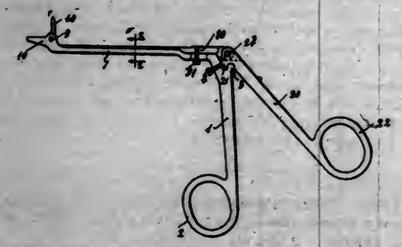
1,754,803. SHIPPING BRACKET FOR MOTOR VEHICLES OR THE LIKE. EDBERT ROGERS, Flint, Mich., assignor to E. S. Evans & Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 18, 1918. Serial No. 223,045. 15 Claims. (Cl. 188—32.)

15. In combination with a vehicle provided with wheels, a floor support for supporting said wheels, a light metallic brace member engaging a portion of one of said wheels for holding said wheel on said support, said brace member extending downwardly from said vehicle into engagement with said support and having each of its ends located outwardly of said wheel from said vehicle, and means for engaging and positively securing each end of said brace member in position for holding said wheel in engagement with said support for supporting said vehicle.



1,754,804. THEFTPROOF LICENSE-PLATE BRACKET. EGIDIO ROSSI, Albany, N. Y. Filed Feb. 6, 1929. Serial No. 338,016. 2 Claims. (Cl. 40—2.2.)

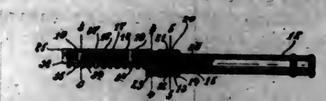
1. In a device for the purpose described, a casing member, means for securing the casing to a fixed part of a motor vehicle, a locking mechanism within the casing, a shaft rotatably mounted within the casing and extending to the outer side of the casing, a bar attached to the shaft,



means for securing a registration plate to the bar, means for limiting the extent of rotation of the shaft, and co-operating means between the shaft and the lock for retaining the registration plate in either a horizontal or in a vertical position.

1,754,805. TEMPERATURE-ACTUATED AUTOMATIC CONTROL VALVE. JOSEPH SLADKY and ALEXANDER C. SLADKY, Milwaukee, Wis., assignors to National Enameling & Stamping Co. Inc., Milwaukee, Wis. Filed Oct. 8, 1928. Serial No. 311,280. 2 Claims. (Cl. 158—42.4.)

1. In a device of the class described, the combination of a burner, a generator tube connected thereto, fuel supply means for said generator tube, a plunger valve controlling said fuel supply means, an elongated tubular member adapted to contain an expansible fluid located adjacent said generator tube, a priming cup for heating said generator tube and said tubular member, a casing carrying said tubular member and pivotally supported from a stationary point, a bearing face adjacent said casing, a diaphragm mounted within said casing, and a plunger mounted between said diaphragm and said bearing face, said valve being connected to said casing.



1,754,806. SURGICAL INSTRUMENT. HOLLAND N. STEVENSON, Pelham, N. Y. Filed Sept. 5, 1929. Serial No. 390,601. 10 Claims. (Cl. 128—318.)

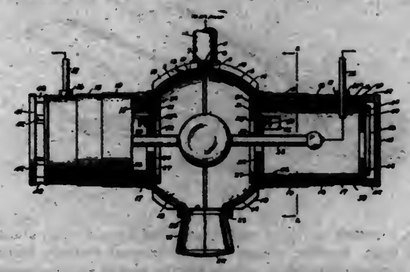
1. A surgical instrument for making an opening in thin osseous partitions located in body portions inaccessible for open operation, comprising a small body-insertable, shears-like tool operated by corresponding movements of a pair of larger scissor handles connected to the tool by relatively movable, body-insertable connecting links, one of the members of said shears-like tool being pointed for individually producing with open shears a primary hole by piercing action, and both members having mating marginal portions with shearing edges defining a punch hole area for jointly enlarging, by closing the shears subsequent to the piercing action, said primary hole by an action of substantially punching nature.

1,754,807. SAFETY RAZOR. BERNARD TEWELOW, Wilmington, Del., and SOLOMON TEWELOW, Philadelphia, Pa. Filed July 31, 1926. Serial No. 126,176. 1 Claim. (Cl. 30—12.)

In a razor the combination with a handle having in one end a cone-shaped socket with a screw-threaded bore extending inwardly from the smaller end of said socket, of two blade-clamping members, one having a concave face and the other a convex face,—the member with the concave face being longer than that having the convex face and the longer portion formed into a stem with exterior screw-threads to enter the bore in the handle while the opposite ends of said two members are permanently hinged together so that when the stem is partially unscrewed from the handle-bore the shorter member may be swung away with-

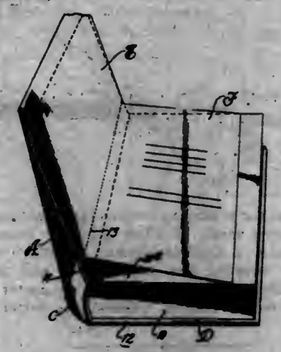
out becoming detached from the longer member, the concave side of the one member having pins projecting therefrom to permit a razor-blade to be laid on the edges of said member and over the pins while the convex member is provided with sockets which will be brought into registration with the pins as the permanent hinge-connection guides the shorter member when it is swung back to clamp and bow a blade between said members and a guard on the shorter convex clamping-member.

1,754,808. AUTOMATIC CANE-CARRIED LIGHTER. ANICETO R. VISITACION, New York, N. Y., assignor of one-fourth to General William Weigel and of one-half to Louis G. Weigel, New York, N. Y. Filed June 29, 1928. Serial No. 289,172. 8 Claims. (Cl. 67—4.1.)



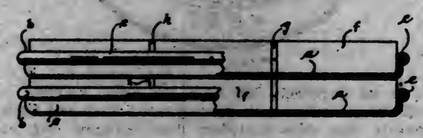
4. A hollow metallic cylindrical casing having a wall of uniform thickness and containing a lighter, said lighter comprising a cylinder having a lateral opening, a liquid fuel container in one end of said casing, a spark material tube and a wick in said container, an abrader over the material tube, a spring impelled device for actuating the abrader to throw a spark upon said wick, a ferrule movable on the cylinder wall, a cap carried by said ferrule to cover the wick when the ferrule is in a lowered position, and means carried by said ferrule to control the operation of said spring impelled device.

1,754,809. THERAPEUTIC TABLET. ELMER B. VLIET, Chicago, and ERNEST H. VOLWILER, Highland Park, Ill., assignors to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1926. Serial No. 142,518. 3 Claims. (Cl. 167—82.)



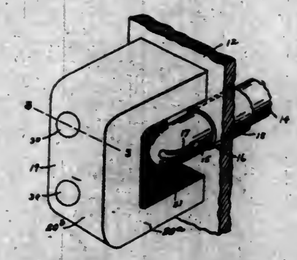
3. As a new article of manufacture, a therapeutic tablet containing chloramine as the active material and from 10 to 20% of potassium nitrate as a filler or diluent.

1,754,810. X-RAY PROTECTIVE DEVICE. REINHOLD H. WAPPLER, New York, N. Y., assignor to Wappler Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Mar. 21, 1922. Serial No. 545,488. 5 Claims. (Cl. 250—84.)



1. In a device the combination of a hollow casing member made of material substantially opaque to X-rays, said casing member being provided with tubular extensions and further provided with a window transparent to X-rays, metallic barrels carried by said tubular extensions projecting in opposite directions from said casing member, slides carried by said barrels for the purpose of supporting an X-ray tube, and mechanism carried by said slides for adjusting said X-ray tube.

1,754,811. BOOK PROTECTOR. EWING T. WEBB, Chicago, Ill. Filed May 4, 1929. Serial No. 360,524. 6 Claims. (Cl. 281—34.)

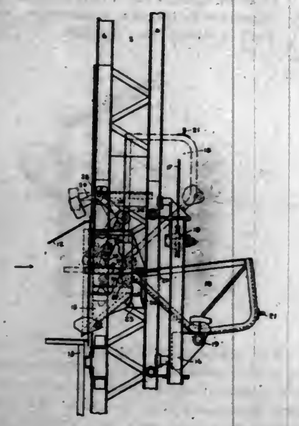


2. A paper protector for a book, including: front and back cover sheets adapted to be placed over the outer surfaces of the front and back covers of a book to cover the same, with their rear edges connected by a strip adapted to lie over the back of the book; flaps attached to the edges of the cover sheets and adapted to be folded under the covers of the book; and an extension flap attached to one flap and adapted to be folded back against the same and under the cover of the book.

1,754,812. BAKER'S PAN. FRED ZACHARIAS, Mineola, N. Y., assignor to himself and Albert C. Eggerts, Mineola, N. Y. Filed July 17, 1929. Serial No. 378,822. 3 Claims. (Cl. 53—6.)

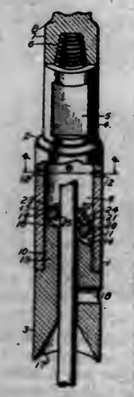
2. A baker's pan embodying therein a metallic dish having sides, and means dividing said dish into a plurality of non-communicating compartments and projecting above the sides of said dish, whereby in stacking a plurality of pans when proofing, air space is afforded between said pans, and gripping areas are afforded for removing said frame from said dish.

1,754,813. BLOWER-NOZZLE PROTECTOR FOR FIRE BOXES. FRANCIS A. BARBEY, Cambridge, Mass. Filed Aug. 11, 1927. Serial No. 212,198. 2 Claims. (Cl. 110—76.)



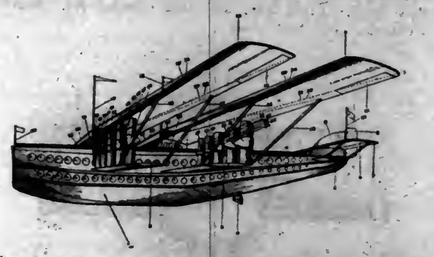
1. A blower nozzle-protecting attachment for a fire-box having in a wall portion thereof a blower-receiving opening, said attachment comprising a nozzle-protecting block of fire-brick material, having an inner end face seated on said wall portion, a front side face provided with a recess formed to receive a portion of a blower nozzle extending through said wall opening, an outer end face spaced from an end of said recess, and a rear side face spaced from the bottom of the recess, the block being provided with elongated bolt-receiving orifices extending from the inner to the outer end face, and between the bottom of the recess and the rear side face, said orifices having enlargements at their outer ends providing nut abutments and formed to receive nut-protecting fillings, bolts engaged with tapped sockets in said wall portion, and extending into said orifices, clamping nuts engaged with the outer ends of the bolts and cooperating with said abutments, and fillings of refractory material inserted in the enlarged ends of said orifices and protecting said nuts.

1,754,814. FRAME CLIP. HOWARD L. BUDD, Brooklyn, N. Y., assignor to Friedman Silver Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 13, 1928. Serial No. 325,676. 8 Claims. (Cl. 40—156.)



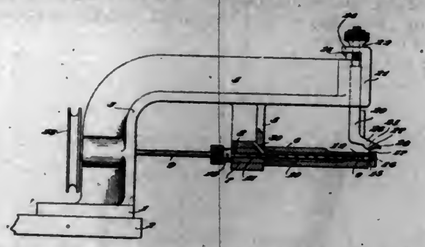
5. In combination with a frame having a front flange and a rearwardly extending flange, a rim inserted thereinto between the flanges and a back fitting inside of the rim, of a flat metallic member having its end portion secured to the inner face of the front flange and having part of the remaining portion thereof substantially at right angles to the end portion and passing about the inner edge of the rim to the rear face thereof, the other end portion of said member being adapted to be bent inwardly on the rear face of the back for removably holding the back in place, said member being substantially L-shaped in operative position, and said other end portion being out of contact with the rim.

1,754,815. CONCRETE ELEVATING AND DISTRIBUTING APPARATUS. JAMES E. BUSHNELL, North Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 255,894. 19 Claims. (Cl. 214—120.)



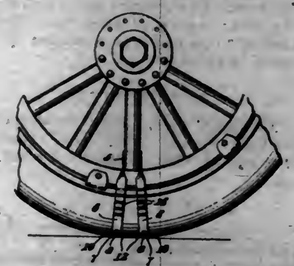
6. In a device of the character described the combination of a vertical track, a vertically moving tiltable receptacle mounted thereon, switch means mounted adjacent said track and receptacle for tilting said receptacle, and mechanism operable by said receptacle under predetermined conditions for opening said switch means whereby said receptacle when elevated is tilted by said switch and upon further elevation thereof said mechanism opens said switch means for permitting further elevation of said bucket.

1,754,816. SUCKER-ROD SOCKET. FRED C. CANNIFF, Tulsa, Okla. Filed June 20, 1928. Serial No. 286,889. 2 Claims. (Cl. 294—92.)



1. In combination with a barrel having a reduced opening at one end and an inclined seat surrounding the opening, a rod gripping ring slidable in the barrel having an enlarged outer portion including flat end faces adapted for contact with said seat, a relatively thin inner portion comprising flat end walls inset from said end faces and a concave inner wall surrounding the ring opening between said end walls and having annular edge forming gripping teeth.

1,754,817. AIRCRAFT. ISAAC COVINO, West New York, N. J. Filed Oct. 2, 1929. Serial No. 396,854. 1 Claim. (Cl. 244—14.)

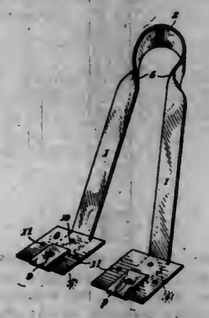


An aircraft having a combination of a main body similar to a boat, tandem planes and horizontal rudder, tractor and pusher propulsion, whose motive power and its respective propulsion is located underneath main supporting tandem planes and supported by shorter planes located midway body of boat and underneath main supporting planes, all substantially as described.

1,754,818. APPARATUS FOR USE IN TRIMMING HOLLOW PEDIFORM ARTICLES. WILLIAM J. DE WITT, Auburn, N. Y., assignor to The Shoe Form Co., Inc., Auburn, N. Y., a Corporation of New York. Filed Jan. 30, 1929. Serial No. 336,146. 2 Claims. (Cl. 164—60.)

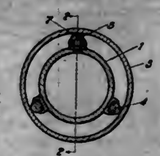
1. Apparatus for trimming surplus material from hollow pediform articles made of sheet material comprising a rotary disk cutter, a shaft upon which the cutter is mounted, means for rotating the cutter shaft, and means for supplying a lubricating medium along the cutter shaft to the cutter to reduce friction between the cutter and the work.

1,754,819. AUTOMOBILE TIE-DOWN DEVICE. EDWARD S. EVANS, Detroit, Mich., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich., a Corporation of Delaware. Filed Oct. 31, 1921. Serial No. 511,599. 9 Claims. (Cl. 188—32.)



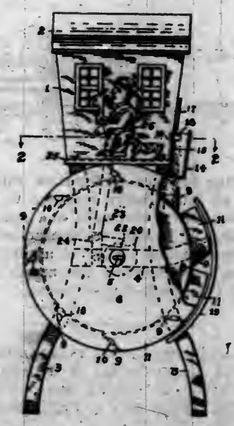
1. In an anchoring device of the class described, an elastically extensible strip formed into a loop and having angularly bent ends providing floor engaging feet, and securing plates having spaced openings through which said feet are threaded.

1,754,820. AUTOMOBILE TIE-DOWN DEVICE. EDWARD S. EVANS, Detroit, Mich., assignor to E. S. Evans & Co., Inc., Detroit, Mich., a Corporation of Delaware. Filed Feb. 16, 1922. Serial No. 536,989. 38 Claims. (Cl. 188—32.)



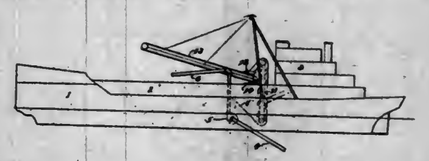
1. An anchoring device for wheeled vehicles comprising a member intermediately return bent to embrace a wheel spoke and legs at each side of said return bend extending at an angle to the return bent portion and terminating in feet engageable with a surface to form an attaching means, said feet comprising end portions bent at an angle to said legs and return bent into flat engagement to form the feet of double thickness and adapted to have nails driven therethrough.

1,754,821. AUTOMOBILE TIE DOWN. EDWARD S. EVANS, Detroit, Mich., assignor to The Evans Auto Loading Co. Inc., Detroit, Mich., a Corporation of Delaware. Filed Oct. 9, 1924. Serial No. 742,592. 4 Claims. (Cl. 188—32.)



1. Anchoring means for motor vehicles comprising a tie down formed of a strip of material bent to provide anchoring feet, each having a base and a return bent portion, and a foot plate having a slot therein to receive the tie down foot with portions of the foot lying below and above the foot plate.

1,754,822. SUCTION TABLE ROLL. HILAND R. FARNSWORTH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio. Filed Mar. 26, 1928. Serial No. 264,639. 9 Claims. (Cl. 92—53.)

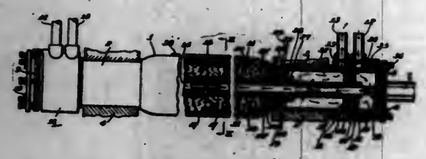


1. A suction roll of the character described comprising a suction tube, a perforate shell revoluble on said tube, an element extending longitudinally of said tube and provided with passages establishing communication between the inside of said tube and the perforations of said shell, said element being in free running contact with said shell.

1,754,823. TOY. FRANK J. GORIUP, Pittsburgh, Pa., assignor to Wolverine Supply & Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1929. Serial No. 364,357. 2 Claims. (Cl. 46—40.)

1. In a toy "water-mill," the combination of a wheel arranged to rotate on a horizontal axis and provided with buckets, a sand hopper located above the wheel, controlled means for gravity discharge of sand from the hopper into the buckets of the wheel whereby to rotate the wheel, a movably mounted mechanical figure, a bell-crank lever having its upper end pivotally connected to the figure, means whereby the rotation of the wheel causes a rocking of the bell-crank lever whereby to move the figure and a horizontal platform over which said figure trails in its movements whereby said figure is prevented from material tilting.

1,754,824. BOAT-UNLOADING MECHANISM. EDWARD M. GRAVES, Cleveland Heights, Ohio. Filed Apr. 3, 1926. Serial No. 99,562. 2 Claims. (Cl. 214—15.)



1. In a boat, a substantially flat cargo deck, a cargo hopper at one end thereof and having its mouth extending thereacross at substantially the same level, means for delivering cargo from said deck to said hopper mouth, elevating means for delivering cargo from said hopper to a point directly above the mouth thereof, and swinging conveying means having its receiving end arranged below the delivery point of said elevating means and adapted to convey the cargo to either side of the boat.

1,754,825. FOAM PRODUCTION. HERMAN HEUSER, Chicago, Ill. Filed May 24, 1926. Serial No. 111,881. 5 Claims. (Cl. 99—11.)

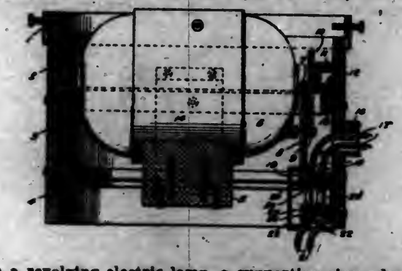
1. The method of producing a foam-producing substance comprising subjecting a protein in aqueous solution suc-

cessively to alkali and acid hydrolytic conversion and terminating the conversion process when the conversion products have a high foam-producing capacity.

1,754,826. FLUID-COOLED ROLL. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 17, 1928. Serial No. 247,367. 6 Claims. (Cl. 257—95.)

1. In a cooling roll, the combination with a cylindrical outer casing, an inner casing mounted to turn with the outer casing concentric therewith and spaced away from the outer casing to provide a chamber between the two casings, a body of metal fusible at a relatively low temperature filling said chamber, and means for circulating a cooling fluid through the inner casing.

1,754,827. WATERPROOFING COMPOSITION. ALBERT W. HOLMBERG, South Orange, N. J., assignor to American Rubber Company, Boston, Mass., a Corporation of Massachusetts. Filed May 4, 1925. Serial No. 28,016. 4 Claims. (Cl. 134—17.)

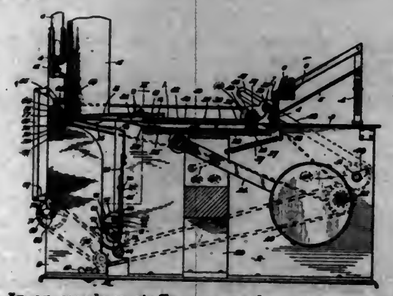


1. A composition for forming a waterproofing coating comprising an aqueous dispersion of rubber containing an emulsion of wax and spindle oil.

1,754,828. HYDROCARBON BURNER. ALBERT H. KELSALL, San Diego, Calif. Filed Nov. 2, 1925. Serial No. 66,256. 5 Claims. (Cl. 299—126.)

1. In a burner structure, a large tubular conductor, a fuel conducting tube positioned centrally therein and extending to near the outer end thereof, said fuel conducting tube being provided in its side walls intermediate its end with fuel discharge orifices, a shoulder bearing screw secured at its threaded end centrally into the normal forward end of said conducting tube and closing said end, and a vaned member revolubly mounted on the bearing portion of said shoulder screw and enclosed partially by the wall of said large tubular conductor at the discharge end thereof, the outer portion of said vane member extending beyond said conducting tube.

1,754,829. REVOLVING LAMP FOR GASOLINE PUMPS. ERNEST KEEMA, Maspeth, N. Y. Filed July 27, 1928. Serial No. 295,772. 1 Claim. (Cl. 240—49.)



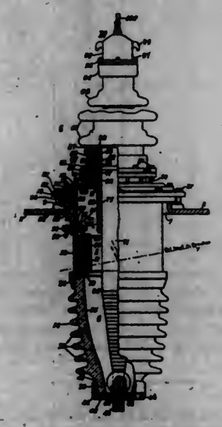
In a revolving electric lamp, a supporting ring adapted to be stationarily mounted upon a supporting post, a second supporting ring, means securing the second supporting ring to the first supporting ring, said second ring being spaced above the first ring, a third ring supported and guided for rotation between the first and second rings and carrying lamp supporting arms, and means mounted within said rings for rotating the lamp supporting ring.

1,754,830. UNDERREAMER. JOHN W. MACCLATCHIE, Compton, Calif. Filed Nov. 20, 1926. Serial No. 149,582. 9 Claims. (Cl. 255—73.)

1. A reamer comprising rotatable supporting means having an axially offset portion forming a mandrel which is non-rotatably fixed relative to the supporting means, and a cutter non-rotatably mounted on the offset mandrel for eccentric rotation of the cutter by the supporting means.

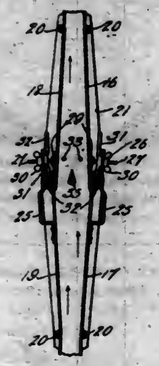
1,754,831. AUTOMATIC ENVELOPE-STUFFING MACHINE. JAMES H. MARSH, Kansas City, Mo. Filed May 11, 1927. Serial No. 190,518. 17 Claims. (Cl. 93—6.)

1. In an envelope stuffer, an envelope support, adapted to hold an envelope with its mouth distended, and means



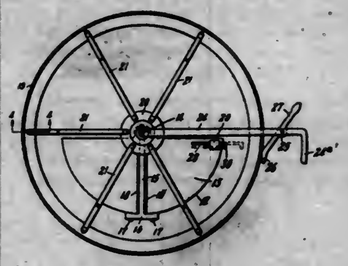
operable between the planes of the sides of the distended mouth for advancing a circular into the envelope and for effecting movement of the stuffed envelope through direct contact only with the trailing edge of said circular.

1,754,832. STALK CUTTER. WILLIAM A. MARTIN, Fort Worth, Tex., assignor of one-half to J. B. Blackman, Fort Worth, Tex. Filed July 11, 1927. Serial No. 204,928. 2 Claims. (Cl. 56—60.)



1. A stalk cutter comprising a wheeled truck provided with an arched axle and a horizontal frame, a working shaft and bearings rigid with said arched axle for said working shaft, gearing for driving said working shaft from the wheels of said truck, hangers suspended from said working shaft and a bearing bar carried thereby; a substantially vertical shaft journaled in said bearing bar and a bearing rigid with said arched axle for the upper end of said vertical shaft, beveled gear wheels on said working shaft and vertical shaft for driving said vertical shaft, stationary cutters attached to said truck, rotary cutters mounted on and driven by said vertical shaft and cooperating with said stationary cutters and a bar attached to said horizontal frame for varying the angle of said shaft and hangers.

1,754,833. HIGH-VOLTAGE STRUCTURE. JESSE E. MATZEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 19, 1927. Serial No. 192,589. 23 Claims. (Cl. 175—358.)

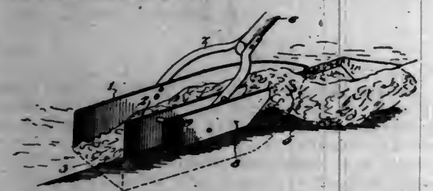


1. A high-voltage structure comprising a wall member having a bushing opening therethrough, a casing of substantially cup-shape embodying an insulating portion and disposed locally about the bushing with its open-end perimeter secured to the wall member around said opening, a complete bushing unit having a portion in said casing and conducting means extending through the bushing and the casing.

1,754,834. SEPARATING MACHINE AND PROCESS OF SEPARATING MATERIALS. CHARLES B. MCNEAL, Forestville, N. Y. Filed Aug. 12, 1927. Serial No. 212,487. 14 Claims. (Cl. 209—139.)

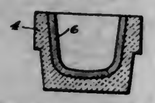
11. The process of separating materials which consists of subjecting the material to be separated to an upwardly flowing current of air to remove particles from said material, causing the air and said particles to flow upwardly in a substantially imperforate duct, the walls of which decrease the velocity of the air near said walls, and deflecting the heavier of said particles toward said walls to cause the same to drop by gravity through the air near said walls against the direction of current of air.

1,754,835. WHEELBARROW. HERBERT B. NEWTON, Brookline, Mass. Filed Jan. 21, 1928. Serial No. 248,335. 8 Claims. (Cl. 298—8.)



1. A wheelbarrow comprising a bucket, alined axle arms fixed to the bucket and projecting from opposite sides of the mouth portion thereof, so that the center of gravity of the bucket is at one side of the axial line of said arms, a wheel having spaced apart hubs mounted to rotate on the axle arms, the wheel being formed as an open cage enclosing the bucket, and adapted to permit the loading and unloading thereof, propelling means engaged with the axle arms, the arrangement being such that the bucket is supported wholly by the wheel, with its center of gravity below the axial line of the axle arms, and a coupling member carried by the bucket and engageable with a member of the wheel, to cause a dumping movement of the bucket when the wheel is turned.

1,754,836. TIRE. FRANK G. SCHENUIT, Baltimore, Md. Filed Apr. 23, 1924. Serial No. 708,337. 1 Claim. (Cl. 152—18.)



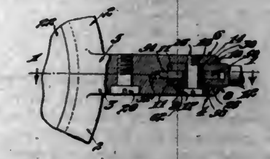
A cushion tire formed of comparatively inextensible material having side walls with a compressible ridge narrower than and extending around the inner periphery of said side walls for engagement with a tire receiving rim.

1,754,837. GUTTER CUTTER. JAMES B. SCULLIN, Parkersburg, W. Va. Filed May 8, 1928. Serial No. 276,117. 1 Claim. (Cl. 97—227.)

A gutter-forming tool consisting of a sheet metal blank including straight parallel inner and outer side walls, and a bottom connecting the lower edges of the side walls, the inner wall being of greater depth than the outer wall and the bottom and the outer wall extending rearwardly beyond the inner wall, the rear extension of the bottom curving upwardly and the rear extension of the outer wall curving laterally and being secured to the upwardly curved extension of the bottom and forming therewith a rear deflecting wall and defining a large lateral discharge space at the rear end of the inner wall, the entire inner edge of the bottom and its extension being in the same vertical plane with the inner side wall whereby to bear against the edge of a walk and guide the tool at work.

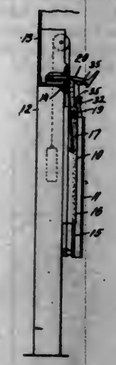
1,754,838. GLASS-MELTING POT. LEE SHOWERS, Charleroi, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 3, 1927. Serial No. 230,817. 3 Claims. (Cl. 49—60.)

1. A poured glass melting pot of clay composition comprising an outer layer and an inner layer both of substantially the same batch except that the materials of the inner layer are more finely ground than those of the outer layer.



1,754,839. PACKAGE AND METHOD OF FORMING THE SAME. ELMER LOVELL SMITH, Springfield, Mass., assignor to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 18, 1927. Serial No. 169,321. 3 Claims. (Cl. 206—46.)

1. A package comprising an article and a wrapper enclosing the article, the marginal edges of the wrapper being overlapped along one face of the article, one of said edges being doubled back so as to lie against the main body of the wrapper, and the other of said edges overlying the first-



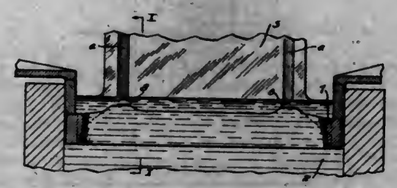
named edge and extending beyond it onto the main body of the wrapper, said marginal edges being adhesively secured to each other and to the main body of the wrapper.

1,754,840. OPHTHALMIC MOUNTING AND METHOD. FREDERICK ARTHUR STEVENS, Providence, R. I. Filed Oct. 16, 1924. Serial No. 743,957. 28 Claims. (Cl. 88—53.)

7. An ophthalmic mounting having, in combination, a split lens rim having end pieces the terminal portions of which are reduced in thickness, a temple having ears mounted between the terminal portions, and a plate interposed between the ears, the plate being movable with respect to and between the ears.

1,754,841. DOOR MECHANISM. CHARLES C. TOMKINSON, Plainfield, N. J., assignor, by mesne assignments, to J. Edward Ogden Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 27, 1926. Serial No. 157,118. 37 Claims. (Cl. 20—19.)

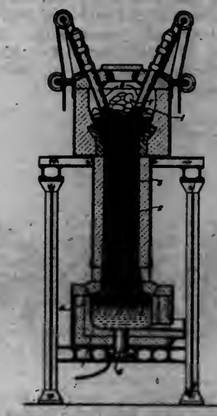
1. A door comprising a plurality of sections arranged for relative vertical movement and for movement vertically and laterally in unison, locking means for said door comprising a device pivoted to one of said sections and means movably mounted on a fixed support and adapted to coact with said device.



1,754,842. CONCENTRATING RUBBER LATEX. ISIDOR TRAUBE, Berlin-Charlottenburg, Germany, assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 3, 1924, Serial No. 735,602, and in Germany Oct. 23, 1923. 10 Claims. (Cl. 18—50.)

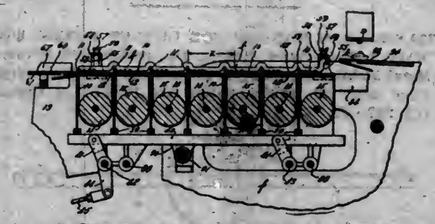
3. The process of separating rubber from latex which consists in bringing the latex into contact with organic colloids, allowing the latex to separate into two layers, applying the concentrated rubber latex to a surface of an organic colloid jelly and allowing the rubber substance to become a coherent layer.

1,754,843. FIREPROOF WALL BOARD AND PROCESS OF PRODUCING THE SAME. FERNANDO SOMOZA VIVAS, New York, N. Y., assignor to International Fireproof Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1927. Serial No. 225,038. 5 Claims. (Cl. 92—21.)



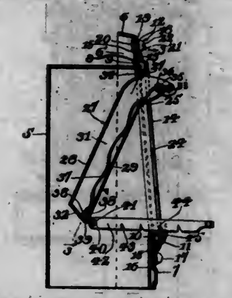
1. A wallboard comprising a porous body of cellulose material impregnated with an insoluble calcium resinate soap binder.

1,754,844. APPARATUS FOR DRAWING SHEET GLASS. JOHN A. WATT, Clarksburg, W. Va., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 4, 1928. Serial No. 267,209. 2 Claims. (Cl. 49—17.)



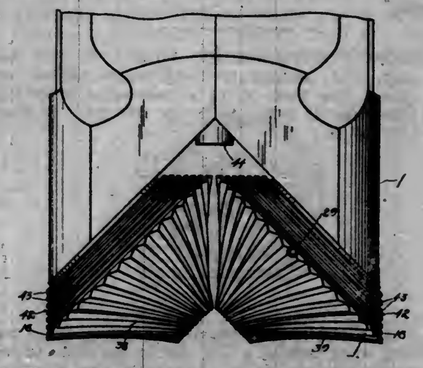
2. The combination with a machine for drawing a glass sheet continuously from a bath of molten glass, of a draw bar of refractory material submerged in the glass beneath the line of generation of the sheet and extending entirely across the bath with humps or shoulders located directly beneath the outer portions of the sheet a short distance inward from the extreme outer edges thereof, said humps approaching nearer to the surface of the bath than do the portions of the bar lying on both sides of the projections.

1,754,845. SLAG-REDUCING PROCESS. THADDEUS F. BAILY, Alliance, and LAWRENCE G. PRITZ, Canton, Ohio; said Pritz assignor to said Baily. Filed Jan. 28, 1928. Serial No. 250,223. 5 Claims. (Cl. 75—225.)



1. That process in the reduction of the oxides of a slag of the character described, which consists in charging basic and acid slag in such proportion as to obtain the desired mixture of ferro-alloy containing phosphorus, manganese, iron and silicon as desired, and melting and reducing them by passing the slag through a carbonaceous resistor material through which electric current is passed.

1,754,846. FEEDING APPARATUS FOR CONFECTIONERY MACHINES. ALONZO LINTON BAUSMAN, Springfield, Mass. Filed Oct. 31, 1927. Serial No. 229,978. 11 Claims. (Cl. 198—30.)



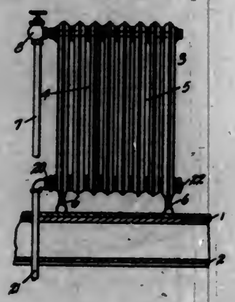
1. A feeding device for a confectionery machine, comprising, a flexible member adapted in one stretch of its travel to receive and carry confections, intermittently operable means for moving said member first in one and then in the opposite direction, a stop mounted to move into and out of the path of the confections carried by said member and in a path closely adjacent one end of said stretch, and intermittently operable means for moving said stop first in one and then in the other direction, said last named means operable to move the stop during periods of rest of the first named means.

1,754,847. REGISTER. CHARLES ALBERT BESCH, La Crosse, Wis. Filed Mar. 31, 1928. Serial No. 266,358. 13 Claims. (Cl. 98—109.)

1. A damper for a register having an adjustably mounted body portion providing a receptacle for a humidifying agent, said receptacle open at its top.

1,754,848. ROLLER-CUTTER DRILL. CLINTON H. BULL, Columbus, Ohio, assignor of one-half to Clarence C. Le May, Columbus, Ohio. Filed Jan. 14, 1926. Serial No. 81,243. 5 Claims. (Cl. 255—71.)

1. The combination with a rotary drill head, a spindle carried by the head, a bearing removably mounted on the

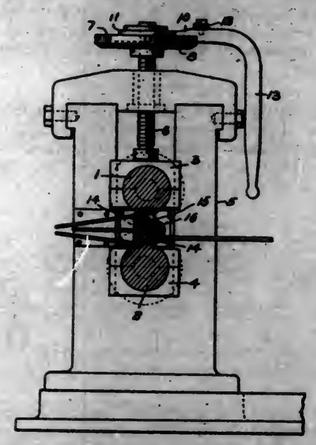


spindle, a cutter rotatably mounted on the bearing, and a washer interlocked with the bearing and capable of being rotated to apply or remove the bearing from the spindle.

1,754,849. BAR HANGER FOR OUTLET BOXES, ETC. MARTIN M. CLAYTON, Beaver, Pa., assignor to National Metal Molding Company, a Corporation of Pennsylvania. Filed Mar. 28, 1925. Serial No. 17,538. 2 Claims. (Cl. 247—22.)

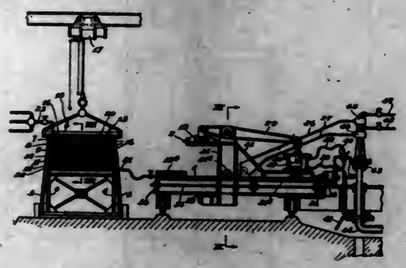
1. A bar hanger for electrical outlet boxes, etc., comprising a single metallic strip longitudinally folded to form a pair of resilient leaves projecting from the fold on divergent lines, in combination with means connected to the box engaging said leaves and putting them under compression to cause frictional engagement between the engaging means and the strip.

1,754,850. RADIATOR. HARRY B. DE LONG, Spokane, Wash. Filed June 20, 1927. Serial No. 199,995. 1 Claim. (Cl. 257—151.)



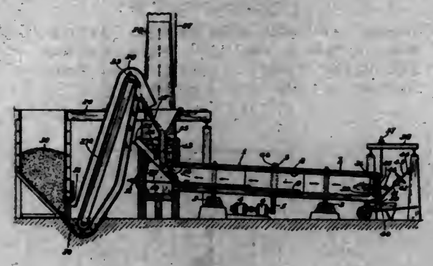
The combination with a sectional radiator having an inlet pipe connected to the top of an end section and an outlet pipe connected at the bottom of said section, of bushings supported in the upper portion of the radiator and spaced lugs in said bushings, a steam pipe supported in said bushings and adapted to receive steam from the inlet pipe, and said steam pipe having a pair of tapered end tongues supported by the lugs of one bushing and lateral openings within the radiator for the emission of steam.

1,754,851. PLATE FRAME. WILLIAM H. DEY, Montclair, N. J., assignor to United States Radium Corporation, New York, N. Y., a Corporation of Delaware. Filed May 4, 1928. Serial No. 275,015. 13 Claims. (Cl. 90—17.)



1. A display device comprising an open center frame having walls defining a slot, one of the walls having a part partially overhanging the slot to form a restricted entrance thereto, a pair of plates of substantially the same thickness received in the slot, one of these plates lying beneath said overhanging part, and held there by the second plate, said second plate lying opposite the opening to the slot and means at the rear of the frame and within the lateral margin thereof for attaching it to an object.

1,754,852. MECHANISM FOR OPENING SHEETS. ROBERT EDWARDS, Martins Ferry, Ohio. Filed Oct. 24, 1923. Serial No. 670,513. 4 Claims. (Cl. 29—17.)



1. In a machine for opening packs of sheets the combination with a pair of driven rolls of a plurality of rolls disposed intermediate said driven rolls and adapted to cooperate therewith, the axes of said last named rolls being in a plane substantially coincident with the axes of said driven rolls and being further adapted for displacement relative to the driven rolls in response to variations in the thickness and number of sheets passing between the driven and intermediate rolls.

1,754,853. APPARATUS FOR MAKING COMPOSITE GLASS. JOHN H. FOX and WILLIAM OWEN, Pittsburgh, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Original application filed Dec. 17, 1926, Serial No. 155,425. Divided and this application filed Aug. 1, 1928. Serial No. 296,779. 3 Claims. (Cl. 18—17.)

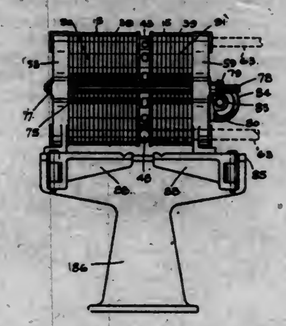
1. Apparatus for applying pressure to a plurality of sets of glass sheets with interposed layers of reinforcing material comprising a carrier mounted for movement, a plurality of presses mounted on the carrier and each consisting of a base in fixed position on the carrier, and a presser head and power means therefor mounted on the carrier for movement transversely of the base, so that in one position the head lies over the base and in another position it lies to one side of the base.

1,754,854. CALCINING APPARATUS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 17, 1928. Serial No. 278,392. 5 Claims. (Cl. 263—38.)

2. In combination in calcining apparatus, an inclined rotary drum, a supply hopper adjacent the higher end of the drum, a supply pipe leading from the hopper into such higher end, means for supplying heated gases of combustion at the lower end of the drum, a chamber surrounding said pipe into which the higher end of the drum opens and having an outlet independent of said pipe, and means for withdrawing the gases of combustion from said chamber through said outlet, an opening being provided in said pipe intermediate its ends leading into the chamber so that a portion of the gases of combustion are drawn through the outer end of the pipe.

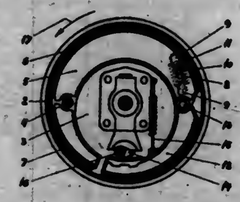
1,754,855. LIGHT. GEORGE GRAFF, Toledo, Ohio, assignor, by mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 14, 1927. Serial No. 233,156. 3 Claims. (Cl. 240—7.4.)

1. A light for the interior of vehicle bodies comprising a shallow stamped sheet metal body having a peripheral portion adapted for engagement with the vehicle body, the body having a portion projecting forwardly beyond its periphery and formed with a forwardly opening recess, a light bulb substantially housed within said recess, and a socket for the bulb projecting rearwardly beyond the periphery of the body.



1,754,856. BRUSH WRINGER MOP. STACEY A. HAINES, Lakewood, Ohio, assignor, by mesne assignments, to Harry E. Duer, North Olmsted, Ohio. Filed Aug. 17, 1927. Serial No. 213,551. 2 Claims. (Cl. 15—116.)

1. In a mop, a combination with a handle of a cloth carried thereby, a sleeve mounted for movement along the handle, a curved hollow casing associated with the sleeve and having one end thereof opening toward the cloth and in a direction extending longitudinally of the handle, said casing having the other end extending at right angles to the handle, means projecting out of the first mentioned

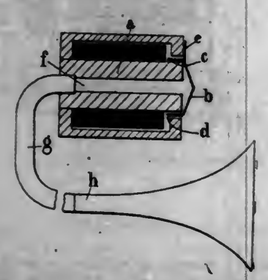


opening for engaging the cloth, a crank associated with the second named opening, and mechanism within the casing for connecting said means and crank.

1,754,857. HEAT-EXCHANGE APPARATUS. ALBERT DEK HARRISON, Montreal, Quebec, Canada. Filed Apr. 10, 1929. Serial No. 354,115. 10 Claims. (Cl. 257—245.)

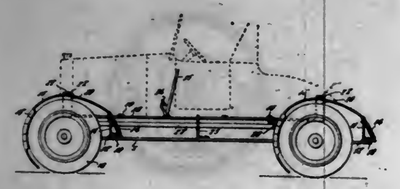
1. In heat exchange apparatus, a plurality of course plates alternating with plain separating plates and forming parallel courses and having ports within the circumference of the plate forming passages for said parallel courses across plate groups on respective sides of the course plates.

1,754,858. MOTOR-VEHICLE BRAKE. POUL ARNE SCOTT IVERSEN, Copenhagen, Denmark. Filed Dec. 14, 1927, Serial No. 239,993, and in Germany Sept. 9, 1927. 5 Claims. (Cl. 188—78.)



5. In a motor vehicle brake, a brake drum, and a single crescent-shaped brake block within the drum rotatably mounted adjacent one end on a stationary pivot to provide two braking surfaces at opposite sides of the pivot which are eccentric to each other.

1,754,859. LUBRICATING SYSTEM. GEORGE DOUGLAS JONES, Sacramento, Calif., assignor to Charles Moreing, Sacramento, Calif. Filed Nov. 29, 1926. Serial No 151,337. 17 Claims. (Cl. 184—7.)

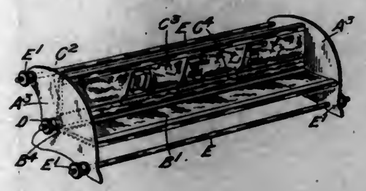


1. An oiling system for machine bearings, comprising a lubricant reservoir, a conduit leading from said reservoir to a bearing, means for intermittently applying and relieving pressure on the lubricant in said conduit, a spring seated valve in said conduit for closing the passage in said conduit when pressure on the lubricant is relieved, another valve in said conduit nearest said reservoir seated by lubricant pressure and normally maintained in open position when pressure on the lubricant is relieved said pressure seated valve closing the passage only when seated, and means for positively spacing said valves, the reciprocal movement of said valves being adjustable to define the quantity of lubricant, delivered to the bearing during each pressure operation.

1,754,860. TELEPHONIC LOUD-SPEAKER. FREDERICK WILLIAM LANCHESTER, Moseley, Birmingham, England. Filed May 25, 1929, Serial No. 366,003, and in Great Britain Apr. 14, 1928. 3 Claims. (Cl. 181—27.)

1. A loud speaker comprising a sound producing mechanism, an amplifying horn and an interconnecting conduit of constant bore and of length at least one quarter of the wave length of the deepest tone which it is required to amplify.

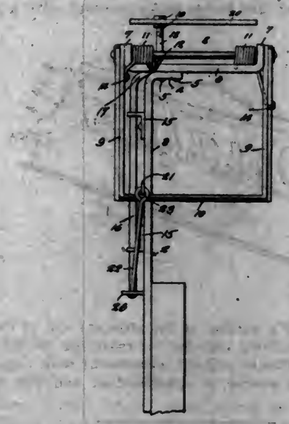
1,754,861. VEHICLE BRAKING APPARATUS. TAY H. LEE, Evanston, Ill. Filed July 10, 1928. Serial No. 291,611. 5 Claims. (Cl. 188—4.)



1. An apparatus of the class described, including a stationary frame structure, means for mounting the frame structure on a vehicle, a movable frame structure, a plurality of flexible strap like checkers, one for each wheel of the vehicle, means for hingedly engaging the checkers with the stationary frame, a movable frame, means engaging the movable frame with intermediate portions of the checkers, spring means associated with the checkers holding them normally in a predetermined position, spring means associated with the movable frame holding it in a normal predetermined position.

1,754,862. APPAREL SUSPENSION. ARTHUR HAROLD MOGINIE, Sydney, New South Wales, Australia. Filed Feb. 10, 1927, Serial No. 167,294, and in Australia Feb. 26, 1926. 1 Claim. (Cl. 24—225.)

An apparel suspender comprising a front sheet metal plate, a rear sheet metal plate disposed above the front plate, each of said plates having corrugations disposed thereon, a screw having a fast pitch thread, secured to the rear plate and adapted to freely pass through an opening in the front plate, a nut for said screw, distance pieces disposed upon the upper portions of the plates and adapted to prevent side movement thereof, and a flat spring arranged to impart parallel movement for the purpose of separating the plates, said flat spring being secured to the rear plate and having an opening through which the screw is adapted to pass.

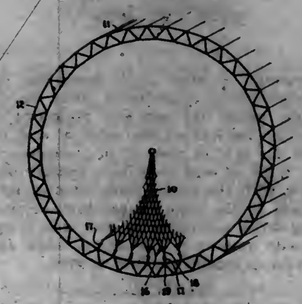


1,754,863. DISPLAY SIGN. NORMAN BERNARD MACKENZIE O'BRIEN, London, England, assignor, by mesne assignments, to Autolux Sign Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 14, 1928, Serial No. 319,268, and in Great Britain Nov. 25, 1927. 13 Claims. (Cl. 40—130.)

10. In a display sign, the combination of a light-absorbing background, a main reflector arranged at an angle thereto, an interchangeable reflecting legend, and means for supporting said legend in one or more planes between and at an angle to the main reflector and background.

1,754,864. BIRD TRAP. FRED C. RALPH and CHARLES OUTWAIT, Erie, Pa. Filed July 13, 1928. Serial No. 292,541. 1 Claim. (Cl. 43—88.)

A trap comprising a frame, spring-closed jaws pivoted to the frame, a trigger, means for mounting the trigger for right-line sliding movement on the frame, spaced latches between which the jaws are held when the jaws are swung downwardly to set position, means for pivotally mounting the upper ends of the latches pivotally on the frame, the trigger being provided at its lower end with seats wherein the lower ends of the latches are detachably received, and a perch on the upper end of the trigger and so located that an animal thereon will be caught by the

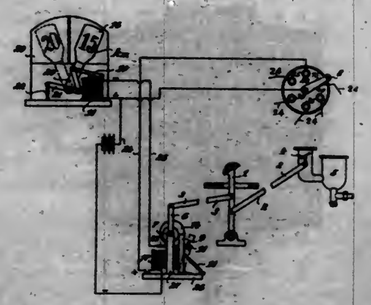


jaws when the jaws close, the weight of the animal on the perch serving to move the trigger downwardly and disengage the seats from the latches.

1,754,865. ALDOL CONDENSATION PRODUCT AND VULCANIZATION OF CAOUTCHOUC THEREWITH. LORIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 10, 1924. Serial No. 749,040. 7 Claims. (Cl. 18—58.)

6. A method of treating rubber which comprises subjecting it to vulcanization in the presence of a reaction product of acetaldol and a material selected from a group comprising orthotoluidine, para toluidine, amino xylene, aniline and benzylamine.

1,754,866. BULKHEAD FOR AIRSHIPS. WILHELM SIEGLE, Friedrichshafen, Germany, assignor to Goodyear Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed May 6, 1929. Serial No. 360,919. 10 Claims. (Cl. 257—245.)

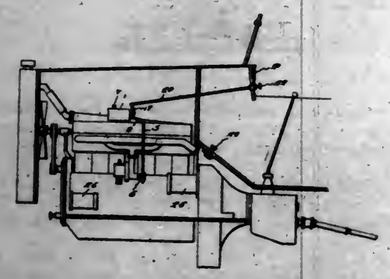


1. In an airship comprising a rigid hull of constant circumference, a bulkhead composed of intermeshing strands disposed transversely within the hull and spaced resilient fastening devices connecting outer circumferential portion of the bulkhead to the hull.

1,754,867. SLIDING CATCH. PAUL STOJA, Kloster Wennigsen am Deister, Germany. Filed Jan. 12, 1928, Serial No. 246,298, and in Germany Jan. 12. 1927. 1 Claim. (Cl. 43—83.)

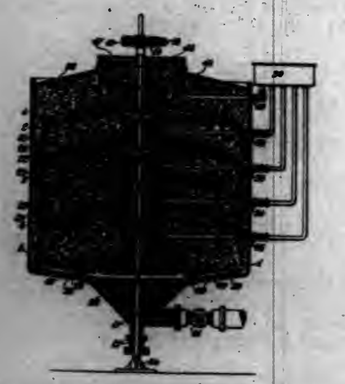
An animal trap comprising a base, a trigger pivotally mounted on the base, said trigger having its rear end extended vertically and provided with a slot, a coil spring seated in a recess in the base directly below the trigger, said spring tending to rock the trigger on its pivot, a latch lever pivotally mounted at one end of the base and provided on its upper edge with a cam slot, a finger formed on the forward end of the latch and engaging the slot of the trigger, said forward edge of the lever being formed with a narrow flange and a shoulder, said flange adapted to engage the upper wall of the slot when the trap is in set position, said shoulder engaging the vertical wall of the trigger and acting as a stop against the action of the spring, a spring-actuated frame pivoted to the base, the cross bar of the frame engaging the cam slot of the latch lever when said trap is in set position, whereby rocking movement of said trigger will release the flange of the lever and allow the cross bar to ride out of the cam slot and swing through its arc.

1,754,868. DEVICE FOR INDICATING AND CONTROLLING THE SPEED OF MOTOR VEHICLES. AUGUST WEHLING, Cologne-Sulz, Germany. Filed Dec. 2, 1926, Serial No. 152,291, and in Germany Feb. 9, 1926. 2 Claims. (Cl. 137—139.)



1. A device for controlling the speed of motor vehicles, comprising a plurality of electromagnet circuits, an equal number of spring-returned pivoted bars adapted to be attracted by said electromagnets when energized, means for energizing any particular electromagnet circuit at will, a plurality of cam discs equal in number to the electromagnet circuits, and co-operating with and limited in their rotation by said pivoted bars, a radial arm limited in its rotation by said cam discs, a foot lever for controlling the supply of gas, a throttle valve, and link mechanism connecting said foot lever with the radial arm and with the throttle valve, substantially as described.

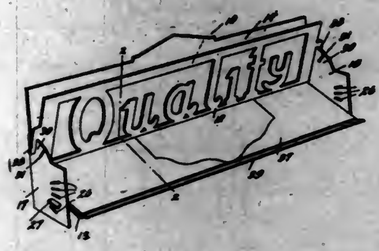
1,754,869. STARTING MEANS FOR INTERNAL-COMBUSTION ENGINES. RALPH WHITLOCK, Borger, Tex. Filed Feb. 11, 1929. Serial No. 339,069. 1 Claim. (Cl. 123—179.)



Engine starting means comprising a starter motor, a battery, a pair of electromagnets, a lever pivotally mounted between said magnets, a connection between said bat-

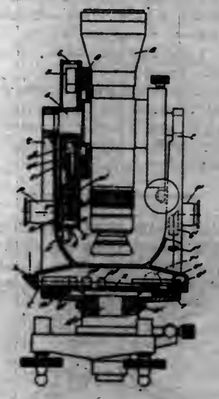
tery and one side of one of the magnets, a switch in said connection, the opposite side of the coil being grounded, a connection between the lever and the usual engine choke, the other magnet being connected to the usual generator of the engine, equalizing springs for said lever

for maintaining the same in partial choking position, the first mentioned magnet being energized when the switch is closed, to cause the lever to operate the choke, the other magnet being energized when the output of the generator is sufficient, so as to pull the lever to an off choke position.



1,754,870. APPARATUS FOR THE SEPARATION OF FINELY-DIVIDED SOLIDS FROM LIQUIDS. JOHN WILFRED WICKES, Tongaat, Natal, South Africa. Filed Feb. 4, 1926, Serial No. 86,001, and in Great Britain Feb. 19, 1925. 12 Claims. (Cl. 210—55.)

1. The herein described method of separating finely divided solids from liquids which consists in introducing liquid carrying solids in suspension into the upper part of a chamber, constraining the said liquid to flow vertically downward through a plurality of chambers superimposed therein, withdrawing clear liquid from the highest zone of the superposed chambers, thereby causing a slow movement of the clear liquid towards the said highest zones and discharging sediment which has settled on the tops of the superposed chambers in a direction to promote the said slow movement of the clear liquid drawn from the said highest zones.

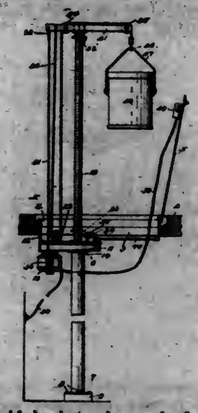


1,754,871. DISPLAY SIGN. WILLIAM P. WISE, Boston, Mass., assignor to Autolux Sign Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1929. Serial No. 352,018. 10 Claims. (Cl. 40—130.)

1. In a sign, the combination with a legend, of a collapsible support for said legend formed of sheet material and comprising a base, a back serving as a ground for the legend hingedly connected to said base, and side pieces hingedly connected to the back and adapted to be swung forwardly for interlocking engagement with the base, each of said side pieces being provided with a series

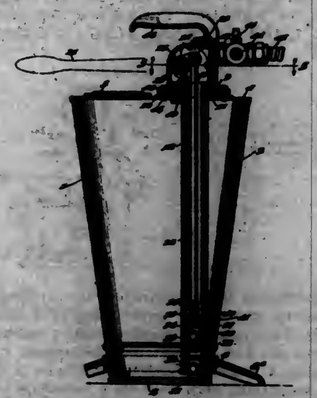
of slots in which a portion of the adjacent end of the legend may be selectively inserted for retaining the latter in the desired position of angular adjustment with respect to the ground, the source of illumination, and the eye of the observer.

1,754,872. THEODOLITE AND OTHER ANGLE MEASURING INSTRUMENTS. THOMAS YEOMANS BAKER and RALPH WALDO CHESHIRE, Teddington, England, assignors to Cooke, Troughton & Simms Limited, York, England, a British Company. Filed Feb. 16, 1928, Serial No. 254,868, and in Great Britain Feb. 26, 1927. 5 Claims. (Cl. 88—2.6.)



1. A theodolite or other angle measuring instrument having in combination a graduated circle, an eyepiece, a datum mark, means for optically projecting the scale divisions or graduations at one point of said circle into one part of the field of view of said eyepiece and those at another point of said circle into another part of the field of view with the datum mark situated between the adjacent ends of the scale images thus obtained and a fine reading device for displacing said scale images simultaneously with respect to the datum mark and in the same direction as seen in the field of view.

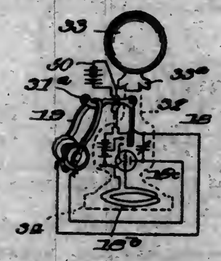
1,754,873. HOISTING MECHANISM. GUY R. BLACKWOOD, Columbus, Ohio, assignor to Capital Lift and Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 15, 1928. Serial No. 285,753. 8 Claims. (Cl. 254—148.)



1. In combination with motor driven hoisting apparatus for lifting a bucket through an opening, a switch arranged

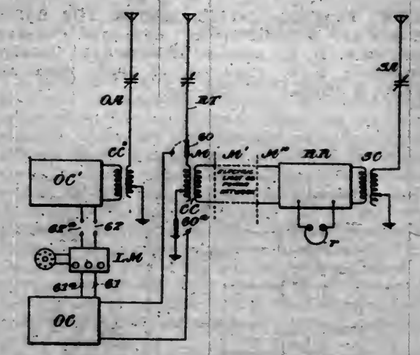
for controlling the operation of said motor and a member pivotally carried by the lower edge of said opening and cooperative with said switch and so arranged that upon

the failure of said bucket when raised to register with said opening the switch will be opened and the upward movement of the bucket stopped.



1,754,874. GREASE BUCKET. CLYDE G. BUTLER, Cincinnati, Ohio, assignor to The Cincinnati Ball Crank Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 17, 1928. Serial No. 262,525. 2 Claims. (Cl. 221—80.)

1. A grease dispensing device, comprising, a bucket, a lid for said bucket, a base for said bucket having legs providing greater base contact for the bucket, a pump mounted on the lid having a cylinder extending downwardly into the bucket, the lower end of the cylinder disposed adjacent a portion of the wall of the bucket and adapted to contact the same when the pump is operated in discharge stroke, and a handle for operating said pump extending outwardly over the bucket and over that portion of the wall diametrically opposite said portion contacted by the cylinder.

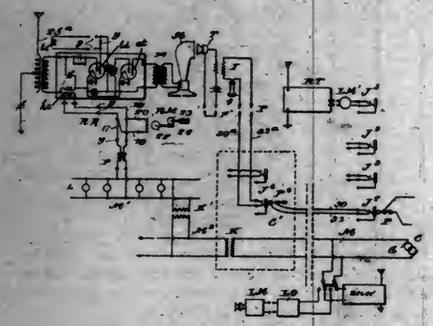


1,754,875. RADIOPHONE DESK SET. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Oct. 27, 1922, Serial No. 597,422, Patent No. 1,576,308, dated Mar. 9, 1926. Divided and this application filed Dec. 21, 1923. Serial No. 681,992. 5 Claims. (Cl. 250—20.)

1. A radio telephone receiving system comprising means for relaying modulated carrier waves, to a receiving station, a primary loop or coil connected to receive said relayed waves and to radiate the same, said loop being fixed in a horizontal position and a receiving set related to said primary loop but mechanically detached therefrom,

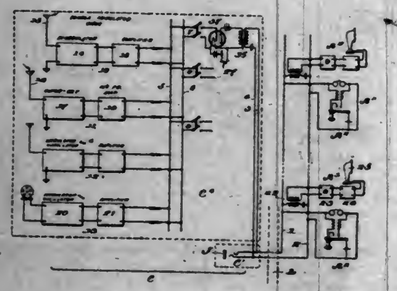
and movable with respect thereto, said set carrying a secondary or collecting loop so arranged in the set as to be normally held in horizontal position when the receiving set is in a normal operating position.

1,754,876. REGIONAL SYSTEM OF RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 9, 1924. Serial No. 691,824. 4 Claims. (Cl. 179—2.5.)



1. In a regional distribution system for radio broadcast, a central station, a wired network extending therefrom to outlying points of consumption, and connected to all of said points in common, subscriber's radio telephone receiving instruments at said points of consumption, means at the central station for transmitting radio frequency waves over said wired network, other means at the same central station to radiate radio frequency waves through the ether, means at the central station for controlling the frequency relation between the two sets of waves such as to produce a given superaudio beat between them when combined, means at each subscriber's station to receive both of said sets of waves, one over the wired network and the other through the ether, with means to heterodyne the same and to detect and reproduce the signal modulations in the subscriber's receiving instrument, said receiving heterodyning and detecting means being permanently tuned to a fixed and predetermined frequency calibrated and locked, whereby no tuning is required to be done by the subscriber.

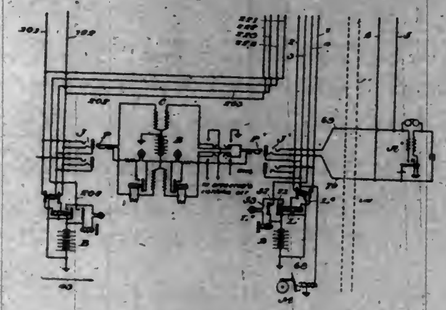
1,754,877. RADIO TELEPHONE SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 9, 1924. Serial No. 691,825. 1 Claim. (Cl. 250—6.)



A radio-wire system of broadcast distribution comprising a wired system or network, and subscribers' instru-

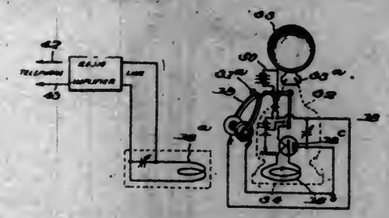
ments provided with antenna circuits and connections to said wired network, said circuits and connections being combined on the input side of a detector to heterodyne and produce modulated beat waves on the output side of the

detector, together with means at a central point for broadcasting modulated waves over the wired network, and other means for broadcasting simultaneously, properly related unmodulated waves through the ether.



1,754,878. TRAFFIC-CONTROL SYSTEM FOR RADIO BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Feb. 21, 1925. Serial No. 10,916. 5 Claims. (Cl. 250—6.)

5. In a system of radio broadcast distribution, a central station with subscribers' substations connected therewith over line wires, means at the central station for receiving different programs of signals modulated on different radio carrier waves, means for relaying each of said signal programs broadcast to all the substations over said lines without detection of the signals, but on carrier currents of frequencies suitable for line transmission, said frequencies being different from the received frequencies and different for the different programs, and selective tuning and detecting means at each substation operatively connected with its line.

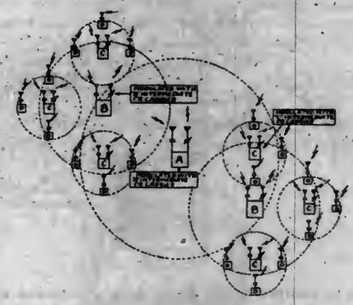


1,754,879. TRUNKING SYSTEM OF RADIO DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Mar. 26, 1925. Serial No. 18,529. 20 Claims. (Cl. 179—2.)

1. In a system of radio broadcast distribution, a telephone central station with subscribers' substations and wire lines interconnecting them, a telephone switchboard and a radio switchboard at said central station, radio receiving means at the central station adapted to be connected to an individual subscriber's line and operable to receive and relay radio matter over the line to the substation at a frequency suitable for line transmission, each line connecting means forming a unit in the radio switchboard and comprising the following elements: a line

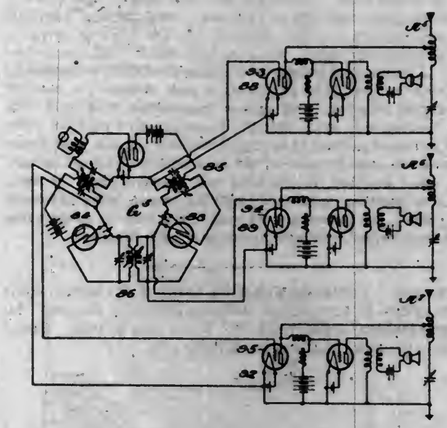
switch, actuating means therefor, a line extension circuit leading therefrom to said radio receiving means, a radio busy test circuit for the line, a radio clearing out signal circuit for the line, and terminal means connected with the line for supervisory purposes.

1,754,880. RADIO DESK SET. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Division of application Serial No. 681,992, filed Dec. 21, 1923, which is a division of application Serial No. 597,422, filed Oct. 27, 1922, issued as Patent No. 1,576,308. Divided and this application filed Aug. 1, 1925. Serial No. 47,547. 2 Claims. (Cl. 250—14.)



1. In combination with a wire circuit carrying modulated superaudio waves and terminating in a tuned and mechanically fixed primary coupling coil, a mechanically detached, movable and self-contained radiophone receiving set comprising a unitary standard and base, a detector therein, an amplifying horn thereon, a secondary coupling coil therein, in a plane normally parallel with that of said primary coupling coil, circuit wires and connections mounted therein, an audio frequency receiver carried thereon and adapted to be connected with said amplifying horn, and a switch also carried thereon and having contacts included in said circuits, together with a source of current for the detector, the arrangement being such that the coil, detector, receiver, and horn are controlled as to their proper operative relations by the movement of said switch.

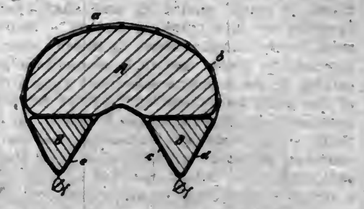
1,754,881. RADIO TRUNK SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Aug. 7, 1925. Serial No. 48,866. 1 Claim. (Cl. 250—6.)



The method of selective signalling between a plurality of transmitting stations and a plurality of receiving stations which consists in permanently allotting to each receiving station a primary carrier wave frequency to which the receiving apparatus at said station is permanently and fixedly tuned, permanently allotting to each of the transmitting stations a particular secondary or intermediate

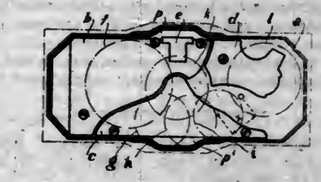
frequency to which its transmitter is permanently and fixedly tuned, but leaving its primary frequency variable for selective purposes, and leaving the secondary frequency at the receiving stations variable for selective purposes, then causing selection of a desired receiving sta-

tion by a particular transmitting station by first adjusting the frequency of said transmitter to the fixed primary frequency of the desired receiving station, and then causing identification thereat of the transmitting station by tuning to receive the signal on its fixed, secondary, or intermediate frequency.



1,754,882. POLYPHASE BROADCAST DISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Original application filed Nov. 27, 1926, Serial No. 151,117, Patent No. 1,652,092. Divided and this application filed Nov. 18, 1927. Serial No. 234,140. 5 Claims. (Cl. 250—36.)

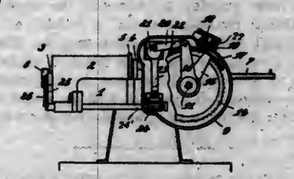
1. A polyphase generator comprising a plurality of thermionic tubes connected in tandem for mutual oscillation, with means to produce phase displacement between said tubes.



1,754,883. AIRSHIP. WILHELM E. DÖRR, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin-Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Apr. 18, 1927, Serial No. 184,504, and in Germany May 15, 1926. 5 Claims. (Cl. 244—6.)

1. An airship comprising two kinds of gas containers, lifting gas in one kind of container, fuel gas of approximately the same specific gravity as air in the other kind of container, and a rigid hull surrounding the lifting gas container for receiving the lifting forces and the loads of

the airship, the fuel gas container being composed of material of relatively light weight and located outside the rigid hull.



1,754,884. WATCH. EMIL FREY, Bienne, Switzerland, assignor to the Firm Frey & Co., Frey-Uhren Aktiengesellschaft (Frey & Co., Montres Frey, Societe Anonyme) (Frey & Co., Frey Watch Co., Limited), Bienne, Switzerland. Filed Mar. 21, 1929, Serial No. 348,880, and in Switzerland Dec. 22, 1928. 2 Claims. (Cl. 58—88.)

1. A bracelet watch comprising an elongated rectangular case, and an elongated rectangular movement occupying substantially the entire space within the case and the sides of which, for their greatest part, are limited by straight lines; said movement embodying an escapement device, a plate, bridges, a set of intermediate wheels, and a winding stem; at least one intermediate wheel projecting slightly beyond the outer side of the rectangle formed by the movement; the plate and certain of the bridges being provided with lateral swellings that protect the projecting part of the said intermediate wheel, thereby to enable the component parts of the escapement device to be made of abnormally-large size as compared with those of a conventional escapement device for a movement of the same size.

2. A bracelet watch according to claim 1, in which a side of the rectangular case is formed with a slight lateral swelling corresponding to and covering the swelling on the side of the movement.

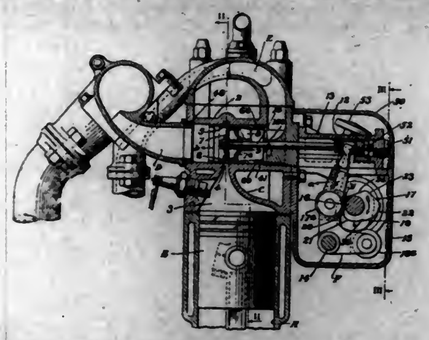
1,754,885. BUTTER CUTTER. GERHARD FRINGS, Cologne-Sulz, Germany. Filed Aug. 15, 1929, Serial No. 386,037, and in Germany Sept. 2, 1927. 1 Claim. (Cl. 31—14.)

A machine for cutting a butter mass into butter pats, comprising a frame, a butter container removably arranged in the frame and formed with an outlet to shape the butter pats, a piston fitted in said container to exert an endwise pressure on the material therein, a piston rod connected to the piston and extending beyond the container and formed on one edge with a series of teeth to provide a rack, a shaft mounted in the frame beyond the container, a pinion on said shaft cooperating with the rack on the

piston rod, a ratchet wheel fixed on said shaft in spaced relation to the pinion, a second shaft mounted in said frame, a crank carried by said shaft, pawl mechanism operated by said crank to impart a step-by-step movement to the ratchet wheel to thereby operate the piston through the pinion and rack, manually adjustable means carried by the frame to selectively govern the cooperation of the pawl mechanism and ratchet for determining the movement of the ratchet in the operation of said second shaft, a cutter movable across the material outlet of the container to sever the material as it is projected through said outlet, and means operated by said crank to impart a rotary reciprocation to said cutter.

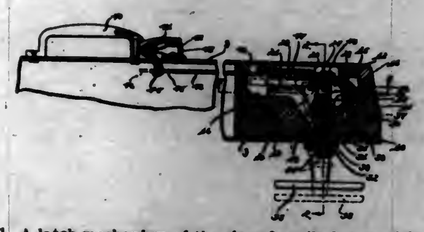
1,754,886. DISPERSED VULCANIZED RUBBER. WILLIAM C. GEER, New Rochelle, N. Y., and HARLAN L. TRUMBULL, Hudson, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 13, 1925, Serial No. 36,940. Renewed Sept. 15, 1928. 14 Claims. (Cl. 18—52.)

1. The herein described process which comprises plasticizing vulcanized rubber with the aid of a rubber softener, intimately admixing with the plasticized rubber a colloidal emulsifying paste to form a relatively smooth paste-like mass, adding a non-solvent liquid to the mass to form a non-viscous creamy liquid, and subjecting the creamy liquid to a comminuting action to reduce the size of the suspended particles to approximately that of rubber latex.



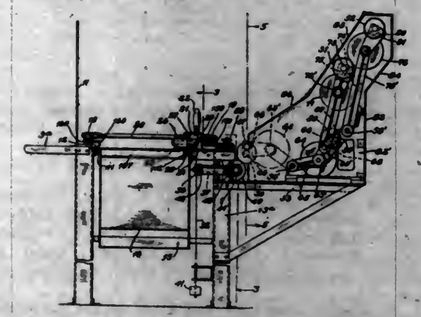
1,754,887. SCOOTER. OLIVER H. GENTRY, Rochester, N. Y. Filed Feb. 20, 1929. Serial No. 341,527. 2 Claims. (Cl. 208—38.)

1. In a scooter, a steering fork and steering head, a cross head on the steering head, a driving wheel and axle therefor mounted to turn in the fork, a crank on each end of the axle outside of the fork, a link connected to each crank, said links passing up through the cross head and having a sliding bearing therein, a handle at the upper end of each link by which the link may be driven, a collar on each link above the cross head, a spring between the collar and the cross head that is compressed on the downward movement of the link and by which the link is drawn up after its crank has passed over the center.



1,754,888. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ROY H. GERARD, San Francisco, Calif. Filed May 31, 1929. Serial No. 367,255. 5 Claims. (Cl. 123—188.)

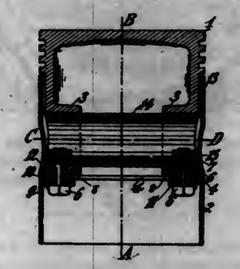
1. In a device of the character described, a cylinder and a head, said head having a valve chest formed therein, said chest having a cylinder port communicating with the cylinder, one end of said valve chest forming an inlet passage and the other end an exhaust passage, an open ended sleeve valve slidably mounted in the chest, said sleeve having a port formed therein, a piston valve slidably mounted within the sleeve valve, means whereby reciprocal movement is imparted to the piston valve to move it from



one side to another of the sleeve port, and means whereby movement of the piston valve is transmitted to the sleeve valve to move the port in the sleeve into and out of register with the cylinder port.

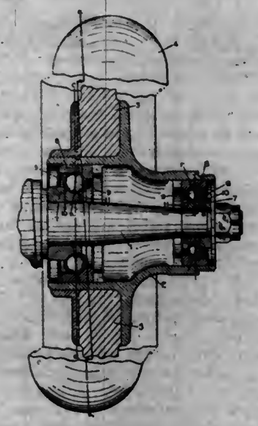
1,754,889. LATCH MECHANISM. GEORGE HALINKA, Detroit, Mich. Filed Aug. 10, 1927. Serial No. 211,873. 3 Claims. (Cl. 292—174.)

1. A latch mechanism of the class described, comprising: a latch bolt slidably mounted; a pull member; a cam on said pull member; and means engageable with said cam for moving said latch member to inoperative position upon the outward pulling of said pull member; and a push member on the opposite side of the door with which used, adapted, upon pushing, for moving said latch member to inoperative position, said cam engaging means being arranged to permit the movement of said latch bolt to inoperative position without disturbance of said pull member.



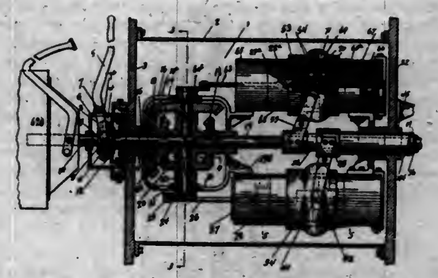
1,754,890. COMBINATION PRINTING CAMERA AND PAPER-SUPPLYING MECHANISM. SAMUEL M. HERSHBERG, Brooklyn, N. Y. Filed July 9, 1926. Serial No. 121,333. 7 Claims. (Cl. 88—24.)

1. The combination with a frame, of a fabric to form a support for paper to be printed by a camera, driving



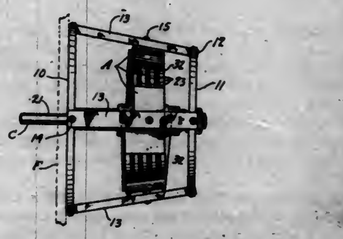
mechanism mounted on said frame and operatively connected to position said movable fabric before printing and withdraw said movable fabric after printing, a bracket mounted on said frame, bearings on said bracket for supporting a roll of sensitized paper, feed rollers secured to said bracket in position to receive the paper from the roll mounted on said bearings, and an operative connection associated wtih said feed rollers, said bracket being pivotally mounted to connect said operative connection with said driving mechanism.

1,754,891. PISTON. RICHARD HILDEBRANDT, Weehawken, N. J. Filed July 21, 1928. Serial No. 294,426. 5 Claims. (Cl. 74—108.)



1. A piston comprising a body, a metal shell of substantially the same coefficient of expansion as the cylinder in which the piston works, attached in a heat insulating manner to said body.

1,754,892. BEARING MOUNTING. FREDERICK G. HUGHES, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed May 18, 1922. Serial No. 561,988. 4 Claims. (Cl. 308—191.)

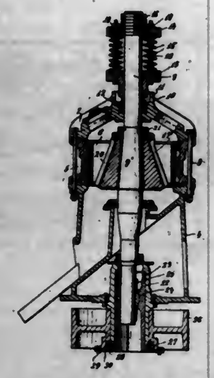


1. In a device of the character described, a spindle, opposed angular contact bearings of different sizes arranged near the ends of the spindle, a wheel hub rotatably supported by said bearings and having its rim-support nearer to the larger bearing, the relative angles of contact of the two bearings being substantially inversely proportional to the radial load on the bearings to equalise the induced end thrusts; substantially as described.

1,754,893. TORQUE CONVERTER. WATSON HURLBURT, Chicago, Ill. Filed Mar. 12, 1928. Serial No. 261,083. 8 Claims. (Cl. 74—34.)

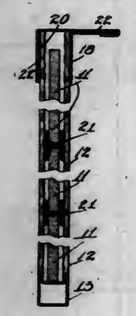
1. In a transmission device, a driving shaft, a driven shaft, a bevel gear fixed to the inner end of each of said shafts, an intermediate gear rotatable about said shafts and about its own axis, said intermediate gear engaging said first-named gears, and means for variably resisting the rotation of said intermediate gear for controlling the relative rotation of said driving and driven gears, said means comprising a cylinder, a partition in said cylinder, a piston at each side of said partition for confining a fluid within said cylinder at each side of said partition, a by-pass for connecting the portions of each piston at each side of said partition, means for varying the size of said by-pass, and yielding means for providing an additional by-pass between the portions of said cylinder at each side of said partition when the pressure in said cylinder exceeds a predetermined amount.

1,754,894. VARIABLE CONDENSER. WILLIAM S. KELLOGG, Peoria, Ill. Filed Jan. 15, 1927. Serial No. 161,278. 4 Claims. (Cl. 175—41.5.)



1. A variable condenser comprising a cone-shaped rotor rotatable about a central axis and having an exterior thread, a stator having a complementary hollow conical internally threaded space, and means for feeding the rotor longitudinally of said axis whereby the threads are fed deeper radially into each other as the rotor is fed longitudinally into the stator, and means for insulating said rotor and stator from each other.

1,754,895. GYRATORY CRUSHER. JOSEPH E. KENNEDY, New York, N. Y. Filed Jan. 21, 1928. Serial No. 248,339. 14 Claims. (Cl. 83—10.)



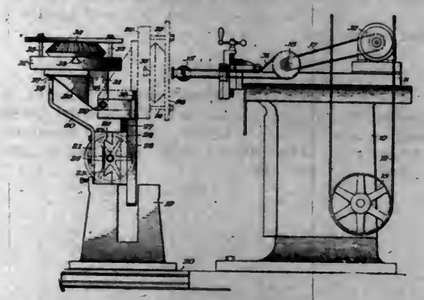
1. In a gyratory crusher, a concave, a crushing head mounted to have gyratory movement and movement in an axial direction and laterally of the axis of the crusher, and yielding means to suspend said crushing head and urge

the head with a predetermined yielding force and constituting a crushing pressure in predetermined position relative to the concave and permit of movement of said head

against such yielding force axially and laterally of the crusher axis by a force applied thereto exceeding such predetermined crushing pressure.

1,754,896. LIGHT-COLORING SCREEN. ALEXANDER M. KNAUBER, Chicago, Ill. Filed Nov. 7, 1927, Serial No. 231,406. Renewed Sept. 23, 1929. 13 Claims. (Cl. 189—76.)

1. A light-coloring screen comprising a frame having a plurality of parallel, fixed and spaced channel bars to receive a plurality of glass plates therebetween; glass plates between adjacent bars and freely slidable therein; and transverse channel bars between the fixed bars and separating the adjacent glass plates, the transverse bars and the plates being removable.



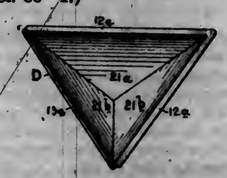
1,754,897. AUTOMATIC SOUND-REPRODUCING MACHINE. SAMUEL KOHN, New York, N. Y., assignor to Wonda Phonograph Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 10, 1921. Serial No. 506,739. 1 Claim. (Cl. 274—10.)

In a multiple-record phonograph the combination with a turntable, a reproducer arm, a reproducer, a stack of records adapted to be successively fed to the turntable and a brake for the turntable, of means for automatically moving the reproducer arm to record-playing position and means called into action by cessation of movement of said reproducer arm across said turn-table sequentially to raise the reproducer from a record when it has completed reproducing a selection thereon, to move the reproducer arm clear of the record, to supply another record from said stack to said turntable and to lower the reproducer onto the newly supplied record, means to render the brake

operative to stop the turntable and means for predetermining the number of records from the stack to be played in succession before the brake becomes operative to stop the machine.

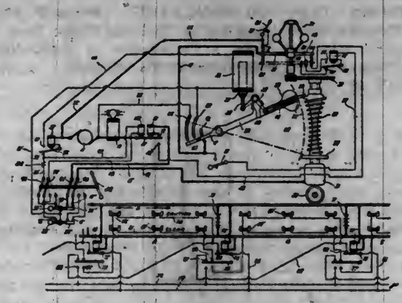
1,754,898. WORKHOLDER FOR GRINDING MACHINES. EDWIN F. LONGENBACK, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 25, 1926. Serial No. 131,327. 4 Claims. (Cl. 51—37.)

1. In a device of the character described, a tool mounted for advancement in a path of predetermined direction in a horizontal plane, in combination with a work holder for positioning and maintaining a work piece in predetermined relationship within and to the path of said tool, said work holder having a plane surface adapted to receive a work piece thereagainst and means for holding said work piece against said plane surface, formed to cause said plane surface to determine the position of the work piece, means for mounting said work holder for vertical and transverse adjustments, and pivotal means connecting said work holder to said last named means, and adjustable stop means limiting the pivotal movement of said work holder for maintaining said work holder with said plane surface in substantially a horizontal plane in one extreme position and maintaining said work holder with said plane surface in substantially a vertical plane in the other extreme position, said work holder when in substantially vertical position presenting the work piece in the path of said tool.



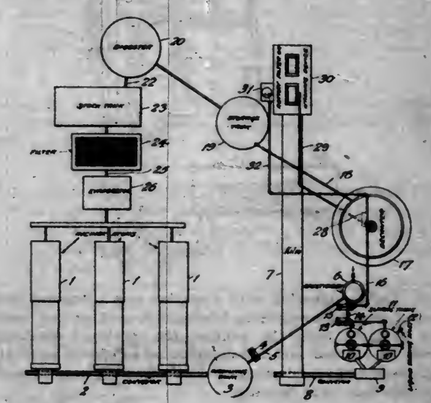
1,754,899. DANGER-SIGNAL DEVICE. EDGAR A. MILLER and CLEVELAND A. JAMES, Philadelphia, Pa. Filed Oct. 25, 1924. Serial No. 745,752. 3 Claims. (Cl. 88—1.)

3. A reflector device consisting of an uneven number of reflecting units arranged about a common center to form a substantially continuous annular reflecting means, each unit comprising three triangular reflecting surfaces abut-



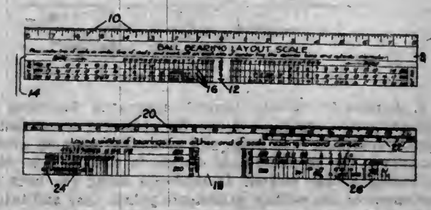
ting each other to form a triple reflector and whose axis is nearer to the common center than is a central point in the orifice of the triple reflector.

1,754,900. REFLECTOR. EDGAR A. MILLER, Philadelphia, Pa., assignor of one-half to Cleveland A. James, Philadelphia, Pa. Filed Jan. 2, 1926. Serial No. 78,754. 1 Claim. (Cl. 88—1.)



A reflector comprising five overlapping reflector units arranged about a common center and each unit formed of pressed glass and comprising three triangular shaped reflecting surfaces arranged at right angles to each other, the triangular rims of the reflector units each having one edge devoid of a flange, and an adjacent edge provided with an outwardly directed flange whose under surface lies in substantially the same plane as the flangeless edge, and wherein further, one of the triangular reflecting surfaces has an angle of 90° and two angles of 45° each, and the remaining two triangular surfaces each have one angle of 90°, a second angle of 35° and the remaining angle of 55°, and wherein also, the 90° angles of the three reflecting surfaces are grouped at a common point.

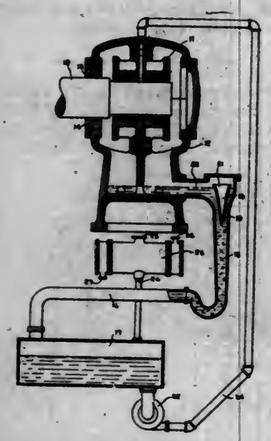
1,754,901. RUN-DOWN AND RESET LOCOMOTIVE-CONTROL APPARATUS. MONROE E. MILLER, Washington, D. C., assignor, by mesne assignments, to Union Simplex Train Control Co., Inc., a Corporation of Delaware. Original application filed Jan. 15, 1923, Serial No. 612,780. Divided and this application filed July 11, 1927. Serial No. 204,905. 4 Claims. (Cl. 246—63.)



1. Vehicle controlling apparatus comprising in combination with a track divided into blocks; two sets of control elements in each block arranged in different longitudinal lines and each including a series of control elements located at intervals along the track in the block, means controlling said control elements of each block and controlled by traffic conditions for rendering at least one set of control elements operative under clear conditions, the other set operative and the first named set inoperative for caution conditions, and both sets inoperative for danger conditions; the control elements of one set being arranged adjacent to the control elements of the other set throughout each block; a vehicle-carried run-down device operable whenever the vehicle is in motion for obtaining danger vehicle conditions when the vehicle has travelled a distance greater than the distance between the control elements of one set; and vehicle-carried means having separate responsive elements in said longitudinal lines controlled by said control-elements and controlling said run-down device and operable when responding to control elements of the firstnamed set to reset said run-down device and maintain clear vehicle conditions, and operable when responding only to the control elements of the secondnamed set, with the firstnamed set of elements inoperative, to reset said run-down device and maintain caution vehicle conditions.

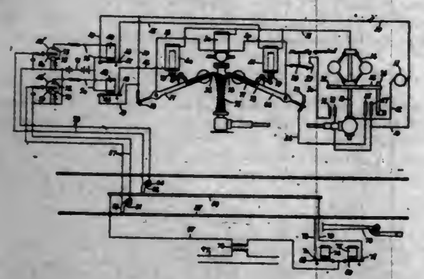
1,754,902. CONTINUOUS SULPHATE PROCESS. WILLIAM D. MOUNT, Lynchburg, Va., assignor of one-half to Kenrick A. Forrest, Harvey, Ill. Filed Jan. 11, 1929. Serial No. 331,892. 7 Claims. (Cl. 92—9.)

1. A process for producing sulphate pulp which comprises the digesting of the wood by means of the alkali liquor, the separation of the pulp and spent liquor, the evaporation of the moisture and burning of the solid organic materials in the spent liquor, the dissolving of the resultant ash, the separation of the solid impurities therefrom, the causticizing of the liquor, the separation of the sludge therefrom, and the reuse of the clear liquor for digesting wood.



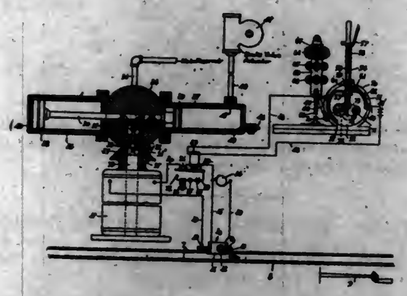
1,754,903. MEASURING RULE. DUDLEY W. NEARING, New Britain, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Sept. 21, 1925. Serial No. 57,753. 10 Claims. (Cl. 33—111.)

5. In a device of the character described, a measuring rule having dimensional graduations representing bearing



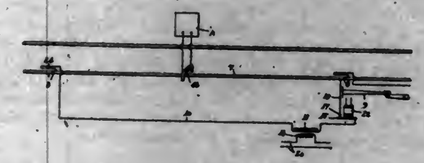
diameters marked off on one side thereof, bearing identity indicia comprising series of bearing size numbers marked off to correspond, the other side of the rule having dimensional graduations representing bearing widths, and bearing identity indicia comprising series of bearing size numbers marked off in congruent alignment with said last graduations; substantially as described.

1,754,904. BEARING HOUSING. JAMES L. RAY, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 3, 1927. Serial No. 196,249. 7 Claims. (Cl. 308—122.)



1. The combination with a bearing and a housing therefor, of means for supplying lubricant to said bearing, means for draining from the housing the lubricant discharged from the bearing, and means including an ejector motivated by the flow of said drainage for withdrawing gaseous media contained in said housing.

1,754,905. RUN-DOWN AND RESET TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed May 6, 1926. Serial No. 107,125. 7 Claims. (Cl. 246—63.)



1. Automatic vehicle control apparatus including a vehicle-carried run-down device for obtaining an ultimate vehicle retarding condition, and manually operable avoiding means for resetting said device, in combination with indicating means located at intervals along the path of movement of the vehicle to indicate points near and intermediate the ends of the blocks where the avoiding means should be operated to prevent said vehicle retarding condition.

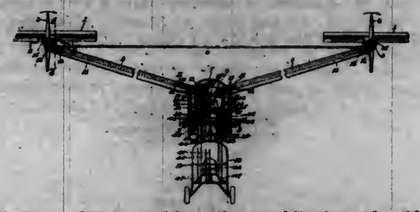
1,754,906. SIMPLEX NORMAL DANGER AUTOMANUAL TRAIN-CONTROL APPARATUS. ALFRED L. RUTHVEN, Rochester, N. Y. Filed Oct. 28, 1926. Serial No. 144,772. 16 Claims. (Cl. 246—63.)

1. A vehicle control apparatus comprising vehicle retarding means including cooperable control elements on the vehicle and track-side, an alert device operable for different traffic conditions and controlling said means to prevent operation thereof, and a signal device operable with said said alert device for indicating the operation of said alert device, said device being on the exterior of the vehicle and visible along the right of way.

1,754,907. CONTINUOUS TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed July 27, 1929. Serial No. 381,495. 9 Claims. (Cl. 246—63.)

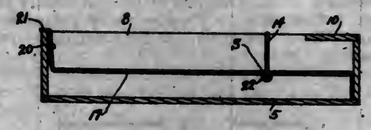
1. The combination with a vehicle track having insulated joints dividing the track into blocks, and a vehicle carried apparatus including a receiving coil cooperable inductively with said track, of trackside circuits including the track rails and having portions extending adjacent to the insulated joints to avoid "blind spots."

1,754,908. CLIP FOR BOOK BACKS. FRANK S. SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1929. Serial No. 353,851. 3 Claims. (Cl. 40—23.)



1. A clip for a book back, comprising a spring wire frame of general rectangular shape having its upper end curved to fit the convexity of said back, the ends of the wire being at the bottom of the frame and curved upwardly and outwardly, and a sheet metal clip having its lower end curved inwardly and secured to said ends and adapted to engage the beaded edge of said back.

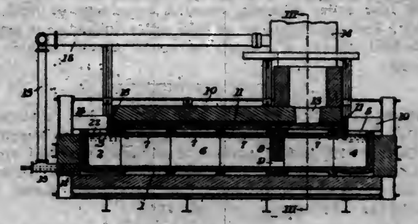
1,754,909. PROCESS OF RAPIDLY BLEACHING VEGETABLE FIBERS OF ANY KIND. CARL GUSTAV SCHWALBE, Eberswalde, and HERMANN WENZL, Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Filed Jan. 19, 1925, Serial No. 3,449, and in Germany July 15, 1921. 5 Claims. (Cl. 8—2.)



1. In the art of bleaching vegetable fibers especially cellulose raw material the combination of the following steps: placing the fibers in the form of dry paste-board on a continuously moving supporting member, moistening and preheating the fibers, impregnating the fibers with a strong bleaching liquor containing from 20 to 30 grams of active chlorine per liter, immediately removing the excess of bleaching agent, passing the treated fibers through a moist and warm atmosphere so that the bleaching agent remaining in the fibers effects the bleaching to the desired degree, and finally removing the remnants of the exhausted bleaching liquor by rinsing them with water, pressing off the water, separating the bleached paste-board from the supporting member and conveying it to a drying device.

1,754,910. AEROPLANE. ALEX SERNA, Fordson, Mich. Filed Nov. 23, 1927. Serial No. 235,223. 7 Claims. (Cl. 244—19.)

1. In a flying machine, the combination of widely spaced apart flying units each including an aerofoil and a propeller, rigid arms upon the outer ends of which said units are supported with said arms extending radially inward and downward therefrom and rigidly connected at their inner ends centrally between said units, power means carried by said arms adjacent their connected inner ends, and means for transmitting motion from said power means through said arms to drive said propellers.



1,754,911. DOUBLE-COMPARTMENT MONEY TILL. LEWIS RAYMOND SHERWOOD and THOMAS LEO LITTLE, Lakewood, Ohio. Filed Jan. 12, 1929. Serial No. 332,004. 3 Claims. (Cl. 45—7.)

3. An attachment for money tills including, in combination, a shaft comprising a pair of alined spaced sections connected together by inverted U-shaped hangers and having at the remote ends of end sections hangers with oppositely disposed lateral extremities, rear panels hingedly connected with shaft sections and having depending rear ends, front panels hingedly connected with the shaft sections and having at their front ends risers with forwardly directed stop ears at their upper edges.

1,754,912. CONTINUOUS GLASS-MELTING POT. EDWIN E. SLICK, Pittsburgh, Pa. Filed Sept. 2, 1926. Serial No. 133,163. 8 Claims. (Cl. 49—59.)

7. A pot furnace for melting glass having a long relatively narrow combustion chamber, a long relatively narrow melting pot within the combustion chamber having upwardly and outwardly opening charging and working openings, a gaseous fuel burner opening into one end of the furnace, and an offtake flue near the other end of the furnace and between the charging and working openings,

the arrangement being such that the products of combustion pass from the burner over the length of the melting pot from the burner to the offtake flue.

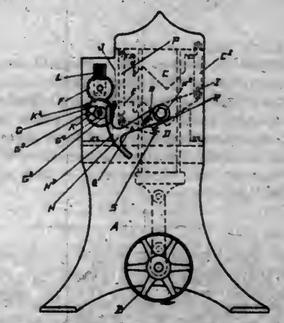
1,754,913. UNSYMMETRICAL ORGANIC PEROXIDE BLEACHING AGENT AND METHOD OF PREPARING THE SAME. WILLIAM B. STODDARD, Stamford, Conn., and ROBERT V. TOWNEND and VAMAN R. KOKATNUR, Kearny, N. J., assignors to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed Sept. 8, 1928. Serial No. 304,838. 15 Claims. (Cl. 260—16.)

1. A peroxid of the general formula—

$$R—CO—O—O—OC—R_1$$

in which R_1 is an aromatic radical and R—CO corresponds to an acyl radical of a mono-basic aliphatic acid having not less than four carbon atoms.

1,754,914. BLEACHING METHOD AND COMPOSITION. WILLIAM B. STODDARD, Stamford, Conn., assignor to Pilot Laboratory, Inc., Arlington, N. J., a Corporation of New Jersey. Filed Oct. 23, 1928. Serial No. 314,545. 17 Claims. (Cl. 83—42.)



1. A composition of the type described which comprises an organic peroxid dissolved in a non-aqueous solvent.

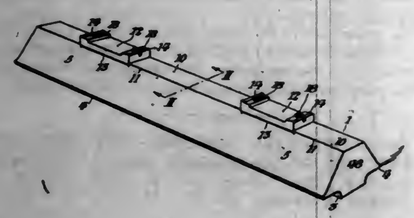
5. A method of bleaching which comprises treating the material to be bleached with a non-acqueous solution of an organic peroxy compound.

9. A method of forming peroxy compounds which comprises treating an acyl chloride with hydrogen peroxide to form an organic peroxide, dissolving said peroxide in a nonaqueous solvent, and chemically drying the resulting peroxide solution.

12. A method of bleaching flour and other milling products which comprises spraying a non-aqueous solution of organic peroxides uniformly throughout said milling products, and permitting said peroxides to react therewith.

1,754,915. MACHINE DESIGNED FOR THE MANUFACTURE OF FLASHINGS. ADELARD J. THERRIEN, Lynnfield, Mass. Filed Aug. 2, 1928. Serial No. 296,898. 9 Claims. (Cl. 153—21.)

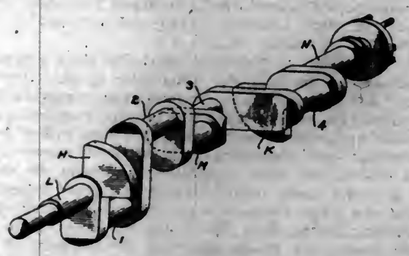
7. In a machine of the character described, a pair of die members, means for moving one of said die members



towards and from the other, a roller for feeding material between said die members, and a link and lever lost motion connection between said movable die member and said feed roller whereby opening movement of said die effects feeding movement of said roller following a predetermined amount of opening movement of said movable die member.

1,754,916. MECHANICAL TOY. JOHN W. THOMPSON, Oak Park, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 13, 1926, Serial No. 128,941. Divided and this application filed Apr. 28, 1928. Serial No. 273,741. 3 Claims. (Cl. 46—45.)

1. A toy comprising a platform, wheels and axle for said platform, a mutilated gear on said axle, a sliding object on said platform, a rack connected to said object in mesh with said gear, a second object yieldingly fixed on said platform and an elastic means connecting said objects.

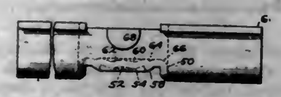


1,754,917. METALLIC RAILWAY TIE. RAYMOND L. VAIL, Germantown, Pa. Filed Apr. 6, 1929. Serial No. 352,953. 11 Claims. (Cl. 238—70.)

1. In a metallic railway tie, the combination with outer upwardly converging strut plates; of inner upwardly converging strut plates secured at their upper edges to said outer plates and having their lower edges in spaced relation with each other and with said outer plates; and a base plate connected with the lower edges of said strut plates; whereby each of said outer plates is obliquely braced by one of said inner plates.

1,754,918. CRANK SHAFT FOR V-TYPE ENGINES AND METHOD OF BALANCING SAME. CLINTON L. WALKER, Piedmont, Calif. Filed July 15, 1925. Serial No. 43,703. 3 Claims. (Cl. 74—38.)

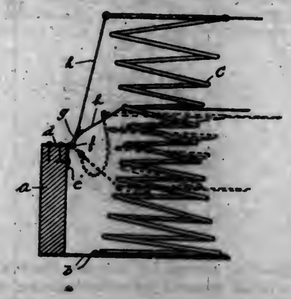
3. A four throw crank shaft for a V-type four-stroke cycle engine, having cranks arranged in 180 degree pairs set at 90 degrees to each other and counterbalanced by a pair of weights in a plane bisecting the angles of cranks



1 and 3 and 2 and 4, and opposite thereto respectively, and each of said weights having a WRL equal to .7071 times the difference in WRL of cranks 1 and 2 or 3 and 4.

1,754,919. FELT MANUFACTURE. VAN A. WALLIN, Chicago, Ill., assignor to American Hair & Felt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1928. Serial No. 265,598. 1 Claim. (Cl. 28—14.)

The method of producing felts, made of hair, jute or other coarse, feltable fibres, too thin to be felted between the felter plates of the usual heavy felting machine, which consists in building up a composite mass of thin bats of the feltable fibres, separated from each other by a single, thin, flexible separator, to a thickness sufficient for efficient handling in the usual heavy, coarse, felting machinery used in the manufacture of thick felts, subjecting the composite mass to the pressure and agitation of the felter plates at one operation, and after felting removing the separators.

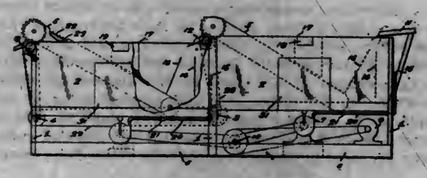


1,754,920. METHOD OF MAKING JOURNAL BOXES. GEORGE D. WARD, Kearny, and WILLIAM H. CHAPMAN, Montclair, N. J., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 3, 1927. Serial No. 210,433. 8 Claims. (Cl. 29—166.)

1. The method of making a narrow center, hanger box from flat sheet steel which consists in pressing at the center of a blank a deep teat united to shallower and wider concavities at the end portions by inwardly arched beads, and then pressing the teat inwardly to form a narrow center with a shaft hanger seat; substantially as described.

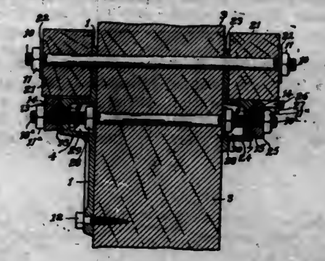
1,754,921. UPHOLSTERY ATTACHMENT. SIMON L. WARREN, Quincy, Mass. Filed May 8, 1928. Serial No. 276,040. 4 Claims. (Cl. 155—179.)

1. In combination with an upholstery frame of substantial depth having a support at its bottom and a series of spiral springs mounted upon said support within the frame and extending for a substantial distance above the top thereof, a series of metal eyes mounted on the frame in position to project within the same adjacent its top, and



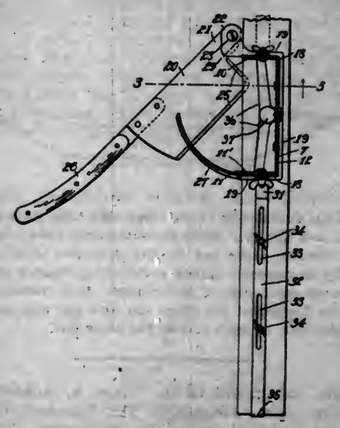
a plurality of cords extending through each of said eyes and connected thereto and to top and intermediate coils of adjacent springs, to restrain said springs against longitudinal expansion and lateral distortion and permit compression thereof.

1,754,922. METHOD OF MAKING HUBS. CHICHESTER P. WELDON, Bristol, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Mar. 29, 1927. Serial No. 179,294. 3 Claims. (Cl. 29—159.3.)



1. The method of forming a flanged hub which consists in swaging down the middle portion of a sleeve, confining the sleeve against a change in shape except at an annular space near the end portion, expanding said end portion to cause it to bulge outwardly into said space, and collapsing said bulged portion by axial pressure to form a folded flange; substantially as described.

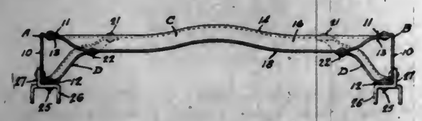
1,754,923. FRUIT-GRADING MACHINE. ERNEST H. WIEGAND, Corvallis, Oreg., assignor, by mesne assignments, to the Citizens of the United States for their free use and enjoyment. Filed Dec. 11, 1928. Serial No. 325,350. 1 Claim. (Cl. 209—178.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



A fruit grading machine, comprising tanks in series containing solutions of greater density than the density of water, means for recirculating said solutions in each of said tanks, means for minimizing the agitation of said solutions, means for introducing fruit into the first of said tanks and means for conveying the fruit from the first of said tanks to the other tank or tanks in the series.

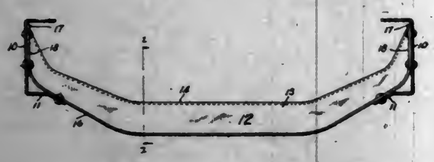
1,754,924. POLE ATTACHMENT FOR ELECTRIC CONDUCTORS. ROLLAND G. WILLIAMS, Branford, Conn., assignor to Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed June 13, 1928. Serial No. 285,192. 2 Claims. (Cl. 173—251.)

1. The hereindescribed fixture for securement to a pole comprising a base having a ledge extending horizontally therefrom with horizontal parallel spaced grooves in the outer face of said ledge, a clamping plate, and means for securing said plate to the ledge and to the pole with a messenger cable firmly held between said plate and ledge, said ledge having raised seats whose horizontal plane is in close proximity to the horizontal plane of the messenger cable and above the upper edge of the clamping plate, and an insulating bar supported by said seats and secured thereto.



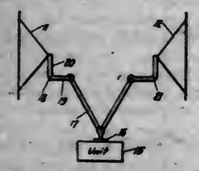
1,754,925. MORTISE-CUTTING DEVICE. HANS ALMIND, New York, N. Y. Filed Nov. 11, 1927. Serial No. 232,507. 7 Claims. (Cl. 144—27.)

1. In a mortise cutting device, a frame arranged with a side wall and integral right angle end walls and one end wall arranged at the end with a perforated ear extending laterally in a plane with the bottom edge of the frame and the other end wall extended outward and curved inward, cutters fixed upon the inner surface of the frame walls with the cutting edge extended beyond the bottom edge, a slicing cutter substantially of rectangular form having a cutting edge extended along a longitudinal edge and one end edge thereof with a perforated ear extending laterally from the corner at the juncture of the end having the cutting edge with the back edge of the cutter, and means to pivotally connect the slicing cutter with the perforated ear of the frame to arrange said cutter to have movement in a direction into and out of the open side of the frame transversely of and in a plane with the cutting edge of the cutters fixed on the frame, and the bottom edge of the outward and inward curved extension of the



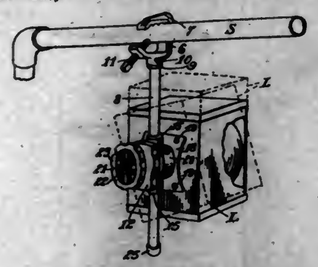
one end wall of the frame extended below the bottom of the remainder of the frame and adapted for the engaging of the slicing cutter to serve as a gauge and guide for the slicing cutter in the cutting operation thereof, and a hand grip fixed to the slicing cutter to extend laterally therefrom opposite to the connection of said cutter with the frame.

1,754,926. CROSSBAR FOR AUTOMOBILE FRAMES. BIRGER TORVALD ANDREN, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 22, 1927, Serial No. 227,889. Renewed Mar. 5, 1929. 13 Claims. (Cl. 280—106.)



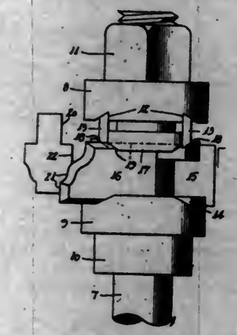
1. In a frame for automobiles or other vehicles, a cross bar having gussets at its ends, a pair of oppositely arranged channel side bars to one flange of each of which one of said gussets is attached, and braces attached to the cross bar intermediate the gussets, the outer ends of the braces being attached to the other flanges of the side bars.

1,754,927. AUTOMOBILE FRAME. BIRGER TORVALD ANDREN, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Feb. 2, 1928. Serial No. 251,275. 10 Claims. (Cl. 280—106.)



1. In an automobile frame, two side bars each having a vertical web and an inwardly extending flange, combined with a channel cross bar having upturned ends standing vertically in opposed planes and having flanges at its end portions on each side of the channel, and connections between the flanges of the cross bar and the web and flange of the side bar, at each end of the cross bar.

1,754,928. LOUD-SPEAKER. CARL R. ALBERTUS, San Leandro, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed July 28, 1927. Serial No. 209,092. 17 Claims. (Cl. 181—31.)

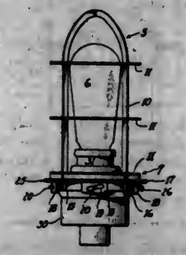


1. In combination, an actuating unit, an air actuator, and a rigid driving element for transferring energy between the unit and actuator, the direction of transmission through said element being oblique both to the direction of movement of the unit, and that of the air actuator.

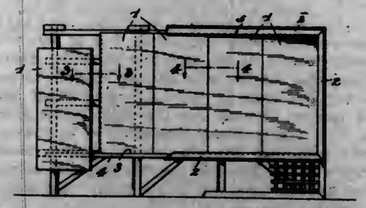
1,754,929. MOUNTING OF LAMP HOUSINGS. HARRY J. ATTICKS and JOSEPH G. SALTZMAN, New York, N. Y. Filed Nov. 17, 1927. Serial No. 233,916. 2 Claims. (Cl. 240—52.)

1. In supporting means for a lamp housing, a carrier embodying a clamp member for mounting on a support and a rod secured to the clamp member, and means for mounting a lamp housing on the carrier for adjustment parallelly and universally thereof, comprising a clamp plate having a central perforation and perforated spaced ears extending laterally from a face of the plate in alined arrangement at one side of the perforation for engagement of the carrier rod to mount the plate thereon to have adjustment longitudinally of and about the rod, a bracket embodying a plate portion for mounting of a lamp housing thereon and arranged as a clamp member having a laterally extending stud for engagement in the perforation of the clamp plate for adjustment about an axis transverse of the axis of the carrier rod, and means engaged on the stud at the outer side of the clamp plate to draw said plate and the lamp housing carrying bracket to and secure the lamp housing in adjusted position on the carrier rod.

1,754,930. CUTTER HEAD. WILLIAM G. BEAN and ULYSSES M. COOL, Burbank, Calif. Filed June 4, 1928. Serial No. 282,850. 1 Claim. (Cl. 144—231.)



A cutter head comprising a spindle, three collars thereon having complementing grooves in their confronting faces, and cutters between the collars seated in said grooves, the grooves in the opposite faces of the intermediate collar being arranged at an angle to one another in chordal positions on the collar and said grooves being of such depth as to extend beyond a common plane so that the cutters produce overlapping cuts, the grooves and cutters being arranged in pairs at the opposite sides of the spindle.

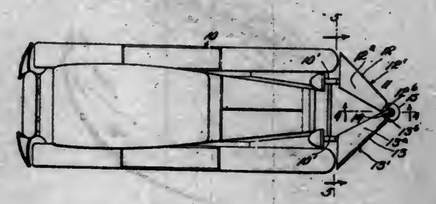


1,754,931. LAMP GUARD AND MOUNTING THEREFOR. HENRY BRACHTL, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1928. Serial No. 248,286. 14 Claims. (Cl. 240—102.)

1. A protective device for incandescent lamps having, in combination, a guard carrier, a guard open at one end to

receive a lamp and adapted to abut said carrier, said carrier comprising a body member, a ring rotatably mounted on said body member and arranged to move axially of the member during such rotation, said member and said ring having opposed notches formed therein arranged to be carried into and out of registering relation by relatively rotating said ring and member, a plurality of fingers on the open end of the guard adapted to be inserted into said notches when in registry, said fingers having notches therein to permit rotation of said ring to carry its notches out of registry with the notches in said member to secure said guard to the carrier, and means operable during such rotation of the ring to move the ring axially of the body member and thereby draw the guard into firm clamping abutment with said body member.

1,754,932. ADVERTISING SIGNBOARD STRUCTURE. WILLIAM G. BROWNE, Yonkers, N. Y., and ROGER W. OLMSTED, San Francisco, Calif. Filed Sept. 12, 1927. Serial No. 218,973. 3 Claims. (Cl. 40—125.)

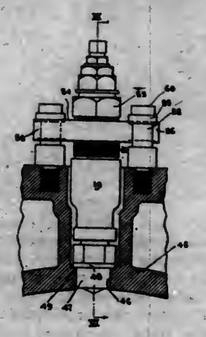


1. In a structure for displaying posters and the like, a sectional body comprising a plurality of panels, each including a skeleton support having side rails with rearwardly bevelled front edges, and a sheet metal covering, said sheet metal being applied to each skeleton support in such a manner that when said panels are assembled with their edges in abutting relation the sheet metal portions surrounding said edges are divergent and acutely contiguous in the face plane of the structure and the sheet metal faces of said panels combine to form a smooth, substantially continuous surface throughout the portion of said body adapted to receive and display the poster or the like.

1,754,933. TIME-CONTROLLED SWITCH. GEORGE M. BRUNNER, Roseburg, Oreg. Filed Dec. 20, 1926. Serial No. 156,018. 12 Claims. (Cl. 194—9.)

1. In a time controlled coin operated switch of the character described, a switch structure including a swinging knife blade, a sliding switch plate member having connection with said knife blade, a sliding coin plate arranged in side by side relation with the switch plate, means for causing said coin plate and said switch plate to operate simultaneously through a coin connection therebetween for the closing of said switch, means for moving the switch plate laterally to cause it to engage a fixed portion of the structure to maintain the switch in closed position, a time mechanism, and trip means operable by said time mechanism to cause the release of the sliding switch plate to open said switch.

1,754,934. AUTOMOBILE BUMPER. DOMENICO CAPOBIANCO, New York, N. Y. Filed Oct. 26, 1929. Serial No. 402,562. 4 Claims. (Cl. 293—17.)



1. An automobile bumper composed of two main bumper elements pivoted together at a centrally-located point to provide a bumper relatively V-shaped in conformation, said elements extending at their opposite ends to a position adjacent to the sides of the car chassis, and mounting means capable of horizontal adjustment for mounting said bumper on the car chassis.

1,754,935. PROCESS OF DIRECTLY PRODUCING PHONOGRAM CARRIERS SUITABLE TO BE PLAYED OFF. ALFRED CHMIELOWSKI, Vienna, Austria, assignor, by direct and mesne assignments, to Sigmund Katscher, Vienna, Austria. Filed July 5, 1928, Serial No. 290,685, and in Austria May 23, 1927. 2 Claims. (Cl. 274—41.)

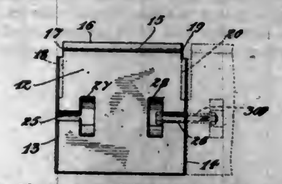
2. A phonogram record comprising a surface layer of gelatine having a sound groove cut therein.

1,754,936. INJECTION NOZZLE. ALAN ERNEST LEOFRIC CHORLTON, London, England. Filed Mar. 21, 1928. Serial No. 263,419. 9 Claims. (Cl. 123—32.)

1. The combination with an engine cylinder having an opening for a fuel injection nozzle, of a fuel injection nozzle having a tip portion fitting in said opening, a shoulder fitting against the exterior of the cylinder, a second shoulder spaced outwardly from the first shoulder, and a cylindrical portion extending outwardly from the second shoulder; and anchorage means for the nozzle including tension members carried by the cylinder, an abut-

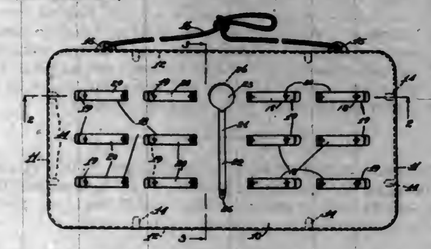
ment member held fixedly in place with respect to the cylinder by the tension members, and an adjustable sleeve surrounding said cylindrical portion, threaded to and movable with respect to said abutment member, and having its inner end engaging said second shoulder.

1,754,937. SOFA PILLOW. BESSIE COMSTOCK, Waukesha, Wis. Filed Oct. 10, 1928. Serial No. 311,455. 1 Claim. (Cl. 5—337.)



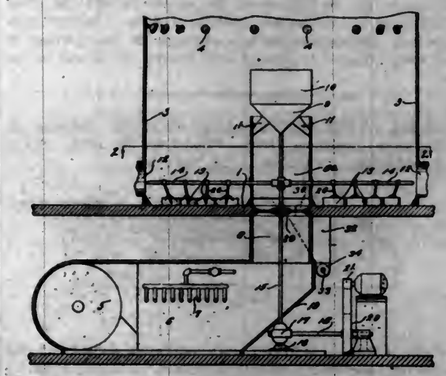
A pillow provided with a flexible filling enclosed by a contour-maintaining covering of fabric in combination with an outer covering also of fabric and having an elongated opening intermediate of its ends, the margins of which are provided with lacing apertures, and a lacing cord extending through said apertures and connecting said margins, the inner covering being provided with a permanently attached piece of material similar in color and appearance to that of the outer covering and registering with the laced aperture in the outer covering.

1,754,938. FASTENING DEVICE WITH INSTANTANEOUS JAMMING. HUGUES LOUIS DARDELET, Nantes, France, assignor, by mesne assignments, to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Original application filed May 19, 1925, Serial No. 31,392, and in France Sept. 5, 1924. Divided and this application filed June 14, 1926. Serial No. 116,041. 5 Claims. (Cl. 85—5.)



1. A two-part fastening device comprising a bolt and a nut, said bolt having a nut penetrating shank portion the major part of the periphery of which extends around the axis of the bolt in the path of the generatrix of an Archimedean spiral, said nut having a reception aperture for said shank portion the major part of the wall surface of which has a spiral curvature complementary to the spiral peripheral surface of said shank portion and is movable into and out of binding engagement with said spiral peripheral surface by relative rotary movements between the nut and bolt, said spiral surfaces having a sufficiently low maximum amount of recession from the axial line of the bolt and nut to afford a self-holding frictional grip upon forcible jamming together of said surfaces by turning effort exerted on one part of the fastening device.

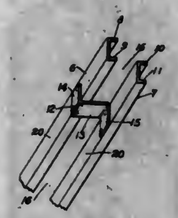
1,754,939. CURB BLOCK. THORLEIF FLIFLET and THOMAS B. ALLARDICE, Mountain Lakes, N. J. Filed Dec. 31, 1927. Serial No. 243,829. 3 Claims. (Cl. 94—31.)



2. A curb block comprising a body having a front face, a rear face, a curved face at one end thereof, a flat face at the other end thereof, and a top face including an inner flat portion and a rib at one side thereof extending upwardly from the front face.

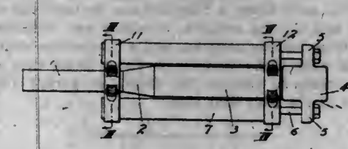
1,754,940. TIE RACK. CHARLES K. FREEMAN, Chicago, Ill. Filed Dec. 19, 1928. Serial No. 327,148. 3 Claims. (Cl. 206—80.)

1. A tie rack comprising a base plate, and a plurality of transversely spaced lugs struck out of said plate and connected thereto at one end, and extending horizontally in spaced and substantially parallel relation to said base plate, the free ends of said lugs being flared outwardly and a portion of each lug intermediate its ends being flexed inwardly in close proximity to said base plate, whereby said lugs are adapted to support neckties or the like with the faces of the ties disposed substantially parallel to said base and to yieldingly hold said ties in fixed position thereon.



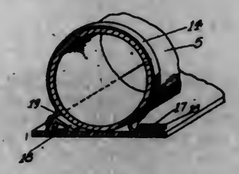
1,754,941. SPRAY DRIER. WILLIAM O. FROHRING, Shaker Heights, Ohio, and WILLIAM F. RICHARDS, Mason, Mich., assignors, by mesne assignments, to The Laboratory Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 20, 1927. Serial No. 185,303. 5 Claims. (Cl. 159—4.)

2. A spray drier, comprising a circular drying chamber, said chamber being provided with a substantially radially



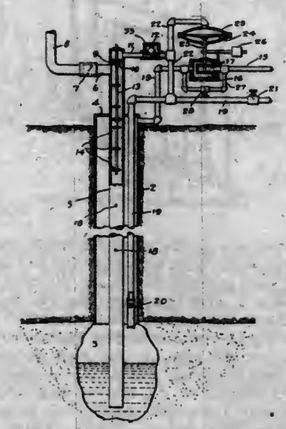
extending channel in its bottom, movable means within said chamber for scraping the material deposited on the chamber bottom and for conveying it to said channel, and supporting means extending across said channel for supporting the scraping means while crossing said channel.

1,754,942. BUILT-UP STUD FOR HOLLOW PARTITIONS. WILLIAM M. GOLDSMITH, Cincinnati, Ohio, assignor to The Goldsmith Metal Lath Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 8, 1926. Serial No. 121,182. 6 Claims. (Cl. 72—115.)



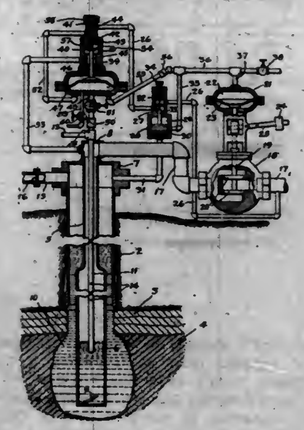
5. In a device of the class described the combination of two flanged structural irons disposed with their flanges in parallelism and their webs out of transverse alignment and braces connecting the structural irons and retaining them in fixed offset relationship.

1,754,943. FIELD GUN WITH TUBE RECOIL. VICTOR HAMMAR, Bofors, Sweden. Filed July 12, 1928, Serial No. 292,171, and in Sweden Dec. 4, 1926. 5 Claims. (Cl. 89—43.)



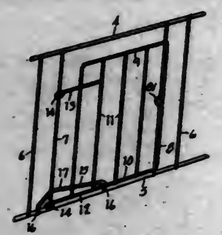
1. Arrangement in field guns having tube recoil comprising a tube, rollers disposed radially around said tube for supporting the forward end thereof and which bear against the cylindrical periphery of the tube, and a cradle in which said rollers are mounted.

1,754,944. SIGN DEVICE. THOMAS H. HARRIS, Norwood, Ohio. Filed Jan. 18, 1927. Serial No. 161,916. 2 Claims. (Cl. 40—145.)



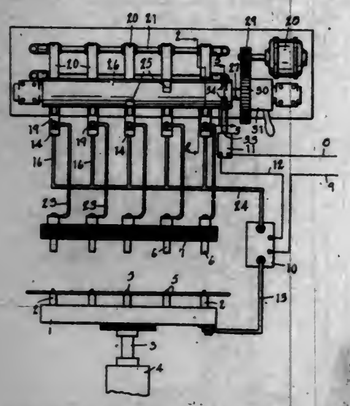
1. In combination with a pole, a directory board, and means for mounting it on the pole, comprising a strap to surround the pole, means for securing one end of the strap to the board, and means for securing the other end of the strap to the board, comprising button studs on the board, and keyhole slots in the strap, and a locking strip for the button and slot connection, having keyhole slots facing in the opposite direction from those of the strap.

1,754,945. METHOD AND APPARATUS FOR FLOWING OR PUMPING WELLS. RICHARD M. HASKELL, Bradford, Pa., assignor of three-fourths to Tide Water Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 5, 1927. Serial No. 210,799. 17 Claims. (Cl. 103—11.)



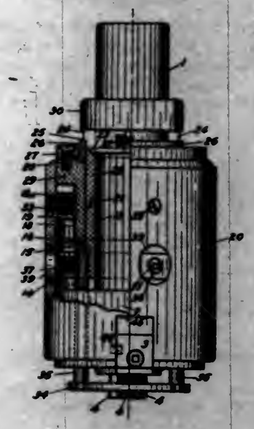
1. The method of flowing wells which comprises maintaining a back pressure on an aeriform operating medium escaping from the well, utilizing the pressure of such medium to keep a flowing medium turned off from the well, and utilizing fall in pressure in said medium due to rise of liquid in the well to bring about turning on of the aeriform flowing medium.

1,754,946. WELL-FLOWING APPARATUS. RICHARD M. HASKELL, Bradford, Pa., assignor of three-fourths to Tide Water Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Feb. 20, 1928. Serial No. 255,621. 20 Claims. (Cl. 103—11.)



1. Well flowing apparatus comprising a well casing, means to supply motive fluid to the well to discharge liquid therefrom, fluid pressure means adapted to shut off the supply of motive fluid including a fluid pressure conduit and a valve for controlling flow through said conduit, means to move said valve in response to a state of discharge of the well and to retain the valve in such moved position, and means to release the retaining means in response to change of pressure in the well casing.

1,754,947. POULTRY COOP OR CRATE. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Aug. 24, 1928. Serial No. 301,714. 5 Claims. (Cl. 220—36.)



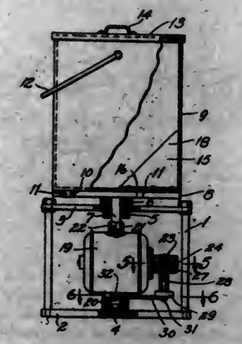
1. In a structure of the class described, the combination of a panel comprising horizontal top and bottom bars and vertical slats secured thereto and disposed to provide a door opening, a door comprising top and bottom members and vertical slats, said door being provided with hinge members having pivotal and sliding engagement with the vertical slat at one side of said door opening, and a bail-shaped door retaining and lifting member, the arms of which are secured to the bottom longitudinal bar to project upwardly therefrom constituting a door retaining means, the bight portion of said member being forwardly inclined and disposed transversely of the panel slat on which the door is hinged so that the bottom member of the door rides thereon when the door is swung to open position thereby elevating the door.

1,754,948. ELECTRIC WELDING MACHINE. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Sept. 21, 1928. Serial No. 307,392. 8 Claims. (Cl. 219—4.)

1. In an electric welding machine, the combination of a plurality of coacting pairs of electrodes, a transformer having a main circuit connected thereto, an electrode switch for each coacting pair of electrodes having one of its contacts connected to one of a pair of eletrodes and the other to said transformer, electric connections for the other electrode of the pairs to said transformer, a circuit breaker switch interposed in said main circuit in advance of said transformer, and a drum provided with a plurality of spirally disposed tappets for successively closing said electrode switches as the drum is rotated and with a plurality of tappets coacting with said circuit breaker switch and acting to close said circuit breaker switch after the closing of one of electrode switches and open it prior to the opening of the electrode switch.

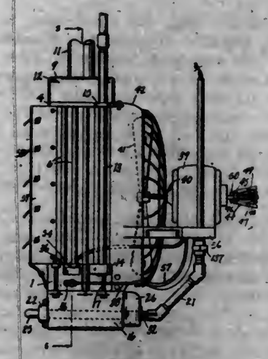
1,754,949. AUTOMATIC THREAD-CUTTING TOOL. PAUL O. HECHT, Davenport, Iowa, assignor to B & D Mfg. Co., Rock Island, Ill., a Corporation of Illinois. Filed June 4, 1925. Serial No. 34,888. 12 Claims. (Cl. 10—145.)

2. In mechanism of the character described, a body comprising a shank and a flange, a shell surrounding the body and sliding on the flange, said shell having at its upper end a ring shaped abutment, locking dogs carried by the shank and engaging the said abutment to lock the shell in lowered position, springs within the shell and tending to separate the shell and flange by moving them longitudinally relatively to each other, a ring slidable between the shank and shell and, in one position, engaging and withdrawing the dogs from locking position, and a continuous abutment below said shell and connected to the slidable ring to actuate the same to release the dogs and permit relative movement of the body and shell.



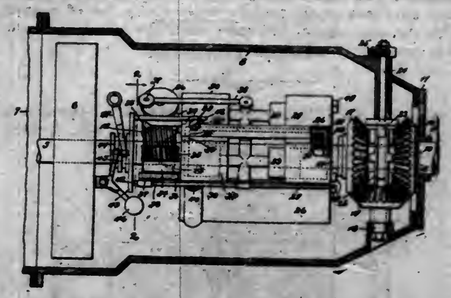
1,754,950. PROCESS AND APPARATUS FOR OBTAINING NEW RADIATIONS. VICTOR ALBERT HENOCQUE, La Basse-Croisille, par Conches, Eure, and HENRI SCHMIDT, Paris, France. Filed Dec. 13, 1924, Serial No. 755,688, and in France June 5, 1924. 7 Claims. (Cl. 250—1.)

1. A system for producing radiations that will act at a distance in a powerful way, comprising a source of radiation, a metallic reflector located behind said source, an open electric circuit, and means for supplying electric energy to said circuit, said circuit having one end grounded and the other end connected to the reflector itself, so that it will create an electromagnetic field to act upon said source and cause it to emit radiations in waves of a shorter wave length.



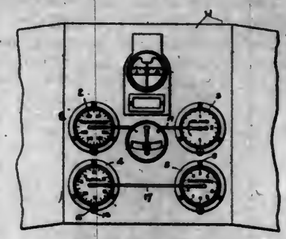
1,754,951. WASHING MACHINE. WALTER J. HOLLIER, St. Louis, Mo. Filed Sept. 6, 1928. Serial No. 304,264. 2 Claims. (Cl. 259—75.)

1. A washing machine comprising a base, a motor pivotally mounted thereon, means operated by the motor shaft for oscillating said motor, a horisontal support pivotally mounted in a member of said base and having its pivot non-



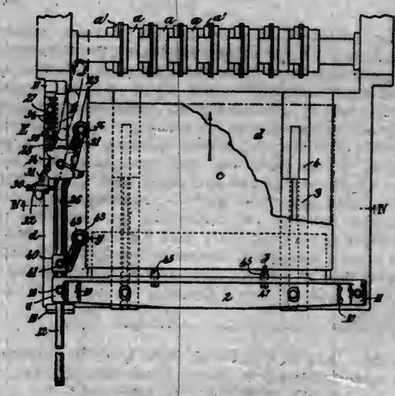
rotatably engaged with said motor and a container mounted on and detachably engaging said support to be oscillated therewith in the movement of said motor.

1,754,952. HEATING APPARATUS. HUBERT R. HUMPHREY and GEORGE A. HUMPHREY, Kalamazoo, Mich., assignors to General Gas Light Company, Kalamazoo, Mich. Filed Nov. 3, 1928. Serial No. 314,017. 30 Claims. (Cl. 126—110.)



1. In a heating apparatus, the combination of a chambered base member having a plurality of combustion chamber discharge openings surrounded by upwardly facing flue seats, a top member having a plurality of flue openings therein, radiating flues of relatively small diameter arranged with their upper ends through said openings in said top member and their lower ends in said seats in said base member, flue clamping strips mounted on said top member to engage the upper ends of said flues and having restricted flue discharge openings therein, a flue header member mounted on said top member to coact therewith to provide a flue header, said header being provided with a discharge flue, a burner housing member mounted on said base member to coact therewith to provide a combustion chamber, and gas burners mounted on said burner housing member and having primary air inlets opening therein.

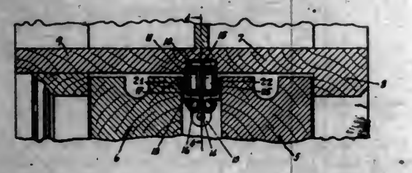
1,754,953. TRANSMISSION. SAMUEL C. IGOU, St. Louis, Mo. Filed Mar. 1, 1926. Serial No. 91,474. 8 Claims. (Cl. 74—34.)



1. A transmission comprising a driving shaft, a transmission shaft, a worm rotatable by the driving shaft, a worm wheel rotatable with the transmission shaft and a controllable resistance for the worm wheel.

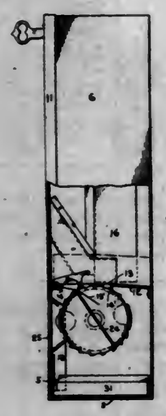
1,754,954. INSTRUMENT PANEL FOR AIRCRAFT. CARL E. JOHNSON, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed July 2, 1929. Serial No. 375,439. 4 Claims. (Cl. 244—31.)

1. An instrument panel for aircraft comprising a plurality of flight indicating instruments adjustably mounted with respect to said panel and glide lines on said panel interconnecting said instruments.



1,754,955. GAUGE FOR SHEET SLITTERS AND THE LIKE. PETER KRUSE, Brooklyn, N. Y., assignor to E. M. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed July 22, 1927. Serial No. 207,595. 9 Claims. (Cl. 271—55.)

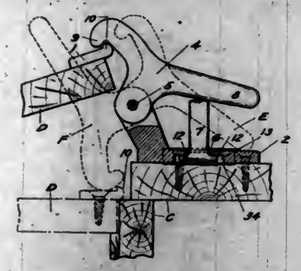
1. The feeding mechanism according to claim 7, further characterised in that the said gauge members are adapted



to engage a sheet at three separate points, the said side gauge member being in advance of the end gauge members, and the said shifting means being adapted to move such advanced gauge member horizontally out of contact with the side edge of the sheet while the end gauge members continue to advance.

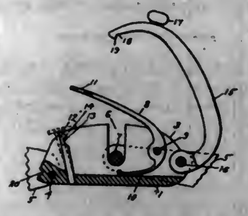
1,754,956. WEATHERPROOFING MEANS. ARTHUR H. KUHLMANN, University City, Mo. Filed Feb. 4, 1929. Serial No. 337,290. 17 Claims. (Cl. 20—69.)

1. In a combined weather strip and parting bead, means forming a sealing structure movably associated with the parting bead and comprising a longitudinally disposed member, and an element movable along said member.



1,754,957. DISPENSING DEVICE FOR FLEXIBLE SHEET ARTICLES. HANS K. LORENTZEN, New York, N. Y. Filed Nov. 19, 1926. Serial No. 149,341. 1 Claim. (Cl. 312—51.)

In mechanism for dispensing flexible articles supported within a casing, the combination with a cylindrical member having closed ends to be mounted below said flexible articles, of means secured to said closed ends for rotatably mounting said cylindrical member within said casing, said cylindrical member having its peripheral wall interrupted to provide diametrically opposed openings therein between segments of said peripheral wall, each of said segments having a forward edge and a rearward edge, and a partition plate for said cylindrical member extending diametrically across said cylinder and connecting the respective rearward edges of said segments, said forward edge upon rotation of said cylindrical member being adapted to engage the lowermost of said flexible articles for delivering the same to an opening in said casing.

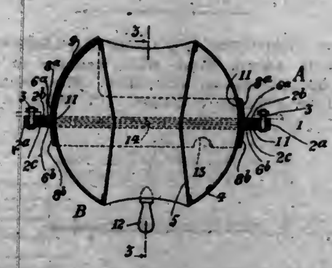


1,754,958. SAFETY LATCH FOR DOORS. OSCAR E. MAGNUSON, Davenport, Iowa. Filed Sept. 19, 1927. Serial No. 220,293. 9 Claims. (Cl. 292—101.)

1. In a device of the character described, a base plate for attachment to a door casing, said base plate being provided with means whereby a stop may be mounted thereon, spaced lugs projecting from the face of the base plate, and a hook shaped latching member having a projection from one edge thereof, said projection fitting between said lugs

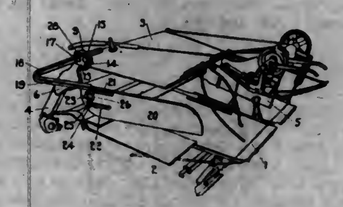
and being pivotally secured therein, a stop on the base plate for limiting the rotation of the latching member in a direction to release the door and means for preventing actuation of the stop by a person outside the door.

1,754,959. BRACELET LOCK. DIMITRY F. MATUSHENKO, Brooklyn, N. Y. Filed Aug. 12, 1929. Serial No. 385,104. 3 Claims. (Cl. 24—241.)



1. In a bracelet lock, the combination with a block adapted to be attached to one end of a bracelet and provided with a slot adapted to engage the other end of said bracelet, of an inner bar pivotally mounted on said block and adapted to cover said slot with said other end of said bracelet, means to resiliently retain the free end of said bar when said bar is in an operating position, an outer closing bar for said slot and said inner bar, means to pivotally support said outer bar on said block, and means to resiliently retain the free end of said outer bar on said block.

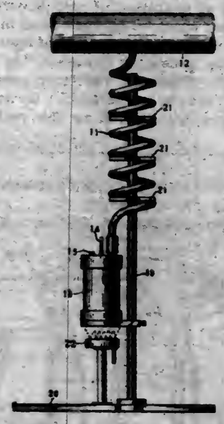
1,754,960. REFLECTOR. HERMAN MAYER, Philadelphia, Pa. Filed Apr. 9, 1929. Serial No. 353,873. 8 Claims. (Cl. 240—103.)



1. In a device of the character stated, a reflector casing closed at its top and open at its bottom, outwardly flaring bottom side walls therefor, a trough shaped member open at its top carried by the closed top of said casing, a cover for said trough shaped member, an electric socket common to said trough shaped member and said casing and projecting into the latter, a switch for said socket, an electric light carried by said socket and means for supporting said casing in any desired angular position.

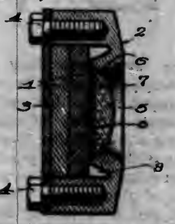
1,754,961. AIR-DIRECTING DEVICE. THOMAS NEILSON, Glasgow, Scotland. Filed Nov. 29, 1927, Serial No. 236,891, and in Great Britain Nov. 7, 1927. 8 Claims. (Cl. 98—40.)

1. An air directing device comprising, in combination, a bearing ring, means for rotatably supporting said bearing ring, a substantially ellipsoidal nozzle independently rotatable in the bearing ring, an air passage through the nozzle, trunnions on the nozzle in the line of its axis of generation, and bearings, in the bearing ring for the trunnions on which the nozzle can rotate in the bearing ring at right angles to the axis of rotation of the bearing ring.



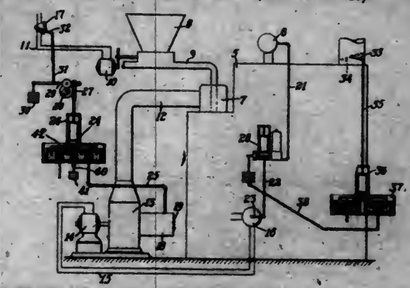
1,754,962. HARVESTER BINDER. NICHOLAS R. NELSON, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Dec. 10, 1928. Serial No. 324,972. 6 Claims. (Cl. 56—468.)

6. In a harvester-binder, the combination with the frame thereof and the binder-deck, of a casting mounted on the frame, a supporting member including a bearing secured on the casting, a plate integral with said member and extending therefrom in a grainward direction, a rotatable casting journaled in the bearing and having a plate extending therefrom in parallelism with the plate on said member and in contact therewith, a slot in the plate on the rotatable casting and concentric with the axis thereof, an opening in said rotatable casting extending the length thereof, a bar journaled in said opening and longitudinally adjustable therein, said bar bent intermediate its length to provide an arm extending stubbleward, a downward extension at the end of said arm, a headboard mounted on said extension, and a bolt extending through said slot and the plate on said member and a nut on said bolt operative to hold said plates together, or to release said plates from engagement with each other whereby said rotatable casting is actuable to raise or lower the headboard.



1,754,963. PRESSURE GAUGE. WILLIAM HENRY OSBORN, Harrison, N. Y. Filed Dec. 2, 1927. Serial No. 237,157. 2 Claims. (Cl. 73—81.)

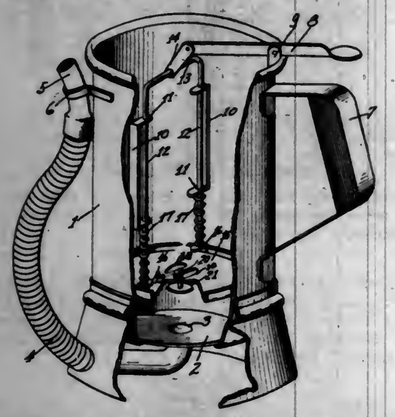
1. The method of operating a heat responsive indicator for measuring gas pressures at temperatures independent of the temperature actuating said indicator, which comprises connecting a boiler containing a liquid with the vessel containing the gas whose pressure is to be measured, boiling the liquid within said boiler under said pressure,



and condensing the boiler vapors between the boiler and the vessel containing the gas whose pressure is to be measured.

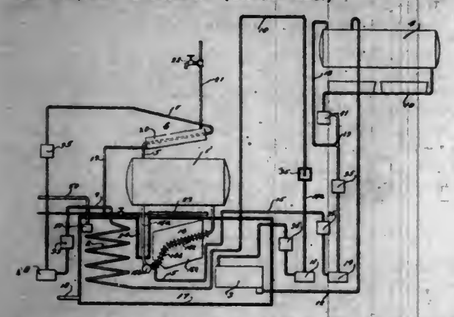
1,754,964. CLAMP FOR AUTOMOBILE BUMPERS. WILLIAM G. PANCOAST, Winnetka, Ill., assignor to Biflex Products Company, Waukegan, Ill., a Corporation of Delaware. Filed July 5, 1928. Serial No. 290,681. 2 Claims. (Cl. 88—1.)

2. A clamping member for automobile bumpers comprising a metal block of substantial thickness, having a circular recess in its front face converging to an opening in the rear face thereof, surrounded by a rearwardly facing annular seat, and a light reflecting jewel mounted in said seat, the surface of said recess being polished to provide a reflector for increasing the reflective intensity of said jewel.



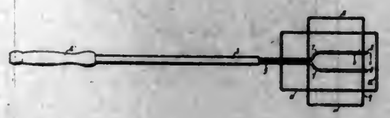
1,754,965. COMBUSTION-CONTROL APPARATUS. THOMAS A. PEEBLES, Mount Lebanon, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed Apr. 5, 1928. Serial No. 267,628. 4 Claims. (Cl. 236—14.)

1. The combination with a boiler furnace for generating steam, of means for delivering fuel thereto, a blower for



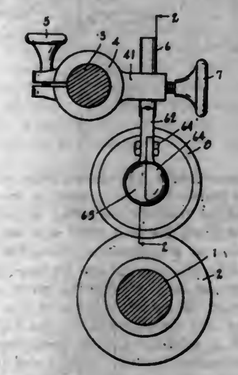
delivering air thereto, a constant size air inlet to said blower, a pressure responsive regulator operated by variations in the pressure of the steam output of the boiler for varying the speed of operation of said blower, a pressure responsive regulator operated by variations in the air inlet of said blower for controlling the speed of operation of said fuel delivery means, a damper located in the furnace outlet and a pressure responsive regulator operated by the variations in the furnace pressure built up by the air and fuel feeding devices for controlling the position of said damper.

1,754,966. OIL-DISPENSING MEASURING DEVICE. BENJAMIN PHILLIPS, Cincinnati, Ohio. Filed Apr. 16, 1928. Serial No. 270,269. 5 Claims. (Cl. 221—16.)



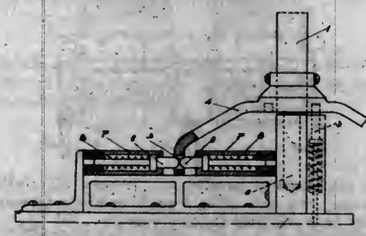
1. A dispensing device comprising a measuring vessel for receiving a charge of liquid to be dispensed, a dispensing conduit arranged in the bottom of the vessel, and means for increasing the flow of material through said conduit comprising a disc fitting loosely within the container and having a check-valved port therein, and means for manually operating said disc as a piston, said means comprising a pair of plunger rods attached to said disc at their lower ends, and an operating handle pivotally connected by means of a link and yoke to said plunger rods at their upper ends, said handle being pivotally mounted on the container wall at a point intermediate its length, and said plunger rods being provided with springs whereby said disc is normally forced into position seating against the bottom of the vessel.

1,754,967. REFRIGERATING SYSTEM. ALBERT C. SCHICKLER, Cleveland, Ohio, assignor to Edmund E. Allyne, Cleveland, Ohio. Filed June 30, 1927. Serial No. 202,724. 4 Claims. (Cl. 62—118.)



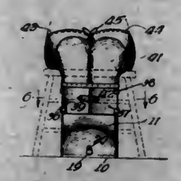
1. Absorption refrigerating apparatus, including a boiler absorber, a cooling loop through which the refrigerant and absorbing agent may circulate, said loop having two legs, one shielded from and the other in heat conducting relation with a cooler, and a gas return flow connection communicating with the heat conducting leg of said loop.

1,754,968. KITCHEN AND CAMP IMPLEMENT. BENJAMIN H. SMITH, Niles, Mich., assignor to Michigan Wire Goods Company, Niles, Mich. Filed Sept. 3, 1929. Serial No. 390,140. 8 Claims. (Cl. 53—5.)



1. In an implement of the class described, the combination with a tubular handle of flattened cross section provided with a hand piece at its outer end and having a longitudinal slot in its under side closed at its end, of an implement provided with a shank telescoping within the handle, said shank being formed of a piece of wire folded upon itself to provide a laterally resilient loop whereby it is frictionally supported in its adjusted positions within the handle, the bight end of the shank being turned laterally and given a quarter twist to provide a finger piece projecting through said slot in said handle.

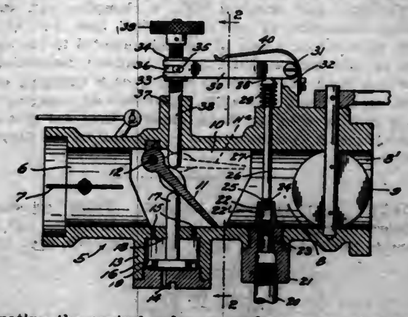
1,754,969. PAPER SLITTER. JOHN R. SPOOR, Kalamazoo, Mich. Filed May 17, 1929. Serial No. 363,743. 4 Claims. (Cl. 164—70.)



1. In a paper slitter, the combination of a bottom slitter on a suitable shaft, a top slitter with suitable bracket for supporting the same comprising a supporting fork with bearing heads and ball bearings at each side, a circular top slitter cutter, a shaft for supporting the same extending through the said ball bearings and adjustable therethrough, a socket in one bearing head with a spring and bearing disk therein for forcing the top slitter into engaging position, an adjusting pin with annular and longitudinal slots in its periphery, and a stop pin in the bearing head engaging said slots for adjustment to hold the top slitter out of engagement and permit it on adjustment to be forced into position by the actuating spring, as specified.

1,754,970. DISPLAY RACK OR TRAY. JOHANNES TACOMA and CAMILLE DE VLEESCHOUWER, Amsterdam, Netherlands. Filed Mar. 3, 1928, Serial No. 258,990, and in Great Britain Mar. 4, 1927. 3 Claims. (Cl. 211—163.)

1. In a device of the class described, a rotatable rack bar, a support for the rack bar, a member having a curved wall fixed to said rack bar, a hole in said wall, and abutting oppositely disposed resiliently mounted pins, said wall being adapted to pass between the pins, said pins being mounted on the rack bar support.

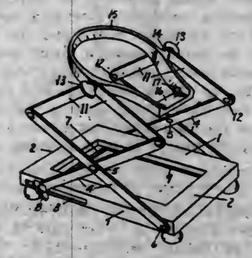


1,754,971. VAPORIZING APPARATUS OR APPLIANCE. CHARLES F. WAIGAND, Chicago, Ill., assignor of one-half to Frances E. Waigand, Chicago, Ill. Filed Dec. 12, 1928. Serial No. 325,482. 5 Claims. (Cl. 128—256.)

1. In a vaporizing apparatus, the combination of a metallic boot, a metallic plate separating the inside portion of the boot into a foot chamber and a fluid chamber, said separating plate having an upturned portion at its periphery, an annular rim integral with the said upturned portion, said annular rim having a peripheral dependent portion, an annular flange extending inwardly from the walls of said boot, said flange having a dependent wall portion, said flange and dependent wall portion of said flange being spaced relatively to the upturned portion of said separating plate and integral rim to form a vapor inlet from the said fluid chamber to the said foot chamber, spacing members between the said flange and the said metallic separating plate, an electrical heating element within the said fluid chamber, a foot rest within the said foot chamber, a door in the upper portion of the boot adapted to be opened for ventilation, and a hood removably secured to the upper portion of the said boot, said hood having two openings at its top portion.

1,754,972. CARBURETOR. HARRY C. WAITE, Evanston, Ill. asignor of one-sixth to J. P. Arthur, Oakland, Calif.; one-sixth to R. A. Dunann, Oakland, Calif.; one-sixth to C. F. Arthur, Los Angeles, Calif.; one-tenth to George I. Haight, Chicago, Ill., and Marcus Jacobson, Waukesha, Wis.; and one-tenth to Ebenezer Welk, Oakland, Calif.; R. A. Dunann, administrator of said Waite, deceased. Filed Feb. 20, 1924, Serial No. 693,969. Renewed Sept. 13, 1929. 5 Claims. (Cl. 261—49.)

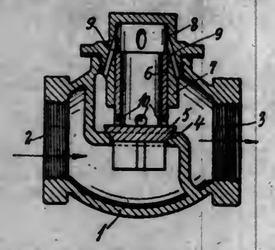
1. In a carburetor, a body provided with a valve chamber, an inlet passage and a mixing chamber, a fuel feed nozzle provided in the mixing chamber, a valve for said nozzle, a control valve provided in said valve chamber for regulating the opening movement of the nozzle valve, a choker valve provided in the inlet passage, and means actuated by the partial vacuum in the valve chamber for



actuating the control valve to produce an opening movement of the latter, said means being rendered operative by closing of the choke valve.

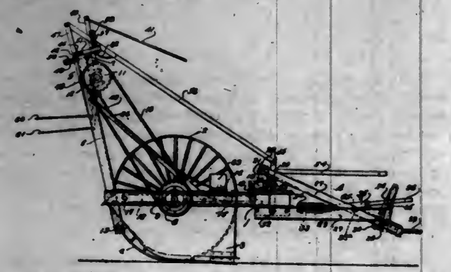
1,754,973. CONDIMENT RECEPTACLE FOR KNIVES, FORKS, AND THE LIKE. HERMAN WALCH, Caldwell, Kans. Filed Apr. 14, 1928. Serial No. 270,025. 3 Claims. (Cl. 65—45.)

1. In an article of the class described, a hollow handle successively contracted and threaded towards the end and provided with a pair of beveled annular faces, an inner cap having a beveled edge crewed upon the outer threaded end portion to a seat against the first annular beveled face and a covering cap having a beveled edge enclosing the first cap and screwed upon the second threaded end portion to a seat against the second beveled face.



1,754,974. HEADREST. FRED C. WARFIELD, Jackson, Mich. Filed Jan. 23, 1928. Serial No. 248,770. 6 Claims. (Cl. 27—13.)

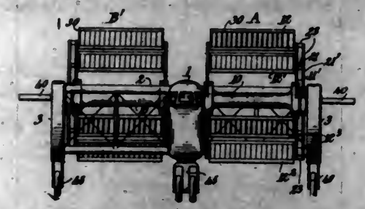
1. A head-rest comprising a frame-like base having horizontal slots in the side members thereof, a pair of pivot-



ally connected bottom links, one link of each pair being pivoted on the sides of said base, a clamping bolt arranged through said slots and the lower ends of the other links of the pair and provided with a clamping nut, coiled springs connected at one end to said base and at the other to said bolt, a pair of top links pivoted to the upper ends of said bottom links, and a headrest conformed to receive a head and provided with a neck engaging cross piece at its front end with thumb screws engaging the upper ends of said top links whereby they are pivotally connected and said head rest is secured in its adjusted positions.

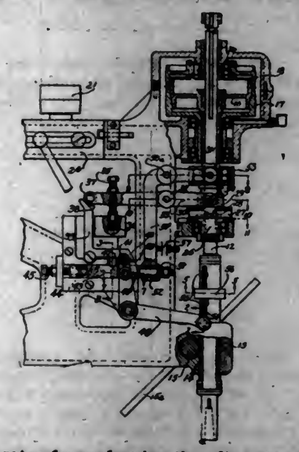
1,754,975. NONRETURN VALVE. GEORG ANDERSEN, Oslo, Norway. Filed Dec. 29, 1927, Serial No. 243,391, and in Norway Mar. 1, 1927. 2 Claims. (Cl. 251—128.)

1. In a non-return valve the combination of a valve casing containing inlet and outlet, a valve disc controlling the communication between inlet and outlet, an upwardly open hollow piston on the upper side of the disc, apertures near the piston bottom connecting the interior of said piston with the outlet, a stationary downwardly open cylinder for said piston and separate apertures near the upper end of the cylinder connecting its interior top space with the outlet.



1,754,976. WHEELED SCRAPER. ARTHUR P. ARMINGTON, Willoughby, Ohio, assignor to The Euclid Crane & Hoist Company, Euclid Village, Ohio, a Corporation of Ohio. Filed Mar. 21, 1927. Serial No. 177,064. 7 Claims. (Cl. 37—132.)

1. Earth moving apparatus comprising, a wheeled frame, a scraper bucket mounted for movement about a rearward supporting connection therewith, means movable in said frame for adustably supporting the forward end of said bucket in loading position, draft gear associated with said movable means and with said frame whereby the elevation of the lip of the bucket in said position is dependent upon resistance of the same to pull on said draft gear to advance the apparatus, and means for raising the forward end of the bucket to load carrying and dumping positions.

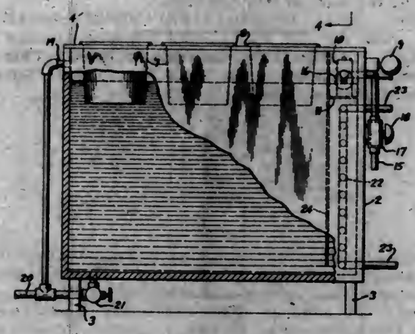


1,754,977. VERTICAL-RISING AIRPLANE. AXEL G. BERGMAN, New York, N. Y. Filed July 13, 1925. Serial No. 43,294. 12 Claims. (Cl. 244—25.)

1. A vertically rising airplane including oppositely rotating frames revolving about axes substantially transverse to the horisontal line of flight of the machine, and aerofoils carried thereby through substantially circular orbits, said aerofoils comprising inverted, trough-like surfaces, said trough-like surfaces being disposed with their

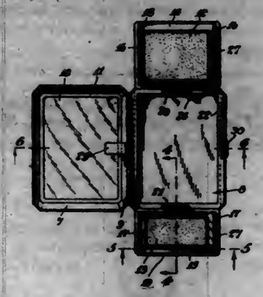
valleys substantially parallel to the axes of rotation of the frames, and each of said surfaces being formed of a plurality of feathering shutter vanes.

1,754,978. MACHINE FOR SETTING THREADED DEVICES. WILLIAM D. BUSS, Cleveland, Ohio, assignor to The Hammond Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 134,101. 4 Claims. (Cl. 81—54.)



1. Apparatus for performing threading operations, comprising a tool spindle, a rotatable driver, driving connections between said driver and spindle including clutch means driven thereby and a movable member yieldable upon abnormal torque resistance of the spindle to the driving effect of said clutch means, yielding means effective upon said clutch means and normally urging the same to release position, latch means for holding said yielding means retracted with the clutch means in driving relation, and an operating connection from said torque responsive member to said latching means effective upon movement of the torque responsive member, to cause release of the clutch means by said yielding means.

1,754,979. CULINARY UTENSIL. ROYAL ALBERT COCHRAN, Atkins, La. Filed Feb. 11, 1929. Serial No. 339,081. 1 Claim. (Cl. 294—29.)



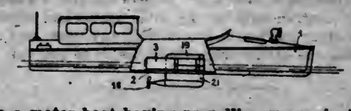
In a device of the character described, a handle comprising oppositely directed U-shaped upper and lower sections pivotally joined together at their rear end, a lifting plate secured to the forward end of the lower section, an upwardly extended hand guard at the rear of the lifting plate passing through the upper section of the handle, and downwardly directed gripping blades upon the forward end of the upper section of the handle.

1,754,980. FIRE-BUCKET TANK. WILLIAM F. CONRAN, Brooklyn, N. Y. Filed Jan. 13, 1928. Serial No. 246,620. 3 Claims. (Cl. 169—1.)

1. Fire apparatus comprising a water tank, a hinged cover for said tank having a series of openings in which to support buckets, and means for raising the cover when not held down by buckets with liquid therein.

1,754,981. VANITY CASE. CHARLES N. CORTELL, New York, N. Y. Filed Mar. 8, 1928. Serial No. 259,944. 5 Claims. (Cl. 132—83.)

1. A vanity case comprising a box section, cover plates hinged to opposite ends of the same and cooperating to form a closure to the box section, retaining slideways on the under faces of said cover plates, and toilet compacts slidably and detachably engageable with said slideways.

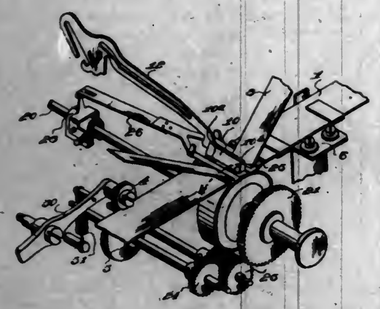


1,754,982. PUMP JACK. BEN J. CRIST, Ellsworth, Minn. Filed Jan. 16, 1928. Serial No. 247,169. 1 Claim. (Cl. 74—14.)

A pump jack stand comprising a horisontally disposed base plate, a bearing cast integral with and extending across one end of said plate, a pump clamp section formed on the bearing, depending legs formed on the opposite end of the base plate from said bearing and clamp section, an

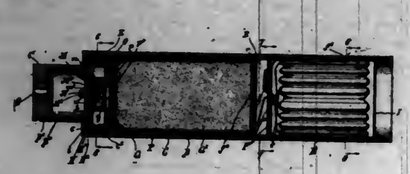
oil pan case in said plate between the bearing and legs, and bearing sections formed on opposite sides of the plate and communicating with said pan.

1,754,988. MOTOR BOAT. ERNESTO CUMBO, Milazzo, Italy. Filed May 8, 1927, Serial No. 188,587, and in Italy May 4, 1926. 5 Claims. (Cl. 115—41.)



1. In a motor boat having propelling means in the central portion of its hull, the combination of a well in said central portion of said hull opening in the water under it, a casing having a bottom and located in said well, a motor unit and a propeller mounted in said casing bottom, a lower portion of said motor unit and said propeller depending under the said casing bottom and the upper portion of said motor unit being enclosed within said casing, and cooperating means in said well and in said casing to support said casing with said bottom at the lower mouth of said well for the normal operation of the boat and to lift said casing into said well.

1,754,984. ELECTRIC SOCKET. JOHN CUTHBERT, Chicago, Ill., assignor to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed May 21, 1920. Serial No. 383,082. 2 Claims. (Cl. 173—358.)



1. A contact cartridge for axial insertion into a socket shell comprising an insulating base, a pair of conductor terminals, a center contact held in position on said base by one of said terminals, and a plug receiving shell and insulating sleeve held in position on said base by the other of said terminals, said terminals being located within the plug receiving shell.

1,754,985. TELEGRAPH-PRINTER TAPE-FEED MECHANISM. ROBERT F. DIEKES, Jamaica, N. Y., and EVAN R. WHEELER, North Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1927. Serial No. 175,587. 7 Claims. (178—42.)

1. In a type-bar printing telegraph machine wherein the printing elements are pivotally mounted type-bars which are provided with a plurality of longitudinally spaced characters and are always rocked to the same printing position, tape feeding means for moving a receiving tape forwardly after each character is printed and maintaining the same continuously in the same plane and which imparts no other motion to the tape at any time, and means for causing one or the other character to be printed.

1,754,986. FIXED AMMUNITION. LOUIS L. DRIGGS, Jr., New Rochelle, and HENRY B. FABER, New York, N. Y. Filed Jan. 8, 1929. Serial No. 331,127. 6 Claims. (Cl. 102—24.)

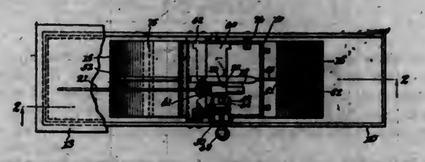
1. Fixed ammunition for use with low power smooth bore firearms, having a short barrel of large calibre, said ammunition comprising a cartridge case forming an auxiliary barrel for the small arm and provided with a stem adapted to slide freely in the gun barrel, with a propelling charge in said stem, the said stem having a chamber for the expansion of the gases from the propelling charge, and said cartridge case having an enlarged loading chamber in front of said stem, with a projectile mounted in said loading chamber, and adapted to be ejected therefrom by the gases from the propelling charge, said projectile comprising a tube slidably mounted in the loading chamber of the cartridge case, a parachute and flare mounted in said tube, an expelling charge also mounted in said tube for ejecting said parachute and flare and for igniting said flare, means for suspending said tube and said flare from said parachute as they fall together through the air, and means, controlled by the firing of the small arm, for igniting said expelling charge.

1,754,987. PHOTOGRAPHIC-FLASH-LIGHT CARTRIDGE. LOUIS L. DRIGGS, Jr., New Rochelle, and HENRY B. FABER, New York, N. Y. Filed Jan. 8, 1929. Serial No. 331,128. 10 Claims. (Cl. 102—21.)

1. A cartridge for use in flash-light photography comprising a cartridge case with an expelling and igniting charge mounted in the rear end thereof, an air chamber in front of said charge, a charge of oxygen bearing material in front of said air chamber, and a container containing

flash light powder, mounted in said cartridge case in front of said oxygen bearing charge, with frangible diaphragms forming the heads of said container.

1,754,988. RAILWAY-SIGNAL FUSEE PLUG. FRANK DUTCHER, McKeesport, Pa. Filed Nov. 7, 1927. Serial No. 231,611. 6 Claims. (Cl. 102—24.)

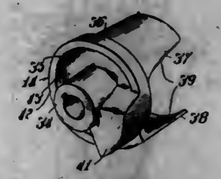


1. A railway signal fusee comprising a tube, a plug having at its end a disk carrying a plurality of peripheral pointed projections, the projections normally extending beyond the plug, whereby when the plug is placed in the tube the projections engage the wall and prevent the removal of the plug.

1,754,989. PNEUMATIC SPRING. ELOV ERICSSON, St. Paul, Minn. Filed Mar. 20, 1924. Serial No. 700,562. 4 Claims. (Cl. 267—65.)

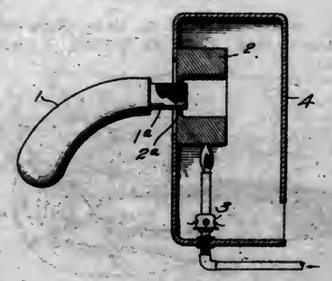
1. A pneumatic spring comprising a normally vertical cylinder having a compression chamber in its upper end, a tubular piston extending into said cylinder from the bottom thereof and closed at its outer end, a head constituting a closure for the inner end of said piston whereby a compartment for air is formed therein, a restricted continuously open passage-way for air extending from said chamber to said compartment adapted to permit the passage of air to and from said chamber, an annular receptacle for lubricant formed in said piston adjacent to the walls of the cylinder, means separating said receptacle from said cylinder, said receptacle and conduit being arranged to prevent the passage of oil downward through said conduit from said receptacle, and means for admitting air under pressure to said cylinder.

1,754,990. REVOLVING FLUSHING TANK. MIGUEL ESNARD, Matanzas, Cuba. Filed Oct. 17, 1929. Serial No. 400,875. 12 Claims. (Cl. 4—32.)



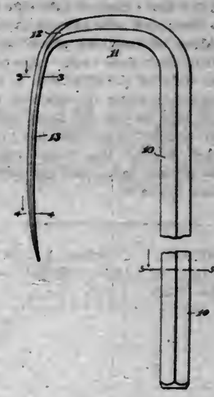
1. In an improved flushing apparatus, a tank, a tumbling drum in said tank having half portions of differential capacities whereby to over-balance the full drum, a normally open valve for admitting water to the drum, detent means for releasably holding the drum in an upright position with the water valve open, trip means on the drum for acting to close the valve when the drum is full and when said detent means is released and for further acting to hold the drum in the upright position, means to release said trip means, and ballast means for restoring the drum to the upright position.

1,754,991. TROLLEY-WIRE SPLICE JOINT. SAMUEL J. EVANS, Princeton, W. Va. Filed Jan. 25, 1928, Serial No. 249,326. Renewed Nov. 30, 1929. 9 Claims. (Cl. 191—44.1.)



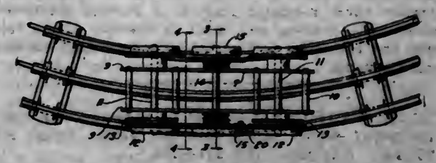
1. A splice joint for wires or cables comprising complementary sections having overlapping shouldered portions interlocking when the sections are joined resisting longitudinal separation of the sections and having inclined wire receiving tunnels formed therein with means for crimping therein the ends of wires inserted in said tunnels.

1,754,992. CENTRIFUGAL PUMP. AXEL O. FABRIN, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed Dec. 6, 1926. Serial No. 152,742. 12 Claims. (Cl. 103—115.)



1. An impeller for centrifugal pumps comprising a spiral vane of tapered form diminishing in thickness for its entire length from its leading edge to its trailing edge, said vane defining a single peripheral outlet for the discharge of all of the impelled liquid, and a counterbalance adjacent to such outlet.

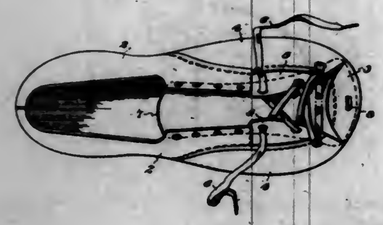
1,754,993. METHOD OF AND APPARATUS FOR SIZING HARD-RUBBER ARTICLES. FRANK FENTON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 7, 1928. Serial No. 304,528. 4 Claims. (Cl. 18—55.)



3. Means for shaping hard rubber articles comprising a cylindrical member having at one side a narrow inwardly directed flange, and a gas burner arranged to direct a flame against said body.

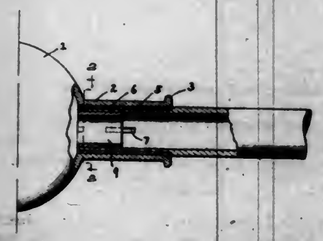
1,754,994. SHEET-METAL BUMPING-OUT TOOL. WILLIAM FERGUSON, Flint, Mich. Filed May 4, 1928, Serial No. 275,216. Renewed Sept. 27, 1929. 19 Claims. (Cl. 81—15.)

1. A bumping tool comprising a handle, a coupling portion extending at an angle from one end thereof, and an anvil integral with said portion and disposed substantially in parallel spaced relation with respect to the handle and having its inner face uninterrupted throughout.



1,754,995. TOY LOCOMOTIVE WHEEL. JOHN T. GALLIGAN, Bridgeport, Conn., assignor to The Ives Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 8, 1928. Serial No. 259,995. 5 Claims. (Cl. 105—196.)

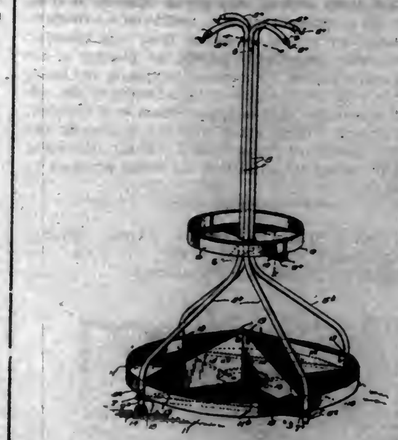
1. In a toy railway car wheel, a truck frame, an axle mounted therein, wheels secured to the axle, discs movably



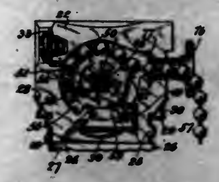
fitted against the side of the wheels and having annular flange portions extended beyond the periphery of the wheels, and springs interposed between the frame and the flanges to yieldably hold the latter against the sides of the wheels.

1,754,996. SHOE. LUCIUS L. GANT, Shreveport, La. Filed Aug. 9, 1927. Serial No. 211,805. 1 Claim. (Cl. 36—45.)

A shoe comprising a sole, and an upper including quarters secured to the sole and having forward portions spaced above the sole, side pieces secured to the sole and lower side edges of the forward portions of said quarters and extending forwardly from the quarters and having their front ends spaced from each other, a toe piece secured to said sole between the front ends of said side pieces and having its sides free from the side pieces, flaps secured along the upper side edges of the side pieces in front of said quarters and having their rear ends overlapped by but free from the forward ends of the quarters, a tongue disposed beneath and overlapped along its sides by the side pieces, flaps and quarters, and having its front end extending beneath and loosely connected to said toe piece, and a lace passed transversely through the tongue rearwardly of the toe piece, the side pieces, flaps, and quarters being formed with eyes to receive the lace.



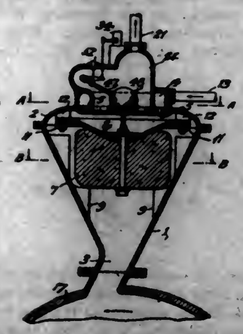
1,754,997. BUSHING. CLIFTON V. GANTT, Wagener, S. C. Filed Aug. 22, 1928. Serial No. 301,291. 3 Claims. (Cl. 64—12.)



1. In combination with a universal joint housing, of a propeller shaft rotatable therein, a bushing interposed between said housing and shaft, a bushing within said shaft, and means for locking said first mentioned bushing in said housing.

1,754,998. FRUIT-DISPLAY RACK. ALBERT J. GEARTTS, Escanaba, Mich. Filed Apr. 17, 1929. Serial No. 355,791. 6 Claims. (Cl. 211—154.)

1. In a device of the class described comprising a standard having divergent base-defining legs, brace means connecting said legs, and a sectional display receptacle adapted to be assembled upon said brace means, within the confines of said array of leg, means for holding said receptacle assembled, and the width of said receptacle being such that the same can not be removed when assembled, said legs engaging same to prevent shifting.



1,754,999. ELECTRIC FITTING. GILBERT W. GOODRIDGE, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 8, 1927. Serial No. 166,702. 18 Claims. (Cl. 173—354.)

1. An electric fitting comprising a longitudinally split body having a threaded boss at one end, and a screw shell contact screwing on said boss and having a wedging engagement with the split body beyond said boss to hold the parts firmly united.

1,755,000. PRIMING MEANS FOR CENTRIFUGAL PUMPS. OTTO HAENTJENS, Hazleton, Pa. Filed Mar. 16, 1929. Serial No. 347,659. 11 Claims. (Cl. 103—113.)

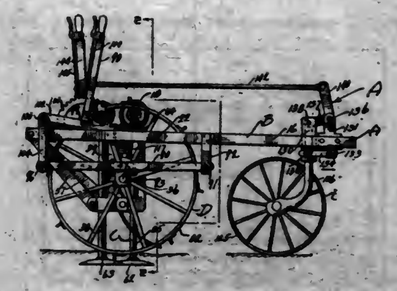
1. A priming appliance for pumping systems having a centrifugal pump, said appliance comprising a casing with

a chamber connected therewith having a float and a diaphragm connected to the float, a second chamber above said diaphragm and in communication with the priming pump, said upper chamber having means for supplying water thereto and being in communication with the first mentioned chamber around the rim of the diaphragm.

1,755,001. PATTERN AND GUIDE STRIP. GEORGE W. HARLEY, Collingswood, N. J. Filed Oct. 31, 1927. Serial No. 230,116. 6 Claims. (Cl. 94—17.)

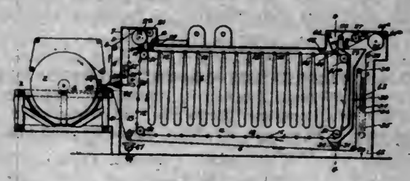
5. A method of making a pattern and guide strip consisting in incising the strip intermediate its marginal edges to define a plate, after which the plate is twisted to project portions thereof on both sides of the strip, the faces of which are parallel to the longitudinal axis of the strip.

1,755,002. CLUTCH-PROTECTING DEVICE. CHARLES M. HIBBETS, Claude, Tex. Filed May 3, 1927. Serial No. 188,491. 4 Claims. (Cl. 74—81.)



3. In combination with the forwardly inclined portion of the floor board of an automobile and a clutch pedal operating through the said inclined portion, and a curved foot piece having pivotal connection at one end with the clutch pedal and adapted to bear against the said inclined portion of the floor board, the free end of said foot piece being adapted to be engaged by the foot of the operator when it is operably positioned on the clutch pedal and in a manner to relieve the clutch and its bearings of all foot pressure incident to the otherwise abusive practice of "riding the clutch pedal".

1,755,003. METHOD FOR FASTENING PYROTECHNIC ELEMENTS OR FIRECRACKERS TOGETHER. THOMAS G. HITT, Seattle, Wash. Filed Apr. 3, 1929. Serial No. 352,237. 8 Claims. (Cl. 102—22.)

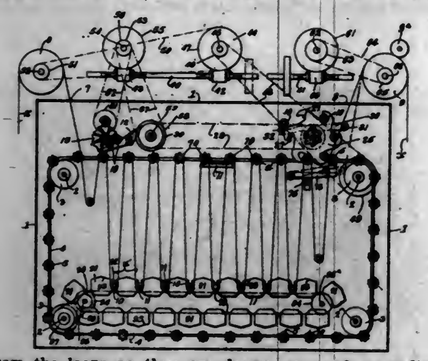


1. A method for detachably connecting together a plurality of pyrotechnic display elements having looped fuses, consisting of connecting each pyrotechnic element together in series by linking the loops together.

1,755,004. ROTARY DISK WEEDER. HERBERT V. HOSKINS, Waterville, Wash. Filed Aug. 16, 1926. Serial No. 129,553. 2 Claims. (Cl. 97—43.)

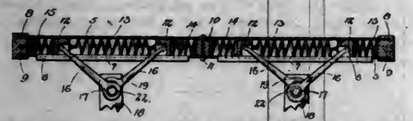
1. In a weed cutting machine the combination of a main frame, a shaft horizontally and rotatably supported by the main frame, vertical shafts supported by the frame, gear means connecting the horizontal shaft to the vertical shafts for rotation of the latter upon rotation of the former, cutting disks at the lower ends of said vertical shafts, running gear including supporting wheels, means for adjusting the axes of the supporting wheels towards and away from the frame, and a driving connection between a wheel of the running gear and shaft, operative in any vertically adjusted position of the wheel.

1,755,005. FILTER-CAKE LOOP DRIER. ALPHEUS O HURXTHAL, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1926. Serial No. 104,501. 10 Claims. (Cl. 159—7.)



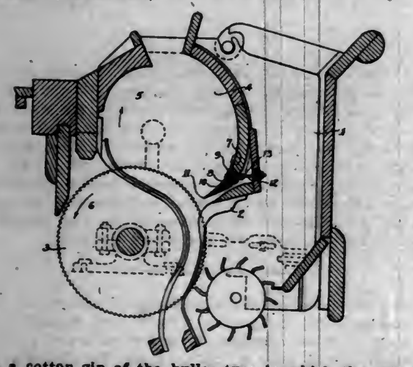
1. The combination of a filter drum; a drier; an endless conveyor passing around the drum and through the drier, said conveyor being looped between the drum and the drier; means for driving the filter drum and thereby advancing that portion of the conveyor carried thereby; means independent of the drum driving means for advancing that portion of the conveyor located within the drier; and means for automatically controlling the speed of the drum through the medium of the loop formed in the conveyor between the drum and the drier.

1,755,006. LOOP DRIER. ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignor to Proctor and Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 3, 1928. Serial No. 290,092. 11 Claims. (Cl. 271—2.2.)



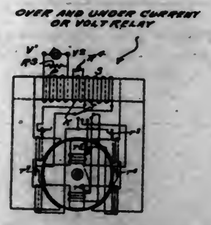
1. The combination in a loop drier, of a casing enclosing a drying chamber; an endless conveyer; girts carried by the conveyer over which the material is to be looped; means for feeding the material to the conveyer; a feed wheel for placing poles on the material between the

girts to form the loops; an elevating wheel at the discharge end of the drier arranged to receive the poles



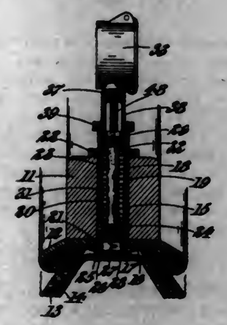
from the loops as they are drawn up; and an endless conveyer for carrying the poles from the discharge end of the drier to the delivery end thereof.

1,755,007. BUMPER BAR. THOMAS JACKSON, Mount Hawthorn, near Perth, Western Australia, Australia. Filed Mar. 20, 1929, Serial No. 348,609, and in Australia Oct. 22, 1928. 8 Claims. (Cl. 293—55.)



1. A bumper bar for motor cars, comprising a tubular member closed at each end and having a longitudinal slot, a pair of pistons slidable in said tubular member, yieldable means between each of said pistons and the adjacent end of the tubular member, and a pair of arms having their forward ends extending through said slot and articulated, respectively, with one of said pistons, said arms having their rear ends mounted to swing on a common vertical pivot.

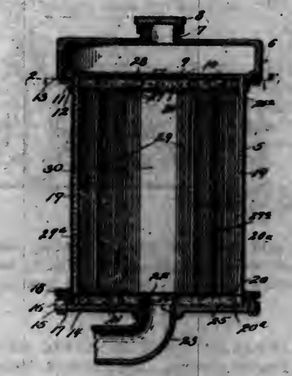
1,755,008. CURVED SEED BOARD FOR COTTON GINS. WILLIAM MAURICE JOHNSTON, Amite, La., assignor to Gullett Gin Company, Amite, La., a Corporation of Louisiana. Filed Apr. 8, 1929. Serial No. 353,452. 1 Claim. (Cl. 19—61.)



In a cotton gin of the huller type in which the cotton is fed into the roller box between the saws and the seed board, a roll box, saws having peripheral portions projecting into said roll box, a seed board pivotally mounted at the lower portion of said roll box tapering into a sharp straight knife-like edge outside of the cylinder of revolution of the edges of said saws.

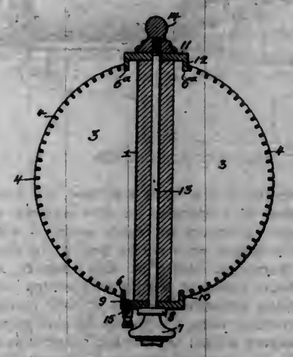
1,755,009. ELECTRICAL MEASURING INSTRUMENT. CHMOUL LEIB LIPMAN, London, England, assignor of a part interest to Nalder Brothers & Thompson Limited, London, England. Filed May 12, 1927, Serial No. 190,948, and in Great Britain May 20, 1926. 11 Claims. (Cl. 171—95.)

1. An electric alternating current instrument comprising an electromagnet, a laminated core for said magnet, a main energizing winding on the said core, symmetrically disposed polar surfaces on said magnet, a drum of electric conducting material adapted to be rotated through an arc between said polar surfaces, a fixed inner core of magnetic material within said drum, polar projections on said inner core and a winding on one of said polar projections of said inner core extending close to the inner periphery of said drum arranged and connected to produce a magnetic field in said polar surfaces substantially at right angles in time phase and space direction to that produced therein by the said main magnetizing winding.



1,755,010. PRESSURE-INDICATING DEVICE FOR USE WITH PNEUMATIC TIRES. CHARLES WILLIAM GODSON LITTLE, Enfield, England. Filed Nov. 10, 1927, Serial No. 232,365, and in Great Britain May 27, 1927. 5 Claims. (Cl. 73—111.)

1. A pressure indicating device for use on wheels shod with pneumatic tires comprising a gauge having a tubular extension, a tubular carrier to receive the gauge extension and adapted to be permanently mounted on the wheel, a gauge actuator contained within the carrier, means whereby said actuator is connected at one end with the gauge mechanism and means at the other end having a pressure plate to contact with the air tube of the tire and a spring encircling said actuator and adapted to be compressed against said last mentioned means by the tubular extension when entered into thec arrier.



1,755,011. AIR CLEANER OR FILTER FOR CARBURETORS. WARREN V. LUDLAM, Meridian, Miss. Filed Sept. 15, 1927. Serial No. 219,758. 7 Claims. (Cl. 183—17.)

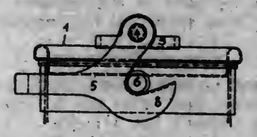
4. An air cleaner of the class specified, comprising an outer reticulated casing which admits atmospheric dust laden air throughout the whole area thereof to the interior of the cleaner, the reticulated casing forming the outer cover of the cleaner, an oil receptacle at one extremity of the cleaner having a base with openings therethrough, an inner removable receiver consisting of spaced and

rigidly held diaphragms having openings therethrough, and filaments extending longitudinally and terminally connected to the respective diaphragms and arranged around a central open passage having an outlet at one end, and a pipe connected to the outlet for pplying the cleaner to a carburetor.

1,755,012. AERIAL FOR RADIO APPARATUS. JAMES H. MATHESON, Wyomissing, Pa., assignor to Donald E. Matheson, Edgewood Park, Pa. Filed Nov. 10, 1926. Serial No. 147,589. 6 Claims. (Cl. 250—33.)

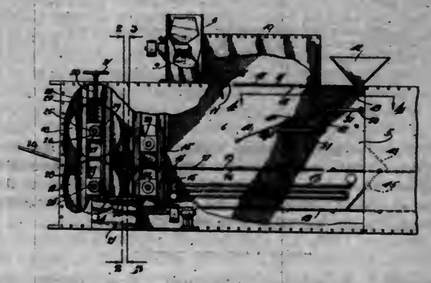
3. The combination in an aerial for radio apparatus, of a hub; a series of segments mounted on the hub; notches in the segments; and an aerial-wire coiled around the carrier and resting in the notches of the segments.

1,755,013. GARMENT DRIER. JOHN W. MCCORMICK, Tulsa, Okla. Filed Jan. 17, 1929. Serial No. 333,175. 4 Claims. (Cl. 34—26.)



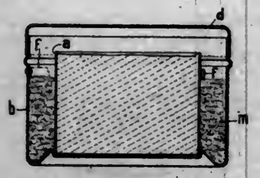
1. In a garment drier, a housing, a rotatable garment drying frame in the housing, a heater at the upper end of the housing, means for withdrawing heated air from the upper end of the housing and delivering the same to the lower end of the housing for upward movement therein, and a fan wheel impeller on the rotatable drier operated by the current of air entering the lower end of the housing.

1,755,014. THUMB SAVER. CARRIE BEURET MORRISON, Pawnee Station, Kans. Filed Oct. 31, 1929. Serial No. 403,819. 3 Claims. (Cl. 2—21.)



1. A finger protector of the character described comprising a resilient body portion having an opening therethrough, spaced inwardly from the opposite ends thereof resilient securing means mounted on the body for removably securing the body on a finger, inlay means adapted to be mounted on the inner face of the body portion and to substantially overlie the opening, said inlay means being positioned spaced inwardly of the outer face of the body, and means for securing the inlay on the body.

1,755,015. CONTAINER CLOSURE. EMANUEL MÜLLER, Unter-Engstringen, near Zurich, Switzerland. Filed Feb. 28, 1929, Serial No. 343,288, and in Switzerland Apr. 4, 1928. 3 Claims. (Cl. 220—55.)

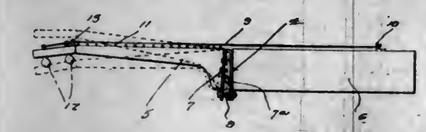


2. A releasable closure between a milk can and its cover comprising conical trunnions associated with the can and an elastic bow pivoted relatively to the cover, with which it is operatively connected, and provided with hook-shaped cam ends shaped similarly to said trunnions for engaging the latter, the elasticity of the bow allowing of movement of said hook-shaped ends axially of said trunnions.

1,755,016. HAY AND GRAIN HANDLING MACHINE. JOHN LINLEY MURPHY, Ithaca, N. Y. Filed Sept. 12, 1929. Serial No. 392,122. 2 Claims. (Cl. 34—31.)

2. An apparatus of the character described, comprising a drying chamber, means for heating and ventilating the same, means for conveying material through said chamber, a pair of relatively adjustable heatable rollers located in advance of the chamber, a second pair of internally heated rollers in advance of the first rollers, and a closed sweating chamber between the two pairs of rollers.

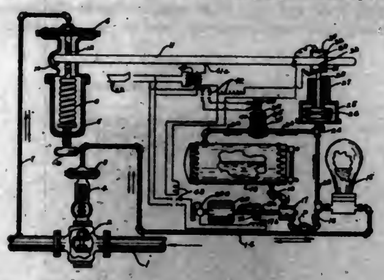
1,755,017. METAL CONTAINER WITH LID FOR SEMI-FLUID AND THICK SUBSTANCES. ADOLF NEBEL, Basel, Switzerland. Filed June 11, 1926, Serial No. 115,337, and in Switzerland Aug. 18, 1925. 1 Claim. (Cl. 220—10.)



A metal container for semi-fluid and thick substances, such as fats, waxes, shoe cream and the like, comprising an outer box, a lid thereon, a piece of unperforated material in form of a box open at the top, freely inserted in said outer box to constitute an inner box arranged to receive said substance as a compact filling, spring means to maintain same in the outer box with exclusion of any mutual contact between the side walls of both boxes when stripping off the substance and of any soiling of the hand holding the container and in such a position that an intermediate annular space is reserved between the side walls of said boxes, and a filling material with a volatile fluidifying agent within said intermediate annular space, having a greater volume than the top layer of the substance within the inner box and giving off its volatile agent to saturate said top layer of smaller volume of the substance within the inner box, for the purpose of realizing a concentric action of the volatile agent round about on the top layer of the substance in order to prevent same from solidifying and degradation.

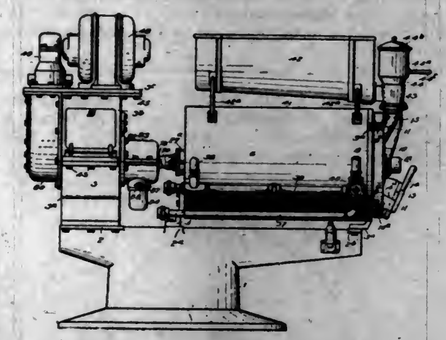
1,755,018. SEWING WIRE FOR FLAT ROPE. RICHARD NITSCH, Warren, Ariz. Filed May 31, 1929. Serial No. 367,456. 3 Claims. (Cl. 117—52.)

1. A composite sewing strand or lacing for metal rope composed of hard and soft wires one embedded in the other



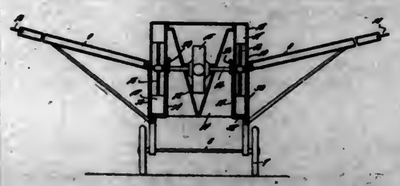
1,755,019. MUSICAL INSTRUMENT. FRANK C. PARKER, Jr., Norristown, Pa. Filed May 3, 1929. Serial No. 360,023. 2 Claims. (Cl. 84—293.)

1. In a stringed musical instrument of the class described, a body, a neck, and a resilient hinged connection between the body and neck, said connection being in the form of a U-shaped spring, the arms of which are rigidly fastened to the body and neck respectively.



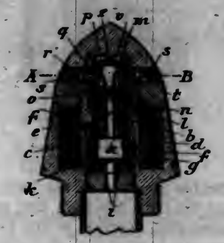
1,755,020. ELECTRIC CONTROL FOR REDUCING VALVES, ETC. CHARLES D. PETERSON, Marshalltown, Iowa, assignor to The Fisher Governor Company, Marshalltown, Iowa. Filed Oct. 3, 1928. Serial No. 310,153. 9 Claims. (Cl. 50—10.)

1. A pipe line for conveying a fluid under pressure, a valve for regulating the flow of fluid through said line, an actuating member for said valve, a chamber communicating with said pipe line, posterior to said valve, a second actuating member arranged in said chamber, means including a closed fluid circuit for pumping a fluid operating



medium to said first mentioned actuating member for operating said valve, and means operated by said second actuating member for controlling said pumping means.

1,755,021. APPARATUS FOR TREATING MATERIALS. LEROY S. PFOUTS, Canton, Ohio; Joan S. Pfouts administratrix of said Leroy S. Pfouts, deceased. Filed Aug. 18, 1926. Serial No. 129,980. 8 Claims. (Cl. 259—105.)

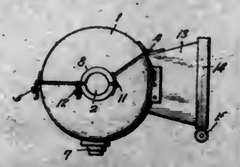


1. In apparatus of the class described, the combination with a support, of a cylinder on said support, a pair of inner and outer members rotatably mounted within said cylinder and provided with shafts projecting through the inner head thereof, a casing on said support, a pair of concentric shafts mounted within said casing, clutch elements projecting through one wall of said casing for detachable connection with the shafts of said members, respectively, gearing within said casing for driving said concentric shafts in opposite directions, means for driving said gearing, and a lubricant collecting wall surrounding said clutch elements.

1,755,022. AEROPLANE. GUSTAV PLOGER, Dell, Mont. Filed July 20, 1929. Serial No. 379,729. 5 Claims. (Cl. 244—18.)

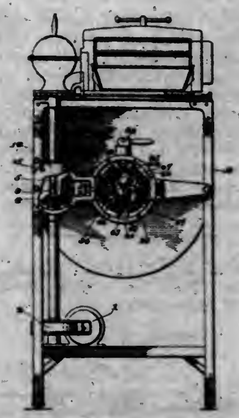
1. An aeroplane comprising a fuselage, an air compartment formed therein opening through one wall of the fuselage, air compression chambers at opposite sides of the fuselage having pressure generating means operatively mounted therein, said chambers having communication with the interior of the air compartment, and means in the compartment against which the air is driven for producing a lifting effort upon the fuselage.

1,755,023. ELECTRIC FUSE FOR PROJECTILES. HERBERT RÜHLEMANN, Sommerda, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany, a Corporation of Germany. Filed June 22, 1927, Serial No. 200,683, and in Germany June 26, 1926. 6 Claims. (Cl. 102—38.)



6. An electric igniter for projectiles comprising a source of current, a regulating resistance, a priming composition, a resistance wire for the composition, and a condenser for storing the current from the source of current necessary for heating the wire to fire the composition.

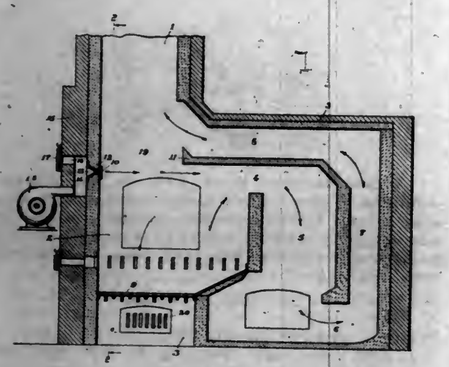
1,755,024. DRAFTING INSTRUMENT. ARTHUR G. SANDEN, South Bellingham, Wash. Filed Mar. 21, 1929. Serial No. 348,874. 8 Claims. (Cl. 33—104.)



1. A drafting instrument consisting of a body formed with a base, a side at 90° thereto, and a third side formed by two right lines meeting at an angle of 165°, said body having an irregular curve opening therein, one side of said opening being for a major portion of its height, a right line disposed at an angle of 75° with respect to said base, the opposite side of said irregular curve opening being formed for a major portion of its extent by a segment of a circle whose center is the meeting point of said two right lines.

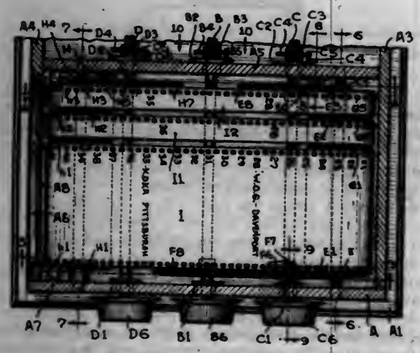
1,755,025. SOCKET FOR THE COMBINATION X-RAY RADIATORS. STEFAN SCHVACHO, Trencianske Teplice Lazne, Czechoslovakia. Filed Oct. 29, 1927. Serial No. 229,694. 2 Claims. (Cl. 174—177.)

1. A radio-therapeutic device of the character described, comprising a globe shaped casing constituting a lamp socket formed in two concentric sections and provided with a plurality of tubular arms for the insertion of lamps of different characters, said arms being provided with locking means for the lamp.



1,755,026. ROTARY DRIVE MECHANISM. JOSEPH J. SCHMITT, Algoma, Wis. Filed Aug. 18, 1927. Serial No. 213,842. 12 Claims. (Cl. 74—50.)

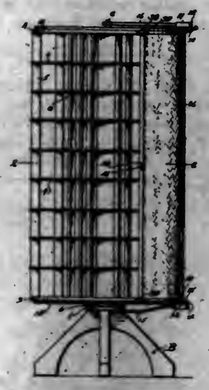
1. In a rotary drive mechanism of that type including a drive shaft, a pair of gears loosely mounted thereon, a clutch slidable on the shaft for alternately clutching the gears thereto, a driven shaft, and a gear secured thereto and meshing with the drive shaft gears, the combination of a support, a clutch shifting member pivoted thereto and formed with a transverse slot, a trip member pivoted to the support and having an arm extending through said slot, a link pivoted to the trip member, means connected with the trip member and link to yieldingly hold them off center with respect to each other, said support and link having coacting means for limiting relative movement between the link and trip member, and means adapted to be actuated by the driven shaft gear for engagement with said arm to shift said trip member and link past dead center to provide for the operation of said clutch shifting member.



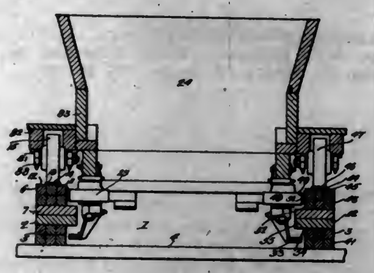
11. In combination with driving and driven members, operative connections therebetween to effect reversal of movement of the driven member, said operative connections embodying a movable element, a shifter operatively connected with said movable element, means carried by one of said members for actuating said shifter at specified intervals, and a device selectively positionable in and out of the path of said shifter for arresting movement of the same and retaining said movable element in neutral position, said device comprising a manually actuable plunger, and spaced pivotally mounted pawls carried by the same and defining an intervening shifter receiving space.

1,755,027. INCINERATOR. AATTO P. SAHA, Brooklyn, N. Y. Filed May 16, 1928. Serial No. 278,325. 3 Claims. (Cl. 110—18.)

1. An incinerator, including a furnace chamber, means forming a tortuous passageway extending from said chamber, means forming a smokestack, the smokestack merging at one point into said tortuous passageway and at a lower point into the upper part of said chamber, and means forming an air damper extending across said lower point, whereby an article passing downward through the smokestack may drop directly into said furnace chamber through said air damper while the smoke and products of combustion are directed through said tortuous passageway into said smokestack above said lower point.



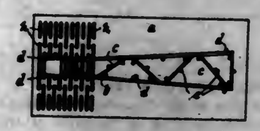
1,755,028. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Oct. 8, 1925. Serial No. 61,296. 13 Claims. (Cl. 116—124.1.)



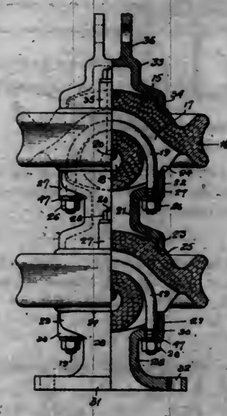
1. In an apparatus of the kind described, the combination with a tuning shaft, of an endless belt occupying a path surrounding the tuning shaft, positive belt driving and supporting means intervening the tuning shaft and the belt, substantially as described.

1,755,029. RACK. EMILE SCHREIBER, Atchison, Kans. Filed May 31, 1929. Serial No. 367,364. 4 Claims. (Cl. 211—144.)

1. In combination with a rotating rack, a roller supported adjacent to said rack, a flexible member coacting with the roller and adapted to wind thereon and unwind therefrom, said flexible member when unwound serving to enclose the rack, means for connecting the outer end portion of the flexible member to the rack, and means in driving engagement with the rack and the roller for revolving the roller upon rotation of the rack.

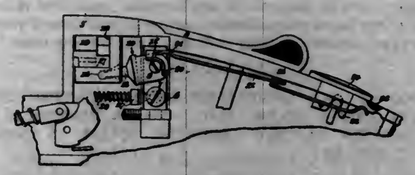


1,755,030. TRACK CONSTRUCTION. HERBERT P. SCHMECK, Philadelphia, Pa., assignor to Philadelphia Toboggan Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1927. Serial No. 172,886. 20 Claims. (Cl. 104—247.)



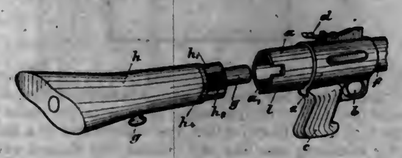
1. A track beam comprising a plank, and a plurality of relatively small elongated bars, certain of which are mounted on said plank in side-by-side relation and others mounted on said last-mentioned bars in superposed relation.

1,755,031. WELDING TABLE. HANS SCHMUCKLER, Berlin, Germany. Filed Nov. 10, 1928, Serial No. 318,512, and in Germany May 5, 1927. 3 Claims. (Cl. 113—99.)



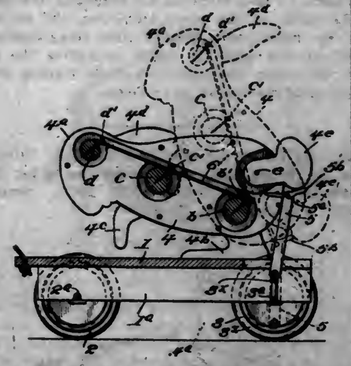
1. A welding table consisting of a flat surface having transversely spaced apart parallel slots and beyond the slots a plurality of apertures, and means for holding a plurality of bars in abutting engagement with each other, whereby said bars may be joined by welding to constitute a frame.

1,755,032. INSULATOR. HAROLD P. SLESSMAN, East Liverpool, Ohio, assignor to The R. Thomas & Sons Company, East Liverpool, Ohio, a Corporation of Ohio. Filed Jan. 7, 1925. Serial No. 1,032. 5 Claims. (Cl. 173—366.)



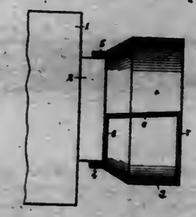
1. A post insulator comprising a pair of insulator units of the link type, a unitary tubular spacer extending therebetween, opposed U-links passing through the spaced insulator units, and means to engage the legs of the said links with the spacer and to unite the parts into a rigid whole.

1,755,033. BREAKDOWN GUN. LOUIS P. SMITH, Ithaca, N. Y. Filed Aug. 27, 1925. Serial No. 52,892. 1 Claim. (Cl. 42—44.)



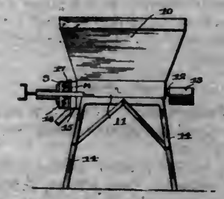
A break down gun provided with safety mechanism and having a barrel locking bolt rotatable on the longitudinal axis of the gun, a bolt operating post journaled on a vertical axis, a yoke pivotally mounted on said post and having a projecting arm universally jointed to the barrel locking bolt, the pivot pin of said yoke being elongated and operatively connected to the safety mechanism.

1,755,034. AUTOMATIC FIREARM. LOUIS STANGE, Sommerda, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed June 18, 1929, Serial No. 371,881, and in Germany Nov. 15, 1928. 4 Claims. (Cl. 42—75.)



1. In an automatic firearm in combination, a longitudinally movable breech piece, a hollow stock guiding said breech piece, a casing, containing a trigger, a breech sleeve and a barrel, and means for releasably and removably connecting said stock to said casing.

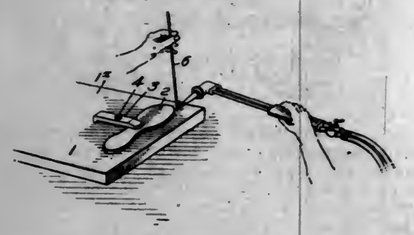
1,755,035. WHEELED TOY. PETER STRONG, Winchendon, Mass. Filed Nov. 9, 1928. Serial No. 318,213. 3 Claims. (Cl. 46—45.)



1. A toy comprising a wheeled platform and an animal figure thereon, said animal figure having rear legs rigidly connected to the platform, a hinge pin rigidly connected to the legs and pivotally supporting the body of the figure, the front legs of the figure having a pivot pin rigidly connected thereto and pivotally engaging the body, said figure having ears, a hinge pin rigidly connected to said ears and pivotally engaging the head of the figure, wheel operated means for swinging the body on the pivot of the rear legs, and a link having offset connections to the pivots of the rear and front legs and ears respectively.

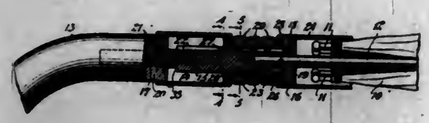
1,755,036. CAMERA ATTACHMENT FOR MAKING ARTIFICIAL REFLECTIONS. JACOB H. SUSSMAN, Brooklyn, N. Y., assignor of one-half to Edward J. Herbert, New York, N. Y. Filed Mar. 28, 1928. Serial No. 265,421. 6 Claims. (Cl. 95—18.)

1. A camera attachment, comprising a hood adapted to be positioned on the end of the lens barrel of the camera, and a reflecting plate extending longitudinally within the hood and constituting the lower wall of the open upper portion of the hood.



1,755,037. FEED GRINDER. TOM TAMEN, Lakota, Iowa. Filed July 23, 1928. Serial No. 294,842. 1 Claim. (Cl. 83—8.)

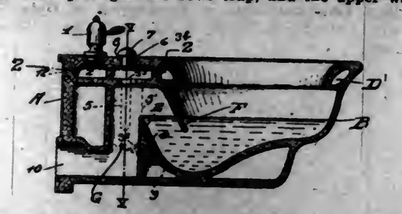
A grinding device comprising a pair of spaced discs having laterally projecting teeth in an interfitted relation,



each disc being divided uniformly into sections, said teeth being arranged in concentric circles with the teeth in each circle being uniformly spaced, each section having an initial series of teeth on each section being arranged in a straight line transversely of the concentric rows, the succeeding teeth in the innermost concentric rows being disposed in staggered relation with the teeth succeeding the initial series in the outer concentric rows, the leading edge of each tooth being sheared off at an angle.

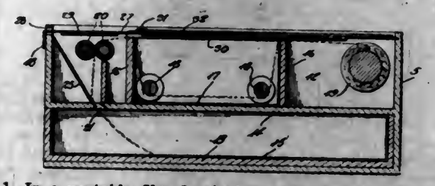
1,755,038. METHOD OF MAKING MOLDS. JOSEPH E. TITTON, Kenmore, Ohio, assignor to The Miller Rubber Co., Akron, Ohio. Filed May 12, 1928. Serial No. 277,351. 9 Claims. (Cl. 76—107.)

1. The herein described process of building up metal articles which consists in temporarily securing a suitable matrix to a metal base member, fusing and welding additional metal to build up a body of metal adjacent said matrix, and thereafter removing the matrix.



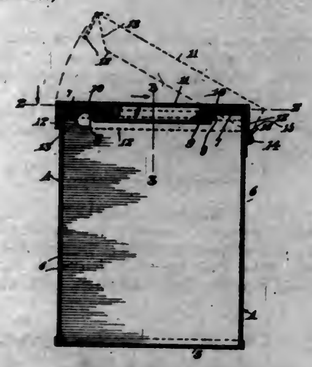
1,755,039. UMBRELLA GUARD. HAROLD M. VANDENHOVE, New York, N. Y. Filed Sept. 12, 1927. Serial No. 219,079. 2 Claims. (Cl. 135—44.)

1. The combination with the canopy, canopy staff, and handle of an umbrella, of a guide member rigidly connected between said handle and staff, a tubular member surrounding said guide member, coacting means on the guide member and the tubular member permitting sliding movement of the tubular member and preventing it from having turning movement, a series of tumblers each having a series of circumferentially arranged peripheral numbered facets, said tumblers arranged within the tubular member and surrounding said guide member, coacting portions on said tumblers, guide member and tubular member adapted to lock the tubular member against sliding movement out of engagement with said canopy to prevent it from being opened, said tumblers being manipulatable through openings in said tubular member to transpose portions of said tumblers to release said tubular member for sliding movement out of engagement with said canopy to permit the canopy to be opened.



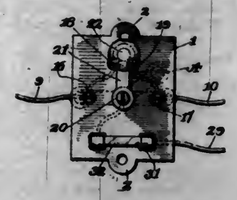
1,755,040. WATER-CLOSET. FRANK WALLACE, Freeport, N. Y. Filed Apr. 17, 1929. Serial No. 355,766. 17 Claims. (Cl. 4—73.)

4. In a water closet, a bowl having a flushing rim, a water receiving chamber in the bowl, lateral water passages in the bowl in communication with the chamber, a water jet in the bowl trap, ducts forming communication between the lower ends of the lateral water passages and jet, ducts forming communication between the lower ends of the water passages and bowl trap, and the upper wall



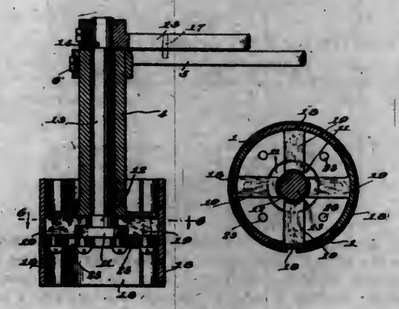
of the closet having a clean out opening in direct communication with the entrance to the soil pipe forwardly of the water receiving chamber.

1,755,041. FILM DEVELOPING AND PRINTING DEVICE. EUGENE WASYLENKO, Mount Carmel, Pa. Filed Nov. 4, 1927. Serial No. 231,075. 4 Claims. (Cl. 95—90.)



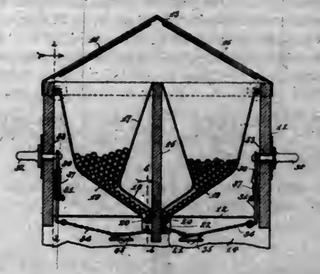
1. In a portable film developing and printing device, a casing having superposed compartments communicating at adjacent ends, a developing tank in the upper compartment midway the ends thereof, a frame slidably mounted in the walls of the upper compartment overlying the same, a hinged colored glass in the frame overlying the developing tank and film roll to be developed journalled in one end of the upper compartment, trailed through the developing tank and downwardly into the lower compartment.

1,755,042. TIN CONTAINER WITH FRICTION TOP AND HINGE COVER. EMIL J. ZOLLER, Brooklyn, N. Y. Filed Feb. 14, 1927. Serial No. 168,118. 2 Claims. (Cl. 220—29.)



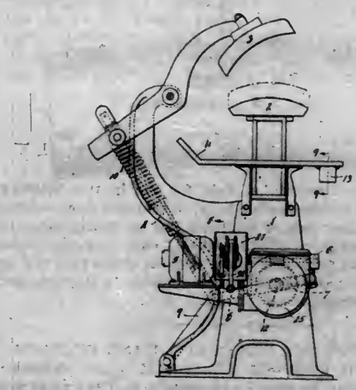
1. In a receptacle of that type including a body portion having a flanged top provided with a removable closure, the flanged portion of the top being secured to the outer face of the side of the body portion, the combination of a flanged lid for enclosing said top and closure, the flanged portion of said lid frictionally engaging with the outer face of and depending below the flanged portion of said top, a hinge member secured to the outer face of the side of said body portion below said flanged portions, and means for pivotally connecting the bottom of the flanged portion of said lid to the top of said hinge member.

1,755,043. COMBINED ANTENNA SELECTOR AND SAFETY SWITCH. STENGRIM ALSETH and VINCENT L. NEAL, Lewiston, Idaho; said Alseth assignor of one-fourth to Charles C. Miles, Clarkston, Wash., and one-eighth to Rudolph Strom, Oakland, Calif. Filed Oct. 22, 1928. Serial No. 314,192. 1 Claim. (Cl. 200—114.)



A combined antenna selector and safety switch comprising, a base, a pair of remotely spaced binding posts adapted for connection with angularly disposed antennæ, a pair of spaced, adjacent binding posts, means to provide circuits between the respective posts of one pair and the respective posts of the other pair, a contact for each post, a centrally disposed binding post spaced an equal distance from said pairs of binding posts, a terminal carried by the base and adapted for connection with a receiving set, means to provide a circuit between said terminal and the centrally disposed binding post, and a rotary switch arm pivoted on said centrally disposed binding post for selective engagement with each of the contacts of said remotely spaced binding posts and with the contacts of said adjacent binding posts concurrently for selectively completing a circuit between the receiving set and a selected antenna and between the receiving set and both of the antennæ, said means providing a circuit between the terminal and centrally disposed binding post including a fuse for protecting the receiving set when in active use, said switch arm being positionable out of connection with all of the contacts of said binding posts simultaneously to protect the fuse when the receiving set is inactive.

1,755,044. DEVICE FOR EXPANDING AND MOUNTING PISTON RINGS. KENNETH J. BAILEY, Great Falls, Mont. Filed Apr. 19, 1928. Serial No. 271,226. 12 Claims. (Cl. 29—86.4.)



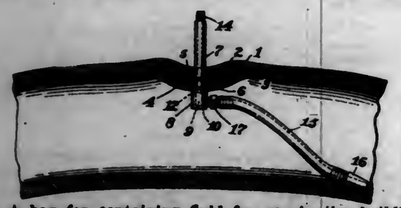
7. A piston ring expanding tool comprising an annular expansion head mounting an annular series of radially expansible segments, a base mounting said head having an upstanding shank and means carried by said shank for effecting uniform radial expansion of the segments of said head.

1,755,045. STRAW-SERVING MACHINE. SALVATOR BARKEY, New York, N. Y. Filed May 14, 1928. Serial No. 277,556. 5 Claims. (Cl. 312—67.)

1. In a serving machine for soda straws or analogous articles, a hopper in which the straws are stored, an inclined chute communicating with the bottom of the hopper for gravitationally feeding straws from the hopper to the point of service, said chute being only of sufficient size to accommodate a single row of straws resting one upon the other, and the lower wall of said chute being disposed in the same plane as one wall of the hopper adjacent said chute, the opposite hopper wall defining a sharp angle with the upper wall of the chute, a bottom plate under said chute, said bottom plate having a groove therein adapted to receive the lowermost straw of the stack, and a pusher engageable with one end of the lowermost straw and working in the groove to project said straw endwise through an opening in one wall of the container.

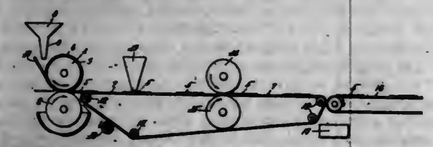
1,755,046. ELECTRICALLY-OPERATED PRESSING MACHINE. WILLIAM P. BEATTIE, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 13, 1926. Serial No. 128,983. 12 Claims. (Cl. 192—131.)

1. In a pressing machine, a base, a pair of relatively movable pressing members mounted thereon, means for effecting closing of one of said pressing members upon the other, pressure between said members, release of pressure, and return of said members to the original position thereof, said means comprising an electric motor, a rotary member adapted to be driven thereby, a linkage in operative connection between said rotary member and one of said pressing members whereby said cycle of press operations is effected each revolution of said rotary member, control means for said motor, comprising a control circuit for said motor, a portion of said circuit being divided to form two



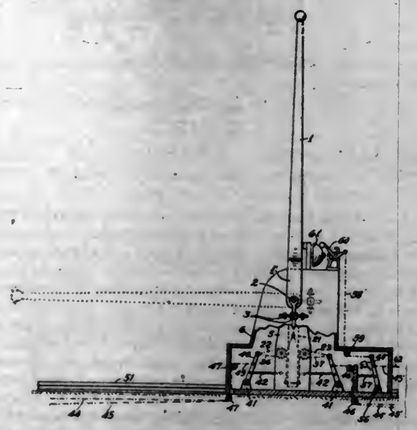
current paths, a pair of hand operated switches in said divided portion, said switches being spring urged to normally complete one of said current paths, adapted upon coincident hand operation to complete the other of said current paths, and widely spaced upon said machine, and a switch in said control circuit adapted to interrupt either of said current paths, and timed with said rotary member to alternate said interruptions dependent upon said press operations.

1,755,047. FISH LURE. CHESTER A. BRAIDWOOD, Perth Amboy, N. J. Filed Jan. 25, 1928. Serial No. 249,406. 4 Claims. (Cl. 43—42.)



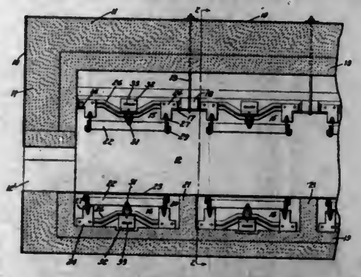
1. The combination with a fish lure, of a fish hook, and means connecting the hook with the lure for relative movement, said means extending through the lure and providing an eye at one side of the lure connected with the eye of the hook and having portions set in a recess in the opposite side of the lure to prevent said means from turning.

1,755,048. INFLATABLE BAG FOR USE IN TIRE BUILDING. ROY COTTON PRICE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 19, 1928. Serial No. 313,605. 9 Claims. (Cl. 18—45.)



1. A bag for containing fluid for use in tire building, comprising a hollow flexible body, a paid of rubber vulcanized to the inner face of said body, an internally threaded ferrule located in an opening in said pad, clamping plates carried by said ferrule on opposite sides of the pad, and an inflating stem passing through an opening in the body and detachably engaging said ferrule.

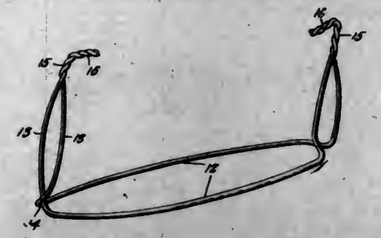
1,755,049. PROCESS FOR COATING AND SURFACING PREPARED ROOFING. WALTER H. CADY, Beowawe, Nev., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1926. Serial No. 95,820. 2 Claims. (Cl. 91—68.)



1. The process of treating individual shingle units cut from prepared roofing and having butt and adjacent side edges which includes the successive steps of coating all portions of the units uniformly with waterproofing bituminous material and applying granular surfacing material to the units in a continuous operation.

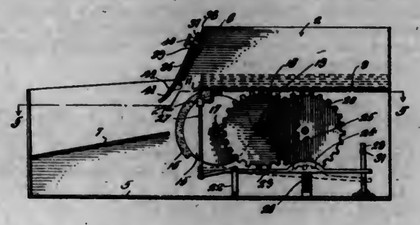
1,755,050. AUTOMATIC RAILROAD GATE. ENRIQUE CANUT and JOSE M. LOYDI, Sagua la Grande, Cuba. Filed Jan. 12, 1929, Serial No. 332,168, and in Cuba Nov. 19, 1928. 5 Claims. (Cl. 246—293.)

1. In an automatic railroad gate, a rotatable shaft, a gate secured to said shaft, a pair of elements serving as counterweights for said gate rotatably mounted upon said shaft, one of said elements being concentrically mounted and the other being eccentrically mounted, means for reversing the positions of said elements to cause operation of said gate, means for restoring the original position of said elements to place the gate in inoperative position and means operated by a train for setting said operating means and said restoring means in operation.



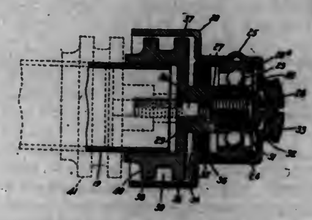
1,755,051. ELECTRIC FURNACE. ROBERT M. CHERRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 1, 1928 Serial No. 258,334. 13 Claims. (Cl. 266—1.5.)

11. A heating unit for electric furnaces comprising a plurality of refractory members, means for securing said refractory members together, a plurality of hook members pivotally secured to said refractory members and a heating resistor secured to said hook members.



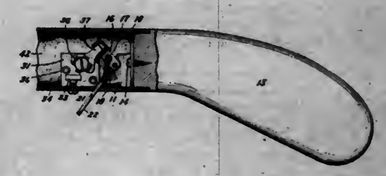
1,755,052. BROOM PROTECTOR. JOHN S. CHESTER, Royal Oak, Mich. Filed Apr. 10, 1929. Serial No 354,029. 1 Claim. (Cl. 15—169.)

A broom bridle comprising a pair of substantially U-shaped resilient frames arranged to provide elongated outwardly bowed spaced side members adapted to be positioned upon opposite sides of a broom, crossed oppositely and outwardly curved end members extending from the



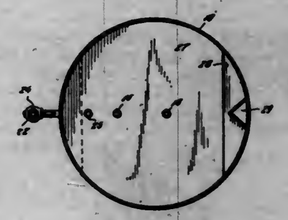
side members, and inwardly extending twisted extremities at the upper ends of the end members to secure the latter together and provide penetrating elements.

1,755,053. POST CARD AND ENVELOPE COUNTER. CLARENCE G. CORNING, Wild Rose, Wis. Filed Jan. 21, 1928. Serial No. 248,401. 11 Claims. (Cl. 93—93.)



1. A card and envelope counter of the character described, comprising means for supporting a stack of articles to be mounted, means for removing single articles from a stack on said supporting means, a panel arranged transversely of and forwardly of said supporting means, a pair of superposed finger members secured to said panel and projecting beyond the lower edge thereof, one of said finger members having its lower end arranged in a plane a sufficient distance above said stack supporting means to permit a single article to pass therebeneath, and the other finger members extending a substantial distance beneath the first mentioned finger member and curving forwardly and acting to guide an article downwardly as it moves from said supporting means.

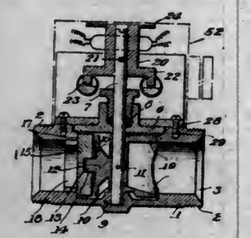
1,755,054. VACUUM-CLEANER-BRUSH BEARING. JAMES M. DARST, East Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Jan. 3, 1928. Serial No. 244,071. 1 Claim. (Cl. 308—187.)



In a bearing structure for vacuum cleaner brushes and the like, the combination with a rotary member, of an end bearing structure therefor comprising a head mounted on the end of said member, an axially extending stud carried by the head, said stud having a shouldered end, a ball bearing having an outer race and an inner race, in which inner race the shouldered end of the stud is seated, means carried by the stud for engaging the inner race to hold the stud in said seated position, said means being releasable to permit the stud to be withdrawn from the bearing, a cylindrical cup-shaped housing having at one end an enlarged portion which surrounds the head with a close running clearance, said head being provided with an annular groove which forms a labyrinth packing with the enlarged portion of the housing, at the opposite end of said housing enclosing the bearing, and a removable closure means for said opposite end of the casing, said closure means being axially in line with the holding means and adjacent the bearing, whereby by removing said closure means, said holding means may be removed and the bearing and outer member of the packing removed as a unit from the stud.

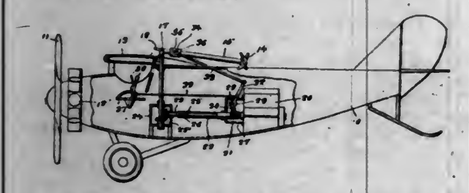
1,755,055. SNAP SWITCH. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Feb. 1, 1928. Serial No. 251,167. 16 Claims. (Cl. 200—67.)

16. A snap switch comprising a thin, flat frame member, a fixed contact supported thereby, a movable contact, an element which carries the movable contact and straddles the frame member, an actuator pivoted on the frame member for moving the element and through which the frame member extends, said element straddling the actuator, a pivot for the element which is carried by the actuator and forms its sole support, said actuator and element forming a toggle, and a coil spring connected at one end to the element and at the other end to the actuator, which spring when it crosses the dead center moves the element with a snap action to open or close the circuit and which also completes the movements of the actuator.



1,755,056. MOTOR-MOISTENING DEVICE. WALTER E. DE WEESE, Cleveland, Ohio. Filed Aug. 26, 1927. Serial No. 215,668. 1 Claim. (Cl. 62—1.)

In an air moistener for internal combustion engines, a tank adapted to contain a supply of water, a water inlet for the tank, a water outlet for said tank, a vertically disposed cross sectionally V-shaped partition formed of expansible material and located within the tank, said partition together with the walls of the tank defining an expansion chamber, said chamber being closed at opposite ends, and a vent pipe extending from said chamber to the atmosphere.

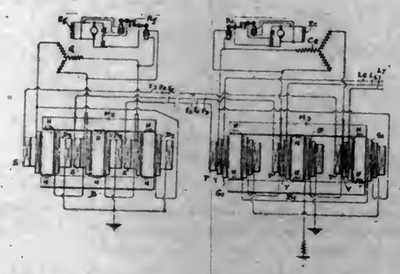


CARNEGIE LIBRARY OF ATLANTA

1,755,057. ELECTRIC VALVE. JOHN J. FAGAN, Bayonne, N. J., and LOUIS KOVACS, Brooklyn, N. Y. Filed Sept. 22, 1928. Serial No. 307,572. 7 Claims. (Cl. 137—139.)

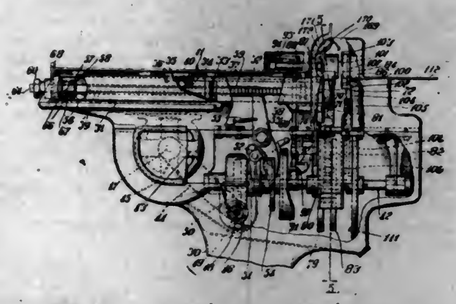
1. A device of the class described comprising a valve casing, a rotary valve therein, a member connected with the valve stem and having a pair of projections thereon, two pairs of solenoids associated with the valve casing, a core passing through each pair and having a notch therein for receiving a projection, a circuit including one solenoid of each pair, a second circuit including the other solenoid of each pair, means for controlling each circuit from a distant point and a circuit breaker for controlling both circuits arranged on the member which is connected with the valve stem.

1,755,058. SUSTAINING AND STABILIZING ATTACHMENT FOR AIRPLANES. HARRY P. FINLEY, Little Rock, Ark., assignor of one-half to Telas Coleman, Little Rock, Ark. Filed May 8, 1929. Serial No. 361,436. 2 Claims. (Cl. 244—15.)



1. In combination with an airplane, a traction propeller, a lifting propeller, a separate source of power for the lifting propeller, means including a sectional shaft to operatively connect the lifting propeller with its source of power, said shaft comprising a fixed section and an axially movable section, coupling means for said sections, means to move the lifting propeller to an active position, and means operated by the lifting propeller moving means to move the movable section of said shaft axially and couple the same to the fixed section.

1,755,059. WINDSHIELD WIPER. EDWARD J. GALLAGHER, Jr., Baltimore, Md. Filed Feb. 21, 1929. Serial No. 341,733. 7 Claims. (Cl. 15—255.)

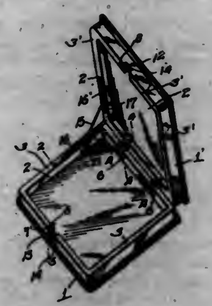


1. A wiper device of the class described comprising a housing having a chamber with an open side, the open side being arranged adjacent the transparent member to be wiped, a wiper strip carried by the housing and arranged in and projecting from the opening in the chamber and dividing the chamber into two parts, means for supplying heated air to the chamber and means for moving the device over a surface to be cleaned.

1,755,060. AUTOMATIC VOLTAGE-REGULATING MEANS. FRAZER W. GAY, Newark, N. J., assignor to General Electric Company, a Corporation of New York. Filed May 6 1927. Serial No. 189,241. 6 Claims. (Cl. 171—119.)

1. In combination, a transformer having a magnetic core arranged to be saturated substantially above the knee of its saturation curve at its normal operating voltage, an inducing winding on said core, an induced winding on said core, a tertiary winding on said core, and a synchronous condenser connected to said tertiary winding for neutralizing the magnetizing current of said transformer at its normal operating voltage.

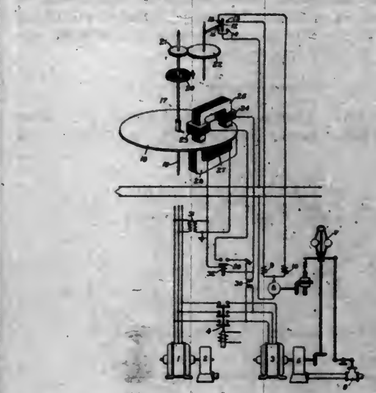
1,755,061. CUTTING AND WRAPPING MACHINE. EDWARD C. HEGG, Buffalo, N. Y., assignor to Mojonnier Bros. Co., a Corporation of Illinois. Original application filed May 10, 1927, Serial No. 190,359. Divided and this application filed Feb. 23, 1928. Serial No. 256,231. 14 Claims. (Cl. 107—21.)



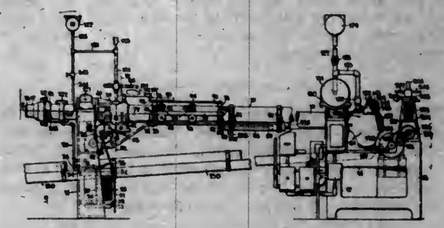
1. A machine of the character described, comprising a feed table adapted to support a block of material, cutting means for severing said block into sections, and means for moving said block step by step on said table toward said cutting means comprising a follower adapted to engage the rear side of said block, longitudinally reciprocating feed bar provided on different parts of its periphery with longitudinal rows of differently spaced teeth, a pawl movably mounted on said follower and adapted to engage the teeth in any one of said rows, a longitudinal guide for said follower, a rock lever, a link connecting said lever and said bar, a cam engaging said lever and operating to move the feed bar forwardly to the same point, a spring connected with said lever and adapted to move the feed bar backwardly, a sleeve capable of turning with said bar but held against longitudinal movement therewith, a stop mounted on said bar and movable lengthwise therewith, and a plurality of differently spaced stops arranged in an annular row on said sleeve about the axis thereof and each adapted to be engaged by the stop on said bar for arresting the backward movement of the same at a different point.

1,755,062. COMBINED TABLE AND AMUSEMENT GAME. FRANK HERNES and RICHARD WINKLER, Chicago, Ill. Filed Jan. 9, 1928. Serial No. 245,472. 1 Claim. (Cl. 45—81.)

In an article of the class described, a body having a central hollowed open portion to provide an area for a game structure, supporting legs for said body, a sectional top for the body and for covering the hollowed portion, and means providing slidable connection between the sections of the top and the body to permit the sections to be moved from covering position with respect to the hollowed portion to suspended position at opposite corresponding sides of the body, and means for releasably latching the sections in said covering position, said means including yieldably held latch members carried by the sections, keeper plates carried by the opposite corresponding edges of the body, and finger buttons carried by the latch members for moving the latch members from engagement with the keeper plates.



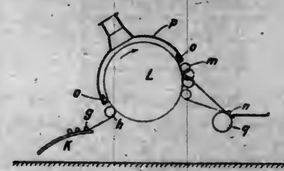
1,755,063. JEWEL CASE. JOSEPH B. HOLDEN, Canastota, N. Y., assignor to Diemoulding Production Company, Incorporated, Canastota, N. Y., a Corporation of New York. Filed Jan. 3, 1928. Serial No. 244,297. 6 Claims. (Cl. 206—1.)



1. In a jewel case having opposed sections hinged together along one side to open and close, a spring link interposed between said sections and having one end attached to one section and its other end provided with an extension slidable along and upon the other section as the sections are opened and tensioned to open said sections, and means cooperating with said link for limiting its sliding movement in the direction of said opening movement.

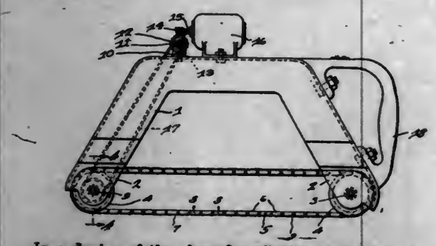
1,755,064. SYNCHRONIZING DEVICE. LUKE F. KENNEDY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 11, 1926. Serial No. 80,433. 9 Claims. (Cl. 290—4.)

2. The combination of a plurality of alternating current circuits, means for producing substantial equality between the frequencies of said circuits including a motor element comprising a field coil connected to one of said circuits and a second field coil arranged to be connected to the other of said circuits, means operable to vary the connections between said second mentioned field winding and said other circuit in accordance with the phase relation between the voltages of said circuits, and means controlled by said element for changing the frequency of one of said circuits.



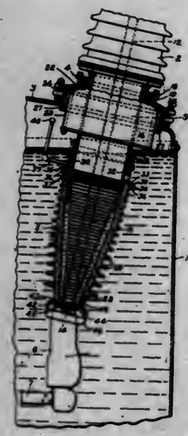
1,755,065. TUBE-STRIPPING MACHINE. HERMAN T. KRAFT, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 13, 1927. Serial No. 183,427. 31 Claims. (Cl. 154—9.)

1. An apparatus for supporting an elongate member having a vulcanizable article molded thereto, a hollow member provided with vacuum producing means, means for positively engaging the article against the hollow member, and means operatively associated with the hollow member and with the vacuum producing means for placing the latter into communication with the hollow member.



1,755,066. DEVICE FOR DRYING CELLULOSE FILMS. HANS KRULL, Scholwin, near Stettin, and HEINRICH DETHLOFF, Maxau, Germany, assignors to the Firm of Feldmühle Papier- und Zellstoffwerke Aktiengesellschaft, Scholwin, near Stettin, Germany. Filed June 26, 1928, Serial No. 288,444, and in Germany May 12, 1927. 1 Claim. (Cl. 34—48.)

A device for drying cellulose films, including an interiorly heated drying cylinder of a relatively large diameter, said cylinder provided for a considerable portion of its circumference with heat radiation preventing means, a

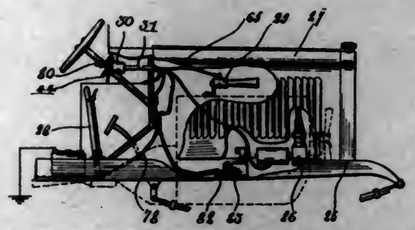


stationary pressing-on roller for transferring the film to the drying cylinder and a taking-off roller for the dried film, said last mentioned roller adjustable peripherally of the cylinder so as to permit variation of the length of the drying path of the film in contact with the cylinder outside of said radiation preventing means.

1,755,067. SAW. ARTHUR KUHNNE, Chicago, Ill. Filed Mar. 8, 1928. Serial No. 260,233. 1 Claim. (Cl. 143—82.)

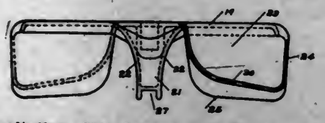
In a device of the class described and in combination, a substantially U-shaped frame, hollow in cross section, and having reduced end portions, shafts in the reduced end portions, pulleys on said shafts, a sectional bandsaw passing around said pulleys, a second pulley on one of the shafts, spaced brackets on the intermediate portion of the frame, a shaft supported by said brackets, a worm gear on the latter shaft, a pulley on the last shaft, a belt connecting the last pulley with the second pulley on one of the first shafts, a motor adjacent the brackets, a worm on the drive shaft of the motor engaging the worm gear for imparting movement to the saw blade, and a handle member secured to one side of the frame whereby to manipulate said frame.

1,755,068. HIGH-VOLTAGE STRUCTURE. HOWARD G. MACDONALD, Murrysville, and JESSE E. MATHER and GORDON A. BURR, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1927. Serial No. 221,439. 16 Claims. (Cl. 173—318.)



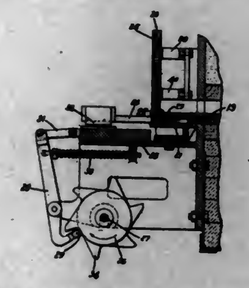
2. In a high-voltage structure, the combination with a main receptacle for a fluid, an electrical device therein and a condenser terminal bushing for said device extending through a wall of the receptacle with an inner portion below the level of said fluid, of means for surrounding only said inner bushing portion by another fluid body and maintaining said fluid bodies separate comprising an insulating well member supported directly on the bushing.

1,755,069. PROCESS OF PROTECTING THE INTERIOR SURFACES OF AIRBAGS FROM DETERIORATION IN SERVICE. GERALD D. MALLORY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 18, 1927. Serial No. 234,296. 8 Claims. (Cl. 18—50.)



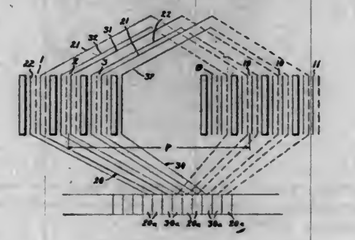
1. A method of preserving airbags which comprises injecting therein a solution of glycerine containing an inert pigment and an oil which wets the pigment.

1,755,070. SWITCH MECHANISM. CAMILLE MAUBOURGNE, Montreal, Quebec, Canada. Filed Oct. 8, 1928. Serial No. 311,183. 4 Claims. (Cl. 180—82.)



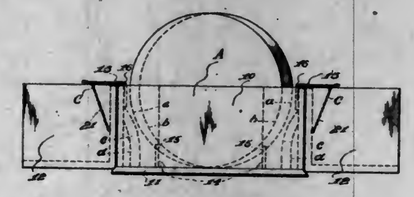
1. A switch mechanism for motor vehicles having a warning signal, an emergency brake and an ignition system, comprising a switch plate carrying terminals electrically connected with a battery, a signal, an emergency brake, and the vehicle ignition system; and locking means associated with said switch plate operable to lock the circuits so that the ignition circuit is disconnected and an audible signal actuated, said signal being stopped only upon applying the emergency brake and attempted operative movement of the switch or brake will operate the signal.

1,755,071. AGITATING DISK FOR WASHING MACHINES. HARRY L. OGG, Newton, Iowa, assignor, by mesne assignments, to Automatic Washer Company, Newton, Iowa, a Corporation of Delaware. Filed Apr. 3, 1926. Serial No. 99,441. 5 Claims. (Cl. 259—101.)



1. An agitating disk having radially extending ribs upon its lower face, each rib having downwardly converging side walls, and a bottom portion comprising spaced rubbing edges and a perforated web therebetween.

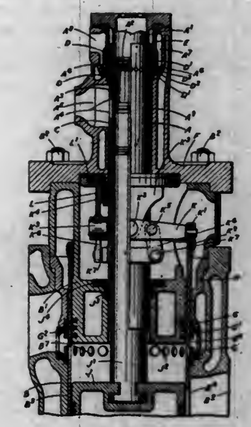
1,755,072. FURNACE. ALBERT N. OTIS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 8, 1927. Serial No. 211,272. 7 Claims. (Cl. 214—18.)



1. A conveying mechanism for moving small articles through a heating chamber provided with inlet and outlet openings comprising a member provided with a channel extending between said openings, a second member adjacent said inlet opening provided with a channel aligned with said first channel, said second channel having a slot in its bottom, means for feeding the articles to be heated into said second channel, a member mounted for reciprocatory motion within said slot so as to project into said second channel and means for reciprocating said member whereby said articles are moved along said channels through said heating chamber.

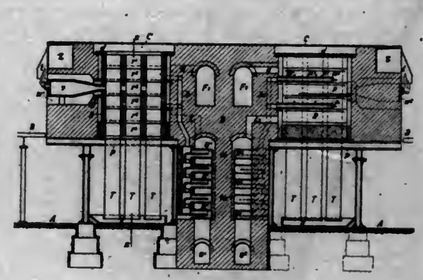
1,755,073. DYNAMO-ELECTRIC MACHINE. JOSEPH M. PESTARINI, St. Ouen, France, assignor to General Electric Company, a Corporation of New York. Filed Aug. 18, 1927, Serial No. 213,922, and in France Dec. 16, 1926. 5 Claims. (Cl. 171—206.)

1. A dynamo-electric machine comprising an armature having straight slots extending entirely across the face thereof, a commutator, and two independent windings connected to separate commutator segments, each of said windings comprising long pitch coils and short pitch coils arranged in said straight slots, each of said coils being connected to said commutator.



1,755,074. FILING CABINET FOR PHONOGRAPH RECORDS. CHARLES T. RAY and DONALD MCDONALD, Jr., Louisville, Ky., assignors to B. F. Avery & Sons, Louisville, Ky., a Corporation of Kentucky. Filed May 11, 1927. Serial No. 190,442. 4 Claims. (Cl. 312—10.)

1. A filing cabinet for phonograph records comprising a case, removable and reversible means within the case having slots on its opposite sides, of which slots those on one side of the means are formed to receive records of a different size from those on the other side of said means.

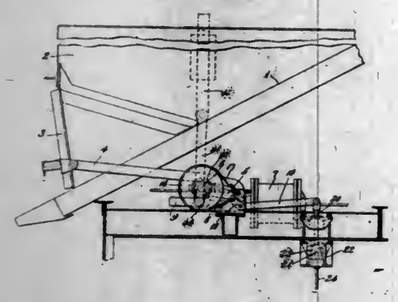


1,755,075. COMPRESSOR FOR AIR OR GAS. HARRY RALPH RICARDO, London, England. Filed Feb. 25, 1928, Serial No. 256,912, and in Great Britain Mar. 3, 1927. 14 Claims. (Cl. 230—179.)

1. A sleeve valve compressor for gas including in combination, a cylinder having an annular delivery port, a sleeve valve within the cylinder having a ring of delivery ports adapted to register with the annular delivery port during the delivery period, a piston reciprocating within the sleeve valve, mechanism for imparting motion to the sleeve valve, a sealing ring mounted in a recess in the cylinder and engaging the exterior of the sleeve, this ring

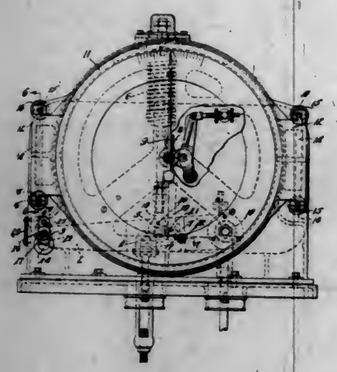
being so disposed as to constitute the lower edge of the annular delivery port, and means for preventing axial movement of the ring relatively to the cylinder.

1,755,076. FURNACE FOR TREATING ZINC ORES AND OTHER ZINCIFEROUS MATERIAL. ALEXANDER ROITZHEIM and WILHELM REMY, Berlin-Oberschoneweide, Germany. Filed Apr. 23, 1926, Serial No. 104,147, and in Germany Nov. 13, 1925. 9 Claims. (Cl. 263—38.)



1. A zinc reduction furnace comprising an enclosing masonry structure, a multiplicity of spaced, vertical, refractory muffles arranged in said furnace, the muffles being supported independently of each other and of said masonry structure, a roof for the furnace formed by plates carried by the muffles, means for supplying heating gases to the flue spaces between the muffles, and means for supplying additional air to said flue spaces.

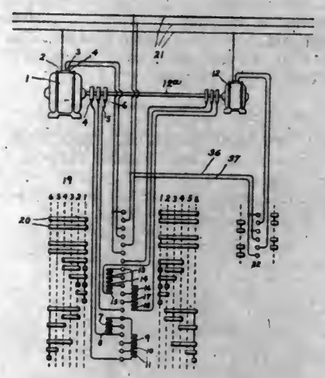
1,755,077. DOOR-LOCKING MECHANISM FOR COKE-QUENCHING CARS. EUGENE WILLIAM SCHELLENTRAGER, Cleveland, Ohio, assignor to The Atlas Bolt & Screw Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 31, 1924. Serial No. 717,148. 7 Claims. (Cl. 105—286.)



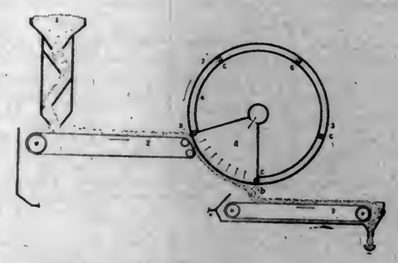
4. The combination with a dump car provided with a body, a door therefor, and operating means for said door, of means for maintaining said door in closed position,

means for supplying fluid pressure thereto to release said maintaining means, and means for retarding the escape of said fluid pressure from said maintaining means,

whereby said door is always closed by said operating means prior to the application of said maintaining means to maintain the door in closed position.



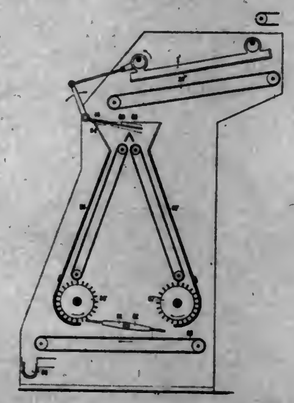
1,755,078. WEIGHING INDICATOR. EUGENE W. SCHELLENTRAGER, Cleveland Heights, Ohio, assignor to The Atlas Bolt & Screw Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1926. Serial No. 96,213. 11 Claims. (Cl. 265—68.)



1. In an article of the class described, a pivot bearing located between opposed walls, and inwardly extending projections upon said walls and spaced from said bearing for positioning a member pivoting upon said bearing.

1,755,079. ELECTRIC-MOTOR CONTROL FOR REVERSING OPERATIONS. CARL SCHIEBELER, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 30, 1928, Serial No. 250,444, and in Germany Feb. 25, 1927. 6 Claims. (Cl. 172—274.)

1. The combination with an alternating current driving motor, of a controller movable to accelerate said motor, an auxiliary motor connected to said driving motor, control means for said auxiliary motor, and an operating connection between said controller and said control means whereby said auxiliary motor is energized to apply a braking torque to said driving motor when the controller for said driving motor is moved from a running position back toward starting position.



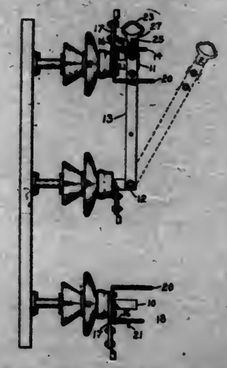
1,755,080. MEANS FOR SPREADING CUT TOBACCO IN CIGARETTE-MAKING MACHINES. HEINRICH SCHÜNEMANN, Spandau, Germany, assignor to Messrs. Neuerburg'sche Verwaltungsgesellschaft m. b. H., Gereonhaus, Cologne, Germany, a Corporation of Germany. Filed Nov. 23, 1927, Serial No. 235,311, and in Germany Sept. 10, 1925. 2 Claims. (Cl. 131—39.)

1. A means for conveying cut tobacco and depositing the tobacco so conveyed in a uniform layer on a travelling conveyor from a tobacco feeding means comprising a rotating hollow suction cylinder having spaced perforations and a fixed and hollow cylinder within said first cylinder provided with a sector-shaped suction opening in its outer periphery.

1,755,081. MEANS FOR LOOSENING AND SPREADING CUT TOBACCO. HEINRICH SCHÜNEMANN, Spandau, Germany, assignor to Messrs. Neuerburg'sche Verwaltungsgesellschaft m. b. H., Gereonshaus, Cologne, Germany, a Corporation of Germany. Filed Nov. 23, 1927, Serial No. 235,312, and in Germany Jan. 29, 1926. 2 Claims. (Cl. 131—39.)

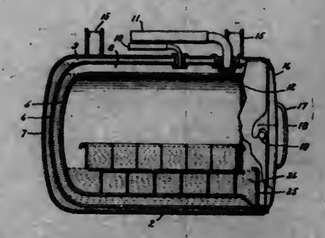
1. Means for loosening and distributing cut tobacco comprising an oscillating grid subdivided into several different grid sections, means for feeding the tobacco to the first grid section, means for diverting the longer fibres of tobacco from the first grid section to the second grid section, slides arranged below the respective grid sections,

pin rollers arranged below each of the slides, the pins of which are adapted to the length of the fibres of the sifted tobacco so that in one unit of time equal quantities of tobacco are drawn from the slides and led to the rod forming belt.



1,755,082. WATER HEATER. WILLIAM J. SIMS, Iver, England, assignor to General Electric Company, New York, N. Y. Filed Mar. 8, 1928, Serial No. 260,171, and in Great Britain Mar. 11, 1927. 3 Claims. (Cl. 126—350.)

1. In a liquid heater, a liquid container provided with a normally open vent at the top, an inlet conduit entering said container at the bottom thereof and extending to a point above the normal liquid level, an outlet conduit passing through the bottom of said container and means cooperating with said inlet conduit for passing the inflowing liquid to the lower part of said container.

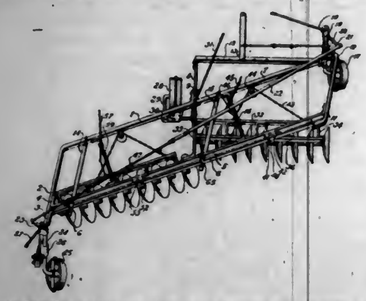


1,755,083. ELECTRIC SWITCH. ARTHUR SPLITTBERGER, Baltimore, Md., assignor to General Electric Company, a Corporation of New York. Filed Feb. 10, 1928. Serial No. 253,435. 3 Claims. (Cl. 200—169.)

1. In an electric switch of the class described, a stationary contact, a pivoted switch blade arranged in circuit closing position to engage said contact, a latch pivotally mounted near the side of the contact away from the blade pivot for movement transversely of the blade and biased to a position to hold the blade in the circuit closing position, a lug on said latch on the side thereof away from the contact projecting from the latch substantially perpendicular to the plane of movement thereof, an operating member pivoted on the free end of the blade ar-

ranged to have a limited movement relative thereto, and a lug on said operating member projecting transversely of the blade and in the path of movement of the lug on the latch and arranged on movement of the operating member in a direction to open the switch to engage the lug on the latch and thereby to move the latch from the blade holding position whereby the blade is free to be moved to the circuit opening position on further movement of the operating member in the switch opening direction.

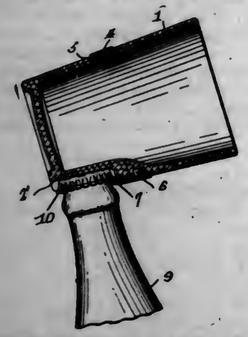
1,755,084. REFRIGERATING MACHINE. CHRISTIAN STEENSTRUP, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 13, 1926, Serial No. 148,266. Renewed May 2, 1929. 10 Claims. (Cl. 62—95.)



1. In combination with a refrigerator cabinet, a cooling unit therein comprising an inner chamber for receiving articles to be frozen, an outer closed chamber surrounding the inner chamber and adapted to contain a liquid, an intermediate evaporator chamber adapted to contain a refrigerant, and means for circulating the refrigerant through said evaporator chamber.

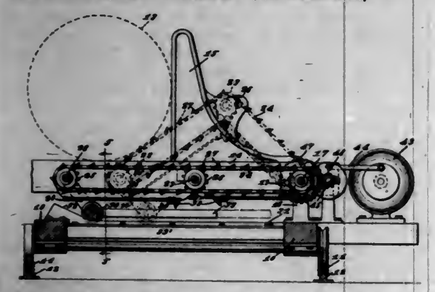
6. In combination with a refrigerator cabinet, a cooling unit therein comprising a receptacle adapted to support an ice tray, said receptacle being provided with means for retaining a freezing liquid whereby said tray when in position is in good thermal connection with the evaporator.

1,755,085. AGRICULTURAL IMPLEMENT. WILLIAM H. STOVER, Colwich, Kans. Filed Dec. 1, 1926. Serial No. 151,896. 2 Claims. (Cl. 53—73.)



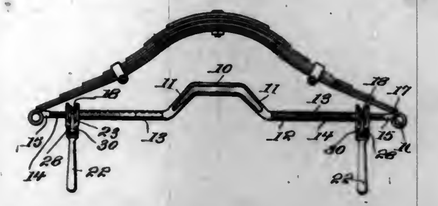
1. A combined plow, discer and packer comprising a rigid frame, supplemental frames independently pivoted to the first named frame, at least one of the supplemental

frames being mounted so as to rock vertically, separate sets of concave discs carried by the supplemental frames, all the discs facing in the same direction, and means for



independently swinging the supplemental frames in horizontal planes so that one set of discs may be at one angle while the other set of discs are at a different angle.

1,755,086. COMBINATION TUMBLER AND BOTTLE OPENER. CHARLES ERNEST TAPP, Barachois, Quebec, Canada, assignor of two-thirds to Paul Guertin & Cie., Quebec, Canada. Filed Dec. 6, 1928, Serial No. 324,269, and in Canada Oct. 22, 1928. 1 Claim. (Cl. 65—46.)



A combination tumbler and bottle cap remover comprising a tumbler having a recess in its outer wall and a channel extending peripherically above said recess, said wall being thickened at the top of said recess, a band disposed in the channel, means extended from the band and into a portion of the tumbler wall for preventing displacement of the band, and a cap engaging claw projecting from said band and into the recess.

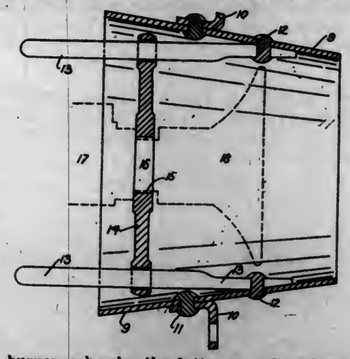
1,755,087. LOG TURNER FOR SAWMILLS. ISAAC V. TRULLINGER, Mulino, Oreg. Filed July 10, 1929. Serial No. 377,199. 4 Claims. (Cl. 143—102.)

1. In a log canting gear, a sectional arm, means pivotally connecting adjacent ends of said sections, means to pivotally mount one end of the arm, means operatively connected with the other end of said arm to move the end of said arm pivotally upward or to move the arm sections relatively, a log engaging element movable along the arm, and means to move said element.

1,755,088. SPRING JACK. BENJAMIN D. VICKREY, Kosse, Tex. Filed Jan. 25, 1929. Serial No. 335,129. 2 Claims. (Cl. 29—87.1.)

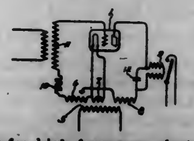
1. A jack construction for leaf springs comprising a frame, reduced extensions carried thereby, tubular extensions receiving the reduced extensions, extensible elements adjustably mounted within the outer ends of the tubular extensions, and adjusting elements mounted upon the extensible elements and abutting the adjacent ends of the tubular extensions to spread the sleeve extremities of the leaf springs apart to facilitate registration and insertion of shackle bolts therefor.

1,755,089. CHIMNEY HOPPER FOR INCINERATORS. ROBERT T. WYSE, Pittsburgh, Pa. Filed Sept. 14, 1927. Serial No. 219,444. 10 Claims. (Cl. 193—34.)



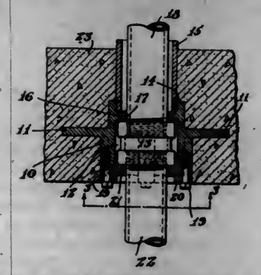
1. The combination with a flue, of a hopper having relatively movable members for automatically positively closing the passage into the flue when the hopper is in its full open and closed positions, and means for moving one of said members relatively to the other for catapulting the hopper contents into the flue.

1,755,090. SUPPORTING MEANS FOR LIQUID-FUEL BURNERS. JOSEPH WILLIAM HORACE AINSCOW, Lindfield, near Sydney, New South Wales, Australia. Original application filed Oct. 5, 1926, Serial No. 139,658, and in Australia Nov. 5, 1925. Divided and this application filed Nov. 10, 1927. Serial No. 232,438. 2 Claims. (Cl. 158—2.)



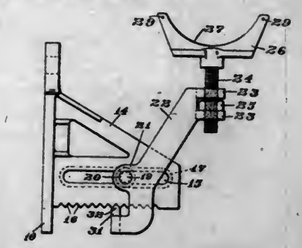
2. A device for adjustably supporting a liquid fuel burner in a furnace mouth and regulating the indrawing of air to the furnace comprising a frusto-conical flame concentrator and in-draught guard adapted to be affixed in the furnace mouth, with its larger end portion extending out of the latter, arms mounted within said flame concentrator

and in-draught guard and projecting outwardly and parallel to the axis thereof, and a spider slidably mounted upon said arms and adapted to engage the forward end



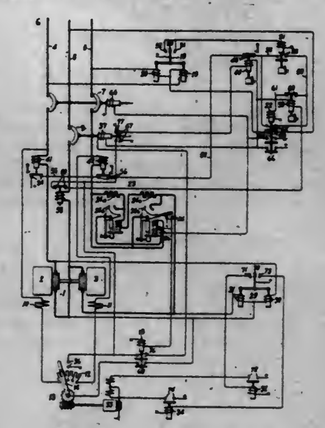
of the burner, whereby the latter may be adjusted with respect to said flame concentrator and in-draught guard and said furnace mouth.

1,755,091. HIGH-FREQUENCY RECEIVING SYSTEM. HUGH E. ALLEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 29, 1929. Serial No. 351,093. 4 Claims. (Cl. 250—27.)



1. In a receiver for high frequency electric impulses employing an electron discharge device having an anode, a cathode and a grid, a source of alternating current, connections from a neutral point on said source to said cathode and from opposite points on said source to said grid and to said anode such that voltages on said grid and on said anode are in opposed phase relation, means for impressing high frequency impulses on said grid, means in said grid connection for correcting for displacement in phase relation between said grid and anode voltages resulting from said last means and current responsive means associated with said anode.

1,755,092. COMBINED ANCHOR AND PIPE SLEEVE. SAUL C. APPEL, Medford, Mass. Filed Dec. 18, 1928. Serial No. 326,858. 2 Claims. (Cl. 126—317.)

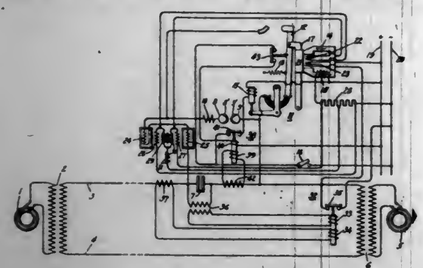


1. In a device of the kind described, the combination of a cylindrical member, laterally extending anchoring plates formed integral therewith, a section of pipe secured to one end of said cylindrical member, a chamber formed in said cylindrical member, a closure for said chamber and alined passages in the cylindrical member and chamber permitting passage of a pipe therethrough.

1,755,093. RADIATOR BRACKET. SAUL C. APPEL, Medford, Mass. Filed Jan. 24, 1929. Serial No. 334,615. 3 Claims. (Cl. 248—17.)

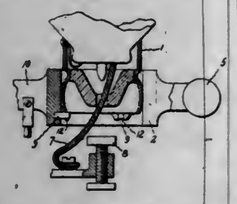
1. In a device of the kind described, the combination of a base, a bracket member formed integrally therewith and extending laterally outward therefrom, said bracket member being provided with an elongated slot extending perpendicularly to the plane of the base, a plurality of parallelly arranged serrations formed in said bracket member and lying parallel to the slot, a supporting arm, means for associating said arm with the bracket, adjustable radiator supporting means mounted on the upper end of said arm, and means carried by the supporting arm and engaging with said serrations in the bracket to maintain the bracket in adjusted position.

1,755,094. AUTOMATIC SWITCHING ARRANGEMENT. HERMAN BANY and HARRY E. LOCKETT, Yeadon, Pa., assignors to General Electric Company, a Corporation of New York. Filed May 10, 1929. Serial No. 362,082. 17 Claims. (Cl. 171—118.)



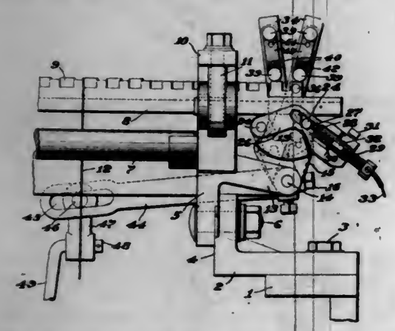
17. In combination, a three wire direct current circuit, a balancer set, means for connecting the main terminals of said set to the main conductors of said circuit, means controlled by said connecting means for regulating the excitation of said set to equalize the voltages between the neutral of said set and the main terminals thereof, and means responsive to the equalization of said voltages for effecting the connection of the neutral of said set to the neutral of said system.

1,755,095. SYSTEM OF PROTECTION AND CONTROL FOR ELECTRICAL APPARATUS. THOMAS A. E. BELT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 9, 1927, Serial No. 174,051. Renewed Mar. 3, 1930. 10 Claims. (Cl. 175—294.)



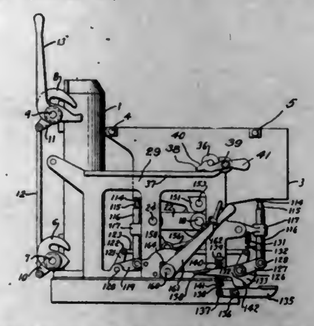
1. In combination, an electric circuit, an electric condenser connected in circuit therewith, protective apparatus

for preventing breakdown of said condenser including a discharge device having spaced electrodes set for a critical



voltage, and a switch connected across said spaced electrodes and operative to short-circuit said spaced electrodes upon a discharge therebetween.

1,755,096. MOUNTING FOR INCANDESCENT LAMPS. JAN BERGMANS and ULBE NICOLAAS DE WIT, Eindhoven, Netherlands, assignors to General Electric Company, a Corporation of New York. Filed Apr. 9, 1927, Serial No. 182,471, and in the Netherlands May 22, 1926. 6 Claims. (Cl. 176—32.)

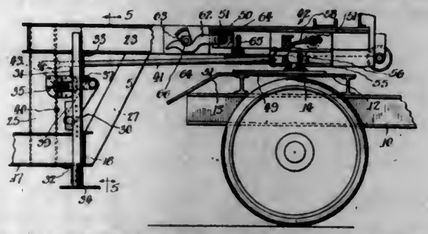


1. In a mounting for incandescent lamps, the combination of a tubular holder with a base support having asymmetrically mounted members projecting inwardly into the bore of said holder, and a lamp base to be placed in said holder having a spherical portion which fits loosely into the bore of said holder and asymmetrical portions to fit said members.

1,755,097. WARP STOP MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Original application filed Feb. 14, 1928, Serial No. 254,201. Divided and this application filed Mar. 14, 1929. Serial No. 347,067. 10 Claims. (Cl. 139—365.)

1. In a warp stop mechanism for looms, the combination of a series of drop wires, a transversely movable detecting bar, a detecting bar actuator, means for connecting the bar actuator and the detecting bar, a lock which operates automatically as said connecting means is moved into connecting position to prevent accidental disengagement between said connecting means and the transversely movable detecting bar, and means for effecting loom stoppage when the detecting bar is arrested by a drop wire.

1,755,098. MACHINE FOR CASTING STEREOTYPE PRINTING PLATES. MARTIN W. BRUESHABER, Chicago, Ill. Filed Oct. 30, 1926. Serial No. 145,361. 26 Claims. (Cl. 22—2.)

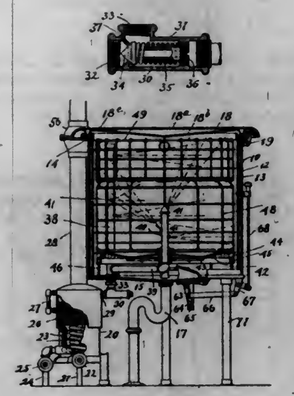


1. A machine for casting stereotype plates including in combination cooperating casting members including a drag having a recessable back behind the matrix and means for moving the recessable back to and from casting position.

1,755,099. POLYMERIZATION OF KETONE-FORMALDEHYDE CONDENSATION PRODUCTS. CHARLES E. BURKE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 6, 1928. Serial No. 283,457. 8 Claims. (Cl. 106—22.)

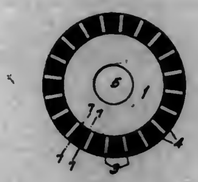
1. Process which comprises polymerizing a ketone formaldehyde condensation product in the presence of an organic amine.

1,755,100. TRAILER VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Mfg. Co., South Beloit, Ill., a Corporation of Michigan. Filed Dec. 26, 1925. Serial No. 77,725. 7 Claims. (Cl. 280—33.1.)



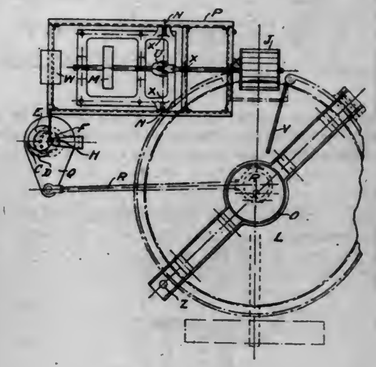
4. A semi-trailer having, in combination, a body frame, wheels supporting the rear end of said frame, a slidable supporting leg, and means to move said leg comprising a pair of toggle links arranged to be flexed through their alined position as said leg moves from inactive to active position, and means for limiting the flexing of said toggle at a fixed point beyond said alined position.

1,755,101. DISHWASHER. MILLS G. CLARK, East Cleveland, and WILLIAM G. FORDING, Lakewood, Ohio. Filed Dec. 16, 1921. Serial No. 522,794. 7 Claims. (Cl. 141—9.)



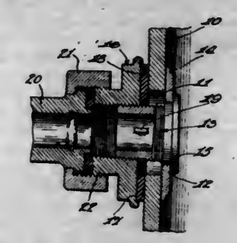
1. In a dish washer, a casing, a source of steam, rotary means within the casing for carrying articles to be washed,

means within the casing adapted to be supplied with steam from said source for projecting jets of steam on the articles and for causing the rotation of said rotary means, means for conducting a small flow of steam to the casing



for preheating the dishes, and means controlled by the difference in pressure existing between said source and said casing for affording a passage for the free flow of steam to the casing when said difference in pressure reaches a predetermined amount.

1,755,102. GEAR. HIRAM D. CROFT, Springfield, Mass., assignor to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 9, 1927. Serial No. 197,738. 2 Claims. (Cl. 74—41.)

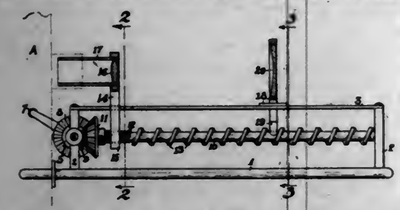


1. As an improved article of manufacture, a gear comprising a body and side teeth, each of said teeth being so constructed that its pitch line on which the action takes place (as line 7—7) is at right-angles to the axis of the gear, the tooth throughout said line is approximately equal in width, and the tooth on the addendum side of said line gradually becomes less in height as the outer end of the tooth is approached, and on the dedendum side increases in depth.

1,755,103. APPARATUS FOR DELIVERING REGULAR QUANTITIES OF GRANULAR OR PULVERIZED MATERIAL. FREDERICK WILLIAM DAVIS, Kingston-upon-Hull, England, assignor to F. L. Smidth and Company, Limited, London, England. Filed July 31, 1928, Serial No. 296,618, and in Great Britain Aug. 5, 1927. 12 Claims. (Cl. 221—18.)

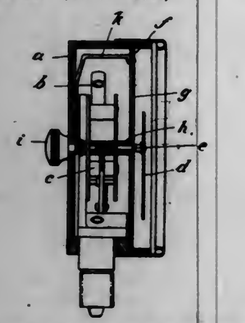
1. Means for delivering material comprising a rotating table adapted to receive the material, means for regulating the supply, a rotating drum adapted to receive the said material and pivotally mounted so as to act as a scale pan and means whereby the pivotal movements of the said drum control the supply of the said material.

1,755,104. COUPLING. EDWARD DEIERLEIN, Port Chester, N. Y. Filed Oct. 3, 1927. Serial No. 223,773. 1 Claim. (Cl. 285—50.)



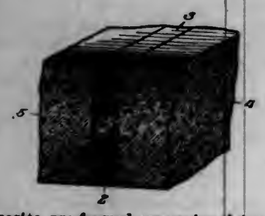
In combination with a closed tank having an opening in the wall thereof, a nipple externally threaded at one end and having a flange at its opposite end for insertion in the tank through said opening, a clamping nut threadedly connected to said nipple externally of said tank, said nut having a recessed face, a gasket fitting between said face and the outer surface of the tank, said nut being externally threaded to receive a union for connecting a pipe with said nipple, and an elongated anchor plate having an aperture therein to accommodate said nipple and retain its flange within the tank when said clamping nut is screwed home, the diameter of said opening being greater than the transverse dimension of said anchor plate to admit the latter to said tank, and the longitudinal dimension of said plate being greater than the diameter of said opening.

1,755,105. CAMERA ATTACHMENT. LEON F. DOUGLASS, Menlo Park, Calif. Filed Mar. 13, 1928. Serial No. 261,249. 8 Claims. (Cl. 88—16.)



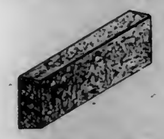
1. In a device of the class described, the combination with a camera having its lens adjustably mounted for

focusing, of a concave lens positioned in front of the camera lens, and means cooperating with the camera lens and



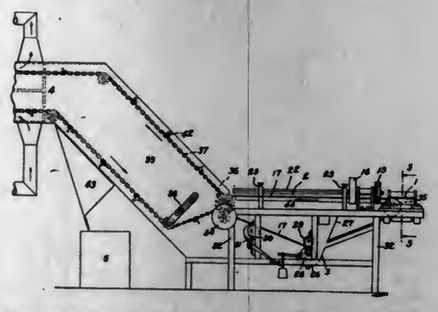
the concave lens for moving said lenses toward or away from each other in the ratio required to maintain a scene to be photographed always in focus.

1,755,106. METER FOR COMPRESSED GAS. EMIL PAUL BONIFAZIUS ECKARDT, Stuttgart, Germany. Filed Apr. 18, 1925, Serial No. 24,154, and in Germany June 3, 1924. 4 Claims. (Cl. 73—109.)



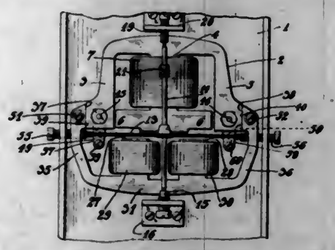
4. An apparatus for measuring the volume of gas taken from a receptacle containing the said gas under pressure, comprising a pressure gage provided with a casing, a pressure indicating member, a dial plate provided with scale marks cooperating with said member and representing pressure, a second dial plate provided with scale marks of even pitch cooperating with said member, guiding means provided on said pressure gage on which said dial plate is movable in the direction of the movement of said member, a handle connected with said second dial plate and located outside said casing, said scale marks of said second dial plate representing volumes of gas reduced to atmospheric pressure delivered from said receptacle and ascending in a direction from maximum pressure of the gage to zero pressure thereof.

1,755,107. PREFORMED EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed Mar. 25, 1925. Serial No. 18,380. 5 Claims. (Cl. 94—18.)



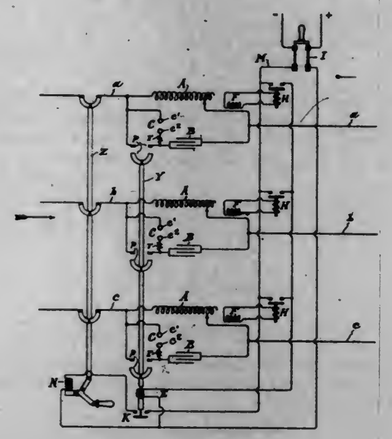
3. A composite pre-formed expansion joint adapted for insertion between the adjacent sections of a pavement and consisting of a bituminous base portion and a crown portion of rubbery material of contrasting color.

1,755,108. PREFORMED RAIL FILLER. ALBERT C. FISCHER, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 30, 1927. Serial No. 202,581. 6 Claims. (Cl. 238—9.)



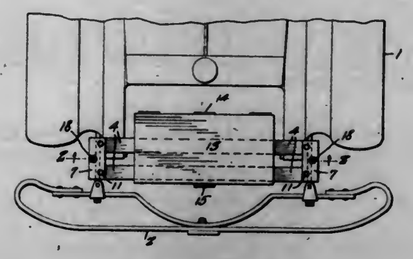
2. A preformed rail filler adapted as an expansion, sound deadening and insulating material, comprising a waterproof binder, linear fibres and earthly material, said fibres being interlaced to reenforce the binder.

1,755,109. MACHINE FOR MAKING DENTAL ROLLS. CAROLUS FORTIER, Outremont, Quebec, Canada. Filed Nov. 9, 1928. Serial No. 318,802. 4 Claims. (Cl. 154—29.)



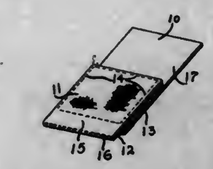
2. A machine of the character described, comprising means for feeding and separating a continuous layer of material into suitable layers of equal lengths, a stationary platform, a belt travelling below said stationary platform, carrying said layers of material whereby when said layers engage between said belt and said stationary platform, the said layers will be rolled, means for depositing a suitable substance on said belt whereby said layers will be impregnated therewith, and means to brush said belt, substantially as described.

1,755,110. INDUCTION METER. HANS FRÖHLICH and RICCARD PUDELKO, Zug, Switzerland, assignors to Landis & Gyr A.-G., a Joint Stock Company of Switzerland. Filed July 19, 1928, Serial No. 293,940, and in Switzerland Sept. 24, 1927. 10 Claims. (Cl. 171—264.)



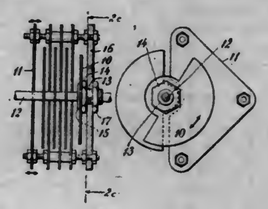
10. An induction meter including in combination a driven meter member, a voltage coil and core, a separate and distinct current coil and core, a ferro-magnetic connecting member connecting said cores and means for variably positioning said cores while maintaining the connection between said cores.

1,755,111. CURRENT-LIMITING MEANS. FRAZER W. GAY, Newark, N. J., assignor to General Electric Company, a Corporation of New York. Filed Mar. 23, 1927, Serial No. 177,816. Renewed Sept. 16, 1929. 12 Claims. (Cl. 175—294.)



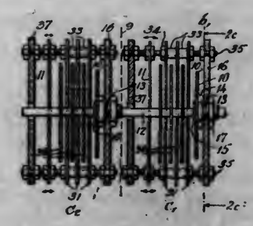
1. In combination with an electric circuit, an inductive reactance and a condensive reactance, and means operative in accordance with the current in said circuit for placing said inductive reactance and said condensive reactance in parallel relation in said circuit upon the occurrence of current above a predetermined value therein.

1,755,112. TOOL CARRIER. MAURICE GILMORE, Abbotsford, British Columbia, Canada. Filed Oct. 12, 1928. Serial No. 312,146. 1 Claim. (Cl. 224—29.)



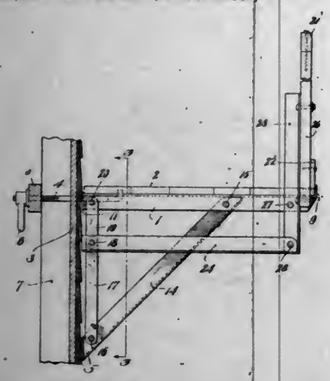
A tool carrier for the purpose set forth designed to rest on and to be removably secured to the bumper brackets at the front of an automobile, comprising spaced plates, a short plate secured to each of the spaced plates at one end thereof, a second short plate secured to each of the spaced plates at the other end thereof, hook bolts adjustably secured to the short plates and having their hook portions engaging with the bumper brackets, said spaced plates each having a downwardly directed central substantially U-shaped portion and a box or cabinet received in and fixed to said U-shaped portions.

1,755,113. SANITARY MANICURING TOWEL. LOUISE GROM, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,703. 6 Claims. (Cl. 132—73.)



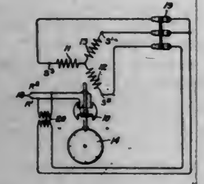
1. A manicure towel, one portion thereof being formed of absorbent paper, another portion thereof being formed of gauze material, a portion of said gauze material being united with said absorbent paper, a flap of gauze strip, said flap being an extension of the first mentioned gauze material.

1,755,114. UNICONTROL SIGNALING SYSTEM. LOUIS A. HAZELTINE, Hoboken, N. J., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 3, 1925. Serial No. 20,484. 31 Claims. (Cl. 250—40.)



1. In a wave signaling system, the combination of an inductance coil, a variable condenser connected thereto, said coil and condenser together comprising a tuned circuit, and two independent adjusting means for said condenser, the adjustment of one of which determines the maximum resonant frequency of said circuit, and the adjustment of the other of which determines the rate of change of resonant frequency of said circuit.

1,755,115. VARIABLE CONDENSER. LOUIS ALAN HAZELTINE, Hoboken, N. J., assignor to Hazeltine Corporation, a Corporation of Delaware. Original application filed Apr. 3, 1925, Serial No. 20,484, and in Great Britain, Australia, and New Zealand Apr. 3, 1925. Divided and this application filed Oct. 7, 1927. Serial No. 224,543. 9 Claims. (Cl. 175—41.5.)



1. In combination with a condenser whose capacity is variable by physical displacement of an electrode thereof, a first means for adjusting the capacity value at a first point of displacement of said electrode, and a second means for adjusting the capacity value at a second point of displacement of said electrode without substantially affecting the adjustment of capacity value at said first point.

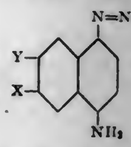
1,755,116. FOLDING STAGING BRACKET. ALONZO P. HENDERSON, Hanover, Mass. Filed Apr. 7, 1928. Serial No. 268,184. 2 Claims. (Cl. 304—33.)

1. A folding wall bracket comprising a plurality of members arranged in a triangle of which two sides are rigid and the third jointed intermediate its length and in combination therewith, a hand-rail, and a hand-rail-supporting member which is pivotally combined with one of said members and connected by an additional member to the joint in said third side.

1,755,117. METHOD OF CALIBRATING INSTRUMENTS. LEE E. HILDEBRAND, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 3, 1928. Serial No. 267,124. 5 Claims. (Cl. 177—337.)

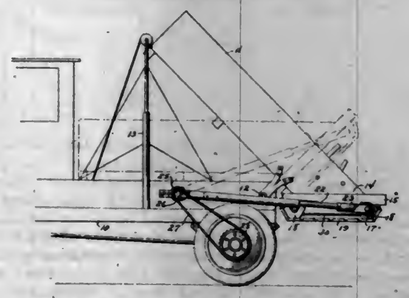
1. The method of calibrating an instrument for the transmission of angular motion provided with a field winding and a polycircuit armature winding in inductive relation with said field winding, one of said windings being rotatably mounted and connected to drive indicating means, which consists in impressing an electromotive force on said field winding and at the same time on said armature winding so as to cause said rotor to be turned by electromagnetic repulsion to a predetermined zero position, and then setting said indicating means in a predetermined position by adjusting it independently of said rotatable winding.

1,755,118. FUR STRETCHER. ONEY HOLLYWOOD, Hyattville, Wyo. Filed Apr. 13, 1929. Serial No. 354,878. 2 Claims. (Cl. 149—21.)



1. A pelt stretcher comprising a pair of members, each having a tapered end, means for pivotally connecting together said ends, a shaft arranged between the members, means for causing longitudinal movement of the shaft when the same is turned, an arm pivoted to each member intermediate the ends of the member, a plate loosely arranged on the shaft and to which the other ends of the arms are pivoted, means whereby the plate will follow the longitudinal movement of the shaft so that the arms will operate to move the members toward or away from each other, means for attaching a pelt to the members, means for holding the members in adjusted position, such means comprising a cross bar and the free ends of the members

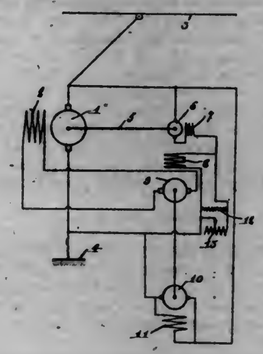
having slots therein through which the ends of the cross bar pass and means for adjustably connecting the cross bar with said members.



1,755,119. PROCESS FOR DYEING REGENERATED CELLULOSE MATERIALS. HENRY JORDAN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 11, 1928. Serial No. 305,330. 5 Claims. (Cl. 8—5.)

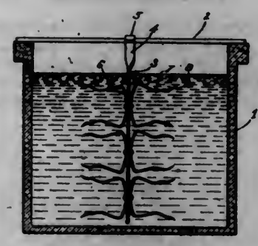
1. The process of coloring regenerated cellulose materials which compriges applying thereto a dye of the formula:

R_1 being an aromatic radical, not containing a free hydroxyl- or amino group, R_2 being 2-amino-5-naphthol-7-sulphonic acid or an N-substituted derivative thereof, X being a sulpho group or hydrogen, and Y being hydrogen or a sulpho group, there being not more than one sulpho group in the nucleus.



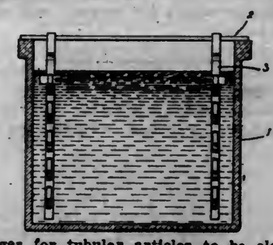
1,755,120. STONE DISTRIBUTOR. CORNELIUS W. KERR, Georgetown, Ky. Filed Apr. 16, 1928. Serial No. 270,545. 1 Claim. (Cl. 275—2.)

A stone distributor adapted for use in conjunction with dump truck bodies comprising a conveyor having one side



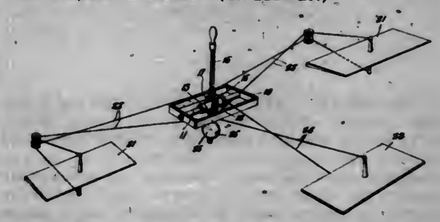
thereof disposed at an inclination within the discharge end of the body in its normal position, a driving connection between the drive wheels of the vehicle and said conveyor, end gates for the conveyor and body slidably mounted between the side portions of the body, operating shafts having connection with the end gates, and adjusting means carried upon the outer side of the body adapted for connection with said shafts to raise and lower the end gates whereby the discharge of the truck may be regulated and leveled upon the conveyor and distributed in a layer upon the roadway while the vehicle is in motion.

1,755,121. MOTOR-CONTROL SYSTEM. MARIUS LATOUR, San Sebastian, Spain. Filed May 19, 1928, Serial No. 279,168, and in France May 20, 1927. 8 Claims. (Cl. 171—225.)



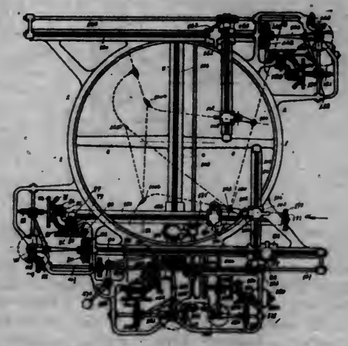
1. A motor control system comprising a main drive motor having an armature and a field winding, an exciting device for exciting the field of the motor, and an auxiliary series motor mechanically connected to the main motor and electrically connected with the main motor armature for keeping the main motor excitation at a predetermined constant relative to the speed of the main motor.

1,755,122. HANGER FOR ARTICLES TO BE PLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,220. 3 Claims. (Cl. 204—5.)



1. In a hanger for frame-like and hollow articles to be electro-plated, a support adapted to be suspended in a plating tank, and having in connection therewith a plurality of article engaging elements, each substantially U-shaped having the body thereof secured to the support, and the arms resilient and extending laterally from the support, and adapted to engage the inner surface of the article to support the same in substantially horizontal position, and to be pressed closely against said inner surface to insure electrical connection.

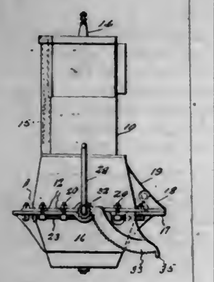
1,755,123. HANGER FOR ARTICLES TO BE PLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,221. 4 Claims. (Cl. 204—5.)



1. A hanger for tubular articles to be electro-plated, for engaging the interior of the article to leave the exterior fully exposed, including rods for engaging within the ends of the article, hangers, and interengaging means in connection with the hangers and the rods for resiliently clamping the rods to the hangers.

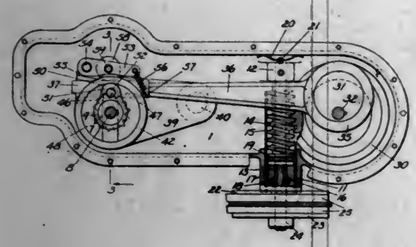
1,755,124. AIRPLANE CONTROL STICK. OTTO H. MADORIN, Marshall, Mo. Filed May 22, 1929. Serial No. 365,135. 2 Claims. (Cl. 244—29.)

1. In a control stick for airplanes, a shaft disposed transversely of the airplane, a sleeve mounted for rocking movement upon the shaft, a control stick, an offset portion provided in said stick, a substantially U-shaped strap having its opposite ends secured to the stick at the ends of the offset portion and cooperating with the latter to provide a frame for the passage of the sleeve, means to pivotally secure the stick frame to diametrically opposite sides of the sleeve and means to connect the stick with the ailerons and elevator of the airplane.



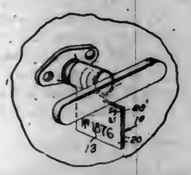
1,755,125. METHOD AND APPARATUS FOR DIRECTING TORPEDOES. LOUIS MARMONIER, Lyon, France. Filed Sept. 22, 1927, Serial No. 221,354, and in France Sept. 24, 1926. 6 Claims. (Cl. 114—21.)

1. An apparatus for directing torpedoes comprising, in combination, a chart table, a sheet of transparent mate-



rial on said chart table, means adapted to reproduce the course of the target on said chart, means adapted to reproduce the course of the torpedo boat on said chart, means adapted to reproduce the course of the torpedo on said chart, a control board associated with said chart and electro-mechanical means for directing said torpedo from said control board.

1,755,126. ENGINE-MOUNTING MEANS. WESLEY C. MARTIN, Donnelsville, Ohio. Filed Aug. 12, 1927. Serial No. 212,572. 3 Claims. (Cl. 180—64.)



1. The combination with an engine structure and a rack element rigidly carried thereby, of supporting means, means pivotally mounting the engine with reference to the supporting means, said rack being movable in an arc-shaped path about the pivotal mounting and continuously supporting the engine from the base thereof during lifting movement, a starting crank for the engine, and a pinion rotated by the crank and meshing with the rack element.

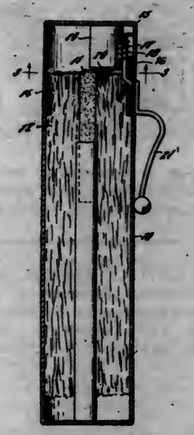
1,755,127. VARIABLE DRIVING MECHANISM. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1928. Serial No. 315,527. 10 Claims. (Cl. 74—14.)

1. The combination, in variable driving mechanism, with a shaft provided with a crank, and a reciprocating rack, of a control arm mounted for adjustment on a plane at right-angles to said shaft, a pinion mounted on said arm in engagement with said rack, a block carried by said pinion in the oscillatory movement of the latter, but also in sliding relation radially thereof, a pivot connecting said block with said crank, and locking and releasing means for said arm.

1,755,128. COMBINATION CHECK AND TAG. CHARLES S. PETERS, Cuyahoga Falls, Ohio. Filed Apr. 13, 1929. Serial No. 354,816. 3 Claims. (Cl. 40—2.)

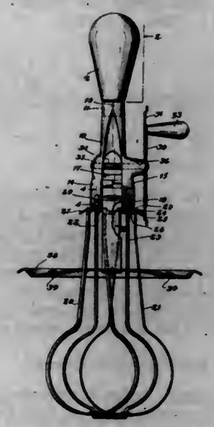
1. A combination check and tag adapted for use in connection with parked automobiles, comprising a tag element and a check element having a longitudinal line of perforation connecting them so that they may be readily separated, said elements having identification numbers, the tag element having a cut out portion at its longitudinal edge providing an intermediate contracted portion between the ends of the tag element, the tag element being adapted to be folded transversely upon the intermediate contracted portion about the shank of the automobile door handle with the ends disposed upon one side of the handle, and means securing said ends together whereby the intermediate contracted portion will be torn in removing the tag element.

1,755,129. METHOD OF MAKING COMPOSITE PHOTOGRAPHS. ROY J. POMEROY, Los Angeles, Calif., assignor of one-half to Famous Players-Lasky Corporation, Los Angeles, Calif., a Corporation of New York. Filed July 14, 1926. Serial No. 122,502. 2 Claims. (Cl. 95—5.)



1. The herein described method of producing composite photographs, that includes first exposing a limited portion of a fresh actinic surface to obtain thereon a first image, developing said first image, bleaching and intensifying the developed image, redeveloping said image, exposing other portions of the surface, developing the whole surface with a developer that will not further develop the products of intensification, and finally fixing.

1,755,130. METHOD OF MAKING COMPOSITE PHOTOGRAPHS. ROY J. POMEROY, Los Angeles, Calif., assignor of one-half to Famous Players-Lasky Corporation, Los Angeles, Calif., a Corporation of New York. Filed July 14, 1926. Serial No. 122,503. 5 Claims. (Cl. 95—5.)

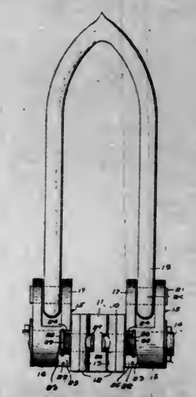


1. The herein described method of producing composite photographs, that includes first exposing a limited portion of a fresh actinic surface to obtain thereon a first image, developing said first image, coating the surface with casein carrying a non-actinic pigment, treating the surface to transform the developed silver and to harden locally the casein, removing the remaining soft portions of the casein, re-exposing the surface to obtain an image on the previously unexposed parts, and finally developing and fixing the surface and removing the hardened casein.

1,755,131. CIGARETTE LIGHTER. JOHN REAL, Sterling, Ill. Filed Aug. 25, 1927, Serial No. 215,457. Renewed Sept. 6, 1929. 1 Claim. (Cl. 67—7.1.)

A cigarette lighter comprising a body portion, a wick arranged therein, a needle projecting above the wick centrally of said body, a cap including a lower section threaded on the upper end of said body, a pivot rod rising from the said lower section and positioned within the upper section of the cap, a bearing carried by the upper section and receiving said rod, whereby the upper section is both slidably and pivotally supported on said rod, said upper section normally receiving the adjacent end of the lower section and adapted to be lifted therefrom for pivotal movement, a coil spring surrounding said rod to maintain the movable section normally in alignment with the fixed lower section, pockets arranged within the upper section at opposite sides of the pivot, and flint material arranged in each pocket and adapted to engage the needle to create a spark when the upper section of the cap is swung upon its pivot in either direction.

1,755,132. EGG BEATER OR THE LIKE. ALBERT W. ROUND, Torrington, Conn., assignor to The Turner & Seymour Manufacturing Co., Torrington, Conn., a Corporation of Connecticut. Filed Dec. 2, 1927. Serial No. 237,153. 10 Claims. (Cl. 259—131.)

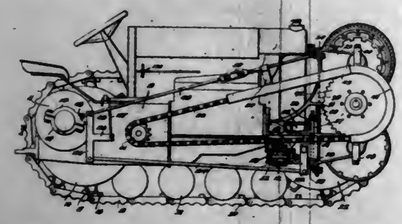


1. A beater or the like device comprising a frame member having an aperture therethrough, a pair of complementary hook members fitted within said aperture and extending in opposite directions from the frame member to provide supporting arms, a pair of complementary receptacle cover members secured respectively to said supporting arms, and quick-detachable interengaging means on said cover portions.

1,755,133. COVER FOR ANNULAR OBJECTS. WILLIAM WALLACE ROWE, Cincinnati, Ohio, assignor to The Paper Service Company, Lockland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1928. Serial No. 265,445. 5 Claims. (Cl. 150—54.)

2. A detachable spare tire cover comprising a disc of relatively stiff material adapted to receive an advertising device, a longitudinally corrugated tube of creped paper having one edge secured to said disc and resilient means normally restricting the corrugations of the other edge in unexpanded condition.

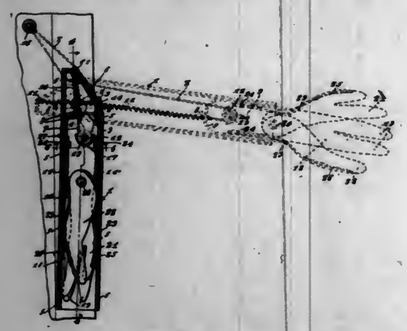
1,755,134. SUCKER-ROD ELEVATOR. GREGORY H. SAWYER, Independence, Kans. Filed Mar. 15, 1928. Serial No. 261,917. 10 Claims. (Cl. 294—91.)



1. A sucker rod elevator comprising, a body portion having a recess to receive the sucker rod, latch elements carried by the body portion and adapted to be projected into the recess, supporting actuating members pivoted upon the body portion and having cam faces to engage with the latch elements to project them, a support connected with the supporting actuating members, and means to lock the supporting actuating members to the body portion against turning movement, said means including spring pressed bolts carried by the actuating members.

1,755,135. LARD PRODUCT AND METHOD OF MAKING THE SAME. JOHN R. SHIPNER, Omaha, Nebr., assignor to The Cudahy Packing Company, Omaha, Nebr., a Corporation of Maine. Filed June 1, 1929. Serial No. 367,887. 4 Claims. (Cl. 99—11.)

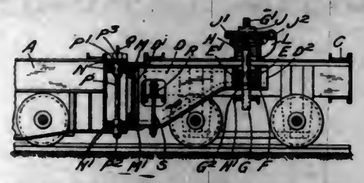
1. The method of treating lard to improve its keeping and other properties which comprises subjecting the lard



to a refining treatment to remove free fatty acids more or less completely therefrom and give a substantially neutral product, hydrogenating the refined lard to a regulated and limited extent to give a hydrogenated product of improved stability but still of lard-like consistency when cooled, deodorizing the hydrogenated lard, and cooling the deodorized product to impart to it a lard-like consistency.

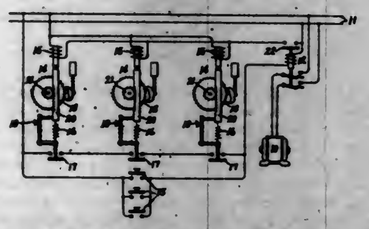
1,755,136. TRACTOR-EQUIPMENT COMBINATION. WILLIAM D. SHOEMAKER, Drummond, and FRANK L. YOUNG, Chevy Chase, Md.; said Young assignor to said Shoemaker. Filed Aug. 6, 1928. Serial No. 297,678. 19 Claims. (Cl. 180—53.)

1. In a tractor-equipment combination, a tractor power plant, an equipment frame supported by said tractor adjacent the power plant, means for bracing said frame to a remote portion of the tractor, and means for either loosely or fixedly securing said frame directly to said power plant.



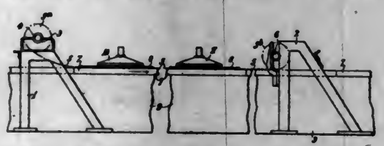
1,755,137. SIGNALING DEVICE. JOSEPH A. STEPHENS, Vermilion, S. Dak. Filed Oct. 4, 1929. Serial No. 397,344. 3 Claims. (Cl. 116—52.)

1. In a signal of the class described, a hollow member representative of the human arm, means supporting the same for swinging movement, manually operable means for effecting such swinging movement, a unit representative of a human hand and comprising digit-representing members, the said hand unit being slidably mounted within the hollow member for concealment therein and projection therefrom, and means operably to automatically effect relative spreading of said digit-representing members when the hand unit is projected from the casing.



1,755,138. TRAVELING CRANE. ANTONY SCOTT STOKES, Ipswich, England. Filed Sept. 26, 1929, Serial No. 395,439, and in Great Britain Oct. 4, 1928. 7 Claims. (Cl. 105—75.)

1. In a traveling crane, the combination of a crane truck, a relieving bogie for carrying part of the weight of the crane when traveling, a relieving girder for transferring weight from the truck to the bogie, means for connecting one end of the girder to the truck, and a connection between the other end of the girder and the bogie



such that the bogie is permitted to swivel about a vertical axis and also to oscillate about axes in the horizontal plane so as to allow the bogie to roll and to pitch.

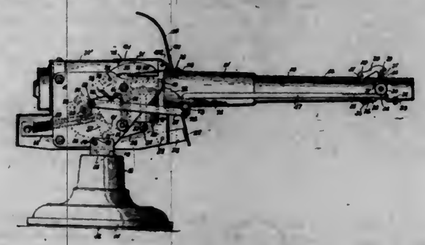
1,755,139. CONTROL SYSTEM AND APPARATUS. GEORGE R. TOWNSEND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 5, 1927, Serial No. 210,971. Renewed Sept. 16, 1929. 20 Claims. (Cl. 175—294.)

1. In a time element control, the combination of an element automatically operable with a time delay in response to variations in a predetermined condition, a second element under the control of said first element and automatically operable independently thereof in response to variations in a predetermined condition, and connections between the elements through which the second element controls the first element to effect time delay operation thereof upon automatic operation of the second element.

1,755,140. APPARATUS FOR GRINDING AND/OR POLISHING GLASS. FREDERIC BARNES WALDRON, Prescot, England, assignor to Pilkington Brothers Limited, Liverpool, England, a Company registered under the Limited Liability Companies Acts of Great Britain. Filed July 16, 1929, Serial No. 378,607, and in Great Britain Sept. 14, 1928. 6 Claims. (Cl. 51—110.)

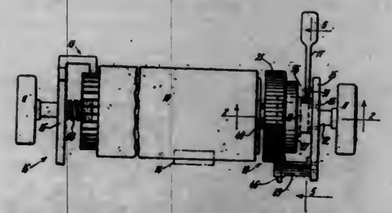
1. In apparatus for grinding or polishing plates or sheets of glass, the combination with a series of traveling tables on which the glass is laid and a series of grinding or polishing discs beneath which the tables are adapted to move continuously, of a roll of clean cloth located at the commencing end of the operative course of the tables, a rotatable mandrel within the roll, and means adapted to unwind the cloth from the roll at the speed of travel of the tables.

1,755,141. SCISSORS. JOHN M. WOYTHAL, Chicago, Ill. Filed Apr. 15, 1929. Serial No. 355,213. 2 Claims. (Cl. 30—13.)



1. Means for providing a connection between two cooperating cutting elements having registering openings

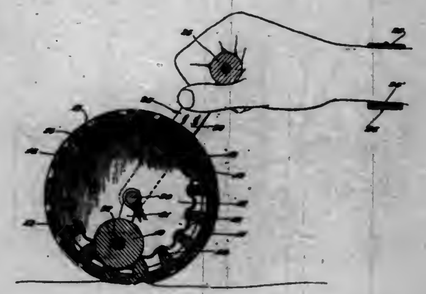
comprising two members arranged in opposing relation with respect to each other inserted in said openings and each provided with an enlarged head adapted to bear against adjacent surface of the cutting elements, one of said members being formed at its end opposite its head to



provide a shoulder, a resilient member mounted between said members and having one end engaging the shoulder, and means carried by the other of the members for comprising said resilient member so as to yieldably urge said members toward each other and bear the heads thereof against said adjacent surfaces.

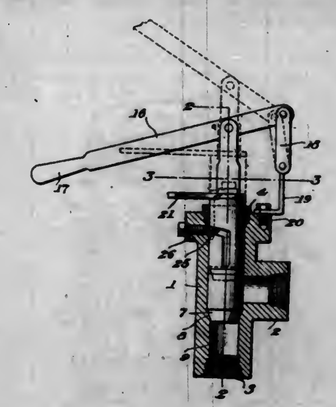
1,755,142. TOY GUN. LOUIS V. ARONSON, Newark, N. J. Filed Apr. 26, 1928. Serial No. 272,976. 19 Claims. (Cl. 46—46.)

1. A toy gun comprising, in combination, a barrel, a mount therefor, flash producing means located adjacent the muzzle of the barrel, pneumatic explosion producing means, an operating shaft and means whereby continuous rotation of said shaft repeatedly operates the flash producing means and the pneumatic explosion producing means in synchronism.



1,755,143. PLATEN-ADJUSTING DEVICE. LORENZO ARRANZ, New York, N. Y. Filed May 19, 1928. Serial No. 279,104. 10 Claims. (Cl. 197—125.)

7. A fractional letter spacing device for a typewriter comprising a platen frame, a shaft having a platen fixed thereto and longitudinally slidable in said frame, a cam element fixed to said frame through which the shaft is slidable, and a separately revolvable device on said shaft cooperating with said cam element to slide the platen and its shaft longitudinally.

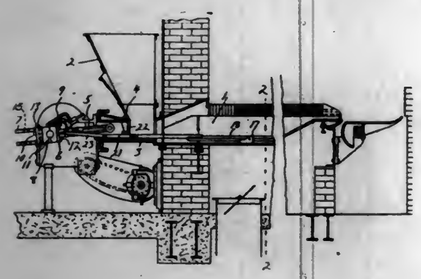


1,755,144. MASSAGE DEVICE. LORENZO ARRANZ, New York, N. Y. Filed June 4, 1928. Serial No. 282,616. 7 Claims. (Cl. 128—57.)

1. A massage device comprising a cylindrical casing, an outer sleeve carried thereby and having yieldable vacuum cups provided therein, yieldable heads disposed behind said vacuum cups and extending inwardly through said cylindrical casing, handle means, and free turning roller means

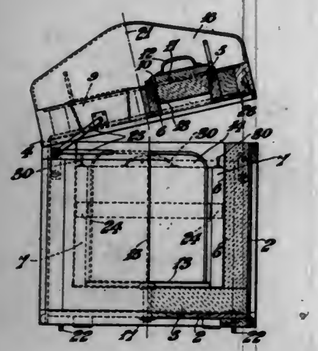
within said casing for successively engaging said heads for expelling air from said vacuum cups as the device is rolled over a surface to be massaged.

1,755,145. BLOW-OFF OR MUD VALVE. HARRY DONALDSON BARR, Jackson, Miss., assignor of forty-nine one-hundredths to B. B. McClendon and L. L. Posey, Jackson, Miss. Filed Mar. 17, 1928. Serial No. 262,516. 2 Claims. (Cl. 251—75.)



1. A valve of the character described comprising a casing, a nipple formed with said casing and being provided with screw threads, said nipple providing the inlet for the valve, said casing having a passage flared at its lower end and providing the outlet, a core mounted for reciprocation in a bore communicating with the passage and nipple and being adapted to control communication between the outlet and nipple, means for reciprocating said core, a valve seat for said core, a stud guided in a slot formed in said core when the core is rotated for fixedly securing said core on its seat, and means for rotating said core for moving the slot with respect to the stud.

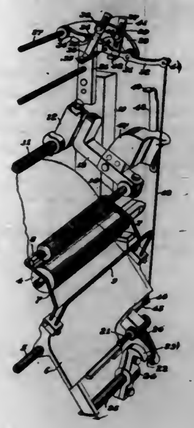
1,755,146. UNDERFEED STOKER. ROYCE L. BEERS, Detroit, Mich., assignor to Detroit Stoker Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 19, 1925, Serial No. 3,521. Renewed Oct. 2, 1929. 7 Claims. (Cl. 110—44.)



2. In a stoker, the combination with a retort, a ram for feeding fuel into the retort, and a pusher block for ad-

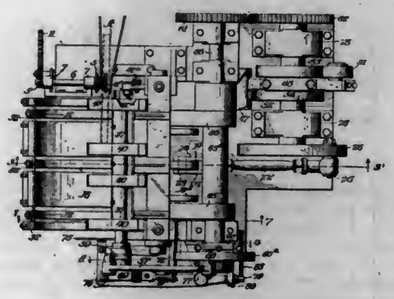
vancing fuel longitudinally of the retort, of a rotary drive shaft, a pitman rod for reciprocating said ram operatively connected to said shaft, a bar for actuating said pusher

block, an extension for the bar movable through the ram, and a link for actuating the bar connected to the extension and pitman rod.



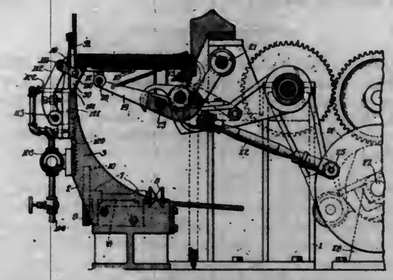
1,755,147. COOLING CABINET FOR ICE CREAM AND SIMILAR SUBSTANCES. PHILIP LEO BILHAM, Balham, London, and JAMES WOODROW SMITH, Barons Court, London, England, assignors to J. Lyons and Company, Limited, London, England. Filed Dec. 9, 1926, Serial No. 153,686, and in Great Britain Jan. 22, 1926. 3 Claims. (Cl. 62—75.)

1. A transportable refrigerating cabinet having walls of heat insulating material and adapted to receive articles, comprising in combination an insulated top continuous with the walls of insulating material and provided with openings having insulated removable covers, a plurality of removable narrow receptacles containing refrigerating substance or eutectic mixture, means for holding them against all the vertical walls of the cabinet and means for screening the cabinet while the covers are removed from the openings.



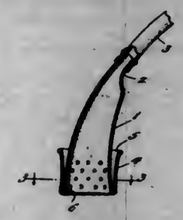
1,755,148. YARN-WINDING MACHINE. EDWARD A. CUNNIFF, Thompsonville, Conn., assignor to Bigelow-Sanford Carpet Co., Inc., a Corporation of Massachusetts. Filed May 8, 1928. Serial No. 276,044. 9 Claims. (Cl. 242—39.)

1. In a yarn winding machine, the combination of a yarn package driving roll, a yarn package holder movable towards and from said roll, a power operated vibrator, a dog adapted to engage said vibrator, a pivotally mounted lifter frame on which the dog is mounted, lifter arms extending from the lifter frame for engaging and moving the yarn package away from the driving roll, a pivotally mounted trip arm having a pivotally mounted dog con-



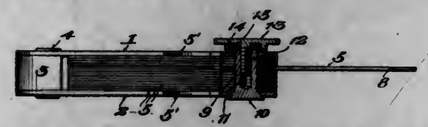
troller, connections between the dog and dog controller, and means actuated by the yarn package holder to effect movement of the dog by the dog controller into engagement with the vibrator when the yarn package has reached a predetermined size to swing the lifter frame and cause the lifter arms to engage the yarn package to disengage the yarn package from its driving roll.

1,755,149. DELIVERY MECHANISM FOR NEWSPAPER STUFFING OR SIMILAR MACHINES. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed May 20, 1922. Serial No. 562,463. 50 Claims. (Cl. 271—87.)



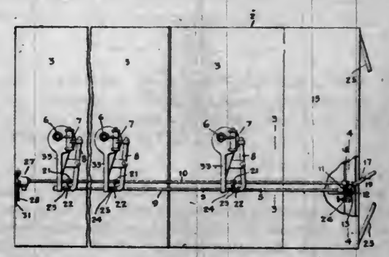
1. A machine of the class specified comprising means for acting upon an article in a substantially vertical position and swinging it up to substantially horizontal position and placing it at the bottom of a stack or pile of similar articles arranged one upon another.

1,755,150. DELIVERY MECHANISM FOR NEWSPAPER STUFFING MACHINES. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed Oct. 25, 1926, Serial No. 143,851. Renewed Sept. 26, 1929. 11 Claims. (Cl. 271—83.)



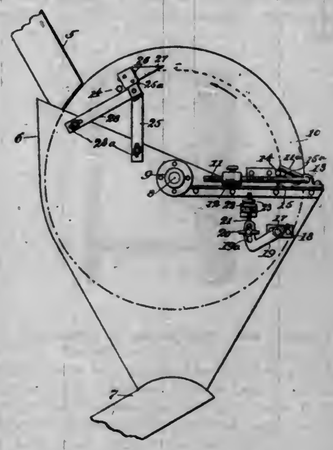
1. A machine of the class specified having a member for engaging an article in a substantially vertical position and swinging it up to substantially horizontal position and means for directing a blast of air toward the member to hold said article in place thereon prior to and during said action.

1,755,151. DEVICE FOR CLEANING THE SCALP AND HAIR. JOCK LEE HENDERSON, Williamstown, W. Va. Filed May 31, 1928. Serial No. 281,869. 2 Claims. (Cl. 15—155.)



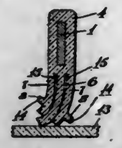
1. A device for cleaning the hair and scalp, comprising a nozzle adapted to be connected with a suction device and having perforations formed in the wall thereof, and a guard including a wall having its lower end joined with the lower end of the nozzle, said wall being spaced from the nozzle and extending above the perforations to provide an annular air passage open at its upper end.

1,755,152. RADIUS TOOL. JOHN W. PARKER, Barrington, R. I., assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Filed June 18, 1928. Serial No. 286,135. 1 Claim. (Cl. 33—178.)



In a radius tool, a pair of spring plates, a post at one end of the plates, means to connect the plates to the opposite ends of the post, a series of longitudinally slotted blades disposed between the plates, a pin projected through the slots of the blades and having a head engaged with the opposite end of one of the plates, and having a threaded bore, a screw in the bore having a head with a circular flange on its under side, and a coil spring encircling the screw and housed at one end within the flange and engaged at its other end with the other plate to tension the latter and to hold the screw against accidental rotation.

1,755,153. SELECTIVE VALVE-ACTUATING MEANS. PAUL S. SHIELD, Cincinnati, Ohio, assignor to Augustine Davis, jr., Cincinnati, Ohio. Filed Jan. 30, 1929. Serial No. 336,087. 8 Claims. (Cl. 137—21.)

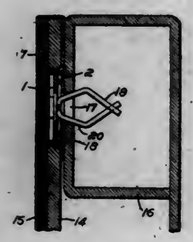


1. Means for selecting and actuating any of a plurality of valves comprising members operatively related to the valves, an actuating shaft and actuating elements operated thereby, connectors adapted to be interposed in operative relation between said actuating elements and said members, means for causing any of said connectors to be in operative relation and others to be out of such relation, said means comprising a selecting shaft extending in the same direction as the actuating shaft and adapted to be moved to any one of a number of positions, said shaft being provided with means for controlling said connectors, means for operating said selecting shaft, and means for operating said actuating shaft.

1,755,154. AUTOMATIC WEIGHER. SHELDON W. SMITH and EDMUND S. SMITH, Springville, Iowa. Filed Sept. 30, 1927. Serial No. 223,141. 3 Claims. (Cl. 249—19.)

1. An automatic weigher for grain and the like, comprising a hopper, means for delivering material to and from the same, a rotor provided with a series of equal buckets, and turning by the weight of its load in the hopper, a series of equally spaced lateral stop-studs, a scale-beam having a trip-lever disposed in the path of said studs, a frictional spring retarder in the path of the studs' movement toward the trip-lever, means adapted for the rocking of said spring, and screw-threaded adjusting means connecting with said rocking means.

1,755,155. WINDSHIELD WIPER. WILLIAM STOBRIE, Providence, R. I., assignor to Apco Mossberg Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Aug. 31, 1928. Serial No. 303,344. 3 Claims. (Cl. 15—255.)



1. A molded rubber wiper comprising a body portion, a plurality of wiping strips integral with said body portion, the outside surfaces of said wiping strips being substantially flush with the outer surfaces of said body portion, and a reinforcing and stiffening strip or rib of rubber integral with each said outside surface of said strips, each of said ribs having a wiping edge angularly disposed with relation to said outside surfaces of said strips.

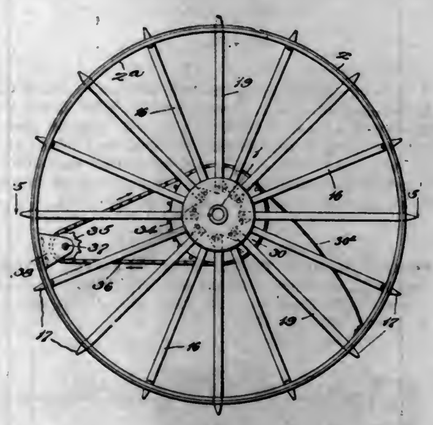
1,755,156. BONE BLACK OF GREAT DECOLORIZING POWER. EDOUARD URBAIN, Paris, France, assignor to Urbain Corporation, a Corporation of Delaware. Filed July 3, 1926, Serial No. 120,535, and in France July 22, 1925. 4 Claims. (Cl. 252—3.)

1. In a process of producing bone-black of great decolorizing power, the steps of treating pieces of bone with acid under conditions adapted to remove calcium carbonate from such pieces without causing them to disintegrate, and thereafter calcining the residue of such pieces.

1,755,157. SEPARABLE-FASTENER UNIT. ANDREW G. ANDERSON, Wollaston, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed May 12, 1928. Serial No. 277,235. 5 Claims. (Cl. 24—213.)

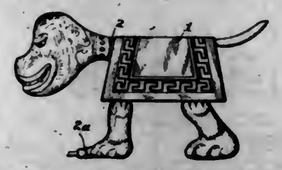
5. A fastener unit comprising, in combination, a casing having an annular wall, fastener element holding means provided as a part of said casing and extending inwardly with relation to said wall to provide a space surrounded by said wall, a wire stud fastener element having a base located in the space between said fastener element holding means, means extending outwardly from said wall and attaching means associated with said casing to cooperate with said outwardly extending means for securing said unit to a support.

1,755,158. PROCESS OF MANUFACTURING GRINDING AND POLISHING DISKS. EDWIN BECKER, Berlin-Hermsdorf, Germany. Filed Apr. 6, 1927, Serial No. 181,598, and in Germany Mar. 16, 1926. 1 Claim. (Cl. 25—155.)



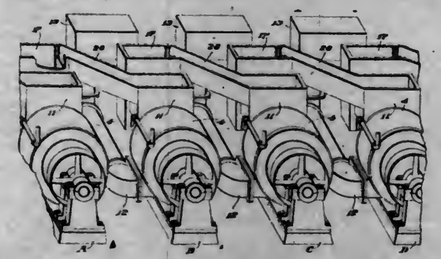
A process of pressing grinding and polishing disks by irregular density by heaping the material on the point of the intended compression, consisting in distributing the material in the mould from the edge towards the center in an ascending plane, in submitting the material to a first pressing so that the curvature of the surface almost disappears, in turning the mould with the pressed body upside down, and in pressing the pressed body again to obtain the final shape.

1,755,159. FISHING ROD AND METHOD OF MAKING SAME. ROBERT H. COWDERY, Geneva, and WILSON D. GRIMES, Cleveland, Ohio, assignors to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1927. Serial No. 173,864. 2 Claims. (Cl. 43—18.)



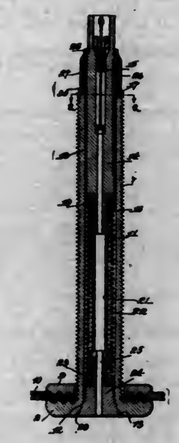
1. A fishing rod adapted for casting purposes, comprising a single billet of tempered steel, tapered from butt to tip, solid throughout its length, said taper beginning with a relatively more rapid reduction of the cross-sectional area of the rod for a substantial distance from its butt than at points beyond such portion.

1,755,160. TRACTOR WHEEL. JOHN A. GRANT, Trumansburg, N. Y. Filed Feb. 13, 1929. Serial No. 339,679. 4 Claims. (Cl. 301—46.)



1. In a traction wheel, the combination of a hub, a rim concentric with said hub, spokes uniting the hub and rim, openings in the rim, thrust rods having teeth at their outer ends, operating means for the thrust rods comprising a disc rotatable on said hub, means pivoting the inner ends of the rods directly on said disc, including pin and slot connections, and bearings formed on said disc, the inner ends of the thrust rods resting on said bearings, whereby the thrust of the rods is transmitted directly to the bearings, said teeth adapted to be projected through said openings in the rim or retracted by rotation of said disc.

1,755,161. TOY. ROY B. WEIMER, Akron, Ohio, assignor of one-half to The Miller Rubber Company, Akron, Ohio. Filed Jan. 27, 1928. Serial No. 249,890. 2 Claims. (Cl. 46—40.)



1. A child's toy comprising a single sheet of thin stiff cardboard or the like relatively stiff, nonyielding material folded to form a box-like structure providing an enclosed space, said box-like structure having relatively thin walls disposed in different planes and provided with openings punched through the walls, and a body of inflatable expansible material disposed within the enclosed space and having parts projecting through said openings substantially perpendicularly with respect to said walls and interlocked therewith, by the expansion of said body on either side of the relatively sharp edges presented by the walls at said openings to a diameter or width exceeding the diameter or width of said openings.

1,755,162. METHOD OF AND APPARATUS FOR SCREENING PULP. ANTON J. HAUG, Nashua, N. H. Filed Dec. 20, 1928. Serial No. 327,390. 19 Claims. (Cl. 92—20.)

1. That improvement in processes of screening pulp, which consists in subjecting a stream of pulp to a series of centrifugal screening operations in each of which a part of the fine stock is taken from said stream while a sufficient proportion of good stock is retained with the materials rejected in each screening operation to maintain the consistency of the unscreened stock approximately unchanged during the greater part of the process and while the pulp passes from one screening operation to the next.

1,755,163. GAUGE. PHILIP E. PULVERMAN, New York, N. Y., assignor to The Visometer Corporation, New York, N. Y. Filed Dec. 22, 1922. Serial No. 608,388. 15 Claims. (Cl. 73—111.)

1. A device of the character described, comprising a tubular body adapted to be secured at one end thereof to a container and to afford communication with the interior thereof, a plunger carried within the bore of the body, said plunger projecting from one end of the body, a collar on the projecting end of the plunger, and a thimble carried on the body and adapted to cooperate with the collar to limit the movement of the plunger into the tubular body.

Patents Nos. 1,755,164 to 1,756,012

THE OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 393—No. 4 TUESDAY, APRIL 22, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

A printed copy of the drawing and statement of any registered trade-mark can be obtained for ten cents.

Interviews with Examiners

RULE 18. Interviews with Examiners concerning applications and other matters pending before the Office must be had in the Examiners' rooms at such times, within office hours, as the respective Examiners may designate; in the absence of the Primary Examiners, with the assistant in charge. Interviews will not be permitted at any other time or place without the written authority of the Commissioner. Interviews for the discussion of pending applications will not be had prior to the first official action thereon.

Adjudicated Patents

(D. C. N. Y.) Van Deventer patent, No. 1,181,623, for electrical condenser and manner of mounting the same, claims 2, 3, 4, and 5 *Held* invalid; claims 6 and 7 *Held* valid and infringed. *Splitdorf Electrical Co.* v. *Dubilier Condenser & Radio Corporation*, 37 F. (2d) 745.

(C. C. A. N. Y.) Dubilier patent, No. 1,497,095, for electrical condenser, claims 3 and 8 *Held* invalid. *Dubilier Condenser & Radio Corporation* v. *Aerovox Wireless Corporation*, 37 F. (2d) 657.

(D. C. N. Y.) Hatch patent, No. 1,574,424, for condenser, *Held* not infringed. *Splitdorf Electrical Co.* v. *Dubilier Condenser & Radio Corporation*, 37 F. (2d) 745.

(D. C. N. J.) Spies patent, No. 1,578,688, for plaster-of-Paris bandage, *Held* invalid. *Byrnes* v. *Johnson & Johnson*, 37 F. (2d) 721.

(D. C. Del.) Mackintosh reissue patent, No. 15,115, for method of driving electrical centrifugal machines, *Held* valid and infringed. *S. S. Hepworth Co.* v. *Penick & Ford*, 37 F. (2d) 782.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE JUNE 1, 1930

The act of Congress approved April 11, 1930, amends section 4934, Revised Statutes, so as to provide that, except in design cases, the fee for filing each original application for patent and the fee for issuing each original patent shall each be $25.00 and $1.00 for each claim in excess of 20, instead of the present fees of $20.00 and $1.00 for each claim in excess of 20; and amends the trade-mark acts of 1905 and 1920 so as to provide that the fee for registration of trade-marks and for renewals of registrations shall be $15.00 instead of the present fee of $10.00.

The act also provides that the fees for recording assignments or other papers shall be, if the paper does not exceed six pages, $3.00; for each additional two pages or less $1.00, and for each additional patent or application where more than one is included or involved in such writing 50 cents additional.

These new fees are effective on and after June 1, 1930.

Applications for patents, except in design cases, received on and after June 1, 1930, with only the present $20.00 fee will not be entered but will be given a filing date and serial number as of the day the full fee of $25.00 and the additional fee of $1.00 for each claim in excess of 20 is received by the Patent Office.

Condition of Applications Under Examination at Close of Business April 11, 1930

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 116,468; Trade-Mark Division, 1,463. Oldest new case, May 17, 1929; oldest amended, June 3, 1929. The dates given are 1929 except where † indicates 1930.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

ARNOLD *v.* LANGMUIR

No. 2,188. Decided January 13, 1930

[36 F. (2d) 834]

1. INTERFERENCE—PRIORITY—CONSTRUCTIVE REDUCTION TO PRACTICE.

Where the counts of an interference depend upon the asymmetrically-conducting properties of a repeater which was disclosed in L.'s second application directly involved in the interference and his earlier application was silent as to such properties but discloses a repeater such as it would be apparent to those skilled in the art has the inherent properties of an asymmetrically-conducting repeater, *Held* that these counts read upon the earlier application and that L. is entitled to the filing thereof as a constructive reduction to practice of the invention.

2. SAME—SAME—LACHES.

Where L., who had filed an application on October 29, 1913, did not file his divisional application copying the claims of the A. patent of February, 1924, until April 24, 1924, *Held* that L.'s delay in filing the divisional application did not constitute such laches as to bar his right to the claims.

3. INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE.

The testing of a device alleged inherently to embody the invention of certain counts, but with no actual test as to the features upon which the invention depended, *Held* that such tests did not establish a reduction to practice of the invention.

4. SAME—SAME.

Priority as to certain counts held properly awarded to L. on the ground that while A. was the first to conceive the invention he was not the first to reduce to practice and was not diligent in so reducing it.

5. SAME—SAME—CONCEPTION.

Proof by A. of experiments with a Vreeland oscillator having no discharge-controlling electrode and no input circuit upon which the output circuit reacted *Held* not to establish conception of the invention of certain counts of the issue which require an oscillation generator of the audion type or a generator having an input and an output circuit, the latter reacting upon the input circuit.

APPEAL from the Patent Office. Affirmed.

Mr. F. T. Woodward, Mr. R. R. Adams, and *Mr. Elmer V. Griggs* for Arnold.

Mr. C. E. Tullar and *Mr. H. E. Dunham* for Langmuir.

GRAHAM, *P. J.:*

Interference proceedings were instituted in the Patent Office between the appellant, Harold D. Arnold, and the appellee, Irving Langmuir. The subject matter of the interference is contained in 12 counts, three of which are typical and which are as follows:

1. An oscillation generator comprising a resonant circuit for determining the frequency supplied by said generator; a load circuit adapted to be energized by said generator and a three electrode electric discharge repeater for transferring alternating current energy from said generator to said load circuit and preventing said load circuit from reacting on said generator.

5. An oscillation generator of the audion type, an alternating current load circuit and an audion repeater between said generator and said load circuit whereby the frequency of the current supplied by said generator is independent of the character of said load circuit.

6. An oscillation generator comprising a discharge device having an input circuit and an output circuit reacting on said input circuit, a load circuit for coupling said generator to a load, and an asymmetrically conducting repeater in circuit between said generator and said load for preventing said load from reacting on said generator.

The senior party, Langmuir, filed his divisional application, Serial No. 708,820, on April 24, 1924. This was claimed to be a division of a prior application, Serial No. 797,987, filed October 29, 1913, and which said original application was pending at the time this interference was declared. The junior party, Arnold, filed his application for patent August 28, 1917, Serial No. 188,562, and which application ripened into a patent on February 26, 1924. On March 23, 1925, Arnold moved that the burden of proof in the interference matter should be shifted to rest upon Langmuir, for the reason that the counts involved in this interference are not supported by the disclosure in Langmuir's earlier application, No. 797,987, and that Langmuir should, therefore, be restricted to his application No. 708,820, which, as we have seen, was filed subsequent to Arnold's filing date. At the same time, Arnold moved that the interference be dissolved on the alleged ground that claims corresponding to the interference counts are unpatentable to Langmuir, in view of certain references which are said to be statutory bars against the divisional application of Langmuir, and which are said to be not bars against, and which do not anticipate, the Arnold patent involved herein. In connection with this motion certain specified references are relied upon. The Law Examiner, after consideration of these motions, held that the alleged divisional application of Langmuir was entitled to the date of the parent case as to counts 1 to 11, inclusive, and 14, but not as to counts 12 and 13, as to which counts the motion to dissolve was allowed. This action was approved by the Examiner of Interferences. Thereafter the Examiner of Interferences awarded priority of invention to Langmuir, and the Board of Appeals affirmed this decision.

[1] The first matter for consideration is the contention made by appellant that the claims made in the divisional application of appellee do not read upon the original claims in appellee's parent application of October 29, 1913, and that, therefore, the appellee is not entitled to any earlier date of disclosure and constructive reduction to practice than that shown by his divisional application, namely, April 24, 1924. In this respect it is claimed that in the said parent application Langmuir did not refer to the repeater which is connected between the oscillating generator and the load circuit as an asymmetric device, whereas, in the divisional application of Langmuir, and in the claims of Arnold in his patent, No. 1,485,156, this language is used. In reply to this suggestion the Law Examiner and the Ex-

aminer of Interferences both held that the original disclosure of Langmuir in the patent application was sufficient upon which to base the divisional application; that an examination of the device shown by the drawings and described in the specifications in the parent application of Langmuir were sufficient to disclose that the said device had the inherent properties of an asymmetrically conducting repeater.

We have examined the drawings in both the parent application and the divisional application of Langmuir, and find that the drawing in the divisional application, Figure 2, is exactly the same as the drawing accompanying the parent application. In the specifications in the parent application the said repeater is referred to as an "electron discharge tube," while Arnold's and Langmuir's divisional applications describe this device as being of the "audion" type. It is claimed by the appellee, and not controverted by the appellant, that the electron-discharge tube and audion have the same functions, and are operated in the same manner. The mere use of the word "asymmetric" is not in itself enough to make a distinction between the divisional claim and the parent application. If it is plainly apparent from the drawings and specifications, when read in view of the knowledge of the art which the experts in the Patent Office are presumed to have, that the same disclosure was made in each case, in our opinion that is sufficient upon which to base a divisional application. If the invention was shown in the parent application of Langmuir, even though the particular use of it now made might not have been in his mind at the time, he is entitled to any use to which his invention might be put. It was said in *Cleveland Foundry Co.* v. *Detroit Vapor Stove Co.*, 131 F. 853:

> This distinction harmonizes with the doctrine that the benefit secured by an invention extends to all the uses of which it is capable, whether the inventor had them all in contemplation or not, and the other rule, to which we have already referred, that it does not matter that he does not understand the principles on which his device operates. If he discovers new uses to which his invention may be put, or discerns the principles thereof more clearly, while his application is pending, in neither case is there any new invention, nor any enlargement of the old. And, that being so, there can be no legal objection to his so molding his claims as to secure all his invention discloses.

See also *Dwight & Lloyd S. Co.* v. *Greenawalt*, 27 F. (2d) 823; *Mershon & Co.* v. *Bay City B. & L. Co.*, 189 F. 741; *Howe Mach. Co.* v. *Nat. Needle Co.*, 134 U. S. 388, 51 O. G. 475; *Roberts* v. *Ryer*, 91 U. S, 150, 10 O. G. 204.

We agree with the Patent Office that appellee was entitled to make claims 1 to 11, inclusive, and 14, of his divisional application, and to take the date of the parent application, namely, October 29, 1913, for a constructive reduction to practice.

[2] It is contended by appellant that Langmuir failed to make his divisional application from October 29, 1913, to April 24, 1924, and that this circumstance should be held to constitute laches and to bar his claim. Arnold obtained his patent in February, 1924, and Langmuir made his divisional claim about two months later. No abandonment or lack of diligence is alleged to have occurred during that period. Langmuir was within the two-year rule of the statute construed in *Chapman* v. *Wintrouth*, 252 U. S. 126, 272 O. G. 913; *Webster Elec. Co.* v. *Splitdorf Elec. Co.*, 264 U. S. 463, *Westinghouse Elec. & Mfg. Co.* v. *Jeffrey, Etc.*, 22 F. (2d) 277, 327 O. G. 219, and other cases.

[3, 4] Both of the Patent Office tribunals found that Arnold had established conception of the invention of counts 1, 2, 3, 4, and 11 prior to Langmuir's record date. This finding being favorable to appellant, of course is not questioned by him, and in view of our conclusion as to the subsequent diligence of Arnold, the correctness of this finding is not material. Both tribunals held he had not been diligent from the time of this conception to Langmuir's record date. We concur in this finding. We can not improve on the statement of the Examiner of Interferences of this point.

> In considering whether or not any of the several experiments performed by Pierce amounted to a reduction of the invention defined by counts 1, 2, 3, 4 and 11 to practice the purpose of the invention must be taken into consideration. In the experiment, of which Exhibit 1 is the record, the testimony of Arnold and his witness Pierce is to the effect that the test had for its purpose to ascertain the characteristics of a certain audion detector tube. While the witnesses testified that they knew at that time that the audion tube had a high input impedance and was an asymmetrical device (Q. 20 of Pierce and Q. 5 of Arnold) the test of which Exhibit 1 is a record was not such as to constitute a reduction of the invention to practice. The experiment was not a test to determine whether or not a change in the load circuit or output circuit of the repeater would react on the generator to change its frequency. In this experiment Pierce did not actually measure the frequency of the oscillator or input to the audion detector. The different frequencies noted on the record, Exhibit 1, were taken from a calibrated oscillator (X-Q. 51). The output circuit of the audion (the load circuit of the counts) was not varied in the experiment (X-Q. 53). There was no actual test of the invention here in issue. To hold that this experiment was a reduction to practice of the invention, because as Arnold contends, the function or characteristic of these tubes to prevent the reaction of the load on the generator is inherent in such tubes, would be in effect to hold that the invention belongs to that class in which an actual test is unnecessary.

[5] The issue then squarely arises as to priority of conception of the subject matter of counts 5, 6, 7, 8, 9, 10 and 14. We must look to the record testimony to discover just what the respective conceptions of the parties were. As has been stated, Langmuir offered no evidence, relying upon his record date. The evidence offered on behalf of Arnold was, in brief, as follows:

Paul H. Pierce testified that he had been in the employ of the Western Electric Company and Bell Telephone Laboratories since July, 1911, and, in 1913, set up and operated an arrangement of a generator, a three-electrode vacuum tube and an alternating-current load circuit; that at that time he was working with Arnold; that on January 13th and 17th he took some frequency characteristics, using a Vreeland oscillator; that he was in that period continuously taking data on various audions; that he took complete measurements of input and output power with a three-element tube connected to an alternating current with a Vreeland oscillator; that the Vreeland oscillator had a large bulb with one cathode in a pool of mercury and two anodes, with two coils on each side of the bulb so that the field of the coils was at right angles to the electron streams between the cathode and the anodes; that the frequency was determined by the tuned circuit between the two anodes, which consisted of the two coils on the sides of the bulb and a variable condenser, the capacity of which could be changed by a system of switches; that he was familiar with the operation of the Vreeland oscillator at that time, and Arnold was in charge of his work; that the oscillator used in these experiments was similar to the sketch, Exhibit 4, which was then offered in evidence; that the device used had a high input impedance and is an asymmetrical device, so that changes in the output circuit do not react on the input circuit; that he knew of the characteristics of the audion in January, 1913, from measurements which he was then making with Arnold; that Arnold was familiar and with these; that he believed the results obtained were satisfactory, and that they were used in detailed studies of the audion characteristics which they were then examining; that Paul Clapp and he did work with a vacuum-tube oscillator circuit coupled to an audion circuit, on the output of which was coupled the load circuit being measured, about May 13, 1914; that circuits involving oscillation generators of this type followed by asymmetrical vacuum tube of the three-electrode type, leading into alternating current of some sort, have been used in the laboratories of the Western Electric Company since 1913; that in their experience, the output circuit of the audion did not vary and was not resonant to the frequencies applied to the input circuit.

Harold D. Arnold, the appellant, testified that he is employed by the Western Electric Company, reorganized as the Bell Telephone Laboratories; that during 1911 and 1912 he was studying the telephone repeater, using as a source of current some Vreeland oscillators arranged with a loosely-coupled connection to secure frequencies which would remain constant, even though different amounts of current were drawn from them because of variations in the load; that his attention was called to the De Forest audion in the latter part of 1912; that the latter part of December, 1912, he found the input impedance of these audions was of the order of a million ohms or more; that he then thought of attaching such a device to the output circuit of an oscillator by which there would be presented to the oscillator a practically-unvarying high resistance, independent of the load applied to the output circuit; that early in January, 1913, he asked Mr. Pierce to continue this work, which he did; that this work was part of a general study of audions and was done under his direction; that from 1913 to the end of 1917 such circuits were used rather frequently, and beginning in 1914, when their personnel on this work was considerably augmented, they were in practically daily use by a considerable number of people, which use has continued during the period mentioned; that the early uses of the invention were almost entirely in connection with circuits terminating in resistance or reactance loads and not in connection with radio; that they were working on telephony over wires.

Practically the whole controversy here revolves about the character of the experiments and the nature of the device used by Arnold and Pierce, as above set forth. If the appellant was then using in his experiments a device, the inherent qualities of which were identical with those of the Langmuir parent application, then he might well be said to be entitled to priority here. The Patent Office finds that the devices were not the same and that, therefore proof of conception by Arnold at that time is lacking and that he must be relegated to his filing date for a date of conception.

In the fifth count of the interference, the device is described as "an oscillation generator of the audion type." Was Arnold's experimental apparatus of the audion type? The tribunals of the Patent Office say it was not. As shown by Exhibit 4, the oscillator used by Arnold and Pierce in their experiments consisted of a glass tube, evacuated, having three electrodes, one cathode immersed in a bath of mercury, and two anodes, these latter being plates located in arms extending outward in opposite directions from the base of the tube. Direct-current electric power was connected with the cathode and by means of the apparatus described by Pierce and shown by Exhibit 4, oscillations were set up in the output circuit.

We agree with the tribunals below that this does not constitute an oscillator of the audion type. The word "audion" was registered as a trade-mark in 1916, registration No. 112,480, by the De Forest Radio Company, as a trade-mark for radio telephones and telegraph apparatus. But prior to that time, it was a word in quite common use and was applied by L. De Forest as a name for the tube in his application for the basic patent on vacuum-tube oscillators, No. 879,532, patented February 18, 1908. Funk & Wagnall's New Standard Dictionary, 1925, thus defines the word:

> Audion.—A small vacuum tube used to detect wireless waves.

The art, however, has given the word a somewhat more definite meaning and, as so used, it is understood to mean a highly-evacuated glass tube containing a cathode, usually a filament, capable of being heated by electric current, an anode or plate, to receive the current from the cathode, and an intervening grid or shutter, all of which are capable of connections outside the bulbs. By the use of the grid electrode, a controlling effect upon the discharge from the cathode is effected, so that potential variations applied to such electrodes will cause variations in the current flowing between the cathode and anode. The Thermionic Vacuum Tube and Its Applications, by H. J. Van Der Bijl (1920), p. 145. The Principles of Electric Wave Telegraphy and Telephone, by J. A. Fleming, (1916) p. 537.

It requires no particular amount of knowledge of the art to observe that the device used by the appellant and pictured in Figure 4, is not an audion, nor is it of the audion type. It has no heated cathode and no discharge-controlling electrode. There is, therefore, no proof of any conception by Arnold of the subject matter of count 5 in his experiments in January, 1913.

Counts 6, 7, 8, 9, 10 and 14 are each framed upon a generator which has an input and an output cir-

cult, the output circuit reacting upon the input circuit, De Forest, in the specification of his basic vacuum-tube invention hereto[illegible] referred to, stated:

I have determined experimentally that the presence of the conducting member a, which as before stated may be grid-shaped, increases the sensitiveness of the oscillation detector and, inasmuch as the explanation of this phenomenon is exceedingly complex and at best would be merely tentative, I do not deem it necessary herein to enter into a detailed statement of what I believe to be the probable explanation.

Following experimentation with the De Forest audion developed the fact that this device, when properly attached to input and output circuits, would feed back and build up electric frequencies received by it until they were greatly amplified. The present-day radio receiving and sending machines are the result.

Langmuir, in his original application, plainly disclosed such input and output circuits with his generator. It seems quite obvious to us that Arnold's oscillator or generator does not disclose anything of the kind. He did insert between his oscillator and his load circuit, in some of his experiments, a repeater with both input and output circuits. But his oscillator or generator had an output circuit only and was not capable of the reactive or amplifying features of the Langmuir device. There is nothing to show that Arnold had a conception of this principle or function when he was making his experiments with Pierce.

This being our conclusion; it follows that Arnold must depend upon his record filing date of his conception. As this was subsequent to Langmuir's parent application and constructive reduction to practice, he must fail in his contentions here.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

JUNG ARCH BRACE CO. *v.* SCHOLL MANUFACTURING CO., INC.

No. 2,154. Decided January 27, 1930

[36 F. (2d) 1005]

TRADE-MARKS—PRIOR ADOPTION AND USE—EVIDENCE.

Evidence reviewed and *Held* to establish that the S. Co., the applicant, adopted and used its mark prior to the earliest date of use established by the J. Company, the opposer, and that the S. Co. was properly held entitled to registration of its mark.

APPEAL from the Patent Office. Affirmed.

Mr. W. F. Murray for Jung Arch Brace Co.

Mr. Myron G. Clear for Scholl Manufacturing Co., Inc.

GRAHAM, *P. J.*:

The appellee, Scholl Manufacturing Company, Inc., filed its application for registration of trade-mark December 1, 1924. The mark in question was a representation of a naked foot within an annular life preserver and was applied to foot-corrective appliances such as arch supports, toe separators, and other like articles. The applicant alleged in its petition that it had used the mark continuously on its goods since February, 1915. The appellant, the Jung Arch Brace Company, filed notice of opposition to said registration, averring itself to be the owner of certificate of registration No. 133,216, issued March 14, 1922. Said registered trade-mark of appellant consists of a representation of the outline of the human foot enclosed within a circle, the foot having a representation of a brace or bandage around the instep of the same.

The Examiner of Interferences dismissed the notice of opposition and this decision was affirmed by the Commissioner.

The only question involved is that of priority of use of the mark in question. It appears from the record that appellant's first use of its registered mark on merchandise offered for sale was in September, 1919. The trade-mark of appellant having been registered prior to the application of appellee, the burden of proof is upon the applicant and any doubts will be resolved against him. *Bluthenthal* v *Bigbie*, 130 O. G. 2068, 30 App. D. C. 118; *Andrew McLean Company* v. *Adams Mfg. Co.*, 136 O. G. 440, 31 App. D. C. 509; *In re Nash Hardware Co.*, 143 O. G. 1347, 33 App. D. C. 221; *William Wrigley, Jr., & Co.* v. *Norris*, 152 O. G. 488, 34 App. D. C. 138; *Mayer Fertilizer & Junk Co.* v. *Virginia-Carolina Chemical Co.*, 156 O. G. 539, 35 App. D. C. 425.

We have examined the record and are unable to say that the Office is in error in finding a prior use of the mark in question by appellee. Appellee called three witnesses, William H. Scholl, executive of appellee, Daniel W. Landon, treasurer of appellee, and Charles H. Gill, advertising manager of appellee from 1917 to 1923. Scholl testifies that he offered a prize for an acceptable sketch for a trade-mark and as a result accepted and adopted the mark in question in February, 1915; that he has used the same continuously since that time as a trade-mark on arch supports, bunion pads, and similar goods. To corroborate this, he offers advertisements from two trade papers, issued in March, 1917, showing the mark in question. It is true that the mark to be effective must be used on the articles offered for sale and that its use for advertising only is not sufficient. *Battle Creek Sanitarium Co.* v. *Fuller*, 134 O. G. 1299, 30 App. D.-C. 411; *Columbia Mill Co.* v. *Alcorn*, 65 O. G. 1916, 150 U. S. 460. But the advertisements in question are corroborative of the positive testimony of Scholl that the mark was used on the goods.

Scholl's testimony as to the date of use is also corroborated by the testimony of Landon and Gill.

It is strenuously insisted by counsel for appellant that Exhibit 4, a pasteboard carton offered in evidence by appellee, is conclusive proof of a fabricated case on the part of appellee. It was found that this carton had two paper covers, the outer one bearing the advertisement of appellee with the mark in question, and the inner one containing the advertisement without the mark. In addition, George H. Jung, jr., went into the market on February 12, 1926, and purchased one of appellee's appliances, in a carton, not having the trade-mark upon it. This carton was offered in evidence and is known as Exhibit 24. This, it is claimed, demonstrates that the appellee did not, in fact, use the mark, at the early date it claims. We can not follow the appellant in this contention. There is no proof in the record as to how long the carton in question had been in the possession of the merchant from whom Jung purchased it. Scholl sold his goods in cartons prior to the adoption of his mark in 1917. If he had cartons on hand at that time, nothing is more natural than that he should paste new labels over the old ones and thus be able to use the cartons he had on hand. Certainly, if appellee intended to fabricate evidence, it would not have pasted a properly marked label on the top of one not so marked, and thus lay itself open to the liability of discovery. Litigants fabricating evidence usually do a better job than this.

We see no reason to disturb the decision of the Commissioner, and it is affirmed.

Affirmed.

CARNEGIE LIBRARY OF ATLANTA

U. S. Court of Customs and Patent Appeals

AMERICAN FRUIT GROWERS, INC., *v.* MICHIGAN FRUIT GROWERS, INC.

No. 2,248. Decided March 19, 1930

1. TRADE-MARKS—OPPOSITION—QUESTION TO BE DETERMINED.

In an opposition, where the goods of the parties possess the same descriptive properties, the sole question for determination is whether the mark of the applicant is confusingly similar with that of the opposer. If it is, registration ought to be denied; if it is not, registration ought to be granted.

2. SAME—CONFUSING SIMILARITY.

A mark, used upon fresh and canned fruits, consisting of the word "Michigander" and the representations of two or three kinds of fruits with an outline tracing of the Lower Peninsula of Michigan and the representation of a goose in white upon a black and white background, *Held* confusingly similar to a mark used upon fresh fruits and vegetables consisting of the words "Blue Goose" appearing immediately above the representation of a "blue goose" enclosed within a double circle.

APPEAL from the Patent Office. Reversed.

Mr. R. T. M. McCready and *Mr. Chas. R. Allen* for American Fruit Growers, Inc.

Mr. James Atkins for Michigan Fruit Growers, Inc.

HATFIELD, *J.*:

This is an appeal, in a trade-mark opposition proceeding, from the decision of the Commissioner of Patents affirming the decision of the Examiner of Interferences dismissing the opposition of appellant and adjudging appellee entitled to the registration of a composite trade-mark (Serial No. 218,983) consisting of the word "Michigander" and representations of two or three kinds of fruit inclosed within a double circle, together with an "outline tracing of the Lower Peninsula of Michigan, and the representation of a goose in white" upon a black and white background, for use on fresh and canned fruits.

Appellant's trade-mark consists of the words "Blue Goose" appearing immediately above the representation of a blue goose inclosed within a double circle. This mark was registered on January 13, 1920. It has been used by appellant and its predecessor throughout the United States and many foreign countries since May, 1918, on fresh fruits and vegetables, and has become associated in the public mind with the highest quality of these commodities. Appellant has sold its products and advertised its mark extensively in every State in the United States, including the State of Michigan. Its trade-mark appears on packages in which its fruits and vegetables are contained, as well as on the skins of citrus fruits. As illustrative of the extent to which the mark of appellant is used, more than five million blue goose labels were used in 1925 on packages containing its products, and more than ninety-one million "pieces of citrus fruits" were printed with this label. During the same year appellant sold more than thirty-eight thousand carloads of fruits and vegetables for the sum of approximately forty million dollars. Large sums of money have been expended in advertising the mark in the newspapers, on posters, painted signs, in trade papers, magazines, in advertising matter to the growers of fruit, moving signs, etc.

It appears that appellee's application for registration of its mark was filed August 19, 1925. No evidence was submitted by appellee.

On March 5, 1927, the Examiner of Interferences held that "an inspection of the marks used by the parties makes it seem reasonably probable that confusion in trade would be likely," and, accordingly, that appellee was not entitled to have its mark registered.

On July 9, 1927, the Examiner of Interferences set aside his previous decision, dismissed the opposition, and held that appellee was entitled to have its mark registered for the following reasons:

This is an opposition which comes to final hearing before the Examiner for the second time. The situation is now different by reason of an amendment of the answer. In this amendment the defense of the use of marks by third parties is made. The evidence of this use is wholly statutory and is afforded by registrations, profert of which has been made by means of soft copies.

The defense relied upon is substantially the same as that which was employed in the cases of *Goodall Worsted Co.* v. *Palm Knitting Co., Inc.*, 352 O. G. 535; *Booth Fisheries Company* v. *Adams & Sons Grocer Company*, 350 O. G. 469. In effect, this defense is that the representation of a goose is less fanciful and arbitrary than it prima facie appears to be from mere inspection of the mark used by the opposer. Of the registrations relied upon, perhaps registration No. 97,009, issued May 12, 1914, will serve as an example. It discloses the notation "Gray Goose," accompanied by the representation of a goose, and is used on canned fruits and canned vegetables. It seems to the Examiner that this defense is well founded in view of the rulings in the cases just cited and the statutory evidence afforded by these registrations.

On appeal, it was held by the Commissioner of Patents that, although the registration of appellee's mark would probably cause confusion in the trade, nevertheless, in view of prior registrations and particularly registration No. 97,009, issued May 12, 1914, of the words "Gray Goose" accompanied by the representation of a goose for use on canned fruits and canned vegetables, appellee was entitled to have its mark registered. In explanation of this holding, the Commissioner said:

Some of the above noted registrations were issued long prior to the earliest date of adoption and use claimed by opposer. It would appear, in consequence, that opposer was not the first to adopt and use the representation of a goose upon goods of this class and it also appears that

the applicant's particular representation of the goose more nearly resembles that disclosed in registration No. 97,009 than it does the representation of a blue goose adopted and used by the opposer. Under these conditions, and following the practice announced in *Goodall Worsted Co. v. Palm Knitting Co., Inc.*, 352 O. G. 535, 56 App. D. C. 148, and *Booth Fisheries Company v. Adams & Sons Grocer Company*, 350 O. G. 469, 56 App. D. C. 142, *the opposer must be deemed restricted in its protection to such distinguishing features of its mark as are not found in prior registered marks used upon the same class of goods. Applying this test, it would seem the applicant's representation of a goose in no way infringes the particular representation adopted by opposer. Except as to the representation of the goose, the applicant's mark is quite dissimilar to that of the opposer.* (Italics ours.)

In the case of *Booth Fisheries Co. v. Adams & Sons Grocer Co.*, 56 App. D. C. 142, 10 F. (2d) 1007, the court had under consideration the opposition of appellant, owner of the registered trade-mark "Black Diamond" and a diamond-shaped figure, to the registration by appellee of the mark "Diamond A," "associated with the representation of a diamond inclosing a large capital 'A.' " The goods of the respective parties were of the same descriptive properties. In holding that appellant was not entitled to the exclusive use of the figure of a diamond, or the word "Diamond," or both, the court said:

There is no dispute that the goods of the respective parties are of the same descriptive properties. It appears that the Patent Office, both before and after adoption of the mark "Black Diamond" by appellant, registered the word "Diamond" in varying forms to many different parties, and to several for use upon goods of the same descriptive properties as those of appellant. Appellant, therefore, was not the originator of the diamond as a trade-mark for canned food products, and is not entitled to the exclusive use of that word or representation. *Alaska Packers' Ass'n v. Admiralty Trading Co.*, 43 App. D. C. 198; *Alaska Packers' Ass'n v. Getz Bros. & Co.*, 49 App. D. C. 55, 258 F. 527. See, also, *Am. Steel Foundries v. Robertson et al.*, 46 S. Ct. 160, 70 L. Ed. 317, decided in the Supreme Court of the United States January 4, 1926. On this point the Assistant Commissioner said:

"It seems to be fairly justifiable to hold that a diamond shape had been used to a considerable degree upon goods of this same general class before the opposer entered the field. Each of those who followed the first user of a diamond shape is only entitled to such distinctive features as he adds to his figure."

A different conclusion would result in the granting to appellant of a monopoly in the use of the word "Diamond" and representation of it, to which appellant is not entitled. *We agree with the Patent Office that the difference between the two marks is such as to entitle appellee to the registration of its mark.* (Italics ours.)

In the case of *Alaska Packers Association v. Admiralty Trading Company*, 214 O. G. 1025, 43 App. D. C. 198, cited in the *Booth Fisheries Co.* case, supra, appellee had applied for the registration of a mark consisting of the "representation of a flag 'having a blue background with a horizontally arranged white stripe with three stars,' together with the red monogram 'A. T. Co.'", for use on canned salmon. It appeared that the opposer—appellant—had used several different flags as trade-marks on goods identical in character. In disposing of the case, the court said, in part:

Since appellant has itself used the several different flags above described, in the sale of different brands of its goods, *it is hardly in a position here to contend that the mark of the applicant will be likely to cause confusion in trade, since that mark differs from each of its marks as much as they differ from one another. In other words, having sold these different brands of salmon under as many different flags, appellant is here estopped to contend that it will be damaged by the registration of applicant's mark*, and, having no standing to be heard, its petition was rightly dismissed. (Italics ours.)

In the case of *Goodall Worsted Co. v. Palm Knitting Co., Inc.*, 352 O. G. 535, 56 App. D. C. 148, the court held that, as a mark consisting of the words "Palm Island" and a representation of a palm tree had been used and registered long prior to appellant's use and registration of the words "Palm Beach," appellant was not entitled, in view of the fact that it was not the originator of the word "Palm," nor of the representation of a palm tree, in a trade-mark, to the exclusive use of such word or representation; and that appellee was entitled to the registration of its mark consisting of the words "Palm-Knit" accompanied by a representation of a palm tree in a rectangle, for use on goods possessing the same descriptive properties as those on which apellant's mark was used. In concluding its opinion, the court said:

* * * Both these features, the word "Palm" and the representation of a tree, were used prior to opposer's adoption and use of its mark, and these are the only features which are common to the mark of the applicant and that of the opposer.

As the Patent Office found, "Palm-Knit" differs from "Palm Beach" more than "Palm Beach" differs from "Palm Island."

Section 5 of the trade-mark act of February 20, 1905, provides, in part, as follows:

Sec. 5. That no mark by which the goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade-mark on account of the nature of such mark unless such mark—

* * * * * * *

Provided, That trade-marks which are identical with a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties, or which so nearly resemble a registered or known trade-mark owned and in use by another and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or to deceive purchasers shall not be registered: * * *

Without attempting to distinguish the decisions in the cases hereinbefore referred to, it is plain that they must be considered in the light of the quoted statutory provisions. In none of those cases were the involved trade-marks identical.

Considering the provisions of the second clause of the quoted proviso, together with the apparent lack of similarity of the involved marks and the language of the court, it is evident that those decisions were based upon the theory that the registrations of the respective marks would not be likely to cause confusion or mistake in the mind of the public or to deceive purchasers.

It appears in the case at bar that appellee seeks to register its mark for use on fresh and canned fruits. Appellant's mark is used on fresh fruits and vegetables. So far as we are aware, appellant was entitled to the registration of its mark for use on its products. If it was not, its mark ought not to have been registered; if it was inadvertently registered, those injured by such registration have a statutory remedy—application for cancellation. Appellee, however, is not injured by the registration of appellant's mark, and, while it may be that appellant is not the originator of a representation of a goose for use in a trade-mark, neither is appellee. Can it be said then that appellant is so narrowly restricted in the use of its mark that it is not entitled to the protection afforded by the statute? We think not. Accordingly, the goods of the parties possessing the same descriptive properties, the sole question for determination is whether the mark of appellee is confusingly similar to that of appellant. If it is, registration ought to be denied. If it is not, registration ought to be granted.

One of the dominant features of appellant's mark is the representation of a goose. The representation, blue in color, usually appears on a white, but sometimes on an orange, background, and is accompanied by the words "Blue Goose." The mark of appellee includes the word "Michigander," representations of two or three kinds of fruit, and an "outline tracing of the Lower Peninsula of Michigan," upon which appears the representation of a white goose—the dominant feature of the composite mark. The other so-called features of the mark, with the exception of the word "Michigander," are indistinct and can be recognized only by careful scrutiny. Why this is so, can only be conjectured. The word "Michigander" does not resemble, in appearance or in sound, the words "Blue Goose." This is not true, however, as to meaning.

We are of opinion that the dominant characteristics of appellee's mark are not sufficiently distinguishable from the mark of appellant; that the marks are confusingly similar; and that to permit the registration of appellee's mark would cause what the statute was intended to prevent—confusion, mistake, and deceit.

For the reasons stated, the decision is reversed.

Reversed.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,620,205, Henry Hermani, Sheet-metal assembling and working machine, decided February 7, 1930, claim 10.

Pat. 1,702,787, R. W. Martland, jr., Leaf holder for books, decided February 26, 1930, claims 1 and 2.

Pat. 1,704,628, E. T. Rushton, Rim tool, decided March 25, 1930, claim 2.

Disclaimers

1,615,799.—*James Denaro*, Cambridge, Mass. AUTOMATIC MACHINE FOR MAKING CUP PASTRY. Patent dated January 25, 1927. Disclaimer filed April 2, 1930, by the patentee.

Hereby enters a disclaimer with respect to claim 7 of said patent of any means for loosening the baked product from the molds and cores other than a means which affects a movement of the female mold elements in parallel relation and in a line substantially at right angles to the axes of the core elements.

Please enter the disclaimer in the following words, i. e.—

In claim 7, line 6, after "comprising" place a comma and insert *devices for separating the split mold sections in parallelism and in a line substantially at right angles to the core axes.*

1,623,469.—*Frank A. Fahrenwald*, Chicago Heights, Ill. METALLURGICAL FURNACE. Patent dated April 5, 1927. Disclaimer filed April 4, 1930, by the patentee and the licensees, *American Manganese Steel Co.* and *Southern Manganese Steel Co.*

Hereby enter the following disclaimer in relation to said claim:

Petitioners disclaim from the scope of claim 6 all metallurgical furnaces except those of the metallurgical class described in which, in addition to the other elements already specified in the claim, the hollow metal rolls are made of high-temperature alloy and with end bearing portions of reduced diameter, and connected with the portions of the rolls within the furnace by means of sections of increasing inside and outside diameter.

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, Apr. 7, 1930.*

Rex-Tone Laboratories, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of United Drug Company, 48 Leon Street, Boston, Mass., to effect the cancellation of trade-mark registration No. 183,225, issued April 22, 1924, to William T. Ellison, 115 E. Liberty Street, Savannah, Ga., which registration, the assignment records of the Office show, has been transferred to Rex-Tone Laboratories, Inc., Tampa, Fla. The notice of such proceeding sent by registered mail to Rex-Tone Laboratories, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless Rex-Tone Laboratories, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 7, 1930.*

The Smile Company, its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The William Boardman & Sons Co., 53–59 Edwards Street, Hartford, Conn., to effect the cancellation of trade-mark registration No. 162,022, issued November 28, 1922, to The Smile Company, 221–223 East Fourth Street, Topeka, Kans. The Office having been unable to secure satisfactory service upon The Smile Company at the said address, notice is hereby given that unless The Smile Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Interference Notice

U. S. PATENT OFFICE, *Washington, Apr. 8, 1930.*

Frank T. Brown, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the applications for patent of Frank T. Brown, 114 Stimson St., Detroit, Mich., and of Joseph Lashenick, 171 McKibben St., Brooklyn, N. Y. A notice of such declaration sent to Solomon Dunn, assignee of said Brown, has been returned by the post office as undeliverable, and counsel for Brown states that he has been unable to ascertain the present whereabouts of said Brown or of his assignee. Notice is hereby given that unless said Frank T. Brown, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

CARNEGIE LIBRARY OF ATLANTA

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 22, 1930

[VOL. 393. No. 4]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

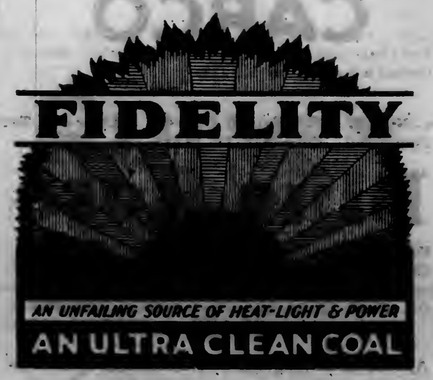
Ser. No. 288,975. PACATOMB COMPANY, San Francisco, Calif. Filed Aug. 24, 1929.

FILTER-PAC

No claim is made to the word "Filter" apart from the mark as shown in the drawing.

For Ground Diatomaceous Silica and Diatomaceous Silica in its Natural State.

Claims use since Jan. 28, 1929.



Ser. No. 294,476. FROMM BROTHERS, INC., Hamburg, Wis. Filed Jan. 7, 1930.

For Fox Pelts, Intended for Scarfs or Trimming for Women's Wear.

Claims use since Nov. 25, 1929.

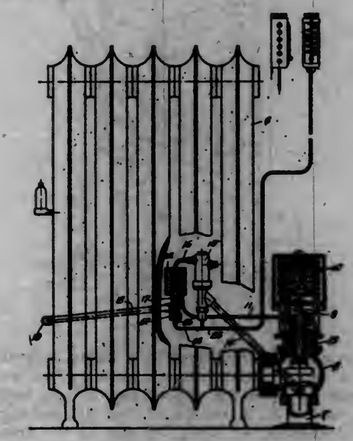
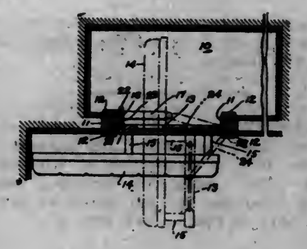
REISSUES



APRIL 22, 1930

17,645. TOILET-SEAT ACCESSORY. JUSTIN NEALL BARKER and MARJORIE NUTTING BARKER, Santa Monica, Calif. Filed Feb. 5, 1929. Serial No. 337,715. Original No. 1,682,592, dated Aug. 28, 1928, Serial No. 171,550, filed Feb. 28, 1927. 8 Claims. (Cl. 242—55.5.)

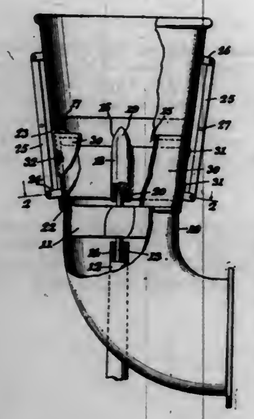


6. A toilet seat accessory comprising: a semi-cylindrical hollow body; flanged end caps for said body; upwardly opening bearings on said end caps; a roller having spindles in said bearings, said end caps being adapted to allow passage of the spindles for insertion and removal of the roller; and a semi-cylindrical hollow closure mounted in the housing and provided with open bearings adapted to rest upon the spindles when the closure is closed and adapted to release the spindles when the closure is open.

17,646. TEMPERATURE-CONTROLLING APPARATUS. EMIL T. JOHNSSON, Chicago, Ill. Filed Jan. 21, 1930. Serial No. 422,689. Original No. 1,682,227, dated Aug. 28, 1928, Serial No. 95,910, filed Mar. 19, 1926. 17 Claims. (Cl. 236—42.)

1. In an apparatus of the character set forth, the combination of a heat exchange member, a supply for said member, a supply valve, an expansion member for opening said valve, a chamber connected with said expansion member but remote therefrom, liquid in said chamber and expansion member, a passageway from the supply through the chamber to the heat exchange member for supplying heat to said chamber, a valve for controlling said heat supply to the chamber, and thermostatic means for actuating said valve.

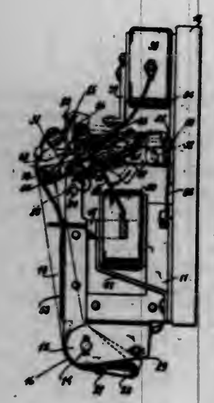
17,647. DISAPPEARING BED. ABRAHAM L. JONES, Logansport, Ind. Filed Oct. 5, 1927. Serial No. 224,246. Original No. 1,595,944, dated Aug. 10, 1926, Serial No. 48,772, filed Aug. 7, 1925. 6 Claims. (Cl. 5—171.)



1. In a disappearing bed, the combination with a reversible door, of a door frame, a bed attached to the said door, the said bed being wider than the door and frame and projecting beyond one side of the door, a U-shaped door carrying member having a vertically disposed portion normally arranged adjacent to one edge of the door and movable with the door, double hinge devices connecting the said vertical portion of said member and the adjacent edge of the door, the said U-shaped member being construceed with lateral portions having their ends pivotally connected with the floor and door frame, said pivotal points having fixed positions, and radius bars located at the top and bottom of the door, each radius bar having one end pivotally attached to the door and midway between the sides of the door and movable with the door, and the other end pivotally connected with the frame structure of the door.

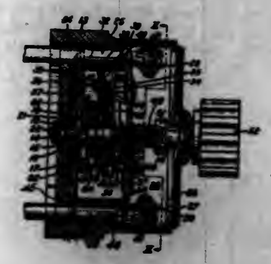
17,648. PUMP. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 12, 1930. Serial No. 435,877. Original No. 1,747,848, dated Feb. 18, 1930, Serial No. 350,762, filed Mar. 28, 1929. 4 Claims. (Cl. 230—120.)

1. In apparatus of the character described, the combination of a housing, a propeller in the housing, guide vane means arranged in the housing and cooperating with the propeller, means providing for axial movement of the



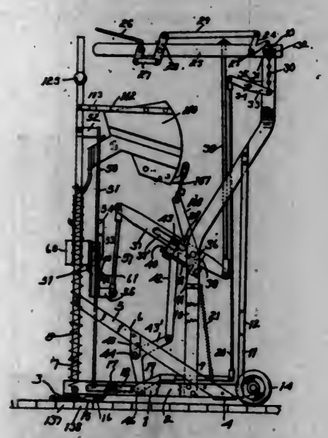
ATLANTA GA YOUNG LIBRARY

guide vane means toward and away from the propeller, said housing having an opening arranged to permit of



the passage therethrough of the propeller when the guide vane means is moved away from the propeller, and means for closing said opening.

17,649. ELECTRICAL SWITCH. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 21, 1929. Serial No. 348,929. Original No. 1,629,756, dated May 24, 1927, Serial No. 461,288, filed Apr. 14, 1921. 16 Claims. (Cl. 200—97.)



6. In a mechanically held magnetic switch, a member movable to and from closing position, a closing magnet coil, releasable means for retaining the switch closed, a tripping magnet coil for means, said coils being included within suitable electric circuits, and means operable by said switch member for opening and closing the circuits of said magnet coils, said last mentioned means including parts of nertia of which tends to delay the opening and closing of said coil circuits.

17,650. SWITCH MECHANISM. JULIAN H. KENDIG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 12, 1930. Serial No. 427,918. Original No. 1,678,882, dated July 31, 1928, Serial No. 520,563, filed Dec. 7, 1921. 37 Claims. (Cl. 200—124.)

1. The combination with a switch member adapted to be progressively moved to open and to closed positions with a snap-action, and manually operable means for arresting the switch member in predetermined positions, of a terminal-responsive means for actuating them anually operable means for releasing the switch member.

17,651. HARDWARE-FLOOR-NAILING MACHINE. WALTER W. VILNEAU and ELBERT CHITTENDEN, Palo Alto, Calif., assignors of one-third to Henry E. Jensen, one-third to Wells P. Goodenough, and one-third to Walter W. Vilneau, Palo Alto, Calif. Filed Dec. 27, 1928. Serial No. 328,672. Original No. 1,671,660, dated May 29, 1928, Serial No. 198,472, filed June 13, 1927. 15 Claims. (Cl. 1—46.)

15. In a floor nailing machine, a frame, a chuck in said frame, a nail receiving hopper, means to feed nails from the hopper to the chuck, a vertically movable hammer for driving said nails, means for raising said hammer, means for intermittently elevating an end of the frame after each driving operation, and means connecting the hammer raising means and the elevating means for actuating the latter when the hammer is raised to its driving position, and means for shifting said frame while the same is in its elevated position.

CARNEGIE LIBRARY OF ATLANTA

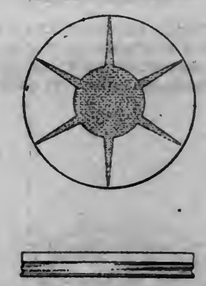
DESIGNS

APRIL 22, 1930

80,993. CANDLESTICK OR ARTICLE OF ANALOGOUS NATURE. FRANK J. ABEL, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed Feb. 6, 1930. Serial No. 34,442. Term of patent 3½ years.

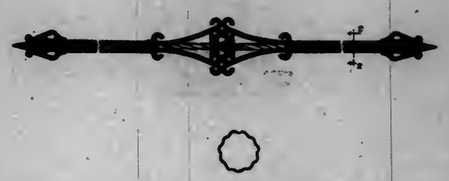
The ornamental design for a candlestick or article of analogous nature substantially as shown.

80,994. CURTAIN-POLE END PIECE. WALTER C. ASTRUP, Cleveland, Ohio. Filed Oct. 17, 1929. Serial No. 33,074. Term of patent 7 years.



The ornamental design for a curtain pole end piece, as shown.

80,995. CURTAIN-POLE END PIECE. WALTER C. ASTRUP, Cleveland, Ohio. Filed Oct. 17, 1929. Serial No. 33,075. Term of patent 7 years.

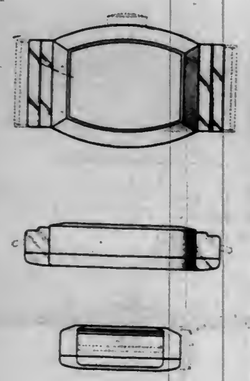


The ornamental design for a curtain pole end piece, as shown.

80,996. JAR COVER OR SIMILAR ARTICLE. WILLIAM A. BOYD, Detroit, Mich. Filed May 6, 1929. Serial No. 31,115. Term of patent 14 years.

The ornamental design for a jar cover or similar article, as shown.

80,997. CURTAIN ROD OR SIMILAR ARTICLE. JAMES H. BOYD, Chicago, Ill. Filed Feb. 27, 1930. Serial No. 34,673. Term of patent 7 years.



The ornamental design for a curtain rod or similar article, as shown.

80,998. LADY'S UNDERGARMENT. JULES CHASE, Bronx, N. Y. Filed June 15, 1929. Serial No. 31,699. Term of patent 8½ years.

The ornamental design for a lady's undergarment, as shown.

80,999. WATCHCASE. ARTHUR P. CONANT, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Aug. 8, 1929. Serial No. 32,331. Term of patent 14 years.

The ornamental design for a watch case, substantially as shown.

81,000. LIGHTING STANDARD. RALPH W. ERSKINE, Mishawaka, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 16, 1929. Serial No. 32,088. Term of patent 7 years.

The ornamental design for a lighting standard substantially as shown.

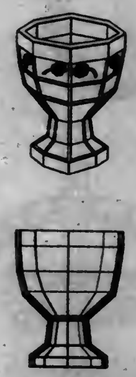
81,001. LAMP BASE OR SIMILAR ARTICLE. JULIUS FELEK, New York, N. Y., assignor to Metropolitan Lamp Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 9, 1930. Serial No. 34,062. Term of patent 8½ years.

The ornamental design for a lamp base or similar article substantially as shown and described.

81,002. FOUNTAIN PEN OR SIMILAR ARTICLE. MONROE GOLD, Brooklyn, N. Y. Filed Feb. 10, 1930. Serial No. 34,464. Term of patent 14 years.

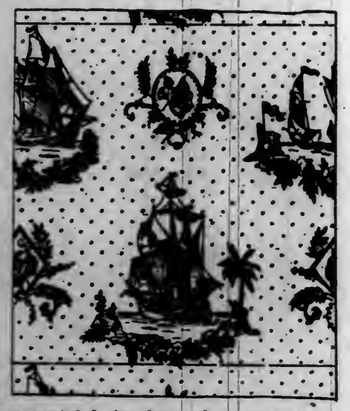
The ornamental design for a fountain pen or similar article, as shown.

81,003. LIGHTING UNIT. CARL F. HAAS, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1930. Serial No. 34,189. Term of patent 14 years.



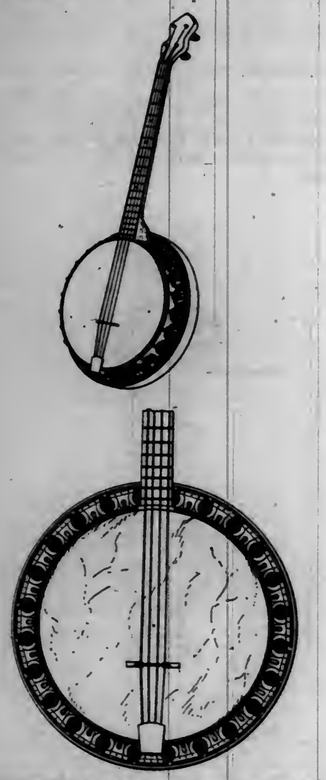
The ornamental design for a lighting unit substantially as shown.

81,004. FLOOR LAMP OR SIMILAR ARTICLE. CROMWELL A. B. HALVORSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 16, 1929. Serial No. 33,803. Term of patent 14 years.



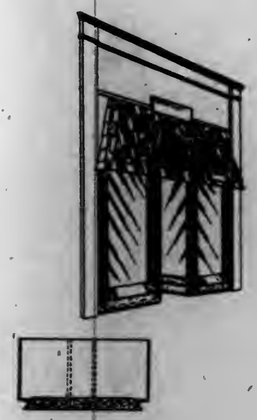
The ornamental design for a floor lamp or similar article as shown.

81,005. PASTRY CUP. ERNEST HAMWI, St. Louis, Mo. Filed Jan. 9, 1930. Serial No. 34,064. Term of patent 14 years.



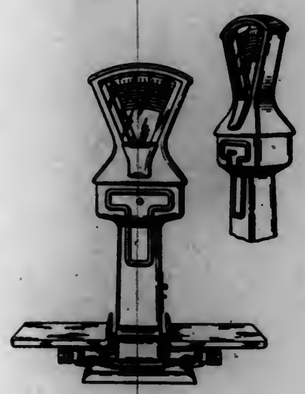
The ornamental design for a pastry cup, substantially as shown.

81,006. WALL PAPER. ERIC ARNOLD HAWARD, Chiswick, England, assignor to W. H. S. Lloyd Co., Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1929, Serial No. 31,296, and in Great Britain Mar. 28, 1929. Term of patent 7 years.



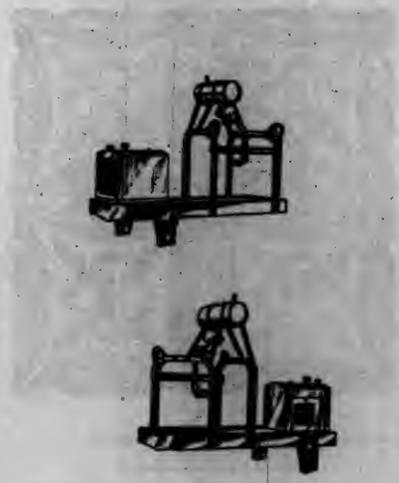
The ornamental design for wall-paper, as shown and described.

81,007. BANJO OR SIMILAR ARTICLE. ALBERT E. HUNTER, Oak Park, Ill., assignor to Regal Musical Instrument Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1928. Serial No. 28,143. Term of patent 14 years.



The ornamental design for a banjo or similar article as shown.

81,008. STORE FRONT. EDWARD L. ILSON, Patchogue, N. Y. Filed May 28, 1929. Serial No. 31,442. Term of patent 7 years.



The ornamental design for a store front as shown.

81,009. SCALE. BERT W. KING, Detroit, Mich., assignor to Barnes Scale Company, Detroit, Mich., a Corporation of Michigan. Filed June 10, 1929. Serial No. 31,609. Term of patent 7 years.

The ornamental design for a scale substantially as shown.

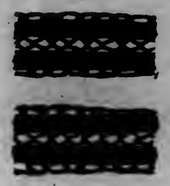
81,010. COMBINED CONCRETE-MIXER TRUCK BODY AND FRAME. PHILIP A. KOEHRING, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Mar. 27, 1926. Serial No. 17,078. Term of patent 14 years.

The ornamental design for a combined concrete mixer truck body and frame as shown.

81,011. LAMP OR SIMILAR ARTICLE. ERIC LAUDEL, Bronx, N. Y., assignor to Art Metal Spinning Co., New York, N. Y., a Firm composed of Eugene Stork and Eric Laudell. Filed Dec. 21, 1929. Serial No. 33,879. Term of patent 3½ years.

The ornamental design for a lamp or similar article, substantially as shown.

81,012. TOY. ALBERT T. LINNEY, Lexington, Ky. Filed Jan. 28, 1930. Serial No. 34,245. Term of patent 7 years.

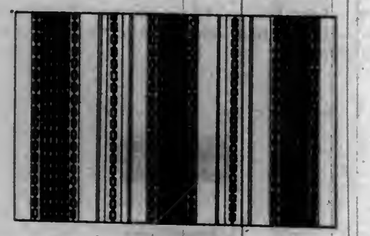


The ornamental design for a toy, as shown.

81,013. BRAID. CLARENCE LIPPER, Philadelphia, Pa. Filed Aug. 30, 1928. Serial No. 27,990. Term of patent 3½ years.

The ornamental design for braid as shown.

81,014. BRAID. CLARENCE LIPPER, Philadelphia, Pa. Filed Aug. 30, 1928. Serial No. 27,991. Term of patent 3½ years.



The ornamental design for braid, as shown.

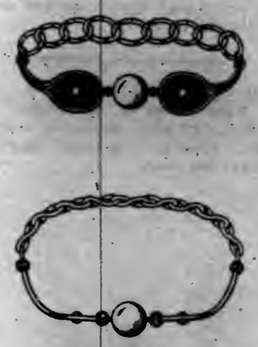
81,015. TEXTILE FABRIC. BENJAMIN S. NASH, Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,177. Term of patent 14 years.

The ornamental design for a textile fabric substantially as shown and described.

81,016. TICKING FABRIC. BENJAMIN S. NASH, Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed July 24, 1929. Serial No. 32,179. Term of patent 3½ years.

The ornamental design for ticking fabric substantially as shown.

81,017. CABINET FOR RADIO RECEIVING SETS. CARL M. OLSEN, Chicago, Ill., assignor to A. J. Johnson & Sons Furniture Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1930. Serial No. 34,119. Term of patent 3½ years.

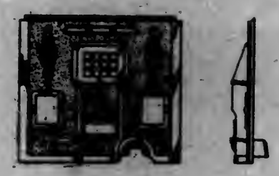


The ornamental design for a cabinet for radio receiving sets, as shown.

81,018. LACE. GEORGE RADFORD, Apponaug, R. I., assignor to Richmond Lace Works, Inc., Alton, R. I., a Corporation of Massachusetts. Filed Jan. 20, 1930. Serial No. 34,197. Term of patent 3½ years.

The ornamental design for lace as shown.

81,019. BRACELET OR SIMILAR ARTICLE. WILLIAM REICHERT, Mamaroneck, N. Y. Filed Jan. 21, 1930. Serial No. 34,203. Term of patent 3½ years.



The ornamental design for a bracelet or similar article substantially as shown.

81,020. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Feb. 19, 1930. Serial No. 34,593. Term of patent 7 years.

The ornamental design for a shoe buckle, as shown.

81,021. FRONT PANEL OF A GAME DEVICE. DAVID C. ROCKOLA, Chicago, Ill. Filed Oct. 18, 1929. Serial No. 33,095. Term of patent 3½ years.

The ornamental design for a front panel of a game device as shown.

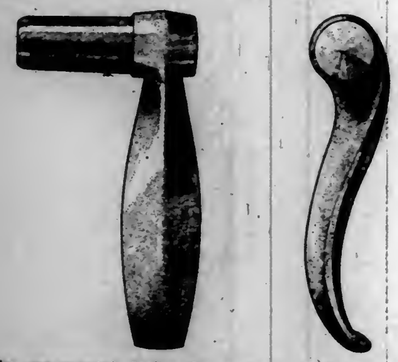
81,022. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. FREDERICK W. ROETTGES, Brooklyn, N. Y., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Jan. 30, 1930, Serial No. 34,351, and in Canada Dec. 4, 1929. Term of patent 3½ years.

The ornamental design for a lighting fixture of article of similar nature, as shown and described.

81,023. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. FREDERICK W. ROETTGES, Brooklyn, N. Y., assignor to Lighting Appliance Company, Inc., New York, N. Y. Filed Jan. 30, 1930. Serial No. 34,353. Term of patent 3½ years.

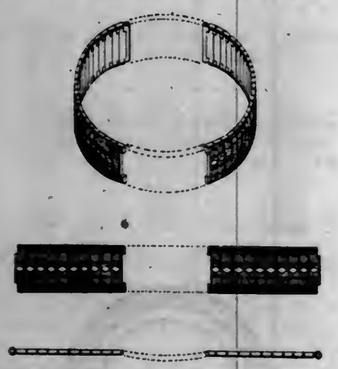
The ornamental design for a lighting fixture, or article of similar nature, as shown and described.

81,024. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, Brooklyn, N. Y. Filed Dec. 20, 1929. Serial No. 33,867. Term of patent 3½ years.



The ornamental design for a lighting fixture, or article of similar nature, as shown.

81,025. NECKTIE HANGER. JULIA C. SALZMAN, Toledo, Ohio. Filed Feb. 14, 1930. Serial No. 34,549. Term of patent 7 years.

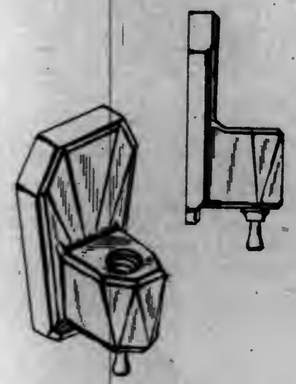


The ornamental design for a neck tie hanger, substantially as shown.

81,026. DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 17, 1930. Serial No. 34,164. Term of patent 7 years.

The ornamental design for a door handle or similar article for an automotive vehicle substantially as shown.

81,027. WATCH BRACELET OR SIMILAR ARTICLE. CARL SCHRAYSSHUEN, Providence, R. I., assignor to Speidel Chain Company, Providence, R. I., a Firm comprising Frederic Speidel and Eugen Speidel. Filed July 12, 1929. Serial No. 32,014. Term of patent 7 years.

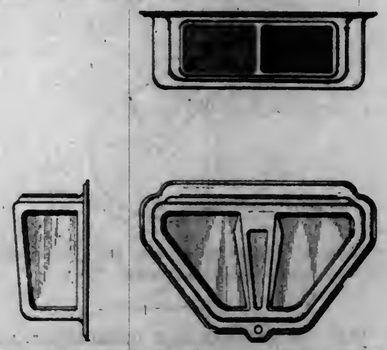


The ornamental design for a watch bracelet or similar article, as shown.

81,028. WOVEN FABRIC. FRED SCHULTHEISS, Woodhaven, N. Y. Filed July 20, 1928. Serial No. 27,539. Term of patent 7 years.

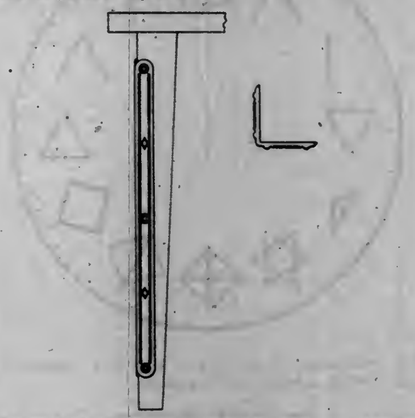
The ornamental design for a woven fabric, as shown.

81,029. ELECTRIC FIXTURE. SOLOMON SHARLIN, Trenton, N. J. Filed Dec. 9, 1929. Serial No. 33,725. Term of patent 3½ years.



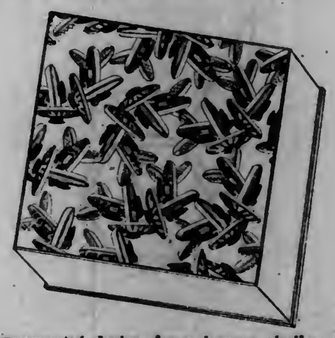
The ornamental design for an electric fixture as shown.

81,030. LOUD-SPEAKER. JOHN MCWILLIAMS STONE, St. Charles, Ill., assignor to Operadio Manufacturing Co., St. Charles, Ill., a Corporation of Illinois. Filed July 26, 1929. Serial No. 32,216. Term of patent 14 years.



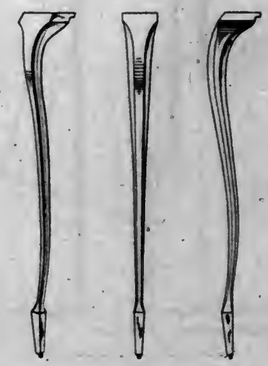
The ornamental design for a loud speaker, as shown.

81,031. RECEPTACLE FOR SMOKERS' USE AND ARTICLES. GERTRUDE E. THOMPSON, Elgin, Ill., assignor to Van Sicklen Corporation, Elgin, Ill., a Corporation of Delaware. Filed Feb. 5, 1930. Serial No. 34,407. Term of patent 7 years.



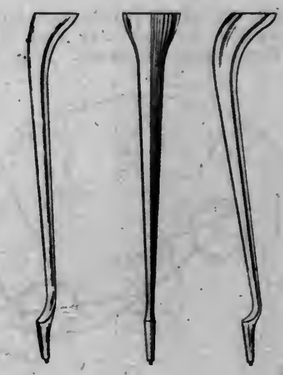
The ornamental design for a receptacle for smokers' use and articles as shown.

81,032. DESK PROTECTOR. HARRY L. TODD, Los Angeles, Calif. Filed June 17, 1929. Serial No. 31,727. Term of patent 14 years.



The ornamental design for a desk protector, as shown.

81,033. BOX OR SIMILAR ARTICLE. FERNAND TOURTOIS, New York, N. Y., assignor to Coty, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1929. Serial No. 33,882. Term of patent 14 years.

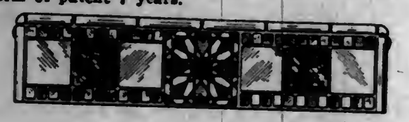


The ornamental design for a box or similar article as shown.

81,034. LAVATORY LEG. HARRY R. TROUT, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 26, 1929. Serial No. 30,623. Term of patent 3½ years.

The ornamental design for a lavatory leg, substantially as shown.

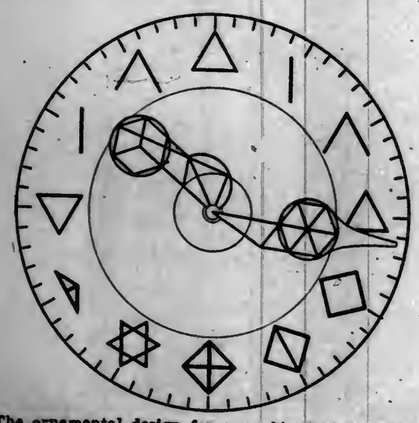
81,035. LAVATORY LEG. HARRY R. TROUT, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 26, 1929. Serial No. 30,624. Term of patent 3½ years.



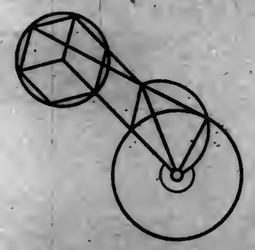
The ornamental design for a lavatory leg, substantially as shown.

81,036. LIGHTING FIXTURE ARM OR ARTICLE OF SIMILAR NATURE. BERNHARD E. ULVAD, Long Island City, N. Y., assignor to Ruby Lamp Mfg. Co. Inc., New York, N. Y. Filed Feb. 10, 1930. Serial No. 34,468. Term of patent 3½ years.

The ornamental design for a lighting fixture arm or article of similar nature, as shown.

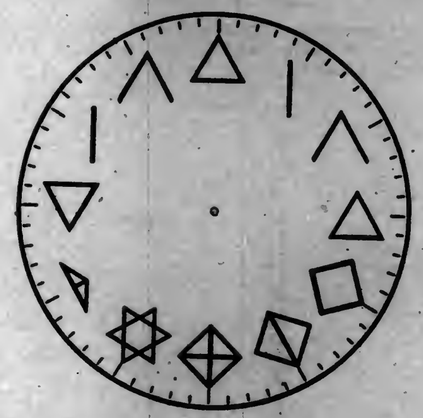


81,037. FERNERY. ARTHUR F. WALKERDINE, San Francisco, Calif. Filed Feb. 10, 1930. Serial No. 34,471. Term of patent 7 years.



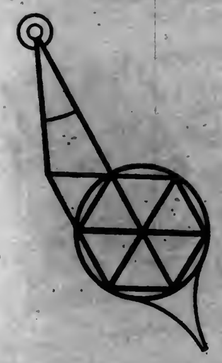
The ornamental design for a fernery as shown and described.

81,038. COMBINED DIAL AND HANDS FOR A TIMEPIECE. THOMAS T. WYNN, New York, N. Y. Filed Nov. 18, 1929. Serial No. 33,492. Term of patent 7 years.



The ornamental design for a combined dial and hands for a timepiece, as shown.

81,039. HAND FOR A TIMEPIECE OR SIMILAR ARTICLE. THOMAS T. WYNN, New York, N. Y. Filed Dec. 16, 1929. Serial No. 33,804. Term of patent 7 years.

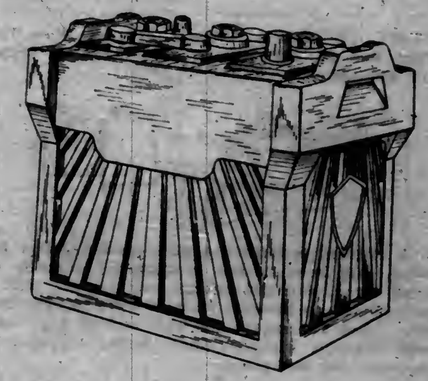


The ornamental design for a hand for a timepiece or similar article, substantially as shown.

81,040. DIAL OF A TIMEPIECE OR SIMILAR ARTICLE. THOMAS T. WYNN, New York, N. Y. Filed Dec. 16, 1929. Serial No. 33,805. Term of patent 7 years.

The ornamental design for a dial of a timepiece, or similar article, substantially as shown.

81,041. HAND FOR A TIMEPIECE OR SIMILAR ARTICLE. THOMAS T. WYNN, New York, N. Y. Filed Feb. 12, 1930. Serial No. 34,510. Term of patent 7 years.

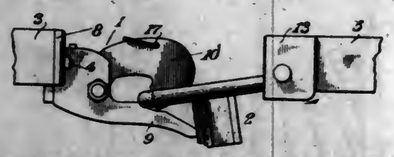


The ornamental design for a hand for a timepiece or similar article, substantially as shown.

81,042. PILE FABRIC. WINOLD REISS, New York, N. Y. Filed July 30, 1929. Serial No. 32,246. Term of patent 3½ years.

The ornamental design for a pile fabric substantially as shown.

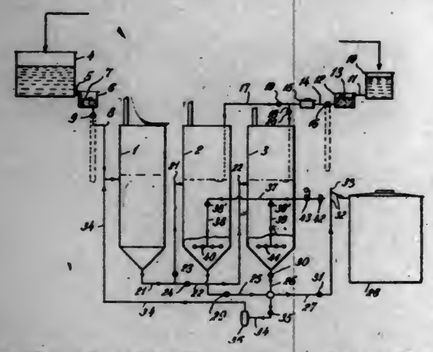
81,043. STORAGE-BATTERY CASE. BYRON M. SWEET, Barberton, Ohio. Filed Aug. 5, 1929. Serial No. 32,305. Term of patent 14 years.



The ornamental design for a storage battery case as shown and described.

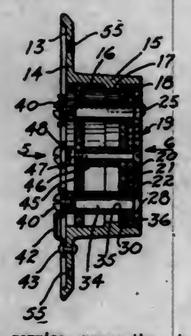
CARNEGIE LIBRARY OF ATLANTA

PATENTS



GRANTED APRIL 22, 1930

1,755,164. COUPLER. ANSON J. BENTLEY, Niles, Ohio. Filed Mar. 22, 1927. Serial No. 177,232. 2 Claims. (Cl. 280—33.15.)

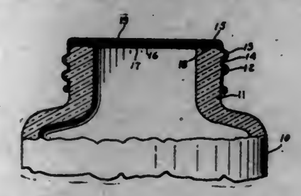


2. A coupling comprising a hook member and a link member, said hook member including a forwardly extending prong, said link member comprising a pair of arms adapted to be pivotally mounted and a rounded front portion adapted to engage said hook member, and means formed integrally with said arms forming a bumper for engagement with said prong.

1,755,165. MANUFACTURE OF SUGAR. ARTHUR W. BULL, Naugatuck, Conn., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 4, 1928. Serial No. 323,640. 15 Claims. (Cl. 127—50.)

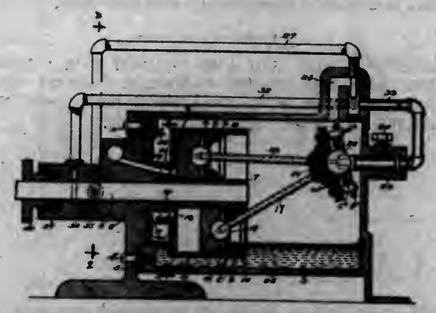
6. The method of treating beet juice in the manufacture of sugar which comprises mixing raw juice with carbonated juice.

1,755,166. ELECTRIC SERVICE CONNECTION. JAMES H. CANNON, Los Angeles, Calif., assignor to Cannon Electric Development Company, Los Angeles, Calif., a Corporation of California. Filed May 27, 1926. Serial No. 111,943. 10 Claims. (Cl. 173—324.)



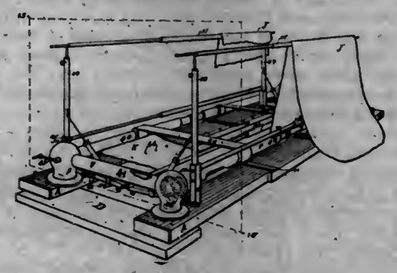
1. An electric service connection including: a body having a cavity; a bead mounted in said cavity and formed of an intermediate disc and two adjacent discs of insulating material, there being an elongated slot in the intermediate disc and openings in the adjacent discs, said openings being in registry with said slot; and a hollow receptacle having a body portion extending through the opening in one of said adjacent discs and provided with a shoulder disposed in said slot, said shoulder being larger than said openings so that the receptacle is retained against axial movement by the adjacent discs, and the body portion of the receptacle being smaller than the opening through which it extends so as to permit a transverse shifting of said receptacle.

1,755,167. ELECTRIC SIGNAL SWITCH. JOSEPH O. CADIEUX, Meriden, Conn., assignor, by mesne assignments, to Connecticut Telephone & Electric Corporation, Meriden, Conn., a Corporation of Delaware. Filed May 22, 1928. Serial No. 279,656. 14 Claims. (Cl. 200—163.)



1. A signal switch comprising a frame having a front plate and side bars, an insulating body supported by said side bars and having a center contact pin, contact fingers carried by said frame independently of said body, an operator guided in said front plate and a spring-pressed contact member movable thereby and co-acting with said contact fingers and with said guide pin.

1,755,168. CLOSURE. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 3, 1927. Serial No. 223,640. 1 Claim. (Cl. 215—43.)

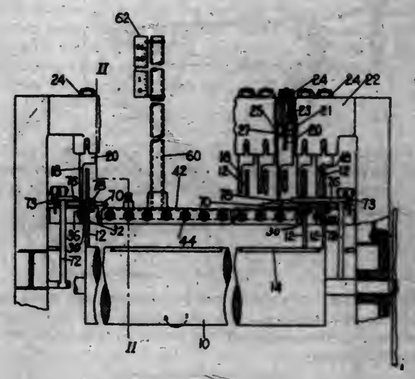


The combination with a container having an externally screw threaded neck, of a closure cap therefor comprising a flat circular top and a screw threaded depending flange to engage the threads on said neck, a circular flat metal bearing plate within the cap parallel with and in contact with said top, said plate being of considerably less area than the inner face of the top portion, a liner within the cap parallel with and in contact with the lower face of said bearing plate, said liner having a wax facing on the side opposite the bearing plate, said liner being of an area to snugly engage its periphery with the flange of the cap and thereby hold said cap, plate and liner together prior to application of the cap to the container and preventing contact of said liner with the upper surface of the container during the application of the cap to the container, except while the liner is being compressed between the upper surface of the container and the marginal portion of the bearing plate and said top during the final rotative movement of the cap as the latter is screwed home on the container.

1,755,169. PUMP OR ENGINE CONSTRUCTION. CHARLES A. ANDERSON, Chicago, Ill. Filed Aug. 8, 1925. Serial No. 49,137. 11 Claims. (Cl. 230—178.)

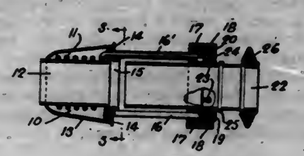
1. The combination of a main support, a drive shaft in said support having a rotary element secured thereto, ported cylinders in said element, pistons in said cylinders, hollow connecting-rods operatively connected at one of their ends to said piston and at their other ends to a stationary point radially removed from an extended axial line of said drive shaft.

1,755,170. BURIAL APPARATUS. CHARLES W. BAKER, Lake Charles Park, Mo. Filed Jan. 28, 1928. Serial No. 250,206. 3 Claims. (Cl. 27—32.)



1. In a burial apparatus a covering mechanism comprising an upper two-part fabric cover holding frame; a lower two-part fabric cover holding frame; an elastic and detachable connection between said upper and lower frames; and a casket-lowering apparatus arranged by the lowering of a casket to successively actuate said upper and lower holding frames.

1,755,171. INSTRUMENT CASE. HERMAN BARTENBACH, Pittsburgh, Pa. Filed June 6, 1928. Serial No. 283,271. 4 Claims. (Cl. 58—90.)

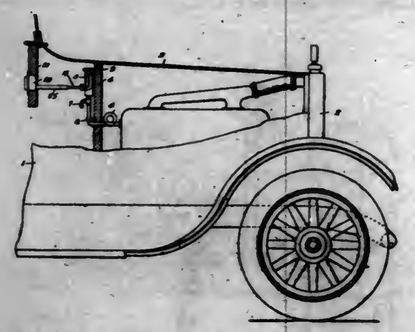


1. In an instrument case of the character described, a hollow body portion including a removable bezel provided with a crystal member, and means for sealing the connections of said bezel with said crystal member and with said body portion for preventing the passage of all extraneous matter through said connections.

1,755,172. MEASURING MACHINE. JOHN M. BENJAMIN, Beverly, Mass., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Jan. 30, 1928. Serial No. 250,526. 29 Claims. (Cl. 33—124.)

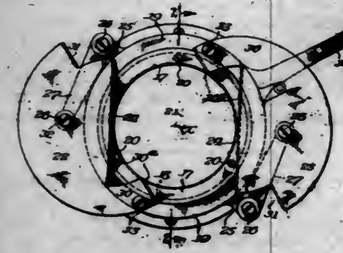
1. In a measuring machine, a support for a piece of work, a plurality of independently movable measuring members for engaging a piece of work on the support, each measuring member being continuously moved through frictional contact with the work to measure a length dimension of the work during relative movement of the member and the piece of work, an enclosed body of fluid, means operated by each measuring member to act on the fluid to cause displacement thereof in accordance with the extent of movement of the measuring member, and means controlled by the fluid displacement to indicate the total work measurement effected by the measuring members.

1,755,173. COMBINATION HEATER FOR PERMANENT WAVING. JAMES C. BROWN, New York, N. Y., assignor to Ernest O. Frederics, New York, N. Y. Filed Oct. 18, 1927. Serial No. 226,862. 10 Claims. (Cl. 219—24.)



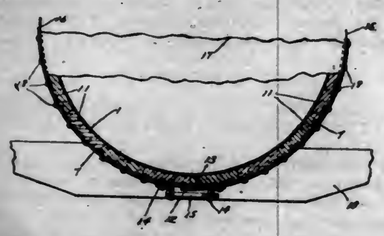
1. In electrical heating apparatus adapted for use in the permanent waving of hair, in combination, a relatively short tubular heater member having a tress-enclosing tube, and means on said tubular heating member for receiving an auxiliary tubular member in continuation of said tube whereby the effective length of the application of heat from the heater member is increased.

1,755,174. RADIATOR METER. PAUL P. CARBT, Chicago, Ill. Filed Feb. 16, 1927. Serial No. 168,713. 1 Claim. (Cl. 73—82.)



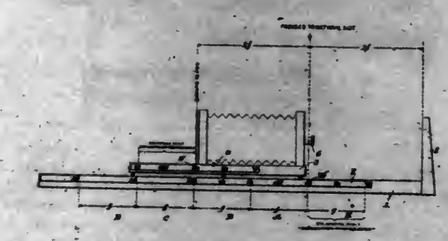
The combination with the water circulating system of an automobile, said system including a radiator, of a water box having its top substantially level with that of the radiator and provided with an air vent, a flexible water conduit leading from said water box into the water circulation system, a float in said water box, a hinged closure for the air vent in said water box and operative-

ly supported by said float, a graduated dial arranged in the dash of the automobile, an indicator movable over the face of said dial, and actuating means for said indicator connecting it to said float, said means comprising a rod



bent between its ends so as to provide two arms at an angle to one another, one arm adjustably receiving the float and a rotary pipe pin-connected to the other arm and actuated thereby.

1,755,175. DOWSER OR DIAPHRAGM FOR MOTION-PICTURE APPARATUS. AUGUSTO DINA, Jersey City, N. J., assignor to The Precision Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,623. 12 Claims. (Cl. 88—19.3.)



12. In a device of the character described, in combination, a plurality of sections having complemental edges, a movable actuating member having pivots thereon, pivots for said sections, means for relatively moving the pivots of said sections and actuating member, and relatively angularly movable members extending between and connected to the pivots on both said sections and actuating member for maintaining the edges of said sections substantially parallel during movement.

1,755,176. TANK. HARVEY FELDMEIER, Little Falls, N. Y., assignor, by mesne assignments, to Cherry-Burrell Corporation, Wilmington, Del., a Corporation of Delaware. Filed Sept. 23, 1926. Serial No. 137,221. 5 Claims. (Cl. 220—1.)

1. A tank for transporting liquids under conditions which create torsional stresses in the walls thereof which comprises a container of relatively thin sheet metal, a layer of heat insulating material entirely surrounding said container, and a stress-resisting jacket enclosing said layer and container, and means to draw and hold said jacket in uniformly close contact with said layer.

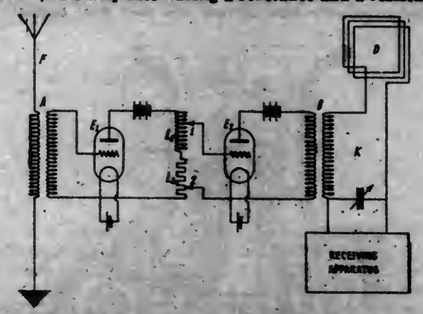
1,755,177. SCALE AND ATTACHMENT FOR REDUCING AND ENLARGING CAMERAS. ARTHUR FRUWIRTH, Brooklyn, N. Y. Filed Dec. 7, 1927. Serial No. 238,355. 2 Claims. (Cl. 88—24.)

1. The combination with a process or copying camera, of a pair of focusing scales coacting therewith, said scales consisting of a minor conjugate scale and a major conjugate scale, said minor scale being attached to the carriage of the camera and the major scale to the stationary base of the camera, both of said scales having a zero graduation line and other lines at angles to the zero line, the angles of said other lines being greater as the distance increases from the zero line, a pointer connected to the lens frame of the camera positioned to move over the major scale, and a second pointer secured to the ground glass frame positioned to move over the minor scale, said pointers coacting with said graduation lines to rectify inaccuracies in the lens.

1,755,178. COMPOSITION FOR REPELLING INSECTS. DUDLEY H. GRANT, Moorestown, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Dec. 29, 1928. Serial No. 329,314. 7 Claims. (Cl. 167—22.)

6. An insect repellant comprising terpinyl acetate, a mineral oil, and an emulsifying agent.

1,755,179. SULPHONIC ACIDS OF HIGH WETTING, CLEANING, AND EMULSIFYING POWER. FRITZ GÜNTHER, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Dec. 28, 1926, Serial No. 157,613, and in Germany Dec. 28, 1925. 6 Claims. (Cl. 260—159.)



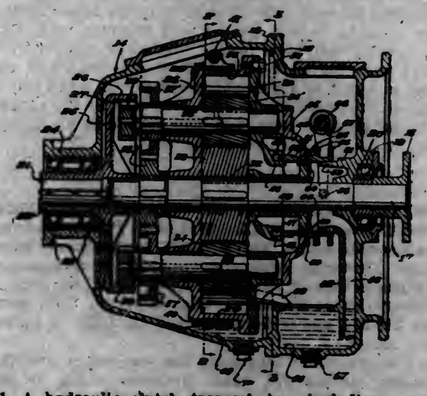
1. The process of producing sulphonic acids of high wetting, cleaning and emulsifying power which comprises condensing an aromatic hydrocarbon with at least two different derivatives of non-armoatic hydrocarbons and sulphonating in a stage of the process.

5. As a new article of manufacture, aromatic sulphonic acids substituted by at least one propyl and at least one butyl group.

1,755,180. ARRANGEMENT FOR DIRECTIONAL RECEIVING. ALF HERZOG, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed June 5, 1924, Serial No. 717,914, and in Germany June 13, 1923. 10 Claims. (Cl. 250—11.)

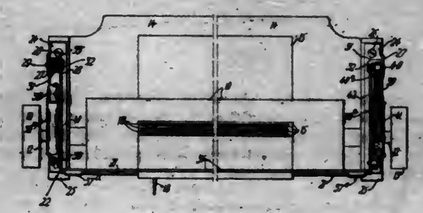
4. In combination, a tuned directional and an aperiodic non-directional antenna, means for coupling said antenna

comprising a circuit coupled to the directional antenna and a radio frequency amplifier coupled to the non-directional antenna, said amplifier having a reactance and a resistance



in its output common to the circuit coupled to the directional antenna, means adjustably associated with said reactance for regulating phase relation between said antenna.

1,755,181. CONDENSER. GEORGE JACOBS, Detroit, Mich. Filed Aug. 24, 1923. Serial No. 659,171. 4 Claims. (Cl. 175—41.5.)

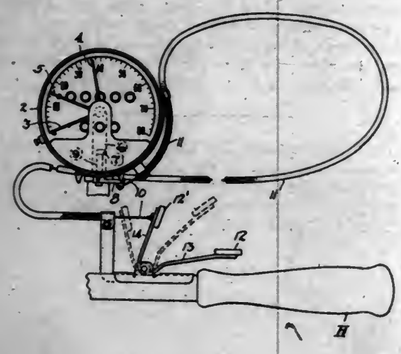


1. In a condenser, the combination of a base and a shaft rotatably carried thereby, a sleeve mounted on the shaft, a series of disks of insulating material mounted on the sleeve, means to cause alternate disks to rotate with the sleeve, means to cause alternate disks to remain stationary, plates of metal mounted in said disks and having parallel sides, and conductors connecting to the two groups of disks, part of said conductors comprising thin plates on said shaft and having tongues engaging alternate plates and the other conductors consisting of flexible strips connecting to fingers projecting through the peripheries of said disks, and a binding post to support said flexible strips.

1,755,182. HYDRAULIC CLUTCH TRANSMISSION. HARMON J. KLINE, Detroit, Mich. Filed Aug. 14, 1928. Serial No. 299,461. 15 Claims. (Cl. 74—34.)

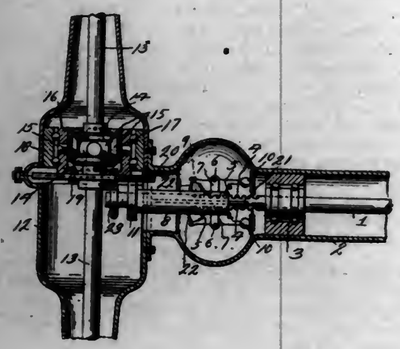
1. A hydraulic clutch transmission, including a main casing, a driving and a driven shaft journalled therein, a rotor casing connected to and rotatable with or independently of the driving shaft, a main rotor connected to the driving shaft, a plurality of coacting rotors mounted in the casing, planetary gearing connecting the rotors to drive the driven shaft, said rotor casing being provided with inlet and outlet ports adjacent the center portion thereof, means carried by the main casing and cooperating with the rotor casing to supply liquid to the rotor casing and the rotors and means for controlling the flow of liquid through the rotor casing to regulate the transmission effect from the driving to the driven shaft.

1,755,183. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 14, 1927. Serial No. 233,030. 5 Claims. (Cl. 197—144.)



2. In a typewriting machine having a rotary platen journaled in a platen-frame, the combination of an impression-strip of harder material set against the rotary platen longitudinally thereof at the typing line and substantially extending the length of the rotary platen, a horizontal frame or bail of flat material pivoted at the rear upon the sides of the platen-frame, depending flat arms extending from said bail at either side thereof to adjacent the typing line and carrying rigidly fastened thereon said strips, the so-formed angular frame-structure swingable from forward operative to rearward inoperative position, stops to limit the rearward throw of the bail, and spring-thrust means to resiliently hold the same in either position.

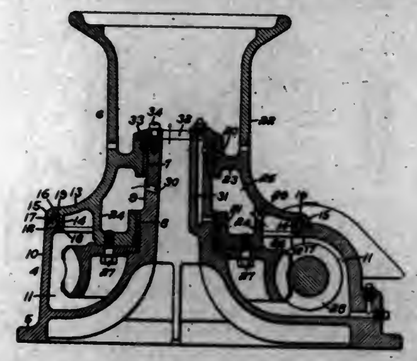
1,755,184. SPEED-INDICATING DEVICE. EUGENE F. MARTINET, Cleveland, Ohio, assignor to The Dual Speedometer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 22, 1928. Serial No. 327,799. 18 Claims. (Cl. 116—116.)



1. In a speed indicating device, the combination of a speed indexing member, a shaft adapted to operate said member, and connecting means optionally engageable and disengageable therebetween.

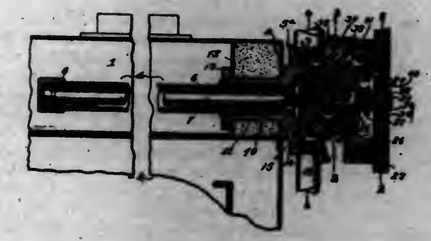
1,755,185. SPEED-INDICATING CONTROL MEANS. EUGENE F. MARTINET, Cleveland, Ohio, assignor to The Dual Speedometer Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1929. Serial No. 339,525. 12 Claims. (Cl. 116—133.)

1. Apparatus of the character described, which comprises a speed indicating means, means other than the prime mover for starting and stopping said indicating means, and remote-control means for operating said starting and stopping means.



1,755,186. TRANSMISSION. LEONARD C. MARTINSEN, Kimballton, Iowa. Filed Jan. 31, 1930. Serial No. 424,876. 3 Claims. (Cl. 74—97.)

1. A differential comprising axially alined driven shafts, gear train connections between the adjacent ends of the driven shafts, an antifrictionally mounted bearing sleeve supporting said gear connections, a friction drive disc carried by said sleeve, a drive friction wheel engaging said disc, a drive shaft, a sleeve carried by said drive wheel, said sleeve being longitudinally feathered on the drive shaft, centrifugally controlled gear segments carried by the sleeve, racks carried by opposite sides of the drive shaft with which the gear segments mesh.

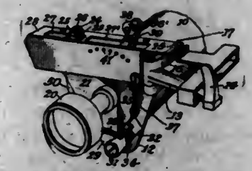


1,755,187. CAPSTAN. ALMON B. NORRIS, Brookline, Mass. Filed May 17, 1927. Serial No. 191,998. 4 Claims. (Cl. 254—150.)

1. In a capstan, the combination of a base and a column, said base presenting an outer wall and said column presenting an inner wall, between which walls there is a lower chamber having at its upper portion an annular opening, said column presenting an opening leading to the atmosphere, a head mounted to rotate about said column, said head presenting a closure for said annular opening, and a wall above said closure, there being an upper chamber between said closure and said wall thereabove,

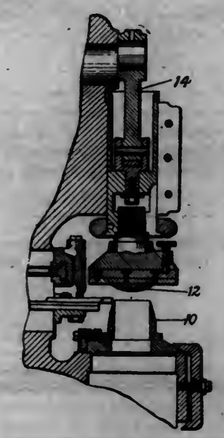
said closure being provided with a passage affording communication between said lower chamber and said upper chamber, and said inner wall being provided with a passage affording communication between said upper chamber and said opening leading to the atmosphere.

1,755,188. THERMOSTATICALLY-OPERATED FUEL-CONTROLLING DEVICE. HENRY W. O'DOWD, Jersey City, N. J., assignor to Standard Gas Equipment Corporation, a Corporation of Maryland. Original application filed Apr. 9, 1925, Serial No. 21,742. Divided and this application filed May 5, 1927. Serial No. 188,891. 6 Claims. (Cl. 236—15.)



1. In a thermostatic fuel controlling device, the combination of a valve casing, a thermostatic couple, a valve adjustably connected to said couple and movable by the latter to control the flow of fuel through the casing, a member rotatably mounted gas tight in the wall of the casing and engaged with the said valve for adjusting it, a plate mounted on said member and provided with teeth, and a rotary dial wheel formed with teeth adapted to interlock with the teeth on the plate and detachably connected with said rotary member; whereby the wheel may be adjusted circumferentially with reference to the member by disengaging the teeth, and may be held in its new position by the reengagement of the teeth.

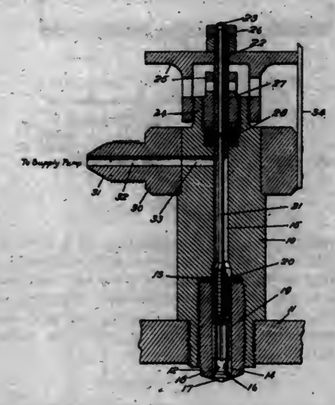
1,755,189. PRODUCTION OF VALUABLE PRODUCTS FROM MONTAN WAX. WILHELM PUNGS, Ludwigshafen-on-the-Rhine, and MICHAEL JAHRSTORFER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 10, 1927, Serial No. 218,854, and in Germany Sept. 13, 1926. 2 Claims. (Cl. 196—21.)



1. The process of separating the wax esters contained in refined Montan wax which comprises boiling the said Montan wax with concentrated acetic acid.

1,755,190. TYPEWRITING MACHINE. HENRY RESCH, Bayonne, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 30, 1926. Serial No. 125,885. 8 Claims. (Cl. 197—114.)

1. In a typewriting machine, the combination with a rotatable platen and its axle, of a ratchet-wheel having a tubular hub fixedly mounted on said axle, a cam-plate freely mounted on said hub, a rock-lever pivoted eccentrically of said wheel, a dog pivoted thereto, means for causing the dog to engage the edge of the cam-plate, means for locking the cam-plate at a desired position, and means for rocking said lever to permit the dog to engage a tooth of the ratchet to throw or sweep the platen through a predetermined line-space distance.

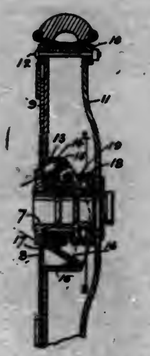


1,755,191. MACHINE FOR MANUFACTURING ARTICLES FROM SHEET MATERIAL. JOHN H. RICHARDSON, Melrose, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 11, 1926. Serial No. 128,629. 7 Claims. (Cl. 164—29.)

1. In a machine for producing heel lifts, a die having a plurality of cutting edges, and a cutting block having a convex surface of varying curvature and of substantially greater area than that bounded by the cutting edges of the die, the construction and arrangement being such that one of the cutting edges is of substantially the same curvature as that of a portion of the convex surface for co-operation therewith in forming the side and back edge portions of a blank, and another cutting edge is of substantially the same curvature as another portion of the block surface for co-operation therewith in forming the breast edge portion of the blank.

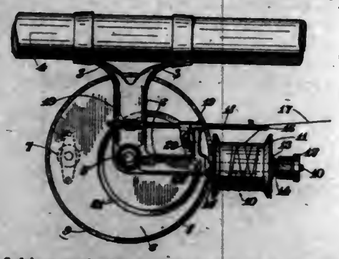
1,755,192. ATOMIZING VALVE. PHILIP LANE SCOTT, Chicago, Ill., assignor to Super-Diesel Tractor Corporation, La Porte, Ind., a Corporation of New York. Filed Dec. 14, 1925. Serial No. 75,661. 1 Claim. (Cl. 299—125.)

In a direct fuel injection system for internal combustion engines, an injection valve comprising a valve housing and a valve seat, and a valve member adapted to be seated upon such seat, a valve retainer comprising a metal rod firmly holding the valve member upon its seat, said retainer adapted to be elongated by pressure within the



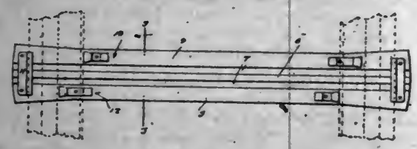
valve housing to permit opening of the valve, the valve member being removably attached to said rod and provided with a plurality of elongated guiding elements, such guiding elements being separated from each other and providing passages of restricted cross sectional areas.

1,755,193. PRODUCTION OF ACETONE. LEO SCHLECHT, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the Main, Germany, a Corporation of Germany. Filed Nov. 23, 1928, Serial No. 321,522, and in Germany Dec. 16, 1927. 14 Claims. (Cl. 260—134.)



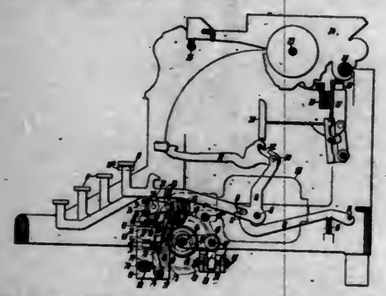
1. The process of producing acetone, which comprises passing acetaldehyde together with steam at a temperature between about 350° and 500° C. over a catalyst containing zinc.

1,755,194. SHOCK-ABSORBING DEVICE. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Jan. 13, 1928. Serial No. 246,441. 5 Claims. (Cl. 152—44.)



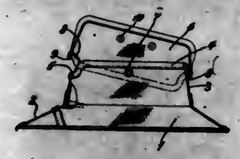
5. In a transmission, the combination with revoluble members; of driving and driven elements having contacting faces, the axes of which are obliquely arranged with relation to the axis of revolution of said members and resilient means adapted to hold said elements in co-operative relation.

1,755,195. FISHING REEL. WALTER STANLEY, Lutterworth, England. Filed Oct. 28, 1927, Serial No. 229,505, and in Great Britain Oct. 30, 1926. 4 Claims. (Cl. 242—84.4.)



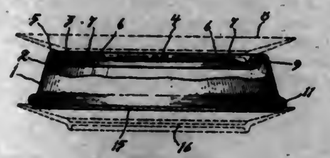
1. In a fishing reel, the combination of a rod, a stem carried thereby and substantially parallel with said rod, a spool rotatably mounted upon said stem and also endwise free thereon, a disc rotatable by the user engaging an end face of said spool, and a spring acting on said spool to thrust it resiliently into driving engagement with said disc, substantially as set forth.

1,755,196. RAIL TIE AND FASTENING MEANS. JAMES VAVORIES, Burdine, Ky. Filed Oct. 4, 1928. Serial No. 310,413. 4 Claims. (Cl. 238—10.)



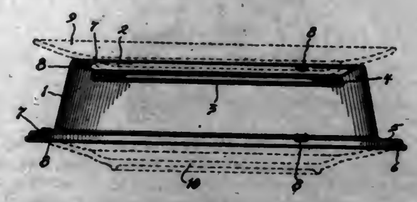
1. In a structure of the class described, the combination of a rail tie, an outer abutment clamp rigidly fastened to said tie adapted for engaging the outer flange of the base of a rail supported on the tie, a second retaining clamp secured to the tie adjacent one longitudinal edge of the tie and adapted to engage the inner flange of the bas of a rail, and a third retaining clamp secured to the tie adjacent the opposite longitudinal edge of the tie and adapted for engagement with the base flange of an extension rail for maintaining the tread of the extension rail in abutting relation with the first rail.

1,755,197. TYPEWRITING MACHINE. RICHARD VON REPPERT, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 15, 1927. Serial No. 219,607. 55 Claims. (Cl. 197—17.)



6. In a typewriting machine having type-bars connectible to depressible key-levers, a power-driven continuously rotating permanently magnetised key-lever actuator, and means carried by each key-lever and movable by the initial depression of said key-lever into the magnetic field of the rotating actuator to become effective to complete the depression of the key-lever and actuate its type-bar.

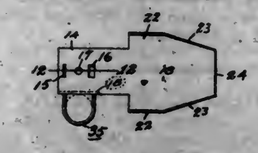
1,755,198. HAT. EDWARD WITTCOFF, St. Louis, Mo. Filed Aug. 13, 1928. Serial No. 299,250. 3 Claims. (Cl. 2—176.)



1. A hat comprising a brim, and a lower crown section in connection with the brim and having a notch in its upper edge at the front, in combination with an upper crown section telescoping upon the upper portion of said lower crown section and having a notch in its lower edge at the front, and means pivotally connecting said two crown sections together and permitting movement of said upper crown section to position to form a closed crown comprising said upper and lower sections or to position to form an open space between the notched edges of the two crown sections at the front of the head.

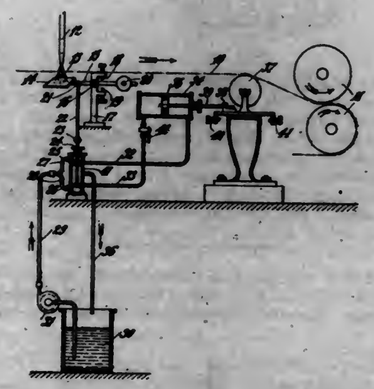
1,755,199. DISH COVER. JOHN B. ZALLIO, Chicago, Ill. Filed Aug. 13, 1927. Serial No. 212,742. 5 Claims. (Cl. 65—53.)

1. In an article of the character described the combination with a cup shaped body provided with a circular exteriorly facing marginal groove on the transverse wall thereof, of support means of restricted area on said transverse wall and disposed inwardly of said groove and projecting exteriorly.



1,755,200. DISH COVER. JOHN B. ZALLIO, Chicago, Ill. Filed Oct. 17, 1927. Serial No. 226,590. 4 Claims. (Cl. 65—53.)

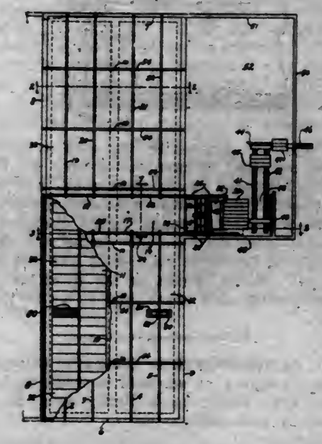
1. In an article of the character described the combination in a cup shaped body, of an annular substantially frusto-conical margin portion of the transverse wall of the body projecting inwardly and in the direction of the other end of the same, the center portion of said transverse wall being offset from said margin portion in the direction of the other end of the body, and an inwardly undercut annular connecting portion between said margin and center portions of said transverse wall.



1,755,201. WALL BRACKET. JASPER BLACKBURN, Webster Groves, and HERBWARD J. PEELE, St. Louis, Mo.; said Peele assignor to said Blackburn. Filed July 5, 1927. Serial No. 203,394. 2 Claims. (Cl. 248—36.)

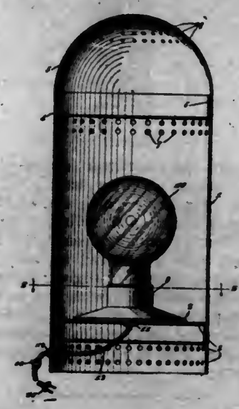
1. A wall bracket formed from a single piece of spring metal and composed of a head portion and a shank portion, an apron integral with said head portion, said head portion and apron being provided with rectangular openings for the reception of a fastening means, upturned wings tapering downwardly at their rear ends formed integral with the longitudinal edges of said shank portion

and adjacent said head portion, and a skew ring having certain of its edges serrated adapted to be inserted in said openings, said serrated edges to grip one of the edges of each of said openings whereby said ring can be adjustably secured therein.



1,755,202. APPARATUS FOR REGULATING LATERAL MOVEMENT OF LONGITUDINAL SIEVES. WALTER BRECHT and ERICH SCHAUN, Augsburg, Germany. Filed May 15, 1929, Serial No. 363,377, and in Germany Jan. 23, 1928. 8 Claims. (Cl. 92—44.)

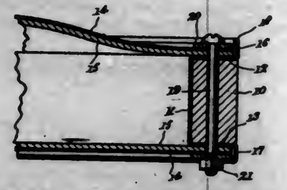
1. In a machine of the character set forth, consisting of a longitudinal web carrying sieve arranged to have lateral shifting from one position to another and a control roller controlling the shifting of the same, a counter-balanced vertically swingable strike plate, means for directing a jet of water upon the strike plate whereby to operate the same, positioned to insure interception of the jet of water by the sieve when the latter is in one position of movement, and means controlled by the operation of the strike plate controlling the operation of the control roller.



1,755,203. ICE PLANT. GEORGE B. BRIGHT, Detroit, Mich. Filed May 17, 1929. Serial No. 363,941. 4 Claims. (Cl. 62—105.)

1. In an ice plant, the combination of a freezing room comprising an area devoted solely to one or more ice freezing tanks with their insulated space together with one or more freezing units contained therewithin, said freezing room being provided with wall supporting structures, one or more continuous monorails above said one or more freezing units, said one or more continuous monorails being supported from the wall supporting structures of said freezing room, and means for moving a portion of each continuous monorail out of alignment with its remaining portion or portions to and beyond the limits of said freezing room through a common egress way from above the projected area of said freezing room, the traversed path of the portion of each continuous monorail moving out of alignment with its remaining portion or portions across

one of the sides of the projected area of said freezing room, having a width relatively less than the length of the traversed side of the projected area of said freezing room, and means for hoisting said freezing units, said last mentioned means being adapted to travel on each of said continuous monorails.

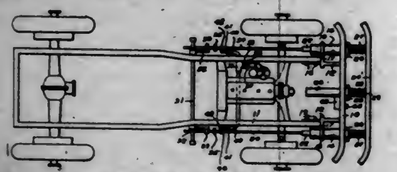


1,755,204. HEATING APPARATUS. OSCAR THOMAS BUFFALOW, Chattanooga, Tenn., and ALBIN HAJOS, Atlanta, Ga. Filed Nov. 21, 1928. Serial No. 320,998. 1 Claim. (Cl. 219—45.)

In an apparatus for the purpose set forth, a casing having a bottom plate therein at a distance from one end thereof and the second end of the casing being flanged inwardly, the said casing adjacent to the flange having a series of apertures, a hollow apertured cover removably received on the flanged end of the casing, said casing, adjacent to its bottom plate, having series of apertures therethrough and all of said apertures affording cold air inlets and hot air outlets, an electric bulb arranged approximately centrally in the casing, between the mentioned apertures, a threaded element passing through the bottom for sustaining the bulb in the casing and said element also providing a guide for insulated wires for the lamp bulb.

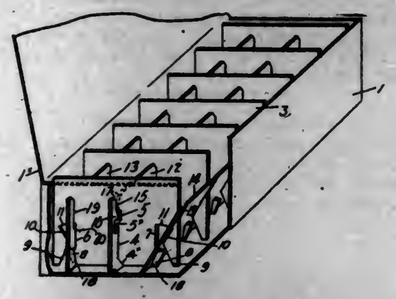
CARNEGIE LIBRARY OF ATLANTA

1,755,205. PNEUMATIC MATTRESS. JENS A. CHRISTENSEN, Omaha, Nebr. Filed Mar. 19, 1929. Serial No. 348,239. 2 Claims. (Cl. 5—348.)



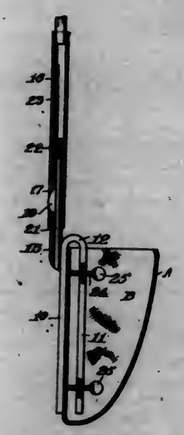
2. An improved pneumatic mattress comprising an open frame composed of bars, and a liner for the inside faces of the bars and having webs above and below the bars and provided with flanges outstanding from the free ends of the webs, said flanges having overturned edges, rubber sheets stretched over said frame and having the margin portions seated on said webs and the ends protected by said flanges, strips on the sheet margins, and fastenings securing said sheets and strips to the flanges and bars.

1,755,206. CASING CUTTER. WALTER L. CHURCH, Houston, Tex., assignor of one-half to William L. Pearce, Houston, Tex. Filed Aug. 2, 1926. Serial No. 126,426. 7 Claims. (Cl. 81—195.)



1. A device of the character described including a body, a fluid pressure cylinder associated therewith, a plunger in said cylinder, a valve controlling the admission of pressure fluid into said cylinder, radially movable cutters in said body, a mandrel connected to the plunger and whose lower end is adapted to work between said cutters and whose upper end is aligned beneath said valve, a yieldable member associated with the mandrel and normally holding the same in position to release said cutters and to hold said valve open, means connected to said cutters and normally tending to move them inwardly relative to said body.

1,755,207. AUTOMOBILE BUMPER. JACK COMISKEY, Kansas City, Kans. Filed May 22, 1929. Serial No. 365,196. 7 Claims. (Cl. 180—83.)

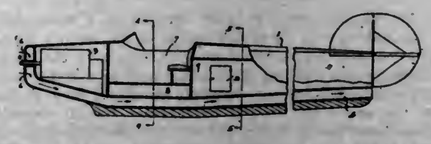


1. In automobile stopping means, a rear bumper, compression cylinders disposed upon the rear side of the rear bumper, near its ends and secured thereto, a forward bumper, rods secured to the forward bumper and operating within the compression cylinders, springs within the compression cylinders and serving to oppose the rearward movement of said rods, brake actuating means including a transverse rock-shaft, cranks secured to the rock-shaft near its ends and disposed near said rods, elements effecting a slidable connection between the cranks and rods, and stops mounted upon said rods and movable into engagement with said elements.

1,755,208. FILLER FOR EGG CARTONS. JOSEPH LEOPOLD COYLE, London, Ontario, Canada, assignor to Ephraim Banning, trustee, Chicago, Ill. Filed June 19, 1928. Serial No. 286,538. 14 Claims. (Cl. 217—32.)

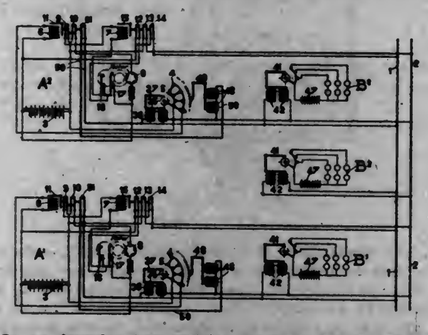
8. An egg filler or holder in which is comprised a plurality of cross-walls upstanding in parallel vertical planes, a pair of partitions intersecting the cross-walls on each side of the center thereof, said partitions being so constructed and connected to the cross-walls as to permit the partitions to be arranged into or out of parallelism, whereby to provide support against collapse of the cross-walls when in said last named position.

1,755,209. UMBRELLA-FASTENING MEANS FOR BAGS. JOSEPH R. DANNER, Wilmar, Calif. Filed Jan. 2, 1929. Serial No. 329,887. 10 Claims. (Cl. 135—9.)



6. A device as described consisting of a post, an umbrella handle securing means on said post, an under support for said post having downwardly extending parallel arms, and means carried by one arm for clamping the other arm upon the side of a flexible bag.

1,755,210. METHOD OF MAKING COUPLINGS. BURT E. DOHNER, Oakwood, near Dayton, Ohio. Filed Aug. 5, 1927. Serial No. 210,983. 2 Claims. (Cl. 29—148.)

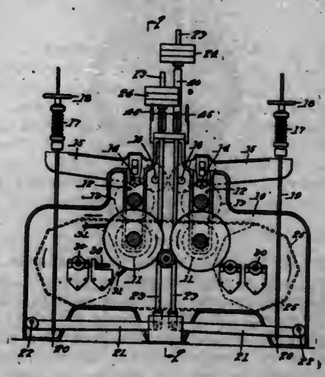


1. The method of coupling two cylindrical members, which consists in forming one member with a threaded recess having a tapering inner end to receive the other member, then applying a thinly connected double sleeve unit to the cylindrical member, the rear part of said unit being threaded and its front part being compressible, then forcing said unit into the recess until the connection between its front and rear parts is broken, and then forcing the compressible part of the unit as a separate piece into the tapering end of the recess, by screwing the threaded part of the unit further into the recess, for the purpose specified.

1,755,211. FUSELAGE FOR AEROPLANES. WALTER K. DWELLE, Houston, Tex., assignor of forty per cent to John T. Deaver, twelve and one-half per cent to James Lawlor, and seven and one-half per cent to C. C. Cunningham, Houston, Tex. Filed Oct. 17, 1927. Serial No. 226,714. 1 Claim. (Cl. 244—30.)

In an aeroplane, a fuselage having an air channel in the bottom thereof extending from end to end thereof and whose forward end is upturned and terminates in an air inlet port at the extreme front end of the fuselage, said fuselage having a cockpit with a storage chamber beneath it and a storage chamber behind it, above said air channel, said fuselage having a gas chamber on each side of the cockpit and entirely surrounding said storage chambers on each side and above, and cross braces reinforcing the walls of said gas chamber.

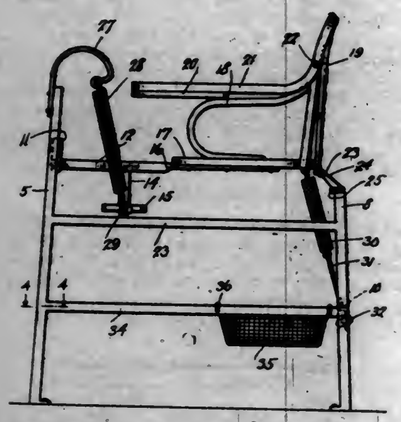
1,755,212. ELECTRICAL SELECTING CIRCUITS. FRANÇOIS FAVARGER, Neuchatel, Switzerland, assignor, by mesne assignments, to The Teleregister Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 21, 1926, Serial No. 82,884, and in Switzerland Jan. 24, 1925. 1 Claim. (Cl. 177—353.)



In an impulse transmitting arrangement for the distant control of indicators associated with a line circuit, a plurality of similar impulse transmitting devices, each comprising, a multiposition selector switch manually movable to different positions, a second movable multiposition selector switch, means whereby the second selector switch is moved from position to position in response to impulses applied to the line circuit, means whereby the first selector switch is additionally moved from position to position in response to impulses applied to the line circuit, a relay having a circuit controlled by the relative positions of said two selector switches, means including a second relay controlled by the operation of the first relay when the selector switches are moved out of coincidence for applying a number of impulses to the line circuit proportional to the amount of relative movement of the selector switches, whereby when any one of the manually operated selector switches is moved relatively to the second selector switches, the first and second relays cooperate to supply the line circuit with a number of impulses proportional to the amount of movement and thereby also cause the operation of the impulse responsive moving means of each first and second selector switches, and means controlled by the first relay of a selector switch which is at the time controlling the supply of impulses to the line circuit to disassociate its associated additional impulse responsive moving means from the line circuit during the operation of such relay.

1,755,213. WAISTBAND. AARON FREYDBERG, New York, and JACOB MARCUS, Brooklyn, N. Y.; said Marcus assignor, by mesne assignments, to Olive K. Thomas and Joseph D. Malkin, trading as National Pad and Binding Company, Philadelphia, Pa. Filed Sept. 1, 1926. Serial No. 132,978. 3 Claims. (Cl. 2—236.)

1. As an article of manufacture, a length of waist band material including a stiffening and a lining strip superposed one upon the other and arranged with their edges adjacent at one edge of the length, the said edge of the length turned over upon the stiffening strip to form a crease between the turned over edge and the body of the length, and stitching through and about the crease, the crease forming a guide for the stitching of the band to a garment.

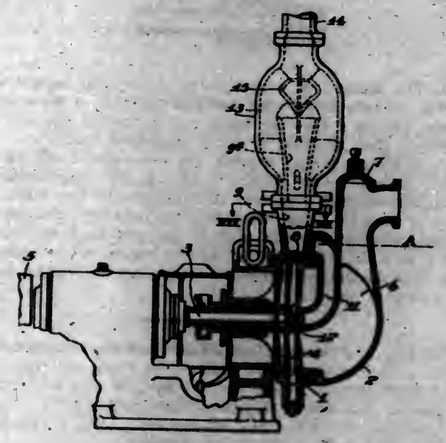


1,755,214. CONTINUOUS EXTRACTOR. FRANK L. FURBUSH, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1926. Serial No. 154,823. 5 Claims. (Cl. 100—37.)

1. In an extracting machine, the combination with a pair of extracting rolls, of an apron passing between them,

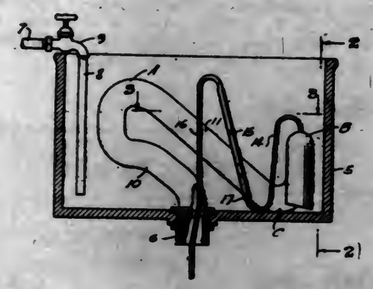
said apron being made up of plates free at their edges from each other and sprocket chains on each side connected with the several plates to complete the apron, whereby the passage of the apron between the rolls will drive it, means for driving one of the rolls, and positive means comprising a ratchet device for driving the apron at a lower speed whenever the press rolls do not drive it at a speed greater than said lower speed.

1,755,215. CHAIR. JOHN B. GLASS, Grand Island, Nebr. Filed Mar. 12, 1929. Serial No. 346,378. 5 Claims. (Cl. 155—55.)



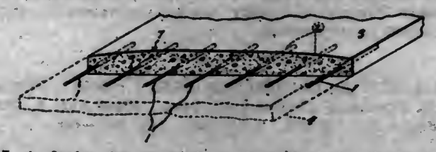
1. A structure of the class described comprising a frame, inverted U-shaped brackets secured in the frame, arms pivotally engaged between the extremities of the brackets, depending extensions on intermediate portions of the arms, a foot rest between the extensions, brackets mounted on the frame above the arms, springs engaged with the last mentioned brackets and with the foot rest.

1,755,216. DENTAL BLOWTORCH. RUDOLPH L. HANAU, Buffalo, N. Y., assignor to Hanau Engineering Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Dec. 13, 1927. Serial No. 239,679. 19 Claims. (Cl. 158—35.)



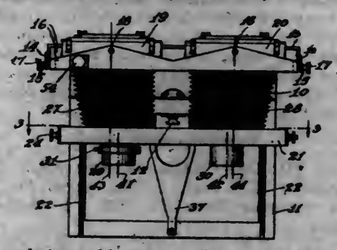
1. A dental blow torch, comprising a body having a fuel supply and a wick extending from said fuel supply and projecting outwardly therefrom, said body having an air storage chamber therein, a nozzle carried by said body and disposed at an angle to the projecting end of said wick, and an air pressure-inducing device carried by said body and having an air inlet and an air outlet, said air outlet having communication with said air storage chamber and said nozzle.

1,755,217. CENTRIFUGAL PUMP. OYSTEIN JACOBSEN, Dayton, Ohio, assignor to The Duriron Company, Inc., a Corporation of New York. Filed Mar. 6, 1929. Serial No. 344,714. 4 Claims. (Cl. 103—113.)



1. In combination in a centrifugal pump, a casing having an inlet eye at its center and a volute around its periphery, a separation chamber mounted above the pump, a discharge pipe leading from the volute to a point intermediate the ends of the chamber, an outlet pipe leading from the upper end of the chamber, a conical spreader member between the upper end of said discharge pipe and said outlet pipe, a runner or impeller mounted for rotation in the casing with its axis of rotation in line with the inlet eye, a suction elbow with an enlarged end cavity in opposition to and surrounding said inlet eye, and a priming conduit leading down from the chamber into said elbow with its end turned laterally in alinement with the axis of rotation of the runner and in opposition to said eye.

1,755,218. AUTOMATIC TANK SIPHON. PAUL E. JERTBERG, Glendale, Calif. Filed May 6, 1929. Serial No. 360,723. 9 Claims. (Cl. 137—106.)



1. The combination of a receptacle for liquid; a double curve siphon having one curve at the discharge end and the other at the receiving end, the latter curve forming an air trap; an air eduction tube connected to the curve at the air trap and ranging downwardly, thence upwardly to form a receiving limb of a siphon and thence downwardly to form a discharge limb, and a port of relatively small area in the receiving limb of the last named siphon, said port being in communication with the liquid in said receptacle.

1,755,219. EXPANSION JOINT IN CONCRETE PAVEMENTS. JEAN H. KNOX, Dallas, Tex., assignor of one-half to Associated Factories Corporation, Dallas, Tex., a Corporation of Delaware. Filed Feb. 18, 1929. Serial No. 340,827. 7 Claims. (Cl. 94—18.)

5. A device for connecting abutting ends of concrete slabs, comprising a plurality of telescopic units adapted to be embedded in the concrete, each unit comprising a sleeve, and a dowel frictionally held within said sleeve and spaced from the sleeve throughout the principal portion of its perimeter.

1,755,220. PHOTOGRAPHIC CAMERA. JACK WILLIAM L. KOEHNE, Chicago, Ill. Filed Nov. 30, 1928. Serial No. 322,715. 15 Claims. (Cl. 95—44.)

1. In a photographic camera, the combination of a bed, front and rear frameworks carried by said bed and extending substantially perpendicularly therefrom, said front framework being movable on said bed towards and from said back framework to focus the camera, two camera backs of substantially the same size carried side by side by said rear framework with their picture planes in substantially the same plane, two front boards carried side by side by said front framework, two bellows respectively connecting said camera backs and said front boards, two lenses of substantially the same focal length carried by said front boards, said front framework having guideways supporting said front boards for movement towards and from each other, and mechanism carried by said bed and said front boards moving said front boards towards and from each other respectively proportionally to movement of said front framework from and towards said rear framework, said lens axes being substantially parallel at all times, said mechanism comprising arms extending from said front boards and a cam plate carried by said bed and engaging said arms.

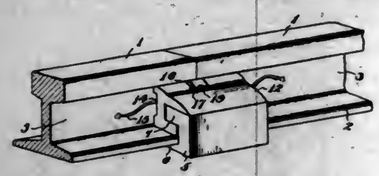
1,755,221. DEVICE FOR PERMANENT HAIR WAVES. STEPHEN LUPES, New York, N. Y. Filed Jan. 24, 1929. Serial No. 334,688. 1 Claim. (Cl. 132—33.)

A permanent waving unit of the class described including a hair setting core comprising a base plate formed with staggered side posts having confining lugs at the tops thereof, centrally arranged anchor posts and oppositely directed spring arms for the purpose set forth.

1,755,222. MOUNTING FOR ADVERTISING PLAQUES. HOWARD B. MINNICK, Chicago, Ill. Substitute for application Serial No. 746,350, filed Oct. 9, 1928. This application filed Feb. 28, 1930. Serial No. 432,042. 1 Claim. (Cl. 40—158.)

A mounting for advertising plaques to be used with an artificial light, comprising a body portion with slots therein, a detachable mount cut into a desired conformation, a spacing member secured to the back of the mount, and cut to conform to the shape of the mount but reduced in size therefrom, means to detachably secure said mount to the body portion, said means comprising fasteners secured to the spacing member and adapted to pass through the slots for fastening the mount detachably to the body portion.

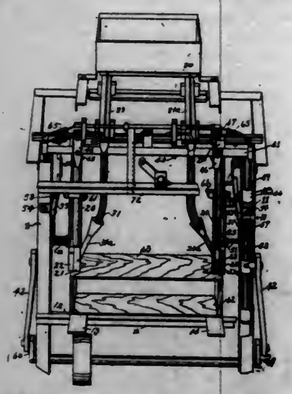
1,755,223. CAR-WINDOW CONSTRUCTION. KARL F. NYSTROM, Chicago, Ill. Filed Jan. 15, 1927. Serial No. 161,890. 9 Claims. (Cl. 98—93.)



1. In a car window construction involving an upwardly sliding window sash, a window frame, the ledge portion whereof beneath the sash supporting face is formed to provide a chamber within the ledge disposed lengthwise thereof and terminating in outwardly curved and oppositely disposed ends open to the car exterior, the intermediate upper portion of the ledge on which said sash rests being apertured whereby communication with said chamber within the ledge is established when the window sash is raised from said ledge.

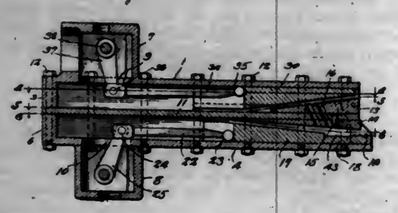
1,755,224. RAIL COUPLING. JOHN V. PALMER, Pittsburgh, Pa., assignor of one-third to Harry T. Neaman and one-third to James M. Magee, Pittsburgh, Pa. Filed Oct. 17, 1928. Serial No. 313,129. 2 Claims. (Cl. 238—208.)

1. A rail coupling including, in combination with rails having flanges, a chair plate having overhanging flanges



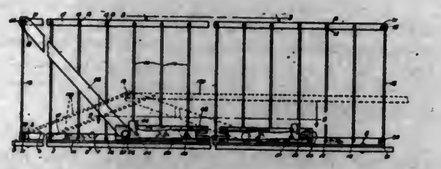
CARNEGIE LIBRARY OF ATLANTA

provided with notches, wedge plates engaging in the chair plate and having upper flanges, said upper flanges being provided with openings to align with the notches in the chair plate when the wedge plates are driven into position,



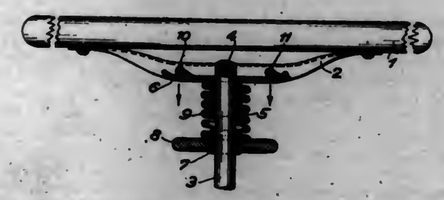
and keys extending through the openings and into the notches and locking the wedge plates in position, said keys being longitudinally curved to coact with the walls of said openings for locking the keys against retraction.

1,755,225. COMPENSATING DEVICE FOR NAIL-DRIVING MECHANISM. HALE PAXTON, Sanger, Calif. Filed July 21, 1928. Serial No. 294,339. 7 Claims. (Cl. 1—10.)



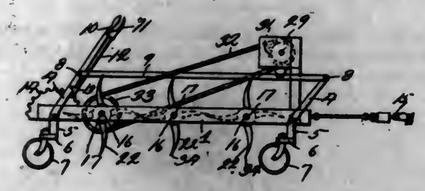
1. In combination with a box making machine having a nailing table, a driving head, and means for giving the driving head a vertical reciprocating movement, of a nail driving rod adapted to move downward with the driving head when interlocked therewith, a sleeve member adapted as a slideway for the driving rod, said sleeve having a downward movement controlled by means independent of the nail driving means, said sleeve having means at the lower end thereof adapted to position nails for engagement with said nail driving rod, means for engaging the nail driving rod with the driving head, and means on the sleeve adapted to disengage said nail driver means with said driving head when said nail driving means is in a predetermined relation with the sleeve.

1,755,226. BURNER. HENRY ROBICHAUX, Lafayette, La. Filed Nov. 13, 1928. Serial No. 319,076. 5 Claims. (Cl. 299—144.)



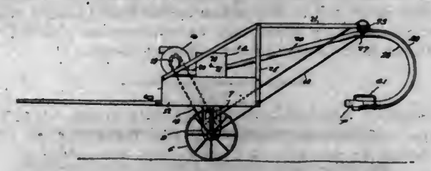
1. A burner including a housing, a partition therein, means for directing oil and steam into the housing at opposite sides respectively of the partition, inclined valve seats on the opposite sides respectively of the partition, tapered slide valves at opposite sides of the partition movable into and out of contact with the seats, an actuating element, and adjustable means shiftable by the actuating element for simultaneously moving the valves at predetermined relative speeds.

1,755,227. COLLAPSIBLE POULTRY COOP. WILLIAM W. ROBINSON, Chattanooga, Tenn. Filed Apr. 4, 1929. Serial No. 352,573. 4 Claims. (Cl. 220—6.)



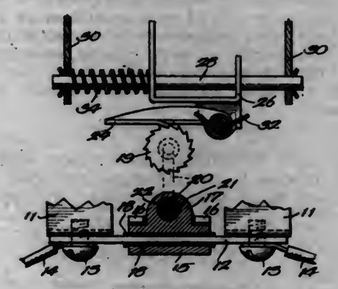
1. The combination of a container, an apertured top on the container, a door hingedly mounted upon the top for closing the aperture therein, a flexible handle means associated with the door and mounted for movement therewith, a gripping means responsive to flexing of the handle means, and means on the top of the container for cooperation with the gripping means for securing the door in locked condition relative to the top.

1,755,228. TILTING CHAIR. ALBERT STOLL, Koblenz, Switzerland. Filed Sept. 4, 1928, Serial No. 303,792, and in Germany Dec. 29, 1927. 6 Claims. (Cl. 155—77.)



5. A tilting chair comprising in combination, a central supporting rod, a pivot connecting the seat to the upper end of the rod directly beneath the seat, a plate slidable on the rod and engaging the seat, a coil spring surrounding the rod to urge said plate against the seat and the latter into normal position.

1,755,229. HARROW. HERMAN STONE, Greeley, Colo. Filed Apr. 6, 1929. Serial No. 353,086. 1 Claim. (Cl. 55—11.)



A harrow comprising a frame, transverse rock shafts within the frame at opposite ends thereof, levers mounted on said shafts intermediate the ends of the levers and rotatable therewith, caster wheels carried by the lower ends of said levers, link connections between the upper ends of the levers above their pivotal points, a handle member carried by one of said levers and forming means for simultaneously rocking all of the levers and rotatable separable interengaged toothed digging elements carried by the frame.

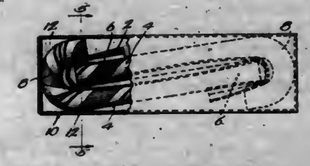
1,755,230. MECHANICAL COTTON PICKER. WALTER L. TURNER, Paris, Tex. Filed Jan. 2, 1929. Serial No. 329,786. 6 Claims. (Cl. 56—31.)

1. An apparatus of the class described including a wheeled receptacle, a casing on top of the receptacle in communication therewith and forming a part thereof, a suction creating means communicating with the front of the casing, flexible conduits leading from the rear of the casing to provide a current of air through the casing between said conduits and suction creating means, a rotary foraminous drum in the casing disposed in the current of air, the axis of said drum being transverse to and offset from said current of air, and cotton picking mechanisms on the free ends of said flexible conduits.

1,755,231. THERMAL OVERLOAD RELAY. HERMON L. VAN VALKENBURG, Milwaukee, Wis., assignor, by mesne assignments, to Square D Company, Detroit, Mich., a Corporation of Michigan. Original application filed Oct. 19, 1926, Serial No. 142,625. Divided and this application filed Jan. 25, 1928. Serial No. 249,472. 4 Claims. (Cl. 200—124.)

1. An electro-thermo-circuit breaker having a movable circuit controlling element, a detent for holding it, a receptacle for fusible alloy, the detent having a stem projecting into the receptacle and pivoted therein and immersed in the alloy whereby the same may be held against pivotal movement in the receptacle when the alloy is solid and released for pivotal movement in the cup when the alloy is fused, and an electro-thermo-heating element adjacent to the receptacle for heating it and the alloy, said heating element forming a support for said receptacle.

1,755,232. CURTAIN FIXTURE. EDWARD E. WHITMORE, Chicago, Ill., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 4, 1929. Serial No. 330,170. 5 Claims. (Cl. 156—26.)

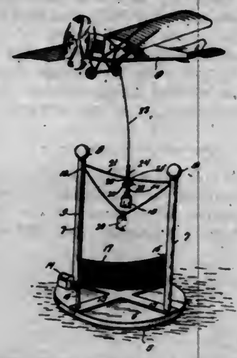


3. In a curtain fixture, a tube adapted to be secured to the lower end of a spring-wound window curtain, outwardly spring-pressed heads at the ends of the tube adapted to engage with guides at the sides of the frame in which the curtain is mounted, outwardly spring-pressed rods extending through the tube into the heads, rings positioned within the heads at the ends of the rods for frictional engagement with the guides under the pressure exerted thereon by the rods, and means in the heads beneath the rings for holding the latter in wedging positions against the guides when forced outwardly by the ends of the rods.

1,755,233. CURTAIN FIXTURE. EDWARD E. WHITMORE, Chicago, Ill., assignor to The Adlake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 4, 1929. Serial No. 330,171. 5 Claims. (Cl. 156—26.)

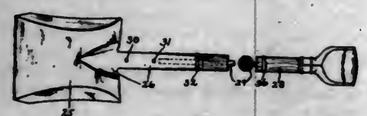
3. In a curtain fixture, a tube adapted to be secured to the lower end of a spring-wound window curtain, outwardly spring-pressed heads at the ends of the tube adapted to engage with guides at the sides of the frame in which the curtain is mounted, outwardly spring-pressed rods extending through the tube into the heads, curved cam members eccentrically pivoted to the outer ends of the rods independently of the heads for frictional wedging engagement with the guides independently of the heads under the upward moving tendency of the curtain, and means to limit the rocking movement of the cam members with respect to the rods.

1,755,234. MEANS AND METHOD OF PACKAGING CANDY CANES. BRASHER O. WESTERFIELD, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1928. Serial No. 270,241. 7 Claims. (Cl. 206—65.)



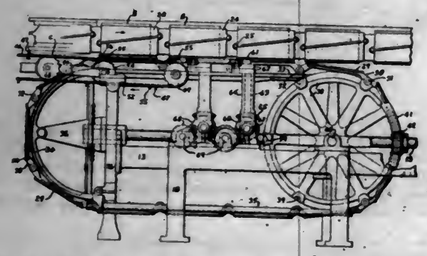
1. Means for packaging candy canes including a container for receiving a pair of canes arranged in nested relation with the top of one adjacent the bottom of the other, and means for insertion between a pair of said nested canes for exerting constant pressure to separate them.

1,755,235. AERIAL MAIL EXCHANGE. LUCY CHICHESTER ASHLEY and WILLIAM B. BAHN, Oklahoma City, Okla. Filed Nov. 15, 1927. Serial No. 233,420. 4 Claims. (Cl. 258—1.)



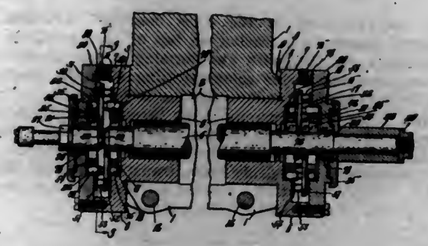
1. An aerial mail exchange comprising a turntable having a pair of upright masts mounted on opposite sides thereof, means associated with the masts for holding a mail pouch for transfer, said last named means embody-

lug slides vertically movable on the masts, and hoisting means for raising and lowering said slides, said masts



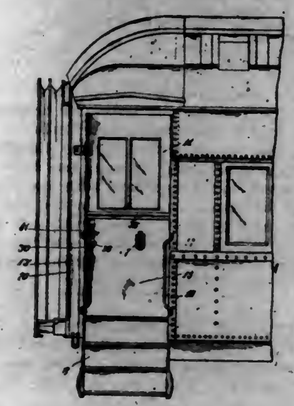
having undercut grooves in the inner sides thereof, and said slides embodying plates slidably held in said grooves and having wedge slots therein.

1,755,236. SHOVEL AND SHOVEL HANDLE. FRANCIS C. BRANDENBURG, Piqua, Ohio, assignor to The Wood Shovel and Tool Company, Piqua, Ohio, a Corporation of Ohio. Filed July 2, 1926. Serial No. 120,210. 5 Claims. (Cl. 294—57.)



1. A shovel comprising a blade having a handle socket with a wooden handle therein, a rivet which passes through the walls of the socket and through the handle, said handle having an axial bore occupied by a metal rod one end of which is adjacent to said rivet, the other end extending beyond the end of the socket, and means for securing the upper end of the socket to the handle.

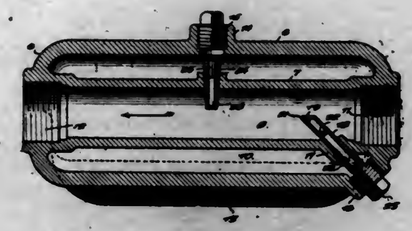
1,755,237. BOOK BINDING OR COVERING MACHINE. ALFRED BREDENBERG, Champlain, N. Y., assignor of one-half to The Sheridan Iron Works, a Corporation of New York, and one-half to T. W. & C. B. Sheridan Company, a Corporation of New York. Filed Nov. 14, 1927. Serial No. 233,105. 5 Claims. (Cl. 11—1.)



1. In a book binding or covering machine, a traveling conveyor for advancing a succession of books to be operated upon, a means for operating upon the successive books during travel, a common drive member or shaft, connections for advancing the conveyor comprising a first sprocket wheel and rigid link follower between the drive member and conveyor, and connections for actuating the operating means comprising, between the drive member and operating means, a second sprocket wheel, and a second rigid link follower engaged thereby in an actuating relationship timed correspondingly to that of the first sprocket and follower, whereby periodic variations of conveyor travel speed due to the action of the first sprocket wheel are substantially neutralized by synchronous periodic variations in the action of the operating means.

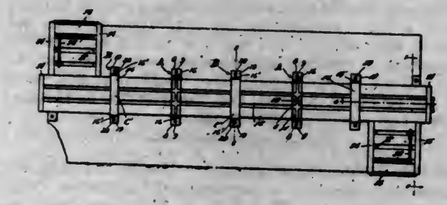
1,755,238. WHEEL HEAD AND THE LIKE. WILLIAM LE ROY BRYANT, Springfield, Vt. Filed Nov. 9, 1926. Serial No. 147,341. 7 Claims. (Cl. 308—203.)

1. A mechanism of the class described comprising a casing having a pair of spaced internal annular walls, a shaft extending through said casing concentrically with said walls, rollers arranged in a pair of series, each roller having portions of small diameter in rolling engagement with said walls and a portion of large diameter in rolling contact with said shaft, said large diameter portions of the rollers of the two series bearing on said shaft at different positions lengthwise thereof, said large diameter portions and said shaft being complementally bevelled at their engagement, the direction of bevelling being reversed at said different lengthwise positions, and means for holding said rollers against axial movement due to such bevelled engagement.



1,755,239. CAR VESTIBULE AND DOOR ARRANGEMENT. EDWARD F. CARRY, Chicago, Ill. Filed Oct. 8, 1928. Serial No. 311,114. 17 Claims. (Cl. 105—429.)

1. In car vestibule construction, the combination comprising the platform, doors having sections operable successively, and locking means associated with said doors to successively release said sections.

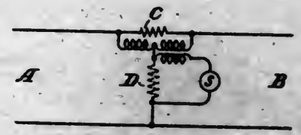


2. In car vestibule construction, the combination comprising the platform, doors having sections operable successively, and associated locking means upon opposite sides of said doors, said means being adapted to successively release said sections.

1,755,240. LUBRICATOR. OMAR E. CLARK, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Mar. 15, 1923. Serial No. 625,852. 10 Claims. (Cl. 184—55.)

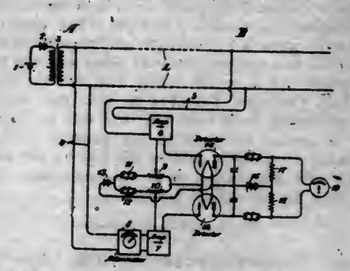
1. A lubricator, comprising a casing having a fluid passageway therethrough and a lubricant reservoir, means for permitting the flow of lubricant from the reservoir into the passageway, and means for creating pressure in the reservoir, comprising a stem extending between the passageway and reservoir and having a conduit opening into the latter, said stem having a portion extending into the fluid passageway and the said conduit having an inlet port opening into the passageway in opposition to the flow of fluid through said passageway.

1,755,241. RAILWAY-CAR-RUNWAY CONSTRUCTION. ROBERT W. COB and MILES M. BACON, Tampa, Fla. Filed Jan. 12, 1929. Serial No. 332,117. 3 Claims. (Cl. 105—457.)



1. In combination with the roof of a freight car a plurality of intermediate brackets mounted crosswise thereon in spaced relation, longitudinal strips mounted on the intermediate brackets, end brackets of greater length than the intermediate brackets each extending to one of the longitudinal sides of the roof and adapted to support one end of the strips, comparatively short strips mounted on the extended portion of the end brackets, supporting legs on the end brackets, a lateral extension thereon having an upwardly and rearwardly turned channel-forming marginal portion for the reception of the strip ends, and an upwardly and inwardly directed retaining tongue on one end of the end brackets for engagement with the upper faces of the comparatively short strips.

1,755,242. PROCESS OF REFINING CRUDE PHTHALIC ANHYDRIDE. COURTNEY CONOVER, St. Louis, Mo., assignor to Monsanto Chemical Works, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 29, 1926. Serial No. 151,605. 12 Claims. (Cl. 260—123.)



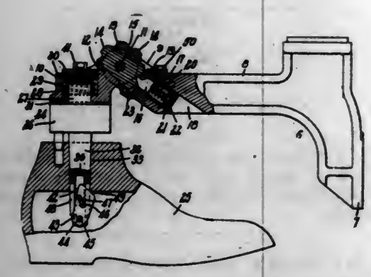
1. In a process of refining crude phthalic anhydride, the steps of adding an aldehydic reacting body to the crude material, and then boiling the mass.

1,755,243. SIGNALING MEANS FOR TELEPHONE SYSTEMS. GEORGE CRISSON, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 21, 1928. Serial No. 301,030. 15 Claims. (Cl. 179—84.)

15. In a transmission system, a network comprising an input and an output line and a measuring circuit, the measuring circuit and the output line being in conjugate relationship.

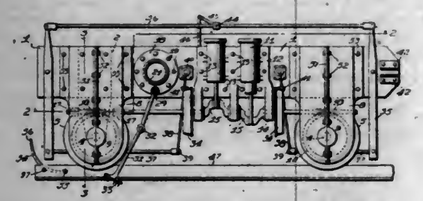
1,755,244. DEVICE FOR MEASURING LEVEL DIFFERENCES. EGINHARD DIETZE, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 20, 1928. Serial No. 327,441. 3 Claims. (Cl. 179—175.)

1. A device for measuring differences in volume level, comprising two separate input circuits, means for introducing variable amounts of loss or gain in one of said input circuits, means for introducing a controlled amount of gain in the other of said input circuits, rectifiers in each of said input circuits, a Wheatstone bridge comprising as its arms the output circuits of said detectors and two resistances, a common plate battery for said detector tubes connected across the junction points of opposite arms of said bridge, and a galvanometer connected across the junction points of the other opposite arms of said bridge.



1,755,245. NUT LOCK. AMSIH JOHN ELIAS, Decatur, Ill. Filed Dec. 31, 1928. Serial No. 329,559. 2 Claims. (Cl. 151—31.)

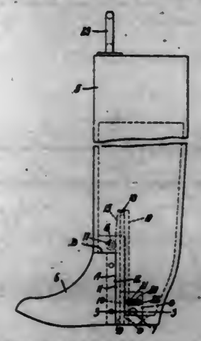
1. In a nut lock, in combination, a bolt having its threaded end slotted longitudinally, a nut mounted upon the threaded end of the bolt, the said nut having its bore diametrically enlarged at its outer end to form a socket, a threaded plug mounted in the said socket, spring clips upon the inner face of the said plug, a flat, wedge-like bolt expander rotatively seated in the spring clips, the opposite end of the said expander being adapted to enter into the said longitudinal slot of the bolt.



CARNEGIE LIBRARY OF ATLANTA

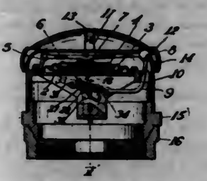
1,755,246. LASTING JACK. HOWARD G. ELLIS, Waltham, Mass., assignor, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Delaware. Filed Mar. 7, 1929. Serial No. 345,080. 7 Claims. (Cl. 12—123.)

7. A jack for a last having, in combination, a bracket, a connecting member pivotally attached to said bracket, a last holder rotatably mounted upon said connecting member and embodying therein a last pin, a last gripping member pivotally attached to said pin and provided with a cam slot therein, said gripping member being adapted to engage a last positioned upon the holder and lock the last thereto, a bolt yieldingly mounted in said last holder, and means projecting from said bolt into said slot and operatively connecting the bolt to the gripping member, the latter being actuated to release the last by the contact of said bolt with the bracket when the connecting member is moved to a predetermined position.



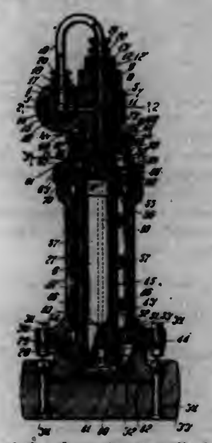
1,755,247. AGRICULTURAL DEVICE. JOHN SAMUEL FIELDING, East Gary, Ind. Filed Oct. 15, 1926. Serial No. 141,791. 5 Claims. (Cl. 97—47.)

1. An agricultural device comprising a vehicle, power means for propelling the vehicle, means for reversing the power means, work arms carried by the vehicle and extending laterally therefrom, and a series of reversible tools carried by the work ams, said tools having two sets of working points, one set being brought into play during the movement of the vehicle in one direction and the other set being brought into play automatically during the movement of the vehicle in the opposite direction.



1,755,248. BOOT-TREE. JOHN H. FLINK, Watertown, Mass., assignor, by mesne assignments, to Hood Rubber Company Inc., Watertown, Mass., a Corporation of Delaware. Filed Dec. 3, 1928. Serial No. 323,299. 12 Claims. (Cl. 18—46.)

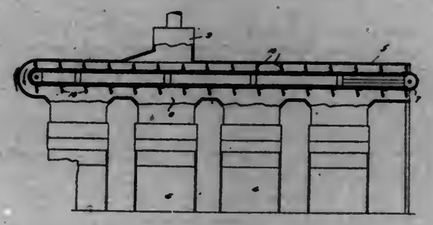
3. A boot tree or last comprising, in combination, a leg section and a toe section normally abutting together and also separable from each other, a guide member pivotally mounted upon said leg section, another guide member fast



to said toe section and slidable upon said pivoted guide member, and means to hold the toe and leg sections in abutting relation.

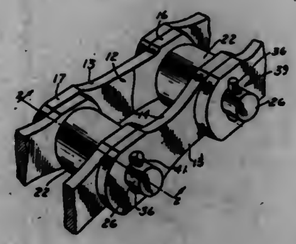
1,755,249. SIGNAL. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio. Filed Oct. 10, 1927. Serial No. 225,154. 9 Claims. (Cl. 116—101.)

1. A temperature alarm comprising an air motor consisting of an expansible chamber, a spring for expanding the chamber, a lever moved by the expansion and contraction of the chamber and operating a sound emitting device, a valve establishing communication between the chamber alternately with a source of suction and with the atmosphere, a resilient operating connection between the lever and the valve, a second valve between the first valve and the source of suction, and thermostatic means controlling said second mentioned valve.



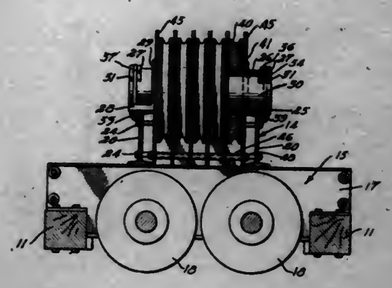
1,755,250. ROLLER JOURNAL. MARTIN FRISCH, St. Louis, Mo., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 9, 1928. Serial No. 253,080. 16 Claims. (Cl. 308—168.)

5. In a device of the character described, a shaft, means in which the upper portion of the shaft is secured for sus-



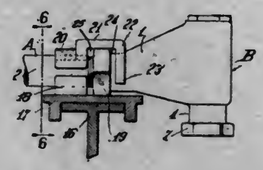
pending the shaft in a substantially upright position, a rotatable assembly including a housing and a pulverizing roller enclosing the lower portion of the shaft, bearings between the shaft and housing, means for lubricating the bearings, and sealing means between the upper end of the housing and the shaft comprising a collar on the shaft, there being a series of spiral grooves in the lower face of the collar, an annular cap on the housing projecting into proximity with the shaft and collar, and annular gaskets mounted in the cap and engaging the shaft and the lower face of the collar respectively.

1,755,251. DISTRIBUTOR SPIKE. PRESTON G. GADDIS, Oklahoma City, Okla. Filed Feb. 23, 1929. Serial No. 342,042. 3 Claims. (Cl. 19—78.)



1. A device of the character described, in combination, a distributor belt for use in a cotton gin, provided with a plurality of resilient distributor spikes extending at right angles thereto, each of said spikes being formed of flexible spring steel and provided with a substantially flat portion for attachment to the belt, said flat portion terminating at one end to provide a gradual curve terminating in a vertical portion, said vertical portion being crimped at its upper edge to provide a relatively flat section intermediate said curve and one end of the crimp.

1,755,252. UPSET LOCK PIN FOR CHAIN BELTS. EDWIN W. GOSSER, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed May 24, 1926. Serial No. 111,245. 8 Claims. (Cl. 74—32.)

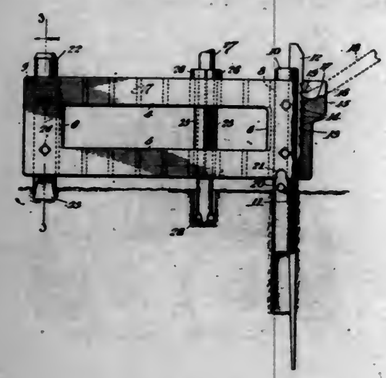


1. In a sprocket chain, the combination of: a pin having a head at one end, there being a hole bored through the opposite end of said pin; link parts having apertures so that when assembled said pin may be inserted through said parts; and a rivet having a head at one end and insertable in said hole, the other end of said rivet then being swedged to bear against one of said link parts to cooperate with said pin-head in unyieldingly clamping said link parts in fixed assembled relation upon said pin.

1,755,253. U-BOLT CONSTRUCTION. EDWIN W. GOSSER, Los Angeles, Calif., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 27, 1927. Serial No. 242,943. 16 Claims. (Cl. 308—18.)

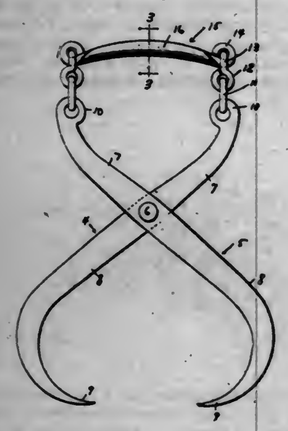
1. In a crown block construction the combination of: a frame providing a pair of horizontally spaced supports; a normally stationary sheave shaft; means for positioning end portions of said shaft upon said supports; a plurality of sheaves rotatably mounted upon said shaft; and means rigidly supported upon said frame and engaging said shaft between adjacent pairs of said sheaves to support a portion of the load imposed upon said shaft through said sheaves.

1,755,254. SUPPORTING MEANS FOR FLEXIBLE PIPE MECHANISM. EGBERT H. GOLD, Evanston, Ill.; Margaret Jayne Gold and Biscayne Trust Company executors of said Egbert H. Gold, deceased. Filed Sept. 26, 1927. Serial No. 222,034. 4 Claims. (Cl. 248—81.)



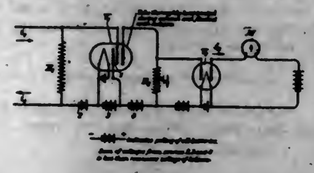
1. A supporting mechanism for a car train pipe and the end train pipe valve connected therewith comprising a support carried by the car, a cradle carried by the support on which the pipe is adapted to rest, there being an outwardly extending flange on the pipe-engaging end of the valve, said flange being adapted to rest on the support adjacent the cradle, and a clamping member secured to the cradle and having a portion adapted to engage over the pipe and a connected portion adapted to extend over the valve and provided with a downwardly projecting arcuate flange adapted to engage down behind the flange on the valve.

1,755,255. GUIDE FOR ROCK DRILLS. RICHARD GRIFFITH, Hydeville, Vt., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Nov. 5, 1926. Serial No. 146,519. 11 Claims. (Cl. 308—8.)



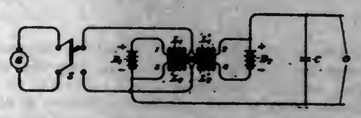
1. In a rock drill guide, the combination with a body having a guideway for the drill steel, of an anchor mov-

ably mounted on the body and adapted to engage in a drilled hole, and means for limiting the amount of in-



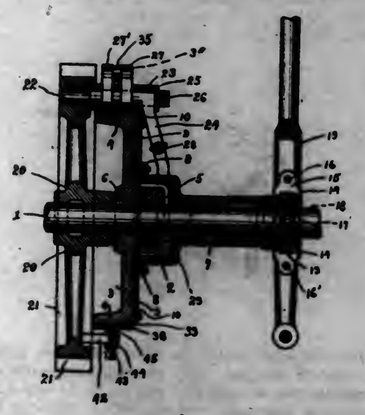
sertion of the anchor into the hole, said means also engaging the body and limiting the movement of the anchor in one direction therein.

1,755,256. ICE TONGS. ERNEST V. HARKNESS, Decatur, Ill. Filed Jan. 18, 1929. Serial No. 333,430. 1 Claim. (Cl. 294—118.)



A pair of ice tongs comprising a pair of crossed pivotally connected levers including handle portions and jaw portions, the pivotal connection being disposed between the centers and upper ends of said levers whereby to provide relatively short upper portions and comparatively long lower portions, and a carrying handle connected with the upper extremities of the said handle portion, said carrying handle comprising a longitudinally bowed channel shaped hand grip terminating at its opposite end in connecting hooks, and flexible connectors between the hooks and upper ends of said levers, said flexible connectors each including a ring connected with the complemental lever, and a double-eyed link connected with the ring and with the adjacent hand grip hooks, the eyes of said hook being turned at right angles with respect to each other.

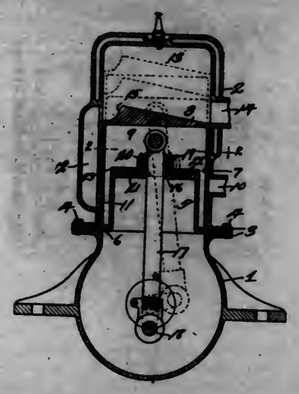
1,755,257. VACUUM TUBE AND METHOD OF PREPARING THE SAME. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed June 1, 1926, Serial No. 113,020. Divided and this application filed Apr. 26, 1927. Serial No. 186,785. 2 Claims. (Cl. 250—27.5.)



1. The method of preparing a bulb for use as a vacuum tube, which consists in exhausting the bulb of its gaseous contents, heat-treating the bulb during the exhaust process, admitting into the bulb a gas of a high ionization voltage, and repeating the exhaust and heat treatment.

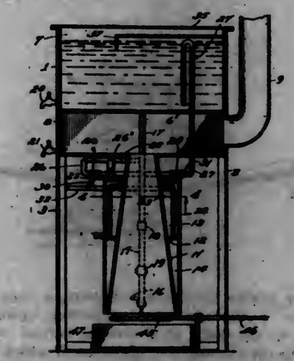
1,755,258. BATTERY-CHARGING CIRCUITS. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 12, 1929. Serial No. 354,607. 3 Claims. (Cl. 171—97.)

1. The combination of two storage batteries of equal terminal voltages, a transformer having two equal windings, one connected between the positive terminals of both batteries and another connected between the negative terminals of the batteries, and a source of direct current connected to the mid-points of both windings of the transformer.



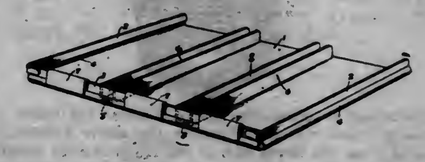
1,755,259. CLUTCH. OMAR R. HUMPHREYS and WALTER G. HUMPHREYS, Omaha, Nebr. Filed July 23, 1927. Serial No. 207,930. 1 Claim. (Cl. 192—35.)

A clutch comprising a shaft, a gear wheel loosely mounted on said shaft, a drum keyed to said shaft, a sleeve slidably mounted on said shaft, a disc mounted on the inner end of said sleeve and being adapted for engagement with



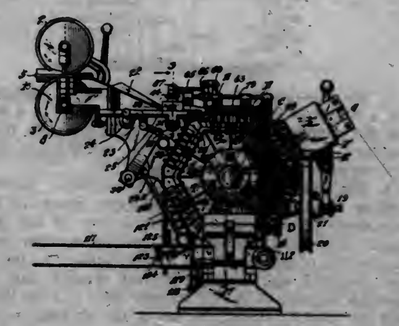
the outer end of said drum when the sleeve is moved forwardly, an outstanding pin mounted in said gear wheel, a lever pivoted on said pin, a pair of outstanding arms on said slidable sleeve, a connecting link for connecting the outer end of said lever to one of said outstanding arms, a spring secured at one end of said lever intermediate the ends thereof and at the opposite end to the other of said outstanding arms, and clutch means surrounding said drum, means for connecting said clutch means and said lever, said spring being adapted to normally urge said lever inwardly whereby to expand said clutch means and release the same from the drum.

1,755,260. INTERNAL-COMBUSTION ENGINE. HARRY L. JOHNSON, Waukegan, Ill., assignor to Johnson Brothers Engineering Corporation, Waukegan, Ill. Filed Dec. 27, 1927. Serial No. 242,798. 19 Claims. (Cl. 123—74.)



7. The combination with a two-cycle internal combustion engine of the transfer type, of a dome having a substantially flat upper portion extending upwardly into a compression chamber of a piston, a connecting rod carried by said piston, said connecting rod having an oscillating and reciprocating connection with the dome.

1,755,261. WATER-HEATING APPARATUS. HARRY N. LEAVITT, Springfield, Mo. Filed Mar. 28, 1925. Serial No. 17,520. 2 Claims. (Cl. 122—458.)

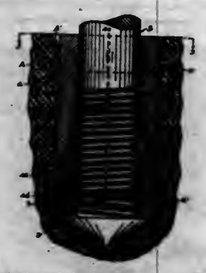


1. In a water heating apparatus, a boiler having a flue, a chamber into which said flue discharges having an outlet, a tank above the boiler and above said chamber, a water conductor connecting the tank and boiler for supplying water by gravity from the tank to the boiler, and having a check valve which opens toward the boiler arranged to conduct water by gravity from said tank to said boiler, a steam conductor connected to the boiler and having two branches, one of which discharges into said tank, the other branch opening to the atmosphere and serving as a means for drawing steam from the boiler for external use, and means for shunting the steam in the steam conductor from one to the other of said branches.

1,755,262. PRINTER'S GALLEY. JAMES EDGAR LEE, Grand Haven, Mich., assignor to The Challenge Machinery Company, Grand Haven, Mich., a Corporation of Michigan. Filed June 11, 1928. Serial No. 284,309. 5 Claims. (Cl. 276—40.)

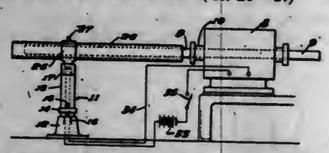
1. A printer's galley comprising, a bottom, sides extending upwardly from opposite side edges of the bottom, an upwardly extending front at the front edge of said bottom, and a plurality of channels located with the webs thereof in contact with the upper side of the bottom and with the legs thereof extending upwardly, said channels being permanently secured to the bottom and having the legs thereof substantially parallel with said sides.

1,755,263. MACHINE FOR MAKING ANNULAR PIECES OF CANDY. ESECK C. MILLER, Newark, N. J.. Filed Oct. 30, 1928. Serial No. 315,986. 12 Claims. (Cl. 107—4.)



2. A machine of the character described, comprising a support having a flat surface and a plurality of die cavities therein, means for feeding and temporarily holding a strip of material to be operated upon in the plane of said flat surface, means for dividing said strip into pieces while it is so held, and means movable in substantially said plane for moving said pieces from said feeding means and depositing each of said pieces into one of said die cavities.

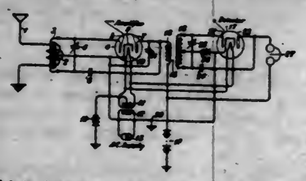
1,755,264. MEANS FOR ANCHORING BOLTS. RICHARD A. MIRZAN, Syracuse, N. Y., assignor to American Bolt Anchor Corporation, Syracuse, N. Y., a Corporation of New York. Filed Feb. 25, 1929. Serial No. 342,514. 1 Claim. (Cl. 85—2.4.)



An anchoring unit for securing a screw-threaded bolt to masonry formed with a socket having its bottom end closed to support said unit including in combination, a

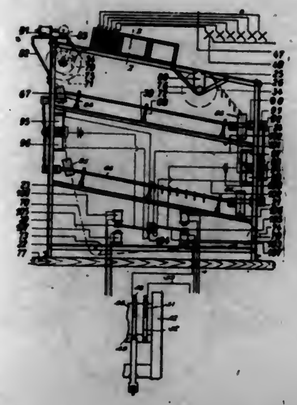
hollow frusto-conical member inserted in said socket and internally threaded throughout its length to receive said bolt, said member having its base portion formed to seat against a part of the bottom of the socket and being of substantially the same diameter as the socket, and an inherently expansive sleeve having a wall unbroken except by a single longitudinal slot extending throughout its length, said sleeve being formed with an internally tapered portion complementary to the frustro-conical member and

terminating a substantial distance below the upper end of said sleeve, the lower end of the sleeve terminating spaced from the lower end of the frusto-conical member, said sleeve being initially of larger diameter than the socket whereby the same is inherently expanded into engagement with the walls of the socket and forcibly expanded into engagement with the latter upon engagement of the sleeve with the frustro-conical member to provide an anchor for said bolt.



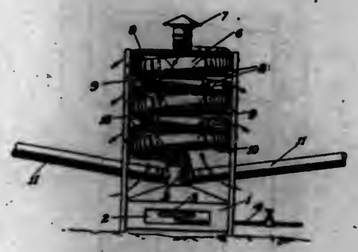
1,755,265. WORK GUARD. WILLIAM G. MUELLER, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 16, 1928. Serial No. 270,429. 5 Claims. (Cl. 29—1.)

1. The combination with a metal working machine having a rotatable chuck for holding bar stock of a housing for the portion of the bar stock that projects from the machine, and means controlled by the housing for controlling the operation of the chuck.



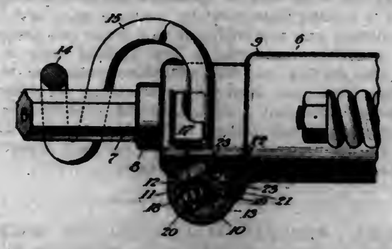
5. The combination with a metal working machine including an electrically driven rotatable chuck for holding bar stock, of a standard located in rear of the chuck, a circuit controller including a movable member mounted in the top of the standard, a head hinged to the top of the standard and adapted to rest thereon and on the movable member of the circuit controller to close the same, and an electric circuit including the driving means for the chuck and the circuit closer.

1,755,266. TUNED RADIO FREQUENCY AMPLIFIER. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,096. 2 Claims. (Cl. 179—171.)



1. In a high frequency signaling system, the combination with an amplifier having a vacuum tube of an input circuit and an output circuit, a detector circuit, a transformer having its primary winding connected with the said amplifier output circuit and its secondary winding connected with the detector circuit, and a condenser connected in parallel with the said primary winding the magnitude of the capacitance and inductance of the said condenser and the said primary winding respectively being such that the impedance of the combination is high for the frequencies to be amplified and low for parasitic frequencies whereby oscillations of the said amplifier at parasitic frequencies is prevented.

1,755,267. CONTROL DEVICE FOR ELECTRIC ILLUMINATED SIGNS. WALTER OSTERMAYER, Berlin-Schoneberg, Germany. Filed Sept. 8, 1925, Serial No. 54,191, and in Germany Sept. 2, 1924. 3 Claims. (Cl. 200—46.)

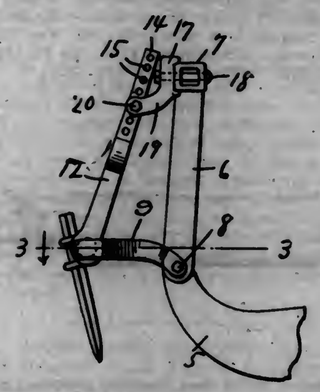


1. In apparatus of the character disclosed, sign elements, a plurality of magazines adapted to hold each a plurality of sign elements, a conveyor for sign elements movable into alternate positions of cooperation with one or another of said magazines, and a guideway, the said conveyor being adapted to convey the sign elements from one or another of the said magazines through said guideway.

1,755,268. AIR HEATER. DONALD PARKER, Fresno, Calif. Filed Feb. 23, 1929. Serial No. 342,014. 5 Claims. (Cl. 126—59.5.)

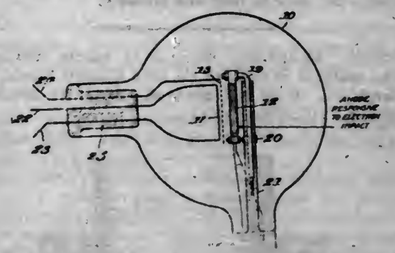
1. An air heater including a firebox, a source of heat therein, and a discharge flue projecting upwardly from the firebox in the form of a vertical helical coil exposed all around to the atmosphere, the turns of which are spaced from each other and from the fire-box and means associated with the coil for causing air passing between the firebox and the coil and moving upwardly in the area included by said coil to be caught and deflected outwardly of the heater between the turns of the coil.

1,755,269. TOOL HOLDER. GUSTAV C. PEARSON, Denver, Colo., assignor to Gardner-Denver Company, Denver, Colo., a Corporation of Delaware. Filed Apr. 19, 1928. Serial No. 271,383. 4 Claims. (Cl. 121—82.)



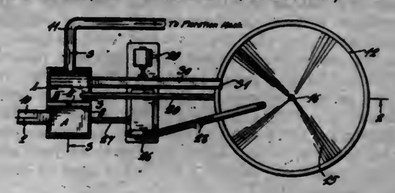
1. The combination with a tool holder, of a tool retainer pivotally mounted thereon, a yielding plunger mounted on and having a swinging movement with the retainer, and a toggle link having a bearing against the plunger and against a fixed portion of the tool holder.

1,755,270. COIN-SLOT GUARD. WILLIAM RABKIN, New York, N. Y. Filed Aug. 13, 1928. Serial No. 299,263. 4 Claims. (Cl. 194—99.)



1. The combination of a coin chute, and an element covering the entrance end of the coin chute and provided with a coin slot, one wall of the coin chute being spaced from said element and having a tongue projecting to the element at the side of the coin slot therein, a pair of jaws mounted upon the said wall of the coin chute and movable toward and from each other and provided adjacent the coin slot with elements covering the slot at the exit side thereof, and means for yieldably holding the jaws together.

1,755,271. PULVERIZER ATTACHMENT FOR CORN PLANTERS. CARL ROSEN, Media, Ill. Filed Mar. 17, 1928. Serial No. 262,429. 1 Claim. (Cl. 97—179.)

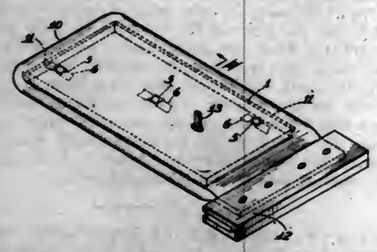


A pulverizer attachment for corn planters wherein the planter includes a runner, a link projecting upwardly from the forward end of the runner, and a cross beam at the upper end of the link comprising a beam, a plurality of teeth, means for attaching the teeth to the last mentioned beam, a bracket on the first mentioned beam, a yoke having openings in its extremities, through which the second mentioned beam extends, arms engaged with the bottom of the link and the ends of the second mentioned beam, a bar extending from the yoke, means for adjusting the connection of the bar with the bracket, said means attaching the teeth and second mentioned beam comprising U-shaped clamp members having apertured extremities through which the teeth extend, and a set screw threaded through the bights of the U-shaped clamp members to engage on the second mentioned beam to hold the teeth tightly against said second mentioned beam.

1,755,272. VACUUM-TUBE APPARATUS. SAMUEL RUBEN, New York, N. Y., assignor, by mesne assignments, to Ruben Tube Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1922. Serial No. 534,213. 12 Claims. (Cl. 250—27.5.)

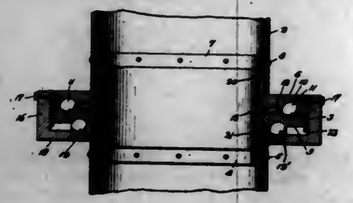
12. An anode composed of spaced conductors normally electrically disconnected and bridged by material responsive to energy variations to vary the electrical conductivity of said anode.

1,755,273. DEVICE FOR CONDITIONING ORES. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Feb. 11, 1929. Serial No. 339,051. 5 Claims. (Cl. 209—3.)



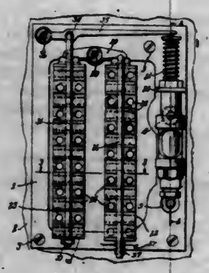
1. A conditioning device comprising, in combination, a reception tank divided into two compartments by means of a transverse partition, means for delivering ore pulp to one of the said compartments, a conditioning tank, means for transferring pulp from the bottom of the reception compartment to the top of the conditioning tank, means for transferring pulp from the bottom of the conditioning tank to the other compartment of the reception tank, means for conducting overflow from the top of the conditioning tank to the last named compartment, a weir in the wall between the two compartments of the reception tank and means for adjusting the height of the weir and an overflow from the second named compartment.

1,755,274. METHOD FOR REMOVING DEFECTS OF JOINDER FROM COMPOSITE GLASS PLATES. JAMES H. SHEETS, Glen Ridge, N. J., and WILLIAM O. LYTLE, New Kensington, Pa., assignors to Duplate Corporation, a Corporation of Delaware. Filed July 7, 1928. Serial No. 290,948. 2 Claims. (Cl. 49—81.)



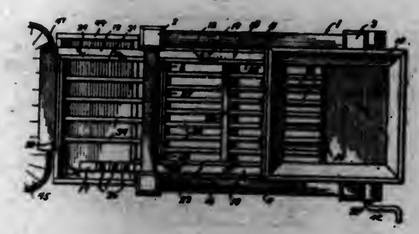
1. A method of correcting a defect of joinder in a composite plate consisting of sheets of glass with interposed

sheets of reenforcing material cemented thereto, which consists in applying a pressure localizing button of larger



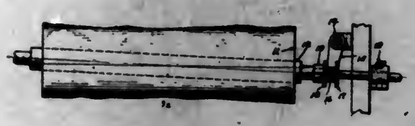
area than the defect to be corrected to the face of one of the glass sheets in opposition to such defect, and then exposing the plate to heat and pressure.

1,755,275. BEARING. WILLIAM O. SMITH, Wilkinsburg, Pa., assignor of one-half to John Clifford Young, Pittsburgh, Pa. Filed Feb. 25, 1928. Serial No. 256,957. 8 Claims. (Cl. 308—230.)



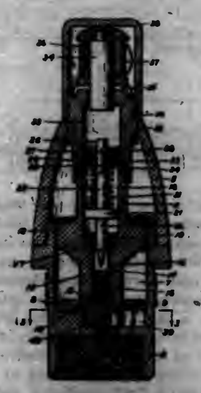
1. In a ball bearing mounting, the combination with oppositely disposed tubular members, of annular rings connected one to each of the aforesaid members, said rings having opposed annular grooves, the groove of the lower ring having openings leading therefrom, a retainer interposed between said rings and having equidistantly spaced apertures and also provided with flanges overlapping the respective first-mentioned members interiorly of the latter, bearing balls in said apertures of the retainer to run in said opposed grooves of the rings under the influence of rotation of one of the tubular members and to maintain the retainer spaced from the lower ring, and devices secured to the upper ring and carrying parts extending under and engaging the lower ring to secure the rings together.

1,755,276. HUMIDISTAT. ROY B. SOMERS, Muskegon, Mich. Filed May 31, 1927. Serial No. 195,512. 2 Claims. (Cl. 236—44.)



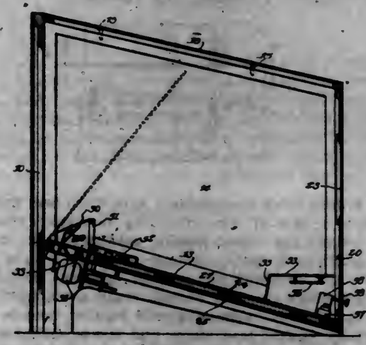
1. A device of the type described comprising a frame, a body portion carried by said frame and having an inlet and an outlet, communication between said inlet and said outlet, a valve for varying the flow of liquid through said inlet, spring means for normally holding said valve open, a lever pivotally mounted at one end upon said frame and having the other end in operative connection with said valve, a rocking lever pivotally mounted upon said frame, a stationary unit mounted upon said frame and having one end operatively connected to said rocking lever, a movable unit having one end operatively connected to said rocking lever, and means for connecting the other end of said movable unit to said actuating lever whereby said stationary unit may actuate said rocking lever for moving said movable unit and said movable unit may actuate said pivotal lever for actuating said valve.

1,755,277. SEPARATING AND GRADING MACHINE. PETER C. STAUP, Sheffield, Ala. Filed June 7, 1927. Serial No. 197,174. 1 Claim. (Cl. 209—99.)



In a machine of the class described, a frame, a screen mounted in the frame, means for imparting reciprocatory movement to the screen, the screen including a frame and screen bars extending longitudinally therein, a cross piece extending within the said screen frame transversely of the screen bars with its upper edge substantially in the plane of the upper edges of the screen bars, and a trash engaging finger extending upwardly from the cross piece intermediate its ends and above the plane of the screen bars to engage and longitudinally dispose trash lodging transversely on the screen bars.

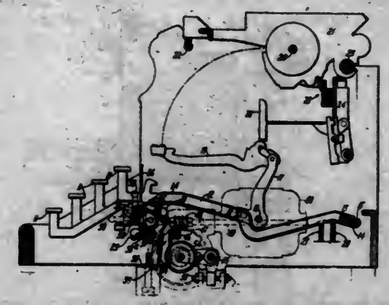
1,755,278. ROLLER ARRANGEMENT FOR PRINTING PRESSES. WILLIAM JAMES STRAIN, Upper Montclair, N. J., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 18, 1928. Serial No. 293,507. 8 Claims. (Cl. 101—348.)



1. A device of the class described including, a rotatable cylinder, a roller rotatable about a yieldable axis, and helically disposed relative to the cylinder, and arranged so that the periphery of the roller engages the periphery of the cylinder.

1,755,279. COMBINATION FUSE. ALFRED F. TRITSCHRID, Wharton, N. J. Filed June 27, 1928. Serial No. 288,570. 10 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

10. In a fuse, a firing pin, a spring for actuating the pin and locking means carried by the firing pin normally holding the firing pin against the action of the spring and releasable upon movement of the firing pin under the influence of inertia.

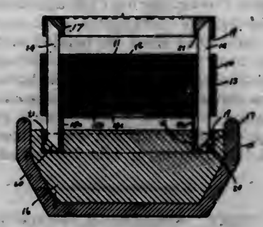


1,755,280. MINIATURE MOTION-PICTURE THEATER. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed Dec. 15, 1924. Serial No. 756,047. 16 Claims. (Cl. 88—24.)

1. A motion picture display device comprising a housing the front wall of which is provided with an opening and the walls extending therefrom converging towards the rear, mechanism for moving films in a horizontal plane and mounted adjacent the front wall of said housing, a screen positioned to receive the images from the film, a flat substantially horizontal floor inclined downwardly from the front wall towards said screen, and a film container underneath said floor the film supporting surface of which is flat and inclined parallel with the floor, whereby the film placed loosely within said container is maintained upon its longitudinal edge and by gravity at the lower portion of said container.

1,755,281. TYPEWRITING MACHINE. RICHARD VON REPPERT, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 28, 1927. Serial No. 221,451. 25 Claims. (Cl. 197—17.)

1. In a typewriting machine, the combination of a constantly-rotating, electromagnetised actuator for a typing mechanism that includes a lever having a positive driving connection with a type-bar, a key-lever, and means carried by the type-bar-lever and operated directly by the

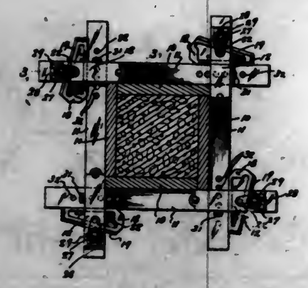


key-lever, to magnetically connect said type-bar-lever with the magnetised actuator, to drive the type-bar by the magnetic attraction or cohesion with said means.

1,755,282. FUEL COMPOSITION. HENRY C. WILLIAMS, Sargent, Nebr. Filed Oct. 20, 1927. Serial No. 227,612. 1 Claim. (Cl. 44—7.)

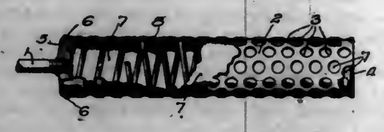
A fuel mixture including cellulose pulp in finely divided form mixed with sawdust in substantially the ratio of three parts of cellulose pulp to seven parts of sawdust, the mixture including also a relatively small amount of potassium nitrate, the mixture of cellulose pulp, sawdust and potassium nitrate being moistened with a mixture of a liquid petroleum derivative, an alcohol and an alcohol soluble coloring matter, the alcohol serving as a source of heat, as a deodorant for the petroleum derivative and as a carrier for the coloring matter.

1,755,283. ROTOR WINDING AND METHOD OF MOUNTING END RINGS. FRANK ADAMS, Indianapolis, Ind. Filed July 11, 1927. Serial No. 204,889. 8 Claims. (Cl. 172—120.)



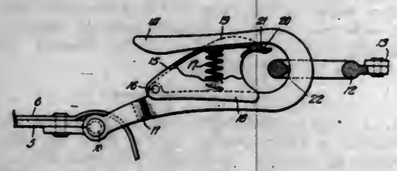
1. In the process of forming squirrel cage rotors, the step of immersing an end ring forming mold with projecting ends of the rotor winding extending therein into molten metal of the desired character until the mold and ends are covered to simultaneously form an end ring and unite the end ring to the winding ends for completing the rotor winding.

1,755,284. CONCRETE-FORM-CLAMPING DEVICE. SAMUEL S. COLT, Orange, N. J. Filed May 29, 1928. Serial No. 281,413. 5 Claims. (Cl. 144—291.)



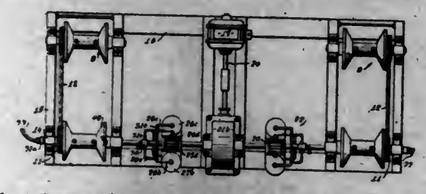
1. In a form clamping device, a clamp bar structure having means at one end to mount a tightening wedge for operative movement relative thereto and means to receive the end of a cooperating clamp bar to dispose the same between said wedge and the form to which the clamping device is applied, said wedge mounting means

having a releasable gripping means engageable with said wedge to lock the same in desired operative position, and said wedge having a depressed portion in a face



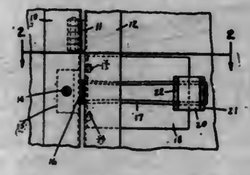
thereof bounded by keeper shoulders adapted to cooperate with said gripping means when the latter is loosened to thereby retain said wedge in assembled relation to said clamp bar structure.

1,755,285. SAMPLE TUBE. ARTHUR B. CUNNINGHAM, Chicago, Ill., assignor to Republic Flow Meters Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 9, 1922. Serial No. 593,200. 6 Claims. (Cl. 183—73.)



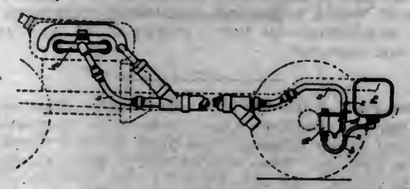
2. A sample tube for securing hot flue gases for analysis by CO_2 recorders or other purposes comprising a tubular member of sheet metal forming an intake for said gases, said tubular member having perforated side walls and having one end thereof closed, a filter sheet of woven asbestos cloth positioned against the inner face of the perforated wall of said tubular member said asbestos cloth being sufficiently porous to permit the gas sample to readily pass through without the application of pressure while preventing the entrance of solid matter, a coil of wire within said filter sheet for holding said sheet against said wall to cover the openings therethrough so that gas entering said tubular member passes through said filter sheet, a removable closure for the opposite end of said tubular member to permit access to said tubular member for cleaning or other purposes, and a conduit communicating with the interior of said tubular member.

1,755,286. SNAP. CHARLES H. DAVIS and HENRY W. LUECK, Park Ridge, Ill., assignors to Mathias Klein and Sons, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1929. Serial No. 363,140. 10 Claims. (Cl. 24—233.)



1. In a device of the character described, a snap having a spring-pressed keeper, a ring therein and cooperating means on said ring and snap whereby to permit depression of said keeper by the ring to remove said ring only when the ring is in one definite position relative to said snap.

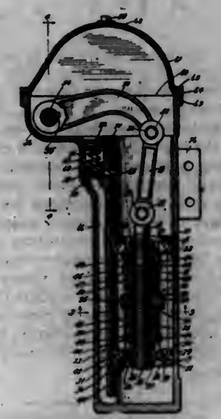
1,755,287. BRAKE-TESTING MACHINE. PAUL J. DONAVAN, Los Angeles, Calif., assignor, by mesne assignments, to Bendix-Cowdrey Brake Tester Inc., Fitchburg, Mass., a Corporation of Delaware. Filed May 8, 1926. Serial No. 107,679. 11 Claims. (Cl. 265—25.)



1. A brake tester for testing the brake action on the wheels of an automobile that the brake resistance on opposite wheels may be compared and equalized, comprising in combination, wheel supporting and turning means for supporting and turning the opposite wheels of an automobile, a power shaft between said means for the opposite wheels, a motor for driving said shaft, driving connections between the opposite ends of the power shaft and said means and constructed to insure the simultaneous rotation of the wheel turning means at each side of the automobile, including fluid confining receptacles between each end of the power shaft and a wheel supporting and turning means and adapted to exert a pressure on the confined fluid corresponding to the driving force imparted to an automobile wheel to turn it under brake resistance, and an indicator adapted to be actuated by the pressure exerted upon said confined fluid.

1,755,288. DOORCHECK. FLOYD K. EASTMAN, Kokomo, Ind., assignor to Concealed Door Check Company, Kokoma, Ind., a Corporation. Filed May 5, 1928. Serial No. 275,277. 2 Claims. (Cl. 16—86.)

1. A door check comprising a wire strap bent upon itself to form a pair of legs extending in spaced relation to each other and substantially parallel when in operative position, a rubber bumper provided with a pair of spaced and substantially parallel openings therethrough, through which the legs of said strap are adapted to extend for slidably supporting said bumper thereon against the closed end of said strap, and means mounted on the legs of said strap adjacent said bumper for normally pinching said legs together whereby the free ends thereof will be maintained under tension when mounted in operative position.

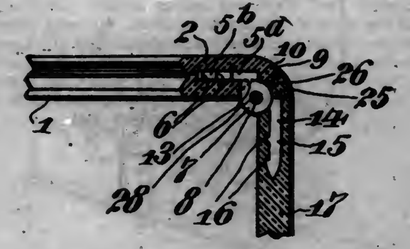


1,755,289. FUEL MIXER. WILLIAM A. EDWARDS, Chicago, Ill. Original application filed Sept. 20, 1924, Serial No. 738,773. Divided and this application filed Dec. 3, 1926. Serial No. 152,368. 6 Claims. (Cl. 261—76.)

1. In a fuel mixture feeding apparatus, a fuel mixture conduit comprising a greater Venturi passage and a lesser

Venturi passage, the lesser passage being positioned wholly within the greater and having its discharge mouth located proximate the plane of maximum depression of said greater venturi; a continuous fuel supply duct extending for discharge into the lesser venturi substantially at the zone of greatest constriction of said lesser venturi and continued therebeyond for discharge in the greater venturi at a zone of the latter of substantially less than maximum depression.

1,755,290.. SHOCK ABSORBER. ERIK FLOOR and EJNAR SEJERSEN, Chicago, Ill. Filed July 5, 1927. Serial No. 203,308. 8 Claims. (Cl. 188—88.)

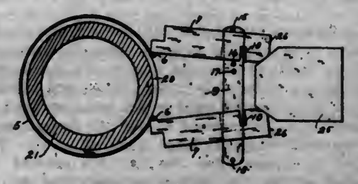


1. In a shock absorber, the combination of a receptacle with a fluid in said receptacle, an actuating element, an inertia and pressure responsive element resiliently supported on said actuating element for movement through said fluid, and a valve supported on said actuating element for increasing the effective area of said pressure responsive element when the latter lags behind said actuating element.

1,755,291. LINGERIE FASTENER. CAROLINE L. FOX, New York, N. Y. Filed June 30, 1927. Serial No. 202,594. 7 Claims. (Cl. 241—25.)

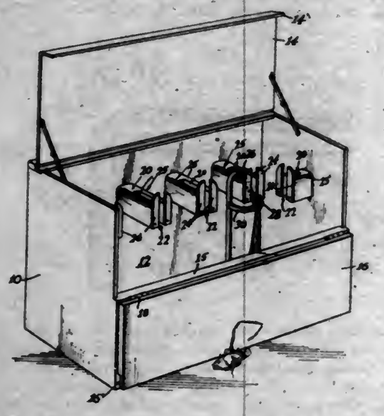
1. A lingerie fastener, comprising a pair of hooks connected together side by side, and each in the form of a substantially closed eye, the extremity of each hook being directed into the eye and located sufficiently close to the adjacent portion of the fastener to provide a throat which is greatly contracted relatively to the width of the opening of the eye, across from the extremity of the hook, whereby the threading of a garment loop through the throat for engaging it in the eye is permitted with difficulty, and the accidental disengagement of the loop from the eye is precluded.

1,755,292. METHOD OF MAKING OPHTHALMIC MOUNTINGS. LEO O. GAGNON, Newark, N. J., assignor, by mesne assignments, to Continental Optical Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Original application filed Apr. 15, 1926, Serial No. 102,162. Divided and this application filed June 11, 1927. Serial No. 198,263. 7 Claims. (Cl. 18—59.)



4. The method of making articles of the class described which comprises the formation of a longitudinally extending opening in the forward end portion of a nonmetallic member, inserting a hinge member in said opening, compressing the material of said member around the said hinge member and thereafter removing portions of said material to expose peripheral portions of the ears formed upon the said hinge member.

1,755,293. CAP. ARTHUR GOLDSTEIN, Milwaukee, Wis., assignor to Eagle Knitting Mills, Milwaukee, Wis., a Copartnership consisting of Max Karger and David Karger. Filed Apr. 6, 1929. Serial No. 353,064. 1 Claim. (Cl. 2—201.)

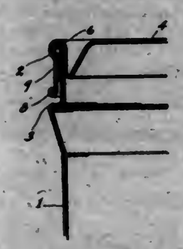


A helmet shaped cap having knitted fabric front, top and rear portions, and interposed relatively narrow leather side portions extending from the lower periphery of the cap toward the top portion thereof and terminating short of the apex of the cap.

1,755,294. PISTON-RING CLAMP. RAY GROVER, Milwaukee, Wis. Filed Oct. 17, 1928. Serial No. 312,977. 10 Claims. (Cl. 28—86.4.)

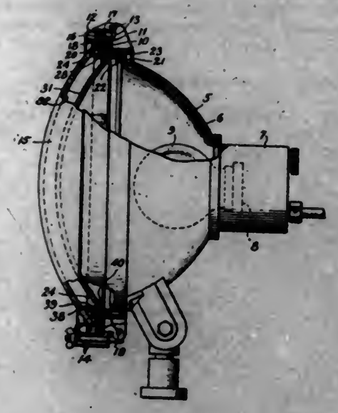
1. The combination with a ring encircling clamp, of clamp operating means comprising a first arm connected with said clamp, a link connected with said first arm, and a second arm connected with said clamp and adjustable upon the link.

1,755,295. SHIPPING AND DISPLAY CASE FOR BRIDLES. MARCO H. HELLMAN, Los Angeles, Calif. Filed Dec. 10, 1927. Serial No. 239,070. 2 Claims. (Cl. 206—44.)



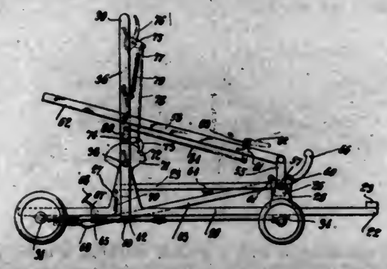
2. A shipping and display case for animal bridles comprising a container having an opening and closure therefor, and a plurality of bridle supporting posts each having a central vertical opening for the reception of the forehead straps of animal bridles when mounted on said posts secured to one of the vertical walls of said container and extending outwardly therefrom, said posts being spaced apart and disposed in horizontal alinement.

1,755,296. FASTENING FOR POUCHES, WALLETS, AND ALL KINDS OF LEATHER CONTAINERS. WILLIAM C. HIBBING, Newark, N. J., assignor to J. E. Margott Co., Newark, N. J., a Corporation of Delaware. Filed May 31, 1928. Serial No. 281,666. 6 Claims. (Cl. 24—230.)



4. A fastener for flexible containers having a flap comprising a socket rigidly fixed to the wall of the container, a support frame fixed on the edge of the flap, a spring clip hinged at one of its ends to said frame and provided with a lug at its outer end, said socket being inclined to facilitate entry and confinement of the clip therein and having an inreaching marginal ledge with which the clip lug is adapted to engage after the clip has entered into and expanded within the socket, whereby the flap may be latched to the wall of the container by inserting the clip within the socket, the clip lug engaging the socket ledge on the expansion of the clip in the socket and whereby the flap will be unlatched from the wall of the container by depressing the clip, disengaging its lug from the socket ledge.

1,755,297. CAN. EDWARD HILDEBRANDT, Tacoma, Wash. Filed Nov. 17, 1926. Serial No. 148,898. 1 Claim. (Cl. 220—59.)

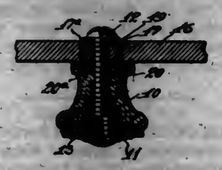


A can comprising a body having an outwardly projecting bead extending about its mouth, a cover for the can having a downturned peripheral flange fitted over and extending below the bead about the mouth of the can body; said flange having a triangularly shaped tongue pressed inwardly therefrom, leaving the lower rim of the flange intact, separated from the flange along its base edge and along its side edges to a point closely adjacent the vertex of the tongue, leaving a narrow connecting portion adapted to be broken by twisting the tongue; said tongue being pressed back and beneath the bead thereby drawing the base end of the tongue upwardly within the narrow portion of the opening that is formed by removal of the tongue from the flange, and thereby necessitating that the tongue be twisted in order to permit its removal outwardly through the opening.

1,755,298. COLOR FLOOD LIGHTING. PAUL M. HOTCHKIN, Chicago, Ill. Filed Apr. 28, 1927. Serial No. 187,283. 2 Claims. (Cl. 240—41.)

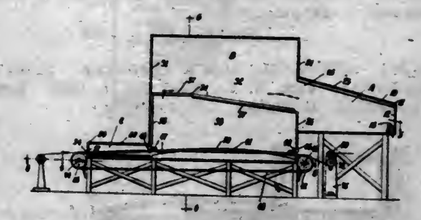
1. In a flood-light projector an open front housing, reflector supporting means positioned in said housing back of the opening, a reflector mounted in said means, lens-holding means mounted on said supporting means, a colored glass lens carried by said holding means, and a closure plate of heat-resisting glass for the front of said housing and spaced from said colored lens whereby the latter is entirely enclosed within the projector and protected from atmospheric elements and colored light is projected from said housing through the heat resisting glass.

1,755,299. STEERING DEVICE. ARVID I. LINDEN, Brooklyn, N. Y. Filed Dec. 4, 1926. Serial No. 152,616. 5 Claims. (Cl. 280—87.5.)



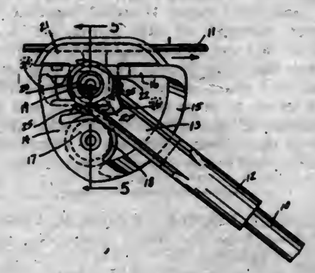
1. In a device of the class described, the combination with a vehicle frame provided with a foot stand, and a steering member, of two steering control levers pivotally mounted one at each side of said frame movable in a front to rear direction, and extending to a point within convenient reach of a child standing on said foot stand, and continuous flexible connection between said steering control levers and said steering member, causing one of said levers to move in one direction when the other lever is moved in the opposite direction.

1,755,300. HAT. JOSEPH S. MARZAK, Baltimore, Md., assignor to Lion Brothers Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Nov. 15, 1929. Serial No. 407,317. 1 Claim. (Cl. 2—175.)



A sailor's or similar fabric hat having an upwardly projecting brim formed of layers of stiffening material and hat material, a stiffening cord at the top edge connected to said stiffening material and said hat material, which latter is double and has a fold line at the top, by a line of stitching extending through said folded cover material near the fold and through said stiffening material near the top and through the cord, said hat material covering the brim on both sides and also covering the cord, said fold being secured between the cord and the top edge of the stiffening material by said stitching, the brim being further formed with a series of lines of stitching extending through and through said respective layers of material and around the brim circumferentially and spaced apart in the direction of the width or height of the brim.

1,755,301. KNOB. WILLIAM E. MCCULLOUGH, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 13, 1928. Serial No. 299,173. 2 Claims. (Cl. 16—121.)

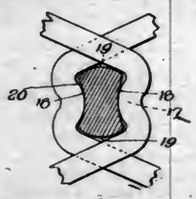


1. In combination with the front wall of a drawer, a knob comprising a body portion adapted to lie flat against the outer surface of a drawer wall and having a central aperture therein, a frontal portion having a threaded opening therein extending nearly to the outer surface thereof, a screw passing through an opening in the drawer wall through said central opening in the body portion and fitting into a threaded opening in the frontal portion whereby said knob is attached to said drawer.

1,755,302. APPARATUS FOR DYEING, COLORING, AND COATING. PIETER MIJER, New York, and LESTER C. SCOTT, Brooklyn, N. Y., and GEORGE S. RADFORD, New Canaan, Conn., assignors, by mesne assignments, to Two-Tone Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 23, 1926, Serial No. 89,830, and in Hungary Mar. 7, 1925. 8 Claims. (Cl. 8—18.)

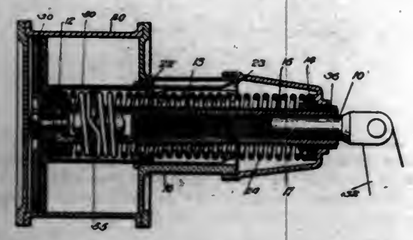
8. An apparatus for dyeing textile fabrics, comprising a closed dye-applying chamber, a closed atomising chamber external thereto but communicating therewith, and a travelling apron passing through the dye-applying chamber to support a fabric travelling therethrough.

1,755,303. SLIDING TROLLEY. GILES S. MOORE, Indianapolis, and OTTO MOORE, Frankfort, Ind. Filed Dec. 22, 1928. Serial No. 327,778. 5 Claims. (Cl. 191—59.1.)



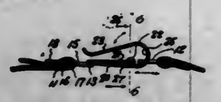
1. A device for making electrical contact with a trolley wire, including a trolley harp, a mounting pivotally supported on said harp, a contact shoe slidably secured to said mounting adapted to make contact with said wire when moved in one direction, and an auxiliary contact member supported on said mounting in position to make contact with said wire when moving in the opposite direction, said sliding shoe being so mounted as to slide with respect to said mounting upon a reversal of its movement for over-balancing said mounting and causing it to swing into position to present the auxiliary contact member to said wire.

1,755,304. FASTENER FOR BELTS AND THE LIKE. JOHN CONRAD OLSEN, Chicago, Ill., assignor to Flexible Steel Lacing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 17, 1928. Serial No. 320,050. 12 Claims. (Cl. 24—33.)



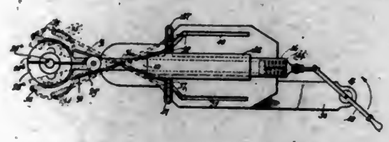
1. In a flexible fastener of the character described, the combination with interdigitated loop-like hinge means

adapted to be secured to the opposite ends of a flexible power transmitter; of a single connecting pin extending through the loop-like portions of said hinge means; and



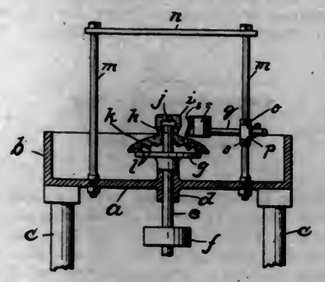
cooperating fulcrum means on said hinge means and pin providing a rockable engagement therebetween, eccentric to the axis of said pin.

1,755,305. AUTOMATIC SLACK ADJUSTER. ALDEN E. OSBORN, New York, N. Y. Filed Oct. 4, 1923. Serial No. 666,629. 10 Claims. (Cl. 188—202.)



1. In an automatic slack adjuster the combination of a brake cylinder, a piston in said cylinder, a piston rod actuated by said piston and rotatably connected thereto, an adjustable member extending outside of said cylinder and connecting said piston rod with the parts to be operated by the movement of said piston, said adjustable member and said piston rod being threaded together, a ratchet disc slidably mounted on said piston rod, a collar rotatable about said rod and having teeth engaging teeth on said ratchet disc, and means whereby said collar is rotated, upon said piston exceeding a certain predetermined amount of travel, to cause the rotation of said piston rod, thru the locking of said ratchet teeth during the return of said parts to their normal position, to adjust the relation of said piston said brake operating connection.

1,755,306. SHOE BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed June 15, 1928. Serial No. 285,591. 1 Claim. (Cl. 24—75.)

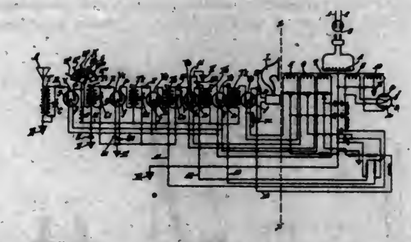


In a device of the kind described, a base-plate having at one end a plurality of slots to provide means to adjustably connect a strap end thereto, said base-plate having a pair of laterally spaced bearing arms longitudinally extending from its opposite end and upwardly off-set from the plane of said base-plate, said base-plate further having a longitudinal leaf spring between said arms and also upwardly off-set from the plane of said base-plate, a hook-shaped clasp-tongue having pivot studs extending from its base and journaled in said bearing arms, said clasp-tongue further having a rearwardly projecting impingement lug underlying said leaf spring whereby said clasp-tongue is yieldably retained in closed position with its base and impingement lug disposed to lie substantially in the plane of said base plate when in such closed position, and a loop-member to receive the separable connection of said clasp-tongue therewith.

1,755,307. MACHINE FOR MAKING VACUUM BOTTLES AND THE LIKE. ERICH H. ROHL, Chicago, Ill., assignor to The Mantle Lamp Company of America, Incorporated. Filed May 8, 1923. Serial No. 636,888. 2 Claims. (Cl. 49—1.)

1. In combination with a sealing machine, a mold, pins arranged on said mold, scissor-like means attached to said pins, pins fastened to the other ends of said scissor like means, said pins being guided within grooves arranged in the support means for said mold, and a handlever connected to the shaft of said mold.

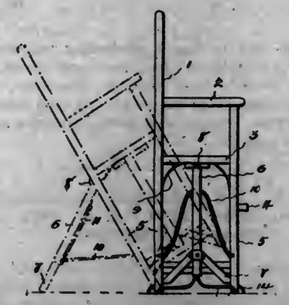
1,755,308. APPARATUS FOR FINISHING INSULATOR SHELLS. WILLIAM HENRY SMITH, Norristown, Pa., assignor, by mesne assignments, to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1927. Serial No. 160,509. 1 Claim. (Cl. 25—3.)



In an apparatus of the character described, in combination, a vertical shaft adapted to be rotated, a plate mounted on said shaft in a plane transverse to the axis of the shaft, a post extending from said plate coaxially of said shaft and a tool pivotally supported on an axis parallel to the axis of said shaft and adapted to be swung into and out of operative engagement with a piece of work supported on said plate.

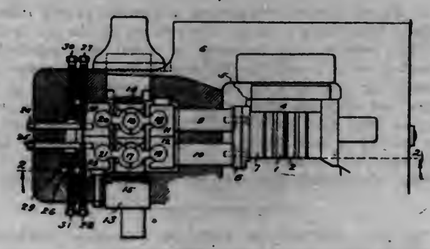
1,755,309. PROCESS FOR DEOXIDIZING COPPER. CYRIL S. SMITH, Cambridge, Mass., assignor of one-half to Carle R. Hayward, Quincy, Mass. Filed July 8, 1926. Serial No. 121,270. 11 Claims. (Cl. 148—11.)

1. A method for the treatment of copper containing oxygen, comprising reducing the same chemically at a temperature below the melting point, and consolidating the reduced metal to a condition of physical homogeneity.



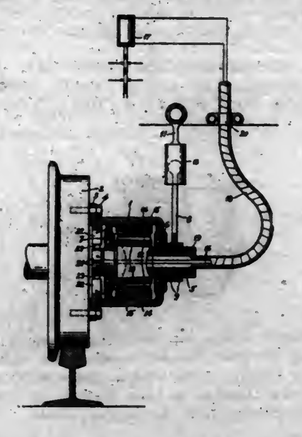
1,755,310. VOLUME CONTROL. SARKES TARZIAN, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,347. 2 Claims. (Cl. 179—171.)

1. The combination with a stabilized thermionic amplifier having input and output circuits, of means in the output circuit for coupling it substantially solely electromagnetically to another circuit, and a variable capacity in series with said means in said output circuit adjustable throughout its range for controlling volume without decrease of stability of the amplifier.



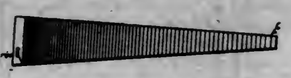
CARNEGIE LIBRARY OF ATLANTA

1,755,311. SUPPORT FOR CHAIRS, STANDS, AND THE LIKE. ALBERT W. BAILEY, New Haven, Conn. Filed Mar. 28, 1927. Serial No. 178,901. 2 Claims. (Cl. 155—77.)



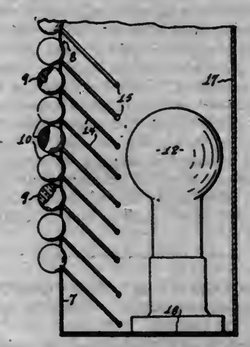
1. In combination with supporting means for chairs, stands or the like; an auxiliary spring operated leg or prop; means comprising a latch for retaining said leg or prop in its closed position; a tripping means for releasing said latch operating automatically and means comprising a spring normally under compression for throwing said leg or prop into its open or supporting position.

1,755,312. OPEN-DIE-HEADING MACHINE. CHARLES T. BRENNAN, Waterbury, Conn. Filed June 29, 1928. Serial No. 289,236. 7 Claims. (Cl. 10—16.)



4. In an open die heading machine in combination with the dies, a plurality of toggles for closing and transferring the dies, a backing plate engaging toggle members and movable transversely of the toggles, said plate having opposed angular faces for imparting an inter-dependent relative adjustment to the toggles, a backing wedge engaging said plate, and screws engaging the ends of said plate and wedge for adjusting them longitudinally of the toggles.

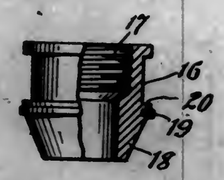
1,755,313. ELECTRIC SPEED GOVERNOR. WILLIAM E. BUTLER, Easton, Pa. Filed Feb. 26, 1927. Serial No. 171,184. 1 Claim. (Cl. 246—182.)



An electrical governor comprising a rotor casing having a magnetic field, one end of the casing being open and the other end closed, the casing having means at its open end for securing it to the face of a locomotive or car wheel, or the like, an armature journaled within the casing and projecting through said closed end of the casing, means connected to the projecting portion of the armature to prevent rotation thereof, and electrical translating means connected electrically with said armature.

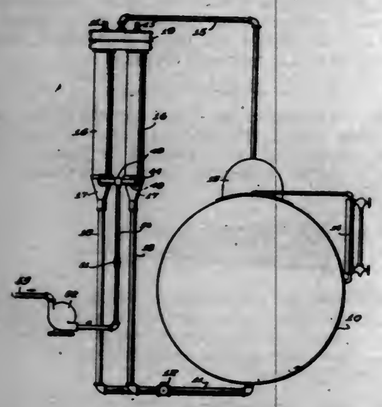
1,755,314. RHEOSTAT AND POTENTIOMETER. ALVA J. CARTER, Chicago, Ill., assignor to Carter Radio Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1928. Serial No. 284,887. 2 Claims. (Cl. 201—63.)

1. A device of the character described comprising an insulating base having wound thereon a resistance wire the adjacent turns of which gradually decrease in distance apart and increase in length from one end to the other of the strip.



1,755,315. CHANGEABLE SIGN. ROWLAND N. CHUBB, Los Angeles, Calif. Filed Oct. 22, 1927. Serial No. 227,999. 9 Claims. (Cl. 40—28.)

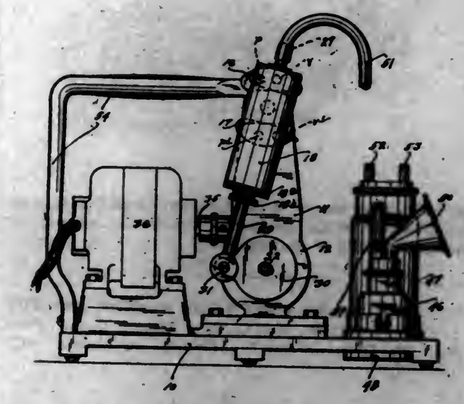
1. In a sign a face plate provided with a plurality of apertures, a plurality of members one removably lodged



in each aperture, each member being larger than the corresponding aperture, and having its major bulk disposed forwardly of said plate, certain of said members being translucent and others being opaque, and a lamp behind said face plate.

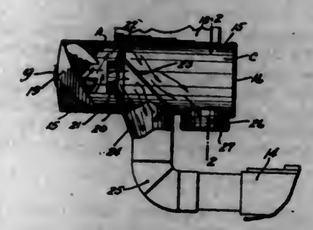
1,755,316. AUTOMOBILE RADIATOR CAP. FRANCISCO O. DE ALCOCER, Los Angeles, Calif. Filed Jan. 5, 1928. Serial No. 244,692. 6 Claims. (Cl. 220—24.)

1. A radiator filling cap including a supply nozzle receiving wall adapted for frictional liquid tight connection with a supply nozzle nad a check valve associated with said wall movable to open position by the pressure of the liquid flowing from the supply nozzle.



1,755,317. BOILER FEED-WATER APPARATUS. ROBERT L. DENNISON, Kansas City, Mo. Filed Jan. 10, 1927. Serial No. 160,270. 2 Claims. (Cl. 137—101.)

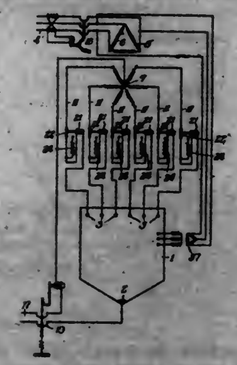
1. Apparatus of the character described comprising a pair of vertical cylinders adapted to communicate at their lower ends with the lower portion of a boiler, a piston mounted to reciprocate in each cylinder, a source of water sufficient to elevate said pistons, a pipe connected between said source and the lower ends of said cylinders, a check valve in said pipe adapted to open to permit water to flow into said cylinders, a valve cylinder, a valve reciprocable in said cylinder and movable to opposite ends thereof to alternately connect said first named cylinders to the atmosphere and to the boiler to receive steam pressure therefrom, and means for shifting said valve comprising an auxiliary valve controlled by movement of said pistons and adapted to alternately deliver fluid pressure to opposite ends of said valve cylinder and to exhaust pressure therefrom.



1,755,318. VACUUM PUMP OR PULSATOR. LAURITS DINESEN, Minneapolis, Minn. Filed July 6, 1926. Serial No. 120,626. 2 Claims. (Cl. 230—40.)

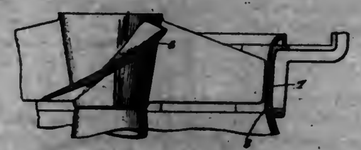
1. In a device of the kind described, the combination of a base, a pedestal secured on said base and formed with connected upper and lower pressure ports and connected upper and lower vacuum ports, a pump cylinder pivoted to said pedestal and having upper and lower ports engageable alternately with the pressure and vacuum ports of said pedestal, a motor-driven crank mounted on the lower portion of said pedestal, a piston working in

said cylinder and having a projecting rod connected to said crank, a nipple on the upper end of said cylinder to which a flexible tube may be connected, means for opening and closing said nipple at will, and means for connecting a flexible tube at will to the pressure and vacuum ports of said pedestal.



1,755,319. AIR CLEANER. FRANK A. DONALDSON, Minneapolis, Minn. Filed Oct. 16, 1924. Serial No. 743,980. 6 Claims. (Cl. 183—90.)

1. An air cleaner comprising a tubular casing formed with a separating chamber through which the air moves without reversing its direction of travel, said separating chamber at one end having means for causing the incoming air to take a whirling motion and provided at its other end with an axial air discharge port of less cross section than said separating chamber, and a dust chamber having a port located in the upper portion of said chamber and eccentric to said air outlet port and connecting said separating chamber to said dust chamber.

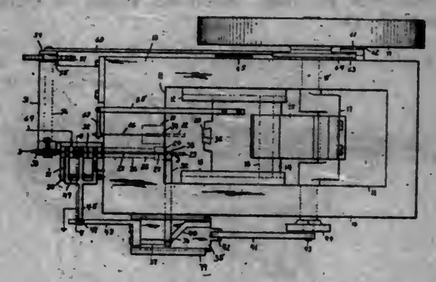


1,755,320. RECTIFIER SYSTEM. ARTHUR GAUDENZI, Baden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Aug. 22, 1927, Serial No. 214,505, and in Germany Aug. 28, 1926. 9 Claims. (Cl. 17—363.)

1. In a rectifier installation, a mercury vapor rectifier comprising mercury cathode means and a plurality of anodes providing a plurality of parallel rectifying paths, a polyphase transformer having a plurality of star-arranged windings connected to said anodes, a plurality of current-limiting resistors associated with the individual anode circuits, and reverse current relay means associated

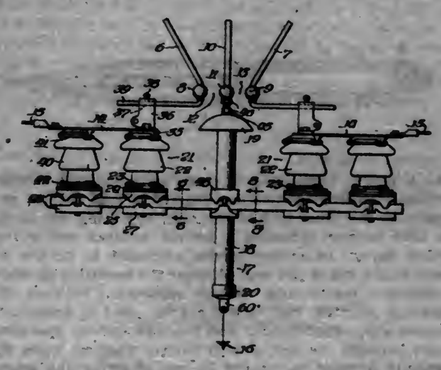
with said circuits for inserting said current-limiting resistors in the respective anode circuits in response to a reverse current flow therein.

1,755,321. WELDING HYDRAULIC APPARATUS. JOHN B. HENDRICKSON, Philadelphia, Pa., assignor to Welding Engineers Incorporated, a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,356. 3 Claims. (Cl. 103—114.)



1. In a hydraulic machine, a cast member having a fluid surface of predetermined contour, said cast member comprising a body portion provided with a recessed portion within a predetermined area, and a layer of welding material deposited by welding in said recessed portion of said body portion at said area to form a portion of said fluid surface and surfaced to give the desired predetermined contour, thereby providing an integral homogeneous structure including a cast support and a layer of welded material thereon as a compact tough surfacing resistant to corrosion.

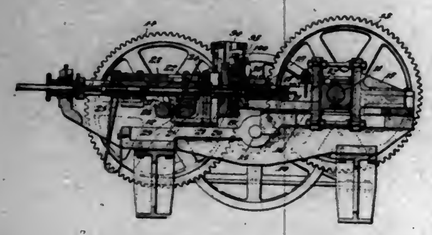
1,755,322. CASTER SOCKET. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 4, 1926. Serial No. 146,123. 4 Claims. (Cl. 16—39.)



1. In a caster socket, a socket frame adapted to be inserted in an opening in a furniture leg, or the like, and including a top pintle bearing portion and spaced side leg portions, an apertured base portion connected to said frame, pintle retaining spring means carried by said base portion, and spring means disposed in the spaces between said side leg portions adapted to frictionally engage the inner surface of said leg to retain said frame therein.

1,755,323. MACHINE FOR FORMING HOT METAL. ALBERT O. HERRON, Waterbury, Conn. Filed Sept. 14, 1928. Serial No. 305,925. 2 Claims. (Cl. 219—8.)

1. In a hot-metal forming machine, the combination with the feed-mechanism and cut-off mechanism thereof; of an electric heater positioned to heat a portion of the stock extending between the said mechanisms and including two electrodes one of which is movable with respect to the other; and automatic means for periodically moving the said movable electrode into and out of engagement with the stock; whereby the said stock may be heated to a sufficiently high temperature to permit maximum forming without subjecting it to stretching and deformation before being cut off.



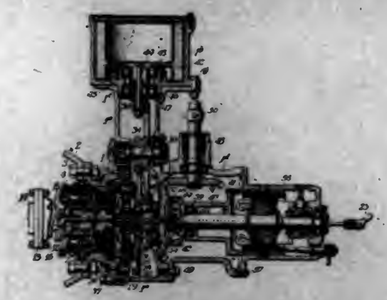
1,755,324. LIGHTNING ARRESTER. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1924. Serial No. 703,025. 4 Claims. (Cl. 175—30.)

1. In combination, a supporting frame, an insulator projecting endwise from and disposed wholly upon one side of said frame, means at one end of said insulator for attaching same to said frame, a line electrode mounted upon the opposite end of said insulator, a resistance unit of such character that its length must exceed the distance from said line electrode to the frame in order to provide a resistance sufficient to exclude the flow of appreciable dynamic current following a discharge to ground, means attached to said resistance unit intermediate its ends and to said frame for supporting said resistance unit upon said frame with one end projecting from one side of said

frame and freely positioned in proximity to said line electrode and the opposite end passing through the plane of said frame and projecting from the opposite side of the frame with said opposite end freely positioned at a distance from the opposite side of the frame, a ground electrode mounted directly upon the end of said unit in proximity to said line electrode, and a ground connection on the opposite end of said resistance unit.

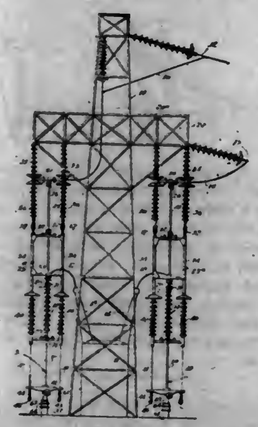
1,755,325. NUT-FORGING MACHINE. JAMES A. KINNEY, Lebanon, Pa., assignor to Bethlehem Steel Company. Filed Mar. 31, 1926. Serial No. 98,690. 5 Claims. (Cl. 10—72.)

4. In a nut forging machine, the combination of a die block, reciprocating tools, means to actuate said tools, and a mechanism for feeding a stock bar, said mechanism comprising a pair of shafts, a roll mounted on each of said shafts, a ratchet wheel fixed to one of said shafts, a reciprocatory slide, a pawl member mounted on said slide and adapted to engage said ratchet wheel, a rotatable cam to actuate said slide, and means controlled by the operator to hold the slide out of engagement with said cam, thereby rendering the latter inoperative.



1,755,326. PENCIL. ELSIE KLAGGES, Glendale, N. Y. Filed Feb. 21, 1928. Serial No. 255,901. 2 Claims. (Cl. 120—18.)

1. A pencil comprising a case, an operating member revolubly mounted at one end thereof, a lead carrier projectible at the other end of the case, operating means for the lead carrier including a helical member and a lost motion device, an eraser carrier arranged to project an eraser at the end of the case adjacent the operating member, a combined rotary and slidable connection between the operating member and eraser carrier, and a connection between the eraser carrier and the lead carrier operating means through the lost motion device, whereby when the operating member is rotated in one direction the eraser is projected and thereafter the lead is projected; and in the other direction, the lead is first retracted and thereafter the eraser is retracted.

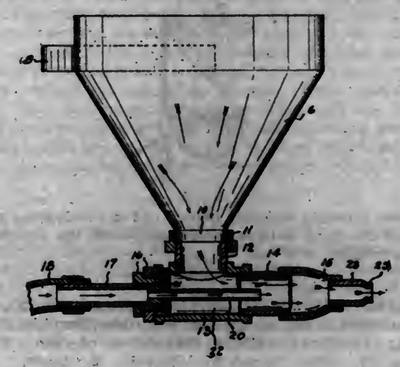


1,755,327. ENGINE STARTER. RAYMOND P. LANSING, Montclair, N. J., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed May 14, 1927. Serial No. 191,842. 29 Claims. (Cl. 123—179.)

1. An engine starter including torque transmitting means having a driving member adapted to engage and crank a member of the engine to be started, an inertia means, a low speed high torque electric motor, and a train of speed multiplying means, opposite ends of which

train cooperates with the inertia means and motor respectively, said torque transmitting means being operatively connected with said train.

1,755,328. SUSPENSION DISCONNECTING SWITCH AND MOUNTING THEREFOR. FREDERICK H. MAYER, Los Angeles, Calif. Filed Sept. 1, 1925. Serial No. 53,335. 13 Claims. (Cl. 200—48.)

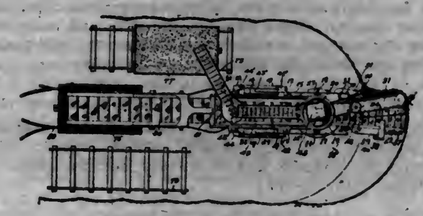


1. A switch to be carried by a line supporting tower and having its upper end attached to the tower, and means attaching the other end of the switch to the ground independently of the tower, the switch including, two spaced contacts, means supporting the contacts so that they are insulated from each other and from the tower and the ground, a blade movable into and out of position where it connects the contacts, and means whereby one of the contacts is electrically connected with the ground independently of the tower when the blade is out of position where it connects the contacts.

1,755,329. PNEUMATIC GUN FOR APPLYING MORTAR. LAWRENCE E. MCCORMACK, Seattle, Wash. Filed Mar. 14, 1927. Serial No. 175,040. 2 Claims. (Cl. 91—45.)

1. In a pneumatic mortar gun, a receptacle having a discharge opening in the bottom end and convergent toward said discharge opening, a T fitting connected with said bottom and forming a passageway crosswise of said discharge opening and communicating therewith, discharge nozzle means connected with one end of said T fitting, and affording an abrupt annular shoulder within said

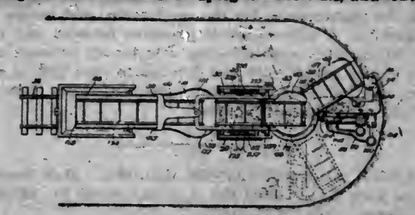
T fitting, a reducer fitting at the other end of said T fitting, pressure inlet conduit means connected with said reducer fitting, and a relatively small injector tube disposed axially within said T fitting and supported by



said reducer fitting and communicating with said pressure inlet conduit means, the discharge end of said injector tube extending beyond the inlet opening to said receptacle and terminating just beyond said abrupt annular shoulder.

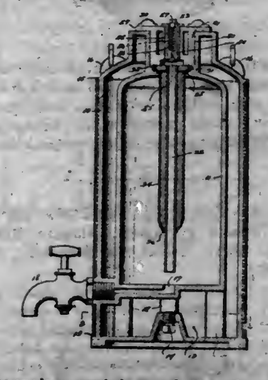
1,755,330. PRIMING MIXTURE. JOSEPH D. MCNUTT, New Haven, Conn., assignor, by mesne assignments, to Winchester Repeating Arms Co., New Haven, Conn., a Corporation of Delaware. Filed Mar. 23, 1927. Serial No. 177,842. 6 Claims. (Cl. 52—3.)

1. A priming mixture, comprising a metallic fulminate, an oxidizing agent having a non-corrosive residue, a fuel having a non-corrosive residue and diphenylamin.



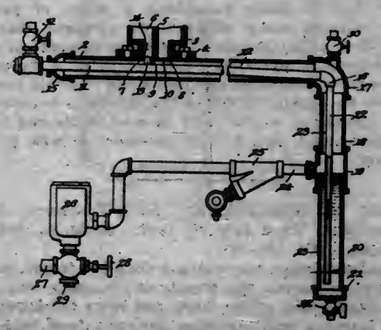
1,755,331. COMBINED COAL MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Dec. 3, 1919, Serial No. 342,218. Renewed Feb. 12, 1930. 49 Claims. (Cl. 262—28.)

43. In a mining machine, the combination with a supporting frame, of a plane chain kerf-cutter mounted thereon for adjustment relatively thereto on a horizontal transverse axis and on an upright axis means for operating said kerf-cutter, and a breaker connected to said kerf-cutter to always lie in the plane thereof irrespective of its adjustment on said axes and movable into the kerf cut by said kerf-cutter.



1,755,332. MINING AND LOADING APPARATUS. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Dec. 23, 1919, Serial No. 346,903. Renewed Aug. 26, 1929. 69 Claims. (Cl. 262—9.)

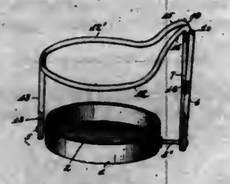
1. In a mining and loading machine, digging mechanism, framework for supporting said digging mechanism for arcuate movement along an upright mine wall, hydraulic means for pushing said digging mechanism to dislodge material from such upright mine wall, and loading



apparatus for automatically receiving the dislodged material and transferring such dislodged material to loading position.

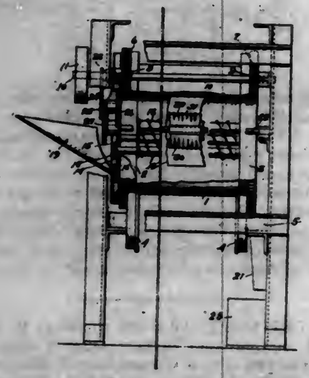
1,755,333. VACUUM CONTAINER. WARREN M. MYERS, Saginaw, Mich. Filed Dec. 20, 1928. Serial No. 327,365. 5 Claims. (Cl. 225—21.)

1. A dispensing container of the character described having an outlet faucet or tap at its lower end, a removable closure for the upper end of the container which when removed permits liquid to be poured into the container and which when closed permits the inlet of air thereinto, an air valve disposed in said closure and yieldingly urged to a closed position, the air valve having a means whereby it may be manually shifted, the closure having upwardly projecting bosses extending beyond the upper end of the air valve to prevent the accidental operation of the valve.



1,755,334. DRYING APPARATUS. THOMAS W. PROSSER, Kankakee, Ill., assignor to Paramount Textile Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed July 13, 1925. Serial No. 43,216. 6 Claims. (Cl. 34—16.)

1. A two-pipe drying system comprising a feed-pipe, a return-pipe, a series of hollow drying units communi-



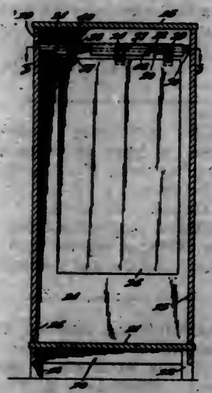
cating with the feed-pipe and all draining into the return-pipe, free passageways for condensate and foreign matter from each of said pipes, a common outlet communicating with the passageways for the condensate, and means for maintaining a differential in pressure between the feed and return pipes and including a water-leg between said pipes and in circuit with and common to each unit of said series and operating to prevent passage of steam from the feed-pipe into the return-pipe.

1,755,335. MILK-CONTAINER HOLDER. MAX ROMAN, New York, N. Y. Filed Feb. 2, 1929. Serial No. 336,962. 4 Claims. (Cl. 215—100.)

1. A milk bottle container holder, comprising a base, a pair of clamping ring sections, and means for pivotally connecting the ring sections with the base, part of said means acting as handle members for manipulating the ring sections for lifting the holder when the same is transported.

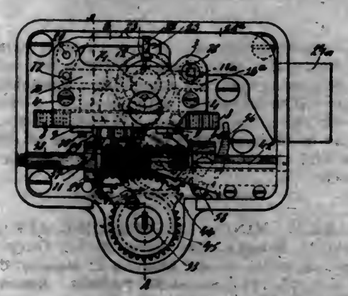
1,755,336. SELF CLEANING, SORTING, OR SIFTING MACHINE. FRANK P. RYDER, Niagara Falls, N. Y. Filed Feb. 8, 1928. Serial No. 252,819. 10 Claims. (Cl. 209—296.)

1. Means for sorting or sifting objects having greater length than thickness comprising a series of parallel shafts carrying screw elements so arranged that the peripheries of the threads of the screw elements of adjacent shafts are approximately in contact and the spaces between their threads on such two screw elements form an aperture for passage of one of the objects to be sorted or sifted, means for rotating said parallel shafts and means for causing said objects to be presented endwise to said apertures.



1,755,337. ANIMAL FEEDER. LOUIS J. SCHEITEL, Manitowoc, Wis. Filed July 28, 1927. Serial No. 209,098. 1 Claim. (Cl. 119—61.)

An animal feeder comprising a frame, a trough, means pivotally connecting the trough at its upper rear edge to the lateral sides of the frame and below the upper side of the frame, a wall extending upwardly from said edge of the trough to close the frame above the trough, said wall contacting with the frame to support the trough in operative position, walls extending upwardly from the end walls of the trough, and a hood secured to the frame and having a top portion overlying the trough and end



portions arranged laterally beyond and in overlapping relation to the walls extending upwardly from the end walls of the trough.

1,755,338. SUSPENSION DEVICE. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 23, 1928. Serial No. 279,999. 2 Claims. (Cl. 129—16.)

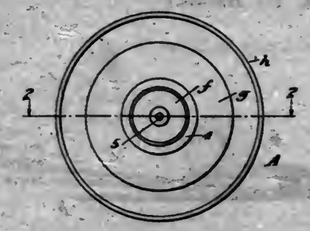
1. A device of the class described, comprising, a rack structure, a series of parallel support rods mounted in said rack for receiving a series of sheet-supporting clips, and a rider having sliding engagement with said rack and embracing but not bearing on said rods at right-angles thereto for sliding the sheet clips on the rods.

1,755,339. SECURITY LOCK. CARL GUSTAF LEONARD SJÖLANDER, Dalsborg, Sweden. Filed July 5, 1923, Serial No. 649,753, and in Sweden Apr. 24, 1920. 6 Claims. (Cl. 70—70.)

1. In combination, a lock operable by a key and including a spindle adapted to be located in a door structure,

a key receiver located on the outside of the door, said receiver having a cylinder movable therein, a wing on said cylinder adapted to stop against the steps of a key, teeth on said cylinder, fixed members adapted to co-operate with said teeth to rotate the cylinder step by step and guide it during axial movement, means connecting the spindle and cylinder for moving the latter axially, a lock mechanism located on the inside of the door structure and including a toothed cylinder operable by said spindle, wings on the second cylinder, racks operable by the second cylinder, and toothed tumblers co-operating with said racks, said tumblers being brought into their unlocking position during oscillation of the spindle, the first mentioned cylinder being adapted to be stopped against the steps of a key.

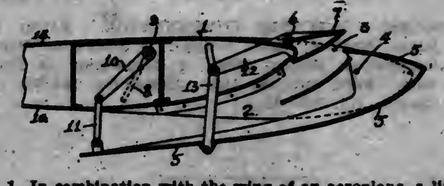
1,755,340. DIRECTOR FIRING SYSTEM. ELMER A. SPERRY, Brooklyn, N. Y., and ELMER MEITNER, Los Angeles, Calif., assignors, by mesne assignments, to Sperry Gyroscope Company, Inc., a Corporation of New York. Original application filed Apr. 9, 1917, Serial No. 160,877. Divided and this application filed Sept. 28, 1929. Serial No. 394,685. 36 Claims. (Cl. 177—351.)



1. In a gun fire control system, a transmitting instrument, a remotely located receiving instrument connected thereto whereby the bearing of a target observed at a point remote from the receiving instrument may be transmitted to said receiving instrument, means for applying a correction to the bearing prior to transmission and for transmitting the corrected bearing to cause the receiving instrument to indicate approximately the bearing of the target with reference to said receiving instrument, and means, including an element the position of which depends on the bearing transmitted for indicating the correction to be applied.

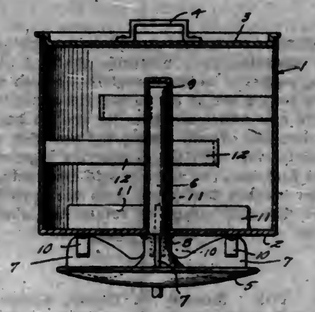
9. In a gun fire control system, a transmitting instrument, a receiving instrument, connections between said instruments whereby they are operated in synchronism, means for shifting a part of said connections to cause said receiving instrument to step ahead of or drop behind said transmitter, indicating means connected to said first mentioned means and means for changing the zero point of said indicating means.

18. A fire control indicator comprising a pair of conjointly readable rotatable indicators of target bearing and gun positions, means for rotating each indicator through one revolution for each revolution of the target and gun respectively, a second pair of conjointly readable rotatable indicators of target bearing and gun positions mounted adjacent the first pair, means for rotating each indicator of the second pair through a plurality of revolutions for each revolution of the target and gun respectively, a signal for showing when to observe the coincidence of said indicators, and means for actuating said signal when the first mentioned pair approach coincidence.



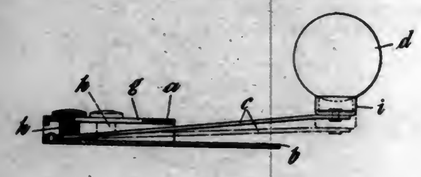
22. In a fire control system, a target bearing transmitter, a gun position transmitter, a follow-the-pointer receiving instrument adjacent a gun and actuated from both of said transmitters, said instrument comprising a plurality of pairs of pointers, one pointer of each pair being the target bearing indicator and the other the gun position indicator, the different pairs of pointers being arranged to rotate at multiple speeds, and means for introducing corrections into the positions of one of each pair of pointers, said means including means for introducing such corrections into one of said transmitters.

1,755,341. WASHING MACHINE. CHARLES E. STANLEY, Glendale, Calif. Filed Sept. 3, 1929. Serial No. 389,910. 8 Claims. (Cl. 259—97.)



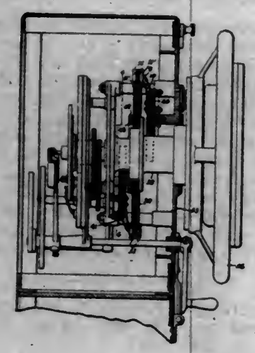
1. In a washing machine, a pair of concentric spaced foraminous members forming therebetween a jacket, a base member between and inwardly spaced from one end of said foraminous members, and a cap secured to and closing one end of the foraminous members.

1,755,342. LIFTING ATTACHMENT FOR AEROPLANE WINGS. HENRI GUSTAVE TISSOT, West Oakland, Calif. Filed Aug. 5, 1929. Serial No. 383,645. 2 Claims. (Cl. 244—12.)



1. In combination with the wing of an aeroplane, a lifting attachment comprising a deflector plate underlying the wing and hinged at its front edge thereto, adapting it for angular adjustment about its hinge axis to and from the plane of the wing's under surface, the front edge of said plate forming part of and coinciding with the front edge of the wing; an overlying supplementary deflector plate hinged at its rear edge for angular adjustment to and from the plane of the upper surface of the wing, said wing having a through passage leading from and controlled by said upper deflector plate and opening below to the rear of the lower deflector plate; and means, under control of the aviator, for adjusting said deflector plates.

1,755,343. CHURN. THOMAS E. WILLIAMSON, Kirkland, Tex. Filed May 21, 1929. Serial No. 364,869. 3 Claims. (Cl. 259—51.)



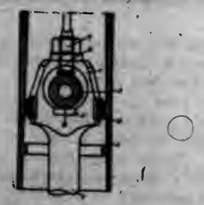
1. A churn of the character described comprising an annular container, a tubular member upstanding in said annular container and opening through the bottom thereof, and a series of radially positioned dasher members secured at one end to the inner periphery of said container and terminating at the opposite end at the tubular member.

1,755,344. GOLF TEE. THOMAS HENRY ACASTER, Old Trafford, Manchester, England. Filed Oct. 19, 1929, Serial No. 400,938, and in Great Britain Dec. 10, 1928. 1 Claim. (Cl. 273—33.)

In a golf tee comprising a weighted body with an upper member projecting laterally therefrom upon the end of which the golf ball is supported, such member being adjustable in height to suit the user's requirements, and a second or lower member projecting laterally to rest upon the ground, a sliding piece within a slot extending across the weighted body for regulating the height of the outer end of the upper projecting member, as set forth.

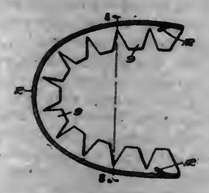
1,755,345. ELECTRIC COMPENSATOR. RALPH E. BATES, Medford, Mass., assignor to Submarine Signal Corporation, Boston, Mass., a Corporation of Delaware. Filed Apr. 18, 1927. Serial No. 184,753. 9 Claims. (Cl. 200—11.)

1. An electric compensator switch comprising an insulated disc mounted on a rotatable shaft, a plurality of conducting segments mounted radially on both sides about the disc, a second set of insulating discs mounted rigidly on a frame and positioned parallel and on both sides of said first disc, one of said discs being provided with radial brushes contacting with the conducting segments on one half of the first disc, the other of said discs being provided with radial brushes contacting with the opposite half of the second disc and means to rotate said shaft to vary the position of the conducting segments.



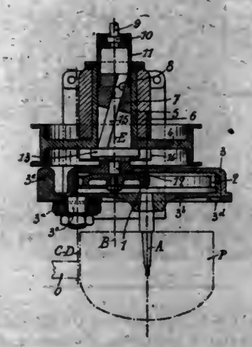
1,755,346. TOY. MORTON O. BLAND, Shelbyville, Ind. Filed Dec. 5, 1929. Serial No. 411,958. 3 Claims. (Cl. 46—14.)

2. A toy comprising a rotatable member consisting of outer flat plates and an inner corrugated plate, said outer plates closing the sides of the channels of said inner plate to provide parallel air passages open at their ends and arranged at opposite sides of the axial center of said member and having their ends arranged at opposite edges of said members, said member being provided at opposite



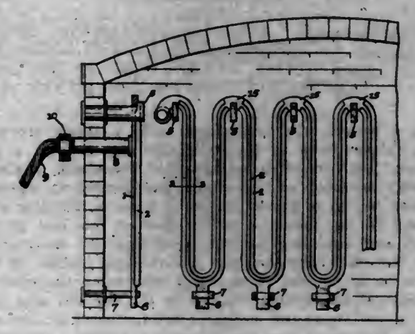
sides of its axial center with openings, and a looped flexible operating member having its sides extending through said openings.

1,755,347. ENGINE PROVIDED WITH A PISTON AND A CONNECTING ROD. JAN BRONS, Appingedam, Netherlands, assignor to Naamloose Vennootschap Kromhout Motoren Fabriek D. Goedkoop Jr., Amsterdam, Netherlands, and Johan Hendrik de Iongh, Hilligersberg, near Rotterdam, Netherlands. Filed Nov. 23, 1928, Serial No. 321,470, and in the Netherlands Dec. 8, 1927. 3 Claims. (Cl. 74—108.)



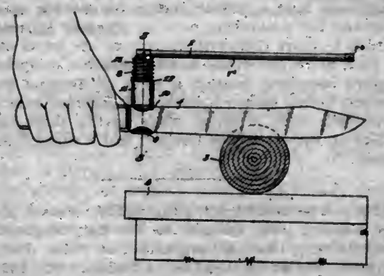
1. In an engine, a piston, a wrist pin therein, a connecting rod having a frame-like end, an adjustable rolling surface on said frame end contacting the pin, the frame end being formed at the outside partly as a revolving body, the axis of revolution of the revolving body coinciding, in the medial position of the connecting rod, with the line of contact of said rolling surface on the wrist pin, and means on the inner part of the piston adapted to guide said revolving body.

1,755,348. OVERSHOE SKID. JOSEPH S. CAPEN, Stoughton, Mass. Filed Feb. 18, 1927. Serial No. 169,859. 6 Claims. (Cl. 132—7.)



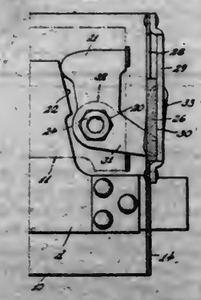
6. An open front resilient heel-edge-cover adapted to be slid onto the heel from the back and comprising an upstanding side covering and gripping portion to embrace and grip the side of the heel in the vicinity of the top, an attached heel-top-covering margin serrated to permit opening and closing of the cover to fit different heels and fastening means near the ends of the cover adapted to engage the breast of the heel to aid in holding the cover in position.

1,755,349. LATHE MECHANISM FOR OVAL TURNINGS. MARCEL CASSÉ, Essonnes, Seine-et-Oise, France. Filed Dec. 24, 1928, Serial No. 328,233, and in France Jan. 5, 1928. 17 Claims. (Cl. 82—18.)



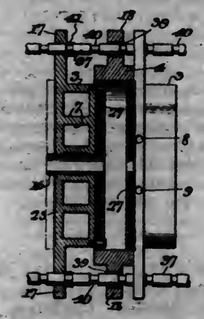
1. A lathe mechanism for oval turning comprising in combination a first frame, three parallel spindles rotatably mounted in said frame, equally spaced from one another and arranged in a common plane, power transmission means for connecting the central spindle with another spindle whereby said central spindle is caused to rotate at a speed equal to twice the speed of said other spindle, in the same direction, means for mounting a working member on said other spindle, a second frame, means for imparting to said central spindle a circular motion relatively to said second frame, means for reciprocating the third spindle along a substantially rectilinear path relatively to said second frame, in the plane of the mean position of said three spindles, and a working member secured to said second frame in said common plane, one of said working members being the piece of work and the other being the tool, and one of said frames being stationary, the other frame being thus imparted a combined reciprocating and oscillating motion relatively to the former.

1,755,350. ELECTRIC-FURNACE RESISTOR. FRANK A. FAHRENWALD, Cleveland Heights, Ohio. Filed May 19, 1924. Serial No. 714,289. 9 Claims. (Cl. 201—69.)



6. A cast resistor heating element of serpentine shape, having straight legs of T section and loops of flat section, the loops having a larger cross-sectional area than the legs.

1,755,351. ONION CUTTER. ALFRED FELARDO, New York, N. Y. Filed Apr. 28, 1928. Serial No. 273,727. 3 Claims. (Cl. 146—203.)

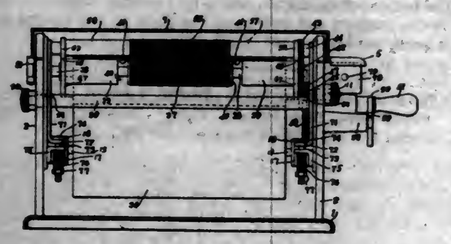


2. In an onion cutter, a bent sheet metal support adapted to be detachably secured to a handled cutting tool near the handle of the latter, and a transparent shield mounted on the support and overlying the blade of the cutting tool laterally and above its upper edge.

1,755,352. AUTOMOBILE DOOR LATCH. JOHN B. FREYSINGER, New Britain, Conn. Filed Aug. 6, 1926. Serial No. 127,665. 4 Claims. (Cl. 292—184.)

1. A latch of the character described having a pair of supports with a free space between them adapted to accommodate a window and a front plate at the forward end of said supports, a bolt carried by one of said supports, operating means in the other of said supports, a slide mounted for vertical movement on the outer face of said front plate, means for slidably retaining said slide on the outer face of said front plate, an operative connection between said bolt and slide, and an operative connection between said operating means and slide.

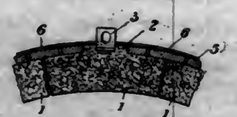
1,755,353. FILTER-POT PRESS. LESLIE S. HUBBERT, Edison, Ohio, assignor to The Hydraulic Press Manufacturing Company, Mount Gilead, Ohio. Filed Nov. 29, 1927. Serial No. 236,517. 9 Claims. (Cl. 100—50.)



1. A filter pot press comprising press heads, a series of alternating hollow pots and plungers interposed be-

CARNEGIE LIBRARY OF ATLANTA

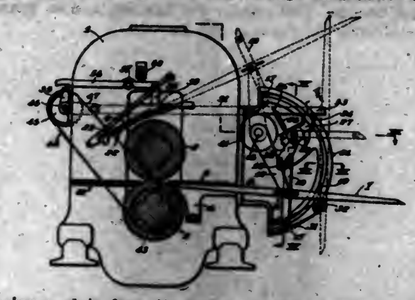
tween said press heads, hydraulic means for moving the pots and plungers in one direction during the expressing operation, lugs on said pots and plungers, rods passing through said lugs, hydraulic means for moving said rods, and means for connecting pots or plungers separately to said rods to move therewith to remove the press cake.



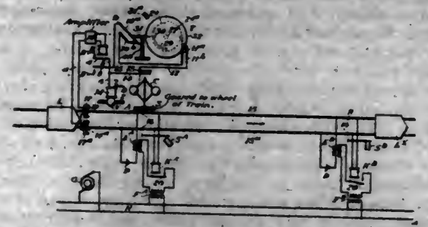
5. In a filter pot press, a filter member comprising in assembled operative relation a layer of filtering medium, two metal plates having openings of different size on one side of said layer, a metal plate having large tapering openings on the other side thereof, and a support for said elements.

1,755,354. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed May 15, 1926. Serial No. 109,418. 4 Claims. (Cl. 282—21.)

1. In an autographic register, a lower driving roller, an upper driving roller, and shaft means movably mounted on the upper shaft, pins carried by said movably mounted means, yielding means connected to said movably mounted means for yieldingly resisting the movement of the pins relative to the upper shaft, and cams connected to said movably mounted means adapted to spread said rollers, means adapted to restrain the rotation of the cams and pins with the upper roller and a common actuating means for releasing said cam restraining means and for actuating said rollers.



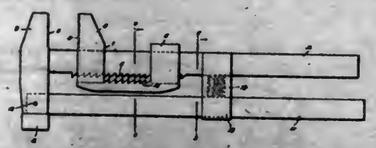
1,755,355. MANUFACTURE OF FRICTION BODIES. HANS KATTWINKEL, Coswig, Germany. Filed Oct. 14, 1926, Serial No. 141,590, and in Germany Dec. 14, 1925. 3 Claims. (Cl. 18—59.)



1. A method of the character described, comprising the steps of intimately mixing loose asbestos fibres with a solution of a phenolic condensation product, drying the mixture, pressing it into solid cakes, superposing a plurality of such cakes, pressing them together into the final shape of the body to be manufactured, and hardening the compressed mass under the influence of heat.

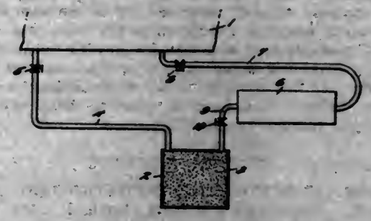
1,755,356. PLATE CATCHER. FRANK R. KRAUSE and RALPH C. STIEFEL, Ellwood City, Pa. Filed Feb. 26, 1929. Serial No. 342,695. 12 Claims. (Cl. 80—47.)

1. A plate transfer mechanism, comprising a skeleton receiving table, a single transfer rack pivotally supported intermediate of its ends and movable through said table, means for elevating said rack through said table for removing a plate from it, and means for lowering the rack and simultaneously turning it end-for-end to bring one of its ends upwardly beneath said table.



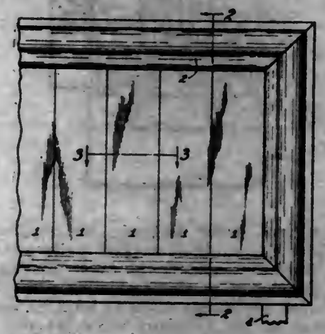
1,755,357. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 702,286, filed Mar. 27, 1924. This application filed Oct. 4, 1924. Serial No. 741,763. 19 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising automatic mechanism carried on a train and operating under unsafe traffic conditions to apply the brakes, and means located entirely on the train for preventing an automatic brake application if the engineer takes suitable periodic action.



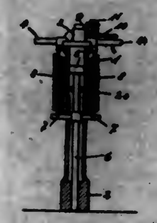
1,755,358. WRENCH. WARD MONTENEY, Castle Rock, Wash. Filed June 12, 1928. Serial No. 284,822. 1 Claim. (Cl. 81—138.)

In a wrench, the combination with a shank provided with ratchet teeth on the inner side edge thereof, a stationary jaw formed on one edge of the shank, a sleeve slidably mounted on the shank and having an opening of such size as to permit the same to move laterally with respect to the shank, a jaw formed on one end of the sleeve and extending laterally therefrom for cooperation with the stationary jaw, the intermediate portion of the sleeve being cut out at its outer side, teeth provided on the wall of the opening formed by the removal of a portion of the sleeve, an elongated lever pivoted at one end to the stationary jaw for disposition adjacent the inner side edge of the sleeve and adapted to engage the same to move the sleeve laterally whereby the teeth of the sleeve are brought into locking engagement with the teeth on the shank to secure the movable jaw against sliding movement.



CARNEGIE LIBRARY OF ATLANTA

1,755,359. RESERVE AND CONSERVATION OF INFLATANTS. HERBERT B. MOSES, Washington, D. C. Filed May 29, 1926. Serial No. 112,736. 10 Claims. (Cl. 244—3.)

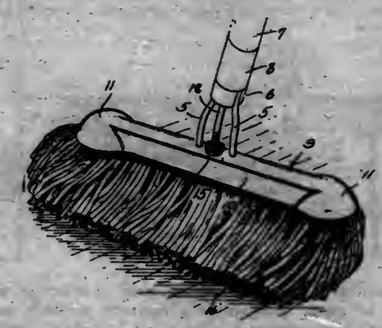


10. An inflatable device adapted to be inflated by a gas, and highly adsorbent material within said device adapted to contact with and adsorb the inflating gas.

1,755,360. SECTIONAL SIGNBOARD. ROGER W. OLMSTED, San Francisco, Calif., assignor to Foster & Kleiser Company, San Francisco, Calif., a Corporation of Nevada. Filed Oct. 22, 1927. Serial No. 227,983. 4 Claims. (Cl. 40—125.)

1. A sectional sign board comprising a plurality of sheet metal panels adapted to abut edgewise to form the body of the sign board, said panels each provided with rearwardly projecting marginal devices, and means engaging said devices and for drawing same tightly together comprising a yoke adapted to engage adjacent devices of adjacent panels and wedge means for forcing said devices together within said yoke.

1,755,361. MECHANICAL HAMMER. ALBERT PFLÜGER and KONRAD HAAGE, Esslingen-on-the-Neckar, Germany. Filed Sept. 24, 1927, Serial No. 221,726, and in Germany July 15, 1926. 5 Claims. (Cl. 123—7.)

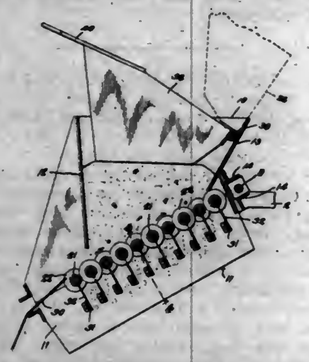


1. A mechanical percussive tool comprising a cylinder, a tup on said cylinder, a piston in said cylinder, a piston rod connected with said piston, means for supplying combustible mixture to said cylinder, and means for igniting the mixture, the length of said cylinder, measured from its inner end to the striking face of said tup, and the length of said piston and piston rod, measured from the inner face of said piston to the end of said rod, being so determined that their difference is equal to the suction stroke of said piston.

1,755,362. METHOD OF MAKING SODIUM SALICYLATES. MARK E. PUTNAM, Midland, Mich, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Apr. 6, 1923. Serial No. 630,396. 3 Claims. (Cl. 260—111.)

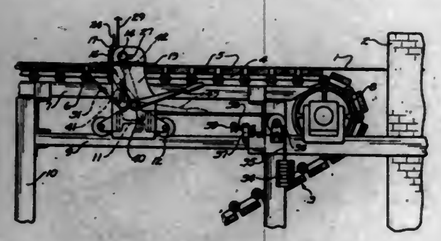
1. In a process of making substantially pure sodium salicylate from a solution thereof containing impurities, the steps which consist in cooling such solution to a temperature under 15° C., such solution being made up too dilute to form anhydrous crystals at such temperature, seeding such cooled solution with crystals of sodium salicylate hexahydrate, thereby causing crystallization of a large proportion of a dissolved salt in like form only, separating such crystals from the mother liquor with its impurities, and then washing and drying such crystals, whereby without further repurification a white anhydrous salt is produced free from tint of color and capable of being dissolved to a clear water-white solution.

1,755,363. MOP HANDLE. JOSEPH S. ROUX, Manchester, N. H. Filed July 2, 1929. Serial No. 375,891. 2 Claims. (Cl. 15—229.)



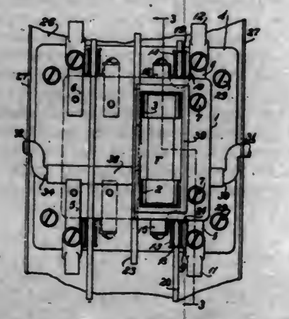
2. In a device of the class described, a transverse member crossed upon itself near to its ends and spread to form enlarged, loop-shaped eyes, the constituent material of the eyes being prolonged inwardly with respect to the eyes, in approximate parallelism to the transverse member to define arms, the arms terminating in fingers arranged approximately at right angles to the arms and to the planes in which the eyes are located, a handle on which the fingers are mounted, a hollow trough-shaped jaw slidable on the fingers and enclosing the transverse member and the arms, the jaw being provided at its ends with enlarged cup-shaped elements receiving the eyes, and a head engaged between the transverse member and the jaw, the head being spread at its ends by the eyes and being held spread at its ends by the cup-shaped elements, and means for producing relative movement between the jaw and the transverse member to effect a compression of the head.

1,755,364. SEPARATOR. ENOS S. ROYER, Wilkes-Barre, Pa., assignor of one-half to R. J. O'Donnell, Wilkes-Barre, Pa. Filed Mar. 24, 1928. Serial No. 264,528. 9 Claims. (Cl. 209—104.)



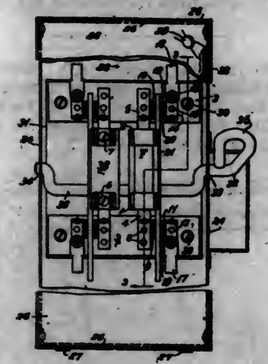
1. A separator including a container for holding material to be separated, a pivoted support therefor, a resilient

support therefor, a bottom for the container including parallel series of disks disposed in lapped and staggered relation to provide outlet orifices therebetween, and means



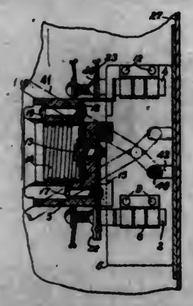
supported with the container for simultaneously rotating all of the disks in one direction and vibrating the container.

1,755,365. CUTTING APPARATUS FOR SHEET GLASS. CLIFFORD A. ROWLEY, Chicago, Ill., assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Original application filed May 19, 1924, Serial No. 714,417. Divided and this application filed Apr. 1, 1929. Serial No. 351,499. 10 Claims. (Cl. 33—32.)



1. An apparatus for transversely scoring a moving sheet of glass, comprising a carriage movable parallel with the movement of the sheet and including a guide bar extending transversely above said sheet, and a cutter carrier having a slidable and rotatable fit on said guide bar.

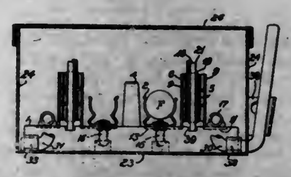
1,755,366. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Mar. 9, 1927. Serial No. 173,979. 15 Claims. (Cl. 200—114.)



1. In an electric switch, the combination of a rear support, an insulating base mounted at the front of the support and in normally fixed spaced relationship therewith, two stationary switch contacts located behind the plane of a rearward facing surface of the base and having parallel opposite contact faces substantially perpendicular to the said surface, one of the said contacts being mounted upon the rear support independently of the base and the other being mounted directly upon the base, and a rectilinearly movable switching member movable parallely with the said rearward facing surface of the base and having opposite parallel contact faces which engage and disengage the two stationary contacts to make and break the circuit through the switch.

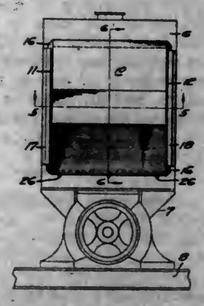
1,755,367. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed Mar. 10, 1927, Serial No. 174,350. Renewed Dec. 7, 1929. 31 Claims. (Cl. 200—114.)

1. In a fused switch appliance, the combination of a rear support, a plurality of supporting elements extending forward from the support, two fuse receiving contacts directly mounted upon and contacting with two of the said elements respectively at the forward portions thereof, two pairs of opposed stationary switch contacts located at least in part behind a transverse plane through the rear parts of the fuse contacts, a rectilinearly movable switching member comprising two conducting elements insulated from each other and normally engaging the said stationary switch contacts of the corresponding pairs to establish a circuit through the appliance, and means for rectilinearly moving the switching member approximately parallelly with the face of the rear support.



1,755,368. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE, JOSEPH SACHS, West Hartford, Conn. Filed July 7, 1927, Serial No. 204,078. Renewed Dec. 7, 1929. 7 Claims. (Cl. 200—114.)

1. In an electric switch, the combination of an insulating base, a pair of opposed stationary switch contacts



carried by the base, means for connecting the said contacts in an electric circuit, an insulating element having opposite flat faces and movable in the planes of the said faces between the said stationary contacts, a movable conducting contact means carried by the said insulating element, the said means comprising two resilient portions having contact surfaces located respectively at opposite sides of the insulating element and normally engaging the respective stationary switch contacts, and means for moving the said insulating element as aforesaid to substantially simultaneously disengage the said movable contact means from the stationary switch contacts, the said insulating element extending between the said stationary contacts in all positions so as to constitute an insulating barrier between them.

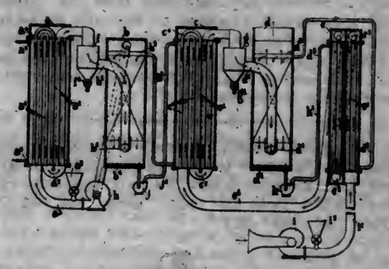
1,755,369. ELECTRIC-CIRCUIT-CONTROLLING APPLIANCE. JOSEPH SACHS, West Hartford, Conn. Filed July 18, 1927, Serial No. 206,782. Renewed Dec. 7, 1929. 11 Claims. (Cl. 200—114.)

1. In a fused switch appliance, the combination of an insulating base, two fuse receiving contacts directly mounted upon the base at the front thereof, two pairs of opposed stationary switch contacts carried by the base at the front thereof and at one side of the fuse contacts, conducting means for electrically connecting one switch contact of each pair with its corresponding fuse contact, a rectilinearly movable switching member comprising an insulating element and two conducting elements carried by the insulating element and normally engaging the said switch contacts of the corresponding pairs to establish a circuit through the appliance, means normally engaging the insulating element of the said member to prevent forward movement thereof, and means for rectilinearly moving the switching member approximately parallelly with the front face of the base to engage the conducting elements thereof with the stationary switch contacts or to disengage them therefrom.

1,755,370. RADIATOR SHIELD. HORATIO W. SMITH, Stockton, Calif., assignor to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed May 28, 1929. Serial No. 366,587. 7 Claims. (Cl. 298—54.)

5. A radiator shield comprising a multiplanar structure composed entirely of mesh material.

1,755,371. COIN-CONTROLLED CLOCK. JACOB A. SMITH, River Forest, Ill. Filed Apr. 27, 1925. Serial No. 26,018. 8 Claims. (Cl. 194—69.)

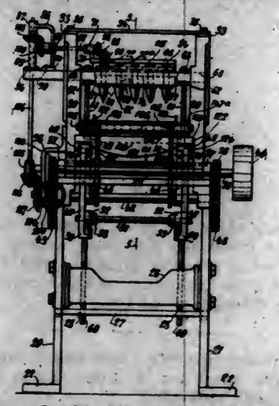


4. In a coin controlled clock, a slidably mounted coin receiver, and means for preventing winding of a clock, said means being arranged to be operated by a coin in said receiver while the receiver is slid through a distance equal to the diameter of the coin.

1,755,372. FLAG HOLDER. STEPHEN SMITH, San Francisco, Calif. Filed Jan. 3, 1928. Serial No. 244,820. 4 Claims. (Cl. 116—173.)

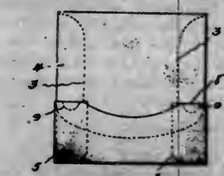
1. A flag holder comprising a staff, a retainer formed of a single wire frictionally secured at one end to said staff and diverging longitudinally therefrom, means on said staff for receiving the other end of said retainer, and means struck from the retainer for preventing movement of a flag along said retainer when the retainer is in engagement with said staff.

1,755,373. DRYING. OLOF SÖDERLUND and THOMAS GRAM, London, England, assignors to Techno-Chemical Laboratories, Limited, London, England. Filed Apr. 23, 1928, Serial No. 272,264, and in Great Britain Apr. 23, 1927. 9 Claims. (Cl. 34—24.)



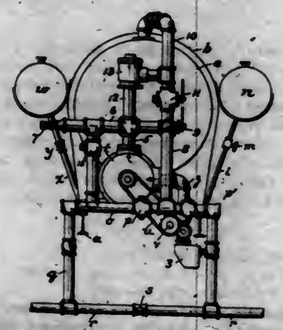
1. A method of treating moist material of at least one small dimension comprising bringing said material carried in suspension in a gaseous fluid current across heat-transmitting surfaces of attenuated conduits whereby moisture is evaporated from the material, separating the material from the current, extracting from the current by direct contact with a divided liquid the latent heat of the evaporation and employing the heat thus attained by the liquid to effect drying of other moist material.

1,755,374. MOLDING MACHINE. HERMAN SONNENBERG, Middle Village, N. Y. Filed Aug. 10, 1927. Serial No. 211,996. 5 Claims. (Cl. 25—6.)



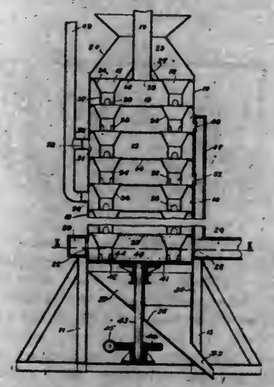
1. In a molding machine the combination of a mold having a plurality of cavities, a crosshead guided in the machine, means to reciprocate the crosshead, a stripper plate detachably supported on the mold, and a plurality

of plungers depending from the crosshead, each plunger having a flange at its top end, each of said flanges having a circumferential recess in its bottom face, each of said



plungers disposed with its longitudinal axis coincident with the longitudinal axis of one of the cavities in the mold.

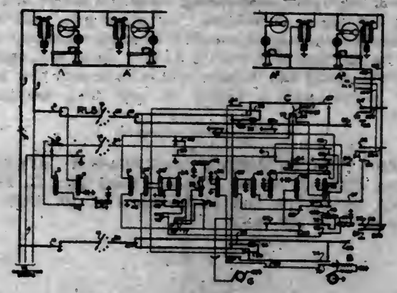
1,755,375. FOLDER OR CONTAINER. ARNOLD J. TANNER, North Haven, Conn., assignor of one-half to Theodore H. Low, New Haven, Conn. Filed May 28, 1928. Serial No. 281,059. 3 Claims. (Cl. 229—16.)



1. A container of the class described comprising a body section; inwardly folding flanges at the sides of said body section extending substantially along the full length thereof; a covering flap extending from the bottom end of said body section arranged to fold and to be secured on said body section to form a separate pocket lying over said flanges and a closing flap extending from the top end of said body section adapted to fold and slide into said pocket to close the container.

1,755,376. ROAD OILER. WATSON T. THOMPSON, Kennett Square, Pa., assignor to American Road Machinery Company, Inc., Kennett Square, Pa., a Corporation of Delaware. Filed June 16, 1923. Serial No. 645,719. 1 Claim. (Cl. 299—35.)

A road oiler having a tank for the oil, a pump having an inlet and an outlet, a connection from the bottom of the tank to the pump inlet, a header connected to the pump outlet, a distributor for the oil, a connection between the distributor and the header, a connection between the header and the tank, a conduit leading from said header back to the pump inlet, a valve in each connection whereby the flow through said connections may be controlled without affecting the flow passage through other connections, and means for delivering cleansing fluid to the pump inlet.

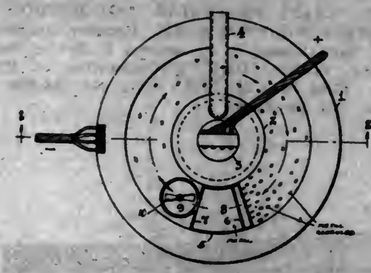


1,755,377. DRYING OF ROAD-MAKING AGGREGATES AND OTHER BROKEN OR GRANULAR MATERIALS. JOHN FREDERICK WAKE, Darlington, England. Filed Sept. 21, 1925, Serial No. 57,667, and in Great Britain Sept. 23, 1924. 4 Claims. (Cl. 34—34.)

1. For drying road-making aggregates and other broken or granular materials on the counter-current principle, apparatus comprising a casing; a plurality of open-ended perforated notched short tubes or pipes situated within the casing in vertical and horizontal spaced relation to each other and to the casing; transverse imperforate plates fixed at intervals within the casing positioning the tubes or pipes, serving as a means to control the direction of the circulation of air by preventing passage except by the notches, and partitioning the casing into compartments, wherethrough the tubes or pipes pass, means at the top of the casing for receiving the material to be dried and delivering it to the tubes or pipes; means at the bottom of the casing for receiving the material from the tubes or pipes and discharging it; means establishing communication between one or more of the casing-compartments and a source of supply of a drying medium or agent; and means establishing communication between the remaining compartment, or one or more of the remaining compartments, and an outlet or outlets for the spent drying medium or agent and the products of the drying operation.

1,755,378. AUTOMATIC TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 18, 1926, Serial No. 142,267. Renewed July 12, 1929. 32 Claims. (Cl. 179—17.)

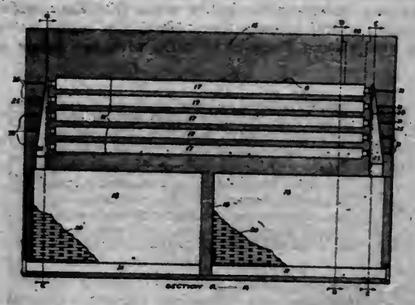
1. In a telephone system, a connector switch, a trunk line terminating in said switch, a calling line, means for connecting said calling line to said switch via said trunk line, a second line, impulsing contacts at a station on said calling line, and means responsive to the actuation of said contacts for then operating said switch either to



connect with said second line and signal a subscriber thereon or to signal another subscriber on said calling line via said trunk line.

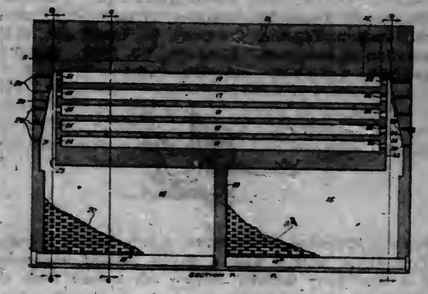
1,755,379. PROCESS OF CONCENTRATING LATEX. HENRY W. BANKS, 3d, Noroton, Conn., assignor, by mesne assignments, to United States Rubber Company, a Corporation of New Jersey. Filed Nov. 28, 1924. Serial No. 752,813. 1 Claim. (Cl. 18—50.)

A process for treating aqueous dispersions of rubber which consists in repeatedly increasing the state of aggregation of the rubber particles therein and alternately removing water-soluble material therefrom.



1,755,380. METHOD AND MEANS FOR ELECTROLYTIC PRODUCTION OF LIGHT METALS. EDWIN O. BARSTOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Nov. 9, 1925. Serial No. 67,780. 12 Claims. (Cl. 204—19.)

2. In a method of electrolyzing a fused electrolyte for the production of a metal which will float thereon, the step which comprises mechanically circulating the surface portion of said electrolyte through a trap adapted to arrest metal floating thereon.

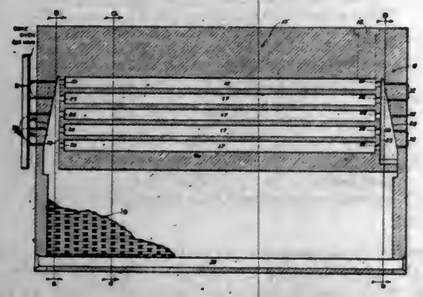


1,755,381. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 16, 1921, Serial No. 470,197. Renewed Jan. 24, 1930. 11 Claims. (Cl. 202—146.)

1. In a coking retort oven, in combination: a plurality of coking chambers; heating walls contiguous to such coking chambers and respectively constituted of two series of horizontal combustion flues; reversible crosswise extending regenerators parallel with the coking chambers and the heating walls, such regenerators being disposed into two series located respectively on opposite sides of the battery, one series operating for inflow while the other series operates for outflow, the regenerators of each series being disposed into groups of three regenerators with one inflow operating regenerator of each group supplying gas and the others supplying air, the gas regen-

erator lying between the respective air regenerators; and duct means connecting the groups of such regenerators of each series respectively with the opposite ends of both series of horizontal combustion flues of said heating walls; substantially as specified.

1,755,382. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 16, 1921. Serial No. 470,198. 18 Claims. (Cl. 202—146.)



1. In a cooking retort oven, in combination: a plurality of parallel horizontally elongated coking chambers; heating walls contiguous to said coking chambers and respectively constituted of horizontal combustion flues; reversible crosswise extending regenerators parallel with the coking chambers and the heating walls, said regenerators being disposed into two series located on opposite sides of the battery respectively, one series operating for inflow while the other series operates for outflow, the regenerators of each series being grouped in pairs with one inflow operating regenerator of each pair for supplying gas and the other for supplying air; and the pairs of said two series of regenerators having communications with the opposite ends of the horizontal combustion flues, respectively, of said heating walls, each of said communications consisting of a substantially straight duct; substantially as specified.

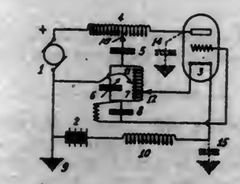
1,755,383. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 16, 1921. Serial No. 470,199. 21 Claims. (Cl. 202—146.)

1. In a coking retort oven, in combination: a plurality of coking chambers; heating walls contiguous to such coking chambers and respectively constituted of horizontal

combustion flues; reversible crosswise extending regenerators parallel with the coking chambers and the heating walls such regenerators respectively extending from side to side of the retort oven and being disposed into two groups alternating with each other, the regenerators of one group operating for inflow while the regenerators of the other group operate for outflow, the regenerators of each group being disposed in pairs with one inflow oper-

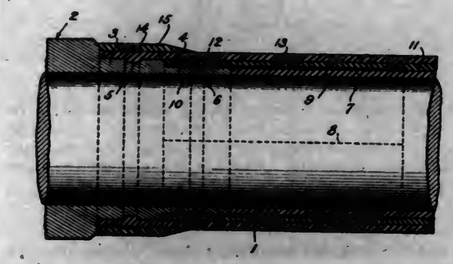
ating regenerator of each pair supplying gas and the other supplying air; and duct means connecting the pairs of such regenerators of both groups respectively with one end of the horizontal combustion flues of the heating walls on one side of such regenerators and with the opposite end of the horizontal combustion flues located on the opposite side of such regenerators; substantially as specified.

1,755,384. SHOW-CASE REFRIGERATOR. FRANCIS C. BECKER, St. Louis, Mo., assignor, by mesne assignments, to Hussmann-Ligonier Company, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 20, 1928. Serial No. 248,049. 4 Claims. (Cl. 312—126.)



2. In a showcase refrigerator, a tray having a bottom rim of angle section with a flange thereof unstanding, and a wire body secured thereto but spaced from said flange at the side of the tray, in order to permit cooperation of said flange, with a stop on the show case.

1,755,385. COMBINATION ELECTRIC-LIGHTING APPARATUS. FORD E. BEIDLER, New York, N. Y., assignor of one-third to Samuel Alsop, one-third to Charles E. Crowley, and one-third to Frank E. Chester, New York, N. Y. Filed May 31, 1928. Serial No. 281,714. 11 Claims. (Cl. 240—10.5.)

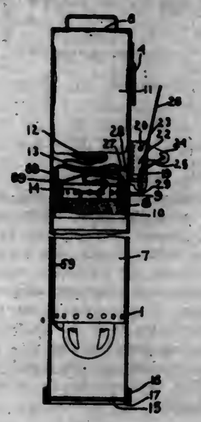


7. An electric lamp including base, a contact member carried by said base included in a circuit connected to a suitable source of electricity, a casing detachably mounted on said base, a lamp carried by said casing, and included in a normally closed circuit connected to another source of electricity, said casing, lamp and source of electricity forming a portable self contained unit, said contact member and casing coacting whereby when the casing is on the base said contact member opens said second mentioned circuit and includes said lamp in said first mentioned circuit and a switch in said first mentioned circuit.

1,755,386. VACUUM-TUBE GENERATOR SYSTEM. HENRI CHIREIX, Paris, France. Filed Apr. 5, 1926, Serial No. 99,740, and in France Aug. 10, 1925. 5 Claims. (Cl. 250—36.)

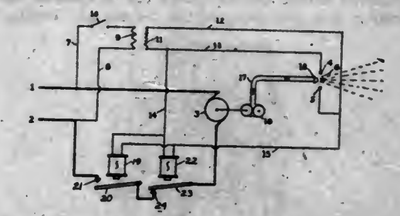
1. A circuit arrangement comprising a vacuum tube oscillator, a source of energy for supplying plate voltage thereto having one of its terminals connected to the plate through an inductance, an impedance having one of its terminals connected to said inductance by a variable contact and its other terminal connected to the grid of said oscillator and a variable contact connected to the filament of said oscillator and contacting with said impedance.

1,755,387. SHAFT PROTECTOR AND METHOD OF MANUFACTURING THE SAME. HERBERT CHRISTOPHERSEN, East Orange, N. J., assignor to Revere Rubber Company, Chelsea, Mass., a Corporation of Rhode Island. Filed June 26, 1928. Serial No. 288,890. 12 Claims. (Cl. 18—59.)



1. A shaft assembly including, in combination, a shaft, a bearing member thereon, a sleeve sealed to one end of the bearing member and extending beyond said end along the shaft, said sleeve having an inside diameter larger than the shaft and being disposed substantially concentric to the shaft, and vulcanized rubber composition surrounding said sleeve, the shaft, and the ends at least of said bearing member.

1,755,388. AERIAL FLARE. GEORGE J. J. CLARK, Whitman, and ERNEST B. JONES, South Weymouth, Mass., assignors to National Fireworks, Inc., West Hanover, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1927. Serial No. 213,676. 16 Claims. (Cl. 102—24.)



1. An aerial flare comprising a shell containing pyrotechnical material and having a releasable cap, an igniting device carried by said cap, and means for actuating said igniting device and operable thereafter to remove and support said cap.

1,755,389. AERIAL FLARE. GEORGE J. J. CLARK, Whitman, and ERNEST B. JONES, South Weymouth, Mass., assignors to National Fireworks, Inc., West Hanover, Mass., a Corporation of Massachusetts. Filed Dec. 5, 1928. Serial No. 323,859. 10 Claims. (Cl. 102—24.)

1. An aerial flare construction for airships comprising a flare-supporting tube, means for supporting said tube within the body of the air-ship with the lower open end thereof exposed therethrough, a flare within said tube, releasable locking means for supporting said flare, and means substantially hermetically closing the lower end of said tube capable of removal by said flare upon its release without substantially obstructing the dropping of the flare.

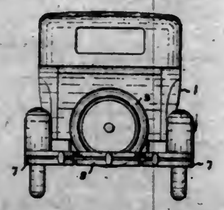
1,755,390. ELECTRICAL SPARK CONTROL FOR BURNERS. FRANK FISCHER, Rye, N. Y., and ARNOLD F. VAN PELT, Interlaken, N. J., assignors to Grant Oil Burner Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,855. 2 Claims. (Cl. 158—28.)

1. In a burner ignition device having a controlled circuit, a high voltage controlling circuit energized from a substantially constant potential, the controlling circuit having a pair of spaced electrodes forming a spark gap for igniting the burner, relay means for closing the controlled circuit when an ignition spark is present at the spark-gap and opening the controlled circuit when said ignition spark is absent, and a shunt circuit around the spark-gap for operating the relay means.

1,755,391. PROCESS OF PRODUCING A PHOSPHATE COATING ON METAL. MATTHEW GREEN and VAN M. DARSEY, Detroit, Mich., assignors to Parker Rust-Proof Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 29, 1929. Serial No. 359,166. 2 Claims. (Cl. 148—6.5.)

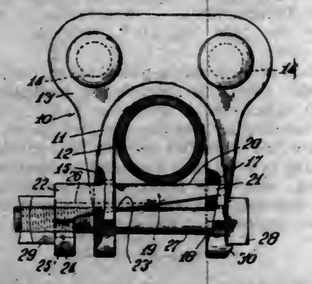
1. A method of producing a phosphate coating on metal articles which comprises providing a preliminary bath and a main bath large in proportion to the preliminary bath, first treating articles for a short time in the preliminary bath and thereafter treating said articles in the main bath for as long as is necessary to produce the desired coating, completely renewing the preliminary bath at frequent intervals, and replenishing the main bath from time to time, regardless of its aging.

1,755,392. SECRET-DOOR LATCH. CARL J. HAGSTROM and CARL G. HAGSTROM, Glen Cove, N. Y. Filed Dec. 28, 1927. Serial No. 242,047. 8 Claims. (Cl. 292—99.)



1. A door latch comprising a casing, a strike, a catch carried by the casing, said catch being movable by the strike on entering the same to engage the strike, a plunger in the casing projecting therefrom, and means operated by the plunger to move the catch to release the same from engagement with the strike, the plunger being actuated on moving the door closely to the jamb, said means retaining the catch in released position while the plunger moves outward of the casing to normal position.

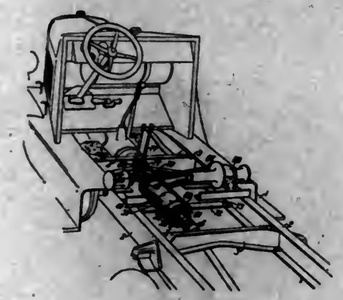
1,755,393. VEHICLE BUMPER. ARDEN HANCOCK, Houston, Tex. Filed Jan. 15, 1929. Serial No. 332,005. 1 Claim. (Cl. 293—55.)



A rear end protector for motor vehicles designed to protect the rear fenders and spare tire, carried by the

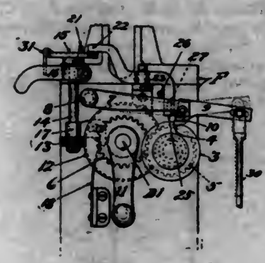
rear end of the vehicle, and comprising side bumpers spaced apart and arranged in the rear fenders of the vehicle, each side bumper comprising a bar attached to the vehicle chassis and extending rearwardly, the rear end of each bar being outwardly curved, bumper arms whose inner ends are bolted to the corresponding bars, said arms being curved around the outwardly curved ends of the corresponding bars and being bolted thereto and having free

outer ends, a U-shaped intermediate bumper, space blocks between the ends of the intermediate bumper and the side bumpers and securing bolts passing through the respective ends of said intermediate bumper and through the corresponding blocks and side bumpers and forming common securing means for securing said bars and the adjacent ends of said bumper arms and intermediate bumper together.



1,755,394. PIPE-ANCHORING MEANS. VICTOR H. HARBERT, Chicago, Ill. Filed Feb. 24, 1928. Serial No. 256,514. 1 Claim. (Cl. 248—31.)

Pipe anchoring means comprising a wide U-shape member adapted to receive a pipe, one end of the member having an apertured flange extending upwardly from the closed side of the member, one side of the U-shape member having a transverse slot socketed intermediate of its ends, while the other side of the member is provided with a transverse slot aligned with the slot in the first mentioned side and with a bolt receiving opening aligned with the socketed portion of the slot in the first mentioned side, a wide wedge member having a flat upper face and a depending apertured lobe at the large end thereof, the lower tapered side of the wedge member adjacent the large end thereof being channeled in alignment with the aperture in said lobe, and a clamping bolt adapted to pass through the apertured lobe, said channel, through the socketed portion of the first mentioned slot and through the bolt receiving opening of the second mentioned side of said U-shape member whereby fastening of the bolt will induce a drawing action on the wedge member in proximity to its longitudinal axis transversely of the U-shape member and force the flat face of the wedge member into firm relation with the pipe.

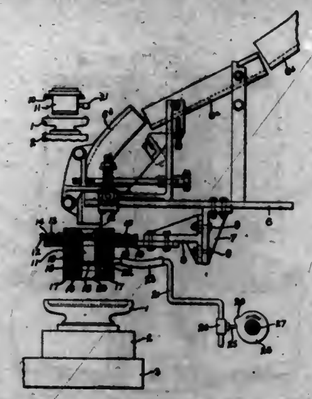


1,755,395. TRANSMISSION POWER TAKE-OFF. JOHN R. HICKS, Tulsa, Okla., assignor of three-fourths to Tidal Oil Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Sept. 14, 1928. Serial No. 306,012. 3 Claims. (Cl. 74—7.)

1. In a device of the character described a housing, shaft sections journaled in and projecting from the housing, a driving member rotatably mounted on the projecting end of a shaft section and having clutch jaws, means for selectively effecting an integral or independent relation of the shaft sections, a mating clutch member keyed

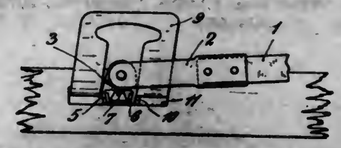
against rotation but slidably mounted on the shaft section adjacent the driving member, and means for engaging or disengaging the driving member and mating clutch member.

1,755,396. ADJUSTABLE STOP MECHANISM FOR YARN-MEASURING SPOOL WINDERS. LOUIS H. HILDEBRANDT, Amsterdam, N. Y., assignor to Collins Loom Works Inc., Amsterdam, N. Y., a Corporation of New York. Filed Aug. 25, 1928. Serial No. 302,129. 5 Claims. (Cl. 33—132.)



4. An adjustable stop mechanism for a spool winding device, which includes a measuring roll adapted to be rotated by contact with the yarn being wound, a support, a rotatable disk, means for rotating said disk incident to the rotation of said roll, an arm pivoted on said support, adjustable means for normally holding said arm in an inactive position and releasing said arm after a predetermined amount of yarn has been unwound, whereupon said arm gravitates to an active position, and means forming a connection between the arm and the starting and stopping mechanism of the spool winder, and actuated by said disk incident to the release of said arm to stop said mechanism.

1,755,397. METHOD AND APPARATUS FOR RETARDING FREELY-FALLING MOLD CHARGES. ALFRED R. HUNTER, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 7, 1928. Serial No. 324,384. 16 Claims. (Cl. 49—14.)

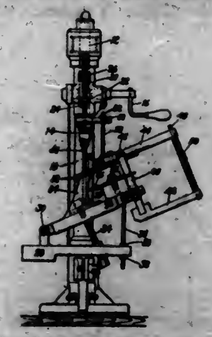


8. Apparatus for guiding charges of molten glass into a mold comprising a guiding member having a substantially vertical opening therethrough, means for directing

a charge of molten glass downwardly through said opening, and means for creating an upwardly moving current

of a gaseous medium through said opening for slowing up a freely falling charge of molten glass passing through said opening.

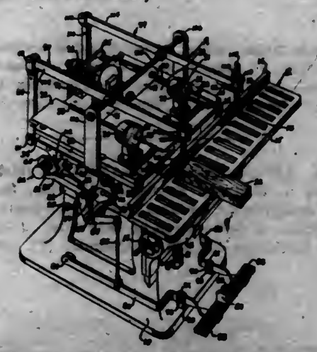
1,755,398. SKI FASTENING. JOHANNES OLSEN JORDELL, Oslo, Norway. Filed Oct. 15, 1928, Serial No. 312,641, and in Norway Oct. 19, 1927. 4 Claims. (Cl. 203—134.)



1. A ski-fastener of the character described, including in combination with a ski having a transverse slot therein and a back-fastening strap, of interchangeable and lockable members slidably and removably mounted in said slot and each having one of the ends of the back-fastening strap secured thereto.

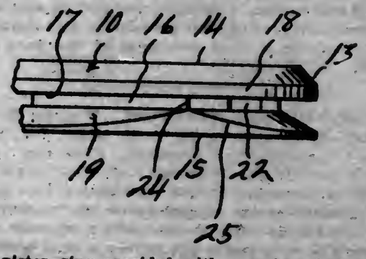
1,755,399. METHOD OF PRODUCING ARTIFICIAL MARBLE. JOHANN KNEBEL, Mahr. Schomberg, Czechoslovakia. Filed Sept. 25, 1928, Serial No. 308,339, and in Czechoslovakia May 21, 1928. 1 Claim. (Cl. 91—70.)

A method of producing artificial marble, consisting in applying a glazing mass consisting of water, potassium carbonate, soda water glass, potassium sulphate, calcium phosphate and a suitable coloring matter to the surface of a slab of material which can be ground, boiling the said slab with the glazing mass in a bath composed of water, calcium carbonate, potassium chloride, magnesium chloride, calcium chloride, nitric acid, acetic acid, sulphuric acid, sodium chloride, magnesium sulphate and citric acid, at a temperature of 100°–110° C. for about three hours, thereupon placing the said slab in a cold bath consisting of water, caustic potash, soda lye and alum for about three hours, then rinsing with water, drying, grinding and polishing, as and for the purpose set forth.



1,755,400. WOOD-HEEL-MAKING MACHINE. RALPH F. KNIGHT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1928. Serial No. 294,007. 4 Claims. (Cl. 144—93.)

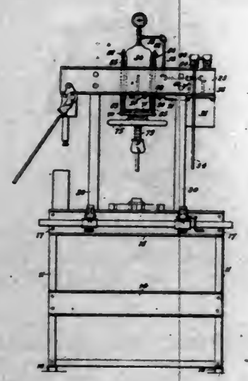
1. In a machine for making wood heels, a vertically reciprocable tool, a table under the tool adjustable about a horisontal axis to bring the shank of a Louis heel on the table into a substantially vertical position, gages for orienting the heel and positioning its shank under the tool, a resilient clamping means arranged to contact with the upper surface of the heel, and a lost motion connection



between the tool and the clamping means whereby the lifting of the tool from the heel renders the clamping means inoperative.

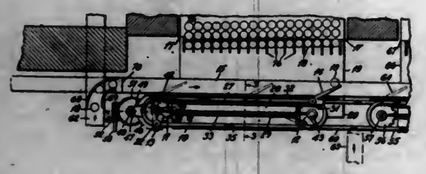
1,755,401. AUTOMATIC BORING MACHINE. JOHN W. KOEHL, CARL PALKOWSKI, and STEFAN WAGNER, Los Angeles, Calif. Filed June 28, 1928. Serial No. 287,660. 8 Claims. (Cl. 144—110.)

1. A drilling machine including a base, a bed on said base, a plurality of slides mounted on said bed for horisontal reciprocating movement towards and from said work table, a drill head on each of said slides, a drill chuck in each head, means in each of said heads whereby to drive said drill chuck, said means including a shaft for each head, a motor including an armature shaft, means connecting each of said first mentioned shafts with said armature shaft and means operated by said motor to move said slides towards and from a piece of work.



1,755,402. PISTON RING. JOHN MAGEE, Detroit, Mich. Filed Jan. 9, 1929. Serial No. 331,272. 9 Claims. (Cl. 74—109.)

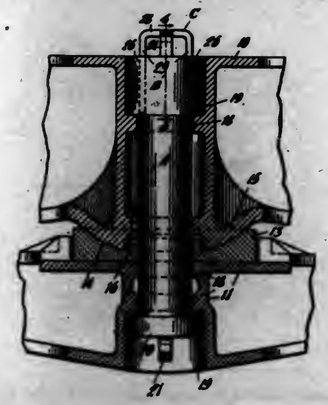
1. A piston ring provided with a series of circumferentially spaced slots overlapping at the outer wall of the ring to form a continuous circumferential groove.



CARNEGIE LIBRARY OF ATLANTA

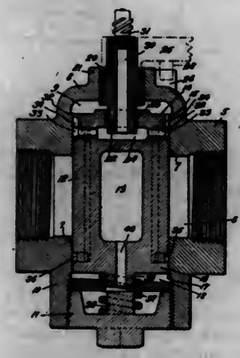
1,755,403. HYDRAULIC PRESS. ROBERT E. MANLEY, York, Pa., assignor to Manley Manufacturing Company, York, Pa., a Corporation of Delaware. Filed Jan. 5, 1926. Serial No. 79,434. 5 Claims. (Cl. 138—17.)

1. In a hydraulic press, a ram cylinder, a ram therein, a screw within the ram, a collar rotatably mounted on the ram and operatively connected to said screw to advance and retract the screw with respect to the ram.



1,755,404. APPARATUS FOR HANDLING GLASSWARE. WILBUR S. MAYERS, Fairmont, W. Va., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 30, 1922. Serial No. 609,860. 7 Claims. (Cl. 198—31.)

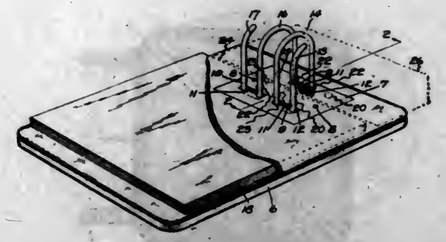
1. In glassware handling apparatus, the combination with a movable carrier for the ware of a member movable in a closed substantially horizontal path adjacent to said carrier, the movement of said member being differential to that of said carrier, a deflector mounted on said member, and means for moving said deflector on said member into and out of the path of movement of the ware on said carrier.



1,755,405. CAR CONSTRUCTION. WILLIAM H. MINER, Chasy, N. Y., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 14, 1928. Serial No. 292,892. 5 Claims. (Cl. 105—200.)

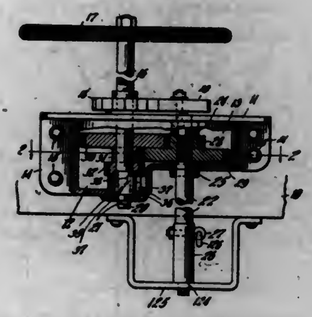
1. In car construction, the combination with body and truck bolsters having aligned center pin receiving openings, each bolster being provided with a shoulder adjacent its opening; of a center pin having a fixed head at one end, engaging one of said shoulders; a detachable head at the other end of said pin, engaging the shoulder of the other bolster; interengaging means on said pin and detachable head for securing the head to the pin upon relative rotation of said head and pin; and key acting means

extending lengthwise of the pin for locking said head against rotation with respect to the pin, to prevent disengagement of said detachable head.



1,755,406. VALVE. SVEN JOHAN NORDSTROM, Oakland, Calif. Filed Aug. 7, 1928. Serial No. 297,987. 12 Claims. (Cl. 251—93.)

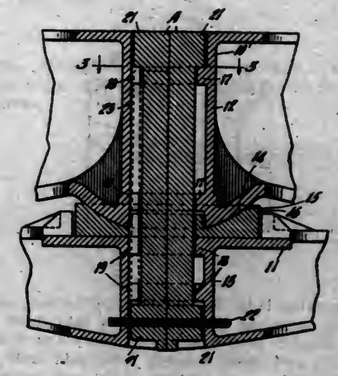
1. A valve comprising, a casing having a passageway therethrough and a cylindrical seat formed transversely of the passageway, a cylindrical plug loosely mounted in the seat and having a hole adapted to register with the passageway, said plug being substantially as long as the cylindrical seat in the casing, the lower side of said casing being closed and forming a chamber with the lower end of the plug, a spring interposed between the plug and the lower side of the casing for supporting the plug, the upper side of the casing being closed and forming a chamber with the upper end of the plug, a head threaded into the upper side of the casing, the lower extremity of the head being flattened and loosely engaging with a correspondingly shaped opening in the upper end of the plug to turn the plug when the head is turned, said head having a bore therethrough and being provided at the outer end of the bore with a fitting for the attachment of a lubricant compressor thereto, the upper end of the plug having passageways by which the inner end of the bore in the head communicates with the chamber in the upper side of the casing, and the seating surfaces of the cylindrical plug and the cylindrical seat in the casing being provided with grooves in communication with the interior of the head and the chamber in the upper side of the casing.



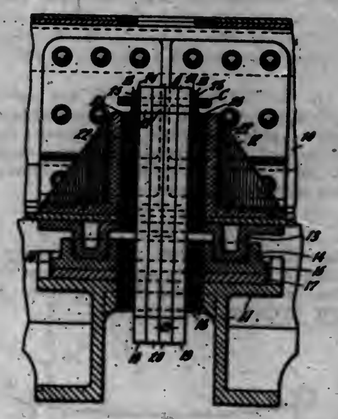
CARNEGIE LIBRARY OF ATLANTA

1,755,407. FILE. THOMAS J. O'CONNELL, San Francisco, Calif. Filed June 14, 1927. Serial No. 198,722. 8 Claims. (Cl. 129—8.)

3. A file for perforated sheets comprising a base, a continuous metallic file strip including a loop portion and a spaced parallel prong coextensive with only a portion of the loop, and means associated with the base adapted for detachable engagement with the file strip adjacent the ends of the loop portion to anchor the strip to the base.



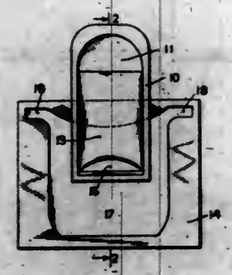
1,755,408. BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 12, 1924. Serial No. 737,257. 5 Claims. (Cl. 74—58.)



8. In a brake mechanism, the combination with a tightening element; of a plurality of transmitting means movable relatively to each other to effect different ratios; a continuous shaft having means rigid therewith for driving said transmitting means in their normal position; means for automatically shifting said transmitting means relatively to each other to change the ratios dependent upon change of tension in the brake rigging; and means rigid with said shaft for driving said transmitting means in their shifted position.

1,755,409. CAR CONSTRUCTION. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 27, 1928. Serial No. 295,654. 8 Claims. (Cl. 105—200.)

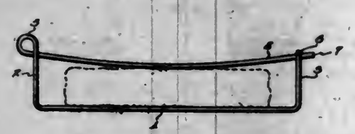
1. In car construction, the combination with body and truck bolsters having aligned center pin receiving openings, each of said bolsters being provided with a shouldered portion adjacent the outer end of the opening thereof; of a pin comprising a plurality of sections, each section having means at opposite ends thereof having shouldered engagement with the shoulders of said openings of the respective bolsters to prevent removal of the pin, said shoulders of the bolster being partly cut away to permit bodily insertion of the sections of said pin through the openings of said bolsters.



1,755,410. CAR CONSTRUCTION. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 27, 1928. Serial No. 295,655. 7 Claims. (Cl. 105—200.)

1. In car construction, the combination with body and truck bolsters provided with aligned center pin receiving openings; of a sectional locking pin connecting said bolsters, said pin comprising a plurality of sections each headed at opposite ends and said heads at opposite ends of each section having shouldered engagement with said bolsters, respectively, to prevent removal of the pin and separation of the bolsters.

1,755,411. LADLE. WILLIAM H. PRIECH, Baltimore, Md., assignor to American Smelting & Refining Company, New York, N. Y., a Corporation of New Jersey. Filed May 10, 1928. Serial No. 276,552. 5 Claims. (Cl. 22—79.)

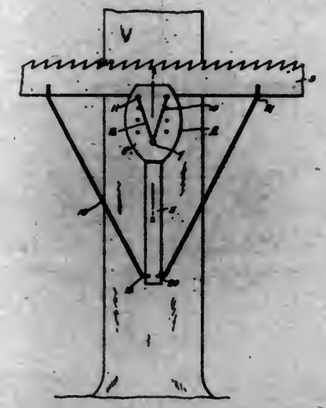


1. A pouring ladle for moulding operations having an outwardly extending spout, means in said spout for permitting metal to be discharged vertically and means associated with said spout whereby when said ladle is tilted a portion of the poured metal is directed rearwardly of said spout.

1,755,412. HIP TILE. ROBERT S. SCHMIEDER, Milwaukee, Wis., assignor to Milwaukee Corrugating Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1927. Serial No. 239,021. 5 Claims. (Cl. 108—24.)

2. A hip tile including separately and independently adjustable side pieces, each side piece including a vertical body member and an inclined body member, there being an offset between the members presenting a shoulder, and a crown piece having inturned marginal flanges slidably interfitted with the shoulders.

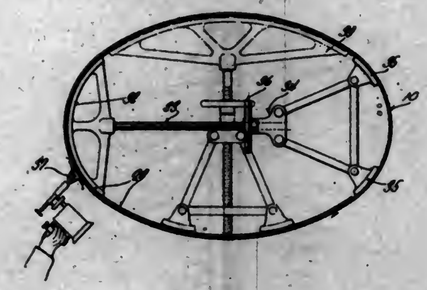
1,755,413. BACON HOLDER. CECIL C. SMITH, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1928. Serial No. 305,116. 2 Claims. (Cl. 17—44.)



1. A meat holding clamp comprising a bent wire structure including a straight back part with a pair of transverse ends extending to one side, one end being curved in part to form a hook and the other end being curved at its remote end and extended to form a pin part to engage said hook.

1,755,414. PARACHUTE PACK. FLOYD SMITH, San Diego, Calif., assignor to Switlik Manufacturing Company, Trenton, N. J. a Corporation of New Jersey. Filed Sept. 12, 1928. Serial No. 305,603. 10 Claims. (Cl. 244—21.)

1. In combination, a parachute container open to expose a parachute therein and a parachute adapted to be housed in the container, said parachute having at the apex a reenforced section adapted to extend across and close the opening in the container on the outer side of the latter when the parachute is housed in the container.

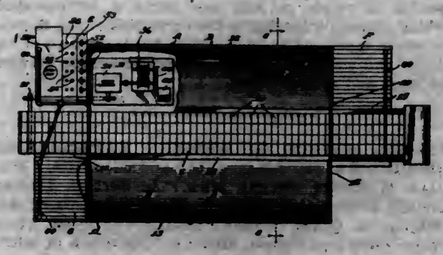


1,755,415. SAW-FILING STAND. ROBERT JAMES STIEFELMEIER, Ponce de Leon, Fla. Filed June 17, 1929. Serial No. 371,606. 5 Claims. (Cl. 76—78.)

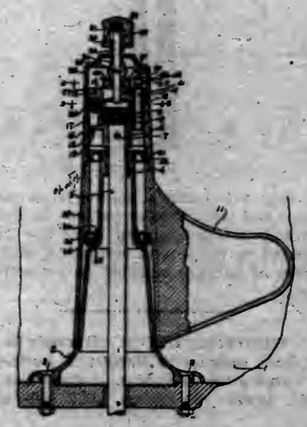
1. A stand of the class described, comprising a shank with a head formed integrally on one end thereof and split to provide a pair of jaws for receiving a saw therebetween, means for drawing the jaws together to clamp them in engagement with the saw, said jaws having a plurality of openings, and pins insertable through said openings to support the saw at the desired elevation, chains connected to said pins and anchored on one of the jaws, said shank having notches in its side edges, rods having offset terminals engageable in said notches and fork terminals to engage the under edge of the saw.

1,755,416. METHOD OF FORMING TANKS. WALTER J. WACHOWITZ, Milwaukee, Wis., assignor to The Wacho Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 10, 1927. Serial No. 174,244. 1 Claim. (Cl. 113—120.)

The hereindescribed method of lining a tank of one metal with a lining of another metal which consists in tinning the inner surface of the tank, in tinning the outer surface of a section of lining, in securing the lining section in contact with the tank surface at all points by means of a pressure applying member of a shape to conform with the contour of the tank and of a size sufficient to engage the entire section and in applying heat to the outer surface of the tank to fuse the tinned surfaces of the tank and the lining.

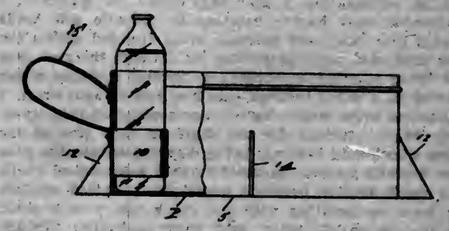


1,755,417. FRUIT CLIPPER. BLISS C. AMES, Corona, Calif. Filed June 19, 1928. Serial No. 286,658. 4 Claims. (Cl. 30—24.)



2. A fruit clipper comprising pivotally connected blades provided with downwardly convex longitudinally extending cutting edges, the tips of the blades curved inwardly and rearwardly in plan and the inner edges of the tips curved upwardly and inwardly and adjoining the forward ends of the cutting edges.

1,755,418. THERAPEUTIC APPARATUS. FRITZ A. ANDERSON, Milton, Wis., assignor to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed May 26, 1928. Serial No. 280,731. 5 Claims. (Cl. 174—177.)

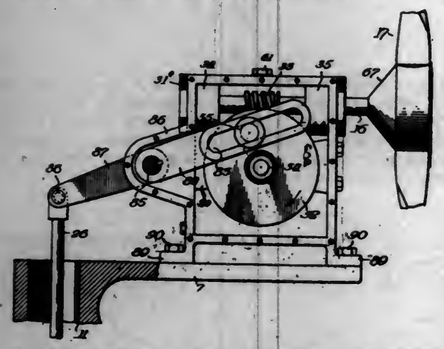


1. Therapeutic apparatus comprising a compartment, a radiant energy generator within the compartment, an endless moving belt-like tread by which patients may be moved through the compartment in the path of rays emitted by the radiant energy generator, and means for controlling the treatment, said means including a controller for varying the speed of the belt tread to vary the time a patient is subjected to the rays, and a controller for varying the intensity of the emission of the radiant energy generator.

1,755,419. WASHING MACHINE. ROBERT J. ANDERSON, Sidney, Ohio. Filed Mar. 11, 1929. Serial No. 345,945. 24 Claims. (Cl. 259—101.)

1. In a washer, in combination with a tub and an agitator stem, a shaft rotatably supported by said stem, an agitator supported around and operated by said shaft, and means between said stem and agitator to stabilize the agitator in its operation, said means including a sleeve on the agitator and a bushing on the stem.

1,755,420. STERILIZING PAN AND BOTTLE HOLDER. FREDRICK A. ARMSTRONG, Kirksville, Mo. Filed Mar. 16, 1929. Serial No. 347,579. 4 Claims. (Cl. 53—1.)



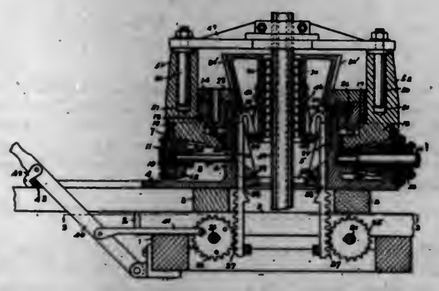
1. In combination, a pan, a wing projecting outwardly from the pan, said wing being of right triangular formation with its shorter leg coplanar with the bottom of the pan and its hypotenuse inclining outwardly and downwardly with respect to a wall of the pan while its longer leg is secured to said wall of the pan.

1,755,421. BUILT-UP STANDING-COLUMN PUMP. PATRICK H. BRAY, Long Beach, Calif. Filed Apr. 1, 1929. Serial No. 351,559. 5 Claims. (Cl. 74—109.)

1. In a deep well pump a built-up stem structure including upper and lower tubular sections for fluid flow and being separably attached, spaced guide and packing cylinders mounted on the several sections of said stem, and spaced bodies of packing mounted on respective sections of the stem.

1,755,422. WINDMILL DRIVE. HERBERT E. BUCKLEN, Elkhart, Ind., assignor to Herbert E. Bucklen Corporation, a Corporation of Indiana. Filed Dec. 30, 1925. Serial No. 78,275. 20 Claims. (Cl. 170—46.)

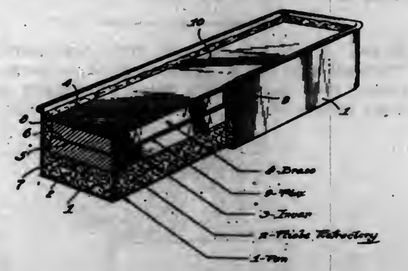
1. In combination, a gear case closed for lubricant, a horisontal shaft having bearings in opposite side walls of said gear case, said bearings being disposed within the gear case, said shaft projecting out through the gear case and being adapted to support a turbine propeller wheel thereupon, a worm between said bearings on said shaft, a transverse worm wheel shaft, a worm wheel on said transverse shaft, bearings for the shaft on each side of the worm wheel, said bearings being disposed within the gear case, a crank member mounted on said worm wheel shaft, said crank member having a crank pin, a slotted oscillating lever co-operating with the crank pin, a rock shaft for the oscillating lever, said lever projecting through the casing, and an external arm connected to said lever.



1,755,423. AIR CLEANER. WILLIAM C. BUTTNER, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed June 27, 1928. Serial No. 288,568. 5 Claims. (Cl. 183—70.)

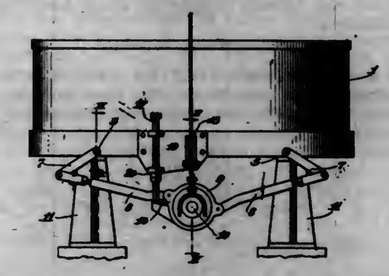
5. An air cleaner comprising a bracket, a fitting integral with the bracket, said fitting having an inlet, an outlet, and a drain, a stem on the fitting having a passage communicating with the inlet, a passage communicating with the outlet and a passage communicating with the drain, a reducer mounted on the stem, a casing mounted on the reducer and enclosing a cleaning chamber, an inlet

tube within the chamber and connected with the inlet passage, an outlet tube within the chamber connected with the outlet passage, the outlet tube extending above the discharge end of the inlet tube, and a filter device arranged within the chamber between the discharge end of the inlet tube and inlet end of the outlet tube.



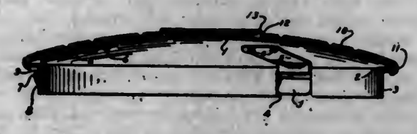
1,755,424. WELL-BORING APPARATUS. MONROE W. CARROLL, Beaumont, Tex. Filed June 29, 1926. Serial No. 119,326. 9 Claims. (Cl. 255—23.)

9. A well boring apparatus including a base plate having a pipe receiving opening said plate also having an annular channel surrounding said opening, a master wheel mounted to rotate on said base plate, a driving shaft working through a bearing in the outer wall of the channel and whose inner end is journaled in the inner wall of the channel and means forming a driving connection between said shaft and master wheel.



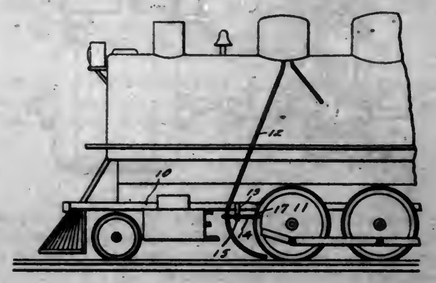
1,755,425. METHOD OF WELDING MATERIALS OF DISSIMILAR THERMAL CHARACTERISTICS. WILLIAM M. CHACE, Detroit, Mich.; Adelbert H. Lindley, Arthur Cooper, and Hilma B. Chace, executors of said William M. Chace, deceased, assignors to W. M. Chace Valve Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1927, Serial No. 219,563. Renewed Feb. 21, 1930. 4 Claims. (Cl. 22—204.)

1. The method of welding two metal pieces together of different heat resistant quality which consists in finishing a face of each part to provide a flat surface free from dirt or scale, placing the metal of the greatest heat resistant quality in a receptacle, shielding the untreated surfaces thereof with a pliable refractory material, coating the prepared surface with a flux, placing the material of lower heat resistant quality with its finished surface facing the



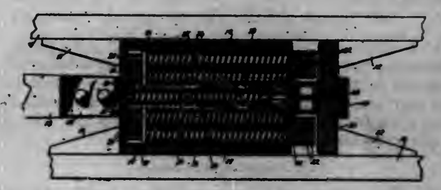
flux covered surface of the first piece, then submitting the assembled pieces to a temperature sufficient to melt the material of the lower heat resistant quality, puddling the said metal of low heat resistant quality while in a melted state to coagulate the dirt and eliminate gas and air pockets, and allowing the metal to cool before removal from the receptacle.

1,755,426. DOOR-OPERATING MECHANISM FOR MIXING MACHINES. ALFRED C. CHRISTENSEN, Chicago, Ill., assignor to National Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1928. Serial No. 304,990. 13 Claims. (Cl. 259—28.)



1. In a mixing machine having a bottom, a pair of doors in said bottom, a rod for supporting each door for turning movements, an arm on each rod, a driving shaft, a disc having a clutch face rotatably mounted upon said shaft, a rigid link connecting each arm with said disc, said disc having a lug, an actuating member engageable with said lug for turning said disc to open said doors, a clutch splined upon said shaft, and means for engaging said clutch and disc to move said disc in a direction to close said doors.

1,755,427. HUB CAP. RAE E. COCHRAN, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio, a Corporation of Ohio. Filed June 13, 1929. Serial No. 370,557. 3 Claims. (Cl. 301—108.)

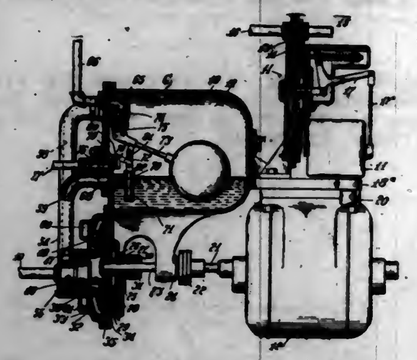


2. In a hub cap, a body member having an inwardly directed hub engaging flange forming with the body member a circumferential bead, an ornamental plate for said body member having its edges turned over in engagement with said bead, said ornamental plate having a hole therein, and a design plate back of said hole and supported by said body member and said ornamental plate.

1,755,428. SANDING APPLIANCE FOR USE WITH LOCOMOTIVES. JAMES EDWARD CONNELLER, Baltimore, Md. Filed Jan. 22, 1929. Serial No. 334,289. 2 Claims. (Cl. 291—41.)

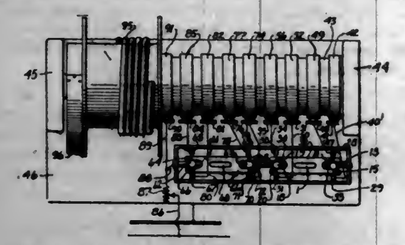
2. In a sanding appliance for locomotives, the combination with the usual locomotive frame, driving wheel and sanding pipe rigidly secured at its upper end to the locomotive frame and depending in advance of the driving wheel, of a horizontally swinging lever pivotally supported from the frame having at its rear end a fork receiving the wheel the arms of which closely approach opposite faces of the wheel, the lever at the opposite side of the pivot from said fork having an opening through which the sanding pipe is directed, the connections of said lever to the frame including a bracket rigidly secured to the locomotive frame to the lower end of which the lever is pivoted.

1,755,429. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 17, 1923. Serial No. 663,083. 7 Claims. (Cl. 213—33.)



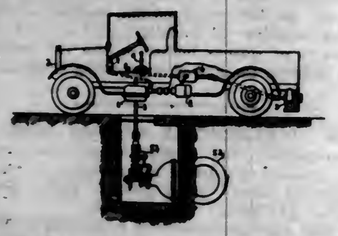
1. In a draft gear, in combination, a pair of opposed followers, two sets of cooperating wedging and friction elements interposed between the followers, said friction elements being bifurcated to provide a spring chamber located on the horizontal median portion of the gear, means for resisting the wedging action of said elements, and a series of springs housed within the chamber and reacting between the named cooperating elements.

1,755,430. DIFFERENTIAL VACUUM PUMP. DAVID N. CROSTHWAIT, Jr., Marshalltown, Iowa, assignor to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Filed Aug. 1, 1927. Serial No. 209,775. 14 Claims. (Cl. 230—75.)



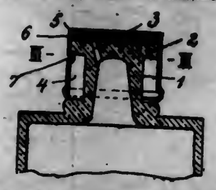
1. A fluid pumping apparatus comprising a rotary impeller formed with a circular series of substantially radial channels provided with open ports at their inner

and outer ends, and an impeller casing formed with alternate air inlet and discharge channels positioned to communicate with the inner impeller ports, and channels for



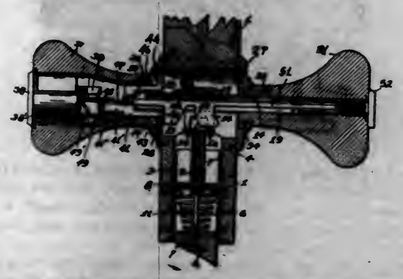
circulating a liquid from certain of the outer impeller ports to other circumferentially spaced outer impeller ports, portions of said liquid channels being formed in the casing and portions in the impeller.

1,755,431. CIRCUIT-CONTROLLING MECHANISM. KENNETH DAVIS, St. Benedict, Pa., assignor, by mesne assignments, to Rembrandt Peale, St. Benedict, Pa., W. Sanders Davies, New York, N. Y., and William S. Wallace, Philadelphia, Pa., trustees. Original application filed Nov. 2, 1921, Serial No. 512,806. Divided and this application filed Mar. 4, 1922. Serial No. 541,122. 32 Claims. (Cl. 200—5.)



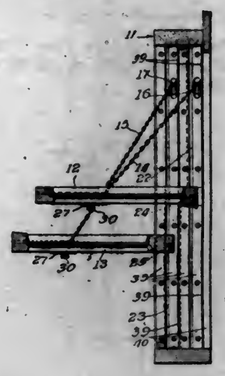
1. A manually operated circuit control comprising a supporting rod, a plurality of circuit closing arms loosely mounted on said rod, and a handle loosely pivoted on said rod and movable about two separate axes and engaging with a plurality of said arms to move them into and out of circuit-closing position.

1,755,432. PORTABLE VALVE-OPERATING MECHANISM. PETER P. DEAN, Stamford, Conn., assignor, by mesne assignments, to Cutler-Hammer, Inc., a Corporation of Delaware. Filed Aug. 9, 1922. Serial No. 580,694. 4 Claims. (Cl. 180—53.)



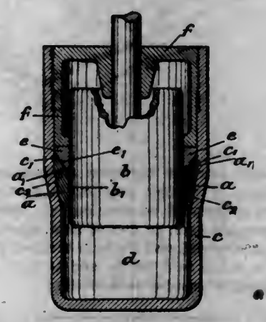
1. The combination with a motor vehicle having a take-off transmission, of a valve key driving unit to be subjected to reverse operations by the vehicle engine through reversal of the direction of operation of said take-off transmission, a stopping device associated with the engine and adapted to be operated by said unit to control the engine and driving connections between said device and unit insuring unidirectional operation of the former regardless of reversals of the latter.

1,755,433. CLOSURE DEVICE FOR PERFUME BOTTLES OR THE LIKE. WILHELM DÜSKOW, Berlin, Germany. Filed Dec. 4, 1928, Serial No. 323,686, and in Great Britain Dec. 28, 1927. 2 Claims. (Cl. 215—76.)



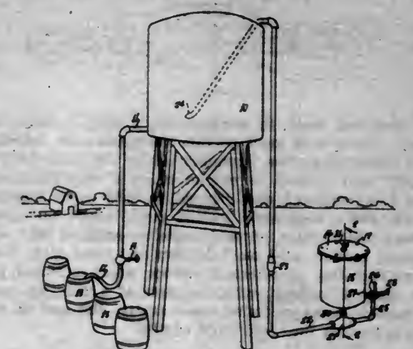
1. In a closure-device for perfume-bottles or the like, a bottle having a neck provided with a cylindrical flange formed around it, and having formed therein an eccentrically arranged spraying opening, a metal cap having an eccentrically placed spraying aperture in its top, a washer embraced by said cap and bearing on the flange, said washer having an opening registering with said aperture, said metal cap having a plurality of embossments bent inwards beneath the lower face of the flange and bearing against the same to secure a close contact between the flange and the washer, a pair of said embossments being spaced to form a groove in said cap, and a stop on the said neck beneath the flange and projecting into said groove between said pair of embossments to cooperate with said embossments to limit the rotary movements of the metal cap.

1,755,434. DOORKNOB-LOCKING DEVICE. ELLING ELLINGSON, San Francisco, Calif. Filed Apr. 29, 1929. Serial No. 358,964. 12 Claims. (Cl. 70—91.)



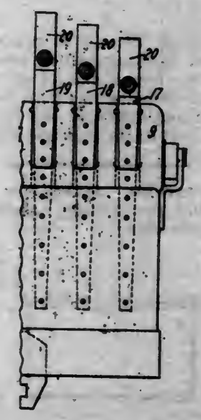
1. A door knob locking device comprising a knob stem extending through a door and having a longitudinal groove formed in one side thereof; inner and outer knobs connected upon the ends of the stem; a latch bolt slidably mounted within the edge of the door; means connecting the bolt and stem for retracting the bolt and stem for retracting the bolt when the stem is turned; a locking member slidably mounted within the outer knob and movable to engage and disengage the stem, said member being provided with locking portions movable to lock the knob against turning; key actuated means mounted within the outer knob for actuating the locking member; and a manual actuating member slidably mounted within the groove of the knob stem and extending through the inner knob for operation from the inside of the door, said actuating member having its inner end rotatably secured to the locking member and being provided with an extension extending laterally from the slot and movable to a position locking the stem and inner knob against rotation.

1,755,435. WINDOW CONSTRUCTION. ANDREW EZGETA and CHARLES D. FLAMM, Chicago, Ill., assignors of fifty-five per cent to said Ezgeta and forty-five per cent to said Flamm. Filed Aug. 8, 1928. Serial No. 298,222. 3 Claims. (Cl. 20—42.)



1. In a window structure, the combination of a frame having a pair of vertical stiles spaced apart and provided on their co-operating inner faces with vertically disposed slots, a window sash mounted in a manner to operate between said stiles and capable of being tilted at an angle with respect to said stiles, a pair of trunnions secured to the vertical sides of the window sash adjacent the lower end thereof and being adapted to enter the vertical slots in said stiles in a manner to be guided therein, the said stiles each being provided with notches formed therein adjacent said vertical slots and communicating therewith, said notches being adapted to receive and support said trunnions in a manner to provide fulcrums about which said sash may be tilted, a pair of flexible members, one of each being secured to the vertical sides of the sash at points sufficiently near the upper end thereof to adequately support the sash when in tilted position on said fulcrums, anti-friction rollers in said stiles adjacent the upper ends thereof over which said flexible members are threaded, and weights for counterbalancing said sash secured to the free ends of said flexible members on the opposite sides of said anti-friction rollers from said sash.

1,755,436. STUFFING BOX. FRITZ FAUDI, Sommerda, Germany. Filed Feb. 1, 1928, Serial No. 250,985, and in Germany July 6, 1927. 5 Claims. (Cl. 286—35.)

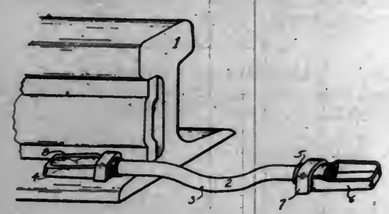


1. A packing for use in connection with cushioning devices employing a casing having a pressure chamber and a plunger receiving chamber opening at one end into the inner end of the pressure chamber, an annular abutment at the point of juncture of said chambers, the wall of the plunger receiving chamber being longitudinally tapered in advance of said abutment and between the same and the pressure chamber, and a plunger movable between said chambers, said packing comprising a packing ring of elastic material having one of its faces exposed to the pressure in the pressure chamber and a backing ring lying in contact with the other face of the packing ring and against said abutment, the contacting faces of said packing ring and said backing ring being wedge-shaped, and the inner periphery of said packing ring being formed to snugly embrace the plunger and the outer periphery of said packing ring being tapered to conform to the tapered portion of the wall of the pressure chamber and lying in contact therewith.

1,755,437. BRINE-MIXING APPARATUS. ANTONIO FAZIO, Portland, Oreg. Filed Jan. 15, 1929. Serial No. 332,722. 4 Claims. (Cl. 259—4.)

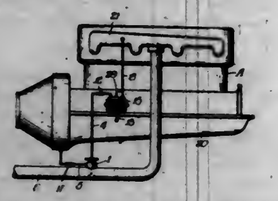
1. A brine mixing apparatus consisting of a mixing tank, a closure for said mixing tank, a screened outlet for said mixing tank, an ejector adapted to draw liquids through said outlet, a three-way valve for admitting water to said tank or to said ejector whereby water may be forced through said tank or around said tank in a manner to withdraw any water which has collected therein.

1,755,438. EXCAVATING DIPPER. BERLIN S. FERGUSON, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Mar. 26, 1928. Serial No. 264,757. 1 Claim. (Cl. 37—141.)



In an excavating dipper, a plurality of teeth each comprising a base secured to the forward edge of said dipper,

CARNEGIE LIBRARY OF ATLANTA

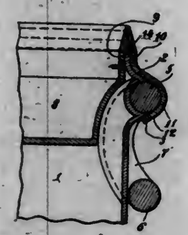


and a point detachably secured to said base, the points of the several teeth being of the same length and the bases of said teeth being of different lengths and so arranged that the forward ends of said points will lie in converging lines.

1,755,439. RAIL BOND. ROBERT GOODYEAR, Cleveland, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Jan. 3, 1922. Serial No. 526,858. 10 Claims. (Cl. 173—278.)

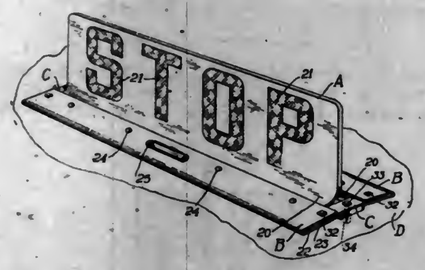
1. In a rail bond, in combination, a mold portion, and a bond cable, said mold portion comprising an extended cable engaging section extending along the cable and an upright wall formed to extend along a rail base, said cable being engaged and gripped by said cable engaging section, and a separately formed metal insert interposed between the portion of said cable so engaged and said engaging section, said mold portion and bond cable forming an open-top, open-bottom molten metal retaining portion adapted to form, with the base of a rail, an open-top molten metal receiving mold cavity, the end of said cable extending into said mold cavity.

1,755,440. OIL-REFINING DEVICE. EDWARD L. GROSS, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,675. 18 Claims. (Cl. 123—196.)



1. In an oil refining device, a receptacle, said receptacle comprising an oil receiving portion adapted to be associated with heating means, and an oil inlet and an oil outlet, said outlet extending to a point below the oil level in the receptacle and delivering the oil therefrom at a point above said level by the pressure of the vapor formed.

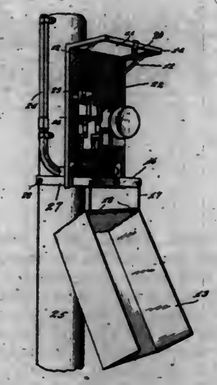
1,755,441. CONTAINER. JAMES EDW. GUNTER, Baltimore, Md. Filed Apr. 1, 1926. Serial No. 98,998. 5 Claims. (Cl. 220—61.)



1. In a container, a cap fitting within and being upheld by the container wall, an upwardly and outwardly directed shoulder on said cap, a retaining band having a top of greater perimeter than its bottom within the container and abutting against said shoulder, said wall partially overlapping the band, thereby holding it in its shoulder abutting position.

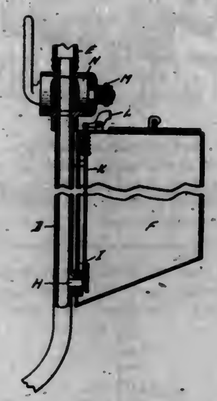
1,755,442. CONTAINER. JAMES EDW. GUNTER, Baltimore, Md. Filed Apr. 12, 1926. Serial No. 101,310. 16 Claims. (Cl. 220—61.)

1. The method of assembling a container having a flexible wall adjacent its mouth or opening with a cap and a retaining ring having a projecting handle, which consists in placing the retaining ring around the outer wall of the mouth or opening of the container with the handle projecting away from said mouth or opening, placing the cap on the container, and applying inwardly directed pressures to the periphery of the cap to form a bead thereon which longitudinally surrounds and partially encloses said retaining ring and presses the same firmly against said container, and depressing said flexible wall of the container with said handle at the place where it projects from said bead.



1,755,443. UPRIGHT HIGHWAY MARKER. MELVIN E. HARTZLER, Downers Grove, and EDGAR P. ROMILLY, Chicago, Ill. Filed Apr. 15, 1929. Serial No. 355,302. 19 Claims. (Cl. 40—125.)

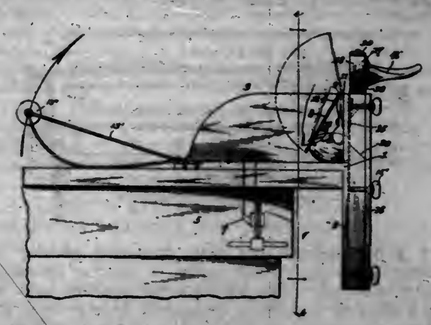
1. A resilient upright highway marker comprising an indicating blade of flexible resilient material having its lower portion bifurcated to provide two base sheets, two base plates secured each to one of said sheets and extending lengthwise thereof, and keepers secured to the ends of said plates to space said plates and to secure said plates together as a rigid base for said blade.



1,755,444. METER BOX. FOSS C. HUSH, Lincoln, Nebr. Filed June 7, 1928. Serial No. 283,690. 7 Claims. (Cl. 220—34.)

1. A box, comprising a back and top rigid with each other, a cover formed to provide when in place a bottom, sides, and a front for the box, a rigid member pivotally mounted near the back edge of the cover bottom, and a

bracket secured to the box-back and projecting forwardly therefrom, said member being pivotally mounted in said bracket near the front thereof.

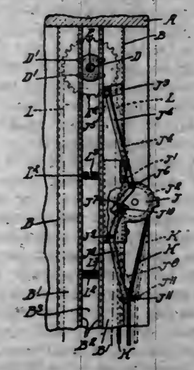


1,755,445. APPARATUS FOR PLANT CULTURE. CHARLES F. IRISH, Bratenahl, Ohio. Filed Nov. 28, 1927. Serial No. 236,125. 1 Claim. (Cl. 47—49.)

A device for the purpose set forth comprising an air gun adapted to be connected with a suitable supply of compressed air, and including a two-way valve for controlling the flow of the air through said gun, a fertilizer containing receptacle attached to said gun, means for connecting the second outlet of said valve with said receptacle, means connecting the lower part of said receptacle to said gun and providing a passage therebetween, and a valve for closing said passage.

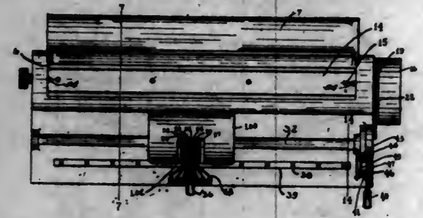
1,755,446. HOUSEHOLD COMBINATION CUTTING MACHINE. JOHN L. JACKMAN, New York, N. Y. Filed July 14, 1927. Serial No. 205,672. 4 Claims. (Cl. 146—158.)

1. In a food cutter, a frame adapted to be made fast to a fixed object, a member slidable in said frame said member comprising a cutter plate and a gage plate movable therewith, means actuated by gravitation for feeding vegetables to the cutter, said means consisting of a roller



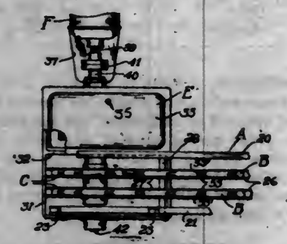
weight carried in a yoke hinged to the said frame and a hinged plate urged by said weight, and means for operating said slidable member.

1,755,447. TRAIN-CONTROL AND CAB SIGNAL SYSTEM. MATTHEW H. LOUGHRIDGE, Bogota, N. J., and JOHN S. HOLLIDAY, New York, N. Y.; J. Margaret Holliday, administratrix of said John S. Holliday, deceased, assignor to Matthew H. Loughridge, trustee, Bogota, N. J. Filed Nov. 22, 1921. Serial No. 516,945. 53 Claims. (Cl. 246—63.)



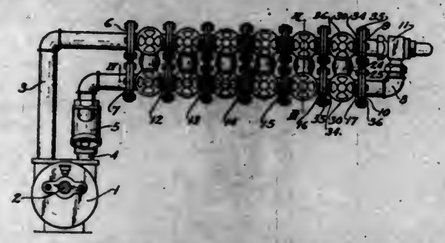
1. In combination, a railway track, a vehicle thereon, an elongated magnet on said track, one pole of said magnet consisting of one rail of said track and the other pole consisting of a ridge placed parallel with said rail, a plurality of means secured to said rail for supporting said ridge, a plurality of spaced energizing coils between said ridge and the web of said rail and a device on said vehicle responsive to both poles of said magnet.

1,755,448. VENETIAN BLIND. HENRY J. MACKIN, Chicago, Ill. Filed Feb. 5, 1927. Serial No. 166,092. 16 Claims. (Cl. 156—17.)



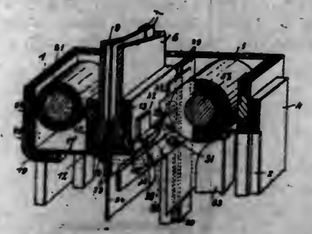
1. In a blind, raising and lowering means for such blind, and latching means for such raising and lowering means, adapted to hold the blind in any position of vertical adjustment irrespective of the means by which it is moved to such position of adjustment.

1,755,449. COST-ACCOUNTING MACHINE. JOHN W. MARDER, Rochester, N. Y. Filed May 2, 1924. Serial No. 710,580. 2 Claims. (Cl. 234—50.)



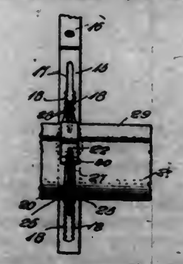
2. A time recorder and work identifying machine comprising a movable record holder, a printing mechanism having relatively adjustable printing elements, each having a plurality of different characters whereby work identifying expressions may be set up, a timing mechanism for moving the record holder relatively to the printing mechanism comprising a pawl operative to move the record holder in a positive direction, and means for shifting the pawl to inoperative position and back spacing the record holder, means for guiding the printing mechanism transversely of the record holder to print at different points thereon at any given time and in rear of said points where the record holder is moved to each spacing position.

1,755,450. CONVEYER AND DRIVING-MOTOR CONSTRUCTION. JULIUS J. MOJONNIER, Oak Park, Ill., assignor to Mojonnier Bros. Co., a Corporaiotn of Illinois. Original application filed May 17, 1926, Serial No. 109,728. Divided and this application filed Apr. 10, 1929. Serial No. 354,019. 7 Claims. (Cl. 198—203.)



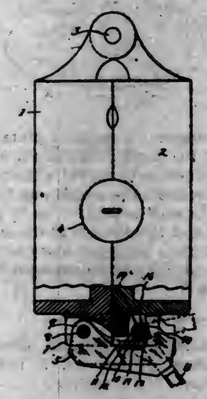
1. A conveyer and driving motor construction comprising a long conveyer frame having vertical posts located at intervals along its sides, longitudinal side members connecting said posts on each side of the frame and transverse members uniting the posts and side members; sheaves at opposite ends of said conveyer frame; a metal link belt around said sheaves; a rectangular gear frame at one end of said conveyer frame positioned midway of the height of said conveyer frame in a horizontal plane and adapted to be installed either side up, said gear frame having a central member adapted to extend longitudinally of said conveyer frame no matter which side of the gear frame is uppermost, said member dividing said gear frame into two parts, one of said parts being open and containing one of said sheaves and the other of said parts being enclosed to form a casing, the open part being in line with said conveyer frame no matter which side of said gear frame is uppermost, and the enclosed part being laterally offset therefrom in both cases; a shaft for the enclosed sheave extending transversely and having bearings in the longitudinally extending parts of said gear frame and in said central member; a motor shaft extending into said gear frame casing; gearing in said casing for conveying power from said motor shaft to said sheave shaft, said gearing comprising cooperating shafts and gear wheels; a motor coupled to said motor shaft outside of said casing; and a support for said motor and the offset enclosed part of said gear frame to which the latter may be connected either side up.

1,755,451. CONCENTRATED-CONTROL UNIT. ANDREW M. MORRISON, Dubuque, Iowa. Filed Dec. 17, 1927. Serial No. 240,909. 2 Claims. (Cl. 137—78.)



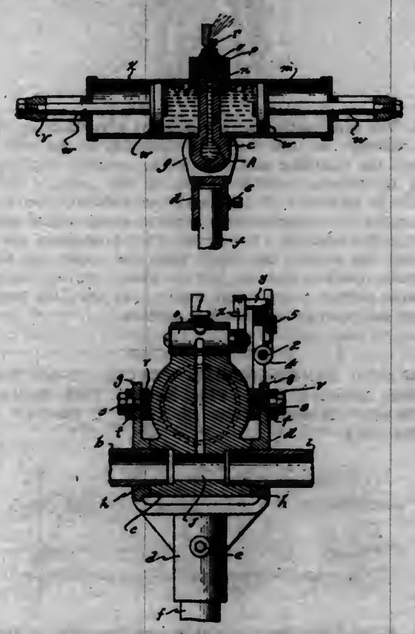
1. A concentrated control unit comprising a pump mechanism, means for operating the same, a pair of pipes connected with said pump mechanism, a filter unit connected in one of said pipes, an end pipe union, a relief valve therein, a plurality of double valve units connected in communicating relation adjacent one another between said pipe union and the pipes connected with said pump mechanism, and a plurality of pipe lines connected with the respective double valve units and adapted to be connected with a tank car, a plurality of tanks and a loading rack, as desired.

1,755,452. CAMERA. CÉSAR MOTTI, Alpes-Maritime, France. Filed Apr. 7, 1927, Serial No. 181,649, and in France Dec. 10, 1926. 18 Claims. (Cl. 95—49.)



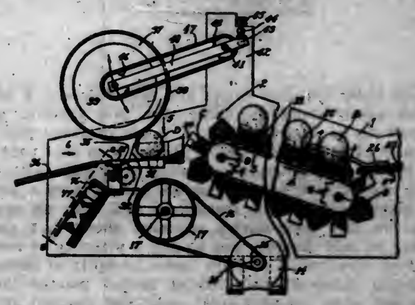
1. A photographic apparatus having a focusing screen, a casing mounted at the upper extremity thereof having a sensitized member therein and means for automatically removing said focusing screen and substituting said sensitized member in place thereof.

1,755,453. EAVES-TROUGH HANGER. CHARLES P. MULLEN, Conshohocken, Pa. Filed Aug. 29, 1928. Serial No. 302,864. 9 Claims. (Cl. 108—29.)



1. An eaves trough hanger comprising a stationary resilient vertical bar having a longitudinal slot providing it with two parallel side members, a trough-supporting member having a portion abutting the front side of said bar and provided with parallel vertical flanges straddling said bar, a lug on said trough-supporting member adapted to enter said slot, momentarily spring said side members apart and then snap into engagement with said side members, and bar-engaging means on said trough-supporting member above said lug, said means slidably and pivotally engaging said bar.

1,755,454. CLAMP. ADOLPH L. NELSON, Detroit, Mich., assignor to Bohn Aluminum & Brass Corporation, Detroit, Mich. Filed June 15, 1925. Serial No. 37,316. 1 Claim. (Cl. 292—103.)

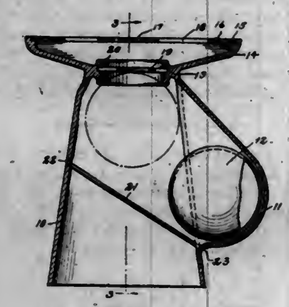


The combination with relatively movable sections, of a clamping member connected to one of said sections, and a cooperating clamping member rotatively mounted upon the other of said sections and provided with a cam portion having a flat face and a cam face alternatively engageable with said first mentioned clamping member to clamp said sections in different positions, said cam face being arranged to provide a rolling contact with said first mentioned clamping member.

1,755,455. AUTOMATIC TURNING DEVICE FOR SPRINKLING SYSTEMS. BERT J. NELSON, Detroit, Mich., assignor to White Showers, Inc., Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1924. Serial No. 756,394. 15 Claims. (Cl. 299—66.)

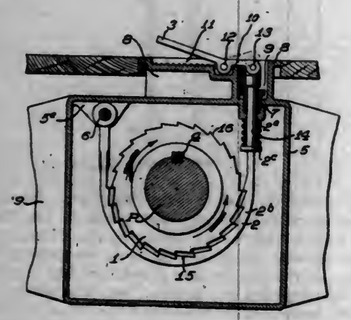
1. In a liquid distributing system, the combination of a fluid pressure oscillating motor, a spray conduit connected to an oscillating part of said motor, the axis of movement of said spray conduit being in line with the pivot point of said oscillating part, a conduit for supplying liquid to said spray conduit, means for directing part of said liquid to said motor for operating the same to oscillate said conduit, a plurality of adjustable means for independently controlling the flow of liquid to and the actuation of said motor to control the amplitude of said oscillating motion, and means pivotally connected to an oscillating part of said motor and having its fulcrum at a different point than said first named pivot for varying the speed of oscillation of said conduit during each stroke.

1,755,456. APPARATUS FOR MARKING FRUIT AND SIMILAR ARTICLES. HARRY G. NUTT, Altadena, and STANLEY C. BARTHOLOMEW, Uplands, Calif., assignors to Scheu Manufacturing Company, Uplands, Calif., a Corporation of California. Filed Oct. 31, 1928. Serial No. 316,244. 5 Claims. (Cl. 101—40.)



1. An apparatus for marking fruit comprising guiding means and means for causing fruit to pass in a plurality of columns over said guiding means, a single marking element for each such column of fruit, and means for moving each marking element from marking position to inking position and back again between passages of successive fruit in the corresponding column into position of engagement with said marking element.

1,755,457. SCREED SUPPORT. JOHN S. O'HARN, Bethune, Colo. Filed Mar. 6, 1928. Serial No. 259,408. 3 Claims. (Cl. 72—101.)

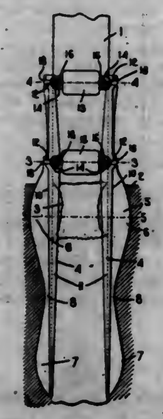


3. A screed for use in connection with the laying of concrete floors and the like comprising, in combination, a straight bar of angle iron having a plurality of supports secured thereto, the supports each comprising, a metal bar bent at two points into a substantially U-shape, the sides being parallel and pointed, the base which connects the sides being straight and flattened so as to fit against one side of the angle, a portion of the side adjacent the end being also flattened and adapted to fit against the other flange of the angle, said flattened end and side being provided with openings adapted to register with corresponding openings in the screed and bolts extending through the openings for securing the supports to the screed.

1,755,458. FLOOR DRAIN AND AUTOMATIC FLOOD PROTECTOR. JOHN OLESZKO, Detroit, Mich. Filed May 18, 1929. Serial No. 362,732. 1 Claim. (Cl. 182—15.)

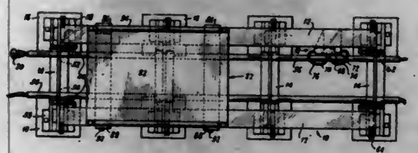
In a cellar drainage device and sewer closure, a body having substantially the shape of a cone frustum, and adapted to be connected with a sewer drainage pipe, a laterally extending ball socket formed with said body, a ball float in said socket, a seat integrally formed with the upper end of said body having an inner groove a bowl, the bottom of which is formed by said seat, an upper flange on said bowl having an inner shoulder, a plate resting on said shoulder and having a plurality of round openings arranged in a circle, and a plurality of radially extending elongated slots having narrow pointed inner ends and wider rounded outer ends, and grouped about said circle of holes, for allowing the draining of the cellar and retaining refuse, a spider formed by crosswise arranged bars resting with their outer ends in the groove of said seat, for limiting the upward movement of the ball when floated by the sewer water rising in socket and body, and a plurality of inclined bars in said body below said socket for guiding the ball float back into said socket upon recession of the sewer water.

1,755,459. REVERSE-MOVEMENT BRAKE MECHANISM FOR AUTOMOBILES. WILBUR S. SAMPLE, Los Angeles, Calif., assignor of one-half to Eugene F. Hunter, Los Angeles, Calif. Filed Nov. 13, 1926. Serial No. 148,267. 8 Claims. (Cl. 188—30.)



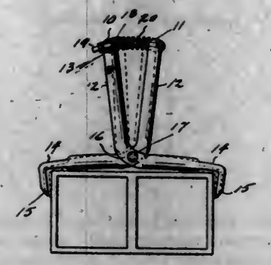
1. In combination with an automobile, an emergency brake including ratchet and flexible ratchet band means for braking the automobile against backward movement, but permitting forward movement of the automobile.

1,755,460. ARCH SUPPORT. WILLIAM M. SCHOLL, Chicago, Ill. Filed Aug. 26, 1927. Serial No. 215,571. 4 Claims. (Cl. 36—71.)



1. In an arch support, a metallic plate longitudinally curved to support the inner longitudinal arch of a foot, said plate being transversely curved adjacent the anterior portion thereof to underlie the second and third and fourth metatarsal heads in such a manner as to give more support to the second and third heads of the metatarsus than to the fourth, said plate being cut away adjacent the rear portion thereof to permit the rounded portion of the heel to rest off the plate.

1,755,461. POLE REENFORCEMENT. GEORGE B. SPRING, West Newton, Mass. Filed Oct. 7, 1926. Serial No. 139,979. 4 Claims. (Cl. 20—99.)



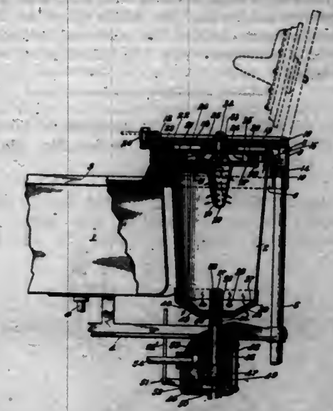
1. The combination with a pole, of a reenforcing member therefor set into the earth alongside of the pole and means for clamping said reenforcing member to the pole, said reenforcing member having on the portion thereof which is embedded in the earth, an outwardly-extending rib which by its engagement with the earth resists lateral swinging movement of the pole, an intermediate portion of said rib having less width than the upper and lower portions thereof and the portion above the intermediate narrow portion being wider and longer than the portion below said narrow intermediate portion.

1,755,462. MINE-RAILROAD TRACK. JACOB STEINBERG, Brooklyn, N. Y. Filed Nov. 18, 1927, Serial No. 234,083. Renewed Sept. 18, 1929. 9 Claims. (Cl. 238—10.)

1. A track section comprising cross-ties of inverted T-shape having openings therein, channel shaped rails having spaced projecting portions, said projecting portions being adapted to engage on opposite sides of the vertical portion of one of said cross-ties, and means for clamping said rails to said ties.

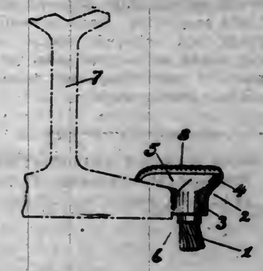
1,755,463. DEVICE FOR HANDLING BUILDING MATERIALS. CLARENCE W. WADDELL, Dallas, Tex. Filed May 17, 1928. Serial No. 278,585. 2 Claims. (Cl. 294—62.)

2. A pair of tongs for setting building materials such as tile, terra-cotta, stone, et cetera, comprising a pair of pivoted members each having an upright handle and a pair of flattened prongs for engagement with the building materials, and means such as a coiled spring to open, said tongs after being compressed by the hands.



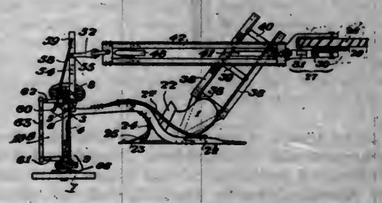
1,755,464. VALVE FOR PNEUMATIC CONVEYERS. SAMUEL WILLIAMS, Elk City, Okla. Filed Oct. 29, 1927. Serial No. 229,704. 2 Claims. (Cl. 137—9.)

1. A valve for pneumatic conveyers comprising a casing consisting of detachable top and bottom members and side members and having branch members and a single piece side member for the interior sides of said branch members, lugs attached to said side members and bent on the edges of said top and bottom to hold said side members against inward movement and for spacing said top and bottom members apart, means for clamping said top and bottom members on said side members and for locking said side members against outward movement, said valve having a plurality of openings to be selectively used, and a gate valve pivotally mounted at the juncture of said branch members for directing material through the selected openings.



1,755,465. WASHING MACHINE. DOUGLAS A. WILSON, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Dec. 16, 1927. Serial No. 240,547. 12 Claims. (Cl. 210—75.)

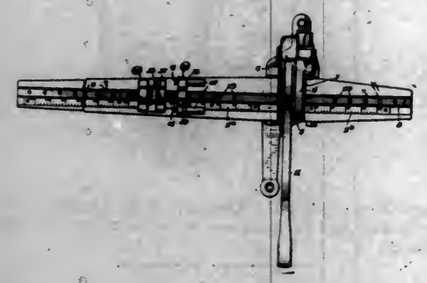
1. In a machine of the character described, a receptacle for extracting water from clothing by centrifugal action, and to subsequently dry the clothing by the introduction of air thereto, means to rotate said receptacle in one continuous direction and while so rotated to extract water by centrifugal action and to discharge the same from the upper end thereof, means to alternately rotate said receptacle continuously in an opposite direction and means



operable only when the receptacle is so rotated to induct air thereto and to cause a circulation of such air therethrough.

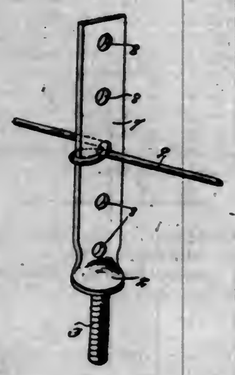
1,755,466. RAIL BOND. WILLIAM P. BOYARD, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 15, 1925. Serial No. 23,343. 17 Claims. (Cl. 173—278.)

1. A rail bond comprising a flexible body member and a terminal member, the terminal member comprising means to grip the body member adjacent the end of the body member, a projecting retaining wall about a portion of the exposed end of the body member to catch, support and retain molten attaching metal and means projecting laterally from the retaining wall to engage a rail and support the bond thereon and to form with the rail a receptacle to catch, support and retain attaching metal used in securing the bond to the rail.



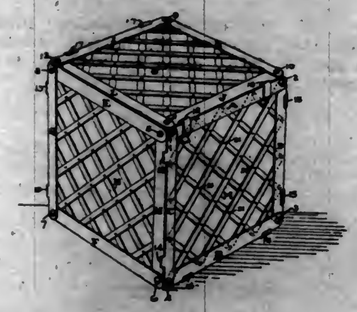
1,755,467. COMBINED ROAD BUILDER, DITCHER, AND BRUSH BREAKER. SIGURD HANS BURNSTAD, Round Hill, Alberta, Canada. Filed May 18, 1927. Serial No. 192,458. 4 Claims. (Cl. 37—110.)

1. In a device of the kind described, a front truck, a plowing unit drawn from said front truck, and auxiliary



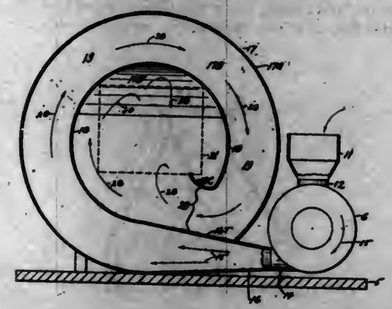
truck drawn from said front truck and having a front wheel and a rear swivelled wheel, an endless conveyer positioned between said plowing unit and said auxiliary truck receiving at one end the earth raised by the plow and discharging said earth at the other end, and means for actuating said conveyer from the rotation of said rear swivelled wheel.

1,755,468. CUTTER. EDWARD CHESHIRE, St. Petersburg, Fla. Filed May 18, 1925. Serial No. 30,898. 7 Claims. (Cl. 164—59.)



1. In a cutter, means for supporting material to be treated, a movable cutting blade disposed intermediate of the length of said supporting means, a readily removable micrometer gauge, and uniformly spaced abutments on said supporting means at the two sides of said cutting blade for removably positioning said micrometer gauge at either side of said cutting blade.

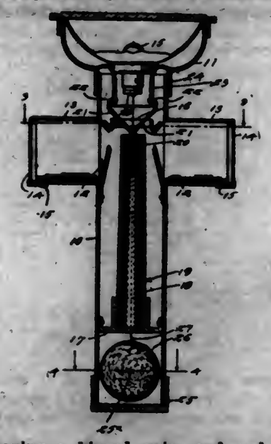
1,755,469. COVER HANGER AND PLATE-FASTENING DEVICE. WILLIAM M. CONNERY, Philadelphia, Pa. Filed May 18, 1928. Serial No. 278,880. 6 Claims. (Cl. 137—75.)



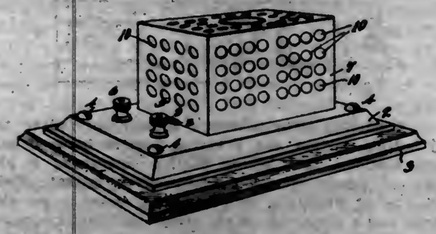
1. As an article of manufacture, a combined plate fastening element and cover support, consisting of a headed element with a projection formed integral with the head of the element, whereby application of the element to fasten two plates together permits the application of a cover thereon to be spaced from the wall.

1,755,470. FOLDABLE BOX. LEONARD ST. CLAIR COOPER, Hollywood, Calif. Filed Mar. 20, 1926. Serial No. 264,942. 8 Claims. (Cl. 220—6.)

1. A foldable box comprising open framework sides hingedly connected together, and lattice wall panels adapted to be detachably secured to the frame-work sides, said lattice wall panels each comprising a series of overlapping slats pivotally connected whereby the structure may be folded together.



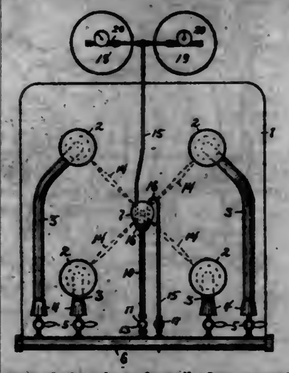
1,755,471. FEATHER RENOVATOR. CLANCY R. CURTIS, St. Paul, Minn., assignor of one-half to Charles E. Bruns, St. Paul, Minn. Filed Jan. 25, 1929. Serial No. 335,021. 4 Claims. (Cl. 209—2.)



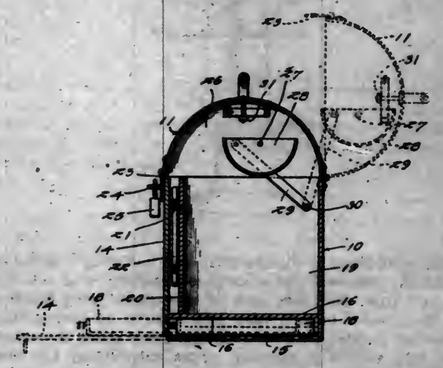
1. A feather renovating device comprising a power blower, a drum mounted in an upright plane, a perimetral duct in said drum and a tangential extension thereof communicating with said blower, said perimetral duct provided with outlet means from the center of the drum, and said blower arranged to receive and project feathers to be renovated into said perimetral duct by air pressure and from said duct into the central part of the drum, elevated outlet means from said central part of the drum comprising a settling duct directed outwardly and downwardly therefrom, a means for reducing the air current at said drum outlet, said settling duct adapted to receive the feathers in semi-suspension and guide means therein to guide heavier matter to the bottom part of it and further to guide the feathers beyond said bottom part to a discharge means.

1,755,472. ELECTRICAL FLASH LIGHT. JOSEPH J. DARLINGTON, Winston-Salem, N. C. Filed Aug. 7, 1928. Serial No. 297,992. 6 Claims. (Cl. 240—10.5.)

1. In a flash light, a barrel, a reflector removably threaded upon one end of the barrel, an illuminating element carried by the reflector, and a telescopic support for the reflector permitting rotation thereof to engage or disengage the same with respect to the barrel, said support collapsing into the barrel, said barrel having radially extending castings projecting outwardly therefrom, said castings each having a hinged outer end and constituting receptacles for battery units to energize said illuminating element.

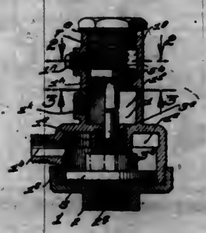


1,755,473. AUTOMATIC FIRE ALARM. PETER F. DODUNSKI, Solon, Ohio. Filed July 9, 1927. Serial No. 204,602. 5 Claims. (Cl. 200—140.)



1. In an automatic fire alarm instrument, a calibrating adjustment comprising a lever bent back on itself to form an angular bell crank, means to adjust said angularity consisting of a threaded stud secured to one arm of said bell crank and passing through an opening in the second arm of said bell crank and adjusting nuts on said stud on opposite sides of said second arm.

1,755,474. GAS STOVE. JESSE M. DUNGAN, Fort Wayne, Ind. Filed Feb. 14, 1927. Serial No. 167,982. 1 Claim. (Cl. 158—53.)

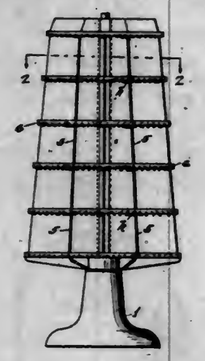


In apparatus of the class described, a gas stove having a series of burners spaced apart; a pilot lamp; a manifold pipe having independent connections respectively with said burners and lamp; a perforated shell disposed over said lamp; a supply pipe extending through said shell over said lamp and connected to said manifold; a source supplying hydrocarbon fuel to said supply pipe under pressure; and valves controlling the corresponding connections between said manifold and burners, said pipe being heated constantly by said lamp whereby the flame of said lamp is continuously maintained during operation of the burners and after all the valves for said burners are closed and the burners extinguished.

1,755,475. TOOL BOX. CHARLES R. FAIRLEIGH, Liberal, Kans. Filed Apr. 30, 1927, Serial No. 187,918. Renewed Aug. 17, 1929. 2 Claims. (Cl. 206—16.)

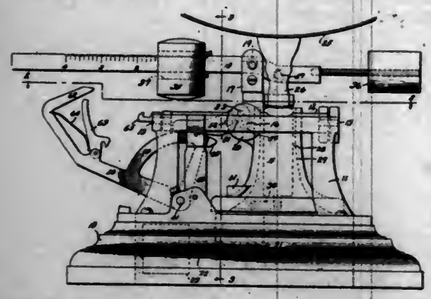
1. A tool box comprising a box having a cover hinged thereto, a pivoted tray carried by the cover and having an open top and a single link limiting the opening movement of the cover and maintaining the open top of the tray upwardly disposed as the cover is moved from open to closed positions.

1,755,476. AUTOMATIC WATER-HEATER CONTROL-VALVE APPARATUS. JOHN C. HIGGINS, San Diego, Calif. Filed Feb. 28, 1928. Serial No. 257,685. 9 Claims. (Cl. 236—25.)



1. In a valve apparatus of the class described, a housing, a pair of superposed chambers formed therein and separated by a single integral partition, a fluid valve plunger mounted in the one of said chambers, a gas valve plunger mounted in the other of said chambers, and a separable stem extending between said fluid valve plunger and said gas valve plunger for operating said gas valve plunger simultaneously with said fluid valve plunger.

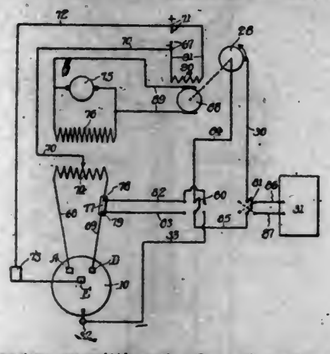
1,755,477. DISPLAY REVOLVING STAND. JOSEPH HUNYADY, Mount Lebanon, Pa. Filed Nov. 18, 1926. Serial No. 149,046. 1 Claim. (Cl. 211—131.)



A rotatable display rack, comprising a stand having a recess in its upper end thereof in which an anti-friction

bearing is seated, and having a central vertically disposed socket therein, a shaft rotatably seated in said socket, one portion of the anti-friction bearing being secured to said shaft whereby the said shaft is held against lateral movement and wear thereof is prevented, a member rigidly mounted on said shaft, a tube surrounding said shaft approximately the entire length thereof and rigidly secured thereto, the said tube having series of vertically disposed grooves, in combination with a frame substan-

tially cylindrical in configuration and including a series of vertically disposed plates arranged radially with relation to said tube, the inner ends of said plates being inserted in the grooves in said tube, and a series of horizontally disposed circular platforms arranged one above the other, the said vertically disposed plates subdividing the said platforms into series of compartments for the reception of small merchandise.

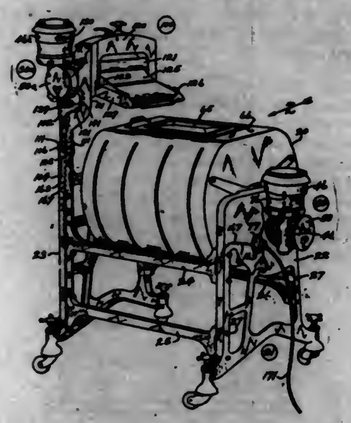


1,755,478. SCALE. LOUIS JAENICHEN, Springfield Township, Oakland County, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 19, 1927. Serial No. 220,348. 9 Claims. (Cl. 205—49.)

1. A weighing scale comprising a scale beam, pan and sliding weight constituting a weighing unit, a frame upon which said unit is mounted so as to swing freely in any direction, and means to lock said unit in any position assumed thereby.

1,755,479. METHOD OF AND MEANS FOR CYCLIC CURRENT CONTROL. W. BARTLETT JONES, Chicago, Ill. Filed Apr. 28, 1924. Serial No. 709,350. 51 Claims. (Cl. 204—1.)

3. A system for using current comprising, in combination, a conducting medium, an electrode in said medium, means to supply continuous current through said electrode, other electrodes in said medium, means to produce a cyclic current through each of said other electrodes, said means in combination with said other electrodes being an

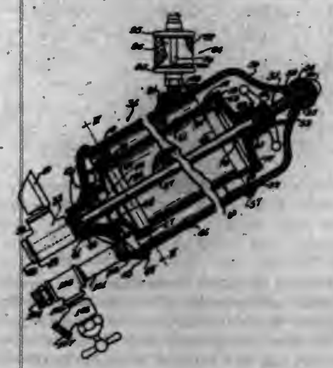


electrode system permitting the flow of continuous current through the first electrode, and measuring means associated with said system to determine electrical values at any point in the cycle.

1,755,480. ROAD PARTING STRIP. ANDREW A. KRAMER, Kansas City, Mo. Filed Nov. 14, 1927. Serial No. 238,179. 13 Claims. (Cl. 94—17.)

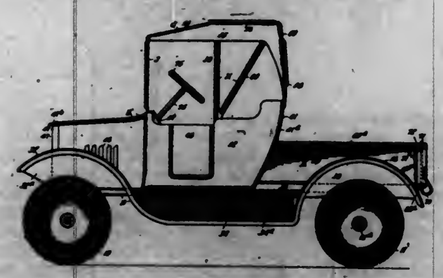
12. A parting strip having a substantially plane top and bottom portion and a keying portion between said plane portions, said keying portion comprising a plurality of closely spaced concavo-convex lateral offsets curved in all directions, each forming a socket on one side thereof and a projection on the other side thereof opposite said socket, said offsets alternating to provide alternate projections and socket portions on both sides of said strip.

1,755,481. DOMESTIC APPLIANCE. RALPH L. LEE, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 31, 1923. Serial No. 629,200. 10 Claims. (Cl. 68—32.)



1. A laundry machine, comprising in combination a support; a wringer unit mounted to swing relative to the

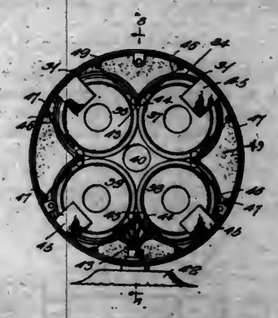
CARNEGIE LIBRARY OF ATLANTA



support into a plurality of operating positions; means for yieldingly maintaining said wringer in operative position, means for transmitting power to the wringer unit; and means operated by merely swinging the unit for automatically interrupting the transmission of power to the unit.

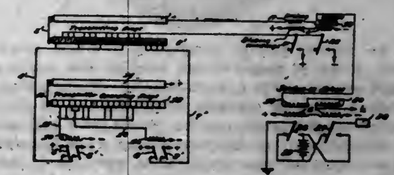
1,755,482. FILTER. FRANK B. LOMAX, Chicago, Ill. Filed Nov. 21, 1927. Serial No. 234,658. 15 Claims. (Cl. 210—178.)

1. In combination, a filter container, a cylindrical filtering barrier in said container, means for supporting said container in a rigid slanting position, an inlet connected to the lower end of the container, an outlet connected to the lower end of the container, and means for forcing liquid through said inlet and through the wall of said barrier into said container, said filtered liquid entering the container being free to gravitate into said outlet.



1,755,483. VEHICLE TOY. FRED A. LUNDAHL, Moline, Ill. Filed Jan. 8, 1923, Serial No. 611,224. Renewed Sept. 9, 1929. 25 Claims. (Cl. 46—48.)

1. In a toy vehicle having front and rear axles and front and rear pairs of wheels, the combination with a suitable frame and body; of front and rear sheet metal axle housings, each housing having also formed integrally therewith, upwardly extending stamped sections corresponding to front and rear transversely disposed semi-elliptic spring suspensions and on which suspensions, sections of the vehicle frame are adapted to be supported.



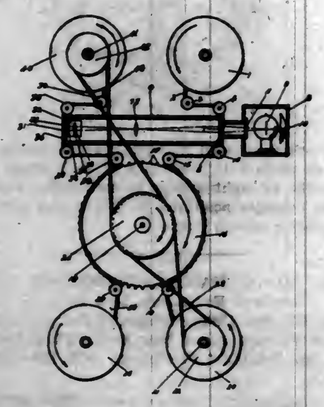
1,755,484. SPEECH AMPLIFYING AND REPRODUCING SYSTEM. LE ROY MARK, Washington, D. C. Filed July 16, 1927. Serial No. 206,641. 3 Claims. (Cl. 179—1.)

1. Microphonic pick-up apparatus comprising a frame, a casing within said frame, a plurality of sockets disposed in said casing in planes laterally off set one from the other, said sockets being arranged to receive and enclose independent microphones, at least one of said microphones being off set from a source of sound by a distance greater

than the others of said microphones and spring members grouped in pairs with the pairs of each group extending substantially at right angles to each other between diametrically opposite positions on said casing and positions on the interior of said frame.

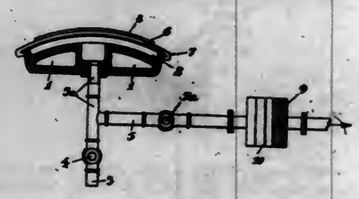
1,755,485. MULTICHANNEL TELEGRAPH CABLE SYSTEM. CRESCENT F. NELSON, New Dorp, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Aug. 2, 1927. Serial No. 210,148. 20 Claims. (Cl. 178—52.)

1. A multi-channel telegraph system comprising a telegraph line or cable connecting two remote stations, the amount of signaling traffic in one channel being different from that in the other channel in the same direction, and means for apportioning said telegraph line to each of said channels for periods of time proportional to the traffic in said channels.



1,755,486. WRENCH. ROSS H. ODELL, Bakersfield, Calif. Filed July 22, 1929. Serial No. 380,013. 3 Claims. (Cl. 81—59.)

1. A wrench comprising a jaw head, a ratchet device having a rack on the jaw head provided with reversely disposed teeth, a pawl member, a lever movable on the jaw head to occupy either of two extreme positions, said pawl member being pivoted on the lever to occupy a neutral position and either of two extreme positions, said pawl member having two teeth one for each set of rack teeth adapted to engage the latter according as the pawl member is moved to one extreme position or the other, yield-

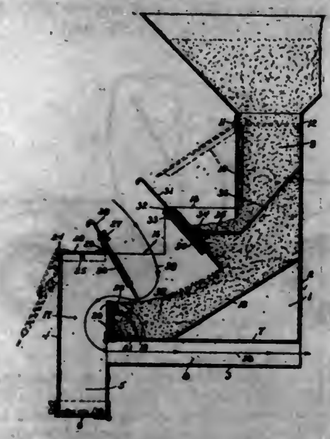


able means for maintaining the pawl member in a neutral position, and a lug on the jaw head, the pawl member having surfaces coacting with the lug to move either pawl teeth into engagement with its respective rack teeth according as the lever is moved to one extreme position or the other.

1,755,487. OPTICAL PRINTER. FREEMAN H. OWENS, New York, N. Y., assignor to Owens Development Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1926. Serial No. 147,981. 8 Claims. (Cl. 88—24.)

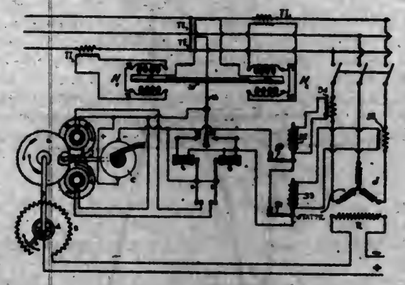
1. An optical printer comprising a single means for moving strips of negative and positive film continuously in fixed spaced relation to each other at one point, such movement being in opposite directions and at the same speed, means for projecting the images from said negative film to said positive film comprising a casing over the ends of which said film strips move, openings in the ends of said casing, a light source adjacent the end over which said negative film moves, for illuminating the images of said film as it moves past the opening in said end, a lens in said casing through which said images pass, and an elongated slit in said casing adjacent the end over which the positive film passes, said slit comprising an angle bracket adjustably secured to one side of said casing and having an arm provided with a slit extending over the opening in the ends of the casing, whereby said slit may be adjusted with respect to said positive film moving thereover.

1,755,488. AIR-DRYING MECHANISM FOR GARMENT PRESSES. GUNTHER PARISOT, Stockholm, Sweden. Filed Sept. 22, 1928, Serial No. 307,762, and in Germany Sept. 30, 1927. 1 Claim. (Cl. 68—9.)



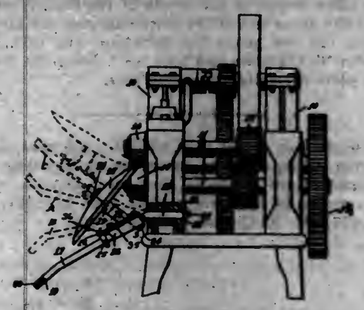
A pressing machine including a lower body formed to provide a heat chamber, a foraminous cover for said chamber, a steam pipe leading into said chamber, and a pipe for delivering heated air under pressure opening into the steam pipe below the chamber, a cut-off in the steam pipe arranged beyond the juncture of the air pipe with the steam pipe relative to the pressing machine and a cut-off in the air pipe beyond the juncture of the air and steam pipes whereby the heated air, when admitted, initially forces the steam in the steam pipe into the heat chamber and through the perforated cover and thereafter delivers heated air through such perforated cover.

1,755,489. SELF-DRILLING EXPANSION SHELL. JOHN H. PHILLIPS, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,895. 1 Claim. (Cl. 85—2.4.)



In a combined drill and expansible shell, a tubular body provided with cutting teeth at one end and weakened from a point spaced from but adjacent thereto to a point intermediate the ends, the opposite end being regularly formed on its exterior and of a reduced internal circumference and constructed to operatively non-rotatably engage a suitable chuck during the drilling operation and closely fit a hanger bolt thereafter projected into the shell.

1,755,490. AUTOMATIC FEEDER FOR MILLS. WILLIAM ALEXANDER SEYMOUR, Leavenworth, Kans., assignor to The Hesse Manufacturing Company, Incorporated, Leavenworth, Kans. Filed July 16, 1928. Serial No. 293,011. 27 Claims. (Cl. 209—137.)



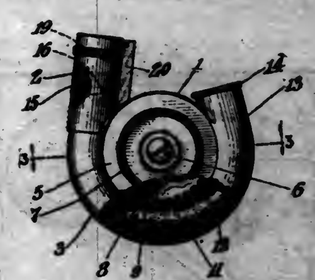
1. An automatic feeder comprising a casing having an entrance throat, a feeding chamber to one side of said entrance throat, and a discharge passage; means within the chamber for maintaining a definite level of material therein, said level-maintaining means including a level-defining means and means for preventing overflow of material to said defining means, and means for directing an air current through the feeding chamber over the material therein thereby to convey material from the feeding chamber through the discharge passage.

1,755,491. AUTOMATIC REGULATOR FOR POWER-FACTOR IMPROVING APPARATUS. VINCENZO FAUSTO SPIGAI, La Spezia, Italy. Filed July 22, 1924, Serial No. 727,584, and in Italy July 30, 1923. 3 Claims. (Cl. 172—246.)

1. An apparatus for the regulation of the power factor in a polyphase net, comprising a pair of contacts, a movable contact means for making contact with one or the other of said first mentioned contacts, means for actuating said movable contact, comprising an electrodynamometer, said electrodynamometer comprising a pair of movable current coils, and a movable voltage coil, means for controlling the torque on said voltage coil, means for transmitting the movement of said voltage coil to said movable contact means.

1,755,492. DISK SHARPENER. CHRISTOPHER W. SKOW, Newton, Iowa. Filed Jan. 10, 1928. Serial No. 245,711. 1 Claim. (Cl. 76—69.2.)

A disk sharpener comprising a supporting frame having a socket, a pair of rollers adapted to bevel the annular edge of a disk to sharpen the same, a saddle bar supported in a common plane with the axis of said rollers and projecting beyond the ends of said rollers, either end of said saddle bar being designed to fit said socket and to be retained against rotation therein, the ends of said saddle bar being bent to form angular portions on the same side of the bar and of different angularity, a saddle slidably mounted on the central portion of said bar, a saddle plate pivotally mounted to said saddle having an upwardly and slightly inclined hub, and means carried by said hub for supporting a disk in operative relation with said rollers, said means comprising a head pivotally mounted in said upright support and provided with radial arms for engaging the under surface of a disk, a bolt for passing through the central opening of a disk and into the end of said head for anchoring the disk thereto.



1,755,493. MILK-BOTTLE CAP. PHILLIP L. STORM, Belvidere, Ill., assignor to Mid-West Bottle Cap Co., Belvidere, Ill., a Corporation of Illinois. Filed Oct. 22, 1928. Serial No. 314,152. 6 Claims. (Cl. 215—38.)

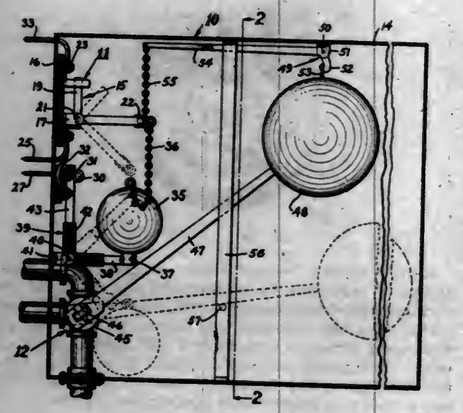
1. A milk bottle cap comprising a disc of sheet fibrous material having a central body portion designed to fit snugly in the throat of a milk bottle and having an annular rim of inverted U-shape, the inner wall of said rim being free of any extraneous fold, and the outer wall of said rim providing a stiff surface for engagement by the feed shuttle

of a capping machine and being designed to be displaced approximately 90° by the capping operation and to be held down against the top of the bottle in sealing contact therewith by the tension of the fibres of the resultant inner wall of the rim.

1,755,494. LIGHTER. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed Sept. 16, 1927. Serial No. 219,885. 4 Claims. (Cl. 67—7.1.)

1. In a lighter, the combination of means for slidably holding a wick with its longitudinal axis in curved position, rotatable feed means coaxially arranged with said curved wick and provided with means for engaging said wick along a curved path to feed said wick forward, and means for igniting said wick, a part of said last named means being carried by and necessarily detachable from said first named means before ignition may be effected.

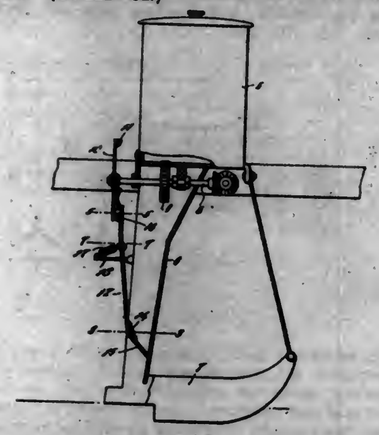
1,755,495. GUARD CAGE. EDWARD A. BAKER, Mansfield, Ohio. Filed Dec. 12, 1928. Serial No. 325,569. 7 Claims. (Cl. 39—36.)



4. In a guard cage, comprising a circular, a tapered, and an intervening member provided with openings all associated together, the lower tapered member being provided with a closure member having a plurality of apertures therein, an imperforate member fitted within the bottom of the tapered member adjacent to the apertures

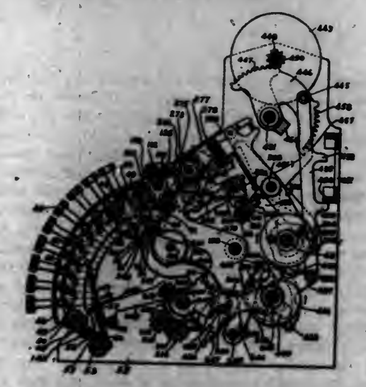
in the closure member and smaller than the interior of the tapered member to provide a space therebetween and slidable members adapted to slide over the openings in the intervening member.

1,755,496. PROCESS OF PREPARING SILICEOUS MATERIALS. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1925. Serial No. 46,890. 14 Claims. (Cl. 23—113.)



11. A process of preparing siliceous materials which comprises forming a colloidal solution of silicic acid in an acid medium and then neutralizing.

1,755,497. AUTOMATIC GAS AND ELECTRICITY CONTROLLING DEVICE. JACOB L. BLALACK, Los Angeles, Calif. Filed Aug. 8, 1927. Serial No. 211,417. 7 Claims. (Cl. 200—85.)

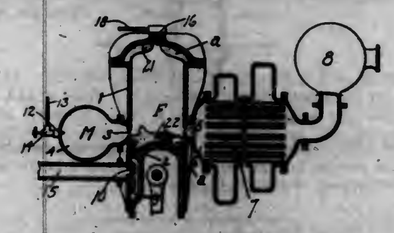


6. In a device of the class described, a housing, a switch mounted in and insulated from said housing, a pivoted rocker arm mounted in and insulated from said housing, said rocker arm including a substantially horizontal arm and a substantially vertical arm, a fusible bar for retaining said vertical arm in position, a bracket adjacent each end of said bar and supporting said bar, said brackets being insulated from said housing, a wire attached to one of said brackets, another wire connecting the other of said brackets to one side of said switch, a seat on one arm of said rocker arm, a weight connected to said switch and normally positioned on said rocker arm seat, said weight being adapted to be unseated by earthquake tremors or by fire causing melting of said fusible rod to actuate said switch to break the circuit therethrough, a shut-off valve, said shut-off valve including an inlet, an outlet, a by-pass outlet and a core, a passage in said core adapted in one position of said core to form a passageway from said inlet to said outlet, another passage in said core adapted when said core is in another position to form a passageway from said outlet to said by-pass outlet, said first passage being adapted when said second passage is in full communication with said outlet and said by-pass outlet to be completely out of communication with said inlet and said outlet, and said second passage being adapted when said first passage is in full communication with said inlet and said outlet to be completely out of communication with said outlet and said by-pass outlet and means operated by said weight when released for actuating said cut-off valve.

1,755,498. HILL DROPPER. FRANK J. BOSS, Edinburg, Tex. Filed June 21, 1928. Serial No. 287,124. 1 Claim. (Cl. 111—51.)

A planter attachment of the class described wherein the planter includes a seed box with a boot projecting downwardly therefrom and a shaft with means thereon for delivering the seed from the seed box to the boot; comprising a disc on the shaft having portions of its body struck therefrom out of the plane of one side face thereof to form hands, an elongated trigger plate of angular construction pivotally mounted in the boot, so that the lower portion of the plate crosses the boot and the other portion of the plate extending the length of the boot, a roller carried by the upper end of the plate engaging one face of the disc and the cam projecting therefrom, and spring means connected to the plate and boot for holding the lower end of the plate normally across the boot.

1,755,499. CASH REGISTER. THOMAS CARROLL, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 13, 1921. Serial No. 477,138. 26 Claims. (Cl. 235—3.)

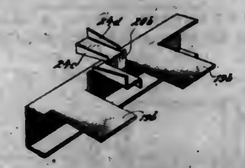


1. In a machine of the class described, the combination of pivoted members complementarily and differentially movable in opposite directions, manipulative devices for controlling said members, operating means for moving said members to a position controlled by one of the manipulative devices and returning them again to normal position, a totaliser, a pair of totaliser actuators positively operated by said members, and means for connecting either actuator to the totaliser for operation.

1,755,500. BATTERY-BOX-CONTAINER COMPOSITION AND METHOD OF MAKING SAME. RUFUS N. CHAMBERLAIN, Depew, N. Y., assignor to Gould Storage Battery Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 25, 1925. Serial No. 58,555. 8 Claims. (Cl. 106—2.)

8. A storage battery box molded of a composition comprising petroleum asphalt, gilsonite, a fibrous binder and an inert filler, the said constituent materials thereof being united to form a blend including such relative proportions of said materials as to produce a hard yet tough, homogeneous, substantially non-cellular mass which is resistant both to physical shocks and to attack by storage battery acid.

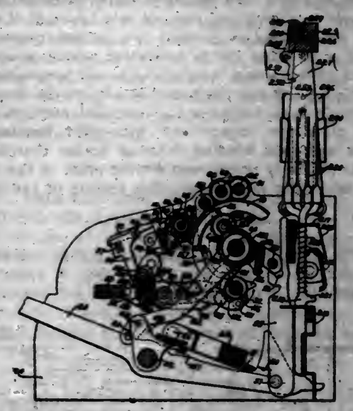
1,755,501. INTERNAL-COMBUSTION ENGINE. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed May 12, 1926. Serial No. 108,640. 17 Claims. (Cl. 123—1.)



13. In internal combustion engines in which the fuel is injected into the combustion gas after high compression of the latter, the combination of a heat-insulating lining of the compression space together with means for limiting the supply of the combustion gas in each cycle to a regulated fraction, substantially less than one, of a full cylinder, measured at atmospheric pressure, and means for compressing said combustion gas to a high pressure previous to injection of the fuel, substantially as described.

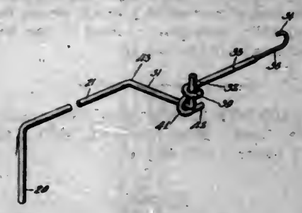
1,755,502. HYDRAULIC CEMENT AND OTHER CALCAREOUS PLASTICS. WILLIAM ARTHUR COLLINGS, Los Angeles, Calif., assignor to Silica Products Co., Los Angeles, Calif., a Corporation of Delaware. Filed Nov. 17, 1927. Serial No. 234,043. 9 Claims. (Cl. 106—35.)

1. As a composition of matter, Portland cement containing bentonite having an alkali-halogen content in excess of that of untreated natural bentonite.



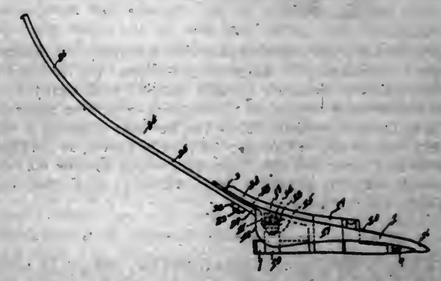
1,755,503. STUD OR THE LIKE. CORNELIUS COLLINS, Los Angeles, Calif. Filed June 26, 1928. Serial No. 288,374. 9 Claims. (Cl. 72—118.)

2. A wall or ceiling frame member comprising a bracket shaped bar having a leg, finger wings extending from said leg, bendable fingers on said finger wings having lateral flanges flaring to a greater width toward the tips.



1,755,504. CASH REGISTER. MAXIMILIAN M. GOLDBERG, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 5, 1922. Serial No. 527,265. 16 Claims. (Cl. 235—2.)

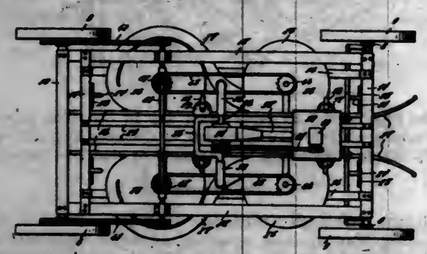
1. In a machine of the class described, the combination of a type carrier, a plurality of groups of keys for adjusting the type carrier common thereto, means whereby each operation of each key of one group effects the same adjustment



of the type carrier as every other key in the same group, and means whereby the operation of the keys of the other group effects a differential adjustment of said type carrier.

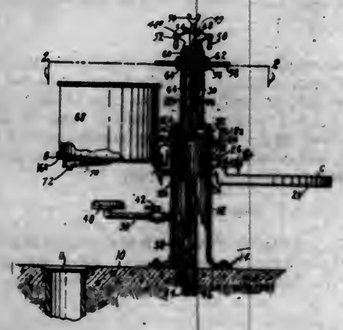
1,755,505. CAR-UNCOUPLING DEVICE. FRANCIS A. JACOBS, Warren, Ohio, assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed May 31, 1928. Serial No. 642,392. 11 Claims. (Cl. 213—169.)

9. An uncoupling device, comprising, in combination: an operating rod; a lifting rod detachably connected to said operating rod; integral means on one of said rods providing a pintle; integral means on the other of said rods curled to form an eye for receiving said pintle, and integral means on one of said rods forming a stop, for preventing accidental disconnection of the rods.



1,755,506. DIVIDER FOR MOWING MACHINES. WILLIAM C. JACKSON, Wapato, Wash. Filed Jan. 21, 1928. Serial No. 248,309. 2 Claims. (Cl. 56—314.)

1. In a divider, the combination with a dividing shoe having an outwardly projecting top rib, terminating in a shoulder, a projecting housing positioned beneath said rib,



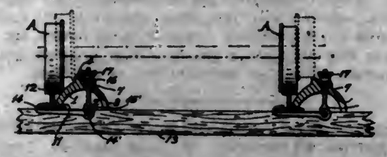
and an inwardly curved extended portion forming the rear end of said shoe, and adapted normally to receive pivotally a divider board, and having the pivotal mounting positioned rearwardly of said rib and said housing, of a dividing rod terminating at one end in a lateral inward curvature and at its other end in a securing means consisting of a slotted plate formed integral with and perpendicular to said dividing rod, and positioned to engage the shoulder of said top rib, and having a lug extended forward of said slotted plate for engagement with said housing, said shoulder and said housing forming braces therefor, and means to pivotally secure said slotted plate to the original pivotal mounting of said extended portion of the shoe.

1,755,507. COTTON-PICKER MACHINE. HENRY A. JANACEK, La Grange, Tex. Filed Dec. 8, 1928. Serial No. 324,740. 8 Claims. (Cl. 56—14.)

1. In a cotton picking machine of the class described, a wheeled frame, a pair of guide frames longitudinally of the wheeled frame, means for supporting the guide frames and to permit lateral movement thereof, means for moving the frames laterally, casings supported by the frames and cotton picking means in the casing.

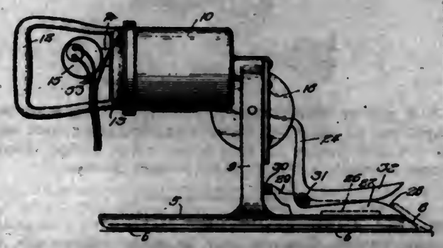
1,755,508. LAUNDRY APPLIANCE. WILLIAM E. KERR, Des Moines, Iowa. Filed June 11, 1927. Serial No. 198,223. 1 Claim. (Cl. 68—35.)

In a laundry appliance of the class described, an upright support, a plurality of supporting devices each independently rotatably mounted on said support and adapted to be independently swung on the support, a burner mounted on said upright support below the devices, whereby a tub on any supporting device may be readily moved to position above the burner and the other supporting devices may be moved to different positions with relation to each other and the one over the burner.



1,755,509. PENCIL AND SHARPENER. BRUNO D. LEVI, New York, N. Y. Filed Feb. 12, 1929. Serial No. 339,903. 7 Claims. (Cl. 120—87.)

1. In a device of the class described, a pencil, comprising a lower barrel having a tube centrally mounted therein, a clutch member engaging the said tube and cooperating with a detachable top-section, the latter being provided with a reduced portion at its lower end and

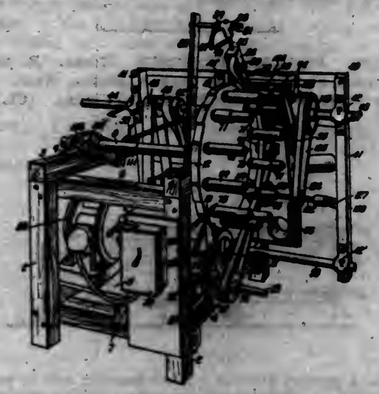


formed with a conical top portion, a bore disposed in the said top section and abrasive means arranged in the latter for the purpose of sharpening the lead.

1,755,510. RERAILING DEVICE. OCTAVIO ENRIQUE MESEGUER LOPEZ, Caibarien, Cuba. Filed Apr. 12, 1928, Serial No. 269,792, and in Cuba Apr. 3, 1928. 5 Claims. (Cl. 104—265.)

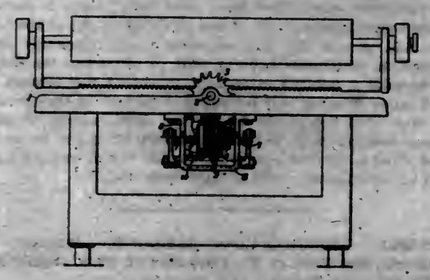
1. A rerailing device including a body provided with a wheel guiding upper surface and having one longitudinal edge adapted to overlie one side of the base of a rail, an anchoring member having one terminal hook to embrace the opposite side of the base flange of a rail and including a shank portion adapted to facially abut the under side of a rail base, and means passing upwardly through the body and connected with the anchoring member for drawing the body firmly against a rail base.

1,755,511. POWER SHEARS. FRANK A. MILLER, Aurora, Ill. Filed May 28, 1928. Serial No. 281,166. 5 Claims. (Cl. 164—74.)



1. In a power shears, a movable base, shears opening at the front end of the base, a central support extending upwardly from the base, a motor casing and a motor mounted at the upper end of the support, means forming an operating connection between one end of the motor and the shears, a handle extending rearwardly from the free end of the motor casing having a central opening therein, and a motor rheostat mounted on the casing and having an operable spring pressed member located within the opening of the handle for manual engagement by the hand of an operator without disengaging the hand from the handle.

1,755,512. PRODUCTION OF AMPHOTERIC HYDRATED OXIDES OF METALS BY HYDROLYSIS. REGINALD HILL MONK, Montreal, Quebec, Canada, assignor of one-half to John Irwin, Montreal, Quebec, Canada. Filed Feb. 18, 1929. Serial No. 341,034. 5 Claims. (Cl. 23—22.)

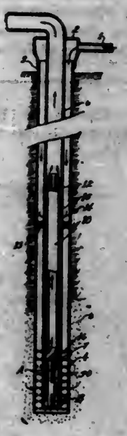


1. In the manufacture of amphoteric hydrated oxides of metals by hydrolysis, the improvement which consists in adding to a solution of a salt of the metal to be hydrolyzed a small amount of an oxide of the metal previously prepared in a manner other than by hydrolysis for the purpose set forth.

1,755,513. TUBULAR-BOX FORMER. EDWIN H. NEWTON and FRANK GREEN, Kansas City, Mo., assignors to National Paper Box Co., Kansas City, Mo., a Corporation of Missouri. Filed Sept. 8, 1927. Serial No. 218,210. 15 Claims. (Cl. 93—36.)

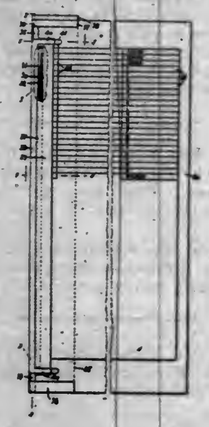
10. A machine for producing peripheral recesses in bodies, comprising rotatable means supporting the bodies, spindles fixed on said rotatable means and rotatably carrying the bodies, means for rotating the bodies, and rotatable recess-producing elements having axes in a plane with the axes of the spindles and of said rotatable supporting means.

1,755,514. TYPEWRITER-ESCAPEMENT MECHANISM. CLIFTON K. RAINEY, Knoxville, Tenn. Filed July 19, 1927. Serial No. 206,913. 15 Claims. (Cl. 197—82.)



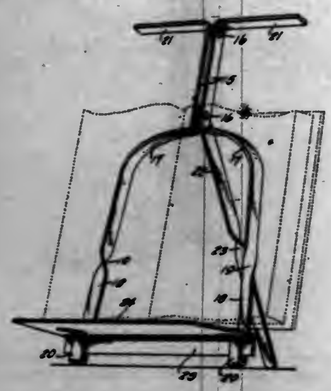
1. In a spacing mechanism for typewriting and like machines, an escapement wheel, an intermittently operable spacing wheel mounted to rotate on an axis arranged transversely of the machine, dogs slidable transversely of the face of the spacing wheel and adapted to be successively brought by the rotation of the spacing wheel into and out of the path of successive teeth of the escapement wheel and to be shifted by the teeth of the latter laterally on said spacing wheel to stop position, and means for maintaining said dogs in initial position and releasing them for shifting motion to stop position and thereafter returning them to initial position.

1,755,515. PROCESS FOR THE MANUFACTURE OF A COMPOUND OF ISONAPHTHYRIDIN. CURT RATH, Berlin, Germany. Filed Nov. 10, 1926, Serial No. 147,608, and in Austria Oct. 17, 1925. 4 Claims. (Cl. 260—42.)



4. A process for the manufacture of isonaphthyridin which consists in treating α-chloro-β-aminopyridin with glycerin and sulfuric acid in presence of oxidizing agents.

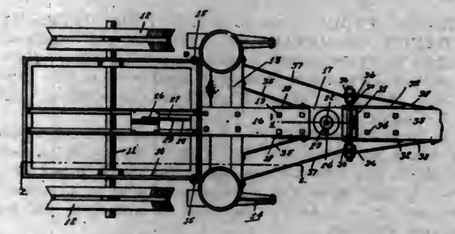
1,755,516. OIL PUMP. EDWARD PETER REYNOLDS, Anaheim, Calif. Filed Oct. 24, 1927. Serial No. 228,394. 6 Claims. (Cl. 103—57.)



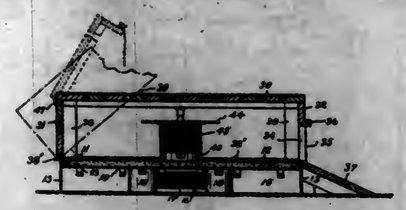
1. In a pumping apparatus of the class described, a well casing closed at its upper end, a pipe string rising within said well casing and extending outwardly of the upper closed end thereof, an oil discharge pipe rising within the lower end of said pipe string and opening at its upper end into the same, a packing surrounding said oil discharge pipe adjacent its upper end, a second packing surrounding said pipe string in a plane below said first named packing and below an opening establishing communication between said well casing and the pipe string at a point between the said packings, a fluid pressure motor and pump unit carried at the lower end of said pipe string and arranged in communication therewith and the lower end of the said oil discharge pipe, and means for introducing a fluid into said well casing above the packing therein, said fluid being adapted to pass from said well casing into and downwardly of said pipe string about said oil discharge pipe to said unit to effect the operation of the latter whereby oil will be pumped from the lower end of said well casing upwardly through said pump and from thence to and through said discharge pipe and said pipe string.

1,755,517. INDEX SHEET AND BINDING MEANS THEREFOR. LYNUS CLYDE REYNOLDS, Sweetwater, Tenn. Filed May 28, 1926. Serial No. 112,367. 15 Claims. (Cl. 129—85.)

12. An index device of the character described comprising binding means having a channel, overlapping sheets having nested folded portions movable into said channel, and means for limiting the movement of said sheets when the nested folded portions are withdrawn from said channel.



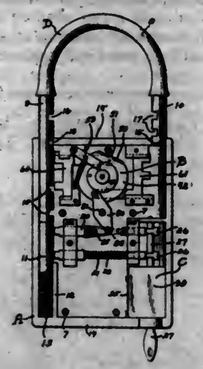
1,755,518. EASEL. EDWARD M. ROBERTS, Long Beach, Calif. Filed July 3, 1928. Serial No. 290,069. 4 Claims. (Cl. 40—146.)



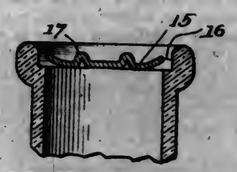
1. An easel comprising two strips of material having linear portions secured to each other, reversely curved portions extending from the linear portions, flat diverging portions at right angles to the curved portions, the free ends of the diverging portions terminating in brackets having extensions outwardly projecting from the diverging portions, a supporting leg pivoted between the linear portions and frictionally embraced by the latter to maintain the leg in any position of adjustment, and a ledge member bridging the brackets and having a lip engaging within the brackets, and a body portion supported on the extensions.

1,755,519. VEHICLE TONGUE. ABRAHAM I. ROORDA, Leighton, Iowa. Filed June 14, 1927. Serial No. 198,780. 2 Claims. (Cl. 278—87.)

1. In a device of the class described, a frame member including a stub tongue, a tongue, means for pivotally connecting said tongue to said stub tongue, said means comprising a plate having forwardly extending pivot lugs and an upwardly extending lug having a vertical opening, means for securing said plate to said stub tongue, a second plate having rearwardly extending pivot lugs for coacting with the first said pivot lugs, means for securing said second plate to said tongue, a pivot member extending through said pivot lugs having each of its outer ends provided with a threaded portion, each of the outer ends being provided with a pair of brace members, one set of the corresponding brace members being secured to said tongue and the other corresponding set being secured to said frame member, nuts for adjusting the pivot ends of said brace members laterally.



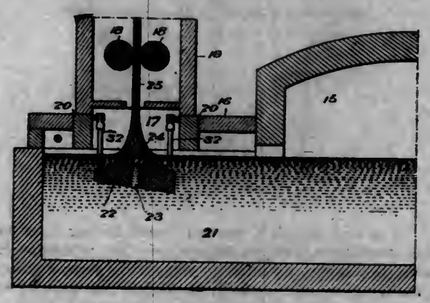
1,755,520. POULTRY BROODER. GEORGE R. SHOUP, Puyallup, and GEORGE E. QUINAN, Seattle, Wash. Filed May 3, 1927. Serial No. 188,503. 2 Claims. (Cl. 119—33.)



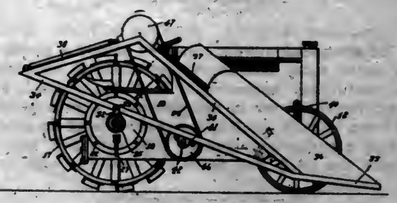
1. In a poultry brooder a lower housing unit embodying a rectangular horizontal sheet metal top plate, having its edges bent upwardly to afford a sand receptacle thereon, side plates secured to said upwardly bent edges and extending downwardly therefrom and co-operating with the top plate in forming a heating receptacle, said side plates having ventilation openings therein, insulator means secured to the lower side of said top plate, electric heating elements supported by said insulator means in slightly spaced relation from said top plate and distributed substantially uniformly throughout the entire area of said top plate, supports for the central portion of said top plate, vent tubes extending upwardly from said top plate and communicating with the heating receptacle therebelow, deflector plates supported above said vent tubes, a rectangular upper housing unit of box like shape open at the bottom and at one side and arranged to be removably supported on said lower housing unit to cooperate therewith in forming a poultry receptacle, means at the corners of said upper housing unit for engagement within the corners of said sand receptacle to prevent displacement of said upper housing unit, a flexible curtain arranged to serve as a closure for the open side of said upper housing unit and an inclined approach to said open side.

1,755,521. PERMUTATION PADLOCK. BERNARD C. SMITH, New York, N. Y. Filed May 21, 1928. Serial No. 279,541. 11 Claims. (Cl. 70—118.)

3. In a lock of the class described the combination of a casing, a shackle including shank portions movable in the casing, combination lock mechanism in the casing including rotatable tumbler discs, dogs slidably mounted in the casing for locking engagement with said shank portions, latch means normally retaining the dogs in engagement with the shank portions and releasable thru operation of the tumbler discs, key actuated lock mechanism in the casing, means operatively connected between the permutation and key lock mechanisms for retracting said dogs thru actuation of the key lock mechanism, and means for normally urging said dogs into locking relation with the shank portions of the shackle.

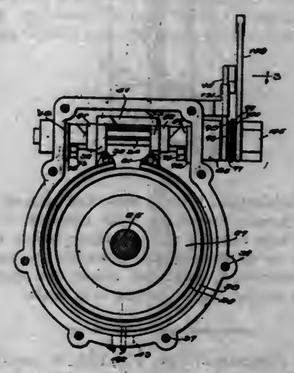


1,755,522. CLOSURE CAP. SAMUEL J. SMYTH, Hawthorne, Calif. Filed July 5, 1927. Serial No. 203,489. 2 Claims. (Cl. 215—51.)



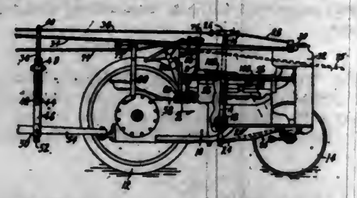
1. A closure cap, comprising a disk-shaped body of a material capable of being flexed and having portions thereof upstruck to provide spaced protuberances to be gripped and pressed together to cause upward flexing of the edges of the body.

1,755,523. APPARATUS AND METHOD FOR DRAWING GLASS. ARTHUR E. SPINASSE, Mount Vernon, Ohio. Filed July 5, 1927. Serial No. 203,488. 17 Claims. (Cl. 49—17.)



1. An anchoring and temperature controlling slab for use in drawing articles or sheets of glass, comprising an oblong solid body portion adapted for complete submersion in a bath of molten glass and immediately beneath the meniscus of the article or sheet being drawn, said body having a transverse wedge shape and provided with an upper surface convex in both longitudinal and transverse directions.

1,755,524. SUPPORTING AND DRIVING ATTACHMENT FOR TRACTOR-OPERATED CORN HARVESTERS. WILLIAM R. STANFIELD, Union, Iowa. Filed May 31, 1927. Serial No. 195,425. 8 Claims. (Cl. 56—18.)

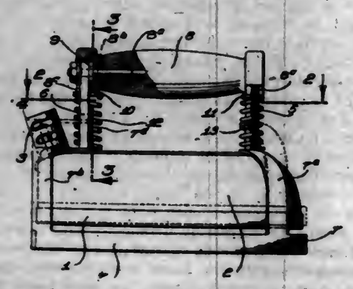


1. In combination, a tractor having an axle housing, an axle for said housing, an auxiliary housing surrounding the axle housing of a length considerably longer than the length of the axle housing, an auxiliary axle carried in said auxiliary housing, means for coupling said auxiliary axle with the tractor axle, and a harvester frame supported adjacent to one side of said tractor and carried by said auxiliary housing.

1,755,525. BRAKE. JOHN W. TATTER, Chicago, Ill., assignor to Lewis Differential Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1927. Serial No. 203,588. 8 Claims. (Cl. 188—196.)

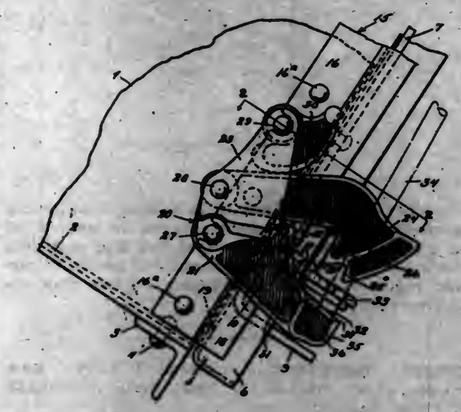
1. Brake mechanism comprising a brake element, a second brake element, a rotatable shaft, means operated by the shaft for bringing said second brake element into and out of effective frictional engagement with the first-mentioned brake element, means rigidly secured to said shaft, a member rotatably mounted on said shaft and engageable with the last-mentioned means to rotate therewith and to be rotated thereby, a spring for holding said member in engagement with said last-mentioned means, a second member rotatably mounted on said shaft and engageable with said last-mentioned means to rotate therewith and to be rotated thereby, a second spring for holding said second member in engagement with said last-mentioned means, spring means for angularly displacing said members relative to each other, a stop carried by one of said members and engageable with the other, a second stop engageable with the first-mentioned member, and mechanism for causing said second member to rotate said last-mentioned means.

1,755,526. DEVICE FOR CONTROLLING TRACTORS FROM A DISTANCE. GUY A. TRAUGER, Alden, Iowa. Filed July 11, 1927. Serial No. 204,786. 4 Claims. (Cl. 180—77.)



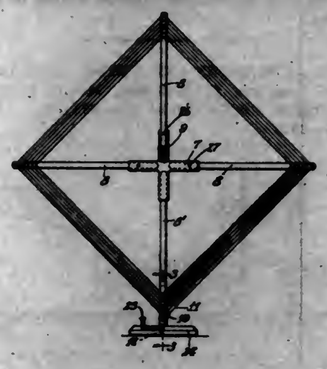
1. In combination with a tractor having a spring actuated clutch pedal thereon, a control device comprising a lever operatively connected to said clutch pedal, a rope for moving said lever in one direction, a latch pivoted to said lever, a latch coacting member mounted on said tractor and a connection between said rope and said latch whereby the latch may be lifted when the rope is taut.

1,755,527. SEPARATOR LOUVER. JAY P. WALKER, Tulsa, Okla., assignor of forty per cent to Guy O. Marchant and six per cent to C. G. Wells, Tulsa, Okla. Filed Mar. 19, 1928. Serial No. 262,955. 8 Claims. (Cl. 183—2.7.)



3. The combination with a tank and spaced separator baffle shell therein having an inlet opening, of a louver surrounding said opening and including means for retarding the flow of fluids and the deflecting of liquids from passing therethrough, and also means for directing the influent in a helical course within said baffle.

1,755,528. COMBINATION FLATIRON AND STAND. JOHN H. WILSON, San Diego, Calif. Filed May 2, 1927. Serial No. 188,231. 5 Claims. (Cl. 68—27.)

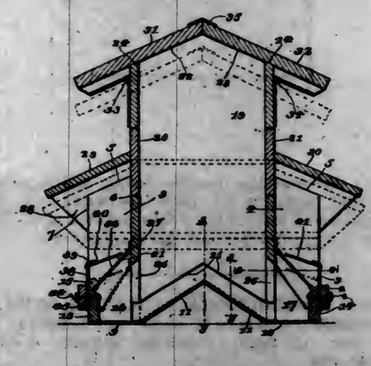


1. In a device of the class described, an electric flatiron body, handle supports on said iron body, a rotatably mounted handle supported between said supports, said handle having catch means rotatable therewith, a stand for said iron slidably mounted on said handle supports, said stand having a foot portion encircling the base of said iron body and conforming to the shape thereof, resilient means adapted to hold said stand in extended position from said handle, and catch means on said stand adapted to be engaged by said handle catch means by rotation of said handle when the stand is moved into retracted position relative to said iron body.

1,755,529. CAR-DOOR DEVICE. WILLIAM E. WINE, Toledo, Ohio. Filed Nov. 16, 1923. Serial No. 675,099. 32 Claims. (Cl. 105—308.)

1. A railway car having a hinged door for closing a discharging opening of a hopper thereof, a pivoted member adapted to releasably maintain said door in closed position, a bracket affixed to the car body and embodying a supporting base for the pivoted member, said bracket having an extension arranged to project beyond the plane of the door when the latter is in closed position constituting means for arresting movement of the door away from its hinge pintles.

1,755,530. PORTABLE LOOP AERIAL. EDWARD F. ANDREWS, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,322. 9 Claims. (Cl. 250—33.)

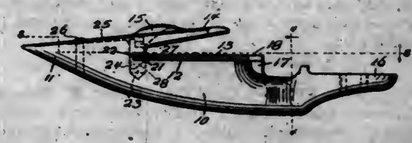


1. In a loop aerial, a central frame having four fixed radially extending sockets therein, one for each supporting arm of the device, aerial wire supporting arms extending outwardly from said sockets, an aerial loop spirally supported upon said arms, and resilient means pressing outwardly upon one or more of said arms to hold the loop under tension and prevent slack therein.

1,755,531. PROCESS FOR THE EXTRACTION OF THE ALBUMINO-CASEINS OF VEGETABLE ORIGIN AND FOR THE SEPARATION OF SUCH ALBUMINO-CASEINS FROM AMYLACEOUS MATTER. HENRI BEAUPOUX, Beauvais, France. Filed Oct. 11, 1926, Serial No. 141,031, and in France Oct. 23, 1925. 2 Claims. (Cl. 99—11.)

1. A process for the manufacture of casein from vegetable substances comprising treating the raw material by an alkali chloride, purifying the product of this first step by the addition of lime, separating the insoluble substances, and coagulating the remaining liquor by treatment with acid, the coagulation being affected to the degree that Ph=5,2.

1,755,532. POULTRY FEEDER. STEPHEN BERNARD and WILLIAM J. GLENN, Holton, Kans. Filed July 22, 1927. Serial No. 207,716. 11 Claims. (Cl. 119—53.)



1. A poultry feeder comprising a body section formed with a pair of oppositely disposed feed troughs and vertically extending, opposed, spaced combined hopper retaining and guide members, a hopper section slidably positioned between said members and discharging in said feed troughs, retaining screens hinged to said hopper for positioning upon the feed within the troughs, and a guard device connected to each of the troughs and overlapping said screens.

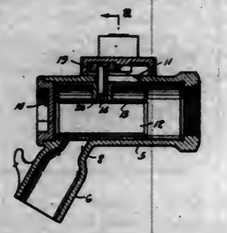
1,755,533. BACK AND CHEST PROTECTOR. JOSEPH BLACK, Rochester, N. Y. Filed Oct. 29, 1928. Serial No. 315,819. 1 Claim. (Cl. 2—92.)

An all-paper garment including right and left back panels and right and left front panels, strips of tough adhesive tape joining the right front and back panels above and below the armhole formed thereby, strips of tough adhesive tape joining the left front and back panels above and below the armhole formed thereby, a strip of tough adhesive tape connecting the back panels, a binding strip of tough adhesive tape straddling and affixed to all exposed edges of the panel, buttons fastened to one of the front panels close to the free side edge thereof, buttons secured to the other front panel at points remote from the free side edge thereof, and cords attached to the buttons on one of the panels and adapted to be wrapped in engagement with the buttons on the other front panel thereby to hold the front panels in lapped relation and adjustably connected to fit persons of different sizes, the armholes formed between the front and back panels being oversize to permit said adjustment.

1,755,534. MOWER GUARD. LOUIS J. BORKHUIS, Jr., Vayland, S. Dak. Filed Sept. 29, 1928. Serial No. 309,334. 4 Claims. (Cl. 56—298.)

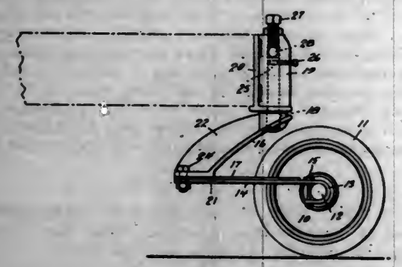
1. A guard finger having both nose and rearwardly extending arm, and having a ledger plate seat beneath said arm and a lug projecting upward from the rear end of said seat, a ledger plate on said seat provided with forwardly extending projections, said guard finger having sockets for said projections at the forward end of the seat, interlocking edge portions on said lug and ledger plate, and a locking bolt disposed in the guard finger for engagement between the projections of the ledger plate for holding the latter against edgewise displacement and against said lug.

1,755,535. ADJUSTABLE CUTTING INSTRUMENT. OTTO M. BRATRUD, Seattle, Wash. Filed July 5, 1927. Serial No. 203,556. 4 Claims. (Cl. 30—9.)



1. A cutting instrument comprising a casing, a holder within the casing, a blade carried by the holder and adapted to project from the casing, a threaded sleeve on the holder, a threaded rod engaging the sleeve, and means rotatable in the casing for actuating the rod to effect an adjustment of the holder through the medium of said sleeve whereby an adjustment of the blade is secured, the holder including a shank having a flat side against which said blade bears, and a pin projecting from the flat side of the shank and engaging the blade for securing the latter to the shank.

1,755,536. VALVE. HAMILTON C. CHASE, Los Angeles, Calif., assignor of one-fourth to Tobias Weber and one-fourth to Harold Roe, Los Angeles, Calif. Filed Oct. 21, 1926. Serial No. 143,039. 4 Claims. (Cl. 251—78.)

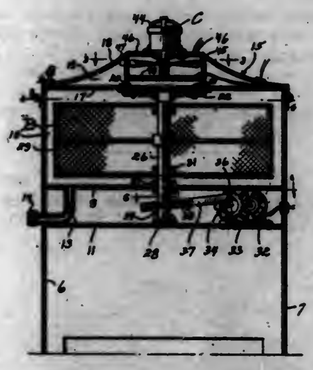


1. In a valve, a body having a bore with an inlet for the supply of fluid thereto at one end and a discharge port in

the side wall of said bore remote from said inlet, an open ended split shell having a chamber freely communicating with said inlet at one of its ends, said shell being disposed

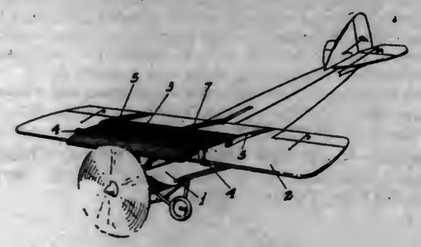
intermediate said inlet and discharge port for sliding movement in said bore with the other end of said shell disposed to traverse said port so as to be moved to cover and uncover said port.

1,755,537. SPRING CASTER. HARRY W. DEISLER, Wellington, Ohio, assignor to The Wellington Machine Company, Wellington, Ohio, a Corporation of Ohio. Filed Dec. 5, 1928. Serial No. 323,990. 10 Claims. (Cl. 16—44.)



1. The combination with a housing, of a king bolt journaled therein, a bracket connected to the lower end of said king bolt and rotatable therewith, and spring arms fastened to the bracket, and a caster wheel arranged between and carried by the free ends of said spring arms.

1,755,538. MEANS FOR FASTENING ROLL ROOFING TO ROOFS. ALBERT H. DRAUGHON, Jr., Fort Myers, Fla. Filed Apr. 23, 1929. Serial No. 357,476. 1 Claim. (Cl. 108—33.)

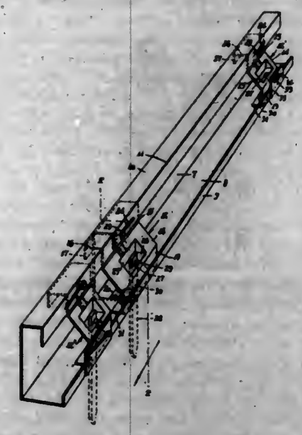


Devices for locking together the upper and lower layers of roofing comprising a metallic strip adapted to extend parallel to the upper edge of a horizontally extending layer of roll roofing, said metallic strip having rows of integral prongs at its upper and lower edges, said prongs being staggered relatively to each other, said strip also having at intervals throughout its length between the rows of prongs nail holes, flat headed nails adapted to pass through the holes and a lower layer of the roofing into the roofing frame, the plane of the surfaces of said prongs being parallel when the prongs are bent upwardly to the edges of the strip, said prongs having sharpened ends adapted to penetrate an upper layer of rolled roofing below its lower edge and bent over to clamp the upper layer of roofing to the strip and to a lower layer of roofing, both rows of prongs penetrating the upper roll of roofing.

1,755,539. COMBINED DISH WASHING AND DRYING MACHINE. CARL N. GEROSA, Rochester, N. Y. Filed Dec. 5, 1927. Serial No. 237,892. 4 Claims. (Cl. 34—26.)

1. In a dish washing machine having a dish receiving compartment, a hollow lid closing the upper open end of the compartment, and drying means mounted in the lid for directing hot air currents into the compartment.

1,755,540. CONTROLLABLE AUXILIARY WING FOR AIRPLANES. CHARLES H. GUNN, San Francisco, Calif. Filed Sept. 19, 1928. Serial No. 306,825. 4 Claims. (Cl. 244—29.)



1. An auxiliary wing structure for airplanes including a rigid wing element superimposed and normally lying on the main wing, means for moving said element forwardly so that its forward edge extends ahead of the forward edge of the main wing, and means connecting said element to the main wing, in a manner to cause the element to assume an upwardly and forwardly angled position with such forward movement thereof.

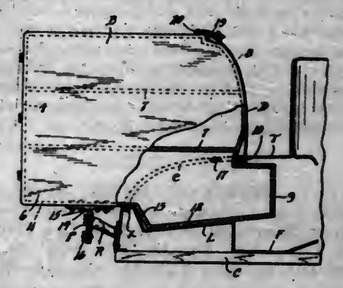
1,755,541. ROAD FORM. JOHN N. HELTZEL, Warren, Ohio. Filed May 7, 1927. Serial No. 189,542. 20 Claims. (Cl. 25—118.)

10. A form rail having an inclined slot, and a member slidable in the rail and having a portion working in said slot to bind said member in the rail when slid in one direction.

16. A form rail having upper and lower flanges, a member disposed between said flanges and having a lower flange

bearing on the lower rail flange and having an inclined portion provided with an inwardly pressed pocket, said

pocket having a bottom portion with a stake receiving opening, and said lower flanges of said rail and member having openings to receive the stake.

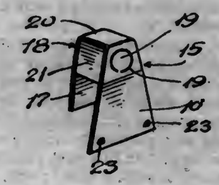


1,755,542. FLY EXIT. FRED L. HICKEL, Ray, N. Dak. Filed June 26, 1928. Serial No. 288,445. 1 Claim. (Cl. 156—37.)

In a structure of the class described, a closure screen provided with an opening, an exit in alignment with said opening, said exit being in the form of an elongated substantially hollow box constructed of wire mesh material, said exit adapted to extend outwardly from said closure screen and having one end completely opened to provide an entrance, an attaching frame fastened to said entrance, a complemental frame for cooperation with the first named frame, fastenings for said frame and the opposite end of the exit being provided with a plurality of discharge openings, and said end being disposed in spaced relation with respect to said closure screen.

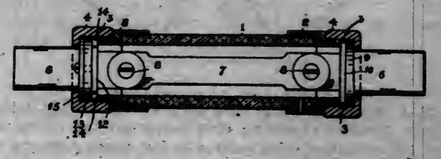
1,755,543. DETACHABLE COMMERCIAL BODY FOR AUTOMOBILE TONNEAUX. ROSCOE A. HILL, St. Paul, Minn. Filed June 29, 1928. Serial No. 289,270. 9 Claims. (Cl. 224—29.)

1. A detachable body for automobile tonneaux comprising a box structure having a front portion adapted to underlie the ledge at the front of the tonneau doorway and having a bottom provided with an offset forward portion adapted to be supported from the bottom portion of



the tonneau structure, said offset portion providing an abutment shoulder to prevent rearward longitudinal displacement of said box structure.

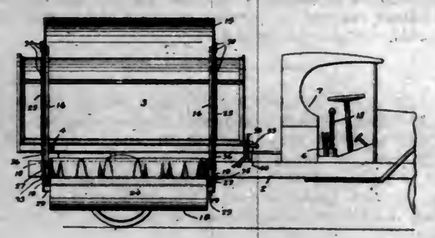
1,755,544. PROCESS OF IMPROVING BREWING WATERS. EDUARD JALOWETZ, Vienna, Austria. Filed Aug. 18, 1926, Serial No. 130,101, and in Austria Nov. 20, 1925. 9 Claims. (Cl. 210—23.)



1. A process of improving brewing-waters by adding gypsum in such quantity that a stoichiometrical proportion is obtained between sulphates and carbonates of lime and magnesia.

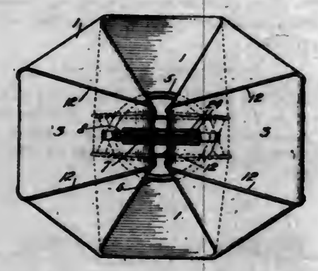
1,755,545. OUTLET FOR BASEBOARD RACEWAYS. PAUL H. LACEY, Chicago, Ill. Filed July 28, 1928. Serial No. 295,873. 7 Claims. (Cl. 247—15.)

1. An outlet for base board raceways comprising in combination a ground strip having a transversely extending groove, and an outlet member formed with a hood-like portion overlying an end of the groove in the ground strip, said hood-like portion having side and end walls and portions extending from certain of its walls and extending parallel with faces of said ground strip and secured thereto, there being an outlet opening in one side wall of said hood-like portion.



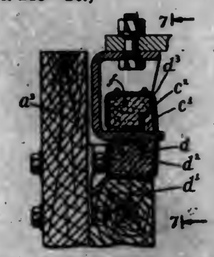
1,755,546. RENEWABLE FUSE. FREDERICK C. LAVARACK, Montclair, N. J., assignor to Great Western Fuse Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 28, 1928. Serial No. 264,141. 4 Claims. (Cl. 200—132.)

1. In a renewable fuse, the combination of a tubular body, a terminal blade provided with an abutment, a slotted washer arranged to be slipped down over the blade into



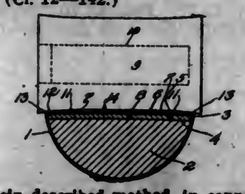
engagement with said abutment, means for preventing relative rotation between the washer and the body, a one-piece apertured sealing disk slidably secured to the face of the washer by a pin and slot connection and arranged to be slipped down over said blade with and to bear against the slotted washer, said disk and blade being provided with portions arranged to interengage, when the disk is shifted on said washer, to prevent relative longitudinal movement between said blade and said disk, and means for clamping all of said elements in fixed assemblage.

1,755,547. REFUSE COLLECTOR. HENRY C. LIMA, Stamford, Conn., assignor, by mesne assignments, to Atia Sales Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1925, Serial No. 22,353. Renewed Dec. 5, 1928. 4 Claims. (Cl. 214—67.)



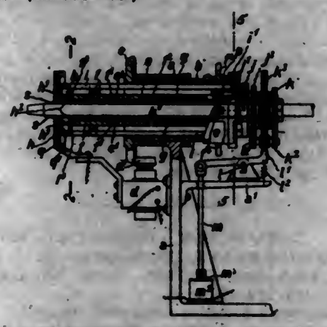
1. A refuse collector comprising a chassis, a cargo body mounted on said chassis having a curved top, and a receiving opening running substantially the full length of the body, a protecting hood on the curved top overhanging the opening and adapted to cooperate with a loading trough in its raised position so as to prevent escape of discharging material, a guide at each end of the opening having a straight portion along the side of the vehicle and a curved portion along the curved top co-operating with the protecting hood,—a material carrying trough having a material receiving opening substantially the length of the body, guided along said guides and having a width so that when raised it substantially fills said protecting hood, and means for raising and lowering said trough.

1,755,548. HAND BAG. JOSEPH N. LOWE, New York, N. Y. Filed Aug. 28, 1927. Serial No. 214,901. 9 Claims. (Cl. 190—43.)



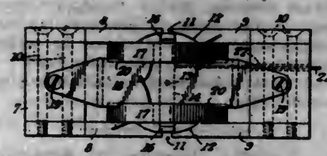
2. A hand bag, comprising flexible ends having linings, mouth portions extending from below the top of the bag and along the top, sides secured to the mouth portions, the mouth portions defining a mouth for the bag, and stiffening boards for the ends having recesses coinciding with the terminals of the mouth, the boards being inserted between the linings and the ends.

1,755,549. CUSHIONING DEVICE FOR MARINE PROPULSION. ALFRED F. MASURY, New York, N. Y., assignor, by mesne assignments, to The Rubber Shock Insulator Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,528. 1 Claim. (Cl. 248—16.)



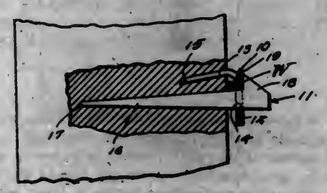
In combination with the hull of a vessel and prime mover, flanges formed along the sides of the prime mover, channels extending substantially the full length of the engine, formed with rigid arms and secured to the flanges, separable housings carried with the hull and having open sides, respectively, through which the arms enter, yielding non-metallic material retained within the housings and engaging the ends of the arms and bolts securing the parts of the housings together and retaining the yielding non-metallic material under compression.

1,755,550. METHOD OF OUTLINING McKAY SHOES. FRANK S. MESS, Lynn, Mass., assignor to North American Chemical Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 31, 1927. Serial No. 243,845. 7 Claims. (Cl. 12—142.)



1. The herein described method, in connection with the manufacture of a shoe of the kind having an inturned upper around a bottom cavity, consisting of spreading the filler layer thereby waxing the inturned upper around the bottom cavity and outlining the edge of the upper all at the same time and as a part of one and the same bottom forming operation.

1,755,551. HOLDER WITH FEEDING ARRANGEMENT FOR THE POSITIVE ELECTRODE OF A SEARCHLIGHT. FRANZ MEYER, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed June 27, 1928, Serial No. 288,785, and in Germany June 29, 1927. 12 Claims. (Cl. 176—66.)



4. In a holding device for the positive electrode of a searchlight, a holder for the electrode, rotatable about the axis of the electrode, a motor running continuously in the same direction, means for coupling the holder to the said motor, a number of clamps fixed to the said holder near the front end of the electrode, a number of rods extending from the clamps towards the rear end of the holder, the rods being attached to the holder and capable of being shifted in the direction of said axis, a body disposed in the device at the rear end of the said holder and capable of rotating about the said axis, this body containing helical surfaces lying opposite the rear ends of these rods and coacting with them, a pinion connected to the said holder, another pinion of different diameter connected to the said body, and two additional pinions one each of which engages one of the aforesaid two pinions, and supported on a shaft which lies parallel to the said axis, a toothed wheel capable of rotating about the said axis, the said shaft being rotatably supported in this toothed wheel, a latch disposed in the device and adapted to engage the toothed wheel, and means for controlling this latch, the rods being adapted—when moved by turning the said body—to tighten or loosen the said clamps and to move them in the direction of said axis.

1,755,552. DRIVING UNIT FOR SPEAKERS. NICHOLAS M. MICHAILOVSKY, Bronx, N. Y., assignor, by direct and mesne assignments, of thirty-seven and one-half per cent to Paul Noel Ritter, Long Island, N. Y., and twenty-five per cent to Henry W. Boettger, New York, N. Y. Filed Aug. 23, 1928. Serial No. 301,526. 4 Claims. (Cl. 175—339.)

1. A driving unit for speakers or the like, comprising a magnet having pole pieces fixed over opposite faces of the same and separated to provide magnetic gaps at the opposite sides of the magnet, the inside faces of said pole pieces being curved substantially as arcs having a center between the magnetic gaps, an armature mounted for rotational movement about a corresponding center on an axis substantially parallel with and extending in the general direction of length of the magnet, said armature extending transversely across from one face toward the opposite face of the magnet and having polar portions shaped similarly to and opposed to the curved inside faces of the pole pieces, a transmission connection extending from said armature and magnetising means for the armature.

1,755,553. WIRE FASTENER. WILLIAM F. MONTEITH, Salmon Arm, British Columbia, Canada. Filed Jan. 18, 1927. Serial No. 161,889. 2 Claims. (Cl. 85—10.)

1. A securing element comprising a relatively thin, flat nail having a head of the same thickness as the body, the head projecting in one direction in the plane of the nail to form an inwardly facing shoulder, and an angular keeper, the arms of which are disposed substantially at right angles, one of said arms being sharpened, the other arm having a rectangular passage through which the nail passes and which the nail fits, the head of the nail projecting laterally from the body of the nail a distance approximately equal to the distance between the aperture in the keeper and the point of junction between the arms whereby the sharpened end of the keeper may be forced for a considerable distance into the material into which the nail is being driven.

1,755,554. HEAT-TREATED NICKEL-COPPER-ALUMINUM ALLOY AND METHOD OF HEAT TREATING THE SAME. WILLIAM A. MUDGE, Huntington, W. Va., assignor, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 10, 1924. Serial No. 719,088. 12 Claims. (Cl. 148—21.2.)

1. In the treatment of nickel-copper-aluminum alloys containing less than 20% of aluminum and at least 15% of nickel, the steps consisting of heating the material to above 600° F. and allowing it to cool.

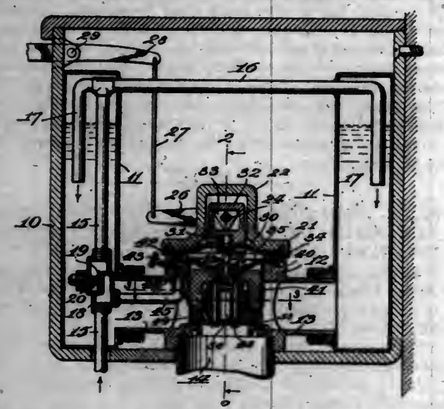
1,755,555. MANUFACTURE OF ALLOYS OF COPPER, NICKEL, AND ALUMINUM. WILLIAM A. MUDGE, Huntington, W. Va., assignor, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Continuation of application Serial No. 719,088, filed June 10, 1924. This application filed Mar. 31, 1925. Serial No. 19,730. 10 Claims. (Cl. 148—21.2.)

1. In the treatment of nickel-copper-aluminum alloys containing from 2% to 17% of aluminum and at least 15% of nickel, the steps consisting of heating the material to above 600° F. but short of melting, and allowing it to cool.

1,755,556. HEAT-TREATED COPPER-NICKEL-ALUMINUM ALLOY. WILLIAM A. MUDGE, Huntington, W. Va., assignor, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Mar. 31, 1925, Serial No. 19,730. Divided and this application filed July 13, 1925. Serial No. 43,403. 11 Claims. (Cl. 148—21.2.)

1. In the treatment of nickel-copper-aluminum alloys containing from 2% to not over 17% of aluminum and at least 15% of nickel, the step consisting of softening the material by rapidly cooling it from a heated condition short of its melting point, such conditions being sufficient to soften the material when cooled.

1,755,557. COPPER-NICKEL-ALUMINUM ALLOY AND METHOD OF HEAT TREATING THE SAME. WILLIAM A. MUDGE, Huntington, W. Va., assignor, by mesne assignments, to The International Nickel Company, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Mar. 31, 1925, Serial No. 19,730. Divided and this application filed July 13, 1925. Serial No. 43,404. 11 Claims. (Cl. 148—21.2.)



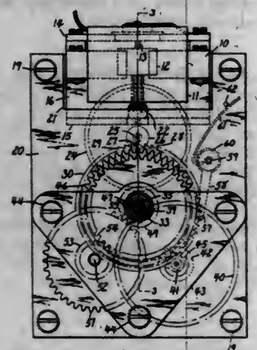
1. In the treatment of nickel-copper-aluminum alloys containing up to 17% of aluminum and at least 15% of nickel, the step of subjecting the material to regulated cooling from a temperature of over 1200° F. but short of melting.

1,755,558. FLUSHING VALVE. JESSE C. OWENS, Los Angeles, Calif. Filed May 29, 1929. Serial No. 366,949. 14 Claims. (Cl. 4—26.)

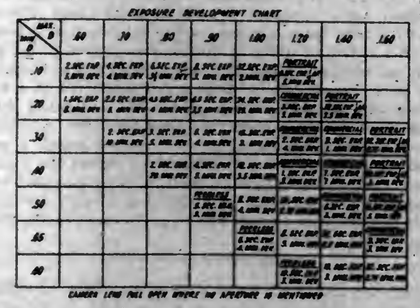
1. The combination with a pair of airtight tanks, of a housing connecting the lower portions of said tanks, a discharge pipe leading from the intermediate portion of said housing, a manually operable flush valve normally closing said outlet pipe, a water pressure supply pipe

CARNEGIE LIBRARY OF ATLANTA

leading to the upper ends of the tanks and the ends of which supply pipe within the tanks are extended downwardly so as to direct jets of water downwardly within the tanks when the flush valve is open to permit water to discharge from said tanks.

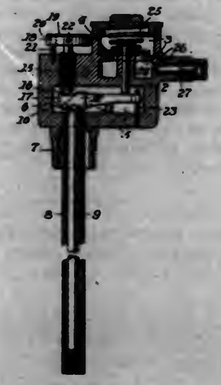


1,755,559. GALVANIZING. CARL PLETSCH, Bad-Nauheim, Germany. Filed May 15, 1924. Serial No. 718,460. 2 Claims. (Cl. 91—70.3.)



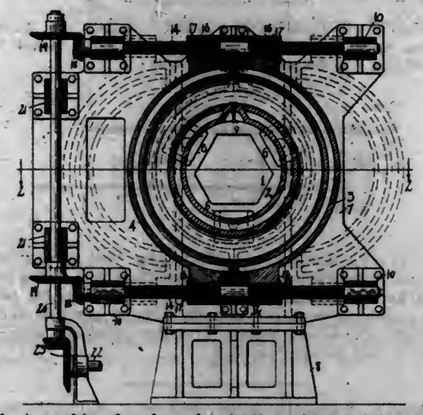
1. The process of galvanizing metal articles comprising cleaning the articles by a cleaning treatment including pickling in acid, applying a solution containing zinc chloride to the surfaces of the articles to be galvanized, neutralizing any free acid introduced in the zinc chloride solution by the pickled articles, heating the articles to dry the solution, and applying molten zinc containing small amounts of aluminum and tin to the surface to be galvanized.

1,755,560. ELECTRIC CLOCK. WILSON E. PORTER, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed Dec. 1, 1928. Serial No. 323,047. 2 Claims. (Cl. 58—26.)



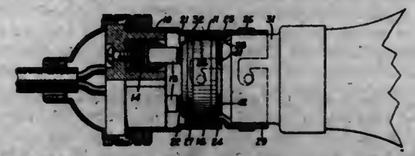
1. In an electric clock having a continuously-rotating synchronous electric motor and visible time-indicating means driven thereby; an intermittent step-by-step drive-mechanism interposed between the said motor and the said indicating-means; whereby the uniform rotary movement of the said motor is converted into a step-by-step movement of the said time-indicating means.

1,755,561. PROCESS OF CORRECTING PHOTOGRAPHIC COPIES FOR FACSIMILE TRANSMISSION. RICHARD HOWLAND RANGER, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 24, 1925. Serial No. 51,930. 5 Claims. (Cl. 178—7.)



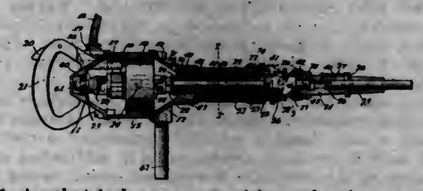
1. The method of preparing a picture for electrical transmission of a facsimile thereof, which comprises, optically determining the average density range of said picture, comparing said picture with a predetermined schedule of density range obtained from a standard picture having an optimum density range for electrical facsimile transmission, reproducing said first picture to secure a copy thereof having substantially the same density range as said second picture, and electrically transmitting a facsimile of said copy.

1,755,562. VALVE. CLARENCE W. ROBERTSHAW and GEORGE A. ROBERTSHAW, Youngwood, Pa., assignors to Robertshaw Thermostat Company, Youngwood, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1927. Serial No. 223,071. 8 Claims. (Cl. 236—102.)



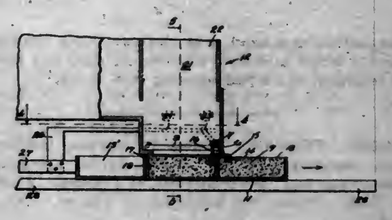
3. In a valve, a valve body having a valve casing therein and a lever housing cooperating therewith, a projection on said casing at one side thereof, a valve in said casing, a lever in said housing, operating means for said lever, and an adjusting mechanism for said lever extending entirely through said projection out of communication with said casing and valve, there being a removable closure for said casing, said closure and adjustment being rotatable about substantially parallel axes.

1,755,563. APPARATUS FOR VULCANIZING INNER TUBES. EMIL SCHNEDAREK, Akron, Ohio, assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 7, 1927. Serial No. 181,720. 2 Claims. (Cl. 18—19.)



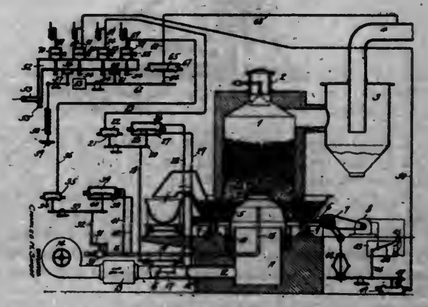
1. A machine for the vulcanization of inner tubes, comprising a tube mold divided circumferentially into inner and outer sections, the former being a continuous ring-shaped member having a trough-shaped recess on its outer periphery and the latter being divided into a plurality of segments, each having a trough-shaped recess on its inner periphery, an independent mounting for each segment and means connected therewith to move the segments simultaneously toward and from the inner section, said means comprising oppositely screw-threaded shafts, lugs carried by each segment engaging said shafts and a common driving means for rotating the shafts.

1,755,564. CIRCUIT-CONTROLLING DEVICE. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Schoenberg. Filed Apr. 28, 1927. Serial No. 186,160. 7 Claims. (Cl. 200—115.5.)



1. A device for controlling current supplied by a lamp socket of the bayonet type, comprising a sleeve adapted to be detachably inserted in said socket, contacts adapted to make connection with the contacts of the socket, other contacts adapted to make connection with a male connector device of the bayonet type inserted in said sleeve, a circuit controller electrically associated with said contacts, and a unitary mounting for said contacts and controller.

1,755,565. ELECTRIC HAMMER. LAWRENCE G. SHOOK, Los Angeles, Calif. Filed Oct. 20, 1926. Serial No. 142,863. 5 Claims. (Cl. 78—38.)

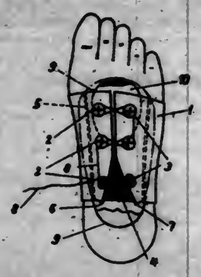


1. An electric hammer comprising a housing, an electric motor in the housing, a shaft driven by the motor, a cam carried by the shaft, a tool holder slidable upon the housing, a cam on the tool holder adapted to be engaged by the first cam, said tool holder carrying a sleeve disposed around the housing and on which is formed a flange, springs bearing on opposite sides of the flange and yieldably holding the tool holder in the predetermined position wherein the cams are disengaged, whereby, upon forcing the housing toward the tool holder, the cams will engage, causing the tool holder to be vibrated by the motor.

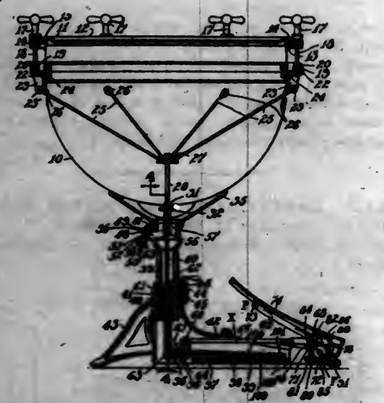
1,755,566. BRICK-FORMING MACHINE. JOSEPH SIMMONS, Los Angeles, Calif. Filed June 27, 1928. Serial No. 288,553. 11 Claims. (Cl. 25—104.)

8. In a molding machine, means for depositing plastic material in a mold, a paddle pivotally mounted adjacent said mold, means for extending said paddle into the mold as the mold is being discharged from the depositing means and for withdrawing the paddle before the after end of the mold is discharged, and a leveling blade extending across and closely overlying said mold.

1,755,567. CENTRALIZED CONTROL FOR GAS PRODUCERS. CHARLES H. SMOOT, Maplewood, N. J. Filed Apr. 16, 1926. Serial No. 102,479. 7 Claims. (Cl. 48—87.)



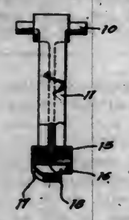
1. In combination with a gas producer provided with air supplying means and a regulator therefor, means responsive to and varying inversely with the pressure of the gas produced, means responsive to and varying with the rate of flow of air to the producer, and a movable member acted upon by both of said means for controlling said regulator.



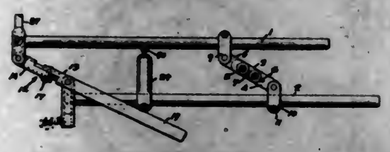
1,755,568. FOOT-ARCH SUPPORT. HANS SOCHOR, Zurich-Hongg, Switzerland. Filed Jan. 7, 1928, Serial No. 245,150, and in Switzerland June 18, 1927. 2 Claims. (Cl. 128—166.5.)

1. An arch support comprising a band of flexible relatively unstretchable material adapted to pass around the instep and arranged with its ends beneath the arch, said ends being spaced apart, a strip of elastic material having its opposite edges secured to said band along lines spaced from the ends of the latter, and bridging the gap

between the ends of the band and by its contraction serving to draw the band firmly around the foot, lacing directly connecting said band ends and adjustably limiting the extent to which said strip may be stretched and said support enlarged, and a pad covering said lacing.

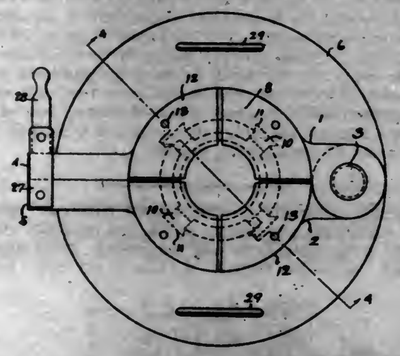


1,755,569. TYMPANO. CECIL H. STRUPE, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 4, 1929. Serial No. 352,403. 17 Claims. (Cl. 84—419.)



1. A pedal tympano comprising a pedestal, a kettle supported by the pedestal, a head for the kettle, head tensioning means arranged to act upon said head, a pull rod for actuating said tensioning means, a foot pedal movably mounted upon the pedestal, a connection between said foot pedal and the pull rod, a friction brake arranged to hold the pedal against movement, and pedal controlled means by which the brake may be rendered active or inactive.

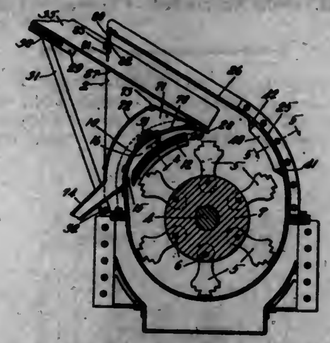
1,755,570. BEARING BOX. FRED C. THOMSON, deceased, Beverly Hills, Calif., by David R. Faries, administrator, Los Angeles, Calif. Filed Jan. 28, 1929. Serial No. 335,668. 5 Claims. (Cl. 184—13.)



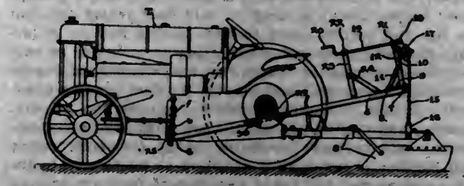
4. In an upright internal combustion engine, the combination of a splash lubricated shaft, a bearing box therefor, a lubricant crank case housing said shaft and box, said bearing box having the lower half formed by a strip pitched in relation to the axis of said box and the width such as to expose the shaft for the width of said box.

1,755,571. COIL-BENDING TOOL. AARON P. WATTS, Los Angeles, Calif. Filed Dec. 20, 1926. Serial No. 155,913. 13 Claims. (Cl. 153—20.)

1. A wire bending tool comprising two substantially parallel rods, three-part adjustable links connecting said rods, and means carried by certain of said links for bending a wire to form two straight parallel portions and a straight connecting portion arranged obliquely with respect to said parallel portions.



1,755,572. PIPE HOLDER. WALTER L. CHURCH, Houston, Tex., assignor of one-half to William L. Pearce, Houston, Tex. Filed July 5, 1927. Serial No. 203,841. 4 Claims. (Cl. 24—263.)

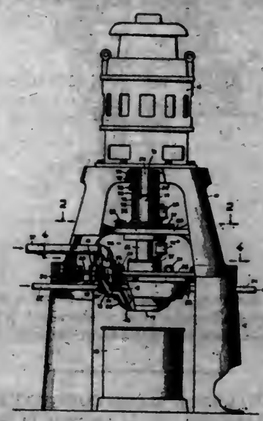


1. A pipe holder including a spider formed of sections hinged together, at one side, and having outwardly turned jaws, at the other side, said spider having a base portion substantially wider than any other portion of the spider so that the same may be seated on a rotary table and having a downwardly converging seat, separate wedge shaped slips in said seat, yieldable means supporting the respective slips on the spider, and releasable securing means associated with the jaws and adapted to secure the sections of the spider about the pipe, to be held said securing means comprising a link pivoted to one jaw and a toggle lever pivoted to said link, one end of which is adapted to engage the outer side of the other jaw and whose other end is formed with a hand grip.

1,755,573. METHOD OF AND MECHANISM FOR GRINDING AND SEPARATING MATERIALS. WALTER J. CLEMENT, Utica, N. Y., assignor to The Bossert Corporation, Utica, N. Y., a Corporation of New York. Filed Apr. 7, 1928. Serial No. 268,300. 19 Claims. (Cl. 19—44.)

1. A mechanism of the class described comprising a substantially cylindrical casing, a rotary shaft arranged coaxially of said casing, a plurality of hammers carried by said shaft to swing in circular paths in said casing and adjacent to the inner face thereof, said casing having its inner face extending outwardly beyond its cylindrical outline through a portion of its circumference, a duct extending lengthwise within said casing out of the paths of said hammers at said outwardly extended portion and defining therewith a passage for material out of the path of said hammers, the outer face of said duct having openings through which material in said passage may be drawn, and means for exhausting air from said duct.

1,755,574. HOISTING DEVICE. ROBERT B. COFFMAN, New Alexandria, Pa. Filed May 31, 1929. Serial No. 367,469. 7 Claims. (Cl. 37—126.)



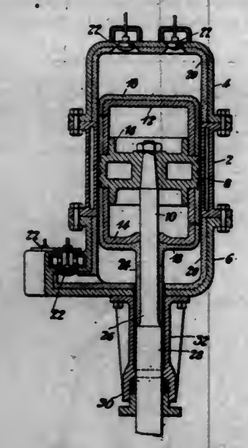
6. In a hoisting device, a frame including side beams having their front and middle parts provided with means to attach them to a tractor in such position that the rear ends extend rearward from the tractor, a rear end-beam having its ends united with the rear ends of the side beams, an upright on the part that extends rearward from the tractor but at a distance from said rear end-beam, a bearing on said upright, a second bearing, and means on said rear end beam to support said second bearing; in combination with a lifting member mounted for rotary movement in said second bearing, means secured to said lifting member and connectable to a load for lifting the latter, and a manually operable member journalled in the first said bearing and operatively connected to said lifting member for effecting rotary movements thereof.

1,755,575. NOZZLE FOR SAND-BLAST APPARATUS. WILHELM ECKLER, Altona-Ottensen, Germany. Filed July 19, 1928, Serial No. 293,967, and in Germany Aug. 20, 1925. 3 Claims. (Cl. 51—15.)

1. A blast nozzle arrangement for sand blast apparatus, comprising a sand container, an outlet for the sand at the bottom of the sand container, a revolving table underneath the sand outlet, a rotatable tubular member below the sand container, above the revolving table and surrounding the sand outlet, sand nozzles secured to the lower end of the rotatable tubular member, the said tubular member being adapted to guide sand from the sand outlet to the sand nozzles, an inlet for admitting a gaseous driving fluid into the rotatable tubular member, a sand accumulating member mounted inside the rotatable tubular member and underneath the sand outlet in such a position as to leave an annular gap between the tubular member and the sand accumulating member, the said gap leading to the sand nozzles, and the said sand accumulating member being adapted to spill sand uniformly into the annular gap whenever the nozzles are rotating, owing to the vibration caused by such rotation.

1,755,576. HOMOGENIZING MILL. WILLIAM EFFENBACH, College Point, N. Y., assignor to United States Colloid Mill Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 23, 1927. Serial No. 207,866. 10 Claims. (Cl. 83—7.)

1. In a mill, the combination of a plurality of elements having juxtaposed effective surfaces for emulsifying, grinding or homogenizing material to be treated, said surfaces being disposed in substantially horizontal planes, a casing for said elements, said casing including a hollow portion extending interiorly of both of said surfaces having a substantially vertically extending discharge for the treated material, and means for rotatively mounting one of said elements in said casing at a definitely set clearance relative to the other of said elements.

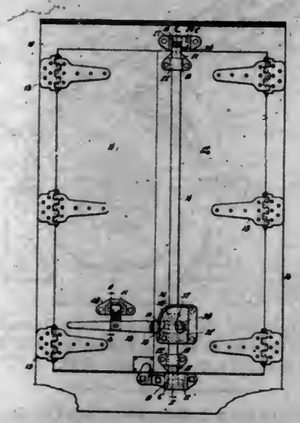


1,755,577. REVERSIBLE TRAIN-CLASSIFICATION SIGNAL. WILLIAM J. FROST, Mansfield, La. Filed Aug. 5, 1929. Serial No. 383,685. 2 Claims. (Cl. 116—175.)

1. A signalling device including two rigid wings hinged together at one end and movable into either of two co-

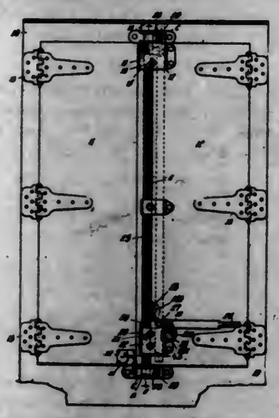
inciding positions one wing having a slot, eyes on each side of the other wing and adapted to project through said slot when the wings are in such coinciding position, and to receive a key insertable through said projecting eye to secure said wings together.

1,755,578. RECIPROCATING ENGINE. WINDER E. GOLDSBOROUGH, South Norwalk, Conn., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1926. Serial No. 88,203. 9 Claims. (Cl. 123—191.)



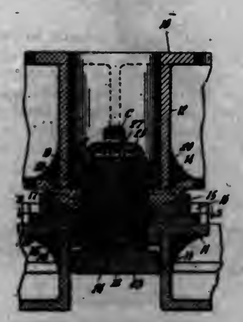
1. A piston rod comprising a rod having a portion of its length of reduced diameter and a sleeve of refractory material telescoped over the portion of reduced diameter.

1,755,579. CIGARETTE SLIDE CONTAINER. WILLIAM F. GRUPE, Lyndhurst, N. J., assignor to Boucher Cork Co., Inc., New York, N. Y., a Corporation of New York. Filed May 9, 1928. Serial No. 276,247. 16 Claims. (Cl. 229—9.)



1. A container for cigarettes comprising an outer pouch element, an inner slide element, said slide element being arranged to receive and contain cigarettes, and an element of readily rupturable material wholly enclosing said inner slide element.

1,755,580. DOOR-OPERATING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 10, 1926. Serial No. 115,062. 4 Claims. (Cl. 268—72.)



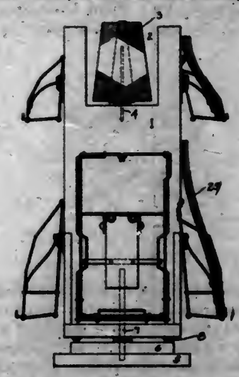
1. In a door operating mechanism of the character described, the combination with a door frame and a pivoted door; keeper means secured to said door frame adjacent the top and bottom edges thereof, having inclined guideways thereon; a continuous operating bar mounted on said door for reciprocation lengthwise and adapted to engage with the guideways of said keepers to effect opening movement of said door upon upward reciprocation of said member, and closing movement upon downward reciprocation of said member; actuating means for reciprocating said member in an upward direction so as to elevate the same and retract the lower end thereof from its projecting position below the bottom edge of the door; and means thrown into action by operator upon movement of said actuating means to bring said member to said elevated position for automatically locking said member in said elevated position.

1,755,581. DOOR-OPERATING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 25, 1926, Serial No. 118,448. Renewed Sept. 26, 1929. 6 Claims. (Cl. 268—72.)

1. In a door operating mechanism, the combination with a door frame and a pivoted door; of a single operating bar; means for movably mounting said operating bar on the door, said means serving to confine said bar against rotation; means for effecting combined longitudinal reciprocation of said bar and lateral travel of said bar and keeper means coacting with the opposite ends of said operating bar to effect opening and closing movements of said door upon actuation of said member.

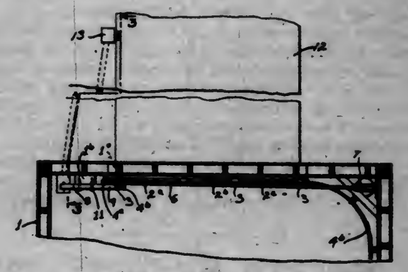
1,755,582. CAR CONSTRUCTION. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 24, 1929. Serial No. 334,692. 11 Claims. (Cl. 105—200.)

1. In car construction, the combination with body and truck bolsters having aligned center pin receiving openings; of a center pin provided with heads at opposite ends thereof having shouldered engagement with the body and truck bolsters, respectively, each of said heads having a shank portion formed thereon, one of said shank portions being in the form of a sleeve and the other shank portion being telescoped within said sleeve, said shank portions respectively extending through the openings of both bolsters and being locked together against endwise separation and together forming the complete shank of the pin.



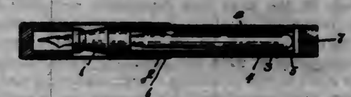
1,755,583. SOUND RECEIVER. HARVEY C. HAYES, Washington, D. C. Filed Aug. 17, 1927. Serial No. 213,632. 8 Claims. (Cl. 179—121.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. In a sound receiver a plurality of coils, a source of electricity connected with said coils and adapted to produce a plurality of separate magnetic fields around said coils, a rigid, bodily movable armature normally balanced in said magnetic fields, sound responsive means connected with said armature and adapted to reciprocate the latter, resilient members connected with said armature and adapted to restore the latter and means for indicating the changes in flux of the magnetic fields upon movements of the armature.



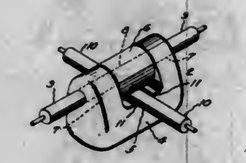
1,755,584. BAG HOLDER. GEORGE L. WECKERT, Seattle, Wash. Filed June 12, 1929. Serial No. 370,861. 2 Claims. (Cl. 211—53.)

1. A bag holder comprising a back board, a wire secured to the board forming the back of a wire frame, side wires secured to the back wire, a bottom cross wire connecting the side wires, said side wires being bent inwardly



at their middle portion to overlie the bags, and a spring-pressed plate carried by the back board adapted to bear against the back of the bags forcing them outwards.

1,755,585. REMOTE LOCK AND CONTROL MEANS FOR DOORS. CHARLES JACOB ANDREWS, San Diego, Calif. Filed Mar. 16, 1926. Serial No. 95,110. 2 Claims. (Cl. 70—14.)



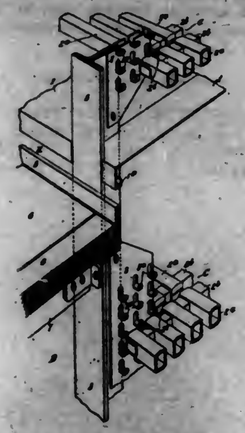
1. In a lock mechanism of the class described, a lock support having a recess in one side, a lock supporting frame pivotally mounted on said support adapted to cover said recess, a lock positioned at the inner side of said frame adapted to be enclosed in said recess when said frame is positioned thereover, the bolt of the lock being adapted to engage a recess portion of said support, and means operatively connected to said frame and adapted to be connected to a door.

1,755,586. FOUNTAIN PEN. EDWARD C. BERRY, Melrose, Mass., assignor to Chilton Pen Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1928. Serial No. 310,114. 2 Claims. (Cl. 120—47.)

1. In a fountain pen comprising a pen holding section having a resilient ink sack connected thereto, a tube enclosing said sack and connected to said section at one end and open at its opposite end, a barrel telescopically fitted on said tube, and having an end opening, stops on said tube and barrel arranged for engagement to limit the extent to which the barrel may be drawn from the tube and having means arranged to permit the passage of air into the tube, independently of said opening, when said stops are engaged, and to be closed against the passage of air upon a slight initial inward movement of the barrel on the tube.

1,755,587. INSULATING DEVICE. WILLIAM BROAD, Beaver Falls, Pa., assignor of three-fourths to Harry E. McLain, Pittsburgh, Pa. Filed Dec. 28, 1927. Serial No. 243,010. 3 Claims. (Cl. 173—28.)

3. In an insulating device, a base having a seat for an electrical conductor, an electrical distribution conductor or wire seated therein, closure means of insulating material extending across the seat, and means for holding the closure means in place comprising a second distribution conductor or wire extending through the base, through the closure means, and then through the base whereby the closure means serves as an insulating medium between the conductors.



1,755,588. SCREW HOLDER AND DRIVER. CHARLES W. BRONK, Binghamton, N. Y. Filed May 25, 1928. Serial No. 280,569. 2 Claims. (Cl. 145—52.)

1. The combination with a screw driver having a handle and shank, of two longitudinally oppositely positioned jaws conforming to the rounded surface of the shank, flanges at the upper ends of the jaws, a spring surrounding the upper ends of the jaws and contacting with the flanges, grasping members at the lower ends of the jaws, leaf springs carried by each jaw member and having their free ends in engagement with the shank to normally separate the lower ends of the jaws and a split collar movable along the outside surfaces of the jaws to close the grasping ends of the jaws against the tension of the springs.

1,755,589. BOOK AND STORAGE STACK. CLIFFORD SIDNEY BROWN, Jersey City, N. J. Filed Nov. 1, 1928. Serial No. 316,404. 8 Claims. (Cl. 211—136.)

1. A book and storage stack comprising a plurality of ranges, aisles between said ranges, said ranges and aisles composed of a plurality of superimposed tiers, stack floors, each tier occupying the space lying between two adjacent stack floors, said ranges divided into compartments by range partitions, vertical columns forming supporting means and positioned on both sides of the ranges and

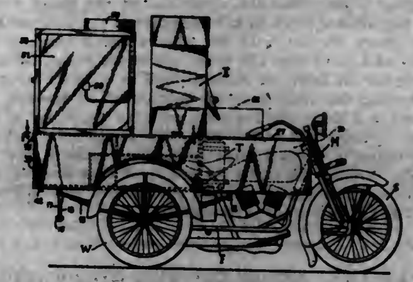
aisles and deck framing members supported by said vertical columns, said deck framing members adapted to support the stack floors.

1,755,590. NUT AND SCREW FASTENING. FRED S. CARR, Newton, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed July 22, 1925. Serial No. 45,274. 3 Claims. (Cl. 85—2.4.)

1. A fastening device for attachment to a relatively thin support comprising, in combination, a nut unit including a nut-holder casing having a flanged base portion to prevent passage of the nut-holder casing through an aperture in the relatively thin support and a resilient portion, a nut assembled with said casing, said nut presenting a flanged base portion located adjacent to the flanged base portion of the casing and an expansible portion passing through the resilient portion of the casing, and a screw for engagement with said nut to expand the expansible portion of said nut against the resilient portion of said casing, thereby to prevent contraction of said casing.

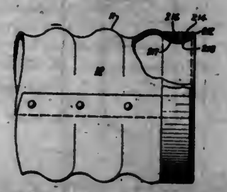
1,755,591. SEPARABLE FASTENER. MOSES F. CARR, Lexington, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Feb. 2, 1928. Serial No. 251,824. 10 Claims. (Cl. 24—214.)

7. An attaching plate for securing a separable fastener stud element to a support, said plate having an abutment



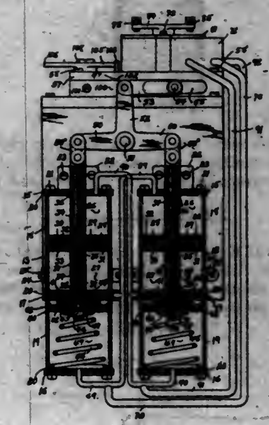
in the form of a boss at the under side of the plate adjacent to the edge and located at one side only for pressing a portion of a flexible support out of the general plane of the remainder of the flexible support.

1,755,592. BUCKLE DEVICE. MOSES F. CARR, Lexington, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1928. Serial No. 297,806. 4 Claims. (Cl. 24—69.)



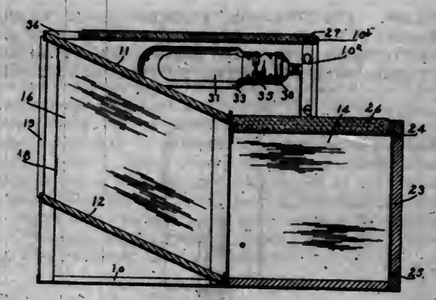
1. A buckle device comprising in combination an eyelet member in the form of a plate having a hook-receiving aperture therethrough and a projection of substantial length at one side of said aperture, a cooperating hook member comprising a single plate portion, a hook portion pivoted at one end to said plate portion and an integral extended projection provided as an intermediate part of the plate portion and located between the pivoted end of the hook and the projection of the eyelet member when the eyelet member and hook member are engaged, said extended projection of the hook plate and the projection of the eyelet plate adapted to cooperate to prevent faulty engagement of the members of the buckle device.

1,755,593. MOTOR-CYCLE VENDING SIDE CAR. WILLIAM E. CAVADAS, New York, N. Y. Filed Nov. 28, 1928. Serial No. 322,315. 7 Claims. (Cl. 208—45.)



1. In a vending vehicle, the combination with a motorcycle and a third wheel spaced therefrom, a transverse axle supported by the third wheel, longitudinally extending springs carried by the axle, a body, means to support the body from the springs including means connecting one corresponding end of each spring and a pivotal connection between said last named means and the body permitting relative movement in a transverse vertical plane.

1,755,594. METALLIC CULVERT. JACK B. CHAMBERS, Houston, Tex., assignor to California Corrugated Culvert Company, West Berkeley, Calif., a Corporation of California. Filed Mar. 2, 1927. Serial No. 171,991. 6 Claims. (Cl. 137—75.)

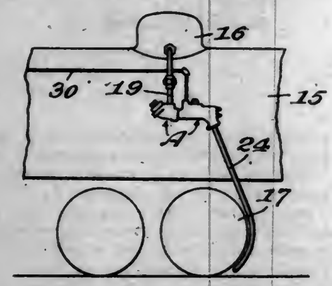


1. A sheet metal culvert unit of the corrugated type having an endless reinforcing metal bar interfitting an end corrugation only, one peripheral surface of the bar corresponding generally to the contour of the culvert corrugations.

1,755,595. GEAR SHIFTER. ALVIN M. CRAIG, New Haven, Conn., assignor to American Gear Shift Company Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 18, 1928. Serial No. 271,089. 16 Claims. (Cl. 74—58.)

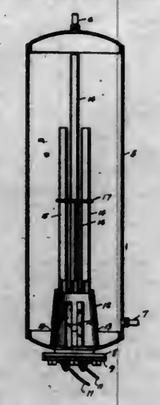
1. In a gear-shifter, the combination with the transmission-case of an automobile; of a substantially vertically-arranged cylinder positioned at the side thereof; a vertically-reciprocating piston and piston-rod in the said cylinder; a gear-shifting member reaching into the said transmission-case; and motion-converting connections extending laterally of the said transmission-case for coupling the said piston-rod with the said gear-shifting member and converting the substantially-vertical movement of the former into a movement of the latter longitudinal to the transmission-case.

1,755,596. COMPARASCOPE. IRVING FISHER, New Haven, Conn. Filed Sept. 8, 1925. Serial No. 54,372. 9 Claims. (Cl. 88—14.)



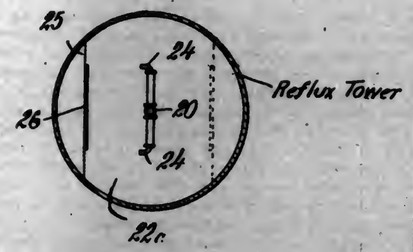
1. In a device of the character described, a cabinet comprising side walls and a pair of supports supported between said walls, one above the other, a reflecting member positioned above the upper support and facing the game, a plate of transparent material below said reflecting member and in front of the upper support, said plate being above and in front of the lower support, whereby an object on the lower support may be viewed therethrough and the image of an object on the upper support and reflected by the reflecting member will be reflected therefrom.

1,755,597. BOTTLE CAP, CONTAINER, AND OTHER REENFORCED PRODUCT. EUGENE L. GREENEWALD, Flushing, N. Y. Filed Mar. 17, 1924. Serial No. 699,846. 43 Claims. (Cl. 215—43.)



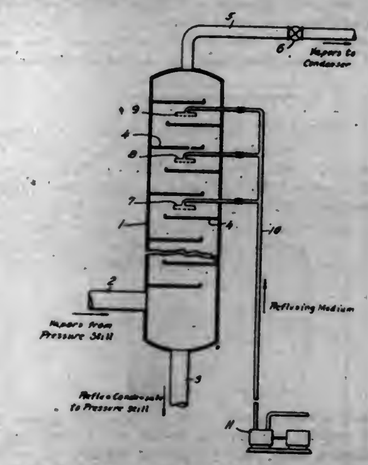
1. A tubular body having corrugations extending circumferentially thereof, and sheet material permanently united to the crests of said corrugations and reenforcing the latter.

1,755,598. TRACK SANDER. JOHN H. HANLON and JOHN W. HANLON, Somerville, Mass., assignors to Hanlon Locomotive Sander Company, Winchester, Mass., a Corporation of Massachusetts. Filed Oct. 14, 1927. Serial No. 226,242. 17 Claims. (Cl. 191—11.)



1. A track sander having a substantially straight horizontal sand passage leading laterally from the sand supply chamber or reservoir, a grid disposed adjacent the mouth of the passage, a downwardly disposed outlet leading from the outer end of said passage, and means for discharging air under pressure into said passage to cause sand to flow from said chamber or reservoir to said outlet.

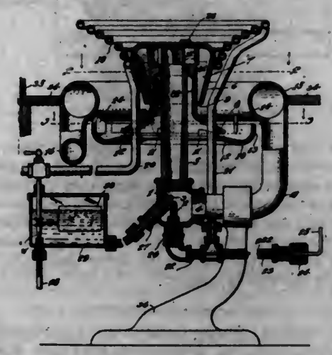
1,755,599. CIRCULATION ELEMENT FOR TANKS. ARTHUR J. HENRY, Los Angeles, Calif., assignor of one-half to Sidney J. Bush, Los Angeles, Calif. Filed Nov. 17, 1926. Serial No. 148,992. 2 Claims. (Cl. 122—13.)



1. In a water heater the combination with a tank having a heater unit therein and an outlet communicating with the top of the tank, a circulation device comprising an inverted cup disposed over said unit, there being vent openings in the wall of said cup adjacent the edge thereof, and a plurality of tubes of different lengths communicating with the chamber of said cup extending from the cup bottom and ending at different levels in said tank.

1,755,600. ART OF CRACKING HYDROCARBONS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 30, 1925. Serial No. 40,502. 3 Claims. (Cl. 196—139.)

2. An improved method of cracking hydrocarbon oils, which comprises distilling the oil under pressure in a pressure still and passing the vapors from the still upwardly through a reflux tower, maintaining free flow of the vapors through the reflux tower, withdrawing the remaining vapors from the upper end of the reflux tower, and introducing fresh oil to be supplied to the pressure still into direct contact with the vapors rising through the tower at a point near the upper end of the tower, initially supplying the fresh oil so introduced as compact streams, preventing distribution of the introduced oil through the vapors in a finely divided state near the upper end of the tower by causing the fresh oil to flow downwardly between said baffles in compact streams and the vapors to flow upwardly through the tower externally of said streams, and returning reflux condensate and unvaporized fresh oil from the reflux tower to the pressure still.



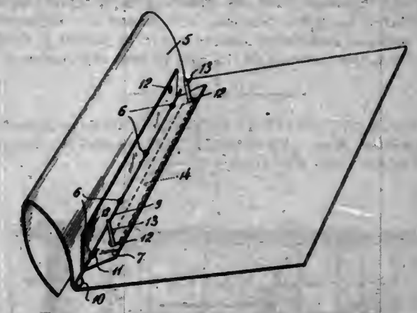
1,755,601. ART OF CRACKING HYDROCARBONS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed July 27, 1927. Serial No. 208,741. 3 Claims. (Cl. 196—140.)

1. In refluxing operations employed in conjunction with the cracking of hydrocarbon oils by distillation under

pressure, the improvement which comprises passing the vapors from the pressure distillation through a reflux condenser, introducing into the reflux condenser in direct contact with the vapors passing therethrough at a plurality of points spaced a substantial distance along the path of vapor travel a light oil which is vaporized substantially completely under the conditions prevailing in the reflux condenser, and returning condensate from the reflux condenser to the pressure distillation, whereby entrainment in the reflux condensate of light constituents suitable as components of the desired distillate is reduced.

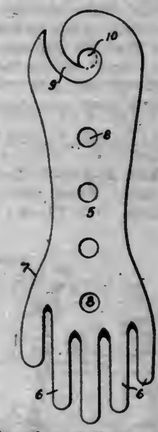
1,755,602. OIL BURNER. GUSTAF E. JACOBSON, South Orange, N. J. Filed Sept. 9, 1926. Serial No. 134,368. 14 Claims. (Cl. 158—56.)

1. An oil burner comprising means for injecting ingredients to form a combustible mixture, means for mixing said ingredients, a sloping shelf on which to burn the mixture, a drip pan at the lower edge of said shelf, a manifold extending peripherally around said drip pan, and means for obtaining auxiliary supplies of air between the shelf and drip pan and between the drip pan and manifold.



1,755,603. PROTECTIVE SUPPORT FOR USE WITH GAS STOVES. SAMUEL M. KASS, Philadelphia, Pa. Filed Sept. 20, 1927. Serial No. 220,662. 1 Claim. (Cl. 126—215.)

A safety device for supporting a pot above the gas burner and shielding the burner from any liquid boiling over from the pot, comprising an upwardly and inwardly converging hollow cone support and a catch gutter about the base of the support, the catch gutter being perforated at the bottom and the bottom of the perforation being bent downwardly and outwardly to direct the liquid to flow outwardly away from the flame.



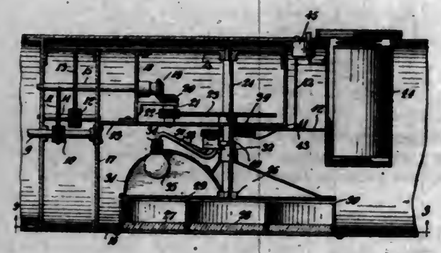
1,755,604. BINDER. FRED J. KLINE, Bayville, N. Y. Filed Sept. 22, 1927. Serial No. 221,235. 1 Claim. (Cl. 129—1.)

In a binder for papers, a folded cover, a plurality of members extending inwardly through the cover along its fold-line and forming eyelets on the inside thereof, a binder strip within said cover having a plurality of openings along its fold-line through which said eyelets extend, a pintle overlying the binder strip and extending through

the eyelets to form a hinge, means for removably securing the pintle, and means carried by said binder strip for detachably securing papers between the folds thereof.

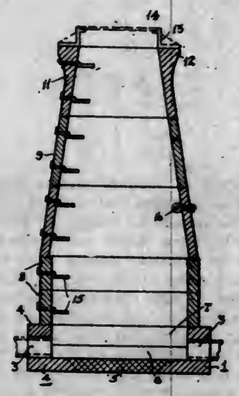
1,755,605. GLOVE DRIER. ROBERT KNOX, Toronto, Ontario, Canada. Filed June 3, 1927. Serial No. 196,189. 2 Claims. (Cl. 223—17.)

1. As an article of manufacture, a glove drier, including a substantially flat body having an enlargement provided with five finger-like extensions formed about one end thereof and having a centre line disposed symmetrically with respect to said five fingers, said body having a portion extending away from said enlargement in the opposite direction of said fingers, such extension being provided with a plurality of perforations disposed along said centre line, and provided with a slot at the side of the centre line and extending toward the fingers and to the centre line and along the centre line in a direction away from the fingers, thereby forming a shoulder to prevent disengagement from its support.



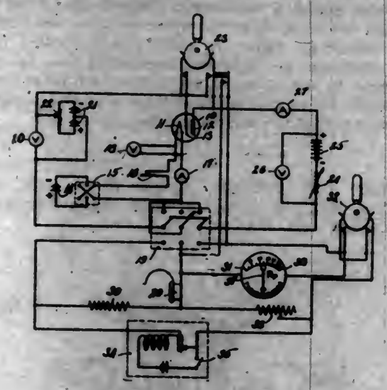
1,755,606. CLAMPING MEMBER FOR SOLE-ROUNDING MACHINES. ANTHONY LABRIE, Haverhill, Mass. Filed Feb. 12, 1929. Serial No. 339,612. 5 Claims. (Cl. 12—25.)

3. A sole clamping member for a sole rounding machine, comprising a forepart section and a heel part section, said



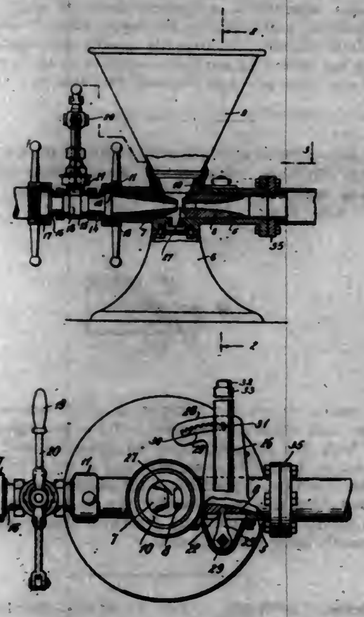
sections terminating at their rear and front ends, respectively, in transverse faces located adjacent the position of the heel breast line, said faces being arranged to extend obliquely rearward from the clamping faces thereof in approximately parallel relation, and means for supporting said sections sufficiently spaced apart to permit a tongue split from the heel end of the sole to pass therebetween.

1,755,607. DISPLAY DEVICE. PHILEMON LAROCHE, Lawrence, Mass. Filed Mar. 2, 1928. Serial No. 258,501. 4 Claims. (Cl. 40—130.)



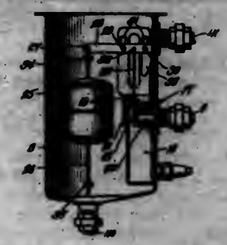
1. An aerial display device having a generally cigar shaped body and a propeller, a casing positioned in the bottom of said body and having a plurality of colored transparent discs mounted therein, means for illuminating said discs, and means connected with said propeller for rotating said illuminating means when the propeller is rotated by the wind.

1,755,608. SECTIONAL CASING. EDWARD D. LEMMERMAN, Cleveland, Ohio. Filed Apr. 10, 1926. Serial No. 101,115. 2 Claims. (Cl. 72—9.)



2. In an article of the character described, the combination of a field-cast base provided with an upstanding flange portion, said flange portion being provided with a circumferential interlocking element at its upper edge, a series of precast circular sections and precast tapered sections having circumferential interlocking elements on their respective edges and adapted to interengage with each other, the element on the lowermost of said sections being engaged with the complementary element on said flanged base, and a precast top section formed with a circumferential interlocking element on its lower edge adapted to interengage with the complementary element upon the uppermost tapered section, said top section being thickened adjacent its upper edge to provide a supporting surface for a closure.

1,755,609. TESTING VACUUM TUBES. EDWARD LIPSON, Chelsea, Mass. Filed July 30, 1925. Serial No. 47,087. 11 Claims. (Cl. 250—27.)

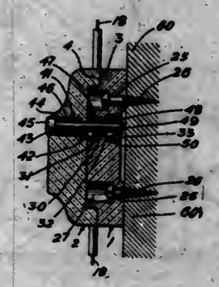


4. In a testing circuit for relays of the space current type, connections including an input circuit and an output circuit for said relay, means for supplying current to said relay, means responsive to current transmitted through said output circuit for producing an indication in terms of the internal impedance of the relay, and other means associated with said output circuit for determining the calibration of said indicating means.

1,755,610. FOAM GENERATOR. WALTER PALMER, Chester, Pa., assignor to Amdyco Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 20, 1927. Serial No. 162,340. 2 Claims. (Cl. 169—15.)

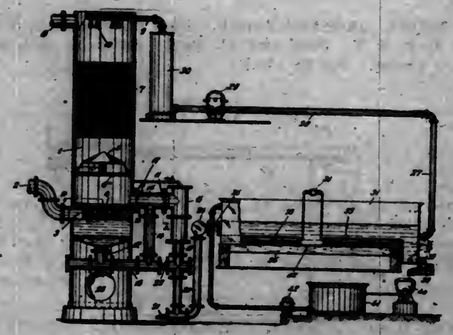
1. In an apparatus for producing fire-extinguishing foam, a hopper adapted to receive a dry material containing foam-forming and stabilizing ingredients, a housing communicating with the hopper, ejector and mixing nozzles within the housing, a lever projecting through the housing and having a finger engaging with a recess in one of the nozzles whereby the latter can be moved relatively to the other nozzle, and means for holding the lever in adjusted position and limiting the arcual extent of movement thereof including a notched sector and a pin on the lever adapted to engage the notches of the sector, the pin being removable whereby the lever can be moved to disengage the finger from the recess in the nozzle to permit removal of the latter from the housing.

1,755,611. PUMP. LAWRENCE M. PERSONS, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1926. Serial No. 91,913. 8 Claims. (Cl. 103—40.)



1. In a fluid supply system, the combination of a source of supply, a receptacle, a pump for pumping fluid from said source of supply into said receptacle, and a control associated therewith comprising a closed chamber communicating with said source of supply and said pump, and an outlet valve for said chamber adapted to be held in open position when the liquid in said receptacle reaches predetermined high and low levels.

1,755,612. AUTOMATIC HEAT-REGULATING DEVICE. MARTIN S. RUNSVOLD, San Diego, Calif. Filed Aug. 29, 1927. Serial No. 216,112. 12 Claims. (Cl. 200—51.)

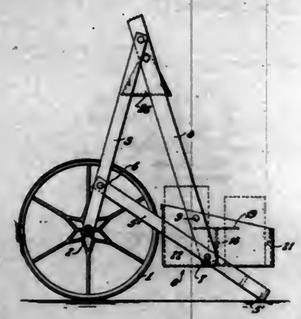


1. In an automatic heat regulating means, a heat and current conducting thermostat support means, a heat distortable thermostat, loosely secured at its ends by said support means, a contact at the one end of said support means, another contact spaced apart from said first mentioned contact, a switch support, a switch slidably mounted thereon, contacts on said switch adapted to connect said first and second mentioned contacts, means for frictionally holding said switch in closed position on said switch support, and means actuated by said thermostat for releasing said switch from engagement with said support.

1,755,613. ELECTRIC SOCKET. LAMBERT SCHMIDT, Jr., Brooklyn, N. Y., assignor to himself and Louis Freund, New York, N. Y. Filed Jan. 17, 1929. Serial No. 333,038. 9 Claims. (Cl. 173—342.)

2. An electrical socket structure comprising a base, a receptacle thereon for an electrical appliance, terminals accessible at the outer face of the base, a cover designed to accommodate said receptacle and covering and rendering said terminals inaccessible, and means positively locking the cover to the base, said locking means being accessible at the outer face of the cover but devised to prevent manipulation to cause unlocking after being placed in locking position.

1,755,614. AERATION AND GAS-PURIFICATION APPARATUS. GILBERT E. SEIL, Newark, N. J., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1925. Serial No. 21,978. 10 Claims. (Cl. 261—3.)



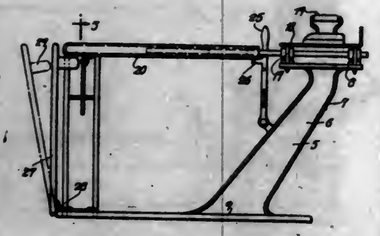
1. Means for use in aeration of liquids comprising a frame, pliable woven fabric of tubular form fixed at one end of said frame and held suspended thereby in a substantially horizontal plane so that the fabric is vibratile; an upwardly curved perforated air pipe extending substantially horizontally within said tube; means for supplying air to said tube through said pipe; means clamping the end of the fabric to said frame; gaskets interposed between said fabric and said clamping means and frame; and circumferential ribs constructed on the interior of said tubular fabric.

1,755,615. PORTABLE DISPLAY RACK. CHARLES R. SELTZER, Longmeadow, Mass. Filed Dec. 17, 1928. Serial No. 326,544. 4 Claims. (Cl. 211—126.)

2. In a structure for display purposes, a support therefor, a shelf secured to the support and having upwardly

CARNEGIE LIBRARY OF ATLANTA

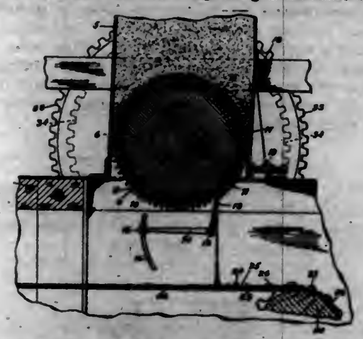
extending sides, flexible means on the shelf having oppositely extending portions and recesses in said portions,



into which containers are placed, and in engagement with the sides of the shelf for securing the same against displacement.

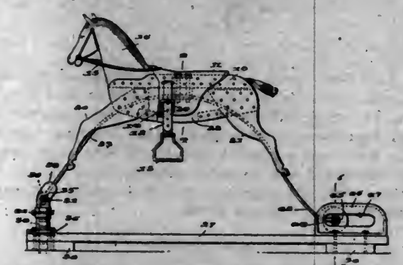
1,755,616. PROCESS OF COLORING CLAY. ROBERT T. VANDERBILT, New York, N. Y., assignor to R. T. Vanderbilt Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 189,177. 4 Claims. (Cl. 91—68.)

1. The method of coloring clay, which comprises breaking up the clay into lumps, spraying the clay in lump form with a solution of a dye to color part of the clay particles of the clay lumps, and thereafter pulverising the clay lumps and thoroughly mixing the dyed clay particles with the undyed particles to effect substantially uniform distribution of the dyed particles throughout the clay and to give a final pulverized clay product of substantially uniform appearance.



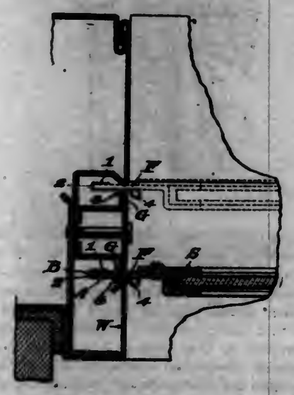
1,755,617. IRONING TABLE. JOHN WALLERSTEIN, New York, N. Y. Filed Dec. 31, 1928. Serial No. 329,331. 2 Claims. (Cl. 68—10.)

1. An ironing table comprising a standard, bearings thereon, a shaft revolvable in said bearings, a board secured to said shaft, a board holder pivoted to said standard and cam portions on said holder for engaging one end of the board to prevent free rotation thereof.



1,755,618. FEEDING AND CONVEYING APPARATUS. ERNST J. WATZL, East Cleveland, Ohio; Marie C. Watzl trustee for said Ernst J. Watzl, missing, assignor of one-half to Herman J. Trenkamp, Cleveland Heights, Ohio. Original application filed Oct. 23, 1925, Serial No. 64,330. Divided and this application filed Oct. 19, 1926. Serial No. 142,717. 4 Claims. (Cl. 221—137.)

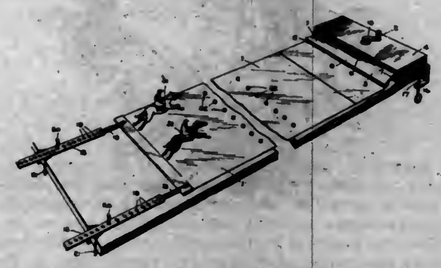
1. In apparatus of the class described, the combination of a hopper, a drum projecting into and also somewhat below said hopper for carrying a layer of moist material therefrom through its discharge end and two independently adjustable devices cooperating with said drum for controlling the measure of discharge of material into said chamber one of said devices comprising a movable section



of the hopper wall and the other device comprising a finger pivotally mounted below the hopper and adapted to be swung toward or away from said drum.

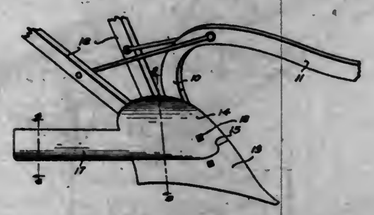
1,755,619. TOY. CHARLIE WESTERLUND, San Antonio, Tex. Filed May 6, 1929. Serial No. 360,838. 5 Claims. (Cl. 272—52.)

1. A toy comprising a body member, a curved spring, means for securing the body member to an intermediate portion of the spring, spaced supports for the ends of the spring, one end of the spring being slidably mounted in its support.



1,755,620. WEATHER STRIP FOR SLIDING METAL SASH. HERBERT E. WHITE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Nov. 27, 1928. Serial No. 322,288. 7 Claims. (Cl. 189—65.)

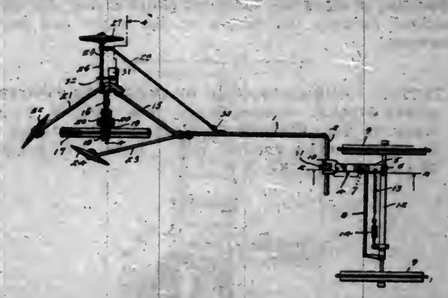
1. A weatherstrip for sliding metal sash comprising in combination with a guideway for the sash, of a metal strip doubled upon itself to provide a sash embracing portion and a guideway engaging portion, said guideway engaging portion including a rib for limiting the side movement of the sash.



CARNEGIE LIBRARY OF ATLANTA

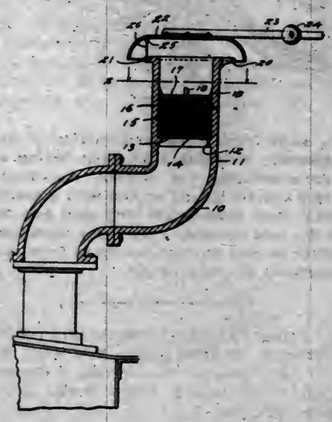
1,755,621. APPARATUS FOR PLAYING A RACE GAME. FRANCIS REGINALD BRAMAN WHITEHOUSE, Harborne, Birmingham, England. Filed Mar. 14, 1929, Serial No. 347,122, and in Great Britain Sept. 22, 1928. 6 Claims. (Cl. 273—86.)

4. Apparatus for playing a race game comprising a flexible track, an abutment near one end of the track, operating means for intermittently moving the track in an endwise direction, said operating means engaging said abutment, a support for said operating means, clamping means for fixing said support, elastic members operating upon the end of the track opposite to that where said operating means are situated, clamping means for fixing said elastic members, and playing pieces for moving on said track.



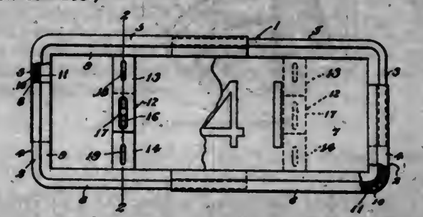
1,755,622. PLOW ATTACHMENT. BOB D. WHITLEY, Nashville, N. C. Filed Dec. 18, 1928. Serial No. 326,763. 1 Claim. (Cl. 97—115.)

A plow for cultivating hilled tobacco plants or the like, comprising a plowshare having an upper horizontal edge at a substantial elevation above its lower edge, a horizontal wing arranged above and in engagement with said upper edge, said wing having a relatively long and relatively narrow extension formed integral therewith, said extension being of substantially the same width throughout its entire length, said extension projecting rearwardly and laterally beyond the wing and having its lower edge substantially horizontal and sharpened, the arrangement of the wing being such that its lower sharpened edge is adapted to shear the top of a hill and throw earth about the plants, said wing being sufficiently narrow to pass beneath the leaves of the plants without injury to the same.



1,755,623. AUTOMATIC TRACTOR STEERING DEVICE. MARK B. WILLIAMS, Plainview, Tex. Filed Oct. 4, 1928. Serial No. 310,326. 9 Claims. (Cl. 97—49.)

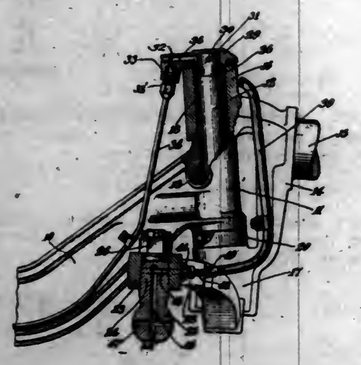
1. An automatic steering mechanism control for tractor plows comprising a main guide arm designed to be connected to a tractor steering mechanism, a furrow following element supported by and at the forward end of the



guide arm, and means carried by the arm forwardly of the element for taking control of the same at a furrow turn to swing the arm about the turn.

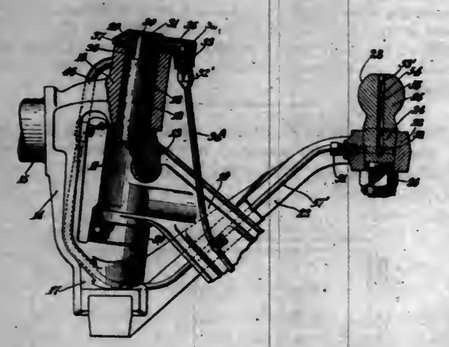
1,755,624. FLAME ARRESTER. MILES F. YOUNT, Beaumont, Tex. Filed June 14, 1928. Serial No. 285,397. 3 Claims. (Cl. 220—89.)

1. A gas vent for oil tanks comprising a hollow body having a screen therein, a pivoted hood covering the outer end of the body, means constantly urging said hood to one side of the body and a fusible member maintaining said hood in its operative position against the action of said means.



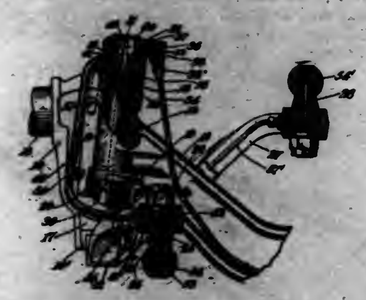
1,755,625. LICENSE-PLATE HOLDER. DALE D. BAST, Braddyville, and HARRY C. JOHNSON, Blanchard, Iowa. Filed June 28, 1928. Serial No. 287,686. 1 Claim. (Cl. 40—155.)

A device of the class described comprising a frame consisting of a pair of sections, each section including a hollow end member and upper and lower hollow members, the respective members having spaced flanges, the respective upper and lower members being telescopically en-



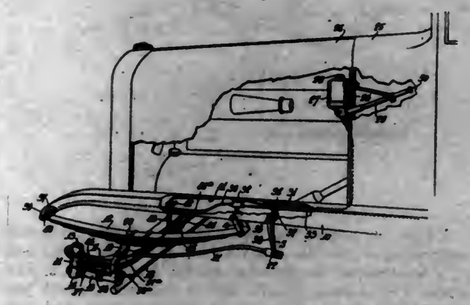
gaged, an endless coil spring confined within the upper and lower members and end members, and securing devices consisting of adjustably connected plates having their ends confined between the flanges of the upper and lower members.

1,755,626. LUBRICATION OF BEARINGS ON PIVOTED STRUCTURES. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 202,995. 18 Claims. (Cl. 184—7.)



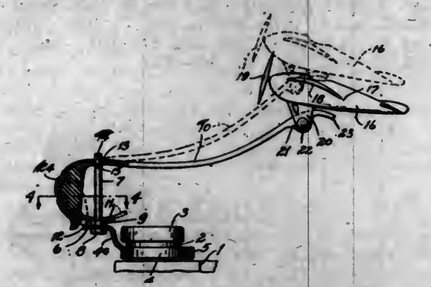
1. In a motor vehicle, the combination of an axle, a knuckle assembly including a king pin having a bearing surface accommodating the steering movement of the knuckle, said knuckle having an arm with a bearing thereon, lubricant inlet means rigid with said axle and above said king pin, said assembly including a passageway along the structure of said knuckle extending from end to end thereof exteriorly of said king pin.

1,755,627. LUBRICATION OF BEARINGS ON PIVOTED STRUCTURES. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 202,996. 10 Claims. (Cl. 184—7.)



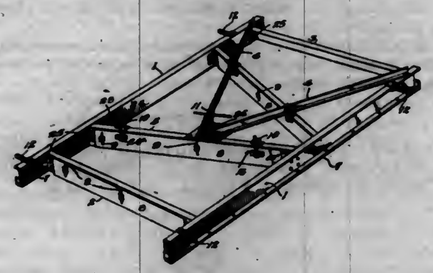
1. In a liquid distributing system, the combination of a conduit having a portion intermediate its ends at a level lower than both its inlet and its outlet, the inlet end of said conduit extending to a level higher than the outlet, the length of said inlet portion above the level of said outlet having a bore sufficiently large to permit downward passage of liquid around the air therein.

1,755,628. LUBRICATION OF BEARINGS ON PIVOTED STRUCTURES. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed July 2, 1927. Serial No. 202,997. 21 Claims. (Cl. 184—7.)



1. In a mechanical installation, the combination of a swiveled structure, a pair of bearings thereon at different levels spaced from the swivel mount and movable thereabout, a common source of lubricant at said swiveled structure and at level higher than said bearings, conduit means connecting said common source with said bearings to supply the latter from said source by gravity flow, said conduit means affording open passage from the higher bearing to the lower bearing in communication with each other at all times, said passageways being constructed and arranged to maintain substantially atmospheric pressure therein at all times.

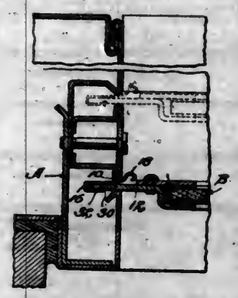
1,755,629. LIQUID-DISTRIBUTING SYSTEM. JOSEPH BIJUR, New York, N. Y., assignor to Auto Research Corporation, a Corporation of Delaware. Filed Dec. 4, 1929. Serial No. 411,521. 9 Claims. (Cl. 184—7.)



1. A centralized liquid distributing system including a reservoir, a main conduit system deriving liquid from the reservoir and having invariant high flow resistance elements at its outlets, a subsidiary distributing system beyond one of said outlets including a plurality of distributing conduits each receiving predetermined proportions of the liquid escaping from said outlet, the main conduit system including conduits of sufficiently small diameter to substantially preclude the passage of liquid around gases entrapped therein, so that they provide substantially incompressible liquid columns, the subsidiary conduit system including conduits having portions of sufficiently large bore to permit liquid flow about the gases therein, and means to apply pressure to the liquid in the main conduit system.

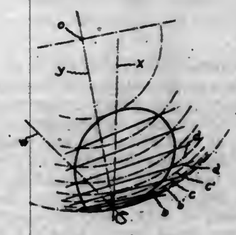
1,755,630. ORNAMENTAL DEVICE FOR AUTOMOBILE RADIATORS. FRANK J. BUDDE, St. Louis, Mo. Filed Sept. 4, 1928. Serial No. 303,704. 4 Claims. (Cl. 46—14.)

1. A device of the character described comprising, in combination with the radiator of an automobile, a support secured on the top of the radiator having a vertical post, an arm having one end reversely curved and provided with a slot receiving said post to permit said end to rest on said support, the main body of the arm having an aperture aligning with said slot and receiving the upper end of said post, members mounted on said post above and below said arm in the zone of said aperture, and an ornamental object mounted on the free end of said arm and presenting an inclined surface to the air in the forward movement of the automobile to cause the free end of said arm to raise under air pressure.



1,755,631. ROAD-SMOOTHING MACHINE. RICHARD A. BURNETT, Wilmington, N. C. Filed Sept. 21, 1927. Serial No. 221,025. 1 Claim. (Cl. 37—148.)

In a road smoothing machine, comprising longitudinally disposed members, steel runners secured on the bottom of said members, a front cross-beam extending from one runner to the other, a rear cross-beam extending from one runner to the other, an angularly disposed cross-beam in the rear of the first cross-beam, a second angularly disposed cross-beam disposed in the rear of the first angularly disposed cross-beam, steel cutting blades secured on the cross-beams, vertically disposed slots in the cross-beams, vertically disposed slots in the steel blades, bolts penerating the slots to adjustably hold the blades with relation to the cross-beams, lugs secured on the upper surface of the cross-beams, bolts secured to the blades and penetrating the lugs and a nut on the top of each of the lugs threadably engaging the bolts.

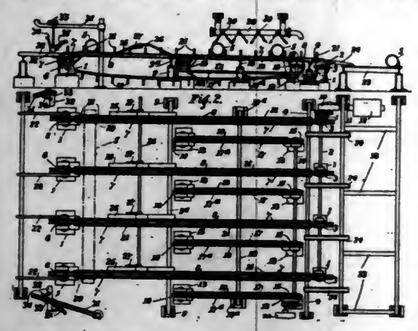


1,755,632. WEATHER STRIP FOR METAL SASH. JOHN OSCAR CARLSON, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 15, 1929. Serial No. 363,171. 5 Claims. (Cl. 189—65.)

1. A weatherstrip having a U-shaped formation adapted to embrace the outer marginal portion of a sash stile, and an inwardly directed projection on a wall of said U-shaped formation adapted to be received within a recess in the sash stile to interlock the strip with the sash, the said

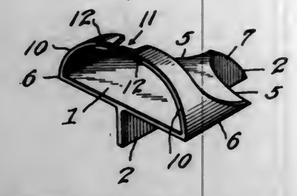
sash stile being continuously straight transversely within the limits of the inner and outer side edges of the weatherstrip.

1,755,633. SCREW PROPELLER. ERIK AUGUST DEHMER, Stockholm, Sweden, assignor to Capulator-Aktiebolaget, Stockholm, Sweden, a Corporation of Sweden. Filed July 24, 1929, Serial No. 380,633, and in Sweden and Germany Aug. 1, 1928. 1 Claim. (Cl. 170—159.)



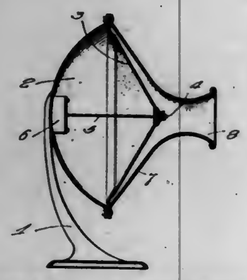
Improvement in screw propellers having blades of common contour provided at the leading edge with a cutting cam and a pressure surface coinciding with an element of a sphere, such pressure surface being shaped in such a manner; that a base line of a cross section at the blade root coinciding with the great circle plane of the sphere forms an angle to the base lines of cross sections taken at a distance from and parallel with the great circle plane, such angle being greater the farther the section planes are from the plane of the great circle; and that a plane through the axis of the propeller shaft and the middle of the blade root base line counted in the direction of rotation of the blade forms obtuse angles to said blade root base and to the base lines of the sections taken at a distance from and parallel with the great circle plane such angles being smaller the farther said base lines are from the blade root base.

1,755,634. LINING OF IRON AND STEEL PIPES, TUBES, AND OTHER HOLLOW BODIES. NORMAN STRAFFORD DEWEY, Airdrie, Scotland, assignor to Stewarts & Lloyds Limited, Glasgow, Scotland. Filed June 6, 1927, Serial No. 196,982, and in Great Britain Jan. 1, 1927. 24 Claims. (Cl. 91—42.)



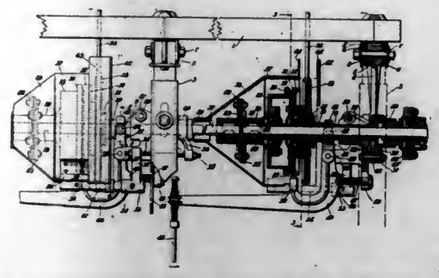
1. Lining iron and steel pipes with a bituminous substance by charging the pipes with the substance in liquid condition, translating the charged pipes bodily and by

mechanical action, and, during such translation and following their charging, spinning them about their own axes



at a speed materially in excess of their speed of translation to distribute the bituminous substance by centrifugal force uniformly over their interior surfaces.

1,755,635. GUN SIGHT. PAUL R. DINDINGER, Florence, Ariz. Filed Apr. 3, 1928. Serial No. 267,055. 2 Claims. (Cl. 33—47.)

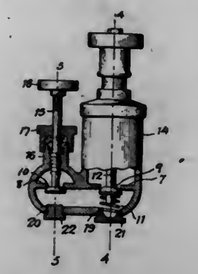


1. As an article of manufacture, a dark colored gun sight formed in a single unit comprising a base plate, arms extending upwardly and inwardly over the base plate to provide a restricted sight opening between the opposing terminal ends of said arms, the oppositely disposed terminal ends of said arms diverging rearwardly in a plane parallel to the base plate, and a coating of light reflecting substance arranged on the forward face of said arms on opposite sides of said restricted opening, and means whereby the base plate may be attached to a gun barrel.

1,755,636. LOUD-SPEAKER. WILLIAM DUBILIER, New Rochelle, N. Y., assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1927. Serial No. 221,277. 7 Claims. (Cl. 181—31.)

1. A loud speaker comprising a supporting member, a housing carried by said supporting member, an actuating device positioned within said housing, a cone shaped diaphragm actuated by said actuating device and a horn carried by said housing and conforming to the shape of said cone shaped diaphragm for providing a chamber between the exterior surface of said cone shaped diaphragm and the interior wall of said horn.

1,755,637. POWER-TRANSMITTER SUPPORT. GEORGE M. EAMES, Bridgeport, Conn., and IRVING F. WEBB, Elizabeth, N. J., assignors to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Original application filed May 27, 1925, Serial No. 33,261, and in Great Britain Aug. 11, 1925. Divided and this application filed Aug. 27, 1928. Serial No. 302,208. 7 Claims. (Cl. 308—29.)

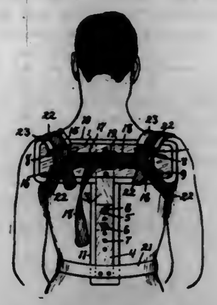


1. A power-table having table-top supporting standards, a depending hanger below the table-top, a universal support for the upper end of the hanger, a bearing-sleeve carried by the hanger, a power-transmitter sustained by said bearing-sleeve, a bracket-member secured upon one side of the hanger having a hub embracing said bearing-sleeve, a complemental bracket-member secured upon the opposite side of said hanger, and means carried by said bracket-members for adjusting the hanger upon its universal support.

1,755,638. MANUFACTURE OF WATERPROOF CEMENT. JOHN M. EVANS, Berkeley, Calif., assignor of one-half to George W. Wallace, San Francisco, Calif. Filed June 20, 1928. Serial No. 287,036. 5 Claims. (Cl. 106—25.)

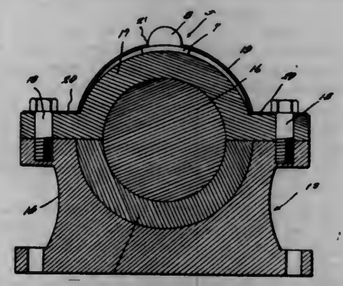
3. A composition of matter, consisting of cement mixed with filtering clay impregnated with adsorbed petroleum and asphaltic bodies.

1,755,639. PRESSURE-REGULATING VALVE. DAVID B. FAWCETT, Washington, D. C. Filed Aug. 2, 1928. Serial No. 297,081. 9 Claims. (Cl. 50—11.)



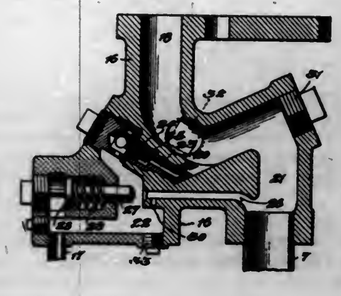
1. A valve of the character described comprising an elongated valve casing having a central chamber and intake and discharge ends, a ported partition within the casing chamber, an automatic pressure controlled valve governing the flow of fluid through said ported partition between said ends of the casing, a second ported partition within the casing, and a by-pass valve controlling the flow of fluid through said second ported partition between said ends of the casing, said valves having opening and closing movements in the same directions and governing the flow of fluid in the same direction through the respective partitions from end to end of the casing.

1,755,640. PROCESS FOR DYEING CELLULOSE ESTERS OR CELLULOSE ETHERS. ERICH FISCHER, Hochst-on-the-Main, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Sept. 9, 1926, Serial No. 134,582, and in Germany Sept. 17, 1925. 6 Claims. (Cl. 8—5.)



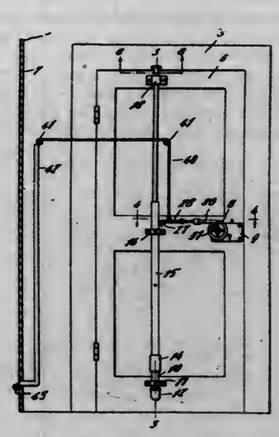
1. The process which comprises dyeing a compound of the group consisting of cellulose esters and ethers with a disazo dyestuff containing not more than one naphthalene nucleus and not more than one sulfo group, and at least one amino-group, which may be substituted, obtainable by combining two molecules of a diazo compound with a hydroxy compound of the aromatic series capable of being coupled twice.

1,755,641. SURGICAL SPLINT. ROY D. FOULKE, Warsaw, Ind., assignor to Winifred De Puy Leiter. Filed June 8, 1928. Serial No. 283,843. 5 Claims. (Cl. 128—83.)



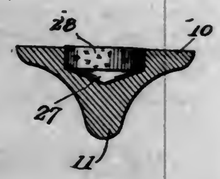
1. In a clavicle splint, a T-frame formed of a horizontally disposed non-flexible plate and a flexible vertically disposed prop in connection therewith consisting of overlapping plates secured together and being longitudinally adjustable relative to each other; an abdominal belt secured to the lower end of said prop, said horizontal plate having in each end portion thereof parallel slots that slant upwardly toward the vertical center line of said plate; an anchor strap extending through the slots in each end portion of said plate, the ends of said strap overlapping each other and being provided with corresponding buckles; an adjustable leash-strap connecting said anchor straps, each end of said leash being provided with a loop that encompasses the overlapping ends of the corresponding anchor straps; and a padded axillary strap in connection with each anchor strap, the ends of which axillary strap have engagement with the buckles of the corresponding anchor strap respectively.

1,755,642. WARNING FUSE. LARRY D. GANNON, Joliet, Mont. Filed May 1, 1929. Serial No. 359,635. 1 Claim. (Cl. 116—106.)



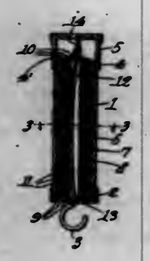
In a structure of the class described, in combination, a shaft bearing, and a warning fuse placed upon and impinging against a portion of said bearing, said fuse embodying self contained means for providing a warning signal observed through the medium of the senses of smell and sight.

1,755,643. TRACK-SANDING APPARATUS. JOHN GAPP, Scranton, Pa. Filed Apr. 1, 1929. Serial No. 351,579. 4 Claims. (Cl. 291—42.)



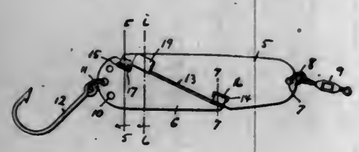
1. Track sanding apparatus, comprising a sand trap having an air chamber and a sand chamber, an air jet passage between said chambers, a check valve normally closing said passage, a clean out passage between said chambers, a piston valve to close said clean out passage but normally held open, and an air valve to control the supply of air to said air chamber.

1,755,644. THEFT ALARM. HENRY GARVEY, Jr., St. Francisville, Ill. Filed Jan. 3, 1930. Serial No. 418,299. 6 Claims. (Cl. 116—88.)



1. An apparatus of the class described comprising a barrel adapted to receive a cartridge in the upper end thereof, a union engaged with the barrel, a tube detachably engaged with the union, a hammer bar slidable in the tube, a striker in the bottom of the tube adapted to be impinged against by the hammer for igniting the cartridge, and means for holding the hammer raised.

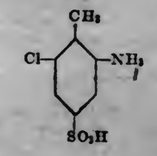
1,755,645. BRAKE SHOE. JOHN HECTOR GRAHAM, New York, N. Y. Filed Aug. 5, 1927. Serial No. 211,270. 4 Claims. (Cl. 188—250.)



1. In a friction brake, an internal expansible ring comprising a pair of brake members arranged in opposed relation, and plugs of natural cork set in the peripheral surface of said members to present a yielding frictional grip engageable with the co-operating element of the brake.

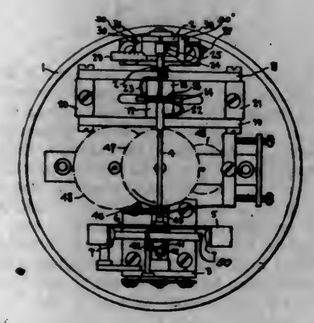
1,755,646. SPIT. ELLIOTT N. HALSTEAD, Princeton, W. Va. Filed Apr. 4, 1929. Serial No. 352,470. 2 Claims. (Cl. 53—5.)

1. A spit including telescopically connected members, co-operating means on the members for limiting their relative sliding movement, a pointed head upon one of the members, the said members being adapted to collapse for housing in one of the members, and a cap detachably engaging one of the members for holding all of the members collapsed and for engaging and housing the pointed head.



1,755,647. TROLLING SPOON. GEORGE F. HARVEY, Victoria, British Columbia, Canada. Filed Oct. 31, 1928. Serial No. 316,310. 2 Claims. (Cl. 43—45.)

1. A trolling spoon comprising a plurality of sections of sheet material disposed in edge to edge relation and with their abutting edges inclined from the longitudinal center line and including a forward section and a tail section and means hingedly connecting said inclined edges of the sections at predetermined points to cause the tail sections to normally lie perpendicularly by gravitation.



1,755,648. 6-CHLORO-2-AMINO-1-METHYLBENZENE-4-SULPHONIC ACID. FRANZ HENLE and BARTHOLOMÄUS VOSSEN, Hoechst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Aug. 24, 1925, Serial No. 52,216, and in Germany Sept. 1, 1924. Divided and this application filed June 6, 1928. Serial No. 283,453. 1 Claim. (Cl. 260—129.)

As a new product, the 6-chloro-2-amino-1-methylbenzene-4-sulphonic acid of the formula:

being a whitish gray powder, sparingly soluble in cold water, readily soluble in hot water and soluble in concentrated sulfuric acid to a yellowish solution.

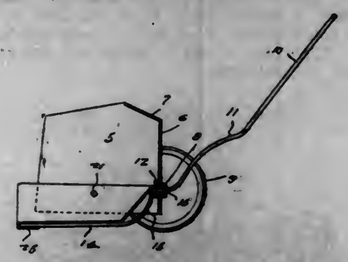
1,755,649. ELECTRICALLY-DRIVEN CLOCK. FRANK HOLDEN, Aldwych, London, England. Filed Oct. 19, 1927, Serial No. 227,263, and in Switzerland Oct. 26, 1926. 4 Claims. (Cl. 58—28.)

1. In an electric clock having an oscillating member carrying a coil, a magnetic field through which the coil passes, an electric circuit including said coil, in combination, a contact connected to said circuit carried by the oscillating member a second contact also connected to said circuit normally separated from the first contact and arranged to be engaged by the first contact to complete said circuit when the coil is in the magnetic field and gravity controlled means horizontally pivoted and connected to said second contact for returning said contact to its normal position after displacement.

1,755,650. CONNECTING ROD. OLIVER T. ISAACSON, St. Cloud, Minn. Filed Feb. 15, 1928. Serial No. 254,503. 3 Claims. (Cl. 74—71.)

1. A connecting rod comprising a substantially straight connecting rod proper having at one end a bearing section, a second section connected with and together with the first mentioned section forming a complete bearing, a counterweight carried by the second mentioned section and extending in alinement with the rod proper and spaced therefrom by the bearing, said counterweight having a

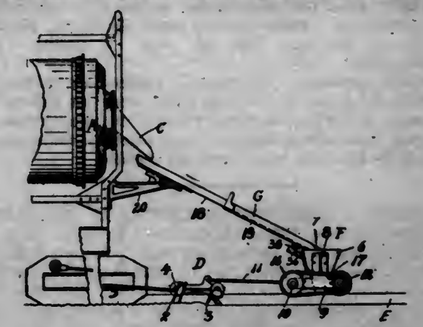
threaded socket in alinement with the rod proper, a threaded weight movable in said socket toward and away



from the bearing, and a screw engaging the side of the threaded weight and adapted to lock the weight at an adjusted position.

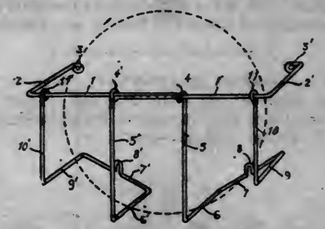
1,755,651. HAND GARDEN FORK. HARRY T. KINGSBURY, Keene, N. H. Filed Dec. 8, 1928. Serial No. 324,697. 2 Claims. (Cl. 294—49.)

1. A sheet metal hand garden fork comprising a shank, a handle, and tines, all of which are formed integral with each other, the metal of the shank being bent so that the tines extend into the shank and reinforce the same, said shank being bent to provide a flange extending at an angle to the plane of the shank along its outer edge and extending into the handle and outer wall of the outer tines.



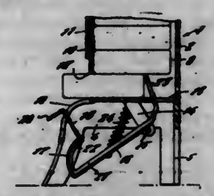
1,755,652. COMBINATION RAKE AND SNOW SHOVEL. JAMES P. KINSLEY, Kirkwood, Mo., assignor of one-half to Lewis E. Agnew, jr., Kirkwood, Mo. Filed Dec. 17, 1928. Serial No. 326,579. 5 Claims. (Cl. 37—121.)

1. A device of the class described including a hood formed with side walls, a rear wall, and a top wall; an axle bar across the rear wall, wheels journaled on the ends of the axle bar, a handle connected with the axle bar, tines connected with the rear wall and the axle bar, and curving downwardly and forwardly below the bottom edges of the side walls.



1,755,653. SUBGRADE PREPARING, CONCRETE DISTRIBUTING, AND FINISHING MACHINE. PHILIP A. KOEHRING, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed July 21, 1928. Serial No. 294,553. 17 Claims. (Cl. 94—46.)

1. In road building apparatus of the class described, the combination with a mixing plant, of instrumentalities for depositing and spreading concrete on a subgrade, and means for finishing the surface of the subgrade and interposed between the mixing plant and the spreading instrumentali-



ties, said instrumentalities and means being simultaneously operable to perform their respective functions while continuously moving along the roadbed.

1,755,654. HOLDER FOR PANS AND COVERS. RUDOLPH A. KOTTEK, Detroit, Mich. Filed Feb. 25, 1929. Serial No. 342,404. 9 Claims. (Cl. 211—41.)

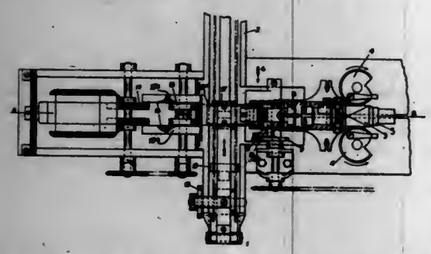
1. A rack comprising a pair of complementary wire members, each comprising two spaced vertical members forming the front of the rack and each further comprising a U-shaped connection between the lower ends of the vertical members projecting rearwardly therefrom, and forming the rack bottom.

1,755,655. VENDING MACHINE. HERMAN H. LANGENFELD, Earling, Iowa. Filed Jan. 4, 1929. Serial No. 330,177. 3 Claims. (Cl. 312—63.)

1. In a vending machine, an article holding cabinet provided with a discharge opening in the lower front side thereof, the bottom of the cabinet being formed with a slot in the rear portion thereof, a vertically swinging member pivotally supported adjacent its rear end beneath the bottom of the cabinet, an ejector finger extending upwardly from the pivoted rear end of the vertically swinging member through said slot for disposition rearwardly of the lowermost article in the cabinet, a vertically disposed strip extending upwardly from the forward end of the pivoted member and normally covering the discharge opening, and a forwardly projecting finger engaging lip formed on the upper edge of said strip for actuating the vertically swinging member to simultaneously move the strip to an inoperative position, and cause the ejector to force the lowermost passage forwardly through the discharge opening.

1,755,656. PROCESS OF PREPARING DIHYDROXYACETONE. WILHELM LENZ, Biebrich-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Apr. 20, 1927, Serial No. 185,360, and in Germany Apr. 26, 1926. 4 Claims. (Cl. 260—134.)

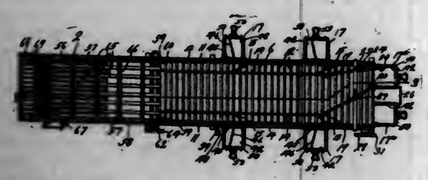
1. The process of converting glycerine into dihydroxyacetone by means of bacteria, which comprises cultivating strongly acidifying bacteria on such nutrient media as contain extractive-substances from vegetable materials to which the glycerine to be converted is added.



1,755,657. CAUSTIC-SODA SOLUTION OF CELLULOSE. OTTO LEUCHS, Elberfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed July 18, 1927, Serial No. 206,803, and in Germany July 30, 1926. 1 Claim. (Cl. 260—10.)

As a new composition, a solution in which the solvent is a solution of about 10% caustic soda and in which the solute is re-precipitable cellulose.

1,755,658. TEXTILE PAINT. LEONARD CHESTER LORDLY, Elmhurst, N. Y. Filed Oct. 15, 1925. Serial No. 62,648. 3 Claims. (Cl. 8—6.)

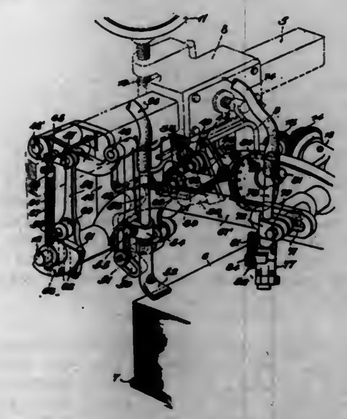


1. A paint for forming designs on textiles consisting of a pure gum tragacanth base with sodium benzoate, acetate of aluminum, and an aniline dye thoroughly and intimately incorporated therein to form a part thereof.

1,755,659. PACKING MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Sept. 8, 1927, Serial No. 218,346, and in Great Britain Sept. 8, 1926. 6 Claims. (Cl. 93—2.)

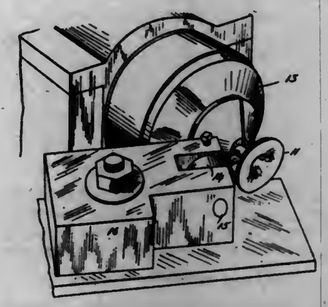
1. In apparatus of the class described, means for conveying one article of a series into a predetermined position, a second conveying means having a path of movement adjacent to and in advance of said position, means for moving a slide of a slide and shell carton into the path of movement of said second conveying means, means for moving the succeeding article of the series to engage and move the first article to position on the slide, and movable means for momentarily retaining the slide in position to receive the article.

1,755,660. ASSORTING TABLE DEFLECTING MEANS. E. LUSTER A. MORROW, Sunnyside, Wash. Filed June 4, 1926. Serial No. 113,685. 2 Claims. (Cl. 198—30.)



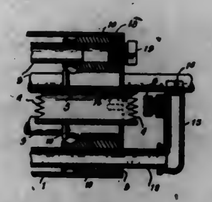
1. The combination with a conveyor, of hinged deflecting members laterally movable above said conveyor, a link connection between said hinged members, a horizontally disposed guide bar above the conveyor, brackets carried by the hinged members and slidably mounted on the guide bar and arching the upper side thereof, said hinged members forming means whereby articles may be discharged into either of two bag holders, and means carried by the guide bar and cooperating with the brackets for holding the deflecting members in position to discharge into either of said bag holders.

1,755,661. DEEP-WELL PUMP. HERBERT PATERSON, Long Beach, Calif. Filed Apr. 16, 1929. Serial No. 355,471. 7 Claims. (Cl. 103—46.)



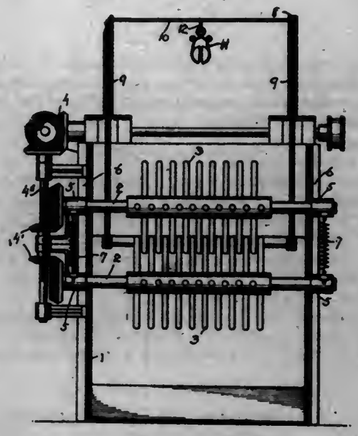
1. In a device of the character described, a casing, fluid conduits associated with the casing, a plug in the casing, inlet ports formed on the casing; ports on the plug communicating with the interior of the casing and with the said inlet ports, a hollow piston carried by the plug, valve casings on the opposite ends of the piston, valves in the casing, and means for forcing fluid through said fluid conduits for operating the piston.

1,755,662. SHEET-FEEDING MECHANISM. ALFRED E. PETERSEN, Ridgefield Park, N. J., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1927. Serial No. 159,684. 13 Claims. (Cl. 271—20.)



1. The combination with a device adapted to separate a sheet from a pile, of means movable at intervals toward and from the pile and past which said device travels, said means being adapted to deflect back onto the pile any sheet or sheets that may be separated therefrom with said first named sheet.

1,755,663. METHOD OF TRUING VALVE FORGINGS AND THE LIKE. WILLIAM S. POETZINGER, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Mar. 21, 1927. Serial No. 177,174. 8 Claims. (Cl. 153—32.)



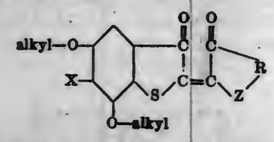
1. The method of truing valve forgings which consists in rotating the valve while hot in a predetermined fixed plane and engaging the head with a truing element arranged in fixed relation to the axis of rotation of the valve, to displace by pressure certain portions of the head to dispose the same uniformly with respect to the stem of the valve.

1,755,664. HYDROCARBON TORCH. WILBERT L. RICHARDSON, Louisville, Ky., assignor to Reynolds Portable Furnace Co., Louisville, Ky., a Corporation of Kentucky. Filed Mar. 13, 1929. Serial No. 346,613. 8 Claims. (Cl. 158—79.)

1. A hydrocarbon burner comprising a plurality of loops grouped about a central line, hollow castings connecting the loops in series to form a preheating coil or generator, and having clean out openings in line with the element of the loops coupled thereto, a casing enclosing the coil, connecting means between the casing and coil, a plate closing the rear end of the casing and having openings in register with the cleanout openings of the hollow castings, a tube supported centrally of the plate and projecting beyond opposite sides thereof and formed at opposite ends with a series of points, said plate having openings exterior to the tube for admission of air, and plugs closing the clean out openings of the hollow castings and connecting them to the plate disposed at the rear of the casing.

1,755,665. MACHINE FOR PLUCKING POULTRY. RALPH W. RICHARDS, Atchison, Kans., assignor to Anna Josephine Richards, Atchison, Kans. Filed Feb. 7, 1929. Serial No. 338,309. 6 Claims. (Cl. 17—11.)

1. In a machine for plucking feathers from poultry, a rotary shaft carrying longitudinal series of radial elastic rubber fingers to form a brush, said fingers being each of elongated form, of circular cross section, and having rounded outer ends.

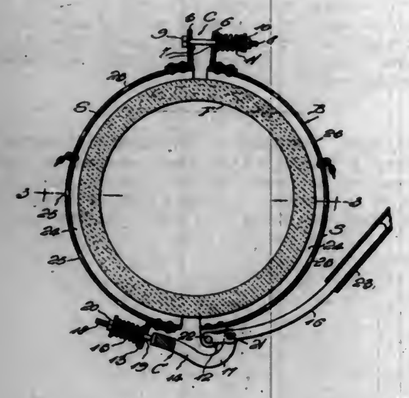


1,755,666. METHOD OF NESTING CAN BODIES. NORBERT J. SCHAAL, Seattle, Wash., assignor, by mesne assignments, to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 30, 1927. Serial No. 179,598. 8 Claims. (Cl. 113—120.)

1. The method of nesting can bodies of the same size having a side seam permanently joining the edges thereof which consists in similarly curving the side wall of the can bodies inwardly from one end thereof to a point adjacent the other end thereof to a gradually decreasing extent, whereby said bodies are tapered and adapted to be fitted telescopically one within another.

1,755,667. VAT DYESTUFF. KARL SCHIRMACHER and KARL EISHOLD, Hochst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed May 22, 1928, Serial No. 279,846, and in Germany May 30, 1927. 4 Claims. (Cl. 260—53.)

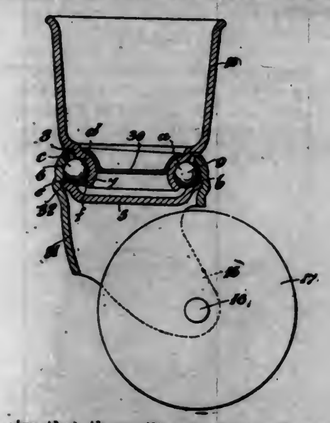
1. As new products, the vat dyestuffs of the following general formula:



wherein X stands for hydrogen or halogen, Z for sulfur or the NH-group and R for an aromatic residue of the benzene-, naphthalene- or anthracene series which may be substituted in any manner.

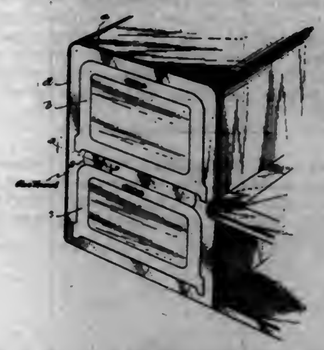
1,755,668. PROCESS FOR REFINING THE RAW OIL OF TURPENTINE. FRIEDRICH SCHLOSSER, Hochst-on-the-Main, and MAX PAQUIN, Koenigstein in Taunus, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Aug. 31, 1925, Serial No. 53,742, and in Germany Sept. 12, 1924. 4 Claims. (Cl. 260—167.)

1. Process for refining the residue of oil of turpentine produced in the manufacture of synthetic camphor which comprises treating the residue with a strong mineral acid.



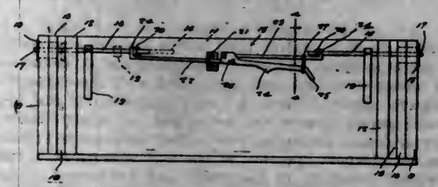
1,755,669. INGOT-FEEDER CLAMP AND SHOULDER SUPPORT. ADAM LEROY SCHWAB, New Philadelphia, Ohio. Filed Apr. 13, 1929. Serial No. 354,890. 9 Claims. (Cl. 22—1.)

1. An ingot feeder clamp comprising a transversely split band consisting of separate sections and circumferentially yieldable connecting means between said sections, and quick releasable clamping means for detachably connecting the ends of the band with each other, said connecting means acting also as hinge means to allow outward swinging of said sections upon disconnection of the band ends by release of said clamping means.



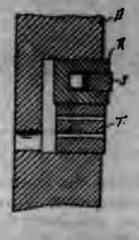
1,755,670. FURNITURE AND LIKE CASTER. HENRY SELBY HELE-SHAW and THOMAS EDWARD BEACHAM, London, England. Filed Mar. 12, 1925, Serial No. 14,907, and in Great Britain Aug. 27, 1924. 6 Claims. (Cl. 16—21.)

1. A roller caster having a ball bearing on its vertical axis, a fixing member carrying one of the races of the ball bearing, a swiveling member carrying the roller and the other race of the ball bearing, each race of the ball bearing consisting of a two-sided groove, the two races being



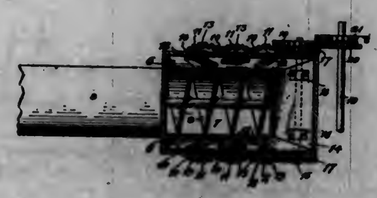
of such a size that they will not engage all the balls at four points, those immediately above the roller being engaged at two points and those at diametrically opposite points in the race being engaged at four points.

1,755,671. STOVE CONSTRUCTION. ALVIN G. SHERMAN, Grosse Pointe, Mich., assignor to The Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1927. Serial No. 166,382. 3 Claims. (Cl. 126—39.)



1. In a stove, a glass enamel front frame having a center bar with an offset portion dividing the oven and broiler chamber, a removable threshold facing strip arranged fit nicely in said offset portion flush with the end portions of said center bar so that the facing strip and the end portions of the center bar are in the same plane.

1,755,672. END GATE AND RETAINING MEANS THEREFOR. BERT A. SMITH, Fayette, Iowa. Filed Apr. 30, 1929. Serial No. 359,284. 1 Claim. (Cl. 296—52.)

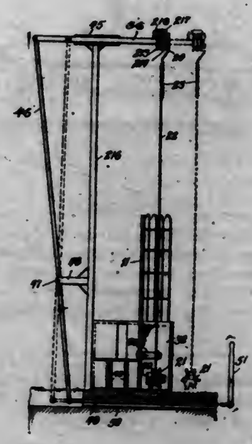


In a structure of the class described, in combination, an end gate provided adjacent its opposite ends with vertical cleats having horizontal holes formed therein, clamping rods slidable and rotatable in said holes, the rods being provided at their outer ends with T-heads and adjacent their inner ends with stop collars, a handle mounted on the intermediate portion of each rod, a bracket on the intermediate portion of the end gate, a link slidably mounted on said bracket, a lever pivotally connected to said link, a second link pivotally connected to said lever, retaining means cooperable with the lever and the last named link, the outer end portions of said links being directed laterally and formed with openings for passage of the collar equipped ends of said rods.

1,755,673. PISTON RING. DEAN M. SOLENBERGER, Kansas City, Mo., assignor to Simplex Piston Ring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 1, 1926. Serial No. 91,600. 7 Claims. (Cl. 74—109.)

1. The combination with a cylinder and a piston loosely fitting the same provided with a ring groove, of a ring in said groove and resilient axially expansible means for developing a predetermined friction between said ring and a wall of the groove sufficient to retard transverse movement of the piston under lateral thrust due to connecting rod angularity to substantially eliminate audible contact with the cylinder wall.

1,755,674. AGITATING MEANS FOR HOPPERS. CHARLES TAURIAINEN, Houghton, Mich. Filed Apr. 29, 1929. Serial No. 359,151. 1 Claim. (Cl. 221—120.)

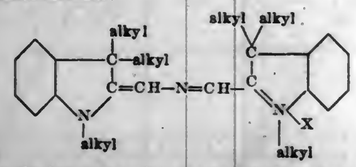


In combination with a hopper having side walls provided with opposed downwardly converging portions; short inclined shafts passing rotatably through said opposed wall portions at horisontally spaced points, inclined agitators secured to the inner ends of said shafts and lying against the inner sides of said wall portions, inclined spur gears secured to the outer ends of said shafts and lying against the outer sides of said wall portions, two of said inclined gears being disposed near one end of said hopper and all of said inclined gears at each side of the hopper being in mesh with each other, a transverse horisontal drive shaft mounted at said one end of the hopper, and vertical spur gears secured to said horisontal shaft and meshing with said two inclined gears.

1,755,675. BILLIARD TABLE. JOHN TAYLOR, Exeter, N. H. Filed Mar. 11, 1929. Serial No. 346,681. 1 Claim. (Cl. 273—128.)

A game of the class described comprising a table having side walls extending upwardly above the surface of the table whereby to retain a ball upon the surface thereof, a plurality of pockets formed in the surface of the table adjacent one end thereof, a bell positioned upon the surface of the table in advance of said pockets and adapted to be struck by the ball in a manner to deflect same in its travel toward the pockets and a guard extending from one side of the bell to prevent the striking of the ball upon the approach of the ball at the side provided with said guard.

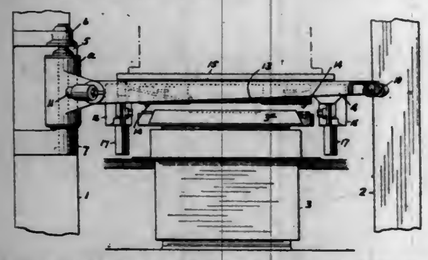
1,755,676. DOG-RACING APPARATUS. WILLIAM R. TWIFORD and GEORGE OEHLER, Miami, Fla. Filed Mar. 26, 1927. Serial No. 178,736. 7 Claims. (Cl. 272—4.)



4. An apparatus of the class described, including an overhead tramway cable, a lure suspended from said cable, movable means constituting a barrier and adapted to be disposed in the path of travel of the lure, and means to deflect said cable so that the lure will clear the barrier and pass the same without interception.

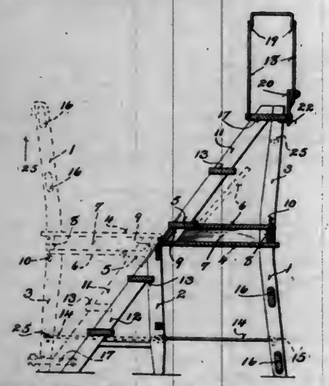
1,755,677. PROCESS OF MANUFACTURING BASIC CALCIUM HYPOCHLORITES. SABURO URANO, Takatacho, near Tokyo, and SEICHIRO IMAI, Okucho, near Tokyo, Japan. Filed Mar. 15, 1926. Serial No. 94,941. 1 Claim. (Cl. 23—86.)

A process for making stable bleaching powder, which consists in evaporating the solution of the bleaching powder under vacuum at temperature 40 degrees C., crystallizing out dibasic calcium hypochloride, owing to the combination of calcium hydroxide, with calcium hypochlorite leaving calcium chloride in the solution.



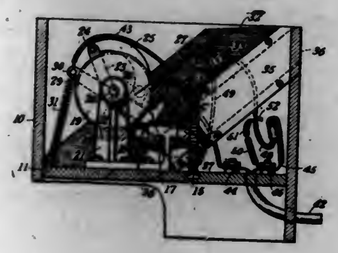
1,755,678. DYESTUFFS DERIVED FROM INDOLINE BASES AND PROCESS FOR PREPARING SAME. OTTMAR WAHL, Leverkusen, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1927, Serial No. 186,829, and in Germany May 3, 1926. 5 Claims. (Cl. 260—47.)

3. As new products dyestuffs corresponding probably to the general formula:



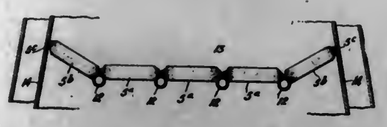
wherein the benzene nuclei may be substituted or not and X stands for an organic or inorganic acid radicle, which are in a dry state yellow to orange-red crystalline powders, soluble in water with light yellow to organge-red color, and which dye natural and artificial silk and cotton when using tannin or other mordants in beautiful greenish-yellow to reddish-yellow shades of good fastness to light.

1,755,679. MOLDING MACHINE. FRANK R. WALLACE, Philadelphia, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1928. Serial No. 247,271. 5 Claims. (Cl. 22—34.)



1. In a molding machine a standard, a swinging hollow frame, hinge means between the standard and frame constructed and arranged to permit horizontal turning and oppose vertical sliding movement, and a second frame seated on the swinging frame and disconnected therewith for freedom of upward motion.

1,755,680. COMBINATION CHAIR AND LADDER. ADOLF WURST, St. Francis, Wis. Filed Apr. 27, 1927. Serial No. 186,928. 1 Claim. (Cl. 228—2.)

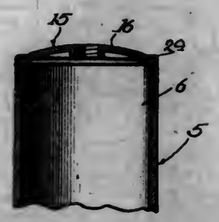


In a device of the class described, the combination of a supporting structure, a pail receiving platform carried thereby, a hook-like member for the reception of the bail of a pail, said member being pivoted to said platform, a locking link pivoted to said member and having an elongated slot terminating in an offset locking portion, and a pin carried by said platform and slidably received in said slot, said pin locking the said link when said pin is located in the offset portion, whereby said hook-like member is temporarily locked in upright position.

1,755,681. PREPAYMENT METER FOR RADIO APPARATUS. GEORGE J. ZISCH, Newark, N. J., assignor to Peter A. Sena and Robert A. Ebert, Newark, N. J. Filed Jan. 18, 1929. Serial No. 333,257. 5 Claims. (Cl. 194—6.)

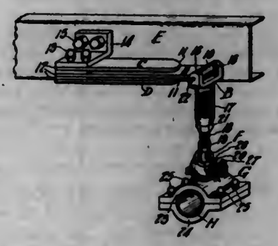
1. A prepayment meter for electric dispensing devices comprising an electric motor, a reduction gear train driven by the motor, an escapement lever and a spring contact lever carried eccentrically by the last gear of the train, means operative upon the entrance of a coin to form an initial circuit through said escapement lever to start the motor and deliver current, and a terminal engaged by said spring contact lever to continue the electric circuit after the release of the coin until said last gear has made one full and complete revolution at which time the spring contact lever will be removed from engagement with said terminal breaking the circuit.

1,755,682. LOCOMOTIVE ARCH BRICK. ARTHUR F. BECKER, Fulton, Mo., assignor, by mesne assignments, to American Arch Company, a Corporation of Delaware. Filed May 11, 1927. Serial No. 190,633. 7 Claims. (Cl. 110—99.)



1. A locomotive arch brick of non-uniform thickness having its thinnest portion of greatest density and being progressively less dense toward its thickest portion.

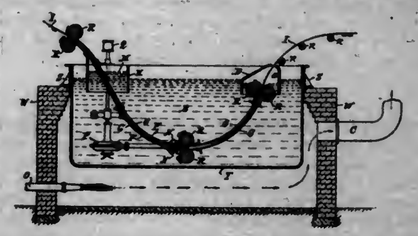
1,755,683. PRODUCTION OF GLUTAMINIC ACID. KARL BROMIG, Frankfort-on-the-Main, Germany, assignor to Deutsche Gold & Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a Corporation. Filed Mar. 8, 1927, Serial No. 173,796, and in Germany Mar. 22, 1926. 3 Claims. (Cl. 260—119.)



1. Process for preparation of glutaminic acid from sugar residues comprising treating the starting material with hot concentrated hydrochloric acid, separating the hot solution from any deposited solids, cooling and again removing deposited solids, concentrating the solution, cooling to low temperature and saturating with hydrochloric acid gas whereby glutaminic acid hydrochloride separates out on standing.

1,755,684. GREASE PUMP. WILLARD F. CLARK, Chicago, Ill., assignor to Monarch Tool & Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed June 22, 1928. Serial No. 287,462. 2 Claims. (Cl. 221—47.3.)

1. A grease pump comprising a cylindrical barrel formed of a tubular piece of metal, one end of said barrel being bored to form an annular shoulder and a comparatively thin wall, a circular head for closing said one end of the barrel, the marginal portion of the head being arranged against the annular shoulder and connected to the central portion by an offset part so as to form an annular recess on the outer face of the head, the outer end of the aforesaid wall being rolled inwardly and fitting in the recess to secure said marginal portion of the head in its operative position against the shoulder, means for closing the other end of the barrel, and a piston slidably mounted in the barrel and operable to force grease therefrom.

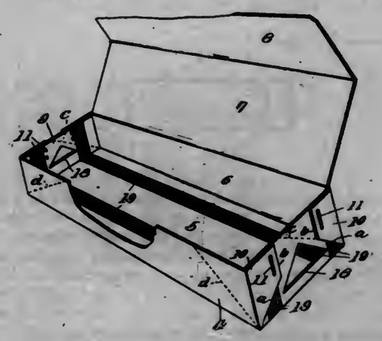


1,755,685. SHOCK-ABSORBER MEANS FOR VEHICLES. EDWIN F. COWLEY, Cleveland, Ohio, assignor of one-half to William E. Brandt, Cleveland, Ohio. Filed May 9, 1925. Serial No. 29,085. 9 Claims. (Cl. 267—45.)

1. A spring having a main leaf flexible individually within a certain limit in two sidewise directions, an ancillary leaf at each side of said main leaf and arranged so that each of said ancillary leaves is brought under tension individually when said main leaf is flexed beyond said certain limit at the corresponding ones of said sides, one portion of all of said leaves rigidly connected together to permanently hold the same in the relation set forth, and means on the free portion of said main leaf for suspension on an associated structure, and comprising a normally unrotatable yoke swivable on said free portion of the main leaf and a stud threaded to said yoke and having a ball seat on the associated structure.

1,755,686. COATED METAL AND PROCESS OF MAKING THE SAME. FREDRIK W. DE JAHN and JOSEPH G. DELY, New York, N. Y., assignors to Chemical Research & Designing Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 10, 1929. Serial No. 398,734. 6 Claims. (Cl. 91—70.2.)

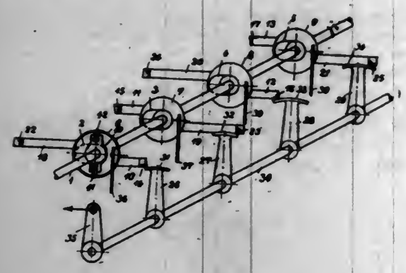
1. A method of coating metals with a metal protective layer which consists in preparing a molten mass whose dominant constituent comprises metal belonging to Group IV in Mendelejeff's Periodic System and having a melting point lower than 400° C., said molten mass containing in addition such an amount of bismuth and of copper as is sufficient to cause the protective layer to adhere to the metal to be coated, but insufficient to cause precipitation



of crystals on such metal, and then bringing the metal to be coated into contact with the molten mass and forming a layer of the latter upon the former, and causing said layer to congeal.

1,755,687. WEATHER STRIPPING. WILLIAM J. DENNIS, Chicago, Ill. Filed Feb. 21, 1927. Serial No. 170,034. 2 Claims. (Cl. 20—69.)

1. A weather stripping having a yieldable filler body, a flexible outer cover for said filler body with edges extending in contacting relation transversely of said body and folded backward toward and terminating adjacent said body portion, a single row of stitching through the four ply structure thus formed, said stitching adjacent and substantially parallel to said body portion to form an attaching flange, and a supplemental cover of rubber disposed between said cover and said filler body and enclosing said filler body to provide a moisture proof casing for said filler body.



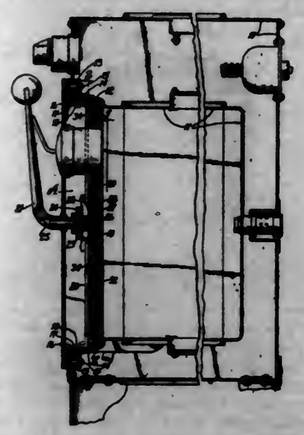
1,755,688. EGG CARTON. LEON BENOIT, Chicago, Ill. Filed Sept. 14, 1928. Serial No. 305,911. 4 Claims. (Cl. 229—30.)

1. A carton formed from a cardboard blank bent to provide a front, bottom, back and cover in the order named, the front, back and bottom having integrally formed extensions forming ends for the carton, said bottom and its extensions being provided with transversely spaced groups of longitudinally extending corrugations for reinforcing the carton, the extensions of the front and back being bent

at right angles into engagement with the bottom extensions and terminating in spaced relation with their upper edges parallel to the bottom of the box and their lower edges inclined upwardly from the lower corner of the box and defining a bend line, a fastener element securing the extremities of the front and back extensions to the bottom extensions, and a ventilating opening in the end of the box between the front and rear extensions.

1,755,689. ELECTRICAL SWITCHING APPARATUS. FRIEDRICH DUWE, Mainz, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuremberg, Germany, a Corporation of Germany. Filed Jan. 25, 1928, Serial No. 249,325, and in Germany Mar. 12, 1927. 2 Claims. (Cl. 200—17.)

1. In electric switching apparatus, the combination with a control member, of a shaft adapted to be rotated thereby, an operating lever mounted on said shaft, a continually rotating shaft, a contact member, a friction coupling intermediate said contact member and said second shaft, a contact spring to be engaged by said contact member, and two arms radially extending from said contact member in opposite directions, either being adapted to engage said operating lever, the arrangement being such that upon the rocking of said first mentioned shaft said operating lever is moved thereby to a position releasing the arm then in engagement with said operating lever allowing said contact member to be moved by said continually rotating shaft to a new switching position and being held therein by the other arm.

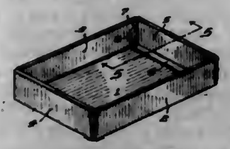


1,755,690. FOLDABLE BOX. JACOB C. HEIM, Philadelphia, Pa., assignor to Brown & Bailey Company, a Corporation of Pennsylvania. Filed July 13, 1928. Serial No. 292,530. 2 Claims. (Cl. 229—38.)

1. A box formed from a unitary blank of foldable material comprising a top, a bottom, sides, means for securing one of said sides to said bottom, and double closures for each end of the box, each closure comprising a panel, foldable resilient wing members on each panel adapted to be inserted within said box, the material of the blank at each end thereof being divided between the adjacent closure panels to form a pair of the said wing members.

1,755,691. DOOR EXPANDER. ROSCOE S. HEISE, Dayton, Ohio. Filed Sept. 29, 1928, Serial No. 309,276. Renewed Mar. 8, 1930. 13 Claims. (Cl. 126—190.)

1. In a structure of the class described, a receptacle having an opening, a door adapted to move into said opening to close the same, said door having a sheet metal facing, means in the door for expanding said sheet metal into contact with said opening to tightly close the same, means for

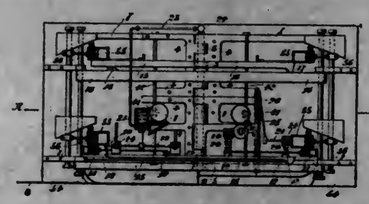


positively drawing said sheet metal inwardly to release said door from the opening, and a member for operating both said means.

1,755,692. PROCESS FOR THE PREPARATION OF CONDENSATION PRODUCTS OF ETHYL ALCOHOL. WILLY O. HERRMANN and ERICH BAUM, Munich, Germany, assignors to Consortium für Elektrochemische Industrie, Munich, Germany. Filed Dec. 2, 1927, Serial No. 237,332, and in Germany Dec. 18, 1926. 12 Claims. (Cl. 260—156.)

1. Process for the production of compounds from ethyl alcohol which comprises passing ethyl alcohol vapors in contact with a non-metallic catalyst normally having a dehydrating or dehydrogenating action on ethyl alcohol, said catalyst being maintained above the temperature at which said normal action takes place.

1,755,693. PACKING AND DISPLAY BOX. ALBERT E. KEPPLER, Philadelphia, Pa., assignor to Brown & Bailey Company, a Corporation of Pennsylvania. Filed May 12, 1928. Serial No. 277,123. 1 Claim. (Cl. 229—34.)

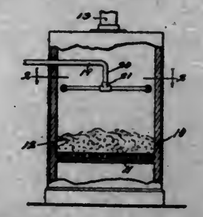


A box formed from a single blank of foldable material and comprising a bottom, outer sides, inner sides provided with cutouts at each end, outer ends, inner ends having tongue members extending from each end thereof and adapted to fit snugly within said cutouts, said tongue members being extended to the bottom of the box when in interlocked relation with the cutouts of the inner sides, extensions to said outer side members lying between each pair of inner and outer ends, and tabs extending from said inner ends adapted to be bent and bear against the bottom of the box, said tabs extending entirely across the bottom of the box between the tongue members and engaging the lower ends of the same and retaining the tongue members in interlocked relation with the said inner sides.

1,755,694. PACKING AND DISPLAY BOX. ALBERT E. KEPPLER, Philadelphia, Pa., assignor to Brown & Bailey Company, a Corporation of Pennsylvania. Filed Apr. 9, 1928. Serial No. 268,526. 1 Claim. (Cl. 229—34.)

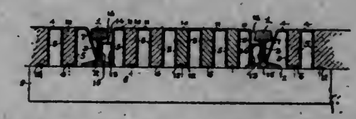
A box formed from a single blank of foldable material and comprising a bottom, outer sides, inner sides provided with cutouts at each end, outer ends, inner ends having tongue members extending from each end thereof and adapted to fit snugly within said cutouts, said tongue members extending to the bottom of the box when in interlocked relation with the cutouts of the inner sides, gusset members connected with the ends of said outer sides and outer end members and lying between each pair of inner and outer ends and tabs extending from said inner end members adapted to be bent and bear against the bottom of the box and also extending entirely across the latter to retain the tongues in interlocked relation with the inner sides of the box.

1,755,695. STEAM-OPERATED ICE AND SNOW PLOW. RUDOLF KLIMA and HANS REISCHENBACHER, Salzburg, Austria. Filed Jan. 3, 1927, Serial No. 158,717, and in Austria Jan. 9, 1926. 6 Claims. (Cl. 37—30.)



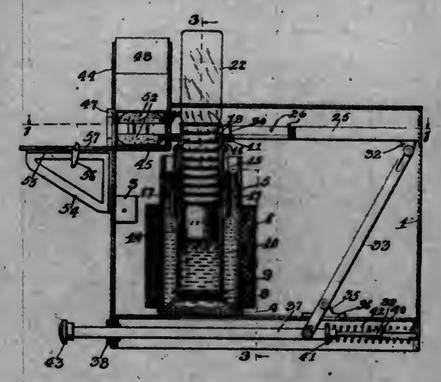
2. A snow plow for railway engines, comprising an upright shaft to be supported centrally of the rails, walls hinged at their adjacent upright sides to said shaft, pressure operated means for each wall to swing the same outwardly about the shaft, and spring means for returning each wall to its initial position.

1,755,696. PERPETUAL DATE INDICATOR. KUAT KLUGE and WALTER BERTHOLD, Berlin-Halensee, Germany. Filed Feb. 19, 1926, Serial No. 89,481, and in Germany Feb. 19, 1925. 10 Claims. (Cl. 40—115.)



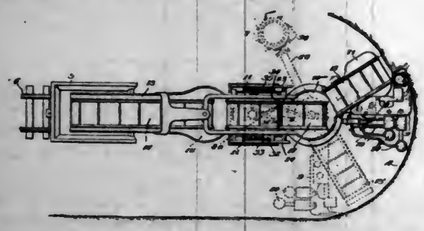
1. A perpetual date indicator comprising a casing having a window therein, a disk marked with the names of the days, a plurality of superposed figure disks of equal diameter different from that of the day disk and numbered with the dates of the consecutive sections of the month, a month indicative disk next to and different in diameter from the day and figure disks, teeth on said disks, and pawl means adapted to be actuated once a day to act on said teeth, said teeth being so disposed that they cause adjustment of the disks correctly each day, allowing for the length of the month and for the leap year.

1,755,697. FURNACE DEVICE FOR ENHANCING COMBUSTION OF FUEL. FRANK LEBECKWICZ, Chicago, Ill. Filed Aug. 13, 1928. Serial No. 299,240. 4 Claims. (Cl. 110—81.)



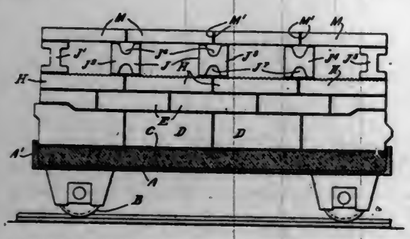
1. In combination with a furnace, a fuel saving device comprising a water supplying pipe, a plurality of pipes horizontally and uniformly arranged within the furnace, and said latter pipes being provided throughout their length with minute apertures in their upper walls and directed toward the top of the furnace and away from the bed of fuel for causing the spraying of water in an upward direction to prevent clogging of the apertures and to more uniformly dampen the bed of fuel.

1,755,698. HIGHWAY RAILROAD CROSSING. CHARLES M. LIEB, Valparaiso, Ind. Filed Oct. 8, 1928. Serial No. 310,984. 10 Claims. (Cl. 238—8.)



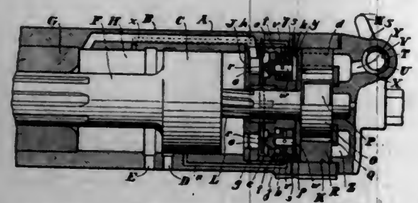
1. A composite highway material comprising a metallic sheet formed into relatively deep corrugations having tread and base portions uniting them, a support for the base portions positioned at points throughout their length, and a suitable paving material positioned in the corrugations on one side of the sheet.

1,755,699. DISPENSING MACHINE. ALEXANDER L. LOEHR, Milwaukee, Wis., assignor of one-third to Henry F. Stock, Waukesha, Wis. Filed Nov. 23, 1929. Serial No. 409,260. 7 Claims. (Cl. 107—1.)



7. In a machine of the class described, a housing having an opening, means for supporting sandwich layers in spaced relation adjacent the opening, means in the housing for containing and supporting a plurality of fillers with the uppermost filler aligned with the space between the sandwich layers, means for consecutively feeding the fillers between the sandwich layers and then forcing the layers and filler from the housing.

1,755,700. KERF CUTTER FOR MINING APPARATUS. EDMUND C. MORGAN, deceased, New York, N. Y., by Olive Eugenie Morgan, executrix, New York, N. Y. Original application filed Dec. 23, 1919, Serial No. 346,903. Divided and this application filed Oct. 17, 1927. Serial No. 226,690. 12 Claims. (Cl. 262—19.)

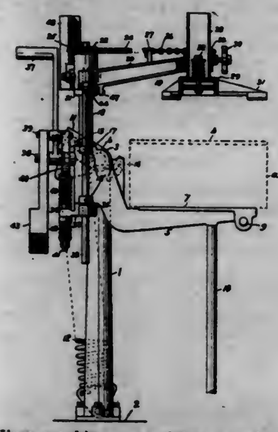


6. In a mining machine, the combination with a main frame, of a kerf-cutter and universally adjustable supporting mechanism for said kerf-cutter comprising concentric rings between said main frame and said kerf-cutter.

1,755,701. TUNNEL-KILN CAR. GEORGE D. MORRIS, New Castle, Pa., assignor to New Castle Refractories Company, New Castle, Pa., a Corporation of Delaware. Filed Aug. 27, 1928. Serial No. 302,232. 6 Claims. (Cl. 25—142.)

1. A tunnel kiln car comprising a metallic bottom frame member, a refractory body portion mounted thereon, transverse girders mounted on said body portion and having a longitudinally extending recess in the top surface thereof, and a goods supporting platform consisting of a plurality of slabs supported by said girders, adjacent slabs being arranged with the joint therebetween positioned over one of said recesses.

1,755,702. VALVE MECHANISM FOR ROCK DRILLS. THOMAS L. MURPHY, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 21, 1928. Serial No. 307,486. 4 Claims. (Cl. 121—19.)

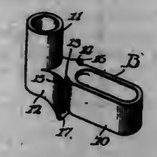


1. In a fluid actuated rock drill, the combination of a cylinder and a piston, a free exhaust port in the cylinder controlled by the piston, a valve chest having a valve chamber, inlet passages leading from the valve chamber to the cylinder, an oscillatory plate valve in the valve chamber to control the inlet passages, plunger chambers in the valve chest, plungers in the plunger chambers extending into the valve chamber, and piston controlled kicker passages for conveying pressure fluid from the cylinder to the plunger chambers to press said plungers against the valve and hold said valve stationary during the admission of pressure fluid to the ends of the cylinder.

1,755,703. TREATMENT OF RUBBER. PAUL I. MURRILL, Plainfield, N. J., and WALTER W. EVANS, New Rochelle, N. Y., assignors to R. T. Vanderbilt Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 28, 1927. Serial No. 221,608. 10 Claims. (Cl. 18—50.)

10. A vulcanized rubber composition combined before vulcanization with a small amount of a condensation product of aldol with ethylene diphenyl diamine.

1,755,704. MOLDING MACHINE. JOHN T. RAMSDEN, Philadelphia, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1927. Serial No. 231,308. 7 Claims. (Cl. 22—83.)



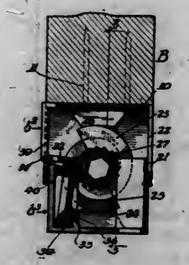
1. A molding machine comprising a column provided with stops, a rollover frame at the top of the column and adapted to rest on the stops in pattern drawing position and to be turned into mold making position, a clamping head provided with a leveling device and slidably mounted in the frame, an operating handle carried by the frame, and mechanism between the handle and head for shifting the latter in respect to the frame to clamp and to pattern draw.

1,755,705. DIAGNOSTIC OPTICAL INSTRUMENT. JAMES E. REID, Moorestown, N. J. Filed June 4, 1928. Serial No. 282,641. 3 Claims. (Cl. 88—20.)

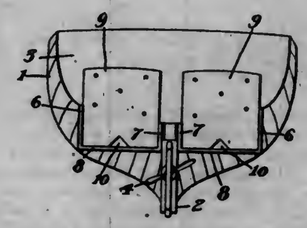
2. An optical diagnostic instrument having a stem, a reflector at the upper part of the stem, a lamp in the stem, a lens and a tubular lens carrier, a lantern structure projecting from and forming part of the wall of the stem and arranged at the front of the instrument to receive light from the lamp, and a transparency arranged at the end of the lantern structure.

1,755,706. BIRD FOUNTAIN. ARTHUR ST. GEORGE, Chicago, Ill. Filed Aug. 17, 1927. Serial No. 213,461. 1 Claim. (Cl. 119—18.)

A bird fountain adapted to be supported by the bars of a cage, said fountain comprising a fountain head adapted to serve as a reservoir, and a fountain bracket having a single pair of vertical grooves adapted to receive and hold large or small diameter bars, and means associated with the grooves for limiting the degree of insertion of the bracket so that it cannot be extended inwardly beyond said grooves.



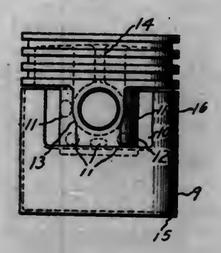
1,755,707. PHOTOGRAPHER'S FLASH GUN. HAROLD R. STOTT, Philadelphia, Pa. Filed June 1, 1928. Serial No. 282,240. 4 Claims. (Cl. 67—32.)



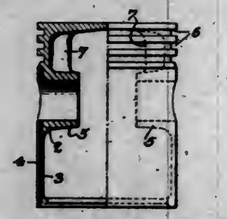
2. The combination of an air tube, a fitting screwed onto one end thereof, a tubular body screwed on to said fitting and forming a powder container, a fitting screwed on to the tubular body, a powder discharging nozzle screwed on to the last named fitting, the last named fitting having a plurality of openings therein affording communication between the tubular body and the nozzle, a manually operable piston within the air tube for discharging air from the same to the container, a yieldable valve device permitting air to pass from the air tube to the container and preventing the return of the air to the air tube, and means to ignite powder discharged from the nozzle.

1,755,708. ADJUSTING DEVICE. ARTHUR H. SYMONS, River Forest, Ill., assignor to Symons Clamp & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1927. Serial No. 168,505. 13 Claims. (Cl. 254—104.)

1. The combination with a shore, of an adjusting device composed of slidably connected telescoping sections, one of which is adapted to engage the lower end of the shore, a pair of oppositely arranged rotatable integral cams, abutments on the sections respectively engaged by the cams, a ratchet-wheel rigid with the cams and a dog to engage the ratchet and lock the cams against reverse rotation said dog being enclosed by the sections and having an extension projecting through slots in said sections whereby it may be manipulated out of engagement with the ratchet-wheel.



1,755,709. STERN CONSTRUCTION FOR MOTOR BOATS AND THE LIKE. JONATHAN COOK SMALL, Provincetown, Mass. Filed Dec. 10, 1929. Serial No. 413,020. 7 Claims. (Cl. 114—66.5.)

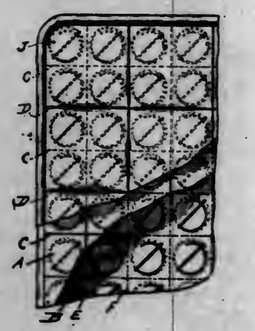


7. In combination with the stern of a motor boat, a pair of auxiliary chamber members disposed one under each counter and having a combined displacement substantially counteractive of the submersion tendency of the propeller at maximum speed.

1,755,710. INTERNAL-COMBUSTION-ENGINE PISTON. HAROLD A. SOULIS and WILBUR T. SOULIS, Easton, Pa. Filed June 30, 1927. Serial No. 202,628. 4 Claims. (Cl. 74—108.)

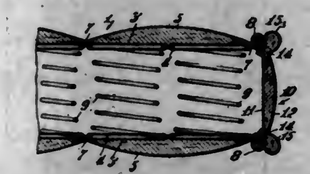
1. A piston having a shell of cast iron with a thin wall having diametrically opposed recesses therein extending downwardly from its upper edge and a horisontally disposed integral inwardly projecting surface adjacent the base of each of said recesses and a head of a lighter metal cast on said shell to form dependent portions embracing each of said surfaces, said depending portions providing wrist-pin bearings.

1,755,711. INTERNAL-COMBUSTION-ENGINE PISTON. HAROLD A. SOULIS, Easton, Pa. Filed July 30, 1928. Serial No. 296,257. 11 Claims. (Cl. 74—108.)



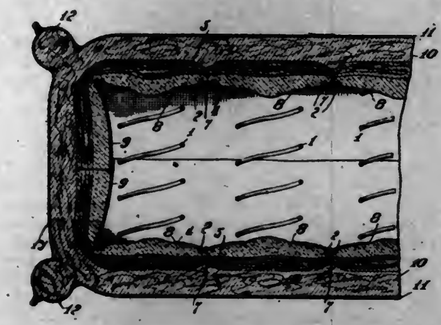
1. An internal combustion engine piston comprising a relatively light body of cast metal, a reinforcing member, wrist pin bosses, a zone where packing ring grooves are cut, a plurality of cast-in bearing particles, all of which are permanently united in casting.

1,755,712. PROCESS OF RECOVERING VOLATILIZABLE METALS FROM ORES OR THE LIKE. HERMANN STEPHANI, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Apr. 11, 1927, Serial No. 182,838, and in Germany Apr. 12, 1926. 3 Claims. (Cl. 75—28.)



1. A continuous process of recovering volatilizable metals from ores, metalliferous products, metallurgical residues and the like, comprising continuously charging the material mixed with reducing agent into a heated metallurgical furnace, continuously admitting flame and air into the furnace, the flame being admitted at a region remote from the region where the material is charged into the furnace, causing the material to move through the furnace counter-current to the flow of products of combustion from said flame and impinging said flame only adjacent the region of admission thereof upon said material whereby the latter is heated to fusion or sintering temperature characterized in that the material is heated sufficiently to vaporize the bulk of the volatilizable metal before it reaches the region where the flame impinges upon it and it is heated to fusion or sintering temperature.

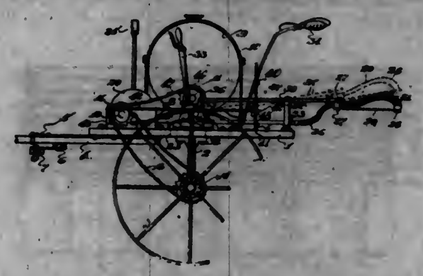
1,755,713. SPRING-FILLED MATTRESS. LOUIS A. SUSKOFF, Chicago, Ill., assignor of one-half to Fred A. Nachman, Chicago, Ill. Filed Nov. 7, 1928. Serial No. 317,816. 6 Claims. (Cl. 5—351.)



1. A mattress comprising top and bottom wall structures each consisting of two layers of fabric secured together by sets of parallel lines of stitching extending respectively longitudinally and transversely of each other and bordering substantially equal square areas, there being openings in one of said fabric layers in each of the said square areas constituting the mouths of pockets formed between said layers, each of said wall structures including a layer of padding and a cover fabric therefor disposed upon that first-named fabric layer which is devoid of openings, some of the lines of stitching of at least one of the above sets and including the outermost of said lines of stitching extending through the layer of padding and cover fabric, springs interposed between said top and bottom wall structures and having their end coils engaged in said pockets, and a boxing strip secured to the peripheral edges of said top and bottom wall structures.

1,755,714. MATTRESS AND METHOD OF MAKING SAME. LOUIS A. SUSKOFF, Chicago, Ill. Filed May 6, 1929. Serial No. 360,925. 6 Claims. (Cl. 5—360.)

1. The method of finishing mattresses which consists in first completing quilted top and bottom walls of the casing, then applying and securing to the peripheral edge portions of said walls the folded edges of a quilted boring strip and passing stitch-chains through said edge portions of said walls and the folded edge portions of the boxing strip to thereby secure the latter to said walls to complete the casing and at the same time form permanent roll-edges on said casing.



1,755,715. MATTRESS AND CUSHION. LOUIS A. SUSKOFF, Wilmette, Ill. Filed Feb. 10, 1930. Serial No. 427,328. 7 Claims. (Cl. 5—351.)

1. A mattress comprising a spring assembly presenting an outer wall having rough surfaced fibrous biscuit formations, a layer of fibrous padding biscuit formations, a layer of fibrous padding covering said outer wall of said assembly and held firmly in place thereon by interengagement of the fibres of said wall and padding, and a cover fabric housing said assembly and said padding.

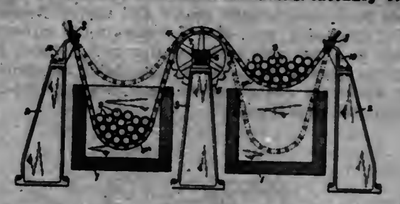
1,755,716. LIQUID-SPRAYING MACHINE. WILLIAM H. THOMPSON, Wichita Falls, Tex., assignor to J. W. Duncan, Wichita Falls, Tex. Filed Dec. 16, 1927. Serial No. 240,444. 2 Claims. (Cl. 299—41.)

1. In a liquid spraying machine, a frame, a liquid receptacle carried by the frame, a pipe extending transversely of the frame and communicating with said receptacle, nozzles carried by the pipe, standards projecting upwardly from the frame, a rock shaft on the frame spaced from the standards, radial arms on the shaft, horizontal arms having slots between their ends, means to pivotally

connect the horizontal arms at one end thereof to the radial arms, means to rigidly connect the horizontal arms at their opposite ends to the pipe, and pins on the standards extending through the slots of the horizontal arms to support the latter for vertical pivotal and longitudinal sliding movements.

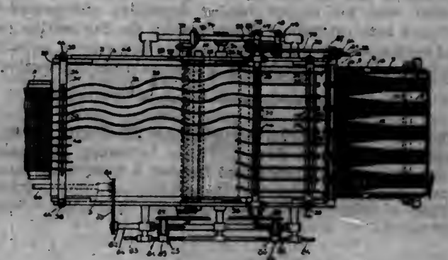
1,755,717. SAW. KARL WAGNER, Reutlingen, Germany. Filed June 21, 1926, Serial No. 117,584, and in Germany July 31, 1925. 2 Claims. (Cl. 29—105.)

1. A saw, having teeth consisting of separate pieces attached to the saw, said teeth having their cutting edges interrupted by grooves to permit removal of the shavings coming from the side surfaces of the cut in the workpiece in inward direction of the saw, said grooves being milled into said teeth longitudinally of the entire front thereof and being of such depth that after subsequent grinding of the teeth the grooves will still remain at the cutting edges.



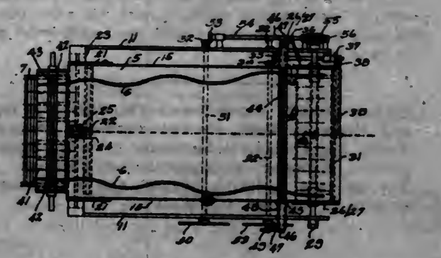
1,755,718. CLAMPING PIN. FREDRICK G. WAGENER, Chicago, Ill. Filed July 29, 1929. Serial No. 381,882. 4 Claims. (Cl. 24—85.)

1. A device of the character described, including; a frame; a securing pin pivotally attached to the frame; a clasp carried by the frame for the end of the securing pin; a clamping bar carried by the frame and adapted to be swung into clamping position adjacent the securing pin to clamp material between the pin and bar; and means for holding the clamping bar in clamping position.



1,755,719. PICKLING APPARATUS. STEPHEN L. WILLIAMS, Bridgeport, Ohio, assignor to Extruded Metal Products Company, Bridgeport, Ohio, a Corporation of Ohio. Filed June 19, 1929. Serial No. 372,158. 7 Claims. (Cl. 266—7.)

7. In combination with companion pickling baths, chains disposed transversely over said baths, means supporting the ends of said chains in fixed positions, rotary supporting means for said chains located between said baths whereby are formed in said chains catenary loops,

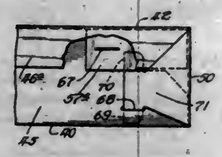


said means being operable to lengthen and shorten said loops being operable to lengthen and shorten said loops alternately for effecting alternate lowering and raising of thereby carried articles with respect to said baths.

1,755,720. APPARATUS FOR HANDLING ARTICLES. ALFRED WINKLER and MAX DÜNNEBIER, Neuwied, Germany. Filed Dec. 18, 1928, Serial No. 326,792, and in Germany Dec. 19, 1927. 16 Claims. (Cl. 198—30.)

1. Apparatus of the character described for the supply of articles in an upright position, comprising conveying means for the articles, guide rails of wavy form, and means for moving said rails transversely to the direction of movement of the said conveying means, for shaking the said articles and bringing them to upright positions.

1,755,721. APPARATUS FOR HANDLING ARTICLES. ALFRED WINKLER and MAX DÜNNEBIER, Neuwied, Germany. Filed Dec. 18, 1928, Serial No. 326,793, and in Germany Feb. 28, 1927. 9 Claims. (Cl. 198—30.)



1. Apparatus of the character described for the supply of articles in an upright position, comprising conveying means for the articles, guide rails of wavy form, and means for imparting side movement to the conveying means in its own plane to shake the said articles.

1,755,722. FOLDING BOX. SIGMUND BACHMANN, Chicago, Ill. Filed Oct. 20, 1927. Serial No. 227,479. 11 Claims. (Cl. 229—33.)

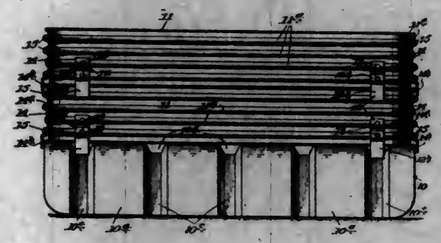
1. In a box, a blank comprising bottom, back, top and flap sections hingedly connected together in series and

CARNEGIE LIBRARY OF ATLANTA

divided by creases about which it may be folded, end sections at the ends of the first mentioned sections with fold-creases therebetween, each end section in line with the back section being substantially square and having creases extending diagonally, part of said creases being cut entirely through to permit this square section to fold like a hinge about the diagonal lines, the material being cut about the point where the two diagonals meet to avoid lapping of the material at said point.

3. A box comprising bottom, back, top and flap sections hingedly connected together in series, the flap section on said top section overlapping the flap section on said bottom section, said top section having depending end portions provided with extensions which overlap the flap section on said bottom section and the ends of the flap section on said top section and interlockingly engage said bottom section.

1,755,723. SELF-ALIGNING PITMAN BEARING. RICHARD R. BLOSS and ROY C. PFEIL, Columbus, Ohio, assignors to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed June 7, 1929. Serial No. 369,202. 7 Claims. (Cl. 308—72.)



1. A self-aligning bearing structure for a pitman comprising a base mounted to swing with the wrist pin as it tilts, and a cap mounted to slide upon said wrist pin as said wrist pin tilts.

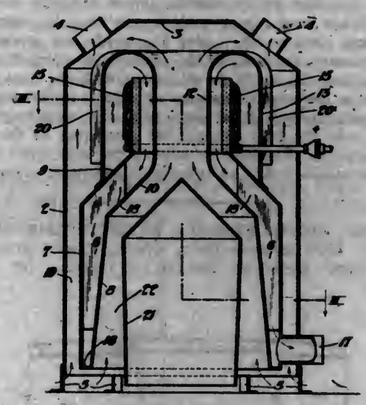
1,755,724. BOAT. ERNST BURMESTER, Burg, near Bremen, and HERMANN HEIN, Bremen, Germany, assignors to Yacht- und Bootswerft Burmester m. b. H., Burg, near Bremen, Germany, a Corporation of Germany. Filed Nov. 26, 1928, Serial No. 322,020, and in Germany Mar. 6, 1928. 7 Claims. (Cl. 9—3.)

1. A boat comprising a plurality of double-sided and stepped transverse seats arranged in the boat, each seat provided with a channel running therethrough, said seats consisting of hollow gas-filled fluid tight chambers.

1,755,725. SECTIONAL BOX AND PLATFORM. CARL L. CLARK and WILLIAM W. GALBREATH, Warren, Ohio, assignors to The Youngstown Pressed Steel Co., Warren, Ohio, a Corporation of Ohio. Filed Nov. 10, 1928. Serial No. 318,371. 1 Claim. (Cl. 220—4.)

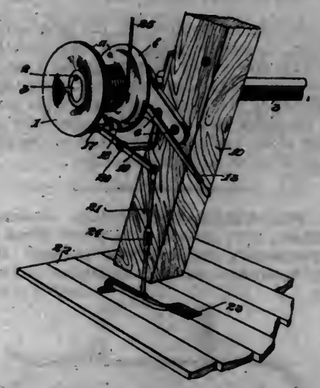
A box having vertical side walls and a removable bottom, said bottom carrying vertical flanges adapted to space the same from a support, said flanges having vertical corrugations therein, and said side walls having depending members adapted to engage the corrugations in the flanges of the bottom to prevent relative horizontal movement between the side walls and the bottom.

1,755,726. SAFETY RAZOR. FERNAN OSCAR CONILL, Cannes, France. Filed Nov. 22, 1928, Serial No. 321,105, and in France Aug. 22, 1928. 4 Claims. (Cl. 30—12.)



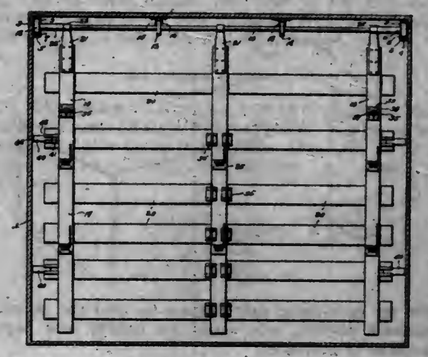
1. In a safety razor, the combination of: a handle; a comb on said handle; a blade; a curved blade support guided by said comb; a stem which passes right through said handle and is guided thereby, said stem carrying said support at one end; detachable means for clamping said blade against said support in an invariable position of curvature; and a nut member forming a prolongation of said handle and screwed on to the other end of said stem, substantially as and for the purposes set forth.

1,755,727. AIR-HEATING FURNACE. ROBERT E. CRAMER, Brentwood, Pa. Filed Nov. 13, 1928. Serial No. 319,121. 4 Claims. (Cl. 126—116.)



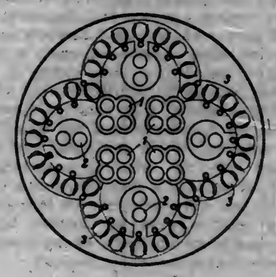
1. A hot air furnace comprising an outer casing having enclosing side and top walls, hot air conduits communicating with the upper end of said casing, an annular wall spaced inwardly from said casing and extending from adjacent the lower end of said casing upwardly to a point intermediate the ends of said casing and then inclined inwardly and upwardly and terminating at a point materially below the upper end of said casing, a second annular wall spaced inwardly from said first named annular wall, said last named wall extending upwardly from a point adjacent the lower end of said first named annular wall to a point adjacent the inwardly and upwardly inclined portion of said first named annular wall and then being inclined inwardly and upwardly in spaced parallel relation to said inclined portion of said first named wall, then extending vertically upward above said first named annular wall and then being reversely bent and extended vertically downward and in contact with the upper face of said inclined portion of said first named annular wall, a bottom wall

closing the space between said first and second named annular walls so as to form a closed heating chamber, the space between said casing and said first named annular wall and said casing and the upper end of said second named annular wall forming a hot air chamber for cold air adapted to enter at the lower end of said casing, a fuel burner in the upper end of said heating chamber above



said first named annular wall, a flue communicating with the lower end of said heating chamber, vertical baffles in said heating chamber to prevent short-circuiting of the heated gases and products of combustion, and fins on the outer surface of the reversely bent portion of said second annular wall so as to increase the heated surface in contact with the air to be heated.

1,755,728. COMBINATION MAKE-UP CATHEAD AND FRICTION HOIST. WALTER W. FOSTER, Wichita Falls, Tex. Filed May 23, 1927. Serial No. 193,542. 3 Claims. (Cl. 192—17.)

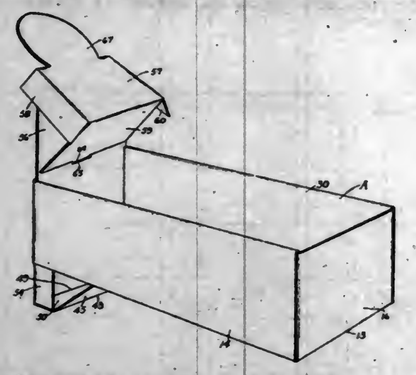


1. In a combination make-up cat-head and friction hoist including in combination with a rotating shaft, the same comprising a member fixed to the shaft to rotate therewith and having a flange, an outer shell freely mounted on said fixed member having flanges, one of which is arranged for frictional engagement with the flange of said fixed member; means to actuate said outer shell to effect such frictional engagement, and means capable of being brought into frictional engagement with the inner surfaces of said shell flanges to arrest rotation of said outer shell when the frictional engagement of said flanges is released.

1,755,729. LOAD BRACE FOR RAILWAY CARS AND THE LIKE. CHARLES E. GOETZ, Benson, Ariz. Filed May 14, 1929. Serial No. 363,009. 9 Claims. (Cl. 105—375.)

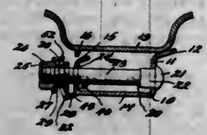
1. In a load brace for railway cars and the like, a plurality of tracks on said car, shafts extending between said tracks and having rolls thereon engaging the tracks, gates freely suspended from said shafts, and means on the shafts for preventing lateral shifting of the gates thereon.

1,755,730. GAME. ADOLF GÖSSER, Hennef-Sieg, Germany. Filed Apr. 15, 1929, Serial No. 355,405, and in Germany Aug. 18, 1928. 2 Claims. (Cl. 273—184.)



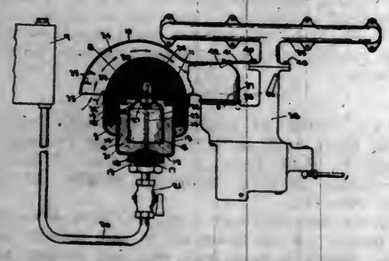
1. A game consisting of a perforated plate, a scoring receptacle below the plate, and balls serving as playing pieces, holes in the plate of smaller diameter than the balls which serve as rests for the balls, large holes in the plate through which the balls may pass and over which are mounted springs having arms serving as rests for the balls during play and between which the balls may be forced, passing through said large holes into the scoring receptacle.

1,755,731. DISPLAY CARTON. REYNOLDS GUYER, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a Corporation of Minnesota. Filed Sept. 20, 1928. Serial No. 307,270. 13 Claims. (Cl. 206—44.)



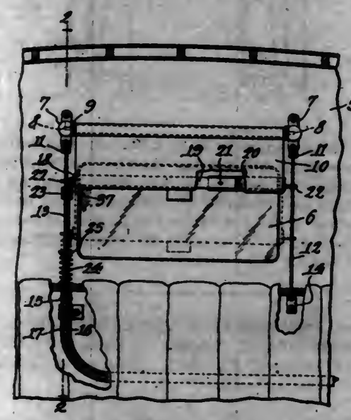
1. A carton comprising a bottom, sides connected to said bottom, an end connected to said bottom, tongues issuing outwardly from said end, end sections extending outwardly from the ends of said sides opposite from said end, tongues on said end sections forming a continuation thereof, said carton being adapted to be folded to

bring said end sections into a common plane and said tongues into the plane of said sides, flaps formed on said



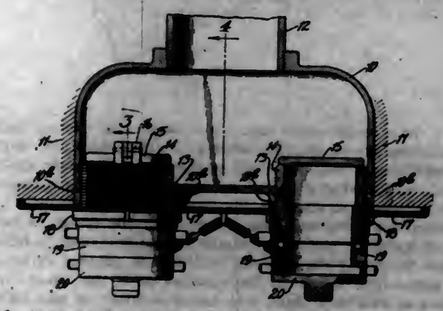
sides for enveloping said tongues to hold the carton in assembled position, and means for holding said flaps in the plane of said sides.

1,755,732. RIM LUG. MATT GZUPKAYTIE, Baltimore, Md. Filed Apr. 6, 1929. Serial No. 353,140. 1 Claim. (Cl. 301—24.)



In a device for securing a demountable rim to a wheel, the combination of a bolt carried by the wheel, a nut member and a rim securing lug member thereon, one of said members having a groove and the other a flange engaged in said groove whereby said members are loosely but permanently swivelled together in such a manner that said lug member may be positively swung in either direction as the nut member is turned upon the bolt, a pair of hinge elements projecting from said lug member adjacent the end of the lug member nearest the wheel hub through perforations into the felly of the wheel, and pintle means inside of said felly for retaining said hinge elements, whereby said lug member is constrained to a pivotal movement about its end while being moved into and out of its rim securing position, said lug member being of such length that when in its outwardly swung position it allows the rim to be withdrawn over its free end.

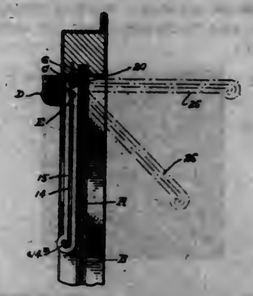
1,755,733. AIR-MOISTENING DEVICE FOR COMBUSTION ENGINES. WILLIAM HAGER and HENRY RIEKERT, Cincinnati, Ohio. Filed Jan. 14, 1928. Serial No. 246,834. 5 Claims. (Cl. 261—99.)



1. In a device of the class described the combination of an inner bowl provided with top, bottom and side walls, an outer bowl communicating with and extending about the inner bowl and forming therewith an annular channel, a bored connection member secured to the bottom wall and adapted for directing through the bore thereof a quantity of fluid from a fluid reservoir, means for controlling the flow of said fluid, comprising a reciprocable needle one end of which may project into the bore of the connection member for closing said bore, a float provided with a longitudinal bore through which the needle may extend, a collar on the needle, levers pivotally mounted on the inner bowl and actuable by the float for exerting a downward force on the collar and needle for moving the needle toward the bore of the connection member, means for retaining the needle in alignment with the bore of the connection member, a quantity of wick material superimposed upon the top of the inner bowl and extending downwardly into the fluid channel for saturation of the wick, and means for directing air toward the wick prior to the entry of said air into an internal combustion engine.

1,755,734. MOTOR-VEHICLE REAR-CURTAIN OPERATOR. EMIL EDWARD HALL, Groton, Conn. Filed July 22, 1929. Serial No. 380,230. 2 Claims. (Cl. 156—28.)

1. An operating mechanism for the rear curtain of a motor vehicle, comprising guide rods, said curtain having a stick having eyes at its ends operating over the rods, a guide piece connected with one end of the curtain stick, a coiled spring in the path of travel of the guide piece to engage the guide piece to restrict downward movement of the guide piece, and a wire attached to the guide piece for moving the guide piece downwardly.

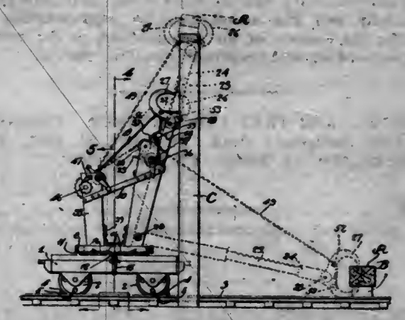


1,755,735. STANDPIPE CONNECTION. ALBERT E. HANSEN, Elkhart, Ind., assignor to Elkhart Brass Manufacturing Company, a Corporation of Indiana. Filed Feb. 2, 1928. Serial No. 251,296. 8 Claims. (Cl. 137—18.)

1. A connection of the character described comprising; a body piece adapted to be built into a wall and having

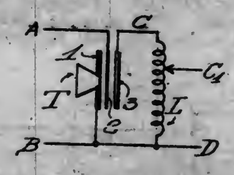
an opening adapted to receive a pipe connection from the building, the outer side of said body piece adapted to lie substantially flush with the outer surface of said wall and provided with a plurality of threaded openings; a face plate provided with a plurality of holes registering with said last mentioned openings, said face plate provided with a marginal flange adapted to lie outside of said wall and cover the edge of the wall adjacent said body piece; nipples with external threads inserted through the holes in the face plate and screwed into the threaded openings in the outer side of the body piece; and means for holding the face plate against the wall of the building, said means comprising locking rings threaded on the nipples and screwed against the face plate to engage the marginal edges surrounding the holes in said face plate.

1,755,736. SUN SHADE. NELS JENSEN, Grass Valley, Calif. Filed May 16, 1928. Serial No. 278,178. 3 Claims. (Cl. 156—44.)



2. A device of the character described comprising a pair of interspaced bracket members, a spring actuated shade roller journalled between said brackets, a longitudinally adjustable rod pivotally secured between the brackets and to one side of the roller, friction means resisting rotation of said rod, a pair of flat arm secured at their upper ends to said rod, one adjacent each bracket, said arms being slotted substantially from end to end and the slots terminating in hook-shaped notches at the lower ends of the arms, a shade cloth secured to the roller, a shade stick secured to the shade cloth, said shade stick extending beyond each end of the shade cloth and projecting through the slotted arms to be guided thereby, said projecting ends of the shade stick adapted to enter the hook-shaped notches at the lower ends of the arms to secure the shade cloth when unrolled, and means permitting longitudinal adjustment of the shade stick.

1,755,737. LAMP SHADE. FRITZ KESSELRING, Furth, Germany. Filed June 30, 1928, Serial No. 289,473, and in Germany Sept. 19, 1927. 1 Claim. (Cl. 240—104.)



In combination a shade of transparent glass with a mirror foil upon it, said shade consisting of an upper hemispherical part and of a lower parabolic part, the shade being adapted of being put with its hemispherical part on the roundish belly of an electric incandescent lamp, the centre of said hemispherical and of said parabolic part coinciding practically approximately with the centre of the lighting filament of said incandescent lamp, the inner diameter of said hemispherical part being larger than the diameter of the roundish belly of the bulb and means for keeping said hemispherical part of the shade off the belly of the bulb so as to leave an air space between both parts said air space communicating on both sides with the air space outside the shade in order to allow a cooling air current to pass upwardly between the hemispherical part of the shade and the roundish belly of the bulb.

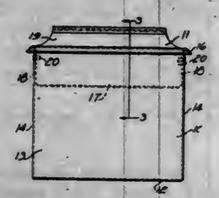
1,755,738. BEAM-HANDLING APPARATUS FOR COAL-MINING AND OTHER OPERATIONS. KOSTANTZ KLEPADLO and ALEXANDER GRATKOWSKI, Scranton, Pa. Filed Sept. 10, 1929. Serial No. 391,556. 5 Claims. (Cl. 212—55.)

1. Apparatus of the character described comprising a truck, a turn table thereon, beam handling mechanism on the turn table, including pairs of guide bars, a beam handling arm pivoted between each pair of guide bars, means for locking the arms to the guide bars, an extension on each arm having gripping jaws at its outer end, and operating means for the extension.

1,755,739. SYSTEM OF MODULATION. JAMES C. KOSITZKY, now, by judicial change of name, James C. Coe, Stillwater, Okla. Filed Nov. 8, 1926. Serial No. 146,984. 4 Claims. (Cl. 179—171.)

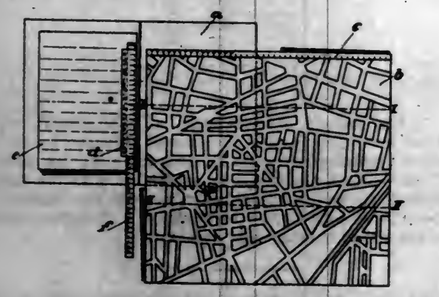
1. The method of modulating an alternating current which comprises passing the current through two electrostatic condensers arranged in series, varying the capacity of one of said condensers in accordance with the desired modulation and simultaneously varying the capacity of the other in such manner as to maintain the total capacity of the circuit substantially constant.

1,755,740. REVERSIBLE REAR-VIEW REFLECTOR. FRANK F. LINN and JOSEPH NEELES, North Bend, Oreg., assignors of part interests to Charles L. Shuppy, Thomas N. Campbell, and Julius Ross, Oakland, Calif. Filed May 21, 1927. Serial No. 193,225. 2 Claims. (Cl. 45—97.)



1. In a rear view reflector for automobiles and the like; an integrally formed reflector mounting and attaching member comprising a body having a central portion arranged for attachment to the automobile and laterally

extending arms at and supported by the ends thereof; an extension arm slidably and pivotally secured to one of said arms; and a reversible reflector pivotally carried between

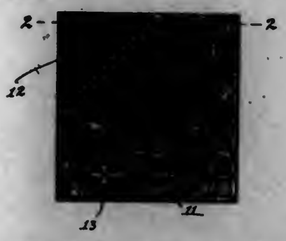


said adjustable arm and the other of said first arms by substantially ball and socket bearings, said bearings permitting the removal of the reflector from or the insertion thereof between said arms upon spreading thereof.

1,755,741. ASH TRAY AND RECEIVER. SYLVANUS D. LOCKE, Bridgeport, Conn. Filed Dec. 24, 1927. Serial No. 242,374. 10 Claims. (Cl. 206—19.5.)

1. In combination, an ash receiver having an upper open end, and an ash tray adapted to rotatably fit in said upper open end of the receiver, said tray and receiver having cooperating pivotal means for the tray, arranged at the opposite sides of the tray and receiver, adapted to permit rotation of said tray upon said receiver between a closed position and an open position, and said cooperating pivotal means adapted to permit removal of the tray from the receiver only when the tray is in open position.

1,755,742. MAP FINDER. FRIEDRICH MATTENKLOTT, Berlin, Germany. Filed June 14, 1927, Serial No. 198,783, and in Germany Oct. 28, 1926. 2 Claims. (Cl. 85—6.)



1. In locating means for maps, the combination of a map provided with ordinates at its margin in one direction and foldable in zig-zag manner in the other direction to form a plurality of strips, a guide line on each of said strips, a scaled finder of a length equal to the width of said strips, said finder being fastened to the edge of a directory so as to be movable in said one direction over said strips and provided with a distinguishing scale mark adapted to be brought in alignment with said guide line.

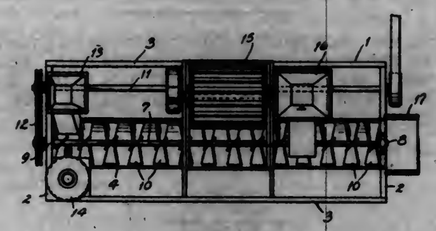
1,755,743. PHONOGRAPH DISK RECORD. EDGAR H. MORRISON, Virginia Beach, Va. Filed Nov. 2, 1928. Serial No. 316,807. 2 Claims. (Cl. 274—42.)

2. In a phonograph record, a circular disk and a hub for said disk forming an inseparable unit therewith, the interior diameter of the hub corresponding to that of the phonograph spindle, and said hub provided with radially projecting prongs lying flat against the side surfaces of the disk.

1,755,744. GOFFERED ARTICLE. ERNST OLOF MUNKTELL, Stockholm, Sweden. Filed May 26, 1926, Serial No. 111,897, and in Sweden May 26, 1925. 2 Claims. (Cl. 154—33.)

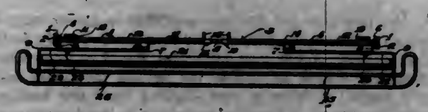
2. The process of preparing a thin soft flexible laminated cellulose product which comprises goffering a plurality of thin layers of cellulose wadding laid upon each other, then impregnating the goffered material and thereafter pressing the impregnated material in order to felt the layers of cellulose wadding together and thereafter pressing a pattern on the product.

1,755,745. WEIGHT EQUALIZER FOR DISPENSING GASOLINE, OIL, ETC., FROM STORAGE DRUMS. JOHN W. PARR, Magma, Ariz. Filed May 18, 1927. Serial No. 192,818. 1 Claim. (Cl. 248—52.)



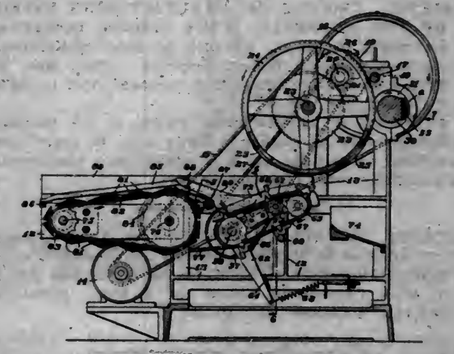
A weight-equaliser frame of suitable size to support a storage drum, said frame comprising a bottom strip, spaced vertical frame members attached to the bottom strip and of substantial height and an over-balancing bar attached to and connecting the upper ends of the aforesaid frame members, means for releasably securing the drum in said frame, pivots mounted on the frame, vertical supports in which the pivots are mounted and a base to which the vertical supports are rigidly secured, and a strip attached to the base and extending in front of the bottom strip of the weight-equaliser frame to function as a stop member to prevent the frame from swinging past a vertical position when it is released from a horisontal position.

1,755,746. POCKET LIGHTER. ALFFOLO PERRERA, Paris, France. Filed Jan. 18, 1927, Serial No. 160,907, and in France Dec. 2, 1926. 6 Claims. (Cl. 67—7.1.)



3. A pocket lighter, comprising a body, a supplementary casing in the body, spaced therefrom and connected to the inner wall of the body between the ends of the latter, said body having a slot longitudinal thereof above the point of connection between the body and casing, a wick support in the top of the casing, a pyrophoric device in igniting position to the wick holder, a perforated shield in the space between the body and casing, and a button passing through the slot and connected to the sheath, said sheath having a window positionable between the wick holder and ignition device.

1,755,747. METHOD OF AND APPARATUS FOR SEPARATING SEEDS. WILLIAM A. RICE, Jerseyville, Ill. Filed July 26, 1928. Serial No. 295,433. 2 Claims. (Cl. 209—45.)

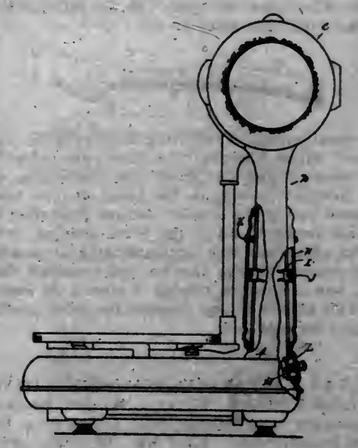


1. The herein described process of separating seeds which become mucilaginous when moistened from seeds which do not become mucilaginous when moistened, which consists in agitating said seed mixture and applying water to moisten said mixture while said seed mixture is in a state of agitation, then conveying said seed mixture while in a state of agitation through a blast of air thereby to remove the moisture from the seeds which do not become mucilaginous when moistened, introducing dry sawdust into said seed mixture while still being agitated, then separating the seeds and sawdust in the usual way by means of screens and fans.

1,755,748. SHADE AND CURTAIN SUPPORT. LULA H. ROBINSON, Dallas, Tex. Filed July 18, 1927. Serial No. 206,464. 2 Claims. (Cl. 156—27.)

2. In a shade and curtain hanger, tracks, an extensible shade and curtain carrier, slidable track engaging latches on the carrier, links secured to the inner ends of the latches, spring pressed means for independently tensioning each of the latches connected thereto and to the carrier, a sliding link for each latch, means to adjustably connect the first named links to the sliding links, means to restrict sliding the sliding links, and operating grips on the inner ends of the sliding links.

1,755,749. MACHINE FOR MARKING ROUND ARTICLES. FREDERICK J. SEVIGNÉ, Milford, N. H., assignor to F. J. Sevigne Machine Company, Nashua, N. H., a Corporation of New Hampshire. Filed May 18, 1929. Serial No. 364,285. 15 Claims. (Cl. 101—40.)

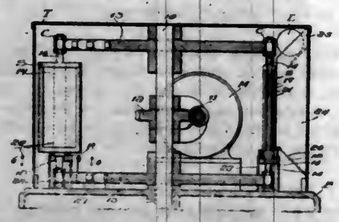


1. A fruit-marking machine having a wheel provided with a printing die, and said wheel being roughened in peripheral alinement with the die, means for inking the die, and means for supplying fruit to position adjacent to the wheel in time for the fruit to be simultaneously marked by the die and rolled along by the wheel.

1,755,750. MANUFACTURE OF ESTERS OF THE BORNEOLS. KARL STEPHAN and FRITZ ULFFERS, Berlin-Charlottenburg, Germany, assignors to Schering-Kahlbaum Aktiengesellschaft, Berlin, Germany. Filed Mar. 30, 1926, Serial No. 98,625, and in Germany Apr. 11, 1925. 2 Claims. (Cl. 260—99.)

1. Process of manufacturing esters of the borneols which consists in heating highly concentrated formic acid with camphene in the presence of pyrophosphoric acid at about 60° C. and taking care that a temperature of 70° C. is not exceeded, distilling off the excess of formic acid and washing the product of the reaction.

1,755,751. SCALE. WALTER F. STIMPSON and WILLIS E. FINCH, Louisville, Ky.; said Finch assignor to said Stimpson. Filed Jan. 26, 1925. Serial No. 4,834. 7 Claims. (Cl. 265—36.)



1. In a scale, the combination with a hollow pedestal and a cylinder housing at the upper end thereof, of a

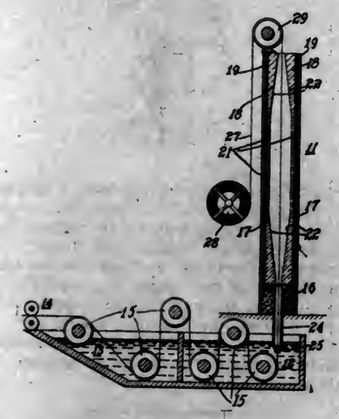
removable end plate for said cylinder housing provided with a marginal flange for telescopically engaging said housing, and a spring clip for retaining said end plate upon said housing.

1,755,752. PROCESS OF MANUFACTURING ESTERS OF THE BORNEOLS. FRITZ ULLYERS, Berlin-Charlottenburg, Germany, assignor to Schering-Kahlbaum Aktiengesellschaft, Berlin, Germany. Filed Mar. 30, 1926, Serial No. 98,626, and in Germany Apr. 11, 1925. 8 Claims. (Cl. 260—99.)

1. Process of manufacturing esters of the borneols, which consists in causing a fatty acid to react upon camphene without the use of a catalyst at a temperature substantially above room temperature.

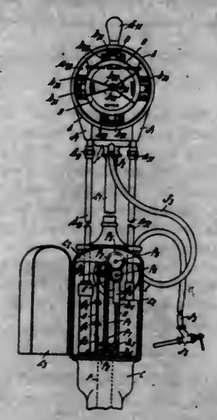
1,755,753. MOVABLE SIGN. HUGO H. VOSS, Chicago, Ill., assignor to Mayer's Moveable Merchandiser, a Copartnership consisting of Milton M. Mayer and Robert T. Mack, Chicago, Ill. Filed Apr. 5, 1928. Serial No. 267,741. 4 Claims. (Cl. 40—97.)

1. The combination with a flexible sign element comprising a series of sign units, each sign unit consisting of a rectangular plate having opposed faces, a flange surrounding each of said faces at its lower and longitudinal sides, said flange terminating in a lip to form a groove for removably holding a panel bearing display matter, of a housing enclosing said element and having an exhibition opening therein, means for continuously moving said sign element across said exhibition opening, said sign units occupying coplanar positions when passing across said exhibition opening and combining in a relationship to form a unitary sign, and means for reversing said units after passing said opening whereby they combine to form a new unitary sign.



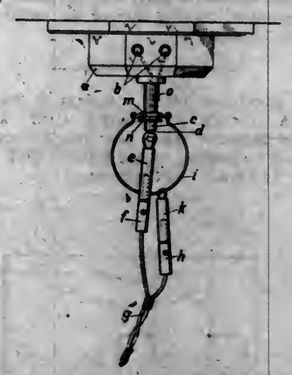
1,755,754. NASAL SYRINGE. REINHOLD H. WAPPLER, Yonkers, and FREDERICK CHARLES WAPPLER, New York, N. Y. Filed Dec. 9, 1927. Serial No. 238,810. 10 Claims. (Cl. 128—240.)

1. A nasal syringe comprising concentrically arranged inner and outer conduits, the inner one comprising a tubular element and the outer one comprising a bored element adapted to engage the inner one in said bore, the forward end of the tubular element projecting slightly beyond the forward end of the bored element, the latter having an additional bore communicating at an agle with the rear position of the annular space around the inner element, and means for forcing a stream of liquid with considerable kinetic energy through the inner conduit and out of said forward end.



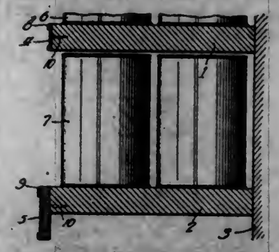
1,755,755. APPARATUS FOR NORMALIZING AND PICKLING METALS. FRANK J. WINDER, Brackenridge, Pa., assignor to Allegheny Steel Company, a Corporation of Pennsylvania. Filed Mar. 16, 1928. Serial No. 262,082. 5 Claims. (Cl. 263—3.)

5. An apparatus for normalising sheet metal including a vertical furnace having an outer metal wall and an inner lining of refractory material, the inner portion of the said normalising apparatus terminating at each of its ends in a tapered reduced portion, a plurality of spaced



recesses in the refractory lining between the said tapered reduced portions for the reception of burners therein and a sealing boxing for the end of the lower reduced portion.

1,755,756. APPARATUS FOR DELIVERING LIQUIDS IN MEASURED QUANTITIES BY VOLUME. GEORGE WRAY, Southport, England. Filed July 1, 1926, Serial No. 119,857, and in Great Britain Jan. 25, 1926. 15 Claims. (Cl. 221—100.)



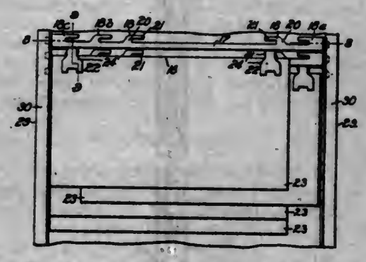
1. In apparatus for delivering liquids in measured quantities by volume in combination;—a fixed casing having a glazed front; a spout to which the liquid to be measured is supplied; means to control the flow of the liquid to the supply spout; a delivery pipe leading from the casing; a measuring vessel rotatably mounted in said casing and divided into a plurality of measuring compartments, each having a glazed front; a fill-pipe for each compartment; an overflow for each compartment, and means for rotating the vessel so as to bring any one of the measuring compartments into which the vessel is divided into the position in which it is filled to the overflow level through its fill-pipe from the supply spout, and afterwards for rotating the vessel so as to bring the said compartment to the discharge position in which it discharges its contents to the delivery pipe; substantially as described.

1,755,757. CONNECTION APPARATUS FOR THE WIRES OF HEAD RECEIVERS FOR BROADCASTING. OTTO ZAHN, Hanau-on-the-Main, Germany. Filed Dec. 1, 1923, Serial No. 323,157, and in Germany June 21, 1928. 1 Claim. (Cl. 173—338.)

An apparatus for connecting to the main line the wires of head receivers for broadcasting, comprising in combination a box, two contact sleeves in said box adapted to be connected to the main line, a sleeve of insulating material downwardly projecting from said box, a metal pin in said insulation sleeve connected to one of said contact sleeves in said box, a ball-shaped head on the lower end of said pin, a plug sleeve loosely mounted on said ball-shaped head so that it can rotate around the same adapted to receive a contact plug from the head receivers, a metal sleeve on said insulation sleeve connected to the second contact sleeve of said box, a collar on said metal sleeve, a metal frame loosely resting on said collar, a ring attached to said frame, and a contact sleeve suspended on said ring designed to receive a contact plug of the other wires of the head receivers.

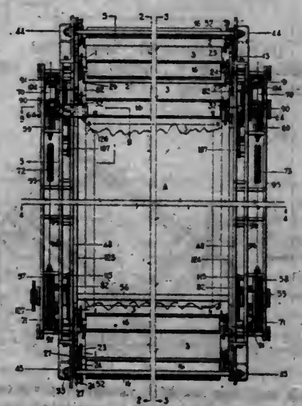
1,755,758. LABEL HOLDER. FRANK M. ZIMMERMAN, Aurora, Ill. Filed Feb. 20, 1928. Serial No. 255,646. 4 Claims. (Cl. 40—16.)

1. A label holder comprising a molding grooved on its front side to receive a label and having top and bottom flanges turned convergently to hold the edges of the label, the top flange being appreciably wider than the bottom flange, and the bottom flange having an abruptly inclined inner face whereby a V-shaped channel is provided of sufficient acuteness to wedgingly embrace the lower edge of the label and prevent accidental lateral displacement thereof.



1,755,759. POCKET MICROSCOPE. KARL AHMELS, Kassel, and LUDWIG OHM, Gudensberg, near Kassel, Germany. Filed June 30, 1928. Serial No. 289,455. 3 Claims. (Cl. 88—39.)

1. A pocket microscope, comprising, in combination, an ocular tube and an ocular lens in it; an objective tube and an objective lens in it, this tube being shiftable in the ocular tube, and cut-off obliquely at its lower end so as to



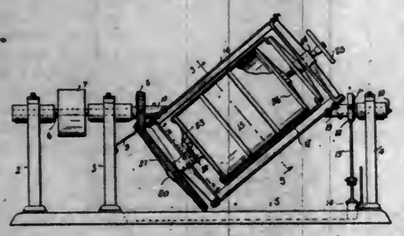
form there a point of support and permit free access of light to the object to be observed, substantially as set forth.

1,755,760. FILE. STANLEY ANTHONY, Boston, Mass. Filed Aug. 2, 1928. Serial No. 297,067. 14 Claims. (Cl. 129—16.7.)

9. In a file, the combination of a main sheet carrier comprising a flat bar having on one edge two projections having tongues whose free ends are directed toward each other, a folded sheet mounted on and receiving said carrier within its fold and provided with perforations through which said projections extend, auxiliary sheet carriers mounted on said tongues, respectively, and an auxiliary sheet carried by said auxiliary sheet carriers.

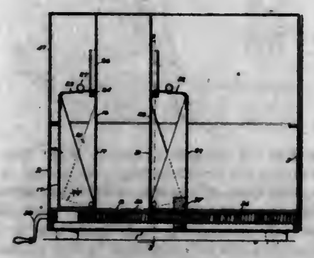
1,755,761. DISPLAY MACHINE. HENRY ARMSTRONG, Syracuse, N. Y., assignor to The O. M. Edwards Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 31, 1928. Serial No. 316,192. 67 Claims. (Cl. 40—31.)

1. In a display machine, the combination of a plurality of pairs of rolls; a carriage for each pair of rolls movable



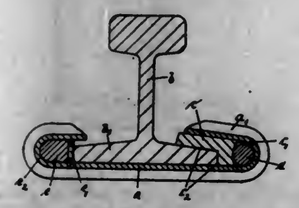
in a closed cycle of movement to carry said pairs of rolls intermittently from starting position in one path across a display area and in a return path remote from the display area back to starting position; curtains connecting the rolls of said pairs of rolls in a closed series; timed mechanism for actuating said carriages intermittently across the display area and the return path; and timed mechanism to effect unrolling of the curtain from the first roll of a pair of rolls moving across the display area and rolling up the curtain previously unrolled on the second roll of the pair of rolls moving across the display area and effecting reverse curtain rolling and unrolling operations during movement of the pairs of rolls in the return path whereby the curtains are rolled on the first roll of the pair of rolls moving to starting position.

1,755,762. SUCKER-ROD GUIDE AND CLEANER. JOHN C. ARMSTRONG, Fillmore, and JOSEPH E. WALLIS, Los Angeles, Calif. Filed Jan. 9, 1929. Serial No. 331,184. 8 Claims. (Cl. 166—18.)



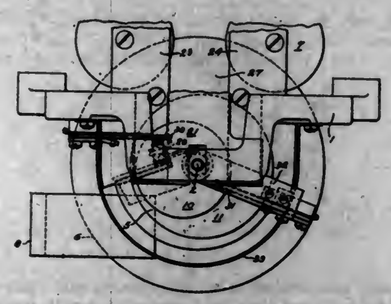
1. For use in combination with a well tubing and a sucker rod, a tubing cleaner embodying: bearing members adapted to be rotatably mounted upon said sucker rod; and radially extending blades interposed between said bearing members, said bearing members comprising a plurality of segments, and collars holding said segments in assembled relation.

1,755,763. DRUM-WASHING MACHINE. JAMES T. BARBER, Brooklyn, N. Y. Filed Nov. 23, 1927. Serial No. 235,389. 3 Claims. (Cl. 141—6.)



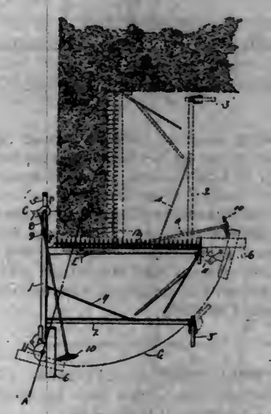
1. A drum washing machine comprising spaced shafts in longitudinal alinement, a frame supported by the shafts at diagonally opposite points, a fixed gear wheel having one of said shafts passing loosely therethrough, a second frame journaled within the before mentioned frame and provided with means for securing the drum to be cleaned, a shaft loosely mounted in both of said frames, a gear wheel fast to the last mentioned shaft and in mesh with the fixed gear wheel, and a ratchet and pawl connection between the last mentioned shaft and the inner frame to admit of independent turning thereof for removing or placing the drum in position.

1,755,764. POSTING TRAY. CURTIS C. BENEDICT and HARLEY A. TULLIS, Los Angeles, Calif., assignors to Flach and Benedict, Inc., Los Angeles, Calif., a Corporation of California. Filed Nov. 2, 1927. Serial No. 230,547. 11 Claims. (Cl. 129—16.)



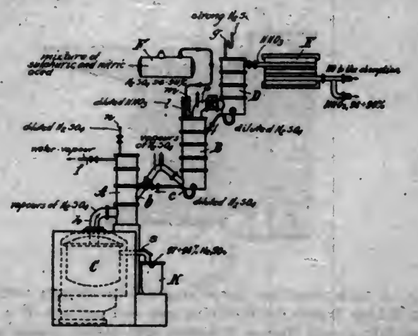
10. In a posting tray, a pair of carriages, each comprising a back plate having offset portions, a sheet-retaining plate pivoted adjacent its lower edge to said offset portions, and a locking plate pivoted to one of said plates and in sliding engagement with the other of said plates, said locking plates being adapted to optionally lock said sheet-retaining plates in parallel relationship to each other or to release the sheet-retaining plates for movement away from each other about their respective pivotal mountings.

1,755,765. RAIL-BONDING MEANS. RUDOLF BÖMO, Rotha/Leipzig, Germany. Filed Feb. 27, 1928, Serial No. 257,442, and in Poland Jan. 3, 1927. 3 Claims. (Cl. 173—262.)



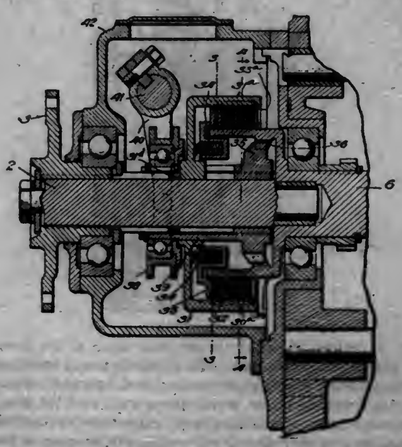
1. A bonding means for railroad rails comprising a one piece yoke adapted to underlie the base flange of the rail and having return bend portions to overlie the base flange, a contact plate of angle form held between one of the base flanges and the return bend of the yoke, and confined against the top and edge portion of one of the flanges of the rail and one of the return bends of the yoke, a wedge arranged between the opposite edge of the base flange and the other return bend of the yoke, and a connector secured between the contact plate and the adjacent return bent portion of the yoke whereby the wedge locks the yoke, contact plate, and connector, to the rail.

1,755,766. DIRECT-CURRENT RELAY. JOHN V. BREISKY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 25, 1925, Serial No. 52,454. Renewed Sept. 11, 1929. 9 Claims. (Cl. 175—339.)



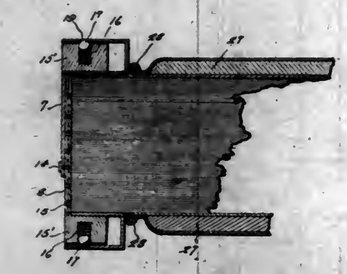
1. A relay comprising a movable magnetizable armature member, a polarized field magnet having a split pole piece co-operating with said armature member and differentially-related windings on the respective portions of said split pole piece for controlling the armature member.

1,755,767. MOTOR AGRICULTURAL MACHINE. ALEXANDER T. BROWN, Syracuse, N. Y. Filed Mar. 21, 1923. Serial No. 626,545. 1 Claim. (Cl. 56—25.)



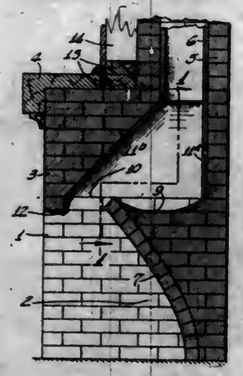
In a motor mowing machine, a lengthwise main frame having a supporting wheel at its front end and a corner turning and tractor wheel at its rear end arranged to normally move in a straight line one behind the other, a mower knife extending laterally from the main frame in the rear of the axis of rotation of the front wheel and near the front end of the frame, the tractor and corner turning wheel being movable into an angular radial position whereby it travels in an arc having approximately the same center as the arc of travel of the front wheel when the machine is turning a corner, the rear corner turning and tractor wheel when in angular position being so arranged relatively to the front wheel that a continuation of the axis of rotation of the rear wheel intersects a continuation of the axis of rotation of the front wheel when in straight position at a point on the inner side of the frame in front of the mower knife whereby both front and rear wheels travel when turning a corner in arcs having approximately the same center located on the inner side of the front wheel in front of the mower knife.

1,755,768. DENITRATION OF WASTE ACID MIXTURES. WILLI BÖSCHING, Halle-Saale, Germany. Filed Aug. 15, 1927, Serial No. 213,025, and in Germany Sept. 3, 1926. 2 Claims. (Cl. 23—161.)



1. A continuous process for denitrating waste acid comprising the steps of concentrating sulphuric acid, leading part of the sulphuric acid vapors into a denitration column in counter-current to a flow of heated waste acid, dephlegmating the remainder of the sulphuric acid by removing the water-steam from the nitric acid, washing the nitric acid vapors with sulphuric acid, condensing the nitric acid vapors to concentrated nitric acid and returning the washing sulphuric acid to the first concentration stage.

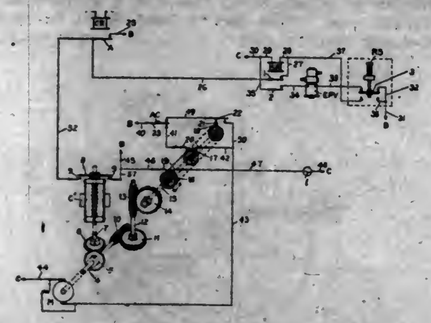
1,755,769. TRANSMISSION MECHANISM. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,209. 4 Claims. (Cl. 192—53.)



1. In a transmission mechanism, the combination of a transmission shaft and a driven shaft arranged in axial alinement, a clutch mechanism between said shafts comprising a drum mounted on the transmission shaft and enclosing a portion of the driven shaft, the drum having internal teeth, a second drum on the driven shaft having a portion enclosing and spaced apart from the former drum, coacting axially-shiftable elements associated respectively with the drums, a toothed member slidable on the driven shaft within the first drum into and out of engagement with the internal teeth and throw-out mechanism arranged to successively disengage the toothed member from the internal teeth and disengage the friction elements, and to engage said elements and the toothed member with the internal teeth in the reverse order.

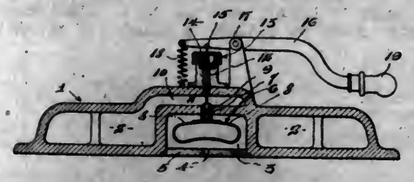
1,755,770. LOOSE-LEAF BINDER. JOHN E. CARR, Atlanta, Ga. Filed Feb. 19, 1929. Serial No. 341,206. 4 Claims. (Cl. 129—35.)

1. A book structure comprising a substantially rectangular binder frame for receiving one end portion of a loose leaf filling said frames including side pieces, clamp means on said frame for engagement with said end portion of the filling, and means for varying the width of the frame, said means consisting of a pair of detachable end pieces, said end pieces being each divided into a pair of sections, a lateral head for one end of each section for engagement with one end of one of the frame side pieces, and means for adjustably connecting the other end portions of the complementary sections together.



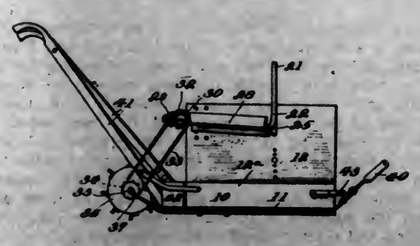
1,755,771. CHIMNEY STRUCTURE. ROY F. CHAMBERS, San Gabriel, Calif. Filed Dec. 5, 1927. Serial No. 237,669. 4 Claims. (Cl. 126—120.)

1. A molded chimney throat liner open at its lower and its upper ends, the rear wall being flat and substantially vertical, the front wall being inclined upwardly and backwardly from its lower to its upper end, and its side walls being upwardly converging with respect to each other and joined to the rear and front walls, all forming a free unobstructed upwardly converging and gradually reducing passage from its lower to its upper end, said liner being adapted to be telescoped over and within other liners for stacking and economically storing the same, the inner surfaces of all walls of one liner, when stacked over another liner, engaging the outer walls of the latter.



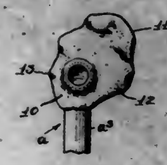
1,755,772. ACKNOWLEDGING DEVICE FOR TRAIN-CONTROL SYSTEMS. CHRISTIAN A. CHRISTOFFERSON, St. Paul, Minn., assignor to The General Railway Signal Company, a Corporation of New York. Filed Jan. 30, 1926. Serial No. 84,960. 10 Claims. (Cl. 246—183.)

1. In an automatic train control system, the combination with a brake applying appliance, a stick relay governing said appliance, means controlled from the trackway for temporarily interrupting the stick circuit of said relay, and



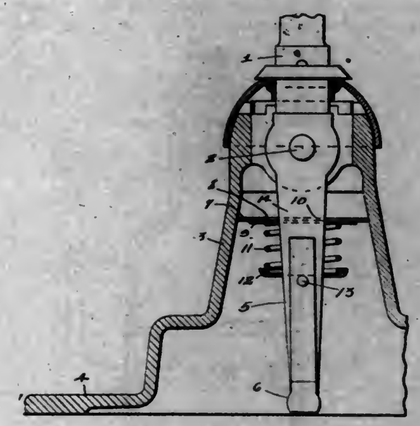
manually operable means for maintaining said relay energized for a limited time, said manually operable means including an electric motor.

1,755,773. PRESSING-MACHINE ELEMENT FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 5, 1928. Serial No. 267,553. 2 Claims. (Cl. 68—9.)



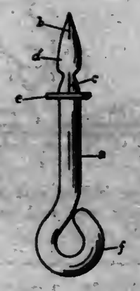
2. A pressing machine element formed with a heated bottom chamber having perforations opening through the pressing face of said element, a closed separator and converter conduit oblong in general form in cross section located within the chamber and spaced from the walls thereof, and having the end portions of its oblong formation lower than its central portion, said conduit having steam outlets in the top side thereof, and its bottom side being imperforate, and means for supplying and controlling the flow of steam to said conduit.

1,755,774. BOLL-WEEVIL CATCHER. HEZAKIAH K. DOWDY, Cordele, Ga. Filed Jan. 15, 1927. Serial No. 161,380. 7 Claims. (Cl. 43—142.)



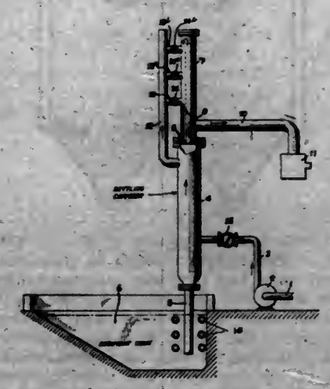
1. A boll weevil catcher comprising a receptacle capable of resting upon and being drawn over the ground in the vicinity of growing plants, a pan for containing a lethal liquid carried by said receptacle, a screen covering said receptacle, the mesh of said screen being sufficiently coarse to permit insects to pass therethrough, but fine enough to prevent passage of leaves, squares and the like, means between the screen and the pan for directing the insects into said pan, means for bending over the growing plants, and agitating means operated by movement of said receptacle for further bending said plants so as to cause them to sweep said screen clear of any accumulations of leaves, squares and the like.

1,755,775. EARPIECE. ANDREW C. DUNN, St. Paul, Minn. Filed Mar. 13, 1923, Serial No. 624,768. Renewed Sept. 16, 1929. 2 Claims. (Cl. 181—23.)



1. An earpiece for a sound conveying tube having a right angular bend therein providing a normally horizontal branch and a normally depending branch, said earpiece comprising a body shaped to fit within the outer ear and formed about the bend in said tube, said body having an opening at its inner side bringing the horizontal branch of the tube into communication with the auditory canal of the ear and formed with proturberances thereon arranged to interlock with the ear folds at either side of said tube.

1,755,776. OIL-TIGHT TRANSMISSION-GEAR HEAD. ERNEST EATON, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 29, 1927. Serial No. 187,638. 4 Claims. (Cl. 74—39.)

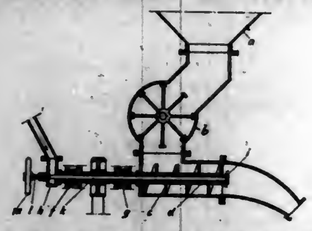


1. The combination of the gear shifting lever of the transmission gearing and the housing in which the lever is pivoted, the lower arm of the lever extending downwardly through the housing and the housing having a transverse partition formed with an opening through which said arm of the lever extends, a sliding closure for the opening in the partition, said closure having an opening substantially fitting the said lever arm, a spring abutment mounted on the lever arm below the closure and a spring interposed between the abutment and the closure.

1,755,777. LANCET. CLAUS FREDERIKSEN, Nordborg, Denmark. Filed Feb. 12, 1929, Serial No. 339,883, and in Germany May 2, 1928. 1 Claim. (Cl. 128—314.)

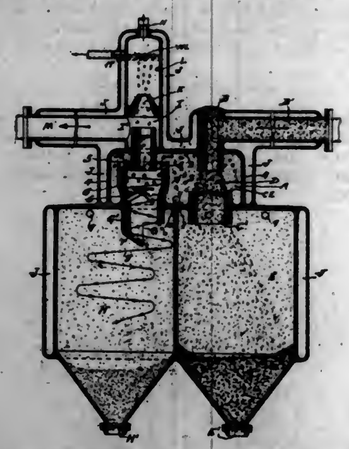
An instrument of the lancet type for the loosening of the cheese-like mass in the teats of cows, comprising a rod terminally provided with a double edged blade, the rod inwardly of the point being of reduced diameter, and a limiting disk carried by the rod below the portion of reduced diameter.

1,755,778. DISTILLATION APPARATUS. JOHN A. GIBB, New York, N. Y., assignor to Zieley Processes Corporation, New York, N. Y., a Corporation of Maine. Filed Nov. 20, 1925. Serial No. 70,215. 3 Claims. (Cl. 196—114.)



1. In a multi-unit still for the continuous distillation of hydrocarbon oils under vacuum, means forming a continuous passage for oil from one still unit to another, means interposed in said passage for separating sediment from the oil, and means forming an open conduit from said separating means to the atmosphere for the removal of collected sediment, said conduit being sealed by the oil therein, the said passage, separating means and conduit being of a height sufficient to provide a head of liquid therein equal to the difference between atmospheric pressure and the vacuum maintained in said still.

1,755,779. CONVEYER FOR PULVERIZED MATERIAL. PAUL GOEBELS, Dessau, Germany, assignor to the Firm G. Polysius, Dessau, Germany, a Partnership. Filed Oct. 15, 1926, Serial No. 141,816, and in Germany May 5, 1926. 2 Claims. (Cl. 302—50.)

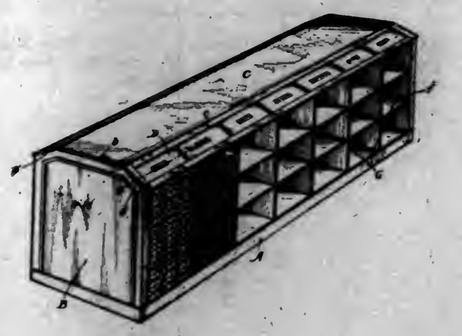


1. A conveyer for comminuted or pulverized material, comprising a driving worm, a hollow shaft therefor, a

nozzle associated with said hollow shaft at its end which is positioned in the conveyer, means for regulating said

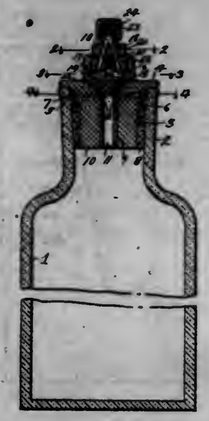
nozzle from the other end of said shaft, and means for conveying pressure air into said conveyer through said hollow shaft and said nozzle.

1,755,780. LINE FILTER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1926. Serial No. 93,275. 22 Claims. (Cl. 209—211.)



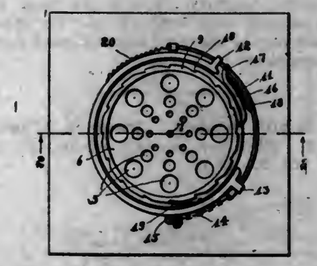
1. The herein described process of filtering fluids without resort to screens that consists in establishing three substantially quiet and vertically extended bodies of the fluid under treatment, cross-connecting the upper end of the first and second of said bodies and cross-connecting the upper end of the second with the lower end of the third body, admitting the fluid longitudinally against the upper end of the first body and thereby depositing its heavier substances therein, subjecting the partly purified fluid to longitudinally downward rotative motion between the second and third bodies and thereby depositing the remaining heavy substances in said second body, directing the twice purified fluid longitudinally against the lower end of the third of said bodies, and thus delivering the lighter substances to the surface of said third body, and, finally directing the movement of the purified fluid from the lower part of said third body.

1,755,781. INSULATING LUMBER OR WALL BOARD. JAMES J. HINDS, Sandusky, Ohio. Filed July 22, 1926. Serial No. 124,276. 2 Claims. (Cl. 154—45.9.)



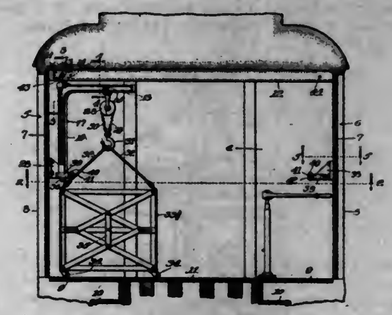
1. A building material composed of layers of the hard fibrous material of the external casing of pithy plants, alternating with the layers composed of the internal pithy structure of said plants.

1,755,782. DISPLAY COUNTER. SEVERN G. HONSTEAD, Nampa, Idaho. Filed Mar. 22, 1928. Serial No. 263,854. 1 Claim. (Cl. 312—118.)



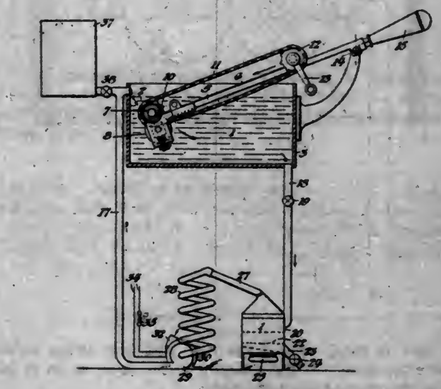
A display case including a base, vertical end walls and partitions having flat central portions and inclined corner portions, a flat counter extending from the flat central end portions of said end walls and resting upon similar portions of said partitions, inclined display windows arranged between the inclined corners of said ends and being supported upon the inclined portions of said partitions, horizontal partitions arranged between the vertical partitions and forming a series of compartments, and removable carriers positioned beneath said display windows and supported on guideways permitting their lateral movement with relation to said windows.

1,755,783. NONREFILLABLE BOTTLE. ANTONIO IMPELLITTERI, New London, Conn. Filed May 18, 1927. Serial No. 192,174. 1 Claim. (Cl. 215—19.)



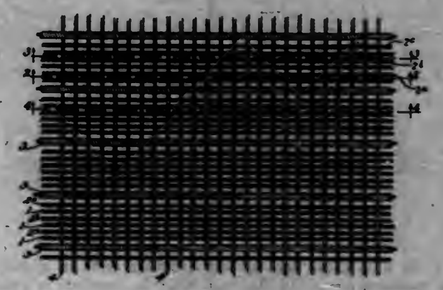
A non-refillable bottle stopper comprising a body member adapted to be received in the neck of a bottle, an axially movable valve sleeve slidably mounted in the body member and having a longitudinal chamber therein and ports extending through the sleeve at opposite sides thereof adjacent its outer end, said body member adjacent the outer end of the sleeve being provided with a chamber, said chamber adjacent the sleeve being of greater diameter than the sleeve and of less diameter than the other portion of the chamber, a valve seat between the two diameters of the chamber, a valve carried by the sleeve and cooperating with the seat, a plug in the chamber of the body member above the valve in spaced relation thereto and having upwardly and inwardly converging and connecting discharge ports, an extension carried by said valve and slidably mounted in a chamber between the inner ends of the discharge ports and a spring cooperating with said extension and forming means for maintaining the valve seated during the non-pouring operation.

1,755,784. CEILING VENT. JAMES JENNER, Los Angeles, Calif., assignor of one-half to Karl Schumacher, Los Angeles, Calif. Filed Apr. 13, 1927. Serial No. 183,568. 2 Claims. (Cl. 98—101.)



1. A vent of the class described comprising a vent plate, a disc turnably mounted on the vent plate, a ratchet mechanism for rotating the disc in relation to the vent plate, and a chain extending from the ratchet mechanism through the vent plate to protrude from the surface of the vent plate.

1,755,785. LUGGAGE UNLOADER FOR RAILWAY CARS. ALVIN C. MCCORD, Chicago, Ill. Filed Dec. 15, 1927. Serial No. 240,093. 3 Claims. (Cl. 214—65.)

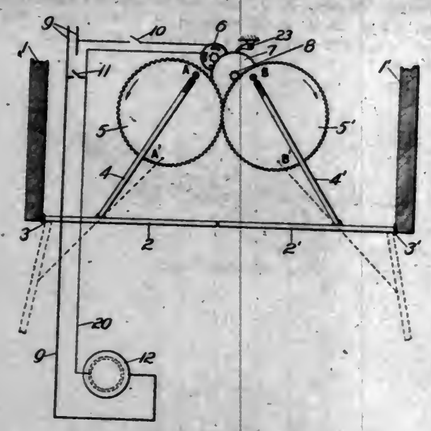


1. The combination with the vestibule of a railway car, of a container for hand luggage, a trackway in the vestibule and extending from side to side thereof, a crane supported by said trackway and shiftable along the same to either side of the vestibule, said crane having a vertical arm and a horizontal arm, means fixed in the vestibule at the opposite sides thereof and providing a pivotal support for the vertical arm whereby the horizontal arm may be swung into and out of the vestibule to either side of the car, and a hoisting device carried by the horizontal arm whereby the container may be lowered from the vestibule at either side of the car.

1,755,786. METHOD OF AND MEANS FOR MAKING TUBES OF CELLULOID AND THE LIKE. WILLIAM MENDEL, Beverly, N. J., assignor to Sanite Corporation, Burlington, N. J., a Corporation of New Jersey. Filed Nov. 14, 1928. Serial No. 319,279. 16 Claims. (Cl. 18—3.)

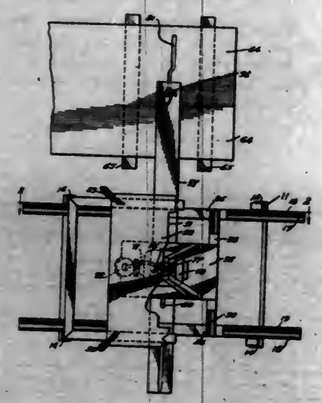
8. Apparatus for forming celluloid tubing, including means for winding a sheet of celluloid in a roll while immersed in a solvent bath and means for forcibly circulating the solvent in said bath during the winding operation.

1,755,787. ELASTIC WOVEN FABRIC. THOMAS F. MOORE, Westerly, R. I., assignor to George C. Moore Company, Westerly, R. I., a Corporation of Rhode Island. Filed Apr. 25, 1929. Serial No. 357,958. 2 Claims. (Cl. 139—423.)



1. Elastic webbing made up of a binder warp, covered rubber warp, and figure warp, with the binder warp and rubber warp being always on the same side of the weft wherever the binder warp changes direction in passing over or under the weft.

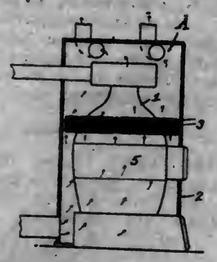
1,755,788. GARAGE-DOOR OPENER. ROBERT V. MORSE, Ithaca, N. Y., assignor to Frank L. Morse, Ithaca, N. Y. Filed Sept. 17, 1924. Serial No. 738,217. 2 Claims. (Cl. 268—35.)



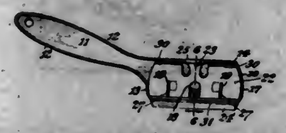
1. In a door opener, the combination of a gear, a door, a link directly connecting said door and said gear, said link being arranged so as to be on dead center when the door is fully open or fully closed, an electric motor ar-

ranged to run in one direction and connected to the gear, the direction of rotation of the gear being such that when

the door is being opened the link will first swing so as to be more nearly at right angles to the door, so as to increase the mechanical advantage.



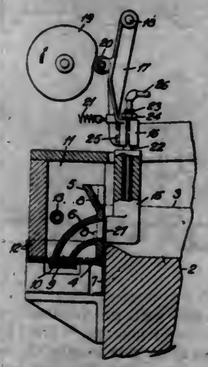
1,755,789. MACHINE FOR CUTTING IRREGULAR SHAPES. CHESTER MOTT, Denver, Colo., assignor, by mesne assignments, to Union Carbide and Carbon Research Laboratories, Inc., a Corporation of New York. Filed Feb. 14, 1928. Serial No. 254,215. 7 Claims. (Cl. 266—23.)



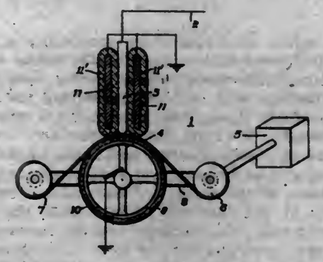
1. In a machine for cutting irregular slots in a plate, the combination of: a floating table; a templet; a guide roller engaging a contour edge of said templet; a driving roller engaging a face of said templet; means for rotating said driving roller, said means permitting a variation of the angle between the plane of said driving roller and a plane including the tangent to said contour edge at the point of contact between said guide roller and said contour edge; and means carried by said floating table for cutting said plate, said last-named means moving through a path followed by said guide roller.

1,755,790. HOT-AIR-FURNACE ATTACHMENT. ELMER R. NEVEL, Lock Haven, Pa. Filed Dec. 29, 1928. Serial No. 329,087. 2 Claims. (Cl. 126—118.)

1. The combination with the combustion chamber of a hot air furnace, of a band encircling said combustion chamber and being spaced therefrom, said band being formed with a series of vertically spaced slots at spaced intervals, a series of vertical radiating fins arranged radially with respect to the combustion chamber, and bendable tongues formed on the inner end of each fin for disposition through the respective slots in the band, the free ends of the tongues being bent laterally for engagement with the inner face of the band, and the outer face of the combustion chamber.



1,755,791. BLADE HOLDER. JOSEPH A. O'NEILL, New York, N. Y. Filed Nov. 28, 1927. Serial No. 236,220. 1 Claim. (Cl. 30—25.)

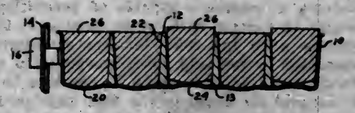


In a blade holder of the class described, a head having a handle disposed at an obtuse angle thereto, said head also having a finger ledge provided with a beaded portion, end flanges, a lock tongue disposed at an angle to its plane and parallel lugs, a guard plate having a finger piece to engage the finger ledge of the head and openings to receive the said lock tongue and lugs of the head for the purpose set forth.

1,755,792. FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Nov. 7, 1924. Serial No. 748,306. 7 Claims. (Cl. 49—55.)

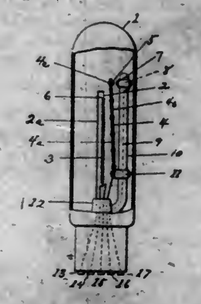
8. Apparatus for feeding molten glass, comprising a container for the glass having a submerged lateral discharge outlet, an impeller disposed in said container, means for moving said impeller periodically toward and from said outlet, a spout block mounted adjacent to said outlet, clamps for removably securing said spout block in place, a spout projecting from said spout block and communicating with said outlet, the said spout being curved outwardly and downwardly, and terminating in a downwardly opening orifice, an orifice ring mounted removably at the discharge end of said spout, an enclosure surrounding said spout, means for heating the interior of said enclosure, and shears for severing mold charges from the glass discharged from said orifice ring.

1,755,793. SURGE RECORDER. JOHN F. PETERS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 31, 1924, Serial No. 729,426. Renewed Mar. 6, 1929. 16 Claims. (Cl. 234—1.5.)



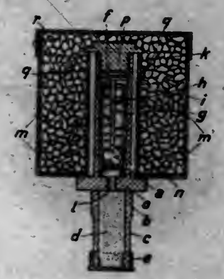
1. An instrument comprising a movable sensitized recording element, means for moving said element, and a shielded electrode adjacent to said element for cooperation therewith, and grounded metallic members for shielding the electrode to limit the area of the element affected thereby.

1,755,794. DISPLAY FORM. LOUIS W. REINHARDT, Brockton, Mass., assignor to George E. Belcher Company, Stoughton, Mass., a Corporation of Massachusetts. Filed June 6, 1925. Serial No. 35,434. 1 Claim. (Cl. 223—18.3.)



In a display form including in combination a foot having a hollow portion and an opening in the sole of the foot communicating wth the hollow portion, and a base having means thereon for supporting the form and locking said form in position so as to prevent removal by any relative lateral or longitudinal movement between the base and the form, said locking means including a post and a locking member thereon adapted to enter the opening in the sole of the foot, said locking member having a length greater than the width of the opening in the foot and being so disposed relative to the opening in the sole as to require relative rotary movement from the normal display position of the form between the display form and the base in order to pass the locking member through the opening in the sole of the foot, whereby when the form is normally positioned on the base the locking member assumes a position within the foot crosswise of said opening in the sole of the foot.

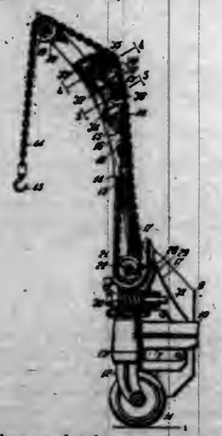
1,755,795. ICE-CUBE TRAY. COOPER B. RHODES, Washington, D. C. Filed June 15, 1928. Serial No. 285,590. 8 Claims. (Cl. 62—111.)



1. A metallic ice cube tray having side walls and a bottom to form ice cubes, said bottom having a normally convex flexible portion adjacent the cube, which may be flexed so as to eject the cubes.

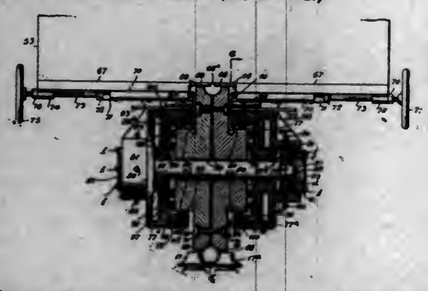
1,755,796. ELECTRON-TUBE APPARATUS. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Patents Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1924. Serial No. 754,957. 5 Claims. (Cl. 250—27.5.)

1. A vacuum discharge device having in a space therein, evacuated to a pressure at which substantially no positive ionization can occur, an electron emission element, an electron stream control element and an anode element composed of a thermosensitive bimetallic expansion element, and a plurality of contact elements, one of which is adapted to open and close an electric circuit, by its movement, actuated by variations of the electronic bombardment of said anode element in response to variations of potential applied to said control element.



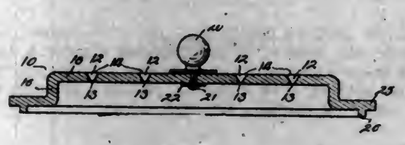
1,755,797. FUSE FOR SUBMARINE BOMBS. PAUL SCHWENKE, Zerbst, Anhalt, Germany. Filed Jan. 18, 1929, Serial No. 333,419, and in Great Britain Jan. 23, 1928. 1 Claim. (Cl. 102—3.)

A hydrostatic fuse for a bomb comprising a heat conducting sleeve element the lower end of which containing an ignitable substance, such as gunpowder, is secured in the end of the bomb and communicates with the upper end projecting from the bomb, a glass tube containing a substance capable of ignition when brought into contact with



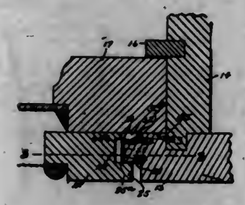
an acid supported in said projecting end of the sleeve, a second glass tube, arranged within the upper part of the sleeve element, containing the acid, a receptacle surrounding the upper end of the sleeve element having apertures and containing a substance capable of generating heat when brought in contact with water flowing in through said apertures when the bomb becomes submerged this heat transmitted to the acid tube causing it to expand and to finally break so as to allow its contents to admix with the material contained in the first mentioned glass tube whereupon the flame produced fires the explosive in the bomb through the medium of the gunpowder in the low end of the sleeve element.

1,755,798. PORTABLE CRANE. BERGER STOCKFLETH, Berrien Springs, and FREDERICK W. BURGER, Niles, Mich., assignors to Clark Tructractor Company, Battle Creek, Mich., a Corporation of Michigan. Original application filed Feb. 9, 1925, Serial No. 7,946. Divided and this application filed Apr. 16, 1928. Serial No. 270,232. 20 Claims. (Cl. 254—178.)



1. A hoisting mechanism comprising a hoisting chain, an upper sheave over which the load carrying portion of said chain operates, a driving sheave around which a bight of said chain runs and by which said chain is driven, and means actuated by the travel of the chain to maintain both sides of said bight taut relatively to said driving sheave.

1,755,799. WELDING MACHINE. MAXWELL H. SUSSMAN, Kew Gardens, N. Y. Filed June 29, 1929. Serial No. 374,705. 19 Claims. (Cl. 219—4.)

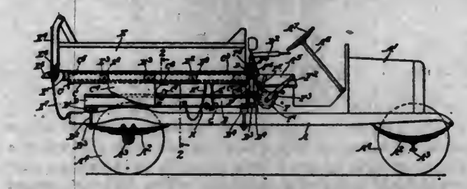


In an electrical welding machine, the combination of contact housings connected with a source of electricity, an electrode rotatably mounted in said housings and provided with end and circumferential contact faces, and contact devices carried by said housings and engaging respectively the end and circumferential contact faces of said electrode to transfer electrical current thereto.

1,755,800. SELF-BASTING COVER. OLAF TOLLAGSEN, Chicago, Ill., assignor to Aluminum Goods Manufacturing Company, Manitowoc, Wis., a Corporation of New Jersey. Original application filed Nov. 20, 1926, Serial No. 149,549. Divided and this application filed Sept. 29, 1928. Serial No. 309,151. 3 Claims. (Cl. 53—6.)

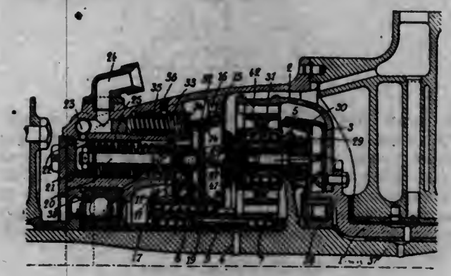
1. An article of manufacture comprising a relatively thick walled cover for cooking utensils, means comprising a plurality of apertures formed in the cover wall and opening through said wall for permitting the escape of steam outwardly through the cover and the dripping back of condensation inwardly through the cover, said apertures being enlarged outwardly within the thickness of the cover wall and having enlarged ends at the outer side of the thickness of the cover wall and reduced ends at the inner side of the thickness of said wall, the thickness of the cover wall being sufficient and the outward enlargement of said apertures such as to form condensation collecting pockets wholly within the thickness of the wall of the cover and solely by the outward enlargement of said apertures within the thickness of said wall and without bending the wall of the cover in addition to providing steam escape and condensation drip back apertures in order to form condensation collecting pockets adjacent said apertures.

1,755,801. WINDOW AND SCREEN THEREFOR. AINSLEY J. VINCENT, Lawrence, Mass. Filed July 30, 1928. Serial No. 296,272. 1 Claim. (Cl. 156—14.)



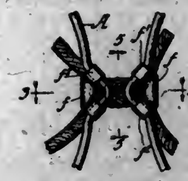
A window casing including a vertical outside member having a sash guiding face 35 arranged to bear on a complemental face on a sash, and a longitudinal screen guiding rib integral with said member and projecting from the sash-guiding portion thereof, said rib having a wide outer longitudinal face 21 in a plane parallel with the outer side of said casing member and offset inwardly therefrom, the face 21 being arranged to have an extended insect-excluding bearing on a complemental face of a screen frame, a narrow inner face 20 parallel with the outer face, offset from the sash guiding face 35 and arranged to guide a lip on a screen frame spring, a spring-guiding face 22 between the inner and outer faces, and a reinforcing fillet portion 33 integral with the casing member and rib and having a beveled face 33ª extending between the lip guiding face 20 and the sash guiding face 35, the arrangement of said faces being such that the portion of the integral rib formed in part by the fillet portion is wider than the spring guiding face 28, the fillet portion imparting a massive form to the inner portion of the rib, whereby liability of breakage of the rib from the casing member is reduced, the fillet portion compensating for the reduction of the cross section of the rib caused by the formation of the wider outer face 21 thereon.

1,755,802. PAD SUPPORT FOR PRESSING MACHINES. BENJAMIN WEINBERGER, Mount Carmel, Ill. Filed May 10, 1929. Serial No. 361,876. 5 Claims. (Cl. 68—9.)



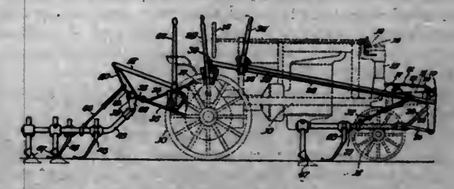
1. A device of the character described comprising densely compacted heat resisting nonmetallic indurated fibrous material of approximately uniform thickness throughout and having numerous holes therethrough, in combination with a wrapper of screening material enclosing said body.

1,755,803. DUMPING BODY. WILLIAM C. ANTHONY, Streator, Ill., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed Jan. 18, 1926. Serial No. 81,986. 7 Claims. (Cl. 298—12.)



1. In combination with a support, a carrying part and a member carrying said part, and resting upon said support and adapted of itself to tip the carrying part, a receptacle resting on said carrying part and adapted to move with it and to move laterally with relation to it and to tip with relation to it.

1,755,804. SPEED CHANGING AND REDUCING GEAR FOR AEROPLANE ENGINES. MARIUS JEAN-BAPTISTE BARBAROU, Paris, France. Filed June 4, 1929, Serial No. 368,402, and in France Mar. 12, 1929. 12 Claims. (Cl. 74—34.)

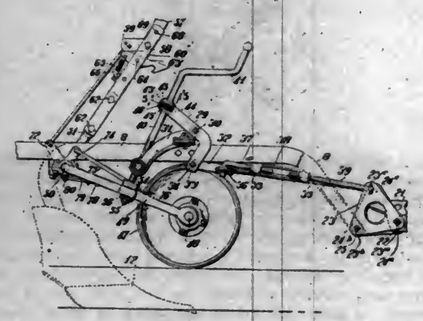


1. In a speed reducing gear, particularly adapted for aeroplane engines, the combination of a driving shaft, a rotary annulus rotatable with said shaft, a driven shaft, a pinion mounted loose on said driven shaft, hollow spindles supported from said driven shaft, planetary pinions loose on said spindles, respectively, and meshing with said loose pinion, a casing, a stationary annulus rigid with said casing, an axially movable member having teeth adapted for engagement either with said rotary annulus or with said stationary annulus according to its axial position, means for slidably connecting said member with said pinion, a first clutch member associated with said driving shaft, a second clutch member adapted to cooperate with said first clutch member, and thrust transmitting means extending through said hollow spindles, adapted to be engaged by said axially movable member before the latter engages said rotary annulus to move said second clutch member toward said first clutch member.

1,755,805. MATTRESS AND LIKE STRUCTURE. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 18, 1924. Serial No. 719,726. 1 Claim. (Cl. 5—267.)

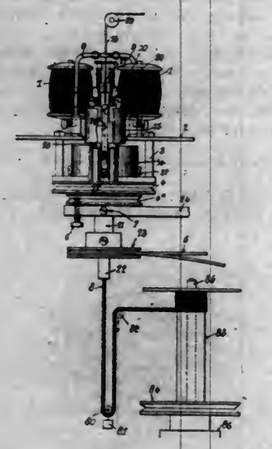
1. A mattress or like structure comprising a plurality of rows of coil springs arranged in juxaposition with their axes parallel, relatively short stout connections of flexible fibrous material extending between the end coils of adjacent springs and metallic fasteners rigidly united to said springs and rigidly securing said connections to the respective springs, the intermediate portions of said connections serving as hinges, as ties, and also as compression members for preventing metal to metal contact between adjacent metal parts associated with said compression members.

1,755,806. TRACTOR CULTIVATOR. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed June 30, 1926. Serial No. 119,528. 7 Claims. (Cl. 97—47.)



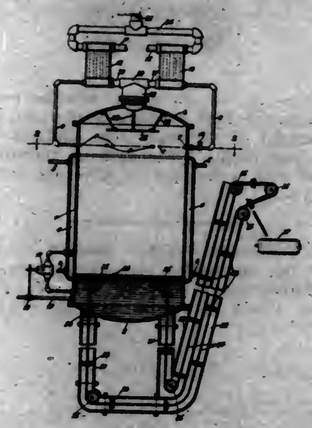
1. In a tillage implement, the combination with a motor propelled vehicle, of front and rear tool supports mounted thereon, a set of cultivating tools disposed in straddle-row relation and having two of the units composing the set connected to the front support with the units positioned to travel immediately adjacent opposite sides of a plant row space, and means for collectively shifting the units carried by said support transversely of the vehicle during travel thereof, and complemental units of the set connected to the rear support.

1,755,807. LOCK NUT. GEORGE I. BOLES, Wayne, Pa. Filed Apr. 6, 1929. Serial No. 352,982. 3 Claims. (Cl. 151—28.)



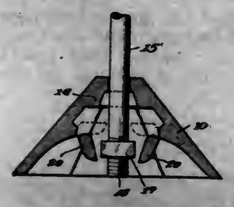
1. In a lock nut construction the combination of a bolt provided with a groove, a nut arranged to thread on said bolt and having a counterbore and a radial hole opening into said bore, and a curved washer slidable over the threads of said bolt having an inwardly disposed tongue to seat in said groove and an outwardly disposed tongue to enter said radial hole when said washer is pressed flat in said counterbore.

1,755,808. TRACTOR PLOW. THEOPHILUS BROWN and CARL G. STRANDLUND, Moline, Ill., assignors to Deere & Company, Moline, Ill., a Corporation of Illinois. Original application filed Jan. 28, 1924, Serial No. 689,029. Divided and this application filed Jan. 13, 1927. Serial No. 160,805. 23 Claims. (Cl. 97—73.)



1. A plow comprising a plow beam, a ground wheel, a vertically swinging member connecting the beam with said wheel, whereby the beam may be swung about the axis of said wheel to raise or lower the plow, a brake movably mounted on said member and adapted to cooperate with said heel to effect the swinging of said member to lift the plow by the draft power, and a manually-operable lever swinging substantially as a unit with said member for applying said brake.

1,755,809. MANUFACTURE OF TUBULAR CORDS OR BRAIDS. RENÉ LÉON GEORGES BURAUX, Le Pre-St.-Gervais, and PAUL JEAN MASSU, Paris, France, assignors of one-third to Maurice Ambroise Ernest Buraux, Le Pre-St.-Gervais, France. Filed Feb. 25, 1928, Serial No. 256,906, and in France Mar. 15, 1927. 3 Claims. (Cl. 66—9.)



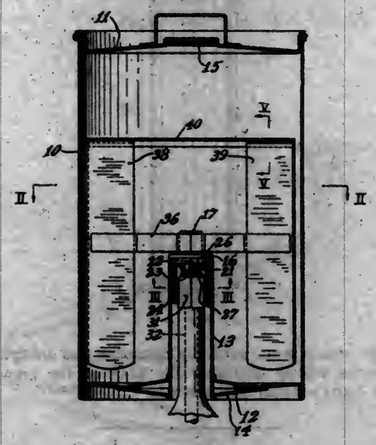
1. In a machine for knitting tubular cord, a bobbin carrier, a needle actuating member, means for holding said carrier and member stationary, reciprocating needles, a needle bed, means for rotating said needle bed together with said needles, a core feeding device and means for holding against rotation the cord delivered by the machine.

1,755,810. METHOD OF REFRIGERATION. SAMUEL C. CARNEY, Tulsa, Okla., assignor to Shell Petroleum Corporation, a Corporation of Virginia. Filed Oct. 1, 1925. Serial No. 59,796. 7 Claims. (Cl. 62—172.)

1. The process of forming ice bodies from water which consists in bringing into direct contact with the water a quantity of light hydrocarbons insoluble in the water, said hydrocarbons being of a character which will not impart any odor, taste or deleterious effect to the ice bodies, and evaporating the hydrocarbons under a partial vacuum.

1,755,811. EARTH ANCHOR. ALBERT B. CHANCE, Centralia, Mo. Filed Mar. 14, 1928. Serial No. 261,498. 5 Claims. (Cl. 189—90.)

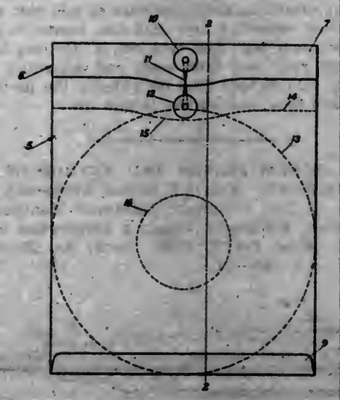
5. In an earth anchor, the combination of a guy member with an anchor member carried by one end of said guy member, means carried by said guy member for preventing movement of said anchor member off said end, and releasable means carried by one of said members, adapted to be actuated by impact on said guy member to release said guy member from said anchor member to bury said guy member in the earth.



1,755,812. INHIBITOR MATERIAL. LUDWIG J. CHRISTMANN, Jersey City, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Sept. 18, 1929. Serial No. 393,590. 8 Claims. (Cl. 148—8.)

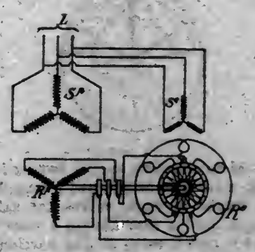
1. A method of cleaning or pickling metals which comprises subjecting the same to a pickling or cleaning bath containing a small amount of tetramethyl diamino diphenyl disulfide.

1,755,812. CHURN. CLIFFORD H. COLE, Birmingham, Ala., assignor, by mesne assignments, to Nineteen Hundred Corporation, Binghamton, N. Y., a Corporation of New York. Filed Jan. 21, 1929. Serial No. 334,085. 11 Claims. (Cl. 259—66.)



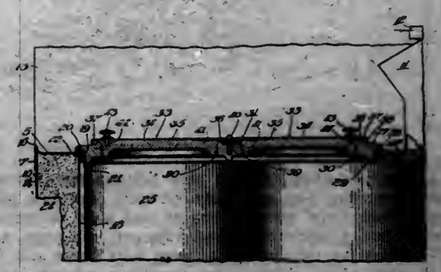
1. A churn comprising, in combination, a cream container having a central sleeve rigid therewith adapted to

enclose an upright driving shaft, an independently removable dasher element, and a coupling device comprising a cover closing the top of said sleeve and secured thereto, an angular lug formed on the underside of said cover, a coupling element having an angular opening fitting over



said angular lug, means for detachably securing said coupling element to said lug, said coupling element being constructed to form a driving connection with said driving shaft to oscillate the cream container, and an angular projection on the top of said cover constructed to form a driving connection with said dasher element.

1,755,814. ENVELOPE. HENRY C. COX, Kew Gardens, N. Y., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed Sept. 25, 1928. Serial No. 308,155. 6 Claims. (Cl. 206—1.)

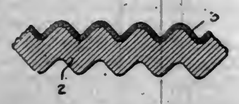


1. An envelope for disc phonograph records, the same being of a width approximately equal to the diameter of a record and being of a height greater than the diameter of a record, said envelope being open at one side, a flap for closing said side, and said envelope being perforated along a line to permit separation of the flap portion from the body portion and along a line to expose a portion of the record.

1,755,815. ALTERNATING-CURRENT ELECTRIC MACHINE. HENRI DE PISTOYE, Paris, France. Filed Mar. 30, 1926, Serial No. 98,452, and in Belgium Apr. 24, 1925. 4 Claims. (Cl. 172—274.)

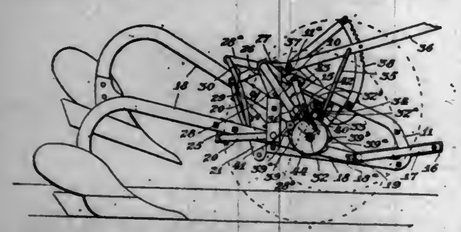
1. In an alternating current dynamo electric machine, the combination of a main electric machine having a stator and a rotor winding, and a commutator frequency convertor adapted to function as a phase advancing device and having a different number of poles than the main machine, said main machine and said frequency convertor being arranged so as to form a single magnetic circuit, said frequency convertor comprising a stator winding coupled to the stator winding of the main machine, a single rotor winding, a commutator, conductors leading from said single rotor winding to the commutator, a plurality of brushes mounted in frictional relation to said commutator, and conductors leading from said brushes to the rotor winding of the main machine, the rotor and stator windings of the main machine and the frequency convertor being connected so as to prevent the disturbing effects due to the difference in the number of poles of the main machine and the frequency convertor.

1,755,816. COOLER CABINET FOR SODA FOUNTAINS. TULLY DE STEFANI, Chicago, Ill., assignor, by mesne assignments, to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 8, 1925. Serial No. 20,375. 6 Claims. (Cl. 217—17.)



1. A cooler cabinet for soda fountains having a flat metallic capping provided with an opening therein and having an upwardly extending bead around said opening, a cover having an annular part of molded heat insulating material projecting over and contacting with said annular bead, said cover having an aperture therethrough, a bead extending upwardly around said aperture, and a lid for closing said aperture having a part extending outwardly and contacting with said bead.

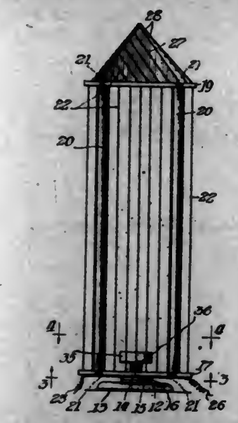
1,755,817. INTERNAL-COMBUSTION ENGINE. RAYMOND H. DIBLEY, Bathurst, New South Wales, Australia. Filed Apr. 30, 1927. Serial No. 187,941. 8 Claims. (Cl. 123—75.)



2. An internal combustion engine having intake and exhaust passages, a carburetor adapted to supply combustible gases to said intake passage, valves for said intake and exhaust passages, and a cam having a base circle portion of less than 180° and a valve lifting portion greater than 180° for opening said intake valve.

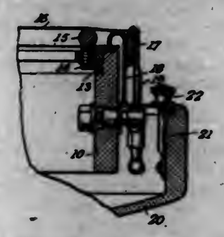
1,755,818. PAPER PRODUCT. PAUL B. GANZINOTTI, Union City, N. J. Filed Feb. 13, 1929. Serial No. 339,563. 2 Claims. (Cl. 41—24.)

1. As a new article of manufacture, a paper product for decorative uses comprising a translucent paper of highly finished surface thrown by embossing into a multiplicity of sloping areas, and a translucent coating covering one or both surfaces of said paper, said coating containing the crystalloid bodies obtained from fish-scales.



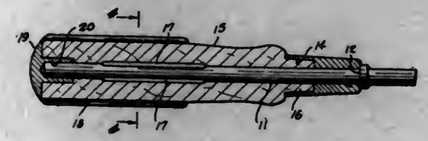
1,755,819. TWO-WAY TRACTOR PLOW. WILLIAM S. GRAHAM, Canton, Ill., assignor, by mesne assignments, to Fred Gerlach and Arnold B. Keller, trustees, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,521. 28 Claims. (Cl. 97—73.)

1. A plow having adjacent plow bottoms for alternate use, comprising two separately vertically shiftable plow beams, each beam carrying one of said plow bottoms, a plow frame, a supporting wheel adjacent each beam, and plow adjusting connections between each beam and the supporting wheel adjacent the other beam whereby when the frame is moved relative to one supporting wheel the beam adjacent the other wheel is caused to have movement relative to the frame.



1,755,820. LOOP AERIAL. ALBERT G. HARMS, Chicago, Ill. Filed Dec. 24, 1925. Serial No. 77,568. 4 Claims. (Cl. 250—33.)

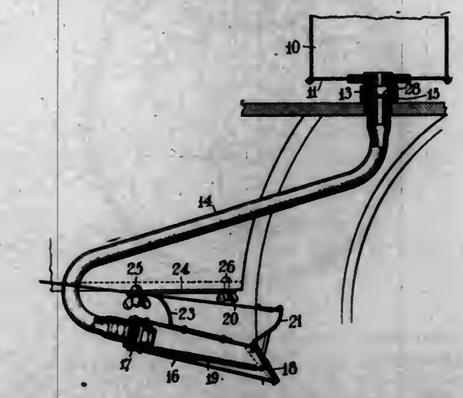
1. A loop aerial comprising a frame including top and bottom members spaced apart a distance greater than any dimension of the members, means connecting said members to each other, a bridge piece on one of said members, and wires coiled around the frame and bridge



piece in engagement with the members and bridge piece, said wires wholly enclosing the area of the frame and having leads extending therefrom.

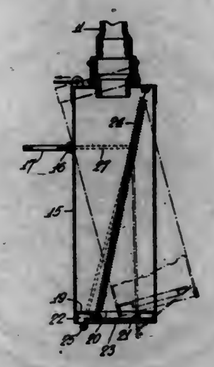
1,755,821. BANJO. FRANK J. HELLER, Woodhaven, N. Y. Filed Nov. 3, 1928. Serial No. 316,895. 5 Claims. (Cl. 84—270.)

1. A banjo, comprising, in combination a head rim, a flanged ring extending about one edge of said rim, a membraneous head extending over said rim, means to stretch said membraneous head over said rim, a tone ring between said flanged ring and said head, and adjusting means mounted in said flanged ring for varying the position of said head and tone ring relative to said rim.



1,755,822. SCREW DRIVER AND METHOD OF MAKING THE SAME. WILLIS F. HOBBS, Bridgeport, Conn., assignor to The Bridgeport Hardware Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 3, 1928. Serial No. 251,480. 8 Claims. (Cl. 145—61.)

1. A screw driver or similar tool comprising a tool and shank forged in one piece with a shoulder on the shank spaced from the end thereof, a metal ferrule having a bore closely fitting the shank and engaging said shoulder, said ferrule having a socket in its opposite end, a handle embracing the shank and seated tightly at one end in the ferrule socket, longitudinal ribs on the shank embedded in the handle to prevent turning of the shank in the handle,



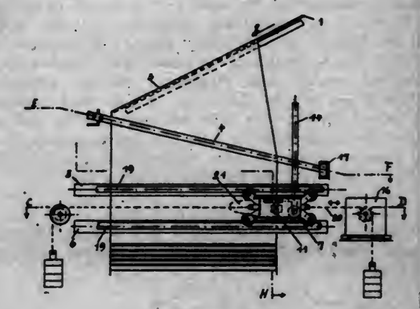
and a metal head covering the other end of the handle and having a socket closed at its inner end permanently attached to the end of the shank by being shrunk onto the end of the shank so that the head is substantially in one piece therewith.

1,755,823. SANDING DEVICE FOR VEHICLES. LOREN L. HOPKINS, West New York, N. J. Filed May 17, 1928. Serial No. 278,381. 13 Claims. (Cl. 291—1.)

1. A sanding device for vehicles, including a nozzle for delivering sand in advance of the vehicle wheel, a conduit connected to said nozzle, and a collapsible sand container formed of material impervious to moisture and connected to said conduit.

1,755,824. SANDING DEVICE FOR VEHICLES. LOREN L. HOPKINS, West New York, N. J. Filed Mar. 18, 1929. Serial No. 347,798. 8 Claims. (Cl. 291—47.)

1. A sanding device for vehicles including a nozzle having a closure, a spring within the nozzle for normally holding the closure in closed position, means for swinging the nozzle, and means for automatically opening the closure against the action of said spring during said swinging movement.

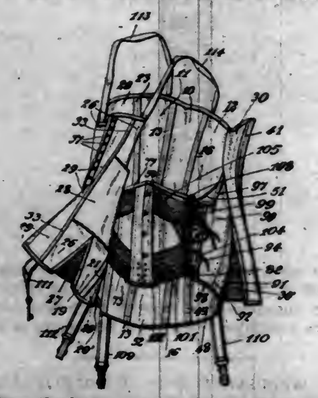


1,755,825. COTTON PICKER. EDWARD A. JOHNSTON, DAVID B. BAKER, and CLARENCE R. HAGEN, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 15, 1926. Serial No. 148,555. 9 Claims. (Cl. 56—47.)

1. A picker bar assembly comprising, in combination, a substantially tubular unitary gear casing, a driving shaft extending through the casing and journaled therein at the ends of the casing, picker stems projecting radially of the casing and journaled therein, gearing connecting

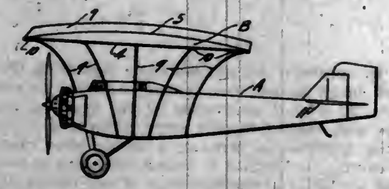
each picker stem with the driving shaft, a gear on the shaft outside of the casing for rotating the driving shaft, and a cam engaging arm integral with the casing and extending to a position eccentric to and above said gear.

1,755,826. APPLIANCE FOR AUTOMATICALLY REGULATING THE ENTRANCE OF FABRICS OR WEBS INTO LAPPING MACHINES. EUGEN KLEIN, Dresden, Germany. Filed Dec. 20, 1927, Serial No. 241,350, and in Germany Dec. 23, 1926. 9 Claims. (Cl. 270—86.)



1. In apparatus for automatically regulating the feeding of fabric or web into lapping machines in order to ensure the correct positioning of the edges of adjacent layers with respect to each other comprising, a movable lapping appliance, a carriage, a feeling lever carried by said carriage in position to engage the fabric or web, and means controlled by the movement of said feeling lever for actuating said lapping appliance.

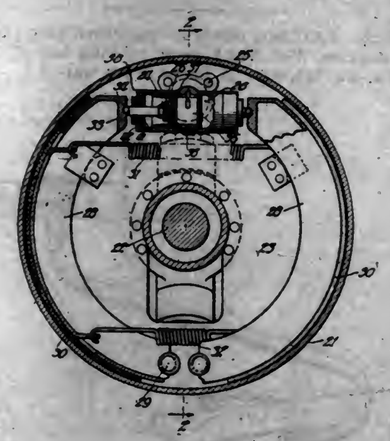
1,755,827. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros. Inc., New York, N. Y., a Corporation of New York. Filed Oct. 2, 1928. Serial No. 309,721. 2 Claims. (Cl. 2—27.)



2. In an apparel garment, a body member adapted to surround the body of a wearer from a line above the bust to a line below the buttocks, the said body member including a back member, a longitudinally divided abdominal support and diaphragm control member comprising front sections of inelastic material connectible to one another

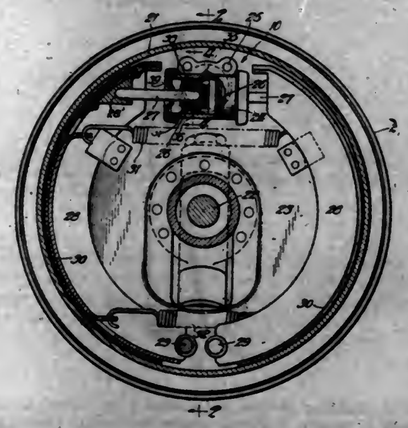
and elastic sections laterally thereof, the said sections being adapted to overlie the abdomen and the lower portion of the diaphragm of the wearer, uplift straps of elastic material extending upwardly from the lower front central portions of the abdominal support and diaphragm control member to the distant edges thereof, diaphragm control straps of elastic material extending downwardly from the upper front central portions of the said abdominal support and diaphragm control member to the distant edges thereof, side members of inelastic material connected at their forward edges to the distant edges of the said elastic sections of the said abdominal support and diaphragm control member and at their rear edges to the side edges of the back member of the body of the garment, the lower edges of the said side members extending down-

wardly from the lower end portions of the abdominal support and diaphragm control member to substantially the lower end of the side portions of the back member of the body member, anchor straps connected to the forward edges of the said side members, and lacing devices for adjustably connecting the said anchor straps to the said uplift straps and the said diaphragm control straps, whereby tension is adjustably exerted to support the abdomen and to maintain the upper front portion of the abdominal support and diaphragm control member in position to control the diaphragm and the said tension is transmitted through the said side members to the back member of the garment to cause the lower portion of the back member of the garment to conform to and support the back and retain the buttocks of the wearer.



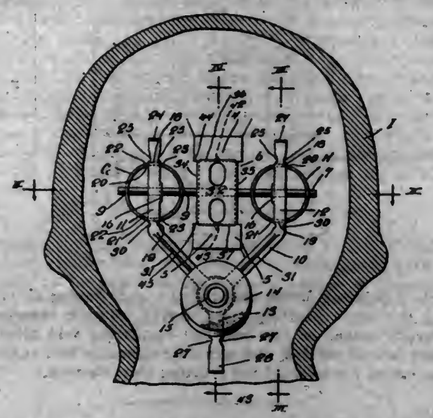
1,755,828. AEROPLANE. OTTO VON KORIES, Holtville, Calif. Filed Jan. 7, 1929. Serial No. 330,885. 3 Claims. (Cl. 244—12.)

3. In a wing structure for an aeroplane, a hollow, circular wing, the lower surface thereof being flat and the upper surface being cambered, and a keel mounted perpendicularly upon the outer side of the upper surface of the structure.



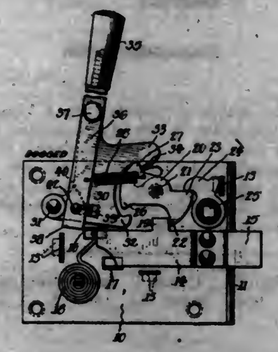
1,755,829. BRAKE. MALCOLM LOUGHEAD, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed June 14, 1926. Serial No. 115,750. 8 Claims. (Cl. 188—152.)

4. In a hydraulic braking apparatus, a brake drum, a brake shoe, a spring for retracting the brake shoe, brake shoe actuating means, a rod connecting the actuating means with the brake shoe, a spider ring having radial inwardly extending tongues encompassing said rod and having its tongues in frictional engagement with the rod, said tongues extending forwardly of the ring to permit the



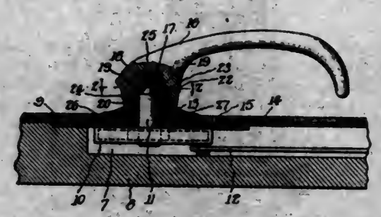
longitudinal movement of the rod in one direction but to resist movement of the rod in the opposite direction under the force of said spring, and a stationary stop member, one on each side of said ring spaced apart from one another, and spaced apart from the ring a distance equivalent to the normal movement of the brake shoe in operation.

1,755,830. BRAKE. MALCOLM LOUGHEAD, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed Nov. 12, 1926. Serial No. 147,858. 17 Claims. (Cl. 188—152.)



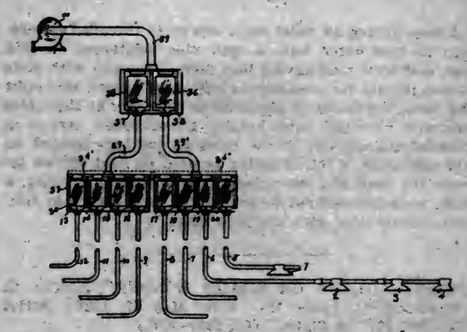
17. In a hydraulic braking system including a brake drum, a brake shoe and a brake shoe lining, the combination of a motor cylinder, a piston structure movable in said cylinder to apply the brake shoe lining against the drum, and a slack take-up mechanism comprising a friction device operating between said cylinder and said piston structure, said device being movable in either direction through the application of abnormal force, the piston structure having a limited amount of free movement with respect to the friction device, the degree of said free movement determining the distance which the brake shoe lining may be retracted.

1,755,831. EYE SET. SAMUEL MARCUS, Brooklyn, N. Y., assignor, by mesne assignments, to Markon Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 26, 1927. Serial No. 163,610. 11 Claims. (Cl. 46—40.)



1. An eye set comprising a pair of eyes, means connecting said eyes together, attaching means for attaching said connecting means with a doll head, and said attaching means having vertically arranged pivot parts for engagement with the doll head to thereby support the eye set for adjustment upon a vertical axis.

1,755,832. DOOR LATCH. ROLLO MARPLE, Charlotte, Mich., assignor to Hancock Mfg. Co., Charlotte, Mich., a Corporation of Michigan. Filed Mar. 26, 1926. Serial No. 97,520. 11 Claims. (Cl. 292—164.)

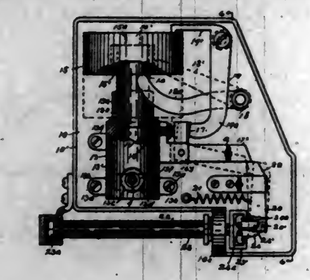


1. A door latch comprising, in combination, a spring-pressed latch bolt, a spring-actuated roll-back arranged to unlatch said bolt, means arranged for actuation by an outside operator to actuate the roll-back, a rocking member actuated from the inside and arranged to be moved in one direction from a normal position to actuate the roll-back and in the other direction from said normal position to dog the roll-back, a handle-arm pivoted intermediate its ends on said rocking member for limited movement, said arm and rocking member in one limiting position acting as a rigid structure when moved to unlatch the bolt, a stop in the path of said arm to prevent the rocking of the plate into dogging position, said stop and said arm being arranged to clear each other on moving the arm relative to the rocking member whereby to permit moving the rocking member into a position to dog the roll-back, and detent mechanism operative to hold the arm and rocking member normally in said rigid relation.

1,755,833. LATCH-OPERATING HANDLE FOR AUTOMOBILE DOORS. ROLLO MARPLE, Charlotte, Mich., assignor to Hancock Manufacturing Co., Jackson, Mich., a Corporation of Michigan. Filed Feb. 18, 1927. Serial No. 169,183. 8 Claims. (Cl. 292—348.)

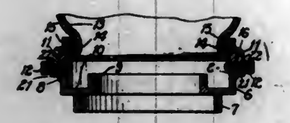
1. A door latch operator comprising a stub shaft having at one end a head, a handle having a portion providing a recess adapted to receive said head, said head and recess being shaped to interengage to prevent relative rotational movement between them but permitting axial movement, a part rigid with the shaft and projecting radially therefrom beyond the periphery of the head, a nut rotatable on the shaft, said handle portion having a recess internally screw threaded to receive said nut, and said nut being operable to clamp said radial projection between it and the handle portion.

1,755,834. SMOKE DETECTOR. GEORGE M. MARR, Woodhaven, and ARTHUR PHELPS MARR, Forest Hills, N. Y. Filed July 13, 1928. Serial No. 292,415. 7 Claims. (Cl. 116—114.)



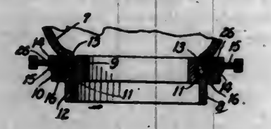
1. A smoke detector comprising a cabinet having a plurality of independent chambers in approximate alignment therein, a pipe leading to each of said chambers, a pipe leading from all of said chambers, a second single chamber into which said last mentioned pipe enters, and an exhausting means connected to said second chamber.

1,755,835. ACTUATOR FOR FIRE EXTINGUISHERS. HOWARD W. PARTLOW, Utica, N. Y. Filed Aug. 31, 1928. Serial No. 303,232. 11 Claims. (Cl. 169—27.)



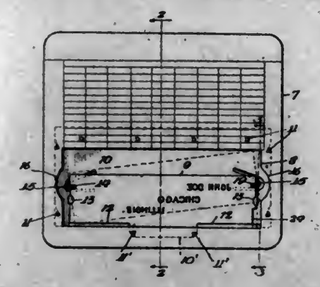
1. In an actuator for fire extinguishers, an air compressor including a hollow upright cylinder and a weighted piston movable therein, means to manually elevate the piston, a bolt movable through an opening in the wall of the cylinder to hold the piston elevated, a rockable member to slide and hold the bolt engaged with the piston, a member operable by the upward movement of the piston to cause the rockable member to thrust the bolt beneath the piston at the end of its upward stroke, said bolt having an end formed for camming engagement with the piston, whereby

upon release of the bolt by the rockable member the weight of the piston will move the bolt out of engagement there-



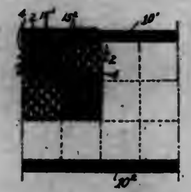
with, a thermostat, and means actuated by the thermostat adapted to trip said rockable means for enabling the piston to gravitate for compressing the air in the cylinder.

1,755,836. GLOBE OR SHADE HOLDER. NICOLA CESARE PETRILLO, St. Louis, Mo. Filed May 29, 1929. Serial No. 366,803. 1 Claim. (Cl. 240—135.)



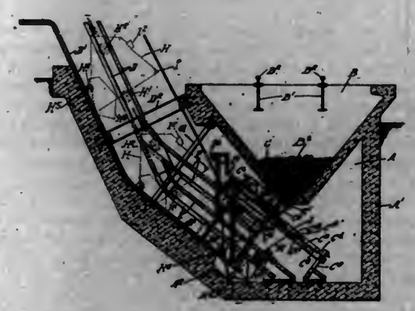
A base having an outer wall, screws in threaded engagement in said outer wall, a split ring positioned on said base, said split ring having lugs formed thereon with slots formed therein for engagement with said screws, said split ring being composed of segments having ears at their free ends with threaded holes passing therethrough, screws in threaded engagement in the holes in the lugs formed on said split ring, a coiled spring secured on said screws between the head and the adjacent ears of said split ring, a globe, a gasket secured to said globe, said gasket in frictional engagement with said split ring.

1,755,837. GLOBE OR SHADE HOLDER. NICOLA C. PETRILLO, St. Louis, Mo. Filed May 31, 1929. Serial No. 367,173. 1 Claim. (Cl. 240—135.)



A split ring hingedly secured together at two of its free ends and having a locking device secured at its other two free ends, said locking device comprising a spring secured to said split ring and having its free end normally penetrating into a slot in said split ring, a circumferential cylindrical hole formed in the same end of the split ring in communication with the slot formed in said split ring, a clasp in threaded engagement in the other free end of said split ring, said clasp having a notch formed at its free end for passage into the cylindrical hole in the other free end of said split ring and for selective engagement with the free end of said spring.

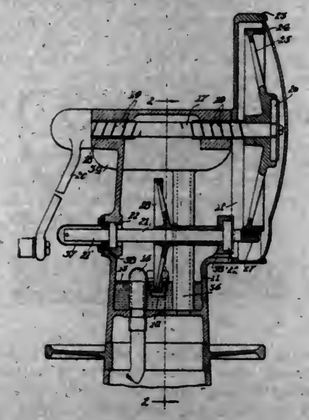
1,755,838. PRINTING DEVICE. ELMER F. RICHTER, Park Ridge, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed July 23, 1928. Serial No. 294,754. 6 Claims. (Cl. 101—369.)



1. A printing device comprising a body having an opening therein, a printing plate having printing characters thereon, means on the body for supporting said printing plate in said opening, and retaining means on said supporting means for securing the printing plate thereon.

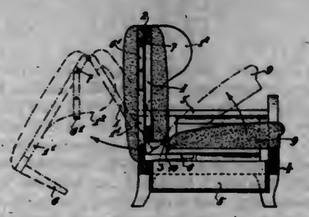
1,755,839. PROCESS FOR THE MANUFACTURE OF CHENILLE FRINGES OR OTHER SIMILAR ORNAMENTS AND PRODUCTS. PAUL RODIER, Paris, France, assignor to Rodier, Paris, France, a Limited Joint Stock Company of France. Filed Feb. 10, 1928, Serial No. 253,857, and in France Feb. 18, 1927. 3 Claims. (Cl. 139—385.)

1. As a new article of manufacture, a fringe, trimming or the like consisting of strands of chenille each strand comprising a core and a strand-like facing with the facing strands substantially adhering to the core at intervals and standing away therefrom between the adhering portions whereby the article as a whole presents, at a distance, the appearance of feathers.



1,755,840. HOIST. CLYDE P. ROSS, Chicago, Ill. Filed Sept. 20, 1926. Serial No. 136,412. 1 Claim. (Cl. 214—125.)

In combination with a hopper, a reciprocating gate, a bucket moving into and out of register with the hopper, an

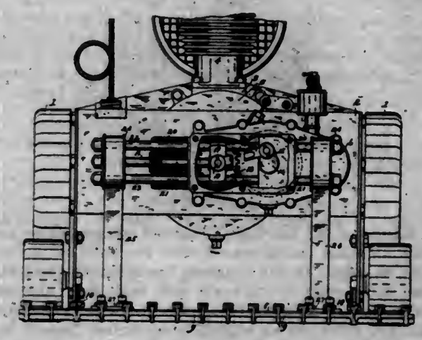


intermediate chute between the bucket and hopper, means interposed between the bucket and the gate for opening the latter after the bucket reaches the loading position, a latch pivoted on the gate, said latch having an up-turned end and being provided with anti-friction members, an abutment on the bucket adapted to be engaged by the latch whereby the bucket as it leaves the loading position, positively closes the gate, the latch comprising a link pivoted on the gate, tracks along which the bucket, the gate and the link travel, means including one of said tracks to hold the latch in engagement with the bucket while the bucket is in the loading position, and means comprising a track member angularly disposed with relation to the gate track for forcing the link out of engagement with the abutment when the gate has reached the closed position.

1,755,841. CREAM-SEPARATOR GEAR HOUSING. FELIX CONSTANTIN SANDSTROM, Milwaukee, Wis., assignor to International Harvester Company, a Corporation of New Jersey. Filed May 18, 1927. Serial No. 192,854. 5 Claims. (Cl. 184—13.)

2. In a cream separator, a frame, a closed housing thereon, a driving shaft journaled in bearings in said housing, a gear at one end of the shaft outside of said housing, a second closed housing surrounding said gear and communicating with the first housing, a driven shaft in the first housing, said driven shaft extending into the second housing, a pinion on the driven shaft in mesh with the gear on the driving shaft, an oil containing trough in the bottom of said first housing, and a gear on the driven shaft and arranged in the first housing to rotate through the oil in said trough to splash the oil therefrom and deliver it to the shaft bearings and into the second housing to lubricate the gears therein.

1,755,842. CHAIR CONVERTIBLE INTO A BEDSTEAD OR COUCH. ROBERT SCHÖBERL, Budapest, Hungary. Filed June 23, 1928, Serial No. 287,834, and in Hungary July 28, 1927. 1 Claim. (Cl. 5—37.)

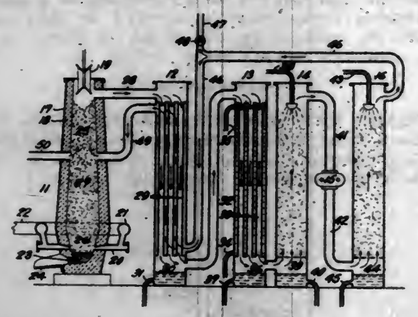


An arm-chair convertible into a bedstead or couch comprising, in combination, a seat frame, arm-rests at the sides of said seat frame with gaps between said arm-rests and said seat-frame, and a back-rest hinged behind the arm-rests, said back-rest being constituted by a pair of juxtaposed frames hingedly connected at their upper edges, the rearward one of said pair of frames having feet engageable with said gaps.

1,755,843. METHOD OF CHANNELING SOLES. WILLIS S. SHAFT, Faribault, Minn., assignor to Shaft-Pierce Shoe Company, Faribault, Minn. Filed Jan. 25, 1927. Serial No. 163,492. 5 Claims. (Cl. 12—146.)

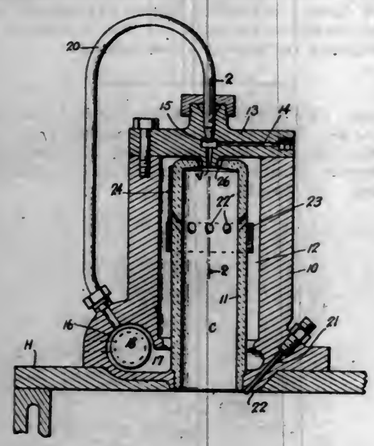
1. The process of forming a combination inner and middle sole and channeling the same comprising the supporting of the sole stock with a portion of its edge above the body thereof, holding said portion of the edge in said position against movement, cutting the margin of the sole and channeling the same, and then releasing the sole and advancing the same to a new position.

1,755,844. LAWN-MOWER DRIVE. JOHN C. SLONNEGER, Milwaukee, Wis., assignor to Milwaukee Power Lawn Mower Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1927. Serial No. 234,701. 5 Claims. (Cl. 56—25.)



1. A power mower provided with a sickle guard and sickle bar, power means providing reciprocating motion and a spring strap connection between the power means and the sickle bar, said spring strap providing directional and pressure means for moving the sickle bar with reference to the sickle guard.

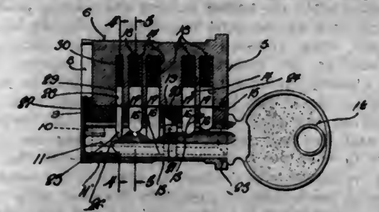
1,755,845. PROCESS OF AND APPARATUS FOR SMELTING ORES AND RECOVERING BY-PRODUCTS THEREFROM. FREDERICK T. SNYDER, New Canaan, Conn. Filed June 8, 1925. Serial No. 35,803. 18 Claims. (Cl. 75—17.)



1. In a process of smelting ore with fuel containing a substantial proportion of volatile constituents, the step of passing in contact with the mixed ore and fuel a current of reducing gas sufficient in amount to lower the par-

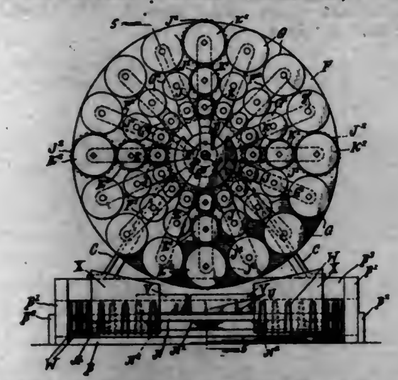
tial pressures of volatile constituents of the fuel to such a degree that they will evaporate into the gas at tempera-

tures below the normal fusing temperature of the fuel and will remain in vapor state in presence of cold fuel and ore.



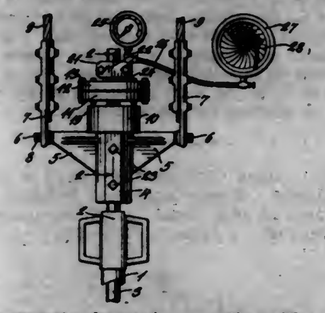
1,755,846. GAS FEEDER. NOEL A. STEED, Portland, Ind. Filed July 19, 1926. Serial No. 123,575. 1 Claim. (Cl. 158—28.)

A burner of the character described comprising an outer casing, an inner casing spaced from the walls of the outer casing to define an air chamber therebetween, said inner casing being open at its lower end, said inner and outer casings having aligned fuel inlet ports at their upper ends, said outer casing adjacent the bottom thereof being formed with an annular air inlet passage surrounding the inner casing, and formed to provide a valve chamber forming part of said passage, a valve operating in said chamber and controlling the admission of air into the annular passage, said annular passage communicating with the space between the inner and outer casings, and a heating element surrounding and supported by said inner casing, and said inner casing having an annular series of inclined ports arranged directly above the heating element.



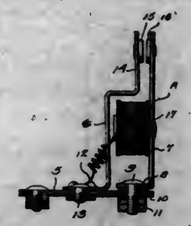
1,755,847. LOCK. ARTHUR C. STEVENS, Milwaukee, Wis., assignor of one-third to Phillip W. Gross and one-third to Ira Milton Jones, Milwaukee, Wis. Filed Mar. 25, 1925. Serial No. 18,263. 12 Claims. (Cl. 70—47.)

1. A lock of class described, comprising a shell, a slotted plug rotatable therein and provided with a plurality of tumbler sockets, tumblers movable in the sockets, drivers mounted in the shell and adapted to pass into the tumbler sockets when the plug is in a neutral position, said drivers being removed from the plug by the insertion of a key in the slot thereof, and one of said tumblers being of a



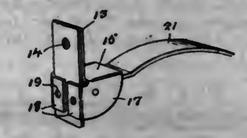
smaller diameter than the others and having its end portion pointed for engagement with the extreme end portion of a key.

1,755,848. ROTARY ADVERTISING APPARATUS. EUGENE C. TAYLOR, Patterson, La. Filed Apr. 14, 1928. Serial No. 269,945. 6 Claims. (Cl. 40—34.)



1. Apparatus for advertising, comprising a main rotary shaft, a vertical disk rotated thereby, a horizontal disk, means operated by said shaft for rotating said horizontal disk, means for displaying advertising matter in movable relation to said vertical disk, and means for displaying advertising matter carried by said horizontal disk.

1,755,849. DYNAMOMETER. CLYDE V. TEMPLE, McCamey, Tex. Filed Nov. 8, 1928. Serial No. 318,024. 4 Claims. (Cl. 265—47.)

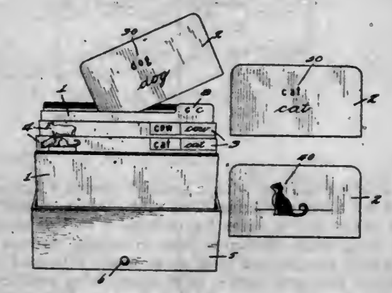


1. A dynamometer for use in connection with well drilling machines comprising a body member having an annular chamber, a flexible diaphragm separating said chamber into two annular compartments, a liquid in one of said compartments, a pressure gauge in communication with the compartment containing the liquid, whereby the pressure of the liquid may be determined, an annular ring in the other compartment, said ring having the surface adjacent the diaphragm transversely convex and means for moving the ring toward the diaphragm so as to bend the latter whereby the volume of the chamber containing the liquid will be decreased and the liquid placed under compression.

1,755,850. STARTER SWITCH. IRBY TINDAL, Greenville, Ala. Filed May 14, 1926. Serial No. 109,186. 1 Claim. (Cl. 200—87.)

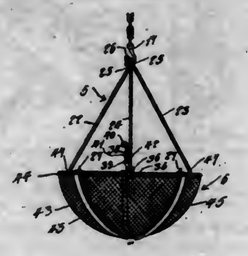
A starter switch comprising a base plate, a pair of arms insulated from each other and carried at their inner ends by said base plate, at least one of said arms being resilient, one arm being straight, an electromagnet carried by said last named arm, the other arm acting as an armature to be attracted by said electromagnet upon energization thereof, said armature arm extending from the base parallel to the other arm to a point slightly beyond the magnet and being bent at a right angle providing an off-set, then extending again parallel to the first arm whereby the free ends of said arms are arranged adjacent and parallel to each other, and electrical contacts carried by the adjacent faces of the free ends of said arms.

1,755,851. BUCKET SUPPORT. GLEN K. VAN EPPS, Grand Mound, Iowa, assignor of one-half to Harry Meints, Grand Mound, Iowa. Filed July 16, 1928. Serial No. 293,021. 2 Claims. (Cl. 31—54.)



2. A new and improved bracket formed from a single blank of material of substantially T-shape formation, the cross head of the blank being bent upon itself to provide an inverted substantially U-shaped bracket portion, an arm pivoted between the parallel portions of said bracket and adapted to be extended horizontally for use, the stem of said blank being bent upon itself to provide an apertured bail receiving ear rising from the bracket, and right angularly disposed extensions projecting from the parallel portions of the bracket and embracing the ear, said ear and right angular extensions having aligned openings for the purpose specified.

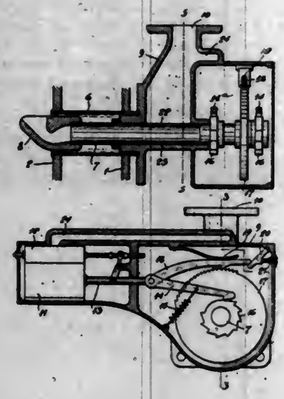
1,755,852. ARTIFICIAL-LIMB JOINT. JAMES WAGNER, Peninsula, Ohio. Filed June 7, 1928. Serial No. 283,548. 2 Claims. (Cl. 287—101.)



1. A pivotal joint for artificial limbs of the class described, comprising, in combination, a pair of complemental plates formed with registering eyes, one of said plates having a truncated conical portion surrounding its eye while the other plate has a recess formed with a truncated conical side receiving the first mentioned conical portion on the other plate, a cylindrical sleeve extending through the eyes, a bolt engaging the sleeve and having a head formed with notches, and means for locking the headed bolt in an adjusted position consisting of a screw cooperating with one of the notches in the head and either one of a plurality of notches spaced apart on one of the plates a lesser distance than the notches that are spaced around the head whereby a nicety of adjustment is provided.

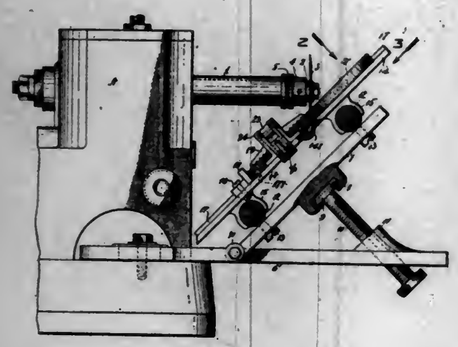
1,755,853. DICTIONARY AND EDUCATIONAL GAME. ETHEL B. WARING, Ithaca, N. Y. Filed Dec. 14, 1927. Serial No. 239,870. 10 Claims. (Cl. 35—9.)

1. A loose leaf dictionary file comprising a set of cards bearing literary symbols and definitions other than literary in combination with a second set of cards, each of the second set bearing on its face the same literary symbol as one of the cards of the first named set and on its back a definition other than literary borne by said card of the first named set.



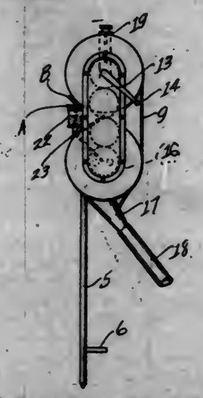
1,755,854. GRAPPLE AND BASKET FOR WAGON-LOADING APPARATUS. EMIL W. WEED, Raymond, Alberta, Canada. Original application filed Nov. 18, 1926, Serial No. 149,235. Divided and this application filed Mar. 15, 1928. Serial No. 261,856. 7 Claims. (Cl. 294—67.)

1. A grapple comprising a plurality of rods, hooks carried by certain of the rods, a hook pivoted to the remaining rod, a semi-spherical container carried by said rods and secured to said hooks, and means releasably securing the pivoted hook in retaining position.



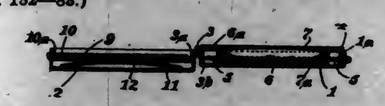
CARNEGIE LIBRARY OF ATLANTA

1,755,855. STEAM CLEANSING DEVICE FOR LOCOMOTIVE AND SIMILAR BOILERS. CARL AXEL ARVID WASTERBERG, Stockholm, Sweden, assignor to Aktiebolaget Superior, Stockholm, Sweden. Filed June 19, 1925, Serial No. 38,330, and in Sweden July 22, 1924. 5 Claims. (Cl. 122—391.)



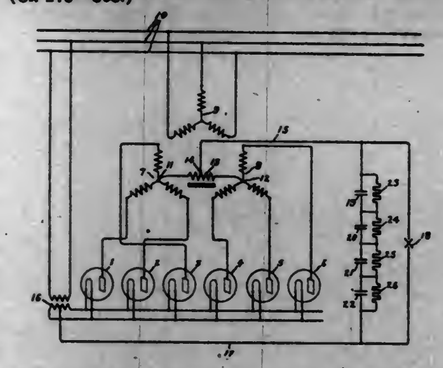
1. The combination with a boiler including a furnace, a set of fire tubes extending from said furnace through the boiler barrel and a water leg forming a wall of said furnace, of a steam discharge pipe extending through said leg to said furnace and forming an angle with said boiler tubes and having a nozzle, said nozzle being permanently located in the furnace, and being flare to effect a fan-like spreading of cleaning steam, and a steam engine, means connecting said engine and nozzle for effecting an intermittent rotation of said nozzle for directing the steam into said boiler tubes, the steam supply to the said nozzle and the steam supply to the said engine being mutually connected, so that the engine will be started simultaneously with the admission of cleaning steam to the nozzle.

1,755,856. HEEL CUTTER. HARRY E. WILLS, North Brookfield, Mass. Filed May 29, 1925. Serial No. 33,790. 5 Claims. (Cl. 164—61.)



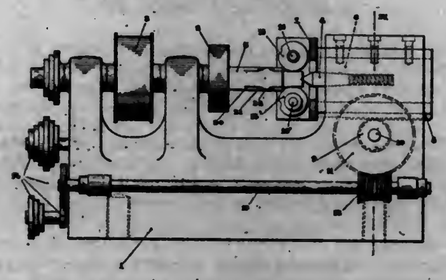
1. In a machine of the kind described, a cutter, a work plate, means for clamping the work to said work plate, means for supporting said work plate whereby it may be moved laterally, and the work borne by it moved onto said cutter, and means for supporting said work plate at an angle to said cutter whereby the work will be separated by said cutter into two parts having similar beveled edges.

1,755,857. EXTERMINATOR. WARREN ABBY, Marina, Calif. Filed Mar. 25, 1929. Serial No. 349,850. 1 Claim. (Cl. 43—124.)



In a device of the character described a tank, a blower positioned adjacent said tank, a measuring cup positioned adjacent said tank and said blower, a pipe extending from said measuring cup to said tank, a valve positioned within said pipe, a pipe extending from said measuring cup to said blower, a valve positioned within said last mentioned pipe, means for rotating said blower for the purpose of forcing the products of said blower and said tank to a remote point.

1,755,858. VANITY CASE. JOHN FRANCIS BABBITT, Louisville, Ky., assignor to John V. Pilcher, Louisville, Ky. Filed June 29, 1929. Serial No. 374,887. 4 Claims. (Cl. 132—83.)

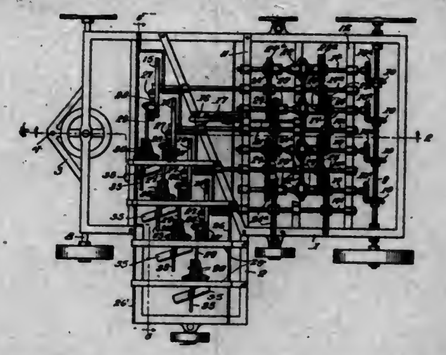


1. A vanity case comprising a pair of hinged sections, a powder pan carried in one section having a closure member provided with a powder exit opening, an applicator pad overlying said closure member and the opening therein, and yielding means carried by the other section for pressing the pad against the pan closure member when the sections are closed.

1,755,859. SYSTEM OF ELECTRICAL DISTRIBUTION. WALTER R. G. BAKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 6, 1928. Serial No. 673,192. 5 Claims. (Cl. 175—363.)

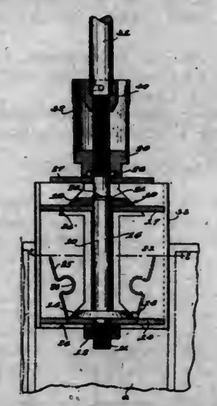
3. The combination in a system of electrical distribution of a source of high potential alternating current, a consumption circuit which is subject to frequent and large variations in the amount of current used, a plurality of rectifiers having large internal resistance for rectifying the current from said source and delivering rectified current to said consumption circuit, and a resistance load permanently connected across said consumption circuit, said resistance load being small in comparison with the total load to be supplied.

1,755,860. SHAPING MACHINE. ADRIEN BARBA, Asnieres, Seine, France, assignor, by mesne assignments, to Audoin d'Halloy, Paris, France. Filed May 6, 1927, Serial No. 189,399, and in France May 11, 1926. 6 Claims. (Cl. 82—13.)



1. The method of making turned objects comprising rotating the work piece and traversing it in a plane parallel to its axis of rotation with a cutter rotating on an axis perpendicular to the axis of the work piece, the shape of whose peripheral cutting edge and the speed at which said cutter rotates are corelative functions determining a path which successive edge-points of the cutter describe in the course of its rotation coincident with an element of curvature of the form to be produced lying in a plane not coincident with the diametrical plane through said turned object.

6. Apparatus for producing turned objects, comprising a rotary work piece holder and a tool cooperating therewith, driving means for imparting relative translatory movement of said tool longitudinally of the axis of said work piece holder and in a plane parallel to, but non-coincident with the axial plane of said work piece holder, said means comprising a series of pinions of different diameters operatively connected to one of said relative movable elements, and racks meshing with said pinions and selectively operable for varying the speed of said relative movement, and means for imparting rotary motion to said tool on an axis perpendicular to the axis of said work piece holder, said tool having a cutting edge on its periphery coacting with the work piece and shaped to produce an element of curvature, the shape of which is determined by the corelative functions of the peripheral shape of the tool and the rates of movements imported to it by said driving means.

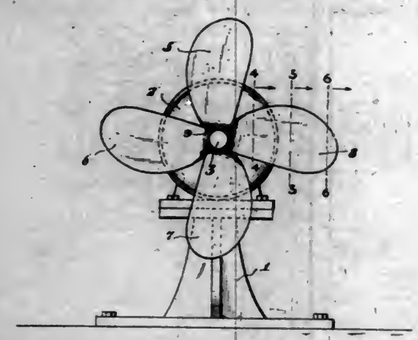


1,755,861. BEET BLOCKER. HESIQUIO BECERRA, Cheyenne, Wyo. Filed Dec. 21, 1927. Serial No. 241,646. 3 Claims. (Cl. 97—13.)

2. An agricultural machine comprising a rectangular frame, an extension laterally projecting from one side thereof, supporting wheels for said frame and extension respectively, cross bars included in said frame, bearings carried by said cross bars, a plurality of shafts of different lengths mounted in some of said bearings, and having their forward ends arranged in horisontal stepped relation with respect to each other, shafts journaled in the remaining bearings and in parallelism with the shafts first mentioned, means for driving the last mentioned shafts from the driving wheels of the frame, means for driving the first mentioned shafts from the other shafts, means for varying the speed of the last mentioned shafts, disks secured on the last mentioned shafts and on the ends thereof that are disposed in horisontal stepped relation with respect to each other, adjustable crank means carried by said

disks, arms pivotally secured to the adjustable crank means, depending means pivotally secured to said arms, and hoe shovels adjustably connected to said arms.

1,755,862. GRINDING MACHINE. ALVIN R. BERCK, Hastings, Nebr. Filed Apr. 10, 1928. Serial No. 268,847. 13 Claims. (Cl. 51—184.3.)

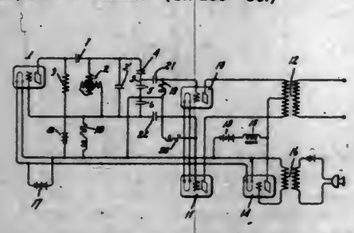


1. In a device of the class described, an arbor, a pair of spaced flat circular disks carried by said arbor, a plurality of circumferentially spaced members extending edgewise between said disks and movable radially thereof, an abrasive element encircling the outer side edges of said members, and means for adjusting said members relatively to said arbor and said disks to vary the diameter of said abrasive element correspondingly for grinding engine cylinders and the like of different sizes.

1,755,863. FAN. GEORGE O. BISHOP, Salt Lake City, Utah. Filed Sept. 26, 1927. Serial No. 222,165. 1 Claim. (Cl. 170—159.)

An air moving fan for warm air furnace work comprising a hub having extending therefrom four equally spaced blades, each of said blades having its body diagonally disposed throughout with respect to the hub and with the angle of inclination of said body gradually decreasing from the inner to the outer end thereof, said body having its inner face for a portion of its length concave and the remaining portion flat, said concave portion being of greater length than said flat portion and positioned outwardly with respect to the latter, said body having its leading edge straight throughout, its outer edge convex

throughout and its follower edge convex throughout, the inner portion of said leading edge being positioned outwardly with respect to the inner portion of the follower

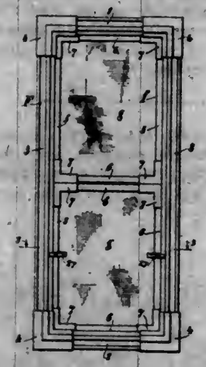


edge of an adjacent body said follower edge terminating in said hub and said leading edge having its inner portion spaced from the hub.

1,755,864. FOOD PRODUCT. ELMER B. BROWN, CHARLES N. FREY, and HARVEY H. HARKINS, New York, N. Y., assignors, by mesne assignments, to Standard Brands Incorporated, Dover, Del., a Corporation of Delaware. Filed Sept. 2, 1927. Serial No. 217,308. 10 Claims. (Cl. 99—10.)

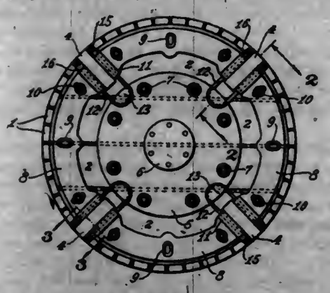
1. As a new article of manufacture, a composition of matter comprising an extract of the acid hydrolysis of a mixture of starch and yeast.

4. The process of making a food product which comprises hydrolizing a mixture of starch and yeast with dilute acid.



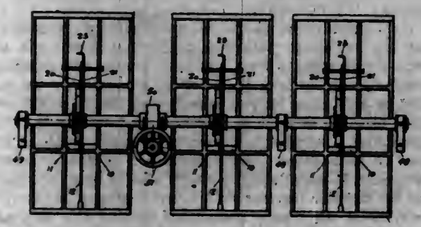
1,755,865. COUPLING CIRCUITS. HENRY R. BUTLER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 22, 1928. Serial No. 301,331. 2 Claims. (Cl. 250—36.)

1. In combination, an electron discharge oscillation generator having an anode, a cathode and a grid, an oscillatory circuit comprising an inductance and a capacity connected in parallel between said anode and grid, a pair of push-pull connected electron discharge amplifiers, each of said amplifiers having an anode, a cathode and a grid, a connection from the cathode of said amplifiers and said oscillation generator to an intermediate point on said capacity and non-inductive connections from the grids of said amplifiers to opposite points on said capacity from said intermediate point.



1,755,866. KNOCKDOWN WINDOW SCREEN. JOSEPH BUXBAUM, Brooklyn, N. Y. Filed Apr. 28, 1927. Serial No. 187,136. 4 Claims. (Cl. 156—14.)

2. In a window frame provided with a closure suspended from the top of said frame and having laterally projecting pins at the bottom, upright and transverse stiles, each stile formed by a single sheet of metal bent into a main hollow member having a longitudinal groove for the guidance of said pins, said metal sheet bent upon itself to form a flange extending from one side of said groove and pro-



vided with stops for said pins, and said metal sheet further bent upon itself to form a second longitudinal flange projecting from said main hollow member at an angle thereto and resting on said closure.

1,755,867. LAUNDRY-DRUM CONSTRUCTION. PETER C. BRUCKMANN and WILLIAM R. HAGER, St. Louis, Mo., assignors, by mesne assignments, to Vorclone Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 28, 1926. Serial No. 144,837. 5 Claims. (Cl. 68—18.)

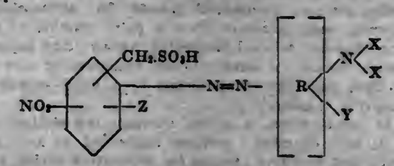
1. In a laundry drum including an end face and ribs removably carried thereby, a face plate secured to the end face, braces movable radially of said face plate and engaging the ribs on opposite sides thereof, and tension members anchored to said face plate engaging the braces to draw said braces inwardly.

1,755,868. SAFETY CLOSURE FOR WALL OPENINGS. WILLIAM FREDERIC CANAVAN, Montreal, Quebec, Canada. Filed Sept. 1, 1927. Serial No. 216,992. 5 Claims. (Cl. 268—24.)

1. In operating mechanism for wall opening closures, a closure frame, a bracket utilized in bodily lifting and lowering said frame and having a plurality of arms spread to grasp said frame at the bottom and intermediately, an operating lever and connecting rod pivotally secured to said bracket, a pawl pivotally secured in said lever and a ratchet suitably mounted and frictionally held in said lever.

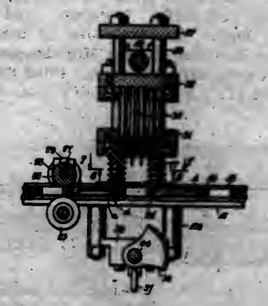
1,755,869. CUSHION SIDE BEARING. WALTER L. DOWNEY, Richmond, Va. Filed Apr. 19, 1926. Serial No. 103,020. 2 Claims. (Cl. 308—138.)

1. A cushion side bearing, comprising a box having end and side walls, and laterally extended flanges at the tops of its end walls, a suitable number of springs arranged in said box, a cover of a length greater than the greatest distance between the outer ends of said flanges, said cover having opposite depending flanges overlapping the side walls of the box and provided with vertically slotted openings located therein beyond the end walls of the box and alined with said box flanges, said cover yieldingly mounted on the springs above the top of the box, and keys arranged transversely of the box in the openings in the cover and beneath the box flanges and outside of the end walls of the box and having vertical movement in said openings, and means to lock the keys in position.



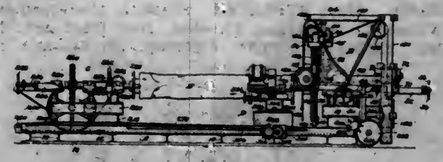
1,755,870. TIRE-CHAIN HOOK. ANSON DRINKWATER, New Hartford, N. Y. Filed Apr. 26, 1929. Serial No. 358,893. 2 Claims. (Cl. 24—232.)

1. In combination with the end links of an anti-skid chain or the like, of hooked members having their body portions pivotally secured to the outer end of one of said links, the body of the hooks being oppositely rounded and the said hooks merging into outwardly directed rounded beaks for engagement with the second end link of the chain.



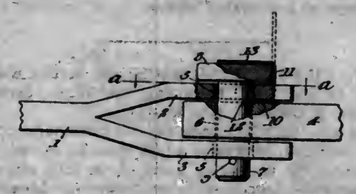
1,755,871. MONOAZO DYESTUFF PRODUCED FROM AMINOBENZYL-ω-SULFONIC ACID AND ACID SUBSTITUTED AROMATIC AMINES. WALTHER DUISBERG, Leverkusen, and WINFRID HENTRICH and LUDWIG ZEH, Wiesdorf, near Cologne, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Feb. 12, 1926, Serial No. 87,959, and in Germany Feb. 19, 1925. Divided and this application filed Feb. 12, 1926. Serial No. 87,958. 12 Claims. (Cl. 260—90.)

1. As new products the compounds of the general formula:



wherein R represents a nucleus of the group including the benzene and naphthalene series and X represents hydrogen, alkyl, aryl or aralkyl, Y represents a sulfonic acid, carboxylic acid or hydroxyl group and Z represents hydrogen or a nitro group.

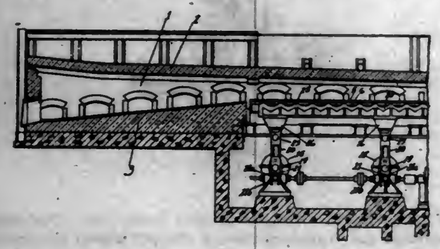
1,755,872. METHOD OF PITTING FRUIT. ANTHONY GOTELLI, New York, N. Y. Original application filed Aug. 19, 1926, Serial No. 130,045. Divided and this application filed Sept. 24, 1929. Serial No. 394,866. 4 Claims. (Cl. 146—219.)



4. The method of removing pits from fruit consisting in slitting the fruit, positioning the pit within the fruit, ejecting the pit through the slit and guiding the pit as it is being ejected.

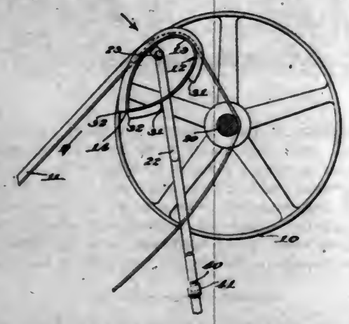
1,755,873. STONE-WORKING MACHINE. FREDERICK A. GERARSON and WILLIS A. LANE, Barre, Vt. Filed Apr. 27, 1928. Serial No. 273,292. 26 Claims. (Cl. 51—49.)

1. A machine of the character described comprising a bed, a head stock and a tail stock mounted on said bed, means for supporting a piece of material to be operated on by and between said stocks, and tools mounted on said head stock and said bed, respectively, for operation on a piece of material supported between said stocks, the tool on said head stock being reciprocal in a direction transverse with respect to the longitudinal axis of the machine.



1,755,874. LOCK FOR CONNECTING PINS OR BOLTS. CLEON M. HANNAFORD, Richmond, Va., assignor to Car Devices Company, Incorporated, Richmond, Va., a Corporation of Virginia. Filed Mar. 5, 1927. Serial No. 173,070. 3 Claims. (Cl. 85—5.)

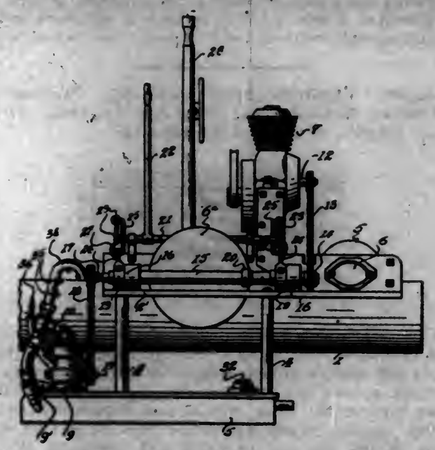
1. A lock for connecting pins or bolts, in a joint, the same comprising a clamping member adapted to fit in the pin-hole or bolt-hole in the joint and having an inner member to engage the inner side of the joint, an outer member to overlie the outer side of the joint and parallel to the inner member, and a connecting arcuate member to conform to the periphery of the pin or bolt, and an ex-



tension capable of engaging the periphery of the head of the pin or bolt and of being bent down over said head to prevent endwise escape of the pin or bolt.

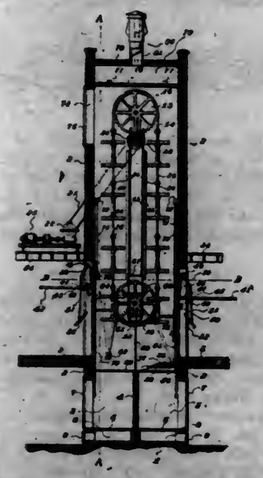
1,755,875. HEATING FURNACE. HARRY HOLIDAY and WILLIAM MCKNIGHT, Glenshaw, and JOHN G. CHRISTFIELD, Butler, Pa., assignors, by mesne assignments, to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Feb. 2, 1928. Serial No. 251,431. 10 Claims. (Cl. 214—18.)

1. In a furnace for uniformly heating corrugated ingot portions, the combination of rack elements to support the ingot portions in the furnace and to engage the corrugations of the ingot portions, and means for causing the ingot portions to roll in intermittent steps along the rack portions.



1,755,876. BELT REPLACER. FRANK L. HOMSTEAD and WILSON R. HOMSTEAD, Pittsfield, Me. Filed Apr. 20, 1928. Serial No. 271,593. 6 Claims. (Cl. 64—51.)

1. A belt replacer comprising an endless band, a rod pivotally connected to the band, a flange located intermediate the edges of the band and dividing the band into two sections, each section decreasing in width from one portion of the band to the opposite portion the band being in the shape of a distorted ellipse.



1,755,877. PIPE-PAINTING MACHINE. RALPH EMERSON JANES, Dallas, Tex. Filed Jan. 20, 1928. Serial No. 248,055. 2 Claims. (Cl. 91—44.)

1. In a pipe painting machine, the combination with a carriage mounted on wheels adapted to travel on a pipe to be painted, of an engine mounted on said carriage, a paint receptacle supported by said carriage beneath the pipe, means including a pump for applying paint from said receptacle to said pipe, means for selectively driving said pump alone and in unison with said carriage, said last named means comprising an adjustable shaft operably connected to said engine, a roller mounted upon said shaft for rotation therewith, a disk mounted for simultaneous rotation with one of said wheels, a rotatable shaft journaled in said carriage adjacent said adjustable shaft, link means between said adjustable shaft and said rotatable shaft for relatively positioning said shaft with said roller

and disk selectively in and out of contact with each other, a drive chain operably connecting the free end of said adjustable shaft with said pump.

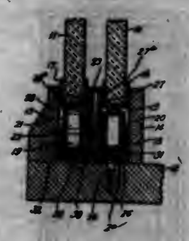
1,755,878. CONTINUOUS SMOKING, CURING, AND TREATING APPARATUS. ROBERT E. JORDAN, Chicago, Ill., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1925. Serial No. 57,191. Renewed Sept. 17, 1929. 30 Claims. (Cl. 99—9.)

1. In combination, a treating chamber; conveying means in said treating chamber; removable carriages for said conveying means; mechanical means for automatically transferring said carriages from a point outside of said treating chamber to said conveying means; and separate mechanical means for automatically transferring said carriages from said conveying means to a point outside of said treating chamber.

17. In combination, a curing chamber, an endless conveyor in said chamber; carriers supported in and movable with said conveyor; means for preventing curing gases from rising through the central section of said chamber and a removable central dividing plate positioned between the bottom of said means and said chamber.

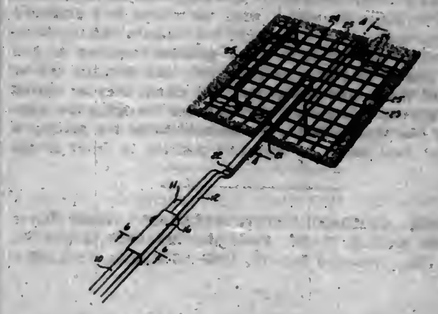
26. A carrier for articles to be smoked or cured comprising a pair of rectangular frame members; a longitudinally disposed supporting member extending intermediate the sides of each frame member and having its ends secured to the ends of said frame member; supporting members secured to the ends of said frame members; a longitudinally disposed rod having the opposite ends thereof secured to and projecting outwardly of said supporting members; eye members supported by said rod; and lifting arms rotatably supported by the projecting ends of said rod.

29. In combination, a treating chamber, a conveyor in said chamber, a plurality of carriages detachably mounted on said conveyor, said carriages being adapted to receive articles to be treated in said chamber, means for mechanically transferring carriages to said conveyor from a point outside the chamber, and other means for transferring said carriages from said conveyor to a point outside the chamber.



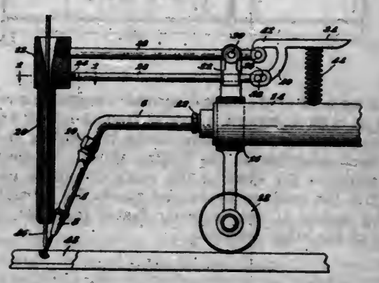
1,755,879. CONDENSATION PRODUCTS OF THE BENZANTHRONE SERIES AND PROCESS OF MAKING SAME. GEORG KALISCHER and HEINZ SCHNEER, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 9, 1927, Serial No. 204,657, and in Germany Sept. 4, 1926. 6 Claims. (Cl. 260—61.)

1. As new products condensation products of the benzanthrone series, corresponding most probably to the general formula:



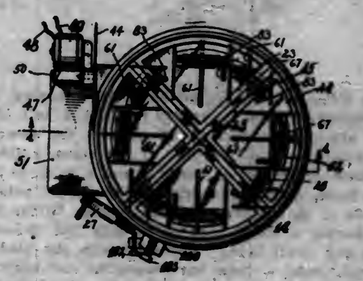
wherein R represents an aromatic nucleus substituted by hydroxyl in one of the positions ortho and para to the bridge carbon atom and wherein the benzanthrone nucleus and the aromatic nucleus R may be further substituted, being when dry yellowish to brownish colored mostly crystalline powders, soluble in organic solvents of a higher boiling point, soluble in concentrated sulfuric acid with a red to brown to olive color, mostly soluble in an alcoholic caustic alkali solution to intensely colored solutions.

1,755,880. CONSTRUCTION FOR DISPLAY CASES AND THE LIKE. HENRY F. KEIL, Scarsdale, N. Y. Filed Feb. 10, 1928. Serial No. 253,325. 15 Claims. (Cl. 16—100.)



1. In a supporting means for sliding panels for display cases and the like, in combination, a plurality of rollers adapted to be positioned beneath the panel to anti-frictionally support the panel for sliding movement, and means to be positioned underneath said rollers to form a track therefor comprising a sheet metal member adapted to be secured flatwise against a base and a second sheet metal member resting upon said first member and removable therefrom and adapted to provide a smooth surface on which the rollers roll.

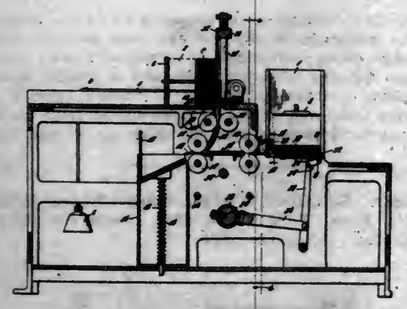
1,755,881. WINDOW-CLEANING DEVICE. JOHN J. KILBRIDE, Scotch Plains, N. J. Filed Oct. 12, 1928. Serial No. 312,179. 1 Claim. (Cl. 15—232.)



A window cleaning device including a thin, flat cleaning element comprising a sheet of absorbent material and a mesh wire frame covered thereby formed with offset aligned portions defining receiving loops, and a handle member comprising a shank adapted to be trained through the receiving loops and having a notch spaced from its free terminal for locking engagement with one of the loops.

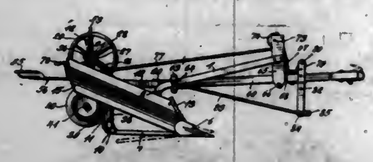
1,755,882. WELDING TORCH. ADOLPH KREBS, Jamaica Plain, Mass. Filed Dec. 6, 1926. Serial No. 152,771. 4 Claims. (Cl. 113—59.)

1. In a device for welding metal, a burner adapted to produce a high-temperature, low-velocity flame, means for permitting movement of the burner along a predetermined path, means for controllably feeding metal into the flame of the burner at the portions to be welded, and means for moving the metal feeding means away from the flame of the burner during the welding operation.



1,755,883. AUTOMATIC SLICING MACHINE. MANUEL LAMOS, Caldwell, N. J. Filed Feb. 28, 1928. Serial No. 257,714. 2 Claims. (Cl. 146—102.)

1. In an automatic slicing machine, a table rotatively mounted and arranged with a plurality of food clamps,

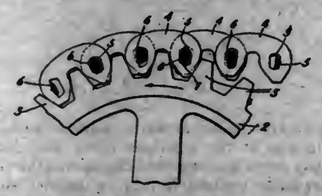


a band attached on the underside thereof, and formed with a plurality of apertures, a clamp slidably mounted on the band and arranged for being fastened in various fixed positions as determined by the spacing of the said apertures, a link pivotally connected with the clamp and arranged for reciprocating for oscillating the table, a cutting knife rotatively mounted in a fixed position relative to the table, and arranged for slicing the food held in one of the said food clamps, and the said clamp may be moved to a different position on the band for changing the position of the table relative to the said knife for placing a different food clamp in operative position in front of the knife.

1,755,884. CARD-COUNTING MACHINE. HARRY DAVID LOWD, Nashua, N. H. Filed Mar. 26, 1927, Serial No. 178,795. Renewed Oct. 10, 1929. 7 Claims. (Cl. 93—93.)

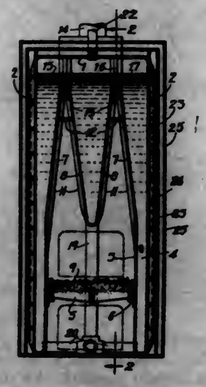
1. A machine of the class described comprising a receiver, a pair of card reservoirs, a pair of feeding rollers arranged adjacent the receiver, guiding means for leading the cards from each reservoir to the feeding rollers, an ejector for each reservoir for ejecting the cards therefrom one at a time into the guiding means and means for operating the ejecting means of one reservoir faster than the ejecting means of the other reservoir.

1,755,885. DITCHING PLOW. SCOTT O. MARTIN and ELMER H. BRIDENBAUGH, Denver, Colo., assignors, by direct and mesne assignments, of one-half to A. M. Nassif, Denver, Colo., and one-half to said Scott O. Martin. Filed May 19, 1928. Serial No. 278,948. 6 Claims. (Cl. 37—98.)



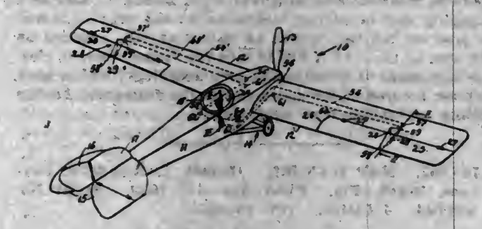
1. A ditching plow comprising a beam having its rear end downwardly and forwardly inclined, a pair of cutter blades attached at their front ends to the downwardly and forwardly extending part of the beam, a transverse brace member connecting the blades at a point to the rear of the beam, diagonal braces extending from points near the ends of the transverse brace member to the beam, a shaft having a wheel secured to each end thereof, said wheels and shaft being located between the blades near their rear ends, a draw bar connecting the shaft to the beam, a pair of guides cooperating with the draw bar and means for independently adjusting each end of the shaft separately.

1,755,886. AEROPLANE WING. JOSEPH FLOYD MCKENZIE, Abilene, Tex. Filed Apr. 18, 1928. Serial No. 270,932. 6 Claims. (Cl. 244—12.)



1. An aeroplane wing comprising spaced, opposed ribs standing on longitudinal edge, lengthwise curved and each including a leading and a trailing end, an expandible and contractile, lengthwise curved top arranged over said ribs and formed of two sections shiftable relatively to each other and slidably connected together, means for hinging the forward end of said top to the leading ends of said ribs, means for hinging the rear end of said top to the trailing ends of said ribs, spaced reinforcing elements secured to the lower face of each of said sections, each of said elements consisting of a series of independent, short, endwise opposed strips, and means supported from the ribs for expanding and contracting said top.

1,755,887. POWER-TRANSMISSION CHAIN. FRANK L. MORSE, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed Dec. 23, 1927. Serial No. 242,054. 9 Claims. (Cl. 74—32.)



1. In a power transmission chain, the combination of links, pintles connecting said links, said pintles each having a plurality of parts, one part of which is adapted to rock upon the other part and also to slide transversely upon the other part.

1,755,888. BOILER AND THE LIKE. THOMAS E. MURRAY, Brooklyn, N. Y.; Joseph Bradley Murray, Thomas E. Murray, jr., and John F. Murray executors of said Thomas E. Murray, deceased. Filed Apr. 20, 1925. Serial No. 24,435. 2 Claims. (Cl. 122—155.)

1. A boiler having a water receptacle which is substantially rectangular in plan and the bottom of which is formed in vertical convolutions extending lengthwise from end to end of the receptacle, the upper portions of said convolutions being bent downward through a portion of their length to form transverse troughs which facilitate circulation of water.

1,755,889. AEROPLANE-CONTROL MECHANISM. VICTOR V. MUZIK, Chicago, Ill. Filed Aug. 31, 1927. Serial No. 216,526. 2 Claims. (Cl. 244—29.)

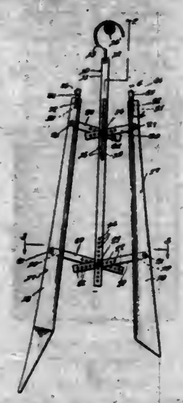
1. In combination, in an aeroplane, a fuselage, wings connected to said fuselage, ailerons connected to said wings, and control means for operating said ailerons and adapted to cause said ailerons to be lowered to increase the angle of incidence of the wings, said control means including a joy stick pivotally mounted at its lower end, wiring between the joy stick and the ailerons of the plane adapted to be actuated by the joy stick to bank the plane, said wiring being connected to said joy stick on both sides of the pivot for said stick and an arm pivotally mounted on an intermediate portion of said joy stick including pulleys above and below the axis of its pivot, said wiring extending over said pulleys whereby said arm may be actuated independently of said stick to lower the ailerons and thus vary the angle of incidence of the wings.

1,755,890. AQUEOUS RUBBER EMULSION AND PROCESS OF PRODUCING THE SAME. WILLIAM BEACH PRATT, Wellesley, Mass., assignor, by mesne assignments, to Dispersions Process, Inc., Dover, Del., a Corporation of Delaware. Filed Apr. 11, 1923. Serial No. 631,451. 21 Claims. (Cl. 134—1.)

1. A process of emulsifying previously-coagulated crude rubber in water, which comprises dispersing the rubber in the form of rubber globules in an aqueous medium with soap as the dispersing or emulsifying agent, and then separating soap therefrom, leaving the globules of the size and shape of those of the original latex dispersed in the water.

3. A process of emulsifying previously-coagulated crude rubber in water, which comprises dispersing in an aqueous medium the rubber, in the form of rubber globules of the size and shape of those of the latex from which the crude rubber was derived with soap as the dispersing or emulsifying agent, and then separating soap and water therefrom without coagulating the rubber globules.

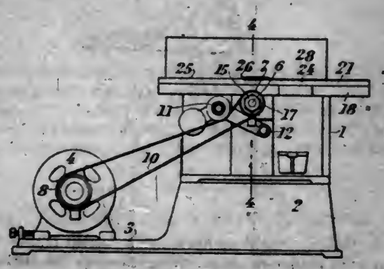
1,755,891. PROCESS OF DISPERSING COAGULATED BODIES. WILLIAM BEACH PRATT, Wellesley, Mass., assignor, by mesne assignments, to Dispersions Process, Inc., Dover, Del., a Corporation of Delaware. Filed July 10, 1924. Serial No. 725,207. 12 Claims. (Cl. 134—1.)



1. An aqueous dispersion of "non-polymerized" previously-coagulated rubber and an inorganic colloid which is not in excess of 15% by weight of rubber, in which the rubber globules possess the same characteristics as those before the rubber was dispersed, said dispersion resulting from the kneading and stretching of a coherent, plastic mass of rubber in the presence of such colloid while gradually adding water.

4. A non-sticky aqueous dispersion of previously-coagulated rubber, comprising separated crude rubber globules, and a colloid, said globules being coagulated with difficulty, if at all, upon the addition of acetic acid to the mass, but said globules coagulating upon removal of the water from the mass, said dispersion resulting from the manipulation of a coherent, plastic mass of rubber in the presence of such colloid and water.

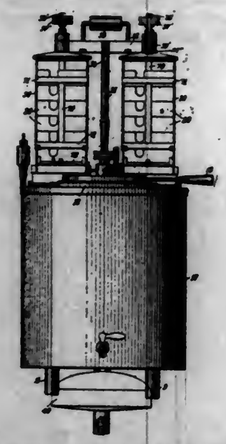
1,755,892. PRODUCTION OF AQUEOUS RUBBER DISPERSIONS. WILLIAM BEACH PRATT, Wellesley, Mass., assignor, by mesne assignments, to Dispersions Process, Inc., Dover, Del., a Corporation of Delaware. Filed July 10, 1924, Serial No. 725,208. Renewed Sept. 14, 1927. 6 Claims. (Cl. 134—1.)



1. A process of dispersing rubber or rubber compounds, which comprises incorporating an organic water-carrying colloid into the mass, and then adding an aqueous solution, free from free alkali, of a stable chemical compound produced by combining a non-metallic colloid and a caustic alkali.

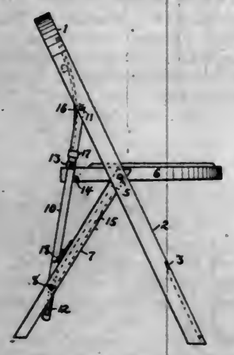
1,755,893. COMBINATION TROUSER CREASER AND SHAPER. GEORGE PREBENSEN, Chicago, Ill. Filed Dec. 31, 1926, Serial No. 158,296. Renewed Sept. 18, 1929. 1 Claim. (Cl. 223—19.)

In a trouser creaser, a substantially U-shaped supporting member having slots formed in the limb portions thereof, said limb portions having a plurality of aligned openings therein adjacent the lower ends thereof, substantially V-shaped creasing members, links for connecting said creasing members to said supporting member adapted to be disposed in cooperating pairs, means for connecting certain of said pairs of links to said supporting member including portions adapted to be selectively inserted into said openings in said limb portions, and means for connecting the other of said pairs of links to said supporting member including portions adapted to extend through said slots, and teeth formed in said slots adapted to selectively engage and retain said portions disposed in said slots.



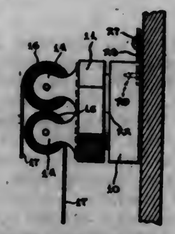
1,755,894. JOINTER ATTACHMENT FOR PORTABLE SAWING MACHINES. DANIEL F. PRINTZ, Reading, Pa.; The Penn National Bank and Trust Company, executor of said Daniel F. Printz, deceased, assignor to Ephrata Manufacturing Company, Ephrata, Pa., a Corporation of Delaware. Filed Dec. 16, 1927. Serial No. 240,472. 5 Claims. (Cl. 144—117.)

1. A wood-working machine comprising a table having an opening therein, a spindle extending substantially par-



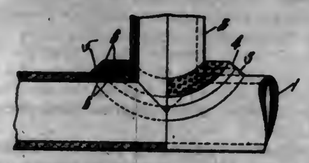
allel therebeneath, a cutting tool mounted on the spindle and having a cutting edge extending substantially transversely thereof, the said tool projecting through the opening in the table, and a plate superposed on the table and having an opening through which the periphery of the said tool projects and having portions adapted respectively to guide the material before and after it is cut, and a vertically and horizontally adjustable follower on said table adjacent the opening, to guide material past the cutting tool.

1,755,895. STERILIZER. PAUL P. PUPILLA, Bradley Beach, N. J. Filed May 12, 1926. Serial No. 108,705. 6 Claims. (Cl. 167—3.)



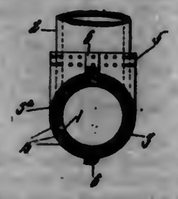
1. Sterilizing apparatus, comprising a sterilizing tank, a rack for receiving articles to be sterilized and movable into and out of the tank, a lid member for the tank and carried by the rack, means to limit the extent of movement of the rack, a rod movable with the rack and having openings corresponding to its raised and lowered positions, a movable arm having a pin adapted to fit into the openings of said rod, and adjustable means to force the lid member to the tank to seal the latter, the said locking pin when in the opening for lowered position of rack in tank serving as an abutment and being locked thereby against withdrawal from the opening.

1,755,896. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed Aug. 5, 1925. Serial No. 48,195. 2 Claims. (Cl. 155—142.)



1. A folding chair comprising a main frame having spaced side members constituting forelegs; a tilting seat supported between said forelegs; rear legs having pivotal connection with said forelegs; a pair of pendant arms having pivotal connection respectively with said forelegs at points thereon above the said seat and having a stop in connection therewith for limiting the upward movement of the rear end of the seat and having also operable relation with said rear legs; means on said seat engaging and actuating said arms as the seat is moved to position for use, means on said rear legs engaged by the seat as the seat is folded into the frame whereby closing movement is imparted to said rear legs; and a back member secured at its upper end in the frame and having sliding connection with said arms.

1,755,897. MAP HANGER. GEORGE T. ROBINSON, Daytona Beach, Fla. Filed Apr. 10, 1929. Serial No. 354,044. 4 Claims. (Cl. 40—85.)

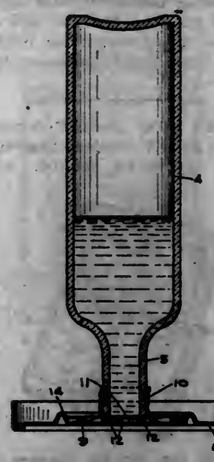


1. A hanger of the kind indicated consisting of a hanger bar, means for pivotally supporting said bar at its longitudinal center, brackets mounted at the extremities of the bar and arranged in superposed pairs and spring actuated rollers mounted in said brackets and having double faced maps reeled upon them in opposite directions.

1,755,898. FIBER CONDUIT JOINT AND METHOD OF MAKING SAME. BERTWELL C. ROOT, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed June 7, 1926. Serial No. 114,267. 2 Claims. (Cl. 285—105.)

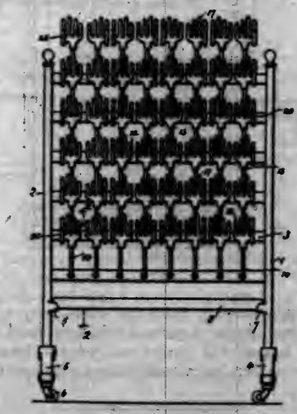
1. A non-leaking fibrous joint comprising a tubular conduit having an opening for the angular reception of another conduit, a plurality of superposed, curved washers fitted over and pegged to said conduit surrounding the opening and serving as a socket member, and another tubular conduit fitted within and pegged to said socket member, said joint and pegs being saturated with a thermoplastic waterproofing agent.

1,755,899. CONDUIT CONNECTION. BERTWELL C. ROOT, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed June 7, 1926. Serial No. 114,269. 4 Claims. (Cl. 285—105.)



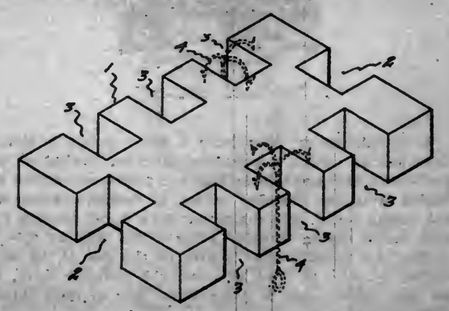
1. A non-leaking fibrous conduit connection comprising a conduit having an opening for angular communication with another conduit, a split coupling surrounding said conduit and having a projecting socket portion for the reception of another conduit at said opening, another conduit held within said socket portion, and wooden pegs passed through and holding the parts of said connection together, said connection being saturated with a thermoplastic waterproofing material which serves to bond the parts together at their junctures.

1,755,900. COUNTER-MOLDING APPARATUS. JEAN HENRY SCHAFFENBERG, Lynn, Mass., assignor to J. Hammond Stewart, Lynn, Mass. Filed Jan. 26, 1929. Serial No. 335,279. 15 Claims. (Cl. 12—66.)



1. Instruments for molding shoe counters with a dip at their wing extremities, comprising cooperating complemental last and mold members, the counter flange-sustaining surface of which last member is outwardly curved in the part flanked by the wing extremity of a counter in the process of being molded, a flange presser for pressing the rear part of the counter flange mounted to travel along the flange-supporting surface of the last, a tiltable presser pivoted to the advancing end of said flange presser and protruding ahead of it, being curved complementally to the outwardly curved part of said surface, and a spring acting between said flange presser and tiltable presser for causing the latter to exert pressure on that part of the counter flange which lies adjacent to said curved surface.

1,755,901. FUMIGATING DEVICE. HARRY A. SEARLE, Council Bluffs, Iowa. Filed Jan. 14, 1929. Serial No. 332,317. 1 Claim. (Cl. 299—23.)

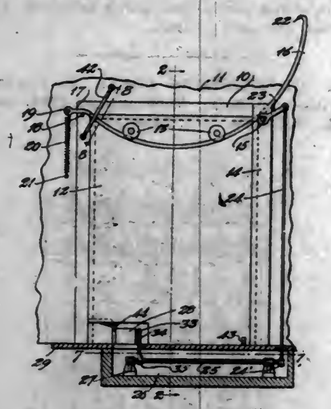


An improved fumigating device comprising a wide pan open to the atmosphere throughout and having an upwardly pressed ridge at its outer margin, lugs extending in annular spaced relation about the central part of the pan, a threaded and perforated socket carried upon said lugs above the bottom of the pan, a receptacle for liquid having a threaded neck screwed into the socket, a base member extending out from the ridge wall of the pan, and a downwardly projecting portion extending angularly about the outer rim of said base portion.

1,755,902. GLOVE-DRYING RACK. SALVATORE TASCARELLA, Brooklyn, N. Y. Filed Apr. 23, 1929. Serial No. 357,585. 2 Claims. (Cl. 211—182.)

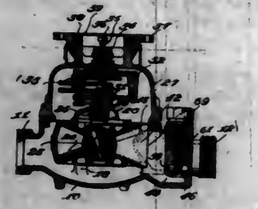
1. A drying rack, comprising a pair of upright standards, a plurality of bars connecting said standards, a base for each standard, a bracket carried by each standard, a drip pan carried by said brackets, a plurality of arms supported by said bars, and an article-receiving member carried by each of said arms, said article-receiving member being offset from one face of said bars to a position vertically above said pan, so that the drip will fall from said article into said pan.

1,755,903. FISHHOOK HOLDER. CHARLIE J. TOWNSEND, Pocatello, Idaho. Filed June 20, 1929. Serial No. 372,470. 1 Claim. (Cl. 43—31.)



A fish hook holder comprising a rectangular rigid block of relatively soft material, a plurality of cut away portions disposed around the sides of said block, said cut away portions being adapted to receive therein the shanks of a plurality of fish hooks with the points embedded in the block.

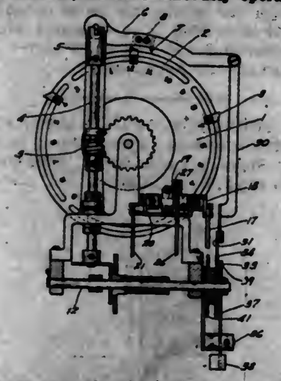
1,755,904. DOOR OR GATE OPERATING DEVICE. EDWARD R. TURNER, Holly, Colo. Filed Oct. 30, 1928. Serial No. 316,053. 2 Claims. (Cl. 39—67.)



1. In a door and gate opening and closing device, a frame, a closure, a horizontal shaft journalled in said

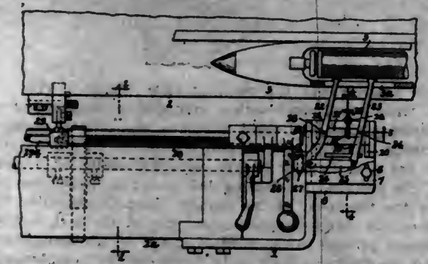
frame, an arcuate track fixed intermediate its ends to said shaft with its lower edge convex, roller hangers running on said track and carrying said closure, a rock arm fixed to the shaft, to rock the same and tilt the track, a link

extending downwardly from the rock arm, a rock shaft below the level of the closure, a rock arm fixed on the rock shaft and having the lower end of the link connected thereto, and vehicle operated means for actuating said rock shaft.



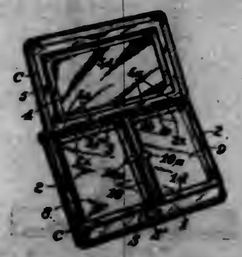
1,755,905. METER. HARRY G. WEYMOUTH, Pittsburgh, Pa., assignor to Pittsburgh Equitable Meter Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1929. Serial No. 353,187. 4 Claims. (Cl. 73—98.)

4. A fluid meter comprising a meter casing having an inlet and an outlet, a measuring chamber having an inlet and outlet disposed side by side and positioned within said casing with the chamber outlet in communication with the casing outlet, said casing having a direct passage from said meter casing to said casing outlet opening into the casing at a point thereof located on the side of the casing outlet opposite to that adjacent the chamber inlet, and an adjustable valve to control the flow of fluid through said passage.



1,755,906. TIME RECORDER. JAMES W. YATES, Cincinnati, Ohio, assignor to The Cincinnati Time Recorder Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 15, 1920. Serial No. 381,528. 5 Claims. (Cl. 234—43.)

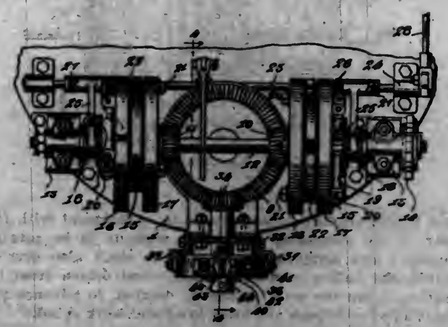
1. In a time recorder having time printing means the combination of means for shifting a two color printing ribbon to bring the desired color opposite the printing point of the printing means, a distinguished type face for irregular registrations, means for shifting the same into position opposite said printing point, a lever, a clock shaft and mechanism driven thereby, and controlled by the clock operated mechanism, for simultaneously operating the said



two shifting means, whereby both a distinguishing color and a distinguishing type face is impressed upon the operator's card.

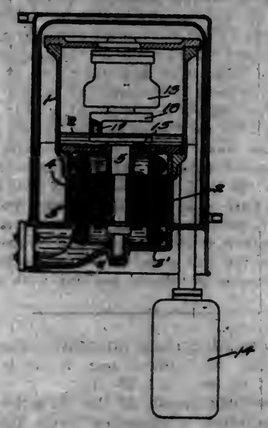
1,755,907. FEELER MOTION FOR LOOMS. FREDRIK ZWIEBEL, Prospect Park, N. J. Filed June 21, 1929. Serial No. 372,573. 4 Claims. (Cl. 139—286.)

1. In a loom, the combination, with the fixed structure and also the reciprocating lay thereof and with a shuttle on the lay having the axis of its contained filling package extending lengthwise of the lay, of a feeler mechanism comprising a carrier on said structure yieldable in one and normally urged in the other direction in which the lay reciprocates, a pair of feeler levers having independent fulcra in the carrier and each adapted to contact with the package and offset lengthwise of and projecting toward said axis and forming therewith acute angles pointing in approximately the same direction and each movable on its fulcrum in a plane cutting the package lengthwise thereof, and means to transmit pivotal movement from each lever to the other.



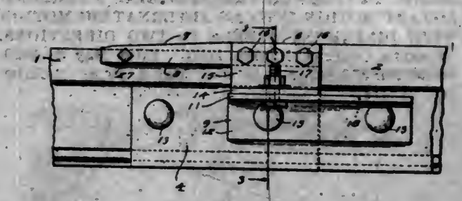
1,755,908. VANITY BOX. JOHN F. BABBITT, Louisville, Ky., assignor to John V. Pilcher, Louisville, Ky. Filed Aug. 20, 1928. Serial No. 300,790. 4 Claims. (Cl. 220—1.)

1. A rectangular box for the purpose described comprising a box body, a frame member hinged thereto comprising a single piece of sheet metal having an open center,



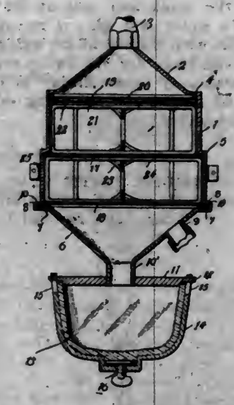
the edges forming said open center being displaced inwardly from the plane of the frame toward said box body, outer edges of said frame being turned back over the outer face thereof, a cover plate having tongues engaging said turned back edges, and a mirror having its edges held in the spaces formed between said offset edges and the cover plate.

1,755,909. BRAKE. JAMES T. BERNARD, Danville, Va. Filed Aug. 22, 1928. Serial No. 301,395. 2 Claims. (Cl. 212—69.)



1. In combination with a turntable of a power apparatus and its drive means including a drive shaft on the table, a pair of pinions loosely arranged on the shaft, a vertical shaft passing through the table, a gear on the upper end thereof meshing with the pinions, means for imparting movement to the table from said vertical shaft, clutch means for connecting each pinion to the drive shaft, a clutch shaft which, when rocked in one direction, will operate one clutch means without operating the other means and when rocked in the opposite direction, will operate the second clutch means without operating the first means; a brake shaft journaled on the table, a gear on said brake shaft meshing with the gear on the vertical shaft, a drum connected with the brake shaft, a brake band on the drum, means for normally holding the band contracted and means connected with the rock shaft for expanding the band when the rock shaft is moved to throw either clutch means into operative position.

1,755,910. PUMP AND MOTOR UNIT FOR REFRIGERATING MACHINES. BERNHARD BISCHOF, Geneva, Switzerland, assignor of one-half to Charles Haccius, Cologny-Geneva, Switzerland. Filed Dec. 26, 1924, Serial No. 758,240, and in Switzerland Jan. 2, 1924. 9 Claims. (Cl. 230—208.)

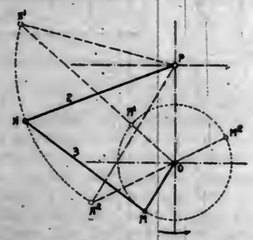


1. In a motor compressor unit, the combination of a motor having a rotor and a stator, said motor being arranged with its shaft vertical, compressing means, a casing entirely enclosing said motor and the compressing means, said casing having an upper and a lower bearing for said shaft, said upper bearing of said motor and the upper part of said casing forming a chamber, the upper end of the shaft projecting beyond said bearing into the chamber, said rotor and said stator being entirely surrounded by oil.

1,755,911. MEANS TO PREVENT BATTERING OF NEW RAILS. JUNIUS E. BUSBY, Jackson, Ky., assignor of one-half to Matt Deaton, Chavies, Ky. Filed Nov. 12, 1929. Serial No. 406,673. 11 Claims. (Cl. 238—220.)

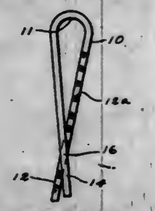
1. A device for preventing the battering of the end of a new rail joined to an old rail, comprising a bridge plate adapted to be arranged upon the old rail, the bridge plate having a horizontal tread portion adapted to aline with the tread of the new rail and having a sloping tread portion adapted to extend from said horizontal tread portion to the tread of the old rail, and means adapted to secure the tread plate upon the old rail.

1,755,912. OIL FILTER. BENJIMAN HARRISON CARLISLE, Petersburg, Ind. Filed Oct. 1, 1928, Serial No. 309,469. Renewed Jan. 9, 1930. 1 Claim. (Cl. 210—165.)



A filter comprising a casing having walls and a top, marginal portions of the top forming a shoulder, the upper portions of the walls being set inwardly to form a shoulder intermediate the height of the casing, a bottom having an annular flange about its upper end removably secured to said casing and projecting inwardly from walls of the casing, upper and lower filtering elements and an intermediate filtering element, the upper and intermediate filtering element being engaged with the upper and lower shoulders of the casing and the lower filtering element resting upon the flange of said bottom, a supporting frame engaged between the upper and intermediate filtering elements, and a similar frame engaged between the intermediate filtering element and lower filtering element, said frames serving to maintain the filtering elements vertically spaced and engaged with the respective shoulders and said flange, said filtering elements and frames being removable through the lower end of the casing when the bottom is detached.

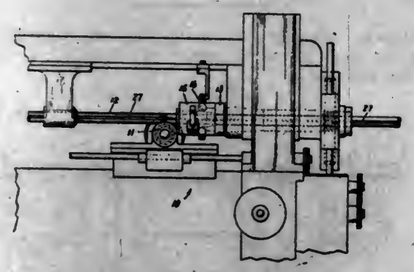
1,755,913. PROCESS FOR PRODUCING COMPOSITE METALS. HENRY L. COLBS, Hamilton, Ohio, assignor to Guardian Metals Company, Hamilton, Ohio, a Corporation of Delaware. Original application filed Nov. 22, 1927, Serial No. 234,957. Divided and this application filed Nov. 9, 1928. Serial No. 318,313. 11 Claims. (Cl. 22—203.)



6. A method of producing burglar-proof vault doors, comprising forming a drill-proof core member, spraying the core with an alkali nitrite, and casting a sheath of heat-conductive metal in and around the core.

1,755,914. DEVICE FOR TRANSFORMING A UNIFORM ROTARY MOTION INTO AN ALTERNATING MOTION WITH DIFFERENT SPEEDS IN TWO DIRECTIONS. GIUSEPPE COLUCCI, Naples, Italy. Filed May 2, 1929, Serial No. 359,842, and in Italy May 3, 1928. 1 Claim. (Cl. 74—14.)

Device for transforming a circular uniform motion into an alternating motion with a speed in one direction different from the speed in the other direction, comprising a crank, a swing arm pivoted at a distance from the axis of rotation of the crank greater than the crank length, a connecting rod which connects the free ends of the crank and swing arm and having an intermediate length between the length of the crank and that of the swing arm, a slide, a guide in which said slide is movable, a link connecting said slide with the end of the swing arm, a second slide carrying the hinge for the swing arm, a guide for said slide substantially perpendicular to the guide mentioned above and a set screw for fixing said second slide in the adjusted position.



1,755,915. REVERSIBLE PAPER CLIP. KENNETH P. DURHAM, Seattle, Wash. Filed July 30, 1929. Serial No. 382,094. 7 Claims. (Cl. 24—261.)

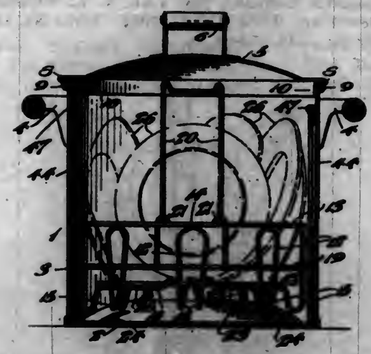
1. A wire clip for securing sheet materials by being reversed in position thereon comprising a bend, two legs which cross, outwardly extending projections on one side of each leg so positioned as to form a toothed jaw when in the binding position.

1,755,916. SHAFT-ADVANCING MECHANISM FOR USE IN HOBBING LONG MULTIPLE GROOVES IN SHAFTS. ULRICH SETH EBERHARDT, Maplewood, N. J., assignor to Newark Gear Cutting Machine Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 19, 1928. Serial No. 326,955. 5 Claims. (Cl. 90—11.)

1. In a shaft grooving machine embodying a hobbing cutter to effect the cutting of longitudinal grooves in a shaft, and a rotatable work spindle through which said shaft is adapted to pass: a shaft advancing or work head comprising an element fixed with reference to the frame of the machine, a gear carried thereby, and a hollow element rotatable with said work spindle and mounted within the said stationary element; gearing carried within the

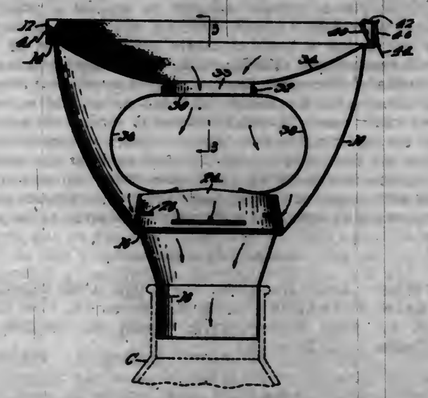
said hollow rotatable element and in engagement with the gear of the associated stationary element to be rotated thereby; and gripping means for the shaft also carried within the hollow rotatable element and driven from its gearing, when the work spindle is rotated, to advance the shaft axially through the work head and work spindle.

1,755,917. BANK COUNTER. PAUL A. DAVIS, 3d, Philadelphia, Pa., assignor to Davis, Dunlap & Barney, a Partnership composed of Paul A. Davis, 3d, M. Edmunds Dunlap, and William Pope Barney, Philadelphia, Pa. Filed Sept. 17, 1928. Serial No. 306,889. 3 Claims. (Cl. 45—140.)



3. In a device of the kind described, in combination a support, a work counter mounted thereon, a vertical riser mounted on the counter and having an inwardly extending grille-supporting shelf overlying a plurality of pairs of vertically positioned spaced walls on the counter secured and in transverse relation to said riser, one of said pairs of spaced walls defining in combination with a wicket hinged in said riser, a teller's compartment, a pair of other compartments within the limits defined by the grille-supporting shelf, the work counter and the pairs of vertically positioned spaced walls, an upright wall in the rear of and spaced from the said riser, a pair of roll tops normally closing said pair of other compartments but slidably adjustable to a position between said wall and riser to uncover said other compartments, and drawers coactingly connected to the roll tops, said drawers being arranged below the counter in aligned position with said roll tops.

1,755,918. CONVERTIBLE UTENSIL. CLAIR R. FAGLEY, Philadelphia, Pa. Filed Aug. 5, 1929. Serial No. 383,614. 7 Claims. (Cl. 53—1.)

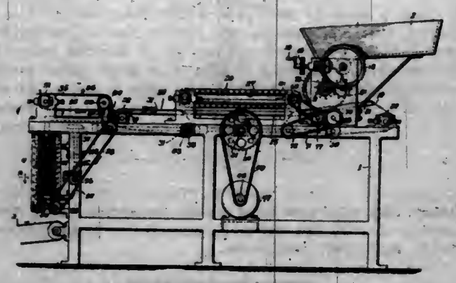


1. A convertible utensil of the character stated, comprising a container, a removable cover therefor, a wire frame positioned within said container, said wire frame

being reversible and being adapted to form a basket for receiving dishes and the like when in the upright position and to form a support for cooking utensils when in the

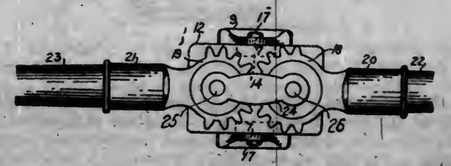
inverted position, and a convex false bottom positioned below said frame and provided with outer peripheral recesses and with upwardly extending nipples.

1,755,919. MILK STRAINER. JOHN FRIBERG, Westboro, Mass. Filed June 27, 1929. Serial No. 374,162. 4 Claims. (Cl. 210—159.)



1. A milk strainer comprising an outer casing having upper and lower internal shoulders, a combined screen and filter supported on said lower shoulder, an inverted cap for said screen and filter having an imperforate top and openings in its side walls for the admission of liquid thereto, an upper screen, a covering member on which said upper screen is mounted, said covering member being supported on said upper shoulder of said outer casing, means to hold said covering member in position, and means supported by said upper screen and covering member effective to hold said inverted cap and lower screen and filter in position.

1,755,920. RAIL JOINT. CARMELO FURNARI, TONY BASILE, and ROSS SCIOTTO, Altoona, Pa. Filed Aug. 15, 1929. Serial No. 386,136. 3 Claims. (Cl. 238—180.)



1. In a rail structure of the class described, a pair of complemental rails having their web portions cut out to provide a longitudinal key-slot, a removable retaining and coupling key arranged in said slot for joining the ends of said rails together, and slidably mounted retaining plates associated with the rail ends and disposed on opposite sides of the web portion for maintaining said key within its slot, and means on the web portions of said rail ends for limiting the sliding movement of the complemental plate in one direction, said rail ends being provided with latch seats, and slidable retaining latches carried by the plates and cooperable with said seats for holding the plates in position.

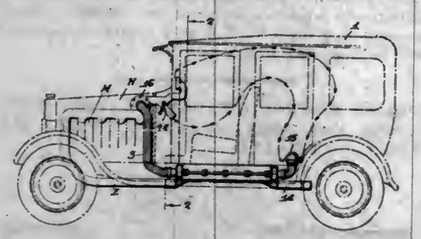
1,755,921. BAGLE-FORMING MACHINE. LOUIS GENDLER, New York, N. Y. Filed Feb. 27, 1929. Serial No. 343,086. 11 Claims. (Cl. 107—4.)

11. A bagle-forming machine, including means for forming cylindrical members from small batches of dough, a forming rod positioned to receive said cylindrical members immediately after forming, means for moving said cylindrical members along said rod, means for bringing the ends of said cylindrical members together around said rod, and forming belts arranged adjacent one section of said rod for completing the action of said cylindrical members to form complete ring structures.

1,755,922. ROWING APPARATUS. ALBERT E. HECOX, Lansing, Mich. Filed June 28, 1929. Serial No. 374,337. 1 Claim. (Cl. 9—25.)

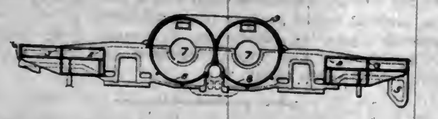
In a rowing apparatus, a clamp base having spaced upstanding ears, the said base having a flat top and a flat downwardly extending rear body plate and spaced downwardly extending reinforced portions in front provided with thumbscrews for securing the clamp base to the gunwale of a boat, the said reinforced portions extending for a distance over and upon the top of said clamp base, the said rear plate having downwardly extending reinforced portions near the ends formed integrally with the said ears, a rocker plate provided on the bottom with ears arranged next to the ears of the clamp base and pivotally attached thereto, said rocker plate having diagonal reinforcing ribs on the bottom, said rocker plate having on the top integral raised gear seats spaced apart, an oar and a separate operating handle having geared disks meshing with each other and pivotally secured upon the said gear seats of the rocker plate.

1,755,923. SHOVEL. MARTIN HOKANSON, Duluth, Minn., assignor to Marshall-Wells Company, Duluth, Minn., a Corporation of New Jersey. Filed July 18, 1924. Serial No. 726,776. 3 Claims. (Cl. 306—32.)



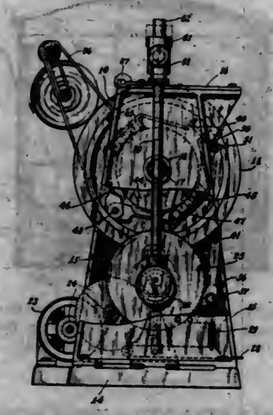
1. A tool blade having an extension formed by folding longitudinally to bring the longitudinal free edges in adja-

cent substantially parallel relation to form a socket, a handle having a reinforcing blade, means encircling the



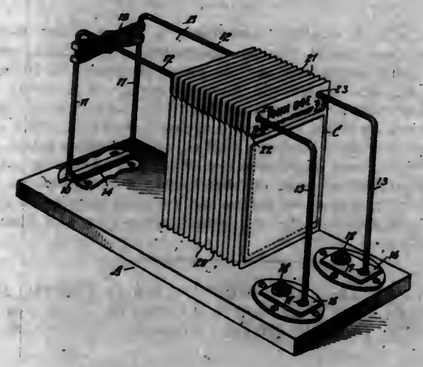
handle and blade and lying within the socket, and a rivet passing through the walls of the socket encircling means, handle and reinforcing blade.

1,755,924. COMBINED MUFFLER AND AIR HEATER. RAYMOND H. KEAGLE and STANLEY E. KEAGLE, Minneapolis, Minn. Filed Aug. 14, 1928. Serial No. 299,617. 2 Claims. (Cl. 257—241.)



1. A combined muffler and air heater comprising a cylindrical sectional casing, an air circulating pipe extending through said casing and arranged concentrically therewith, a plurality of spiral webs formed with each section of the casing, adapted to form a continuous spiral baffle extending around said air circulating pipe, and short conduits formed at the opposite ends of said casing for connection with the exhaust manifold of a motor, whereby the exhaust gases may be caused to travel through said casing around said air circulating pipe and subsequently be exhausted therefrom.

1,755,925. LOCOMOTIVE FRAME. BENJAMIN K. KIRK, Philadelphia, Pa. Filed Jan. 29, 1929. Serial No. 335,865. 1 Claim. (Cl. 105—172.)

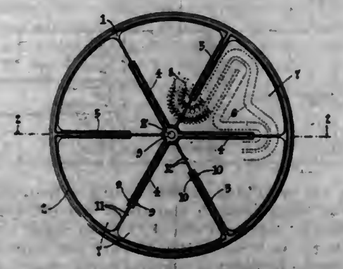


The combination in an electric locomotive frame; two side frames having pedestals for axles and bearings for a jack-shaft; two cradles for the motors, one cradle being on one side of the line of the jack-shaft and the other on the opposite side thereof; and a motor cradle cap enclosing both motors and detachably mounted on the frame.

1,755,926. APPARATUS FOR APPLYING MARGINAL STRIPS TO ARTICLES. CHARLES W. LEGUILLON and JOHN R. GAMMETER, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 21, 1924. Serial No. 714,904. 11 Claims. (Cl. 154—1.)

7. Apparatus for applying marginal strips of rubber to pieces of fabric, the said apparatus comprising an even surfaced platen member adapted to support a sheet of rubber in smoothly spread condition upon its face, means for supporting a piece of fabric with a margin of the fabric overhanging therefrom and in overlapped relation to a margin of the rubber sheet, a presser, a cutter, a mounting common to the presser and the cutter and movable from and toward the platen member to actuate the presser and the cutter against the platen member as a backing, to press the two margins together and to sever the rubber along the said margins, the presser being movable upon said mounting, and yielding means urging the presser member toward an advanced position with relation to the cutter.

1,755,927. MERCHANDISE PACKAGE AND DISPLAY RACK THEREFOR. LOUIS N. LEVINSOHN, New York, N. Y. Filed Sept. 7, 1929. Serial No. 390,979. 2 Claims. (Cl. 211—59.)

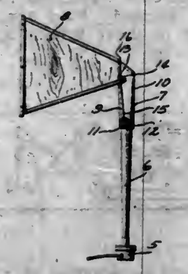


1. A theft proof display rack for packaged merchandise comprising a base member, a frame having a substantially horizontal portion for slidably and pendently supporting the packaged merchandise from the upper ends, means pivoted at one end to the base member and connected at its other end with one end of the horizontal portion, the other end of the horizontal portion having a free end extended downwardly engaging the base member and co-operating with the pivoted means for maintaining the horizontal portions in spaced relation with the base member, and means for locking the free end of the frame to the base member.

1,755,928. SAFETY AEROPLANE CONTROL STICK. JOE BEN LIEVER, San Antonio, Tex. Filed Dec. 13, 1929. Serial No. 413,856. 1 Claim. (Cl. 244—29.)

A student's control stick for airships comprising a lower tubular section and an upper tubular section, flanges on the confronting ends of the sections having peripheral notches, swingable bolts carried by the lower flange movable through the notches, wing nuts on said bolts, a coil tension spring having one end fixedly secured in the lower section, a bolt member connected with the outer end of the coil spring, a tubular handle on the upper stick section having a partition through which the bolt is threaded, a lock nut on the bolt contacting with the partition and said handle being turnable on the said stick section for imparting a longitudinal movement to the bolt and for adjusting the spring.

1,755,929. ELECTRIC HEATING ELEMENT. KEITH CHARLES MACNABB, Carleton Place, Ontario, Canada, assignor to Findlay Bros. Co. Limited, Carleton Place, Ontario, Canada. Filed Feb. 20, 1929. Serial No. 341,455. 4 Claims. (Cl. 219—37.)

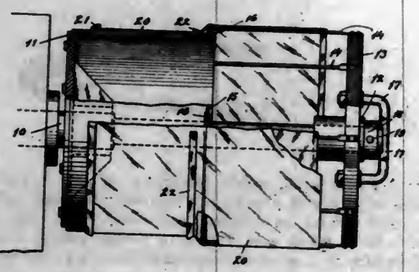


1. In an electric heating element, a substantially sector-shaped block of refractory material having open-ended grooves formed on one side thereof, the grooves in said blocks opening at one end on one side of said block adjacent the apex thereof while the other ends of said grooves open on the other side of said block adjacent the arcuate end thereof.

1,755,930. POWER CABLE. WASHINGTON IRVING MIDDLETON, Watertown, Mass., assignor to Simplex Wire and Cable Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1929. Serial No. 358,227. 5 Claims. (Cl. 173—267.)

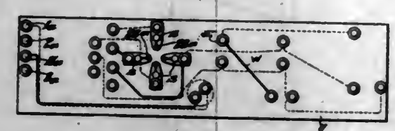
1. A power cable which comprises at least a pair of conductors twisted around one another and each formed of cabled strands in layers, the interstices in each conductor being filled with rubber, a rubber sheath around the conductors, a layer of insulating fabric over the rubber sheath, a continuous film of oil-proof lacquer over the fabric, and a sheath of armor over the film.

1,755,931. SOUND-AMPLIFYING HORN. HERMAN C. MUELLER, Milwaukee, Wis. Filed Apr. 8, 1929. Serial No. 353,310. 12 Claims. (Cl. 181—27.)



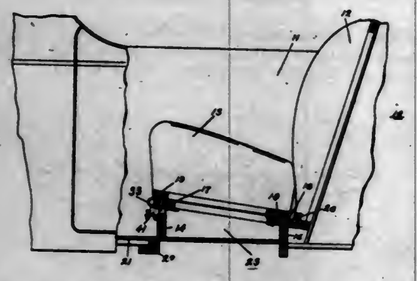
1. In a horn having angularly related portions, the combination with said portions of a sound reflector positioned in the angle at the juncture of said portions, the area of said reflector being greater than that of a cross section of one of the portions and angularly disposed to intercept substantially all portions of a sound wave propagated through said portion and to reflect said sound wave into the other of said portions substantially symmetrically with reference to the axis thereof.

1,755,932. AIRCRAFT PONTOON. JAMES A. PENDERGRASS, Franklin Furnace, Ohio. Filed June 5, 1929. Serial No. 368,470. 8 Claims. (Cl. 244—2.)



1. In a pontoon of the class described, a cylinder extending vertically through the pontoon and open at both ends, a circular bearing plate in the bottom end of the cylinder, a rotatable ball on said bearing plate projecting partially therethrough below the pontoon, and a vertically adjustable thrust bearing engaging the top of the ball and supported in the cylinder.

1,755,933. MACHINE FOR FOLDING TIRE BANDS. FRED B. PFEIFFER, Akron, Ohio, assignor to Seiberling Rubber Company, Barberton, Ohio, a Corporation of Delaware. Filed June 18, 1929. Serial No. 371,897. 8 Claims. (Cl. 154—10.)



1. In apparatus for folding bands, the combination of a band-supporting drum, and a circularly-disposed roller structure movable over said drum to fold the band material upon itself.

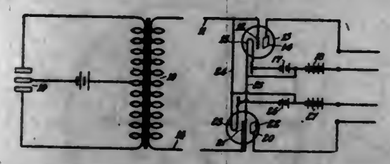
1,755,934. ELECTRICAL APPARATUS. JOHN HEREWARD REYNER, Boreham Wood, and ARTHUR HERBERT CURTIS, Bedford, England. Filed Apr. 5, 1929, Serial No. 352,874, and in Great Britain Apr. 8, 1928. 1 Claim. (Cl. 250—16.)

In a radio set, the combination of a non-conducting plate provided with a series of holes; metallic eyelets about said holes; and electrical connections attached to said plate by said eyelets.

1,755,935. LOCK FOR MOTOR VEHICLES. EDWARD F. ROBERTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 5, 1925. Serial No. 13,045. 3 Claims. (Cl. 70—4.)

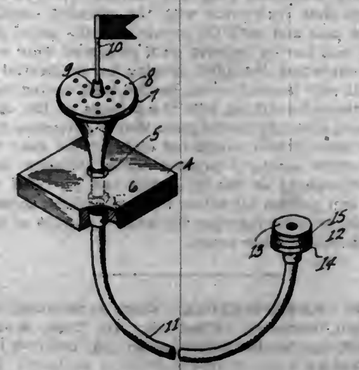
2. In a lock mechanism, a member to be locked, a pin carried by the member to be locked, said pin having a groove, a slide movable inwardly and outwardly, a pull for the slide, said slide having a keyhole slot for coaction with the groove in the pin, a bolt movable transversley through the slide and means for locking the bolt.

1,755,936. MASSAGING DEVICE. ANDREW BURNS SHAW STANLEY, Moreland, Melbourne, Victoria, Australia. Filed Apr. 25, 1928, Serial No. 272,777, and in Australia July 21, 1927. 1 Claim. (Cl. 128—67.)



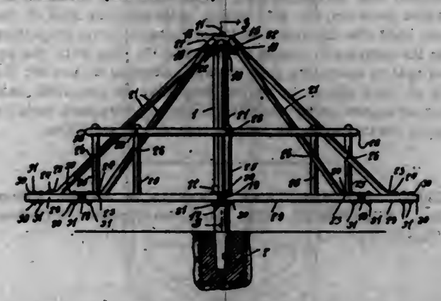
A massaging apparatus including a tubular body provided at one end with an out-turned annular flange and at the opposite end with an external bead, the juncture of the flange and inner wall of the body being rounded, said flange beyond the inner wall of the body being provided with a series of upstanding resilient projections extending throughout the full circumferential length and surface of the flange.

1,755,937. WORK CLAMPING FIXTURE FOR CRANK GRINDING MACHINES. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation. Original application filed Aug. 2, 1926, Serial No. 126,588. Divided and this application filed June 1, 1928. Serial No. 282,173. 4 Claims. (Cl. 51—237.)



4. In a crank grinding machine, work clamping means comprising jaws pivoted to grip the work eccentric with respect to its axis of rotation, and fluid operated pistons revolvable about said axis for actuating said jaws, substantially as set forth.

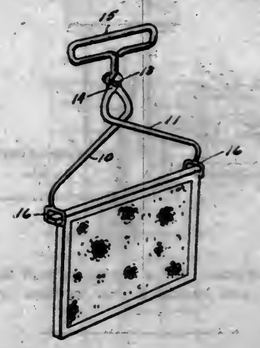
1,755,938. AMPLIFICATION SYSTEM. LINCOLN THOMPSON, Naugatuck, Conn., assignor, by mesne assignments, to Wm. H. Bristol Talking Picture Corporation, Waterbury, Conn., a Corporation of Connecticut. Filed May 1, 1928. Serial No. 274,174. 7 Claims. (Cl. 179—171.)



1. In an amplifying system having a thermionic valve with controlling element, and anode and cathode included in a suitably energized circuit, and an input circuit connected to the said controlling element and cathode: a unilateral device included in the said input circuit, having its voltage-current characteristic adjusted to match the grid-voltage grid-current characteristic of said thermionic valve and thereby to direct current through said unilateral device such that equal positive and negative voltages applied to the input circuit cause substantially equal flows of current respectively between said cathode and the said controlling element and through the said unilateral device.

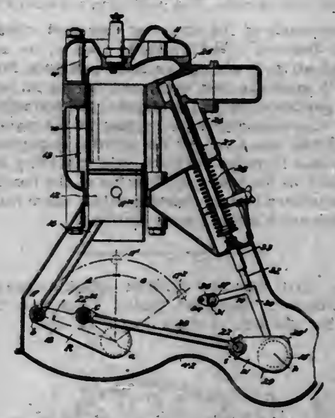
1,755,939. DIVING APPARATUS. GEORGE UHLIG, Portland, Oreg. Filed Aug. 3, 1928. Serial No. 297,813. 1 Claim. (Cl. 9—14.)

A device of the character described comprising a floating air receiving means embodying in its construction a substantially rectangular buoyant base, a funnel-shaped receptacle centrally positioned on the top of said base, a perforated top plate connected to said receptacle and equipped with a socket for receiving therein an indicating flag, and a flexible tube connected to the bottom of said buoyant base to convey air drawn through the receptacle to a person under water.



1,755,940. MERRY-GO-ROUND. OSCAR J. WATTS, Kensington, Kans. Filed Jan. 25, 1928. Serial No. 249,392. 3 Claims. (Cl. 272—33.)

1. A merry-go-round comprising a post, a sleeve and a cap rotatably mounted on the post, arms secured to and extending outwardly from the sleeve, braces connecting the cap and the arms, standards secured to the arms and braces and extending above the latter, seat boards secured to the arms, and an annular member secured to the upper ends of the standards.

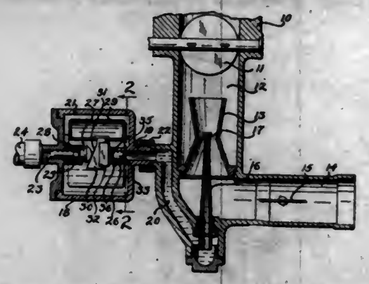


1,755,941. BEEHIVE-FRAME HOOK. LAURENCE F. WILSON, Dallas, Tex. Filed May 11, 1928. Serial No. 277,076. 1 Claim. (Cl. 6—12.)

In a device adapted to be used in connection with bee hives for handling bee hive frames formed with oppositely projecting lugs fitting within said bee hives, the combination with a pair of arms, of a handle therefor, each of said arms being of substantially Z shape and comprising a body portion and upper and lower end portions, the upper end portions of said arms being pivoted together and to said handle by the same pivot, the lower end portions of said arms being formed with rectangular loops for receiving said oppositely projecting lugs of the bee hive frame, the cross section of said arms gradually decreasing from said upper end portion throughout said body portion to said lower end portion, permitting said lower end portions and said rectangular loops to be relatively slender for insertion into said bee hive and attachment to said lugs for ready withdrawal of said frame from said bee

hive, said arms when in operative position on said hive frame having their body portions extending respectively in opposite directions and said body portions crossing each other intermediate said pivot and said loops.

1,755,942. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 14, 1924. Serial No. 706,602. 28 Claims. (Cl. 123—197.)

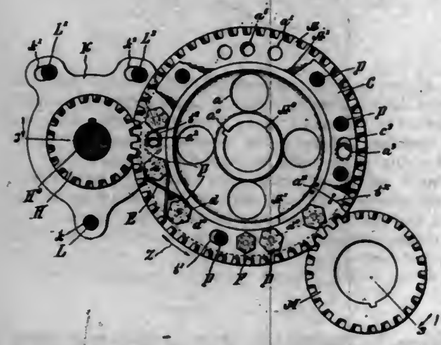


1. In an internal combustion motor of the four-cycle type in combination, a reciprocating member, a rotatably mounted shaft having a crank, means connecting the crank and member, whereby the member makes four single strokes for each complete revolution of said shaft, including a rocker comprising two arms, a pitman connecting the member and one arm, and a link connecting the crank and the other arm, the parts being arranged so that the pivotal connection of the pitman and its arm swings back and forth across a line through the center of oscillation of the rocker parallel to the reciprocating member.

1,755,943. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 19, 1925. Serial No. 57,259. 13 Claims. (Cl. 137—104.)

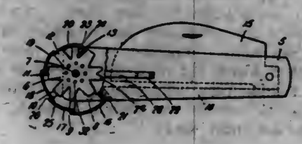
13. A carburetor float mechanism comprising a chamber, an inlet tube extending from one side of said chamber

towards the center thereof, an outlet tube extending from adjacent the center of said chamber, a valve for said inlet tube, a guide mounted to oscillate in said outlet tube, a



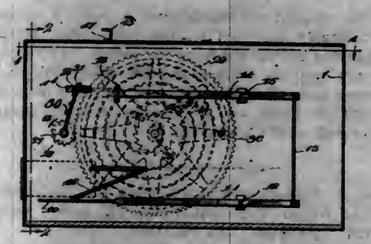
float in said chamber and a device on said float operating in said guide and having a cam surface for controlling said valve.

1,755,944. BOTTLE OR JAR. THOMAS C. ADAMS, Gastonia, N. C. Filed Oct. 28, 1927. Serial No. 229,501. 5 Claims. (Cl. 215—1.)



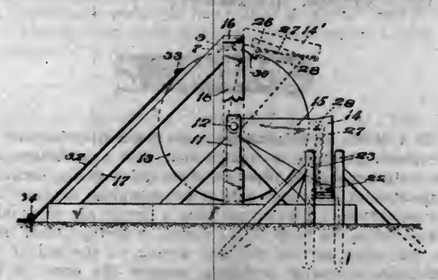
1. A receptacle of the character described, comprising a vertically disposed cylindrical body open at its upper end and closed at its lower end to form a bottom for the receptacle to normally rest upon, and having an externally threaded portion at each of said ends; and a single cap of a diameter approximately equal to that of the main body of the receptacle, and arranged for positive engagement with either of said threaded portions, said cap being arranged, when placed on the lower end portion of the receptacle, to form an auxiliary bottom therefor with a space intervening between the same and the main bottom.

1,755,945. ADJUSTABLE SILENT GEAR. ALEXANDER M. ALEXANDRESCU, Cleveland, Ohio. Filed Nov. 16, 1927. Serial No. 233,692. 1 Claim. (Cl. 74—28.)



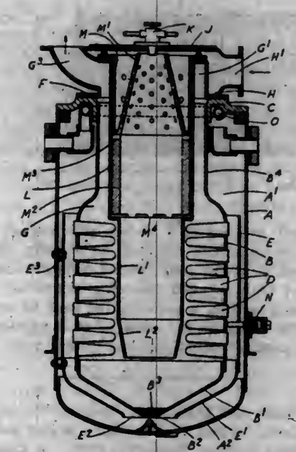
An adjustable transmission gear comprising a main gear body having a toothed periphery and provided with spaced threaded transverse openings with a tapered socket between such openings, a sound deadening ring fitted against the side of the main body gear and having openings of a size to accurately register with the threaded openings of the main gear and provided with an elongated slot registering with the socket, a toothed ring mounted for circumferential adjustment along side said main gear and against the sound deadening ring and having circumferentially elongated slots registering with the threaded openings in the main gear and with the openings in the sound deadening ring and having between such elongated slots a transversely extending threaded opening in substantial alignment with said tapered socket, headed bolts having threaded end portions for taking into the threads of the openings of the main gear and having plain shanks extending through the circumferentially elongated slots of the gear ring, a headed screw having a tapered shank threaded into the threaded opening of the ring gear and provided with a tapered end portion for fitting into the tapered socket, and means for securing together the adjacent heads of the two bolts and intermediate screw.

1,755,946. KNIFE-HANDLE. OTTO ALTENBACH, Ohligs-Solingen, Germany. Filed May 16, 1928, Serial No. 278,116, and in Great Britain Oct. 18, 1927. 3 Claims. (Cl. 7—16.)



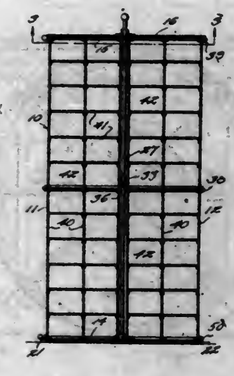
1. A device of the character described, comprising a pair of spaced side plates forming a handle, a disc mounted for rotation between the side plates, adjacent one end of the latter, said disc having a series of integral tools projecting from its periphery, means for locking the disc with the desired tool in operative position and covering means for the ends of said plates in which said disc is mounted, said covering means being mounted to swing over said ends on an axis coaxial with the axis of rotation of said disc.

1,755,947. ANIMAL TRAP. WALTER G. BAKER, Salem, Oreg. Filed Feb. 25, 1928. Serial No. 256,949. 4 Claims. (Cl. 43—75.)



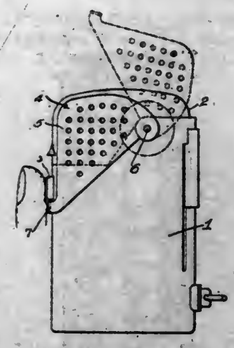
1. A trap of the class described comprising a casing having an entrance, a movable platform located within said casing, a striking element connected to be actuated by the movement of said platform, ejecting means located in rear of and operated by the striking element to receive and throw out an animal which has been struck by the striking element, and means operable by the striking element for automatically setting the trap after the ejecting means has been operated.

1,755,948. GATE-OPERATING MECHANISM. THOMAS W. BRAZELL, Pringle, S. Dak. Filed Mar. 17, 1928. Serial No. 262,349. 11 Claims. (Cl. 246—293.)



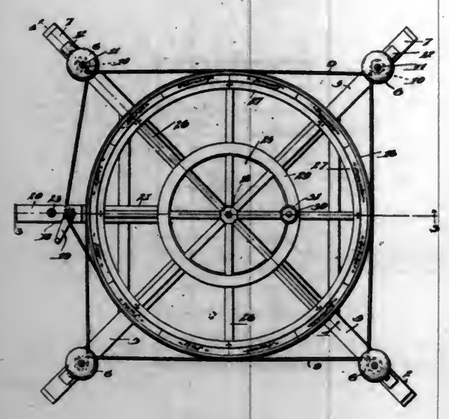
1. A gate operating mechanism comprising an actuating member adapted to be carried by a railway vehicle, a pivoted member adapted to be engaged and quickly moved by said actuating member, means for storing the energy imparted by said actuating member to said pivoted member, and means for utilizing said energy to close a gate.

1,755,949. STEAM GENERATOR AND WATER HEATER. THOMAS CLARKSON, London, England. Filed May 16, 1928, Serial No. 278,111, and in Great Britain May 30, 1927. 6 Claims. (Cl. 122—173.)



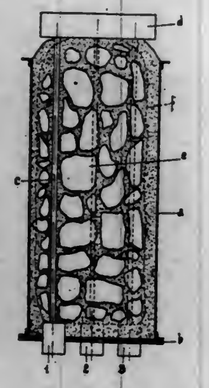
1. A water heater including in combination a cylindrical outer shell disposed vertically and having the lower end thereof closed, a tubular inner shell whose external diameter is less than the internal diameter of the outer shell and having a conical closure at its lower end, the two shells being disposed concentrically with a steam and water space between their sides and lower ends, an annular member connecting the upper ends of these shells and closing in the steam and water space, a series of thimble tubes projecting radially inwards from the wall of the inner shell into a central heating space, a downwardly directed burner mounted opposite to the open end of the inner shell and delivering hot gases into this heating space, a sheet metal baffle member comprising a tubular main part and a conical end portion with a central opening therein this baffle member being disposed in the steam and water space where it lies intermediate between the adjacent external and internal side and end surfaces of the inner and outer shells, the baffle tending to cause water to circulate downwardly between the baffle and the outer shell through the opening in the lower end of the baffle member and upwards between this member and the inner shell.

1,755,950. MAIL BAG AND SUPPORT THEREFOR. DAVIS L. DOBSON, Wilmington, and PERRY J. DOBSON, Kenansville, N. C. Filed Nov. 2, 1927. Serial No. 230,604. 3 Claims. (Cl. 150—14.)



1. A support for a mail bag comprising a base member having ears thereon and a central socket, loops adjacent the bottom of said bag, rods adapted to extend through said ears and said loops to connect the base member to said bottom, a rod secured in said central socket and extending vertically upward, a cover for said bag slidably adjustable on said rod, means for holding said cover in adjusted position, and means for attaching said cover to said bag.

1,755,951. PIVOTAL WIND SCREEN FOR PYROPHORE CIGAR LIGHTERS. ARTHUR DUBSKY, Vienna, Austria. Filed Feb. 15, 1928, Serial No. 254,586, and in Austria Feb. 15, 1927. 2 Claims. (Cl. 67—7.1.)

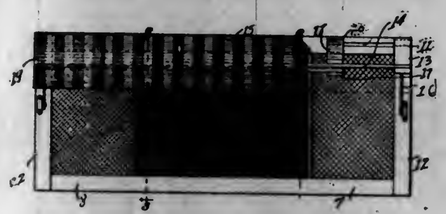


1. A device of the character described including, in combination, a casing, a pintle traversing the upper part of the casing, a spring cover for the casing having pivotal movement about the pintle, a push button device projecting slightly outward from the front of the casing near its upper end for controlling the retention of the cover in a closed position, a windshield including spaced perforated side cheeks positioned on opposite sides of the casing and cover and having pivotal movement on the ends of the pintle, and a transversely extending rib joining the lower ends of the cheeks and normally positioned beneath and retained in such position by the projecting portion of the push button device.

1,755,952. DEMONSTRATION DEVICE. CHARLIE GANT, Akron, Ala. Filed June 11, 1928. Serial No. 284,637. 4 Claims. (Cl. 35—3.)

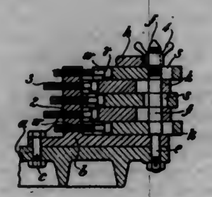
1. A device of the character described comprising a framework, a plurality of spheres journaled upon the framework, a wheel revoluble upon the framework, a luminary carried off-center by the wheel, and means for driving the wheel and spheres in unison so that the luminary travels on a prescribed orbit in respect to the spheres.

1,755,953. MANUFACTURE OF TRANSPARENT FUSED PURE SILICA. HENRI GEORGE, Paris, France, assignor to Societe Quartz & Silice, Paris, France, a Corporation of France. Filed Mar. 9, 1928, Serial No. 260,455, and in France Mar. 23, 1927. 2 Claims. (Cl. 49—78.1.)



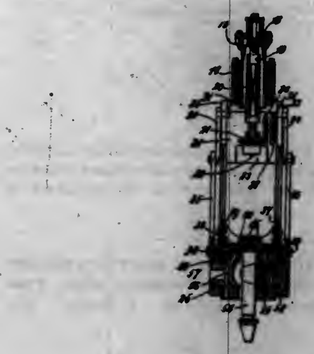
1. A process for the manufacture of transparent, fused, pure silica, consisting in carefully packing a mass of silicious sand around as large blocks as possible of quartzites, said blocks having a high chemical purity, small isometric crystalline elements close packed without any cement and without any occluded gases, in melting said blocks and siliceous sand, and after cooling, in dividing up the composite ingot obtained along the planes containing the flaws or bubbles arising from local impurities, for the purpose described.

1,755,954. PARACHUTE. MANUEL GARCÍA GÜEDE and JACOBO CUTIN, Tucuman, Argentina. Filed Nov. 17, 1927, Serial No. 234,012, and in Argentina Oct. 5, 1927. 3 Claims. (Cl. 244—21.)



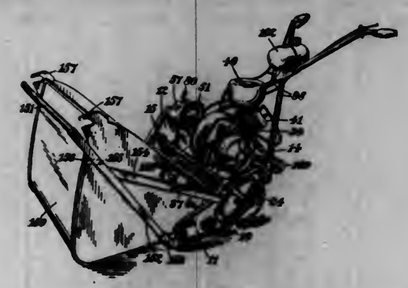
3. A device for releasably supporting a parachute on an aeroplane including in combination with a parachute and its main supporting rope, an open ended casing rockably supported on the under part of the aeroplane for receiving the parachute in a folded position, a closure cap detachably connected to the front of the casing, a spring armed clasp on the inner part of the cap, a ring on the top of the parachute normally arranged between the arms of the spring clasp whereby the parachute is detachably connected to the cap, and releasable means traversing the other end of the casing and engaged with the parachute and adapted to normally retain the parachute and its ropes within the casing and adapted to be released by a pull exerted when the aviator falls.

1,755,955. COMBINED AWNING AND SCREEN. SERPOOHIE HAGOPIAN, San Francisco, Calif. Filed Nov. 25, 1927. Serial No. 235,713. 1 Claim. (Cl. 156—38.)



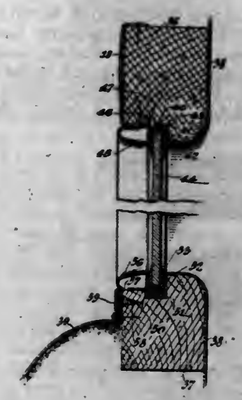
A combined awning and screen comprising a pair of slidably connected screen sections, an awning construction for said screen sections, said awning construction comprising a pair of frames, each hingedly connected to its respective hinged section, a covering for each of said frames, and collapsible brackets for each of said awning sections for connecting said awning sections to said screen sections.

1,755,956. CAM MECHANISM. SYDNEY HUNT, Birmingham, England. Filed Jan. 3, 1928, Serial No. 244,356, and in Great Britain June 22, 1927. 4 Claims. (Cl. 49—14.)



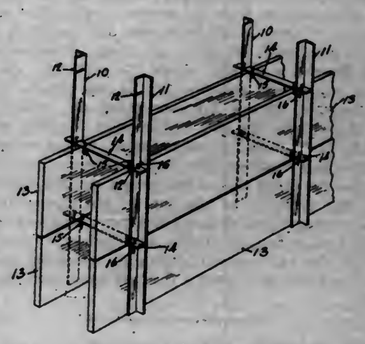
1. In a rotary machine for the manufacture of glass articles, the combination of a fixed central column, a framework carrying glass article forming units rotatable about the said central column, a plurality of vertical guides at the top of the column, slices constituting stepped cam sections and adapted to be slidden radially between said guides, each step of said cam being adapted to cooperate with a follower actuating some device in connection with one of the glass article forming units and each step being composed of any required number of slices the outer peripheries of which constitute the contour of the cam, screw means cooperating with a fixed part at the top of the column for mechanically protruding or retracting any slice radially, said screw means being operable from the top of the column while the machine is in motion, and means for locking said slices in their adjusted positions for the purposes set forth.

1,755,957. MACHINE FOR THE MANUFACTURE OF HOLLOW-BLOWN GLASS ARTICLES. SYDNEY HUNT, Birmingham, England. Filed Jan. 19, 1928. Serial No. 247,851. 20 Claims. (Cl. 49—5.)



1. In a machine for the manufacture of hollow blown glass articles of the type comprising a combined open suction and blowing head and a cover adapted to be applied to the opening in the head, the said cover carrying at least one plug for the formation of the preliminary blow opening in a parison; a construction including a rotary valve located between the opening in the head and the neck mould, the said valve being so arranged that in one position it allows the plug to co-operate with the neck mould and the suction to be effective and in another position, when the plug and cover are withdrawn, closes the head to the outside and allows the blowing air to be effective.

1,755,958. POWER-DRIVEN LAWN MOWER. ARTHUR ERNEST JERRAM, Oadby, England. Original application filed Mar. 23, 1927, Serial No. 177,791, and in Great Britain Apr. 1, 1926. Divided and this application filed Jan. 20, 1928. Serial No. 248,196. 9 Claims. (Cl. 56—26.)

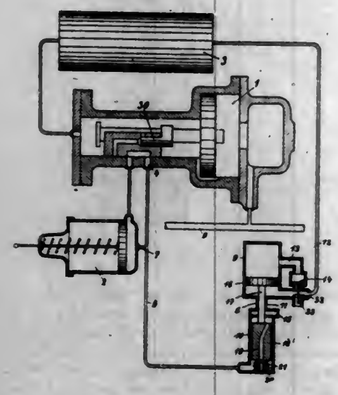


1. In a power-unit-driven lawn-mower, the combination of a frame, a rotary cutter journalled therein, a power-unit that has a driving shaft and is withdrawably mounted on the frame, transmission means comprising a "fixed-centre" driven shaft for driving the rotary cutter, quick-release clamping means for securing the power-unit on the frame, guide means for controlling the motion of withdrawal and replacement of the power-unit out of and into its driving position on the frame in a direction parallel with said driven shaft, and a readily separable driving connection that operatively connects said driving and driven shafts in a line and is separable by the controlled motion of withdrawal of the power-unit.

1,755,959. MOTOR VEHICLE. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1925. Serial No. 61,884. 6 Claims. (Cl. 296—44.)

1. The combination in a motor vehicle body of a frame defining a window opening, channel members on said frame in the plane of the opening, a window glass mounted in said channel members, moulding adapted to position said channel members on said frame, a flange on said moulding engaging a slot in the frame for securing the moulding in position on said frame.

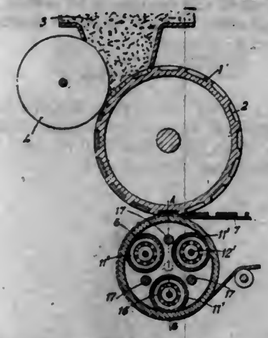
1,755,960. CONCRETE-FORM HOLDER. CLIFFORD J. KOHLER, Wauwatosa, Wis. Filed Dec. 15, 1927. Serial No. 240,090. 5 Claims. (Cl. 25—131.)



3. A form holder for concrete walls comprising a pair of angle irons, one flange of each of which is provided with open-end slits spaced apart in the length of the angle iron, a tie bar formed as a metallic strip entered in opposite slits in the angle irons, the said tie bars being provided at their ends with perforations for the reception of nails or pins to maintain the angle irons in spaced relation and hold the forms in engagement with the opposed angle irons.

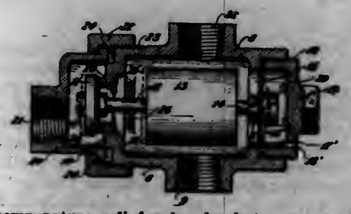
1,755,961. RECORD OR INDEX CARD. DANIEL W. B. KURTZ, Jr., Columbia, Mo. Filed Mar. 27, 1928. Serial No. 265,090. 2 Claims. (Cl. 129—16.7.)

2. In a card index, a series of record cards having rearwardly beveled edges for easy accessibility and quick handling.



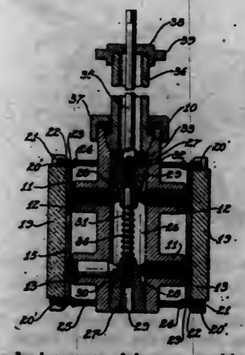
1,755,962. RELEASE VALVE FOR SINGLE-CHAMBER AIR-PRESSURE BRAKES. RICHARD LUDWIG LEUCHTER, Weidlingau-Hadersdorf, Austria, assignor to Gebrüder Hardy Maschinenfabrik und Giesserei A. G., Vienna, Austria. Filed July 21, 1928, Serial No. 294,529, and in Austria Aug. 22, 1927. 4 Claims. (Cl. 303—68.)

1. In a release valve for single chamber air pressure brakes, in combination with an air brake system including a source of air under pressure, a brake cylinder, and a control valve; a release valve, proper, including two axially alined chambers, tubular means connecting the chambers, a piston working in each chamber between the ends thereof, means connecting the pistons for movement in unison and working through said connecting means for said chambers, a pipe leading from the source of air under pressure to one end of one of said chambers and having a branch communicating with the other end of said chamber, a valve in said branch normally closed to maintain air under pressure in the said chamber at the end remote from the other chamber, means for admitting air under atmospheric pressure to the end of the other chamber which is adjacent the first mentioned chamber, means establishing communication between the brake cylinder, the control valve, and the other end of the second mentioned chamber, in the open position of the control valve, the piston in the second mentioned chamber having a passageway therethrough, and means for closing said passageway when the piston in the said second mentioned chamber is at the limit of its movement toward the last mentioned end of the chamber.



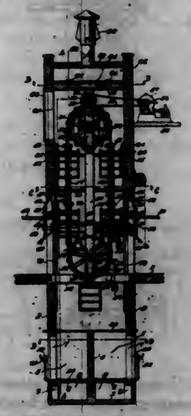
1,755,963. DOUGH-MOLDING MACHINE. RENÉ MALE, Arcueil, France. Filed May 24, 1928, Serial No. 280,360, and in France Sept. 26, 1927. 3 Claims. (Cl. 107—10.)

1. In a dough-working machine including a rotary working roller having recesses therein, and an endless belt cooperating therewith, the combination with an apparatus for detaching portions of the dough from the recesses of the rotary working roller onto said endless conveyor belt, comprising a deformable cylinder coacting with that part of the endless conveyor belt which passes under the rotary working roller, the said deformable cylinder consisting of a plurality of relatively thin resilient metal rings arranged side by side in contacting relation and each capable of radial deformation, means for supporting the said



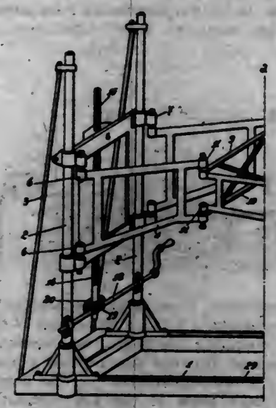
ring, and means for adjusting the last-mentioned supporting means so that the said rings force the endless conveyor belt into engagement, the lower part of the periphery of the working roller.

1,755,964. AUTOMATIC TEMPERATURE-RELIEF VALVE. THOMAS E. MORRIS, Longmeadow, Mass. Filed Dec. 20, 1927. Serial No. 241,414. 7 Claims. (Cl. 137—53.)



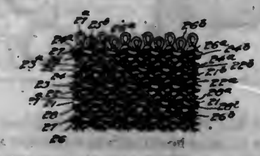
6. A temperature relief valve for hot water tanks comprising a casing member having an inlet and a discharge opening, a valve for closing the discharge opening, a diaphragm and thermostat connected to the valve, means for limiting the movement of the diaphragm by the pressure in the tank, said limiting means permitting the thermostat to operate at a predetermined temperature and open the said valve, as described.

1,755,965. LAPPING AND GRINDING DEVICE. JOHN W. OMEY, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 2, 1927. Serial No. 230,431. 1 Claim. (Cl. 51—184.3.)



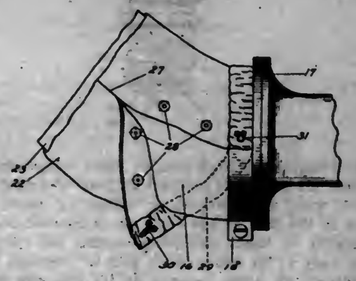
A grinding device comprising a working head having central and radial bores, a sleeve connected to said working head, an adjustment mechanism in the central bore of the working head, an extension shaft connected to the adjustment mechanism, said shaft extending through and beyond the sleeve and provided with means for operating the adjustment mechanism, support members mounted in the radial bores of the working head, said support members having channels therein parallel to the axis of the working head, abrading members mounted in said channels, abutments in the channels at the ends of the abrading members and means carried by the abutments whereby the support members are retained in adjusted position.

1,755,966. MEAT-CURING APPARATUS. ARTHUR E. OZOUF, Chicago, Ill., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1928. Serial No. 271,777. 15 Claims. (Cl. 99—2.)



1. In combination, a treating chamber; conveying means in said treating chamber; removable carriages for said conveying means; means comprising a pair of track members pivotally supported from the walls of said chamber; transferring said carriages from a point outside of said chamber to said conveying means; and separate mechanical means for automatically transferring said carriages from said conveying means to a point outside of said chamber.

1,755,967. COPYING MACHINE. ANTONIO PAOANI, Chiari, Italy. Filed Jan. 31, 1928, Serial No. 250,924, and in Italy Oct. 22, 1927. 3 Claims. (Cl. 90—13.8.)

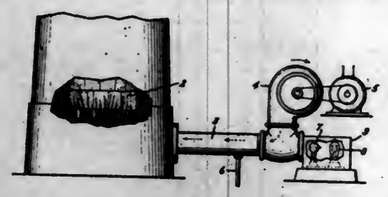


1. A machine for cutting and carving, including a base, a model and work supporting bench adjustable on said base, columns supported on said base, a pantographic support mounted for vertical slidable movement on said columns, a tool carrying frame mounted upon the pantographic support and movable through an angle from a vertical to a horizontal position, and means connecting the tools carried by the frame.

1,755,968. KNITTED FABRIC. HARRY RUBENSTEIN, Brooklyn, N. Y. Filed Oct. 15, 1925. Serial No. 62,585. 1 Claim. (Cl. 66—201.)

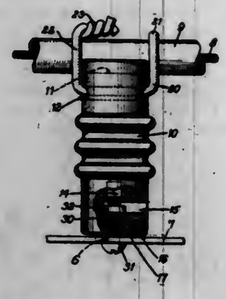
A knitted fabric comprising a plurality of threads in corresponding courses, one knitted at alternate wales and floated at intervening wales in one course, one knitted at every wale of the second course, one knitted at intervening wales and floated at alternate wales of the third course, and one knitted at every wale of the fourth course, the second and fourth threads forming a foundation fabric beneath the staggered floats of the first and third threads, the staggered float relation permitting an equal number of loops in every wale despite the floating of a yarn of a thread which naturally would decrease the loops in a wale.

1,755,969. VACUUM CLEANER. HACHIRO SHIGYO, San Francisco, Calif. Filed Dec. 17, 1925. Serial No. 75,959. 1 Claim. (Cl. 183—51.)



A dust confining chamber for a vacuum cleaner having the usual refuse receiving container, and comprising a generally cylindrical outer bag adapted to removably snugly surround said usual refuse receiving container of said vacuum cleaner and having a slit extending inwardly a short distance from the mouth of said outer bag and a band reinforcing said mouth, there being one character of inter-engaging means on the overlapping portions of the material of said outer bag about said slit to maintain said overlapping portions in overlapping closed relation, and a second fastening means of a different character at the ends of said band, said fastening members enabling the convenient association and disassociation of said encircling bag with said usual refuse receiving container and to prevent lateral disassociation of the portions of the material about said slit, said outer bag at the end removed from its mouth being provided with a centrally disposed aperture to admit the passage therethrough of, and interlocking engagement with, the fastening means intermediate said usual refuse receiving container and said vacuum cleaner.

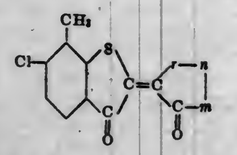
1,755,970. PROTECTIVE DEVICE. HAROLD C. SINGLETON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1926. Serial No. 141,397. 1 Claim. (Cl. 158—42.4.)



An oil burner construction comprising a fan housing having a projecting nozzle portion, an air tube secured

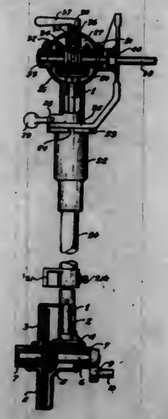
to said nozzle portion and opening thereinto, a combustion chamber into which the other end of said air tube opens, means for supplying fuel to said air tube, a housing secured to said nozzle portion and opening thereinto in

alignment with the ends of said air tube and a flame responsive device in said housing whereby said flame responsive device is exposed to direct radiations from the burner flame.



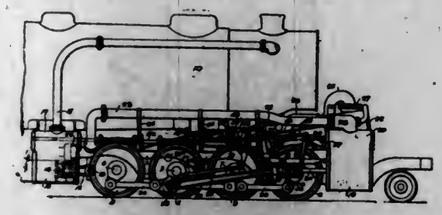
1,755,971. INSULATOR. ROBERT C. SMALLEY, Arlington, N. J., assignor to Claude Neon Lights, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1928. Serial No. 259,967. 1 Claim. (Cl. 173—28.)

An insulator for high tension cable comprising in combination, an elongated cylindrical body of glazed porcelain formed with a diametrically extending cable receiving groove in the face of one end, the cylindrical body having a plurality of beads extending around the circumference of the body at its mid-point, a pair of passages proximate the groove, an axial passage at its opposite end and a radially extending recess in communication with said passage, a pliable yielding cable securing member in the passages and adapted to be looped over a cable in the groove, a bolt in the axial passage adapted to clamp the insulator to a support, a nut in the radial recess to engage the bolt, and unglazed bosses on the face of the end opposite the cable passage.



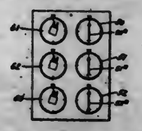
1,755,972. INDIGOID DYESTUFFS AND PROCESS OF MAKING SAME. ROBERT STOCKER, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 7, 1926, Serial No. 121,055, and in Switzerland July 29, 1925. 17 Claims. (Cl. 260—53.)

8. As new products of manufacture the herein described new unsymmetrical indigoid dyestuffs of the general formula



wherein r, n and m stand for atoms of which two are carbon atoms adjacent to each other, which at the same time appertain to an aromatic ring system, and of which the third is NH, S or C, which products form orange to red, violet and brown powders, which dissolve in concentrated sulfuric acid to violet to brown, green, and yellowish-green solutions, yielding with hydrosulfite and caustic soda solution greenish-yellow to yellow and violet vats which dye cotton fast orange to red, violet, brown and grey tints.

1,755,973. POWER APPLIANCE. LOUIS C. UPTON and GUSTAV B. KEIL, St. Joseph, Mich., assignors, by mesne assignments, to Nineteen Hundred Corporation, a Corporation of New York. Filed Oct. 5, 1925. Serial No. 60,412. 1 Claim. (Cl. 74—7.)

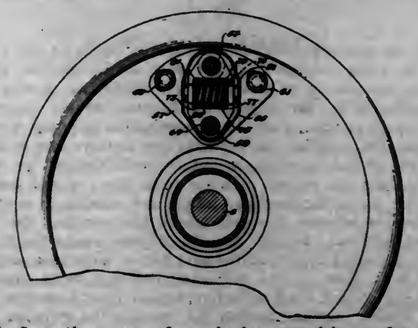


In a power appliance, a vertical sleeve having a housing adapted for housing power mechanism on the upper end of said sleeve, a shaft connected to the said power mechanism and extending through the sleeve, shaft driving means connected to the shaft at its lower end, and means on the sleeve for supporting the said sleeve and the said power mechanism and the said shaft whereby the said shaft is adapted to be flexibly coupled to the said shaft driving means, said supporting means comprising a plurality of spaced collars upon said sleeve, said collars having attaching flanges and means for adjustably securing the collars on the said sleeve.

1,755,974. LOCOMOTIVE. SAMUEL M. VAUCLAIN, Rosemont, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 23, 1926. Serial No. 83,280. 2 Claims. (Cl. 121—122.)

1. The combination in a valve mechanism for a locomotive of side frames, a valve, a valve gear of the Stephenson type for operating the valve, the mechanism of the gear being located between the frames, a rocking lever for the gear; a bearing bracket for the lever having a lug engaging both sides of the top element of a side frame; and two opposed bearing pins for the lever extending into apertures in the side lug at the opposite sides of the frame.

1,755,975. INDICATOR SYSTEM. WALDO W. WILLARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 19, 1927. Serial No. 227,323. 8 Claims. (Cl. 177—351.)

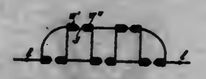


1. The combination in a system of gun fire control comprising a sighting instrument and a plurality of guns controlled thereby, of an intermediate station, an indicating instrument in said station comprising a plurality of indicating members mounted for rotation about axes spaced relatively with respect to each other, means for operating said members in accordance with the relative movements of said sighting instrument and said guns respectively whereby said members are returned to zero positions when the guns and said sighting instrument are directed on the same target, said indicating members being arranged to be in alinement when in zero positions.

1,755,976. ENGINE VALVE. DOLPHUS WILLIAMS, Sanger, Calif. Filed June 10, 1927. Serial No. 197,899. 1 Claim. (Cl. 123—59.)

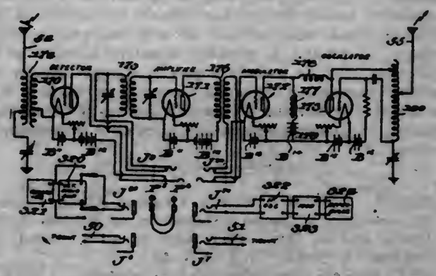
In a device of the class described, an engine body, including cylinders, a valve casing mounted above the cylinders, the diameter of the casing gradually decreasing from one end to the other end, a tapered valve within the casing, means independent of the casing for mounting the valve and providing water circulation therethrough, means for rotating the valve, the mounting means being spaced from the casing of the valve and the engine structure and admitting the rotating means between the valve and mounting means, means imparting longitudinal thrust to the valve, for seating the latter, ports being provided between the casing and cylinders, fuel inlet means and exhaust means, the valve including ports adapted to effect successive registration, in timed relation, between the ports of the valve and the ports between the latter and the cylinders.

1,755,977. BRAKE-CAM CENTRALIZER. CLEMENTS G. BELDEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 1, 1928. Serial No. 251,188. 18 Claims. (Cl. 188—78.)



1. Operating means for a brake comprising a drum, a brake to engage the drum, said operating means comprising a brake actuating member to move said brake into engagement with said drum, means to mount said brake actuating member to permit its bodily movement, mechanism comprising a single spring to restore said brake actuating member to the position from which it was bodily moved in applying the brake.

1,755,978. FLOOR COVERING. JOHN B. CAMPBELL, Salem, N. J., assignor, by mesne assignments, to Carthage Mills Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed June 7, 1926. Serial No. 114,062. 3 Claims. (Cl. 154—49.)

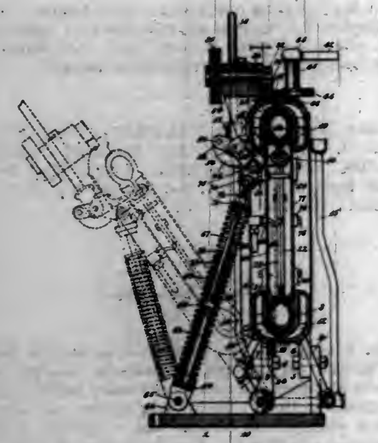


1. A floor covering comprising a ground layer of burlap, an intermediate layer of asphalt-saturated felt-base material, and a top layer of terry cloth, said layers being bound together by a binder comprising asphalt.

1,755,979. SYSTEM FOR THE PROTECTION OF ELECTRICAL INSTALLATIONS AGAINST OVERVOLTAGES. GINO CAMPOS, Milan, Italy. Filed Dec. 20, 1926, Serial No. 156,037, and in Italy Jan. 9, 1926. 3 Claims. (Cl. 175—30.)

1. In a system for the protection of electric installations against overvoltages, a conductor inserted in the line to be protected and formed with sharp bends in a direction opposed to that of the arriving current, and ohmic resistances shunted on the line and completely insulated from ground and from the other conductors of the line and acting to obstruct the passage of the ordinary line currents, but to dissipate in the form of heat the currents produced by the overvoltage; each bend having its peak connected to one end of a resistance, the other end whereof is connected to said conductor at a point further down the line, said resistances being located substantially in the direction of the arriving current.

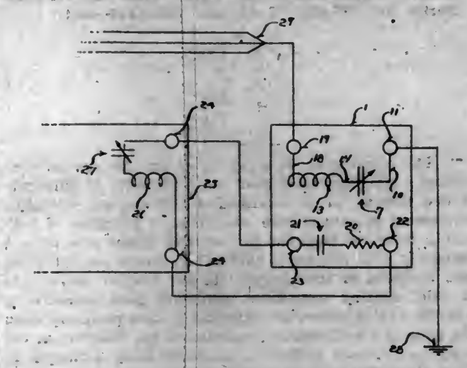
1,755,980. RADIO BROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed May 21, 1925, Serial No. 31,928. Renewed June 8, 1927. 4 Claims. (Cl. 250—6.)



2. A radio system of intercommunication having a plurality of standardized uniform receiving stations di-

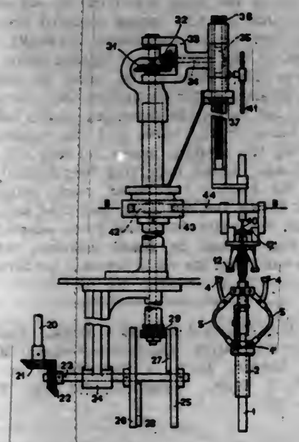
ATLANTA CARNEGIE LIBRARY OF ATLANTA

vided into groups, all said stations being tuned to one common frequency and of sensitiveness limited to the areas covered by their respective groups, a local transmitting station for each group working on said common wave length, and means for double modulating the waves radiated from said transmitting stations as determined by primary stations using variable wave lengths, together with double demodulating means at each of said receiving stations.



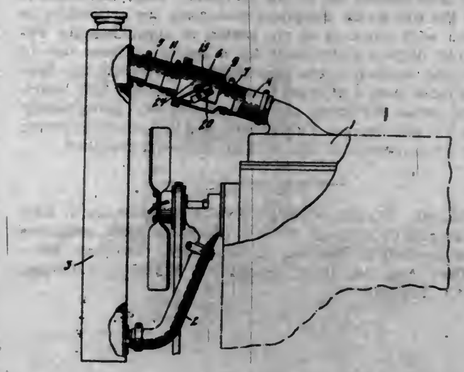
1,755,981. VULCANIZING MACHINE. PETER DE MATTIA, Passaic, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 9, 1925. Serial No. 67,968. 15 Claims. (Cl. 18—38.)

15. A vulcanizing machine including, in combination, a pair of vertically disposed independently supported cooperating mold members, one of said members being independently pivotally mounted at its lower part to move toward and from the other member, a counterbalancing yielding support pivotally connected at one end to said movable member and pivotally connected at its other end forward of said movable member, an annular movable locking ring surrounding the periphery of and carried by said movable mold member and provided with peripheral notches at intervals, engaging hooks carried by the other member to cause the notches therein to register in and to be disposed with relation to said engaging hooks, a breaker comprising a movable eccentric carried by the stationary member and arranged to engage directly the movable member, a stripping device comprising a lever having at its inner end a claw and carried by the movable member, and independent means to operate said stripping device.



1,755,982. TUNER. MILTON MERWIN EELLS, Chicago, Ill., assignor, by mesne assignments, to William Turnor Lewis, Racine, Wis. Filed Sept 20, 1926. Serial No. 136,626. 3 Claims. (Cl. 250—40.)

1. A tuner for radio receiving sets comprising a variable condenser and an inductance coil connected together and to input terminals, a phantom circuit having a condenser and a resistance and connected to terminals, a box housing said condensers, coil, and resistance, and means on the outer side of said box for adjusting said variable con-

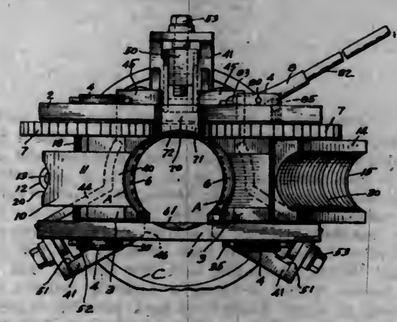


denser, one terminal of the inductance coil being a rigid support therefor and being rigidly connected to the terminal of the variable condenser.

1,755,983. METHOD AND APPARATUS OF INTRODUCING AND FUSING IN THE LEADING-IN WIRES INTO THE TUBULAR FOOT OF AN ELECTRIC GLOWLAMP. BERNHARD ERBER, Vienna, and FERDINAND GANTNER, Modling, Austria, assignors to The Firm of Gustav Ganz & Co., Vienna, Austria, a Corporation of Austria. Filed July 26, 1926, Serial No. 125,085, and in Austria July 31, 1925. 9 Claims. (Cl. 49—2.)

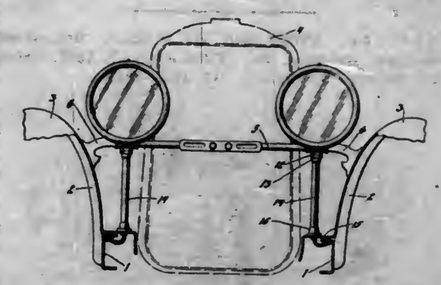
7. An apparatus for introducing and fusing in the leading-in wires into the tubular foot of an electric glow lamp, comprising in combination a conveying member, a gripping device for holding the tubular foot on the said conveying member, a spring for closing the gripping device, means for nipping the tubular foot, means for cutting off the nipped in wires, means for withdrawing the foot containing the nipped in wires from the gripping device on the conveying member, means for causing a relative movement between the said means for removing the finished foot and the said gripping device, means for causing a swinging motion of the said foot withdrawing means, two bars, jaws on the said bars, the bars being capable of being moved longitudinally parallel to one another by the return swinging motion for opening the gripping device by means of the said jaws and in the opposite direction for releasing the gripping device, as set forth.

1,755,984. THERMOSTAT. JESSE E. ESHBAUGH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Apr. 7, 1928. Serial No. 268,189. 11 Claims. (Cl. 236—34.)



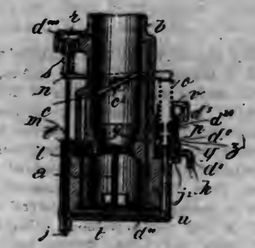
1. A casing, a swinging butterfly valve, pivotally mounted therein, a coiled thermostatic element carried by said valve with its convolutions receding from a pole perpendicular to the pivotal axis of the valve, and having one end secured to the valve and the other end secured to the casing.

1,755,985. GRANULATED PRODUCT AND PROCESS FOR MAKING SAME. HENRY C. GARDINER, Anaconda, Mont. Filed Aug. 22, 1927. Serial No. 214,791. 10 Claims. (Cl. 23—239.)



1. A process for granulating dust resulting from the metallurgical reduction of arsenic bearing ores and material which comprises mixing said dust with sulphuric acid and water, agitating and at the same time drying the mixture.

1,755,986. ROD SPIDER. HERBERT W. GOETZ, Alhambra, and RALPH C. CLARK, Los Angeles, Calif., assignors of one-third to John J. Ferlin, Los Angeles, Calif. Filed Dec. 24, 1927. Serial No. 242,450. 12 Claims. (Cl. 24—249.)



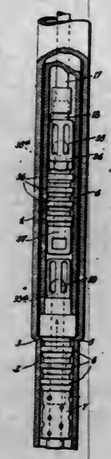
1. A rod spider comprising a support, cooperating gripping members projecting from a vertical face of the support and adapted to release or engage opposite sides of a rod for clamping the latter between the gripping members, attaching means for the spider projecting from the support, the said attaching means having a bore for the rod and being split forwardly from its bore, and a removable plate independent of said attaching means and adapted to overlie the space between the projecting gripping members, the gripping members and the split attaching means being adapted for relative lateral movement of the rod and spider to position the rod between the gripping members when the plate is removed.

1,755,987. HEAD-LAMP SUPPORT. HARRY S. GOLDEN, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 4, 1929. Serial No. 330,249. 7 Claims. (Cl. 240—50.)

1. In a motor vehicle, the combination with a fender brace, a lamp having a hollow tubular portion projecting through the fender brace and a fastening nut threaded on said tubular portion to hold the lamp in position, of a conduit for concealing the conductor of energy for lighting the lamp and means for detachably connecting said conduit in alignment with said tubular portion independently of said fastening nut for the lamp, whereby the conduit may be removed without disturbing the adjustment of said lamp.

1,755,988. CARBURETOR. MAURICE GOUDARD, Neuilly sur Seine, France. Filed Aug. 21, 1925, Serial No. 51,649, and in Belgium June 6, 1925. 6 Claims. (Cl. 261—72.)

1. A carburetor including a chamber and fuel supply means including an overflow tube in said chamber, a mixing chamber, a throttle, a nozzle extending into the mixing chamber and connected to said overflow tube, and means operable by the movement of the throttle to extend the height of the overflow tube.



1,755,989. BRAKE CONTROL. GEORGE E. A. HALLETT, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 6, 1926. Serial No. 127,624. 9 Claims. (Cl. 188—152.)

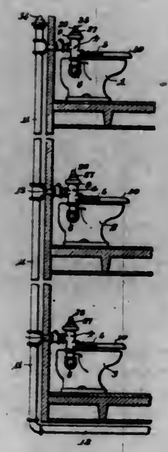
9. A brake system for vehicles including a pedal, a rod extending therefrom and being formed in sections with a slip joint therebetween, a power unit associated with one of the sections and controlled by said slip joint, a distributor bar having pivotal connection at one end with the power unit rod section, a reaction rod pivotally connected

at its opposite ends respectively with the pedal and with the other end of said distributor bar, and brake linkage pivotally connected with the distributor bar intermediate the ends of the bar.

1,755,990. PUMP FOR OIL WELLS. ROY GEORGE HAWLEY, Bradford, Pa. Filed June 15, 1927. Serial No. 198,882. 10 Claims. (Cl. 103—181.)

1. In a pump for oil wells, the combination of a barrel provided with a plunger and pump valves, a pump rod connected with said plunger, said barrel having its upper portion provided with horizontally disposed discharge apertures, an annular compressible packer carried wholly by and surrounding the barrel immediately below said discharge apertures and having a released diameter substantially less than the interior diameter of the surrounding tube or casing, whereby the barrel may be passed into the well to any depth without bringing the packer into contact with the tube, means for retaining the packer in uncompressed condition while the barrel is being lowered into the well and means for releasing said retaining means and forcing said packer laterally into contact with the surrounding tube to prevent deposit of sand between the barrel and tube below said discharge apertures.

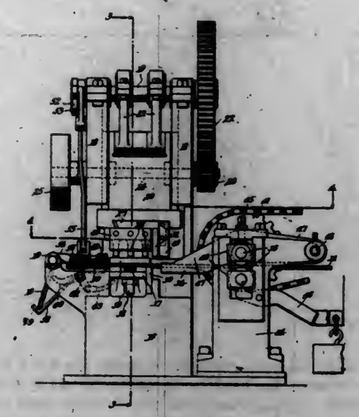
1,755,991. SUNSHADE FOR AUTOMOBILES. GEORGE T. JOHNSON, State Sanatorium, Md. Filed Dec. 2, 1926. Serial No. 152,169. 1 Claim. (Cl. 156—10.)



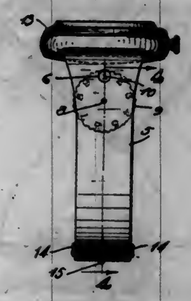
A sunshade for automobile doors and windows, comprising a curtain of flexible material having its edges reinforced by being folded on itself and fasteners passing through the curtain adjacent the corners thereof, said fasteners being sections of separable fasteners.

1,755,992. MEAT-CURING METHOD. ROBERT E. JORDAN, Baltimore, Md., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed May 13, 1927. Serial No. 191,104. 4 Claims. (Cl. 99—9.)

1. The process of curing of minced ham, ham, bacon, and the like which comprises contacting the articles to be cured with currents of air heated to approximately 130 to 160 degrees Fahrenheit for a period of from two to two and one-half hours, and thereafter treating the articles for a period of from four to six and one-half hours, with smoke beginning at temperatures of approximately 130 to 160 degrees Fahrenheit, and gradually reducing the temperatures to 100 to 110 degrees Fahrenheit.



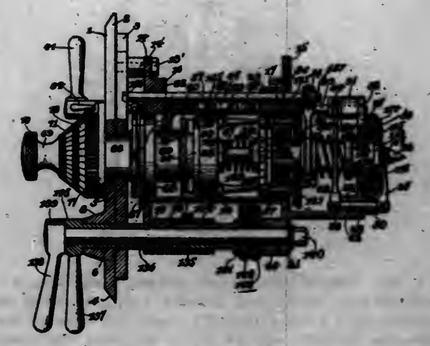
1,755,993. WATER-SUPPLY SYSTEM. EDWARD G. KELLEY and CHARLES E. ZIRKLE, Greenville, Ohio, assignors of one-half to William C. Groeniger, Columbus, Ohio. Filed Aug. 16, 1926. Serial No. 129,598. 6 Claims. (Cl. 137—78.)



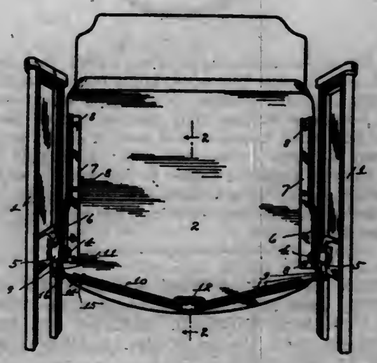
6. In combination, a water receptacle having an inlet and an outlet, said inlet for communication with a water supply pipe, a valve normally closing said inlet and shiftable to open position, and an air supply means including a shiftable element normally closing it to said receptacle and automatically moved from position for the automatic introduction of air to provide a vacuum break when said valve is shifted to open position and the outlet clogged thereby preventing back flow through said pipe, said means further including a normally inactive check shiftable to active position by back pressure to prevent outward passage of air and water through said means when said element is in a position other than normal.

1,755,994. HOT PUNCHING AND SHEARING MACHINE. JOSEPH KURKOWSKI, Carrick, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1927. Serial No. 167,461. 19 Claims. (Cl. 164—49.)

1. For the production of ribbed articles of the character described from a length of ribbed stock, relatively movable cooperating shearing means, and means for presenting the stock to the shearing means, said stock presenting means being movable relative to the cutting point to stress the stock in a manner to avoid excessive compression of the ribs adjacent the cutting point during the cutting operation and means for moving said stock presenting means.



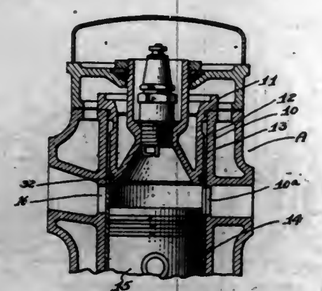
1,755,995. REGISTERING DEVICE. WILLIAM A. LAMB, Chicago, Ill. Filed July 13, 1927. Serial No. 205,498. 2 Claims. (Cl. 235—122.)



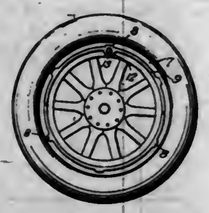
2. A registering device adapted to be carried on the wrist, and consisting of a flexible band and a pivotally attached flexible registering disk held in position by frictional contact with the band.

1,755,996. PERMUTATION LOCK. KARL LITZELBERGER, Hollis, N. Y. Filed Feb. 8, 1928. Serial No. 252,849. 13 Claims. (Cl. 70—18.)

1. A permutation lock comprising a locking bolt shifting means, a permutable locking mechanism therefor and including a slidable and rotatable spring controlled plunger device and a slidable, spring controlled locking device, said locking device engaging in said shifting means to lock it and moved to released position by said plunger device, and a permutable locking means common to said mechanism and shifting means for normally retaining them from movement.

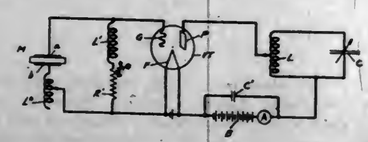


1,755,997. SEAT STRUCTURE. RALPH K. MERRILL, Grand Rapids, and FRED J. BLAKSLEE, Wyoming Township, Kent County, Mich., assignors to American Seating Company, Grand Rapids, Mich., a Corporation of New Jersey. Filed July 23, 1928. Serial No. 294,638. 2 Claims. (Cl. 155—85.)



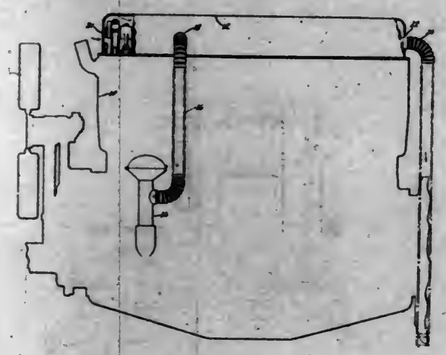
2. In a seat structure of the character described: a support comprising laterally spaced members; a seat mounted thereon swingably about a horizontal axis to and from usable position; a coiled spring urging the seat from usable position and having its ends attached to said members respectively below said axis and its middle axially-movably attached on the under side of the seat at a position rearwardly offset from said axis.

1,755,998. INTERNAL-COMBUSTION ENGINE. ANDRE J. MEYER, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Jan. 3, 1928. Serial No. 244,062. 19 Claims. (Cl. 123—81.)



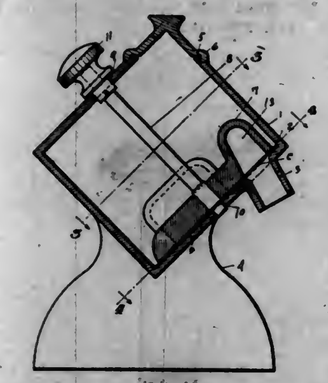
1. An internal combustion engine comprising a cylinder having intake and exhaust ports, a piston reciprocating within the cylinder, a single sleeve valve coaxial with the cylinder and having a combined reciprocating and oscillating movement with respect to the sleeve and cylinder axes, said sleeve having intake and exhaust ports cooperating with the respective cylinder ports, said cylinder intake port having a closing edge the ends of which are spaced longitudinally with respect to the cylinder axis.

1,755,999. TIRE-RIM-MOUNTING MEANS. CHARLES E. MICHAUD and LUCIEN LAPIERRE, Hull, Quebec, Canada. Filed July 26, 1926. Serial No. 124,920. 2 Claims. (Cl. 301—11.)



1. Means for mounting a demountable tire rim to a wheel, comprising a felly band rigidly fastened to the felly, a bodily removable portion on said felly band, consisting of a removable circular strip portion of half the width of the felly band, fingers at both ends of said strip portion, cutaway portions corresponding to the fingers in said felly band to allow the fingers to rest therein, and means comprising a lug integral with said strip portion depending therefrom and positioned to receive a bolt fastened to the felly.

1,756,000. PIEZO-ELECTRIC OSCILLATION GENERATOR. JOHN M. MILLER, Philadelphia, Pa. Filed Sept. 10, 1925. Serial No. 55,464. 18 Claims. (Cl. 250—36.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

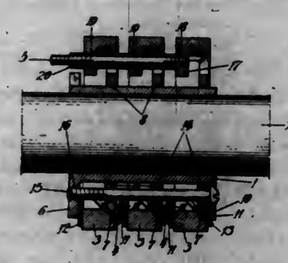


1. In an oscillation generator, a vacuum tube, a quartz crystal in circuit with said tube, and a turnable resonant circuit connected in the output circuit of the tube.

1,756,001. CRANK-CASE VENTILATION. WILLIAM H. MORSE, Oshawa, Ontario, Canada, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 6, 1927. Serial No. 196,839. 8 Claims. (Cl. 123—171.)

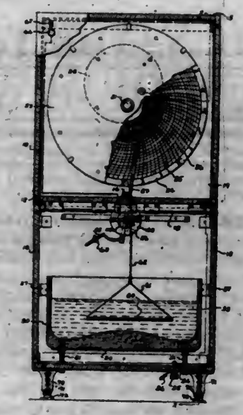
1. In an internal combustion motor having a crank case and overhead mechanism, a cover for said mechanism, an outlet leading from the rear end of said cover, an opening in the front end of said cover, and a conduit from said crank case to said cover.

1,756,002. AUTOMATIC SANITARY SUGAR BOWL. LOUIS NAGY, Detroit, Mich., assignor, by direct and mesne assignments, of one-half to Stephen F. Halach, Detroit, Mich. Filed Sept. 12, 1928. Serial No. 305,368. 3 Claims. (Cl. 221—108.)



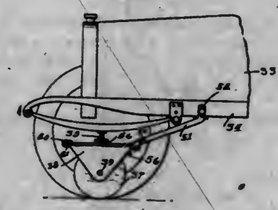
1. An automatic sanitary sugar bowl adapted for delivering sugar in measured quantities, comprising a hollow bowl casing formed with a flat bottom section therein and provided with a rigid top section across the opposite side of the bowl, an operating shaft rotatably mounted within the top and bottom section of the bowl, positioned along the center axis thereof, a measuring disk formed with one flat side mounted on said operating shaft within said bowl casing positioned with the flat disk side resting on the flat bowl bottom section and rotatable thereon with the shaft, means mounted on said shaft for causing rotations of above shaft and attached measuring disk within the bowl, said measuring disk being formed with a series of recessed chambers therein and each chamber having a rim and bottom wall opening, an outlet spout formed through the bowl bottom and opening into the bowl chamber beneath the measuring disk positioned therein to coincide with each recess chamber bottom wall opening during one position of its rotation.

1,756,003. WRENCH. ARTHUR ORLANDO NORTH, Niagara Falls, N. Y. Filed Nov. 3, 1926, Serial No. 146,007. Renewed Feb. 8, 1930. 1 Claim. (Cl. 81—125.)



In a motor driven magazine socket wrench, a polygonal tip, a polygonal head forming a shoulder on the tip and driven by a chuck, a hollow polygonal socket of reduced size at its bottom and adapted to form a nut magazine, the reduced end of which forms a wrench socket, a pair of anti-friction balls spring seated in holes in the head to engage the socket to permit ready detachment, and a central spindle fixed in the head and having spring jaws at its bottom to guide freed nuts in the socket.

1,756,004. CURRENT COLLECTOR. JOHN M. BARR, Cleveland, Ohio, and HAROLD L. SMITH, Milwaukee, Wis., assignors to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 594,081, filed Oct. 12, 1922. This application filed Apr. 22, 1929. Serial No. 357,200. 20 Claims. (Cl. 171—322.)

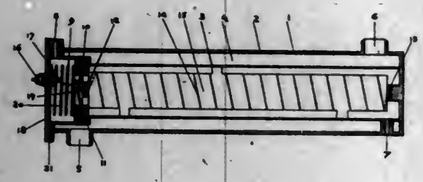


1. A current collector comprising a collector ring, and a ring support shaped to hold and support said collector ring in place by exerting radial and axial pressure thereon and to provide ventilating spaces between the same and said collector ring.

1,756,005. MEASURING INSTRUMENT. CARL GORHAM HERSHEY, El Paso, Tex., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 4, 1924. Serial No. 696,823. 3 Claims. (Cl. 234—5.5.)

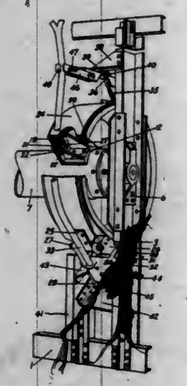
1. In an electrostatic recording voltmeter, a chart, an electrostatic voltmeter having an indicator in operative relation to said chart, and means whereby the potential measured causes a spark between said indicator and chart to make a legible record.

1,756,006. EMERGENCY WHEEL FOR AUTOMOBILES. SIDNEY MARKS, New York, N. Y., assignor of one-half to Warren W. Ward, New York, N. Y. Filed Aug. 21, 1928. Serial No. 301,114. 2 Claims. (Cl. 280—150.)



1. An emergency wheel device for vehicles, comprising a wheel rotatably mounted upon an axle, a sheath carrying said axle, an anchor member pivotally attached to said sheath, said anchor member having at one end, and formed integral therewith, means for maintaining contact between said anchor member and said sheath member, and permitting horizontal movement of one with respect to the other, substantially as described.

1,756,007. PROCESS FOR TREATING MIXTURES OF OXY SALTS OF ARSENIC, ANTIMONY, AND TIN. MELVILLE FLETCHER PERKINS, Tacoma, Wash., and CHARLES W. HANSON, Perth Amboy, and BERRY MARVEL O'HARRA, Westfield, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 20, 1927. Serial No. 162,409. 3 Claims. (Cl. 204—51.)

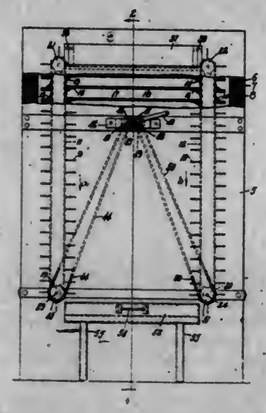


1. The process for treating mixtures of alkali oxysalts including salts of tin and arsenic in which the arsenic is present in substantial amounts relative to the tin content, which comprises dissolving the arsenic and tin salts, heating the solution, electrolyzing the hot solution to deposit substantially the entire amount of tin contained therein and then crystallizing and removing the salts of arsenic.

1,756,008. FUEL HEATER. PAUL SCPRANI, New York, N. Y., assignor of one-fifth to Martin C. Pizzaia; and one-fifth to Integrales, a Firm composed of Nicola Ariola, Lino Pizzaia, and Nick Marchese. Filed Jan. 28, 1930. Serial No. 423,976. 3 Claims. (Cl. 219—38.)

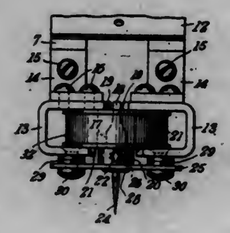
1. A fuel heating device for engines including an inner and an outer chamber, an electrical heating device in said inner chamber, means for admitting fuel to and discharging said fuel from said inner chamber, said outer chamber including an inlet member to receive exhaust gases from said engine and an outlet member to discharge said exhaust gases therefrom, an electrical circuit operative to energize said electrical heating element, means operative to open said electrical circuit when said fuel attains a predetermined temperature suitable for use of said fuel in said engine, whereby, on starting said engine, said exhaust gases passing through said outer chamber effect subsequent heating of said fuel during operation of said engine.

1,756,009. BULL-WHEEL-BRAKE STRUCTURE. RICHARD R. BLOSS, Columbus, Ohio, assignor to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 3, 1928. Serial No. 244,121. 9 Claims. (Cl. 188—77.)



1. Bull wheel structure comprising a bull wheel shaft, a brake wheel on one end of said shaft, a brake band, spaced tie-rods for one end of said brake band, a lever connected to the other end of said brake band and operating in between said spaced tie-rods, and a latch member disposed above said brake wheel for maintaining said lever in inoperative position.

1,756,010. PLASTIC PROCESS. WILLIS A. BOUGHTON, Cambridge, Mass., assignor to Bennett Box Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1925. Serial No. 1,037. 2 Claims. (Cl. 91—68.)



1. A method of preparing stiffener blanks for use in shoes and the like, comprising the steps of impregnating a carrier sheet with melted rosin, permitting the rosin to harden to a stiff condition, and thereafter, prior to reshaping the stiffener blank in a shoe or other article, introducing said blank into a liquid mixture consisting of 30 to 35 per cent by volume of solvent and 70 to 65 per cent of non-solvent, and capable of softening the stiffener blank without substantial dissolution during immersion of the blank in the liquid mixture for hours.

1,756,011. METHOD OF MANUFACTURING AND TREATING ASPHALT BISCUITS. ALFRED A. GLIDDEN, Watertown, and ALAN R. LUKENS, Belmont, Mass., assignors, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Delaware. Filed June 13, 1928. Serial No. 285,138. 7 Claims. (Cl. 18—47.5.)

1. A method of manufacturing and treating asphalt biscuits which consists in heating and mixing an asphalt compound and pressing the mixture into sheet form to make a biscuit, then allowing the said biscuit to become cold and age, and then reheating it slowly and uniformly until it becomes plastic.

1,756,012. PHONOGRAPH PICK-UP. OLIVER B. PARKER, New York, N. Y., assignor to Pacent Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 7, 1929. Serial No. 330,764. 15 Claims. (Cl. 179—100.41.)

1. An electric phonograph pickup, comprising a U-type magnet, means for supporting the same substantially horizontal and close above a record surface, a short straight armature bar, means for yieldingly mounting the same inclined downwardly and away from the ends of the magnet, a record engaging stylus at the lower end of said armature bar and a coil about the upper portion of said armature bar.

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 393—No. 5 TUESDAY, APRIL 29, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(C. C. A. Mich.) Inwood and Lavenberg patent, No. 1,128,145, for means for making box blanks, claim 25 *Held* valid and infringed. *Wirebounds Patents Co.* v. *Saranac Automatic Mach. Corporation*, 37 F. (2d) 830.

(C. C. A. and D. C. Pa.) Malloch patent, No. 1,249,981, for silent railway crossing, claim 1 *Held* not infringed. *Malloch* v. *Philadelphia Rapid Transit Co.*, 37 F. (2d) 896 and 899.

(D. C. Ill.) Angier patent, No. 1,282,167, for package *Held* invalid. *Angier* v. *Nehring Electrical Works*, 37 F. (2d) 953.

(C. C. A. Md.) Moore patent, No. 1,502,050, for ventilating means for the receivers of belt conveyors, claims 1–7 *Held* invalid. *Moore* v. *Baltimore & O. R. Co.*, 37 F. (2d) 884.

New Examining Division

(ORDER No. 3,146)

U. S. PATENT OFFICE, *Washington, Apr. 15, 1930.*

It is hereby directed that new examining Division 63 be established in room 300, A. H. Winkelstein, Examiner in charge, and that the following classes be transferred thereto:

Class 8, Bleaching and Dyeing, from Division 6.

Class 52, Explosive, Pyrotechnic, and Match Compositions, from Division 6.

Class 87, Oils, Fats, and Glue, from Division 59.

Class 99, Preserving, from Division 2.

Class 127, Sugar, Starch, and Carbohydrates, from Division 6.

THOMAS E. ROBERTSON,
Commissioner.

NOTICE—CHANGES IN PATENT OFFICE FEES—EFFECTIVE JUNE 1, 1930

The act of Congress approved April 11, 1930, amends section 4934, Revised Statutes, so as to provide that, except in design cases, the fee for filing each original application for patent and the fee for issuing each original patent shall each be $25.00 and $1.00 for each claim in excess of 20, instead of the present fees of $20.00 and $1.00 for each claim in excess of 20; and amends the trade-mark acts of 1905 and 1920 so as to provide that the fee for registration of trade-marks and for renewals of registrations shall be $15.00 instead of the present fee of $10.00.

The act also provides that the fees for recording assignments or other papers shall be, if the paper does not exceed six pages, $3.00; for each additional two pages or less $1.00, and for each additional patent or application where more than one is included or involved in such writing 50 cents additional.

These new fees are effective on and after June 1, 1930.

Applications for patents, except in design cases, received on and after June 1, 1930, with only the present $20.00 fee will not be entered but will be given a filing date and serial number as of the day the full fee of $25.00 and the additional fee of $1.00 for each claim in excess of 20 is received by the Patent Office.

Condition of Applications Under Examination at Close of Business April 18, 1930.

(Total number of applications awaiting action, excluding Trade-Mark Division, 116,742; Trade-Mark Division, 1,587. Oldest new case, June 1, 1929; oldest amended, June 5, 1929. The dates given are 1929 except where † indicates 1930.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

GOWEN AND BRADFORD *v.* ARNOLD

No. 2,146. Decided January 27 1930

[37 F. (2d) 430]

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIM—CAN NOT BE RAISED ON APPEAL UNLESS RAISED BELOW.

Where the junior party made no contention in the Patent Office that the senior party had no right to make the claims *Held* that that question will not be reviewed by the court on appeal from the award of priority.

APPEAL from the Patent Office. Affirmed.

Mr. S. E. Darby, Mr. C. M. Thomas, and *Mr. F. D. Thomas* for Gowen and Bradford.

Mr. John G. Roberts and *Mr. Irving McDonald* for Arnold.

HATFIELD, *J.:*

This is an appeal in an interference proceeding from the decision of the Board of Appeals affirming the decision of the Examiner of Interferences awarding priority of invention to appellee.

The invention in issue relates to certain structural improvements in vacuum tubes or audions.

The counts in issue read as follows:

1. An electron discharge device comprising an evacuated vessel, a press within said vessel, an anode and a cathode above said press, the axis of said electrodes being parallel to the axis of said press, and a metallic frame connected to said press and supporting said electrodes, said frame being in contact with said anode.

2. An electron discharge device comprising an evacuated vessel, a press within said vessel, an anode and a cathode above said press and parallel thereto, and a metallic frame connected to said press and supporting said electrodes, substantially all of one side of said anode being subjected to electron bombardment from said cathode.

3. An electron discharge device comprising an evacuated vessel, a cathode, an anode, a press, said anode and cathode having their axes substantially parallel to said press, a support for said cathode comprising a metallic frame arising from said press, substantially all of one surface of said anode being subjected to electron bombardment.

The questions of law involved herein are the same as those presented to the court in the following cases decided concurrently herewith: *Robert F. Gowen* v. *William F. Hendry*, Appeal No. 2,216, Interference No. 30,618, and *Robert F. Gowen* and *James L. Bradford* v. *Harold D. Arnold* and *William C. White*, Appeal No. 2,147. In those cases it was held that the jurisdiction of this court in interference cases did not extend to questions involving the patentability of alleged inventions, but was limited to the question of priority of invention and matters ancillary thereto.

In addition to the questions of law referred to, counsel for appellants contends that Arnold's application does not disclose the subject matter of the issue, and that, accordingly, he has no right to make the claims. This contention was not made before the tribunals below, and, therefore, will not be considered here.

It appears from the record that Arnold is the prior inventor of the subject matter of the issue. The decision of the Board of Appeals is therefore affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

GOWEN AND BRADFORD *v.* ARNOLD AND WHITE

No. 2,147. Decided January 27, 1930

[37 F. (2d) 428]

INTERFERENCE—PRIORITY.

Where no question was raised on behalf of the junior parties except that the assignee of the senior party was estopped to take a patent on his application, which question was not reviewable on appeal, *Held* that priority was properly awarded to the senior party.

APPEAL from the Patent Office. Affirmed.

Mr. S. E. Darby, Mr. C. M. Thomas, and *Mr. F. D. Thomas* for Gowen and Bradford.

Mr. J. G. Roberts and *Mr. Irving McDonald* for Arnold.

Mr. C. E. Tullar and *Mr. H. E. Dunham* for White.

HATFIELD, *J.:*

This is an appeal in an interference proceeding from the decision of the Board of Appeals affirming the decision of the Examiner of Interferences awarding priority of invention to Harold D. Arnold.

The alleged invention relates to certain structural improvements in vacuum tubes or audions.

The count in issue reads as follows:

An electron discharge device comprising a stem, cathode, anode and grid electrodes having their longitudinal axes substantially parallel to said stem, a support for said electrodes comprising a plurality of metallic upright members arising from said stem, and lead in wires through said stem for said electrodes.

It appears from the record that the application of Knoop and Cioffi, No. 296,331, filed on May 12, 1919, matured into Patent No. 1,456,505 on May 29, 1923.

The application of Gowen and Bradford was filed on April 3, 1919. The count in issue—claim 17 in the patent issued to Knoop and Cioffi—was copied by Gowen and Bradford on July 11, 1923. The interference as originally declared was, therefore, between Knoop and Cioffi, and Gowen and Bradford. Knoop and Cioffi were the junior parties.

Knoop and Cioffi filed two motions: one, to dissolve the interference on the ground that Gowen and Bradford had no right to make the claim in issue, and the other, to reform the interference by adding the application of Arnold.

Both motions were overruled by the Law Examiner. Thereupon, Knoop and Cioffi appealed to the Examiners in Chief from the decision of the Law Examiner refusing to reform the interference by adding the application of Arnold. The Examiners in Chief reversed the decision of the Law Examiner and, on appeal by Gowen and Bradford, the decision of the Examiners in Chief was affirmed by

the Commissioner of Patents. Thereupon, the interference was reformed to include Arnold's application—a division of his application filed November 2, 1915, and also the application—a division of an application filed October 28, 1920—of William C. White. Arnold was the senior party.

It appears from their preliminary statements that the junior parties conceived the invention subsequent to the filing date of Arnold's application. Accordingly, on December 6, 1926, the junior parties to the interference having failed to show any reason why judgment should not be entered on the record in favor of the senior party, Arnold, the Examiner of Interferences awarded priority of invention to Arnold. On appeals by Gowen and Bradford, and by White, the decision of the Examiner of Interferences was affirmed by the Board of Appeals.

It appears from the record that The Western Electric Company is the owner of both the Arnold application and the Knoop and Cioffi patent, and that The De Forest Radio Company is the owner of the Gowen and Bradford application.

The sole issue in the case involves a question of law.

It is claimed by counsel for appellants that the tribunals of the Patent Office erred in permitting the application of Arnold to be included in the interference. This contention rests upon the proposition that the common assignee—The Western Electric Company—is estopped from claiming a patent for the invention in issue on the application of Arnold, in view of the fact that the invention has been patented to The Western Electric Company's assignors, Knoop and Cioffi. This precise issue was considered and decided by this court in the case of *Robert F. Gowen* v. *William F. Hendry* and *Robert W. King*, appeal No. 2,216, interference No. 50,818, decided concurrently herewith. [— O. G. —.]

It was there held that the jurisdiction of this court in interference cases did not extend to questions involving the patentability of alleged inventions, but was limited to the question of priority of invention and matters ancillary thereto.

It appears from the record that Arnold's filing date is prior to the dates for conception alleged in the preliminary statements of the junior parties to the interference. The decision of the Board of Appeals is, therefore, affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

GOWEN *v.* HENDRY AND KING

No. 2,216. Decided January 27, 1930

[37 F. (2d) 426]

1. INTERFERENCE — PRIORITY — APPEAL — WHAT WILL BE CONSIDERED.

"The question of the right of a party to secure a patent can not be raised in this court on appeals in interference proceedings. In such cases the jurisdiction of this court is confined to the question of priority of invention and to such ancillary questions as may be involved therein (citing decisions). These decisions rest upon the proposition that the question of the patentability of an alleged invention is an issue between the applicant and the Patent Office, the Patent Office representing the public. Whereas, the issue of priority of invention and questions ancillary thereto in interference proceedings are matters inter partes."

2. SAME—SAME—SAME—SAME.

Wherein an interference involving an application of G. and a patent to K. and an application of H., both owned by the same assignee, and G. appeals from a decision on priority *Held* that the contention that the common assignee is estopped by reason of the issuance of the K. patent to obtain a patent on H.'s application can not be considered on that appeal, and G. properly held not to be the prior inventor.

APPEAL from the Patent Office. Affirmed.

Mr. S. E. Darby, Mr. C. M. Thomas, and *Mr. F. D. Thomas* for Gowen.

Mr. John G. Roberts and *Mr. Irving McDonald* for Hendry and for King.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from the decision of the Commissioner of Patents.

The Examiner of Interferences, the Examiner in Chief, and the Commissioner of Patents have concurred in holding that appellant was not entitled to an award of priority of invention.

The invention in issue relates to certain improvements in vacuum tubes or audions.

The counts involved read as follows:

1. A vacuum tube comprising a plurality of electrodes one of which is a plate electrode, insulating material supported by said plate electrode above one edge thereof, and a supporting connection from said insulating material to one of said other electrodes.

2. A vacuum tube comprising a cathode, a grid and an anode, insulating material supported by said anode above one edge thereof, and supporting connections from said insulating material to said grid and cathode.

Appellant's application (No. 271,556) was filed January 17, 1919. In his preliminary statement appellant claimed conception and reduction to practice of the invention as follows: conception September 2, 1918, and reduction to practice September 7, 1918.

King's application (No. 317,314) was filed August 13, 1919, and matured into a patent (No. 1,479,991) January 8, 1924, while appellant's application was pending in the Patent Office. In his preliminary statement, King alleged conception and reduction to practice as follows: count 1, conception November 1, 1917, and reduction to practice November 27, 1917; count 2, conception December 1, 1917, and the reduction to practice January 9, 1918.

Hendry's application (No. 217,565) was filed February 16, 1918.

It appears from the record that the King patent and the pending application of Hendry are owned by a common assignee—The Western Electric Company, Incorporated. The Gowen application is owned by The De Forest Radio Company.

The counts in the interference were copied by Gowen from the King patent, and the interference, as originally declared, involved the application of Gowen and the patent to King.

On July 26, 1926, King moved to dissolve the interference on the ground that Gowen had no right to make claims corresponding to the counts in issue.

On January 5, 1925, the Law Examiner denied the motion of King to dissolve the interference, and also denied the motion of The Western Electric Company, Incorporated, theretofore filed, to reform the interference by adding thereto the Hendry application. (The latter motion was filed by the attorney for King and was considered by the tribunals of the Patent Office, and apparently by all of the parties, as a motion by King.) The decision in the case of In re Dunbar, 300 O. G. 201, 51 App. D. C. 251, was cited by the Law Examiner as authority for denying the motion to reform the interference. In that case it was held:

Where two applicants each assigned their copending applications to the same assignee by an assignment which left no interest in the applicant, the election of the assignee to take the patent on one application, which contained narrow claims reading on the disclosure in the other application, is binding on him, and precludes his right to issuance of patent on the other application, containing broader claims covering the same features.

On appeal by King from the decision of the Law Examiner denying the motion to reform the interference by adding the application of Hendry, the Examiners in Chief reversed the decision of the Law Examiner, and in their decision, among other things, said:

The Hendry application was earlier filed, February 16, 1918, as a matter of fact earlier than any date that can be established by Gowen (conception Sept. 2, 1918), so that if the decision of the Law Examiner is affirmed Gowen might secure a patent. As the record clearly shows that he is not the first inventor of the subject matter of the counts as now interpreted by the Law Examiner, he should not be permitted and is not entitled to secure a patent through a mere technicality involving but a question of law—estoppel by election.

* * * * * * *

An estoppel against the assignee of the King patent, the Western Electric Company, if such exists, might be raised by the public, i. e., by the Office, but not by a third party who is in no way injured by the patentee or the assignee and who furthermore cannot be injured by the true facts of the case, those upon which the alleged estoppel is assumed or established, or by the determination of who is the first inventor. The determination of whether such an estoppel exists lies between the assignee and the Office representing the public and is essentially and entirely an ex parte proceeding and has nothing to do with the question of priority, the sole issue in interference proceedings.

On appeal by the appellant, Gowen, the Commissioner of Patents affirmed the decision of the Examiners in Chief and, in so doing, said:

The holding of the Court of Appeals in the Dunbar case is conclusive against King's assignee obtaining a patent to Hendry with these same claims therein as are now in the King patent. The common assignee is clearly estopped from thus prolonging its monopoly. This much was admitted by counsel for King at the hearing.

The Examiners in Chief in reversing the decision of the Law Examiner did not specifically construe the claims of the issue but did point out that the Law Examiner had made an interpretation of the claims at variance with that made by the Primary Examiner and that this was unexpected by King, who believed these claims were more specific.

* * * * * * *

In view of these conflicting opinions as to the true scope of the claims of the issue it may well be King's assignee should be given some opportunity to establish that Hendry was in possession of the invention, as defined in such claims, when they are given, as the Examiners in Chief held, an unexpected and "somewhat forced" interpretation. If, without priority proceedings, Gowen is granted a patent including these claims and Hendry is also granted a patent with other claims based on the construction he discloses, Gowen's patent may be held invalid as to the claims of the issue, if they are shown to be descriptive of Hendry's invention. (See *Ex parte Hammond and Hammond*, 301 O. G. 1051; *Millett* v. *Duell, Commissioner of Patents*, 96 O. G. 1241, 18 App. D. C. 186; *In re Isbergood*, 245 O. G. 847, 46 App. D. C. 507. See also to the contrary, *Davis-Bournonville Co.* v. *Alexander Milburn Co.*, 1 F. (2d) 227 U. S. C. C. A., 2d Cir.

Thereupon, the interference was reformed by the addition of Hendry's application and, as Gowen's date for conception of the invention—alleged in his preliminary statement—was subsequent to the filing date of the senior party, Hendry, notice was given by the Examiner of Interferences on October 29, 1926, that judgment on the record would be entered against Gowen, unless, within thirty days, good cause was shown why such action should not be taken.

On December 6, 1926, Gowen having failed to take any action in the premises, the Examiner of Interferences rendered a decision holding that Gowen was not "the first inventor of the subject matter in issue." This decision of the Examiner was affirmed by the Examiners in Chief and, on appeal, the decision of the Examiners in Chief was affirmed by the Commissioner.

The appellant, Gowen, contended before each of the tribunals of the Patent Office, and contends here, that Hendry was not a proper party to the interference for the reason that, as the Hendry application and the King patent were owned by a common assignee, and, as the application of King had been permitted, by the common assignee, to mature into a patent, an election was thereby made on the question of priority as between King and Hendry, and the assignee was thereafter estopped to claim that Hendry was entitled to an award of priority of the invention patented to King. In other words, it is claimed that, as the subject matter in issue has been patented to King, the common assignee can not obtain an additional and later patent for the precise claims by incorporating them in the Hendry application. The case of *In re Dunbar*, supra, is cited as authority for this contention. With reference to this issue, the Commissioner, in his decision, said:

It is to be noted that there is no necessary inconsistency with the Dunbar decision for the common assignee to assert that its applicant party, when an actual party to an interference, whether properly or not, is prior to the party adverse to the assignee, as a basis for an award against the adverse party. It may be that the patentee party of the common assignee is earlier than assignee's applicant party. But independently of whether the common assignee took out its patented claims in the application of its first inventor of their subject matter, clearly the adverse party is not entitled to an award of priority unless he is prior to both of them.

While it is claimed by appellant in his assignment of errors, that the Commissioner erred in adjudging that Gowen was not the inventor of the subject matter in issue, and that error was committed in awarding priority of invention to Hendry, the real contention of appellant is that the Commissioner erred in reforming the interference by adding the application of Hendry.

The question of the right of a party to secure a patent can not be raised in this court on appeals in interference proceedings. In such cases the jurisdiction of this court is confined to the question of priority of invention and to such ancillary questions as may be involved therein. *Norling* v. *Hayes*, 166 O. G. 1282, 37 App. D. C. 169; *Gammeter* v. *Thropp*, 210 O. G. 1397, 42 App. D. C. 564; *Wintroath* v. *Chapman*, 248 O. G. 1004, 47 App. D. C. 428; *Cowles* v. *Rody*, 270 O. G. 191, 49 App. D. C. 135, 261 Fed. 1015; *Erbon* v. *Yardley*, 277 O. G. 396, 50 App. D. C. 43, 267 Fed. 345; *Earles et al.* v. *Gomber*, 273 O. G. 353, 50 App. D. C. 389, 273 Fed. 353; *Hernandez-Mejia* v. *Kelley*, 298 O. G. 181, 51 App. D. C. 210, 277 Fed. 609. Nor does it necessarily follow that a patent will be issued to the successful party in an

interference proceeding. *United States Ex Rel. Dunkley Company* v. *Ewing*, 203 O. G. 603, 42 App. D. C. 176, and cases cited. These decisions rest upon the proposition that the question of the patentability of an alleged invention is an issue between the applicant and the Patent Office—the Patent Office representing the public. See 35 U. S. C. A. sections 36, 59. Whereas, the issue of priority of invention and questions ancillary thereto in interference proceedings are matters inter partes. See 35 U. S. C. A. sections 52, 59. The Congress has provided for separate appeals to this court in these classes of cases.

The principles announced in the decision in the case of *In re Dunbar*, supra, were intended to prevent so-called "double patenting" and to prevent the extension of the statutory period of patent monopoly. It may be that the confusion, if any, results from the following language, quoted with approval by the court in the Dunbar case, supra:

"By taking out the Dyson patent, an election was made on the question of priority between Dyson and Dunbar, and the common assignee is just as much bound by that election as if an interference had been declared and priority decided in favor of Dyson."

If the court had used that language in an interference proceeding, counsel might have some justification for claiming that it was applicable here; however, it was used in an ex parte appeal and had reference only to the patentability of the Dunbar claims.

As appellant was bound by his preliminary statement, and, as the filing date of the Hendry application is prior to the date alleged for conception by appellant, the tribunals below were right in holding that appellant was not the first inventor of the invention, and, therefore, was not entitled to an award of priority. For the reasons stated, the decision of the Commissioner of Patents is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MCLAUGHLIN AND GOLDBERG

No. 2,163. Decided December 30, 1929

[36 F. (2d) 488]

PATENTABILITY—FOOD PRODUCT.

Claims for a food product comprising dry yeast and prepared chocolate *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. D. Hesselman, *Mr. W. B. Morton*, and *Mr. R. K. Stevens* for McLaughlin and Goldberg.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Commissioner of Patents, affirming that of the Examiners in Chief finally rejecting claims 1 and 2 of appellant, which read as follows:

1. A food product comprising a mixture of dry yeast and prepared chocolate.
2. A food product comprising a mixture of dry yeast and a chocolate compound containing less than 30% of water.

The references are: Hull, 413,944, October 29, 1889; Cameron, 427,553, May 13, 1890; Booker, 1,309.979, July 15, 1919.

The specification upon which the claims are based reads as follows:

The object of this invention is to produce a palatable food product containing a maximum amount of water soluble vitamines which maintains its value for a long period of time without artificial aid, such as cold storage, and which is instantly available for use. It is well known that the yeast plant contains relatively large amount of vitamines, but in order to get the benefit of it, it has been found necessary to use either the living or the freshly killed yeast plant.

We have discovered that if the yeast be first desiccated in such a manner as not to destroy its life and then mix with some palatable food which does not contain sufficient water to cause the yeast to attempt to grow, that it will remain alive and preserve its chemical and vital qualities through long periods of time under ordinary conditions.

We also find that, if the water content of the mixture of yeast and the palatable vehicle be over 30 per cent, the yeast will attempt to grow, and will slowly invert the sucrose of the vehicle into glucose. For this reason the ordinary commercial yeast cakes at present on the market are not adapted for our purpose since they contain approximately 75 per cent of water.

We have found that, owing to the low temperature at which it melts and the absence of a large percentage of free water, chocolate is ideally adapted to carrying the dried yeast plant. In carrying our invention into effect, we take a mixture of chocolate and cane sugar, melt them together and when the temperature of the mixture falls below the point at which the yeast would be injured (about 110° F.), the desiccated yeast is thoroughly incorporated into the mass which is made into cakes and allowed to cool. These cakes are palatable and, in ordinary temperatures, preserve the valuable food properties of the yeast for a long period of time. We, of course, do not limit ourselves to the use of chocolate and sugar for carrying the desiccated yeast.

By the term "prepared chocolate" used in the appended claims we mean chocolate in cake form sweetened and flavored for immediate consumption without further preparation.

The decision of the Commissioner reads as follows:

Applicant has appealed from the decision of the Examiners-in-Chief, affirming that of the Primary Examiner, denying patentability to claims 1 and 2, which are as follows:

1. A food product comprising a mixture of dry yeast and prepared chocolate.
2. A food product comprising a mixture of dry yeast and a chocolate compound containing less than 30% of water.

The patents relied upon are:

Booker, 1,309,979, July 15, 1919.
Hull, 413,944, Oct. 29, 1889.
Cameron, 427,553, May 13, 1890.

The claims are directed to an edible product consisting of dry yeast and a chocolate compound. The yeast is incorporated with the chocolate and is stated to be protected by the latter. The chocolate is claimed to serve as a vehicle for the yeast, making the latter more palatable and also protecting the yeast from atmospheric moisture and evaporation.

The patent to Hull discloses a yeast cake made up of the yeast incorporated with prepared corn meal which latter, under the effect of great pressure employed in the manufacture of the cake, is forced to the surface of the cake and forms a thin compact crust serving to protect the yeast from the deleterious action of the atmosphere Over the entire surface of the yeast cake a smooth coating of sugar is placed.

The Cameron patent discloses a cake of dry yeast coated with sugar and, outside the latter, with paraffin, shellac, or other innocuous mineral, or vegetable wax or gum, impervious to water. It is stated by this patentee that the yeast cake is thus coated so that "the air and all moisture shall be wholly excluded therefrom, so that it will retain its life and efficiency for an indefinite period and in all climates, and be unaffected by its surroundings."

The claims are anticipated if it be held the substitution of the chocolate compound for the corn meal and sugar involved no invention. The palatable qualities of chocolate compounds are a matter of common knowledge. These materials have been used in a multitude of relations to improve the taste of edible products. It is likewise well known that the chocolate compound does not readily deteriorate when exposed to the atmosphere. The patentee, Hull, having disclosed that the deleterious effect of the atmosphere upon yeast may be prevented by mixing with the latter a material not readily affected by the atmosphere, it would seem there was nothing inventive in selecting another well known material and making the substitution. While the applicant argues the product is new and useful and is intended for direct consumption rather than use in baking bread, yet it is believed to have been nothing inventive in merely selecting the well known chocolate compound and mixing it with the yeast to obtain the protecting and preserving functions suggested by Hull. The decision of the Examiners-in-Chief is affirmed.

Appellant insists that the Commissioner erred in holding that chocolate and corn meal are equivalents in the art to which the application relates or any art, and in holding that the applicant's food product and the preserved yeast for baking purposes belong to analogous arts.

It should first be observed that the claims here in question relate to a product of manufacture and not to a process.

Appellants, in their brief, admit that the palatable qualities of chocolate compounds are well known, and that chocolate compounds do not readily deteriorate when exposed to the atmosphere, but contend that they are the first to utilize a chocolate compound for the dual purpose of preserving dry yeast against deterioration and producing a palatable foodstuff containing in a cake no larger than an ordinary yeast cake an equivalent amount of yeast.

The patent to Hull discloses a yeast cake produced by mixing yeast and corn meal, subjecting the cake to pressure and applying a smooth coating to the surface, preferably of sugary matter. The specification states that the effect of the pressure is to force the finer granules of prepared corn meal to the surface, forming a thin compact crust, which serves to protect for a considerable length of time the yeast plant throughout the interior portion of the cake from the deleterious action of the atmosphere. It also states that the coating of sugary matter furnishes an effective bar to the admission of the atmosphere to the yeast in the cake. The patent to Cameron also discloses a mixture of yeast with corn or barley meal made into a yeast cake, with the moisture afterwards extracted therefrom by drying. The cake is then coated with sugar and finally coated with a thin layer of paraffin or wax. In this patent the yeast cake is stated to be for baking purposes, while the Hull patent is silent as to use. These being product claims, this is immaterial. If the specification of either discloses a composition of matter that covers appellants' claims there is no invention by them in their product. The only question is whether prepared chocolate or a chocolate compound is an equivalent for corn meal. We think it is. Both are edible, both serve to prevent deterioration from the atmosphere, and the only difference between them is one of degree. The chocolate preparation does prevent atmospheric deterioration, but its property in this respect is well known, and it may be that it is more effectual in doing so than corn meal; it is more palatable than corn meal, but its quality in that respect is also well known.

The facts in this case are not, in principle, unlike those in the case of *Maryland Hominy & Coralline Company* v. *Dorr*, 46 F. 773, involving the patentability of a preparation of corn meal, where the court said:

The complainant's product, independently of the process of making it, cannot be supported as for a new composition of matter, or a new substance not before known. Commercially speaking, it may be a new article of manufacture, but it is after all only an improved preparation of Indian corn, with the same characteristics and qualities as other similar preparations. It may be less liable to spoil, more porous, more easily soluble; it may unite more readily with the diastase of malt,—but these are not new and peculiar qualities; they are only the same qualities in an improved degree, which are inherent in other preparations of the same substance.

The fact that in the case at bar the yeast is mixed in a dry state, while in the Cameron patent it is mixed while in a moist state is immaterial. *In re Roselius*, 162 O. G. 272, 36 App. D. C. 130.

We agree with the Commissioner that the substitution of prepared chocolate or a chocolate compound for corn meal, in the product produced, does not involve invention.

As to the contention of appellants that the Commissioner erred in holding that applicants' food product and the preserved yeast for baking purposes belong to analogous arts, we repeat that the patent to Hull is silent upon the use of the yeast cake and we can not say that it was intended to be used solely for baking purposes.

Furthermore, it is stated in appellants' brief:

As everyone knows, yeast has become a popular tonic food, even in its more or less unpalatable form.

If the ordinary yeast cake be used both for baking purposes and as a tonic food, we can not say that the art of making one form exclusively for food is not analogous to the art of making another form for use both as a food and for baking purposes.

The decision of the Commissioner is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

NOLOP *v.* SMITH

No. 2,187. Decided January 13, 1930

[36 F. (2d) 838]

1. INTERFERENCE — PRELIMINARY STATEMENT — PARTY BOUND BY THE ALLEGATIONS THEREOF.

A party may not be permitted, without amendment of the preliminary statement, to prove any date of invention earlier than that alleged in such statement.

2. SAME—PRIORITY—APPEAL—WHAT MAY BE CONSIDERED.

"We find in the files a reply brief by appellant, and also certain affidavits and exhibits attached thereto, not produced before the Patent Office, which appellant's counsel asks us to consider in deciding this appeal. Permission was not secured from the court to file a reply brief, and the statute is plain that upon this appeal the court can consider only evidence produced before the Patent Office."

3. SAME—SAME.

Priority *Held* properly awarded to S. on the ground that he had proved conception and reduction to practice prior to any date alleged in N's preliminary statement, to which N's proofs must be restricted in the absence of any motion to amend her statement.

APPEAL from the Patent Office. Affirmed.

Mr. F. H. Hayn for Nolop.

Mr. W. E. Coleman and *Mr. F. S. Stitt* for Smith.

LENROOT, *J.*:

This is an appeal from a decision of the Commissioner of Patents in an interference proceeding, affirming a decision of the Examiners in Chief which affirmed a decision of the Examiner of Interferences awarding priority of invention to appellee.

The invention relates to a plumbing fixture, and is described in the two counts in issue, which read as follows:

1. In a flush tank, the combination with a float ball having an arm, an overflow pipe and means secured to

said overflow pipe for engaging said arm and limiting the downward movement of said ball.

2. In a flush tank, the combination of a float ball having an arm, an overflow pipe and means for limiting the downward movement of said ball, said means comprising a hook secured to said overflow pipe, said hook being adapted to engage the arm of said float ball.

Patent was issued to appellant on December 9, 1924, upon an application filed February 19, 1924.

Appellee's application was filed March 14, 1925.

The interference was declared by the Commissioner on May 29, 1925.

The preliminary statement of appellant was filed on June 22, 1925, and that of appellee in July, 1925.

The dates set up in appellant's statement are as follows: conception, November, 1922; drawing, March, 1923; model, October, 1923; disclosure, December, 1923 (model and explanation); reduction to practice, December 9, 1924.

The dates set up in appellee's statement are as follows: conception, March, 1921; drawing, September, 1921; model, September, 1921; disclosure, October, 1921; reduction to practice, September, 1921.

Both parties introduced testimony in support of their respective contentions.

All three tribunals concurred in awarding priority to appellee, the Examiner of Interferences and Examiners in Chief specifically finding that no earlier dates could be given appellant than those set out in her preliminary statement, and that appellee's proofs established beyond a reasonable double conception and reduction to practice prior to the dates set out in appellant's preliminary statement.

The decision of the Commissioner held that while appellant in her preliminary statement sets up December 9, 1924, as the date of her reduction to practice, she is entitled to the date of February 19, 1924, when she filed her application, for constructive reduction to practice. He further held that upon all the testimony appellee had established conception and reduction to practice at an earlier date than conception and reduction to practice by appellant, as shown by her testimony. The Commissioner does not specifically hold, as did the lower tribunals, that appellant was confined to the dates set up in her preliminary statement for conception, disclosure and reduction to practice, but he does note the fact, as did the other tribunals, that no motion was made by appellant to amend her preliminary statement to make it conform to the testimony produced by her.

Were we at liberty to ignore the dates set out in the preliminary statement of appellant and pass upon the case solely upon the testimony in the record, we should be compelled to find that the Commissioner and other tribunals in the Patent Office erred in awarding priority to appellee, because of the failure of appellee to sustain that burden of proof which the law requires, appellant being the senior party.

This, however, we are not at liberty to do, except as to allowing an earlier date of constructive reduction to practice. Upon this question we agree with the Commissioner that appellant is entitled to the date of filing of her application, February 19, 1924, for a constructive reduction to practice. This was permissible because the records of the Patent Office show that as a matter of law she was entitled to that date, and no proof was necessary to establish it, and no other date could have been set up so far as *constructive* reduction to practice was concerned.

However, under the rules of the Patent Office, appellant could not, without amendment of her preliminary statement be permitted to prove any date of reduction to practice earlier than said February 19, 1924, and this date is later than the date of reduction to practice by appellee, as established by the uncontradicted testimony produced by him.

It is well established that testimony taken by a party to an interference to show disclosure or reduction to practice prior to the date set forth in his preliminary statement, without amendment of such statement, is inadmissible and will not be considered. *Cross* v. *Phillips*, 87 O. G. 1399, 14 App. D. C. 228; *Bader* v. *Vajen*, 87 O. G. 1235, 14 App. D. C. 241; *Fowler* v. *McBerty*, 121 O. G. 1015, 27 App. D. C. 41; *Neth* v. *Ohmer*, 123 O. G. 998, 27 App. D. C. 319; *Lowrie* v. *Taylor*, 123 O. G. 1665, 27 App. D. C. 522.

Appellee's counsel, when the testimony of appellant was taken, objected to all testimony tending to show dates of disclosure and reduction to practice earlier than those set out in her preliminary statement.

The three tribunals of the Patent Office, having concurred in finding that appellee's disclosure and reduction to practice antedated the earliest date that can be allowed appellant under her preliminary statement, and there being no evidence contradicting the testimony produced by appellee to establish that fact, we are compelled to affirm the decision of the Commissioner.

Appellant's counsel points to certain facts tending to excuse appellant for not having amended her preliminary statement, setting up earlier dates of disclosure and reduction to practice, but we can not alter a well settled rule of law. We would observe, however, that appellant's present counsel, who acted for her in the taking of the testimony in her behalf, was himself a witness and testified that for twenty-one years he was an Assistant Examiner in the Patent Office. Therefore, he was presumably familiar with the rules of that Office. He must have known that the rules provided for motions to amend preliminary statements in interference proceedings, and that in certain cases amendments may be made, even after the taking of testimony, where material error in the statement, arising through inadvertence or mistake, has been made, and upon a satisfactory showing that the correction is essential to the ends of justice. Rule 113.

In this case there was no motion to amend the preliminary statement to conform to the testimony produced by appellant, and all of the tribunals of the Patent Office point out this important fact in their decisions.

We find in the files a reply brief by appellant, and also certain affidavits and exhibits attached thereto, not produced before the Patent Office, which appellant's counsel asks us to consider in deciding this appeal. Permission was not secured from the court to file a reply brief, and the statute is plain that upon this appeal the court can consider only evidence produced before the Patent Office.

The jurisdiction of this court is limited to the consideration of alleged errors by the Patent Office, and if no error is found, its decisions must be affirmed. So in this case we simply hold that upon the record made there was no error upon the part of the Patent Office in awarding priority of invention to appellee. It may be that in an infringement suit appellant may be found to be the prior inventor and her patent held valid. As to this we express no opinion.

The decision of the Commissioner is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE SMITH

No. 2,192. Decided December 30, 1929

[36 F. (2d) 522]

1. PATENTABILITY—ANTICIPATION—ADMISSION.

Where applicant neither asked for an interference with the patent to W. nor attempted, under the provisions of rule 75, to show prior invention of the unclaimed subject matter, *Held* "It must be assumed from the record before us that appellant was not the first inventor of anything disclosed" in that patent.

2. SAME—SAME—SAME.

Where after the citation of a reference for the first time in the Examiner's answer to an appeal applicant made no request that the case be referred to the primary Examiner for reconsideration in view thereof, *Held* that he waived his right to such reconsideration.

3. SAME—EQUIPMENT FOR BILLING TYPEWRITING MACHINES.

Claims for certain equipment for billing typewriting machines *Held* unpatentable in view of the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. B. C. Stickney and *Mr. L. H. Campbell* for Smith.

Mr. T. A. Hostetler for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from the decision of the Board of Appeals of the Patent Office, affirming the action of the Examiner in rejecting all of appellant's claims, five in number, for a patent upon certain equipment for billing typewriting machines.

Claim 1 is illustrative of the claims here in issue and reads as follows:

In the art of magazines for selectively supplying and feeding continuous webs containing work-forms to continuous billing typewriting machines equipped with carbon-sheet frames, a magazine provided with banks of holders for continuous work-webs arranged in vertical and horizontal rows side by side and movable in a horizontal plane along and parallel with the rear of a continuous billing typewriting machine in order to move the banks selectively into web-supporting and feeding position in respect to the machine and the holders arranged to enable the webs as supplied and fed by them to the machine to be permanently interleaved with the carbons of the sheet-frames, whereby the webs interleaved with carbon-sheets can be quickly changed on the machine to webs interleaved with carbon-sheets on the holders in web-supplying and feeding position.

The claims having been twice rejected for want of invention, applicant appealed to the Board of Appeals. In his statement in response to said appeal the Examiner cited the following references: Waldheim, 1,616,071; Smith, 1,358,033; Smith, 1,380,746; Melton, 1,333,931; Barker, 1,260,953; Krause et al., 428,111; Kuentzel, 1,304,492; Apperson et al., 610,510; Clouse, 940,236.

Of the above references, that of Waldheim, 1,616,071, had not before been cited by the Examiner. Waldheim 1,464,122 was cited by the Examiner in his notice of rejection of the claims, but not in his statement upon appeal, nor was it cited by the Board in its decision. Waldheim, 1,615,894, so far as appears from the record before us, was cited for the first time by the Board of Appeals in its decision affirming the action of the Examiner in rejecting the claims. The Board in said decision made Waldeheim 1,616,071 the basic reference. No mention is made in the decision of Waldheim 1,464,122, and Waldheim 1,615,894 was cited only upon a minor question, in connection with another citation to the same point.

It appears from said decision that appellant objected to the citation of the Waldheim patent 1,616,071 upon two grounds:

1. That the application upon which that patent was granted was pending contemporaneously with the present case.

2. That said patent was cited for the first time on appeal.

Shortly after said decision was rendered appellant filed a petition for reconsideration of a certain portion of the opinion of the Board. In that petition it was argued that the Waldheim patent did not embody the invention claimed by appellant, and because of the differences between it and appellant's device, it was not a proper reference.

In said petition appellant submitted a new claim for the consideration of the Board.

The Board rendered its decision on the petition for reconsideration and adhered to its previous ruling, affirming the rejection of the claims. As to the new claim proposed by appellant it declined to approve its admission, stating that it was not certain that the proposed claim was patentably distinguished from the combination of references suggested in its former decision, and that in any event the claim had not been submitted to the Examiner, who was the office expert in this art, and hence it had not had the benefit of his views as to the patentability of the claim.

Appellent's appeal is from the original decision of the Board, and the refusal of the Board to admit the new claim is not included in the notice of appeal or as one of the reasons for the appeal. Therefore that question is not before us and can not be considered.

Two principal questions of law are urged by appellant for the reversal of the decision of the Board:

1. That the Waldheim patents, Nos. 1,616,071, 1,615,894 and 1,464,122 were not proper references, because they were co-pending, when issued, with appellant's application.

2. That appellant's claim had not been twice rejected by the Examiner with the Waldheim patents as a reference.

As to the first of appellant's contentions, it appears that the application upon which the Waldheim patent, 1,616,071 was issued was filed on July 7, 1921, and the application in No. 1,615,894 was filed July 6, 1921, whereas appellant's application was filed on December 3, 1921. Both of these Waldheim patents were issued on February 1, 1927. As to Waldheim 1,464,122, as we have already observed, this patent was not referred to by the Examiner in his statement or by the Board in its decision.

It was held in the case of *Alexander Milburn Company* v. *Davis-Bournonville Company*, 344 O. G. 817, 270 U. S. 390, that where a patent application fully and adequately disclosed, but did not claim, the thing patented to a later applicant alleging a later date of invention, the later applicant was not the "first inventor" within Revised Statutes, section 4920. In that case, as in this, both applications were pending when the earlier patent was issued and it establishes the rule that the mere fact that applications are copending does not preclude the use of a patent issued upon the earlier application as a reference in the rejection of the later application.

[1] If appellant had made any claim that his invention was in fact prior to that of Waldheim, an interference could have been declared, in so far as Waldheim had made claims based upon his specification; or if his specification disclosed the invention covered by appellant's claims, appellant could, by complying with rule 75 of the Patent Office, showing prior invention by him, have prevented the use of the Waldheim patent as a bar to a patent to him. This appellant did not do, and it must be assumed upon the record before us that appellant was not the first inventor of anything disclosed by the Waldheim patent.

The appellant's second contention is that his claims had not been twice rejected by the Examiner citing the Waldheim patent as a reference, and for that reason the Board of Appeals had no jurisdiction to entertain and apply said patent as a reference. He bases this contention upon section 4909 of the Revised Statutes, 35 U. S. C. A., section 57. This section reads as follows:

> Appeals; from Primary Examiners to Examiners in Chief. Every applicant for a patent or for the reissue of a patent, any of the claims of which have been twice rejected, and every party to an interference, may appeal from the decision of the Primary Examiner, or of the Examiner in charge of interferences in such case, to the Board of Examiners in Chief; having once paid the fee for such appeal.

[2] The fact is that the five claims here in question had been twice rejected by the Primary Examiner, and the appeal was taken from his second rejection. The statute makes no requirement that the grounds of rejection shall be stated. The rules of the Patent Office do require the reasons for the rejection to be fully and precisely stated, rule 65. This was done by the Examiner. This rule further states that upon the rejection of an application for want of novelty, "the Examiner must cite the best references at his command." It appears from the record that the final rejection by the Primary Examiner occurred on April 2, 1926. As has already been stated, the Waldheim patents, Nos. 1,616,071 and 1,615,894, were issued February 1, 1927, upon applications filed prior to the application of appellant. Appellant did not take his appeal to the Board until March 3, 1927, which was after the issue of the Waldheim patents. In the Examiner's statement in response to said appeal, dated March 23, 1927, as required by the rules of the Patent Office, the Examiner cited as an additional reference Waldheim patent, 1,616,071. This was the first opportunity that he had to do so. Though not otherwise appearing in the record, the decision of the Board states that appellant's attention was called to this new reference when he received the Examiner's statement, and we must therefore assume that appellant did receive a copy of the Examiner's statement. It further appears from the decision of the Board that appellant objected to the citation of the Waldheim patent, but it nowhere appears that he asked that the matter be remanded to the Primary Examiner for a reconsideration of his claims in view of the Waldheim citation.

The rules and practice of the Patent Office provide for the protection of the applicant in such cases. Appellant did not choose to avail himself of the opportunity that the rules provided to have secured a reconsideration by the Primary Examiner, and he must be held to have waived such reconsideration. In any event, the failure of the Primary Examiner to cite references is not a jurisdictional defect preventing their later use as references on appeal.

It would be a strange situation indeed if the failure of the Primary Examiner to cite a reference which would bar the issue of a patent would compel the issue of a patent which would be clearly invalid. No such construction of the patent laws is warranted.

In the case of *In re Drawbaugh*, 77 O. G. 657, 9 App. D. C. 219, it was held that—

> It is the duty of the Commissioner, if he knows any substantial, reasonable grounds why a patent should not issue, to refuse the patent, whether the specific objection be raised and acted upon by the Examiner or not.

[3] These questions of law being disposed of, there remains the question of whether the Board of Appeals erred in holding that there was want of invention by appellant, in view of the references cited. This involved the determination of a fact, and upon a careful review of the record we concur in the conclusion of the Board.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,018,502, Just & Hanaman, Manufacture of incandescent electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, D. C., M. D. Tenn. (Nashville), Doc. E 360, *General Electric Co.* v. *B. Ransom et al.* Patents held valid and infringed (notice Feb. 11, 1930).

1,025,822, 1,163,253, W. H. Millspaugh, Paper-making machine; 1,163,251, same, Paper making, D. C., W. D. Wash. (N. Div.), Doc. 660, *The Guardian Trust Co. et al.* v. *National Paper Products Co.* Dismissed without prejudice Feb. 10, 1930. Doc. 661, *The Guardian Trust Co. et al.* v. *Washington Pulp & Paper Corp.* Decree as above.

1,075,019, 1,075,021, R. L. Cooney, Dry-pipe water-service fire-extinguisher system; 1,075,091, same, Stationary fire-extinguisher system, filed Jan. 25, 1930, D. C., N. D. Ill. (E. Div.), Doc. 9617, *R. L. Cooney et al.* v. *Fire Protection Co.*

1,075,021. (See 1,075,019.) 1,075,091. (See 1,075,019.)

1,082,784, A. A. West, Hair curler, filed Feb. 17, 1930, D. C., S. D. N. Y., Doc. —, *West Electric Hair Curler Co.* v. *F. Rubio et al.* (*New York Export Co.*).

1,125,513, A. C. Graham, Well-pipe perforator, filed Feb. 11, 1930, D. C., S. D. Calif. (Los Angeles), Doc. E Q–118–J, *A. C. Graham* v. *Baash-Ross Tool Co.*

1,134,603, 1,182,551, 1,414,564, J. Gabel, Automatic talking machine, filed Jan. 3, 1930, D. C., N. D. Ill. (E. Div.), Doc. 9579, *Gabel's Entertainer Co.* v. *C. H. Bartholomew.*

1,169,251. (See 1,025,822.) 1,163,253. (See 1,025,822.)

1,163,680, L. W. Noyes, Power-transmission mechanism, appeal filed Feb. 17, 1930, C. C. A., 8th Cir. (St. Louis), Doc. 8834, *Challenge Co.* v. *Aermotor Co.*

1,180,159. (See 1,018,502.) 1,182,551. (See 1,134,603.)

1,199,124, W. O. Snelling, Food product, C. C. A., 2d Cir., Doc. 10662, *W. O. Snelling* v. *Dernell Potato Products Co.* Decree reversed (notice Feb. 18, 1930).

1,305,690, H. S. Coyer, Grid-making machine, filed Jan. 10, 1930, D. C., N. D. Ill. (E. Div.), Doc. 9581, *De Forest Radio Co.* v. *Grigsby-Grunow Co.*

1,307,733, A. V. Gullborg, Lubricating apparatus; 1,307,734, same, Lubricating means; 1,475,980, O. Zerk, Lubricating apparatus, D. C., S. D. N. Y., Doc. —, *The Bassick Mfg. Co.* v. *Manhattan Mirror Works, Inc.* Consent decree for plaintiff Feb. 19, 1930.

1,307,734. (See 1,307,733.)

1,370,913, J. E. Rioux, Composition of matter for doughnut mix, filed Jan. 15, 1930, D. C., N. D. Ill. (E. Div.), Doc. 9612, *J. E. Rioux et al.* v. *M. Kempner et al.*

1,381,728. (See 1,504,697.)

1,388,898, Schmidt & Schmidt, Carcass dehairing and cleaning machine; 1,388,899, O. C. Schmidt, same, D. C., W. D. Okla. (Oklahoma City), Doc. E 859, *The Cincinnati Butcher's Supply Co.* v. *W. H. Butcher Packing Co.* Dismissed Jan. 18, 1930.

1,388,899. (See 1,388,898.) 1,414,564. (See 1,134,603.)

1,449,874, E. F. Suter, Permanent hair waving, filed Jan. 10, 1930, D. C., N. D. Ohio (E. Div.), Doc. 9583, *Eugene, Ltd.* v. *The National Mineral Co.*

1,469,596, J. W. Hoodwin, Tray; Des. 60,025, same, Ice-cream-cone tray, C. C. A., 3d Cir., Doc. 3795, *Daigger Corp.* v. *L. C. Evans* (*Evans Printing Co.*). Patents held not infringed Feb. 13, 1930.

1,475,980. (See 1,307,733.)

1,504,128, C. G. Lindbom, Cigarette case, D. C., S. D. N. Y., Doc. E 51/64, *Wm. Demuth & Co.* v. *Wales Novelties Corp.* Consent decree for plaintiff Feb. 15, 1930.

1,504,697, J. A. Menard, Abrasive compound; 1,381,728, same, Abrasive composition, filed Feb. 15, 1930, D. C., Mass., Doc. E 3209, *Timesaver Products Co.* v. *J. O. Werner.*

1,526,982, E. W. Hill, Stencil sheet, filed Feb. 18, 1930, D. C., Conn. New Haven), Doc. E 2054, *A. B. Dick Co.* v. *Trinity Stationery & Office Equipment Co.*

1,549,177, J. F. Allen, Rubber-molding apparatus, appeal filed Feb. 8, 1930, C. C. A., 3d Cir., Doc. 4361, *J. F. Allen et al.* v. *Bay State Iron Works et al.*

1,556,736, Wheeler & Nugent, Mechanism for insuring correct starting point in fabric-measuring machines, D. C., N. D. Ga. (Atlanta), Doc. E 492, *The Measuregraph Co.* v. *Grand Rapids Store Equipment Corp.* Dismissed Feb. 7, 1930.

1,576,480, A. W. Kath, Clip-attaching machine, filed Feb. 18, 1930, D. C., Conn. (New Haven), Doc. E 2053, *A. Colton Co.* v. *MacKesson Robbins Co.*

1,580,651, E. V. Daily, Radiator, appeal filed Nov. 26, 1929, C. C. A., 3d Cir., Doc. 4309, *Automatic Gas Steam Radiator Co.* v. *J. B. Clow Sons.*

1,581,485, C. B. Gilmore, Hood latch, filed Feb. 14, 1930, D. C., N. D. Ohio (W. Div.), Doc. E 1048, *Chicago Forging & Mfg. Co.* v. *Chevrolet Motor Ohio Co.*

Des. 60,025. (See 1,469,596.)

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,604,054, P. H. Kuyper, Track mounting for screens or the like, decided February 28, 1930, claims 3, 4, 5, 6, and 7.

Pat. 1,614,630, H. Petin, Weight-operated plate or sheet sorting machine, decided March 3, 1930, claim 7.

Pat. 1,646,050, J. L. Brown, Amplifiers, decided March 15, 1930, claims 1, 2, 3, 4, 5, and 6.

Pat. 1,704,052, L. W. Melcher, Car-axle bearings for trucks, decided March 18, 1930, claims 1 and 9.

Changes in Fees

[PUBLIC—NO. 112—71ST CONGRESS]

[H. R. 10,076]

An Act To amend sections 476, 482, and 4934 of the Revised Statutes, sections 1 and 14 of the Trade-Mark Act of February 20, 1905, as amended, and section 1 (b) of the Trade-Mark Act of March 19, 1920, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 476 of the Revised Statutes, as amended (United States Code, title 35, section 2), is amended to read as follows:

"SEC. 476. There shall be in the Patent Office a Commissioner of Patents, one First Assistant Commissioner,

two Assistant Commissioners, and nine Examiners in Chief, who shall be appointed by the President, by and with the advice and consent of the Senate. The First Assistant Commissioner and the Assistant Commissioners shall perform such duties pertaining to the office of Commissioner as may be assigned to them, respectively, from time to time by the Commissioner of Patents. All other officers, clerks, and employees authorized by law for the office shall be appointed by the Secretary of Commerce upon the nomination of the Commissioner of Patents, in accordance with existing law."

SEC. 2. Section 482 of the Revised Statutes as amended (United States Code, title 35, section 7) is hereby amended by substituting the words "Assistant Commissioners" for the words "Assistant Commissioner," in conformity with the provisions of section 1 of this bill.

SEC. 3. Section 4934 of the Revised Statutes, as amended (United States Code, title 35, section 78), is amended to read as follows:

"SEC. 4934. The following shall be the rates for patent fees:

"On filing each original application for a patent, except in design cases, $25, and $1 for each claim in excess of twenty.

"On issuing each original patent, except in design cases, $25, and $1 for each claim in excess of twenty.

"In design cases: For three years and six months, $10; for seven years, $15; for fourteen years, $30.

"On every application for the reissue of a patent, $30.

"On filing each disclaimer, $10.

"On an appeal for the first time from the Primary Examiners to the Board of Appeals, $15.

"On every appeal from the Examiner of Interferences to the Board of Appeals, $25.

"For uncertified printed copies of specifications and drawings of patents, 10 cents per copy: *Provided*, That the Commissioner of Patents may supply public libraries of the United States with such copies as published, for $50 per annum: *Provided further*, That the Commissioner of Patents may exchange copies of United States patents for those of foreign countries.

"For copies of records made by the Patent Office, excluding printed copies, 10 cents per hundred words.

"For each certificate, 50 cents.

"For recording every assignment, agreement, power of attorney, or other paper not exceeding six pages, $3; for each additional two pages or less, $1; for each additional patent or application included or involved in one writing, where more than one is so included or involved, 50 cents additional.

"For copies of drawings, the reasonable cost of making them."

SEC. 4. That sections 1 and 14 of the act entitled "An Act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same," approved February 20, 1905, as amended (United States Code, title 15, section 81); and section 1 (b) of the act of March 19, 1920, entitled "An Act to give effect to certain provisions of the Convention for the Protection of Trade-Marks and Commercial Names, made and signed in the city of Buenos Aires, in the Argentine Republic, August 20, 1910, and for other purposes" (United States Code, title 15, section 109) are hereby amended by providing that the fee for registration of trade-marks and renewals of registrations shall be $15.

SEC. 5. The money required for the Patent Office each year, commencing with the fiscal year 1932, shall be appropriated by law out of the revenues of that Office, except as otherwise provided by law.

SEC. 6. The Commissioner of Patents is hereby authorized to annually destroy or otherwise dispose of all the files and papers belonging to all abandoned applications which have been on file for more than twenty years.

SEC. 7. This act shall take effect upon the date of its enactment, except that sections 3 and 4 shall take effect on the 1st day of June, 1930.

Approved, April 11, 1930.

Notices of Cancellation

U. S. PATENT OFFICE, *Washington, Apr. 7, 1930.*

Rex-Tone Laboratories, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of United Drug Company, 43 Leon Street, Boston, Mass., to effect the cancellation of trade-mark registration No. 183,225, issued April 22, 1924, to William T. Ellison, 115 E. Liberty Street, Savannah, Ga., which registration, the assignment records of the Office show, has been transferred to Rex-Tone Laboratories, Inc., Tampa, Fla. The notice of such proceeding sent by registered mail to Rex-Tone Laboratories, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless Rex-Tone Laboratories, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Apr. 7, 1930.*

The Smile Company, its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The William Boardman & Sons Co., 53–59 Edwards Street, Hartford, Conn., to effect the cancellation of trade-mark registration No. 162,022, issued November 28, 1922, to The Smile Company, 221–223 East Fourth Street, Topeka, Kans. The Office having been unable to secure satisfactory service upon The Smile Company at the said address, notice is hereby given that unless The Smile Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Interference Notice

U. S. PATENT OFFICE, *Washington, Apr. 8, 1930.*

Frank T. Brown, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the applications for patent of Frank T. Brown, 114 Stimson St., Detroit, Mich., and of Joseph Lashenick, 171 McKibben St., Brooklyn, N. Y. A notice of such declaration sent to Solomon Dunn, assignee of said Brown, has been returned by the post office as undeliverable, and counsel for Brown states that he has been unable to ascertain the present whereabouts of said Brown or of his assignee. Notice is hereby given that unless said Frank T. Brown, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 29, 1930

[VOL. 393. No. 5]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 280,659. J. MOHAMMAD ALI, INC., New York, N. Y. Filed Mar. 18, 1929.

No claim is made to the words "Made in India for" apart from the mark as shown.
For Brass Goods—Namely, Trays, Vases, and Bowls.
Claims use since Sept. 1, 1926.

Ser. No. 286,800. SPIC & SPAN STORES INC., Topeka, Kans. Filed July 8, 1929.

For Casement, Clothesline, Screen, Storm-Sash, and Transom Adjusters; Door and Window Antirattlers, Towel Bars, Washbasins, Frying Baskets, Chain-Link Belting, Chain Conveyor Belting, Stove Boards; Coffee, Rice, and Vegetable Boilers; Carriage, Expansion, Plow, and Stove Bolts; Screen-Door Braces, Door Bumpers, Riveting Burrs, Door Butts, Oil-Well and Well Casings, Aluminum and Enameled-Steel Casseroles, Furniture Casters, Stove Casters; Coil, Dog, Jack, Ladder, Log, and Tire Chains; Base-Metal Cream Coolers, Milk Coolers, Dish Covers; Aluminum, Enameled-Steel, and Tin Cups; Base-Metal and Enameled-Steel Baking, Chafing, Cooking, Fern, Relish, Soap, and Vegetable Dishes; Metal Fence, Fixed Stock and Poultry Fountains, Lawn Fountains; Base-Metal Baking Dish, Casserole, Pie-Dish, and Vegetable-Dish Frames; Funnels, Metal Gates, Clothesline Hooks, Picture Hooks, Waffle Irons; Aluminum and Enameled-Steel Convex, Milk, Preserving, and Tea Kettles; Camper's Cooking Pot and Pan Kits; Fountain, Hose, and Sprinkling Nozzles; Chamber Pails; Baking, Biscuit, Bread, Cake, Cookie, Corn-Cake, Dish, Drip, Dust, Frying, Milk, Muffin, Pie, Pudding, Refrigerator, Rinsing, Roasting, and Sauce Pans; Coffee Percolators, Cotter Pins, Base-Metal Pitchers; and Cake, Dinner, Pie, Sandwich, and Soup Plates; Coffeepots, Teapots; Base-Metal Bean, Cooking, Sauce, and Stock Pots; Clothesline Reels; Aluminum, Steel, and Enameled-Steel Roasters; Coffee, Milk, Milk-Can, Soup, and Tea Strainers; Bread and Sandwich Toasters; Aluminum, Enameled-Steel, Nickel-Plated, and Tin Bread, Crumb, Serving, and Household Trays; Foot Tubs, Infants' Bathtubs, and Laundry Trays.
Claims use since Feb. 15, 1929.

Ser. No. 287,135. GUSTAV FRIEDRICH GERDTS, Bremen, Germany. Filed July 15, 1929.

Gestra

For Steam and Water Valves, Blow-Off Valves, Steam Traps, Nozzles, Piping, Unions, Couplings, Expansion Joints.
Claims use since Jan. 5, 1913.

Ser. No. 295,340. ALEXANDER MERDAN, New York, N. Y. Filed Jan. 29, 1930.

No claim is made to the words "Trade Mark" and "Gas Safety Control" apart from the mark shown on the drawing.
For Automatic Safety Valve for Gas Burners.
Claims use since Jan. 9, 1930.

Ser. No. 295,731. THE ENTERPRISE ALUMINUM COMPANY, Massillon, Ohio. Filed Feb. 7, 1930.

Tea-O-lator

No claim is made to the exclusive use of the descriptive term "Tea" apart from the mark shown in the drawing.
For Aluminum Device for Making Tea.
Claims use since Jan. 31, 1930.

Ser. No. 296,000. CRESCENT BRASS AND PIN COMPANY, Detroit, Mich. Filed Feb. 14, 1930.

SIMPLEX

For Nails.
Claims use since Mar. 25, 1908.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 286,740. THE BOWLER FOUNDRY COMPANY, Cleveland, Ohio. Filed July 8, 1929.

BOWLERITE METAL

No claim being made to the word "Metal" apart from the mark as shown.
For Iron of Special Composition, of Great Tensile Strength, and of Little Increase in Volume Upon Alternate Heating and Cooling and for Ferrous Castings.
Claims use since June 18, 1929.

Ser. No. 296,138. NEW ENGLAND HIGH-CARBON WIRE CO., Millbury, Mass. Filed Feb. 17, 1930.

Newco

For Spring Wire.
Claims use since Nov. 30, 1929.

Ser. No. 297,192. HERAEUS-VACUUMSCHMELZE AKTIENGESELLSCHAFT, Hanau-on-the-Main, Germany. Filed Mar. 12, 1930.

CONTRACID

For Noncorrodible Alloys, Containing Nickel and Chromium, Especially an Alloy of This Character Melted in Vacuo.
Claims use since April, 1926.

CLASS 15

Oils and Greases

Ser. No. 280,477. RICHFIELD OIL COMPANY OF CALIFORNIA, Los Angeles, Calif. Filed Sept. 7, 1929.

In the drawing the horizontal lines indicate a blue color and the broken cross lines indicate a yellow color. No claim is made to the words "Aviation Gasoline" apart from the mark shown in the drawings.
For Gasoline.
Claims use since July 25, 1929.

Ser. No. 292,704. AMERICAN MINERAL SPIRITS CO., Chicago, Ill. Filed Nov. 22, 1929.

KEMSOLENE

For Naphtha.
Claims use since May, 1927.

Ser. No. 292,706. AMERICAN MINERAL SPIRITS CO., Chicago, Ill. Filed Nov. 22, 1929.

LACTOL

For Naphtha.
Claims use since July, 1926.

Ser. No. 293,125. AMERICAN MINERAL SPIRITS CO., Chicago, Ill. Filed Dec. 2, 1929.

VARNO

For Naphtha.
Claims use since May 26, 1926.

Ser. No. 293,126. AMERICAN MINERAL SPIRITS CO., Chicago, Ill. Filed Dec. 2, 1929.

NAPHTHOLITE

For Naphtha.
Claims use since Oct. 4, 1924.

Ser. No. 294,177. POLYGON PRODUCTS CO., Boston, Mass. Filed Dec. 28, 1929.

LUBRI-TASGON

For Penetrating Oil and Rust-Dissolving Lubricant.
Claims use since Dec. 5, 1929.

Ser. No. 294,845. CRAVEROILER COMPANY OF AMERICA, Philadelphia, Pa. Filed Jan. 16, 1930.

CRAVER-RUN-IN-OIL

No claim being made to the word "Oil" apart from the mark as shown.
For Lubricating Oils.
Claims use since Nov. 1, 1929.

Ser. No. 295,631. FRANCIS EDWARD MARTIN, doing business as F. E. Martin & Co., Lake Bluff, Ill. Filed Feb. 5, 1930.

The words "Metallic Lubricants" are disclaimed except in association with the other features of the mark.
For Lubricating-Oil Compounds.
Claims use since July 15, 1924.

Ser. No. 296,830. STANAVO SPECIFICATION BOARD, INC., New York, N. Y. Filed Mar. 4, 1930.

For Refined, Semi-Refined and Unrefined Oils and Greases Made from Petroleum, Both with and without Admixture of Animal, Vegetable, or Mineral Substances for Illuminating, Burning, Power, Fuel, and Lubricating Purposes, Especially Aviation Fuels and Lubricants.
Claims use since July 13, 1929.

Ser. No. 296,878. NEW YORK LUBRICATING OIL COMPANY, New York, N. Y. Filed Mar. 5, 1930.

For Lubricating Oils for Machinery, Engines, Motors, and Dynamos.
Claims use since May 3, 1928.

CLASS 16

Paints and Painters' Materials

Ser. No. 258,495. REPUBLIC PAINT & VARNISH WORKS, Chicago, Ill. Filed Dec. 5, 1927.

PUBLIC GUARANTEED SERVICE PRODUCTS

No claim being made to the words "Public Service Guaranteed Products" apart from the mark shown.
For House Paint, Barn Paint, Velvet-Finish Wall Paint; Blackboard Slating—Namely, a Liquid Finish for Blackboards in the Nature of Paint; Bridge and Structural Paint, Aluminum Enamel, Gold Enamel, Bronzing Liquid, Japan Driers, Varnishes, Japans, and Architectural Finishing Paints, Colors in Oil, Enamel Undercoating, Architectural Finishing Paint Enamels, Screen Enamel, Stovepipe Enamel, Mill-White Paints, Paint and Varnish Remover, Pure Asphalt Roof Paint, Prepared Shellac, Wagon and Implement Enamel, Smokestack and Boiler Paint, Anticorrosion Paint Coating, Roof Primer, All-Purpose Paint Enamel, Floor and All-Purpose Varnish, Varnish Stain, Motor-Car Enamel, Linoleum Varnish, Touch-Up Black Paint.
Claims use since Nov. 18, 1918.

Ser. No. 276,585. JAMES H. TARR COMPANY, LTD., Gloucester, Mass. Filed Dec. 11, 1928.

No claim being made to the word "Tarr's" apart from the mark shown on the drawing.
For Paints—Namely, Preservative Paints for the Bottoms of Vessels.
Claims use since 1899.

Ser. No. 284,546. VILAS W. RIGDON, doing business as Rigdon Products Co., San Diego, Calif. Filed May 23, 1929.

DUO-LAC

No claim is made for the word "Lac" separate and apart from the mark as shown.
For Automobile Paint.
Claims use since Dec. 22, 1926.

Ser. No. 289,782. CARNITT ROSTSCHUTZ- UND FARBSTOFF-GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Breslau, Germany. Filed Sept. 14, 1929.

Siraqua

For Paints in Ready-Mixed Form and Varnish.
Claims use since September, 1928.

Ser. No. 291,870. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Filed Oct. 21, 1929.

USG

Applicant is the owner of registration No. 201,784.
For Paint Colors and Plastic Paint.
Claims use since Mar. 5, 1924, on plastic paint products and since August, 1929, on paint colors.

Ser. No. 295,347. PRATT & LAMBERT, INC., Buffalo, N. Y. Filed Jan. 29, 1930.

The trade-mark consists of a red disc surrounded by a gold border and bearing the "P & L" monogram in white on the red background, which colors are claimed as features of the mark.
For Varnishes, Paint Enamels, Lacquers, Oil-Base and Lacquer-Base Primers, Oil-Base and Lacquer-Base Surfacers, Oil-Base and Lacquer-Base Glazing and Knifing Putties, Enamel Undercoatings, Cement Undercoatings, Primers for Plaster Walls; Dry, Ready-Mixed, and Paste Paints; Water Stains, Acid Stains, Oil Stains, Bensol Stains, Japans, Liquid Fillers, Paste Fillers, Oil Driers, Japan Driers, Paint and Varnish Removers.
Claims use since May 7, 1928.

Ser. No. 296,332. WILLIAM A. GATKE, Richmond Hill, N. Y. Filed Feb. 21, 1930.

GERMATEX
A SANITARY WALL FINISH
MANUFACTURED BY
WM. A. GATKE RICHMOND HILL N.Y.

Applicant disclaims all the wording on the drawing with the exception of the term "Germatex."
For Plastic Paints in Powder Form.
Claims use since Dec. 1, 1929.

Ser. No. 296,429. JOHN W. MASURY & SON, Brooklyn, N. Y. Filed Feb. 24, 1930.

STEADFAST

For Ready-Mixed Paints, Lacquers, and Varnishes.
Claims use since Feb. 10, 1930.

Ser. No. 297,038. VALENTINE & COMPANY, New York, N. Y. Filed Mar. 8, 1930.

For Ready-Mixed Paints, Varnish Stains, and Varnish Enamels.
Claims use since about Feb. 1, 1930.

CLASS 17

Tobacco Products

Ser. No. 297,161. THE TOBACCO REHANDLING CO., LTD., doing business as W. T. Grant & Co. Branch, Louisville, Ky. Filed Mar. 11, 1930.

AL

For Leaf Tobacco.
Claims use since Sept. 8, 1927.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 296,309. THE AEOLIAN COMPANY, Meriden, Conn., and New York, N. Y. Filed Feb. 21, 1930.

AEOLIAN

For Motor Boats.
Claims use since on or about May 20, 1929.

Ser. No. 296,736. H. H. FRANKLIN MANUFACTURING COMPANY, Syracuse, N. Y. Filed Mar. 3, 1930.

TRAVELMOUSINE

For Automobiles and Structural Parts Thereof.
Claims use since Jan. 2, 1930.

Ser. No. 296,997. ANDERSON MANUFACTURING COMPANY, Cambridge, Mass. Filed Mar. 8, 1930.

For Vehicle Spring Covers.
Claims use since Jan. 22, 1930.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 266,513. BUCYRUS-ERIE COMPANY, Milwaukee, Wis. Filed May 17, 1928.

BUCYRUS ERIE

For Portable-Electric-Lighting Plants, Motor Generators, Cables for Carrying Electric Current, and Repair, Spare, and Replacement Parts for the Goods Specified.
Claims use since January, 1928.

Ser. No. 278,495. HOT-N-KOLD CORPORATION, San Francisco, Calif. Filed Oct. 8, 1928.

Hot-N-Kold

The lining on the drawing is to indicate shading only.
For Electric Air Heaters and Parts Therefor, Electric Ranges and Parts Therefor, Electric Water Heaters and Parts Therefor.
Claims use since Dec. 20, 1927.

Ser. No. 278,922. THE BALDWIN COMPANY, Cincinnati, Ohio. Filed Feb. 6, 1929. Under section 5b of the act of 1905 as amended in 1920.

Baldwin

For Radio Receiving Sets and Loud-Speakers, Antennæ, Transformers, Induction Coils, Tube Sockets, Resistance Units, Rheostats, Condensers, and Loading Coils, Choke Coils, Inductances and Resistance Devices, Inductive and Noninductive for Use in Connection Therewith.
Claims use since Jan. 28, 1929.

Ser. No. 285,208. I-T-E CIRCUIT BREAKER COMPANY, Philadelphia, Pa. Filed June 7, 1929.

ITE

For Automatic Electrical Switches; Automatic Circuit Breakers; Automatic Magnetic Circuit Breakers; Nonclosable and Double-Arm Automatic Circuit Breakers; Electric Switches; Electric Switch Gear; Control Switches; Rheostats; Alternating and Direct Current Motor Starters and Controllers; Electric-Motor-Control Apparatus; Alternating and Direct Current Motor Control Systems; and Alternating and Direct Current Motor Protective Apparatus; Dynamic Brakes; Limit Switches; Time-Limit Apparatus; Inductive Time-Limit Control Apparatus; Inductive Time-Limit Apparatus for Controlling Electric Switches, Contactors, and Automatic Circuit Breakers; Inductive Time-Limit Motor-Control Apparatus; Inductive Time-Limit Switches and Contact Making and Breaking Apparatus; Relays; Overload Relays; No and Low Voltage Relays; Time-Limit Relays; Inductive Time-Limit Relays; Motor-Control Relays; Induction Relays; Alternating and Direct Current Generator Control and Protective Apparatus; Generator Switches; Generator Field Switches; Generator Relays; Magnetic and Motor Controlled and Actuated Switches and Contact Making and Breaking Apparatus for Alternating and Direct Current Generators and Generator Circuits; Motor-Operated Apparatus for Generator Field Rheostats and for Automatic Circuit Breakers and Automatic Time-Limit Circuit Breakers Responsive to Overload, No Voltage, Low Voltage, Voltage Difference, and Reverse Current, for Controlling and Protecting Alternating and Direct Current Generators, Motors, Electric Circuits, and Generator and Motor Circuits; Transfer Switches; Automatic Transfer Switches; Motor and Magnetically Actuated and Controlled Transfer Switches; Switches; Automatic Circuit Breakers; Overload, Underload, and Reverse-Current Circuit Breakers for Controlling Storage Batteries and Storage-Battery Circuits; Remote Electrical Control Apparatus; Remotely-Controlled Motor, Magnetically, Pneumatically, and Electropneumatically Operated Switches, Contact Making and Breaking Apparatus, and Automatic Circuit Breakers; Remotely-Controlled Motor, Magnetically, and Electropneumatically Operated Power-Applying Apparatus; Electropneumatic Valves for Electropneumatically-Operated Apparatus; Electropneumatic Damper-Operating Apparatus; Transformers; Mechanically and Electrically Interlocked Switches, Contact Making and Breaking Apparatus, and Automatic Circuit Breakers for Controlling the Sequence of Their Operation; and Apparatus for Manual Remote Control of Switches and Automatic Circuit Breakers.
Claims use since February, 1897.

Ser. No. 289,150. GRAHAM AMPLION LIMITED, Slough and London, England. Filed Aug. 29, 1929.

LION

For Telephonic and Wireless Loud-Speakers.
Claims use since Sept. 21, 1928.

Ser. No. 289,527. LUMITONE CORPORATION OF AMERICA, St. Charles, Ill. Filed Sept. 9, 1929.

LUMITONE

For Equipment for the Remote Electric (or Combined Electric and Pneumatic) Control, Either Manually or Automatically Operated, of Color Effects in Electric-Lighting Systems for Theatre, Industrial, and Similar Uses.
Claims use since May 24, 1929.

Ser. No. 290,034. SAYLOR ELECTRIC & MANUFACTURING COMPANY, Detroit, Mich. Filed Sept. 20, 1929.

The word "Duct" and the representation of the goods are disclaimed apart from the mark as shown in the drawing.

For Nonmetallic Electrical Conduit.

Claims use since Jan. 1, 1916.

Ser. No. 291,827. DULCETTO-POLYPHON LIMITED, London, England. Filed Oct. 21, 1929.

DULCETTO

For Wireless Receiving Sets, Thermionic Amplifiers, Wave Traps, Volume Controls, Crystals and Crystal Detectors, Inductance Coils, Transformers, Thermionic Valves, Thermionic Valve Holders, Condensers, Grid Leaks, Resistances, Switches, Connectors, Plugs, Head Phones, Loud-Speakers, Coil Holders, Variometers, Loose Couplers, Batteries, Insulators, and Aerials.

Claims use since August, 1928.

Ser. No. 292,132. THE VOISOPHONE COMPANY, Wausau, Wis. Filed Nov. 7, 1929.

No claim is made to the exclusive right to the use of the words "Voice, Sound," and "Music" apart from the mark shown in the drawing.

For Unitary Phonographic Reproducing Apparatus for Use with Moving-Picture-Projection Apparatus.

Claims use since June 1, 1929.

Ser. No. 293,059. MONARK BATTERY COMPANY, Chicago, Ill. Filed Nov. 29, 1929.

Applicant disclaims the word "Superior" apart from the mark shown in the drawing.

For Storage Batteries.

Claims use since September, 1919.

Ser. No. 293,823. THE ILER ELECTRICAL MANUFACTURING CO., Warren, Ohio. Filed Dec. 6, 1929.

No claim is made to the exclusive use of the words "The" and "Line" apart from the mark shown in the drawing.

For Fittings, Boxes, and Attaching Devices and Conduit Used in Electrical Wiring Systems.

Claims use since June 14, 1929.

Ser. No. 293,825. L. E. FITE, doing business as Nightingale Radio Manufacturing Company, Memphis, Tenn. Filed Dec. 18, 1929.

NIGHTINGALE

For Radio Receiving Sets.

Claims use since Oct. 26, 1929.

Ser. No. 295,785. DELTA-STAR ELECTRIC COMPANY, Chicago, Ill. Filed Feb. 8, 1930.

For Cable Terminators, Oil Circuit Breakers, Switch-Gear Assemblies.

Claims use since January, 1929.

Ser. No. 296,093. WESTERN ELECTRIC COMPANY, INCORPORATED, New York, N. Y. Filed Feb. 15, 1930.

Western Electric SOUND SYSTEM
The VOICE of ACTION

Applicant disclaims the words "Sound System" apart from the mark as shown on the drawing.

For Electrical Systems for Reproducing, Amplifying, and Projecting Sound from Records of the Phonograph Type or Films and Parts Thereof—Namely, Assembled Amplifier Units, Synchronizing Motors, Inverted Converters, Photoelectric Cells, Electromagnetic Pick-Ups, Amplifying Horns and Magnets Thereof, Sound Gate Consisting of an Apertured Plate and Pressure Pad, Apparatus Units Consisting of Equalizers and Attenuators, and Sound Units Comprising a Source of Light, a Lens Tube, Drive Sprockets, an Apertured Film Guide, and a Photoelectric Cell.

Claims use since Mar. 11, 1929.

Ser. No. 296,620. WESTINGHOUSE LAMP COMPANY, Bloomfield, N. J. Filed Feb. 27, 1930.

WL-706

For Vacuum or Gas-Filled Tubes, and Particularly for Voltage-Regulator Tubes.

Claims use since Oct. 28, 1929.

Ser. No. 296,962. FIRESTONE BATTERY COMPANY, Akron, Ohio. Filed Mar. 7, 1930.

SENTINEL

For Storage Batteries.

Claims use since Feb. 14, 1930.

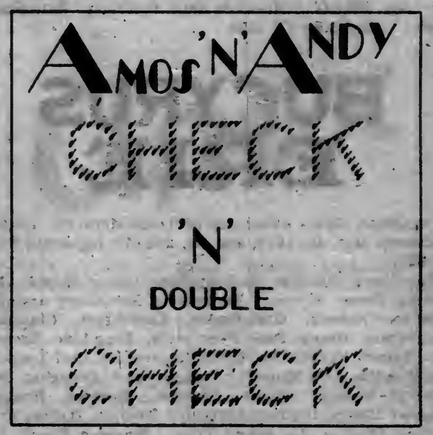
Ser. No. 297,140. LYONS STORAGE BATTERY CO., Belleville, N. J. Filed Mar. 11, 1930.

ETHYL

For Storage Batteries.

Claims use since Mar. 3, 1930.

Ser. No. 297,185. FIRESTONE BATTERY COMPANY, Akron, Ohio. Filed Mar. 12, 1930.



For Storage Batteries.

Claims use since on or about Feb. 14, 1930.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 296,467. AMOS 'N' ANDY DOLL CO., New York, N. Y. Filed Feb. 25, 1930.

For Dolls.

Claims use since Jan. 25, 1930.

Ser. No. 296,749. KIRBY, BLOCK & FISCHER, INC., New York, N. Y. Filed Mar. 3, 1930.

BUDDY

For Golf Balls.

Claims use since Nov. 26, 1929.

Ser. No. 297,353. CHARLES F. BAKER & CO. INC., Boston, Mass. Filed Mar. 15, 1930.

HOLEFAST

For Golf Tees.

Claims use since Mar. 1, 1930.

Ser. No. 297,594. W. T. GRANT COMPANY, Lynn, Mass., and New York, N. Y. Filed Mar. 20, 1930.

BLACK BEAUT

For Golf Balls.
Claims use since Feb. 15, 1930.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 266,512. BUCYRUS-ERIE COMPANY, Milwaukee, Wis. Filed May 17, 1928.

BUCYRUS ERIE

Applicant claims ownership of Trade-Mark No. 120,945 registered Mar. 19, 1918, and No. 202,679 registered Sept. 1, 1925.

For Power Shovels, Railway-Type Power Shovels, Revolving Power Shovels; Excavating Machinery and Excavators—Namely, Grab-Bucket Excavators, Clamshell Excavators, Orange-Peel Excavators, Drag-Line Excavators, Trench Excavators, Tower Excavators, Coal Loaders, Coal-Loading Machinery; Dredges and Dredging Machinery—Namely, Dipper Dredges, Elevator Dredges, Alluvial Mining Dredges, Clamshell Dredges, Hydraulic or Suction Dredges, Unloading Plows, Spreader Plows, Unloading Machines; Cranes—Namely, Traveling Cranes, Railway Wrecking Cranes, Railway Breakdown Cranes; Pile Drivers—Namely, Railway-Locomotive Pile Drivers, Railway Pile-Driving Machines, Floating Pile Drivers; Pumps—Namely, Pumps for Excavating Purposes, Liquid Pumps, and Air Pumps; Hoists—Namely, Power-Operated Hoists, Manually-Operated Hoists, and Power Boom Hoists; Derricks, Power-Operated Derricks, Manually-Operated Derricks, and Mobile Derricks; Lifting Magnets, Winches, Air Compressors, Fans, Steam Engines, Creeping Traction Mechanism, Revetment Plants, Force-Feed Lubricators, Rollers for Use with Machines Mounted on Skids, Hydraulic Jacks, Ratchet Jacks, Injectors, Dipper Trips, Fuel Hoists, Lifting Beams, Dredge Buckets, Grab Buckets, Clamshell Buckets, Orange-Peel Buckets, Drag Buckets, Excavating Dippers, Dipper Teeth, Automatic Stokers for Steam Boilers, Steering Wheels; and Repair, Spare, and Replacement Parts for the Specified Goods; Such of the Foregoing as are Power-Operated Being Operated by Steam Power, Electrically-Operated, Gasoline-Engine Power, Diesel-Engine Power, Semi-Diesel-Engine Power, or Other Power.
Claims use since January, 1928.

Ser. No. 268,901. AKTIENGESELLSCHAFT FÜR FEINMECHANIK VORMALS JETTER & SCHEERER, Tuttlingen, Germany. Filed June 30, 1928.

JESCO

For Pocket Knives; Knives, Forks, and Spoons of Base Metals for the Table; Kitchen Knives, Hunting Knives, Leather-Cutting Knives, Razors, Scissors, Shears, Metallic Knife Sharpeners, Pinchers, Tweezers, Wrenches, Monkey Wrenches, Screw Drivers, Cigar Cutters, Corkscrews, Metallic Coasters, and Axes.
Claims use since Feb. 14, 1928.

Ser. No. 284,826. THE STANLEY WORKS, New Britain, Conn. Filed May 29, 1929.

One Hundred Plus

For Hammers.
Claims use since Jan. 21, 1927.

Ser. No. 295,513. CARTER F. HALL, doing business as Arctic-Aire Company, Inc., Baltimore, Md. Filed Feb. 8, 1930.

ARCTIC-AIRE

For Turbines, Compressors, Pumps, and Parts of the Same.
Claims use since August, 1929.

Ser. No. 295,775. WESTERN LAND ROLLER COMPANY, Hastings, Nebr. Filed Feb. 7, 1930.

WESTERN SPROCKET PACKER

The representation of the goods and the words "Sprocket" and "Packer" are disclaimed apart from the mark as shown.
For Land Rollers.
Claims use since Jan. 11, 1930.

Ser. No. 296,047. J. I. CASE COMPANY, Racine, Wis. Filed Feb. 15, 1930.

For Agricultural Machinery, Implements, Farm-Operating Equipment, and Parts Thereof—Namely, Tractors, Including Farm Tractors, Orchard Tractors, Road Tractors, Industrial Tractors, and Tractors for General Purposes; Portable Engines, Skid Engines; Threshing Machines, Including Grain Treshers, Rice Threshers, Pea and Bean Threshers, Clover and Alfalfa Threshers, Peanut Threshers, Straw Stackers, Self Feeders, Elevators, and Baggers; Combination Harvester-Threshers, Including Prairie Combines, Hillside Combines, Grain Bins, Windrow Harvesters, and Pick-Up Attachments; Silo Fillers; Baling Presses for Hay, Straw, and Other Materials; Plows, Including Walking Plows, Riding Plows, Gang Plows, Two-Way Plows, Tractor Plows, Brush-Breaker Plows, Marsh Plows, Riding Disk Plows, Tractor Disk Plows, Wheatland Disk Plows, and Plows for All Purposes; Harrows, Including Spike-Tooth Harrows, Spring-Tooth Harrows, Clod Crushers, and Harrows for All Purposes; Harrow Carts; Cultivators, Including Walking Cultivators, Riding Cultivators, Corn Cultivators, Cotton Cultivators, Beet Cultivators, Lister Cultivators, Cultivators Generally, and Cultivator Attachments for Tractors; Field Tillers, Orchard Tillers, Cotton Choppers; Listers, Including Riding Listers and Wheatland Listers; Corn Shellers; Planters, Including Riding Cotton Planters, Riding Corn Planters, Walking Cotton Planters, Walking Corn Planters, and Planters for Other Purposes; Grain Drills, Including Plain Drills, Fertilizer Drills, Deep-Furrow Drills, Press Drills, Seeders, Lime and Fertilizer Sowers; Grain Binders; Corn Binders, Including Tall Binders, Short Binders, and Regular Binders; Corn Huskers and Shredders, Corn Harvesters, Cotton Harvesters; Rakes, Including Hay Rakes, Cornstalk or Heavy-Duty Rakes, Dump Rakes, Side-Delivery Rakes, and Tedders; Mowers, Hay Loaders, Feed Grinders, Beet Pullers, Manure Spreaders, Stalk Cutters, Fuel and Water Tenders, Middle Breakers, Ridge Busters, Rotary Hoes, and Parts of All Said Machinery, Implements, and Farm-Operating Equipment.
Claims use since Dec. 20, 1929.

Ser. No. 296,235. THE PRATT CHUCK COMPANY, Frankfort, N. Y. Filed Feb. 19, 1930.

DYNAMIC

For Exhaust Mufflers.
Claims use since Feb. 1, 1930.

Ser. No. 296,460. WICKSTROM & CO. INC., Chicago, Ill. Filed Feb. 24, 1930.

UNION JACK SYSTEM CHICAGO, ILL.

The words "Jack, System, Chicago, Ill." are hereby disclaimed apart from the mark as shown in the drawing.
For Automobile Jacks.
Claims use since Oct. 1, 1929.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 286,918. THE APEX ELECTRICAL MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 11, 1929.

Apex

For Instruments and Meters—Namely, Ammeters, Voltmeters, Wattmeters, Tachmeters, and Electric Time-Switch Meters.
Claims use since Aug. 15, 1913.

Ser. No. 290,973. LOUIS H. SCADRON, New York, N. Y. Filed Oct. 11, 1929.

"NATIONAL"

For Optical Instruments, Such as Ophthalmometers, Retinoscopes, Skiascopes, Lens Measures, and Ophthalmoscopes; Lenses and Optical Products—Namely, Rough Lens Blanks, Bifocal Blanks, Bifocal Lenses, Ophthalmic Lenses, Eyeglass Frames and Mountings, Spectacle Frames and Mountings, Goggle Frames, Goggles, Eyeglass Springs, Eyeglass Studs, Eyeglass Guards, Spectacle Springs, Spectacle Temples or Bows, Spectacle Fronts, Spectacle Bridges, Eyeglass Bridges, Oxford Eyeglass Frames, Oxford Spectacle Frames.
Claims use since July 5, 1917.

Ser. No. 294,841. BEADED SCREEN CORP., Roosevelt, N. Y. Filed Jan. 16, 1930.

Vocalite

For Moving-Picture Screens.
Claims use since Nov. 23, 1929.

Ser. No. 297,470. COLORCRAFT CORPORATION, New York, N. Y. Filed Mar. 18, 1930.

For Moving-Picture Films.
Claims use since Mar. 14, 1930.

Ser. No. 297,565. JOHN FRED MILLER, Detroit, Mich. Filed Mar. 14, 1930.

DEVELOGRAPH

For Charts for Recording Physical and Mental Development of a Child.
Claims use since May 15, 1929.

CLASS 27

Horological Instruments

Ser. No. 297,065. ELECTROTIME MANUFACTURING COMPANY, Chicago, Ill. Filed Mar. 10, 1930.

SYNCHROTIME

For Electric Clocks.
Claims use since Feb. 1, 1930.

Ser. No. 297,066. ELECTROTIME MANUFACTURING COMPANY, Chicago, Ill. Filed Mar. 10, 1930.

ELECTROTIME

For Electric Clocks.

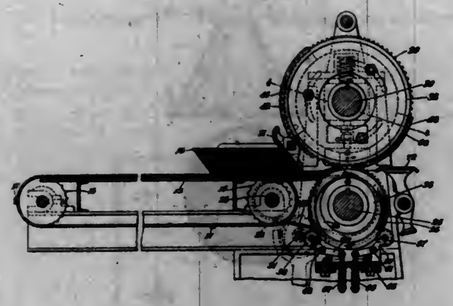
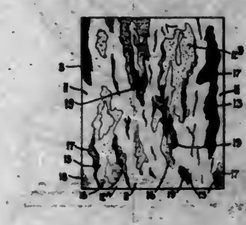
REISSUES



APRIL 29, 1930

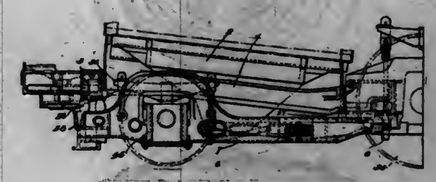
17,652. SUPPORT FOR LOCOMOTIVE AIR PUMPS, ETC. LAWRENCE L. NEEBE, Woodbury, N. J. Filed Mar. 20, 1930. Serial No. 438,848. Original No. 1,668,570, dated May 8, 1928, Serial No. 188,991, filed May 5, 1927. 2 Claims. (Cl. 103—218.)

1. The combination in a support for air pumps and the like on a locomotive boiler, of a bracket having a base shaped to fit the shell of the boiler and having lugs projecting from the base; a frame having knuckles; pivot-bolts connecting the knuckles of the frame to the lugs on the bracket; and a wide brace plate secured to the lower end of the frame and to the shell of the boiler.



17,653. ROTARY BOX-BLANKING MACHINE. LOUIS HENRY SCHROEDER, Woodhaven, and JOSHUA WAGNER, Brooklyn, N. Y., assignors to Progressive Corrugated Machinery Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 10, 1925. Serial No. 55,634. Original No. 1,493,404, dated May 6, 1924, Serial No. 610,604, filed Jan. 4, 1923. 23 Claims. (Cl. 93—58.)

14. In a paper machine, the combination of a pair of co-operating disks for slotting a blank, a scoring wheel for scoring said blank and means whereby said slotting disks and scoring wheel are connected to move in unison in axial directions.



21. In a paper machine, the combination of a pair of shafts, co-operating slotting disks mounted on said shafts, a member, in fixed relation to one slotting disk in respect to axial movements of said disks, and a scoring disk rotatably mounted on said member and maintained thereby in predetermined fixed relation to slotting disks.

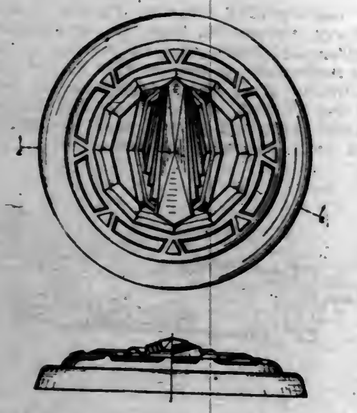
17,654. SURFACE ORNAMENTATION. JOHN J. WEBER, Wilmette, Ill., assignor to J. H. Jochum, jr., Chicago, Ill. Filed Apr. 18, 1927. Serial No. 184,782. Original No. 1,608,281, dated Nov. 23, 1926, Serial No. 91,868, filed Mar. 3, 1926. 7 Claims. (Cl. 41—30.)

1. The method of producing surface ornamentation, which consists in unevenly applying to a surface material of a semi-plastic or comparatively thick consistency, then manipulating the surface of said material to roughen the same, then introducing coloring matter in different areas of the material, then allowing the same to dry, then partially smoothing the roughened material to smooth off portions of the high spots, then coating the exposed surface, then removing the last recited coating from the high spots, then applying a filler of a different color to fill in the crevices or low areas, and finally when dry polishing the entire exposed surface of the coating material.

17,655. LOCOMOTIVE TRAILER TRUCK. CHARLES T. WESTLAKE, deceased, St. Louis, Mo., by Commonwealth Steel Company, Granite City, Ill., assignee, assignor, by mesne assignments, to General Steel Castings Corporation, Granite City, Ill., a Corporation of Delaware. Filed Aug. 17, 1929. Serial No. 386,625. Original No. 1,675,679, dated July 3, 1928, Serial No. 20,832, filed Apr. 4, 1925. 14 Claims. (Cl. 105—174.)

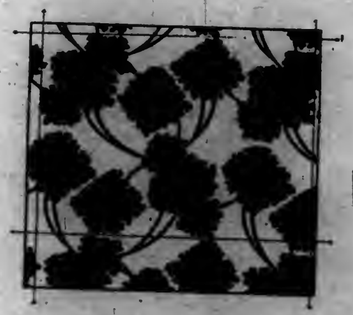
1. A locomotive having a cradle and a trailer truck connected thereto, a bearing between said cradle and said trailer truck, and means as a part of said bearing for regulating the normal load of said trailer truck.

DESIGNS



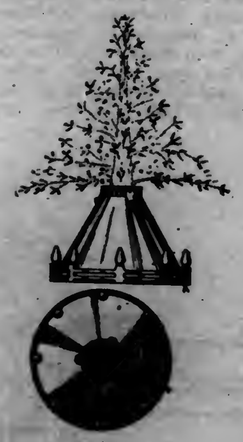
APRIL 29, 1930

81,044. COVER PLATE FOR SOUND-WAVE APPARATUS OR SIMILAR ARTICLE. JOHN M. AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 33,580. Term of patent 14 years.



The ornamental design for a cover plate for sound wave apparatus or similar article, as shown.

81,045. COVER PLATE FOR SOUND-WAVE APPARATUS OR SIMILAR ARTICLE. JOHN M. AUFIERO, Brooklyn, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 29, 1929. Serial No. 33,581. Term of patent 14 years.

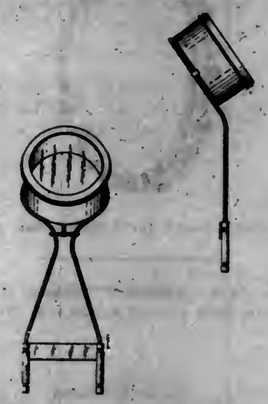


The ornamental design for a cover plate for sound wave apparatus or similar article, as shown.

81,046. TEXTILE FABRIC. FRED W. BADER, Hillsdale, N. J., assignor to J. Kridel, Sons & Co., a Partnership of New York. Filed Jan. 18, 1930. Serial No. 34,177. Term of patent 3½ years.

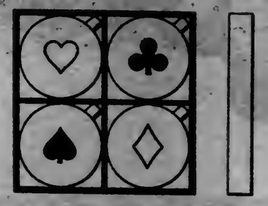
The ornamental design for a textile fabric as shown and described.

81,047. CHRISTMAS-TREE SUPPORT. JOSEPH BLOCK, Brooklyn, N. Y., assignor to Noma Electric Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1929. Serial No. 30,141. Term of patent 14 years.



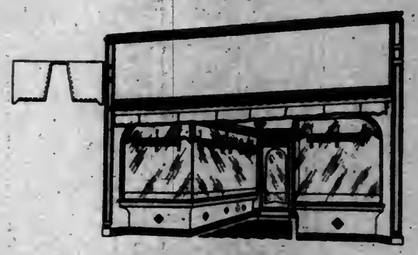
The ornamental design for a Christmas tree support substantially as shown and described.

81,048. CABINET FOR A SOUND-REPRODUCING INSTRUMENT OR THE LIKE. NATHAN P. BLOOM, Louisville, Ky., assignor to Adler Manufacturing Co., Louisville, Ky., a Corporation of Kentucky. Filed June 24, 1929. Serial No. 31,817. Term of patent 3½ years.



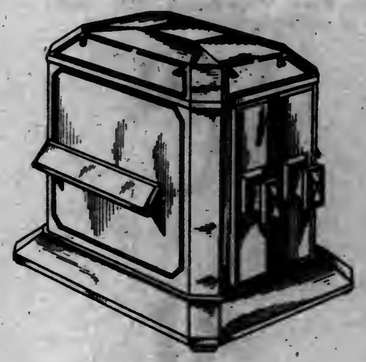
The ornamental design for a cabinet for a sound reproducing instrument or the like as shown.

81,049. WREATH HOLDER. ROBERT BURNS, Toronto, Ontario, Canada. Filed Feb. 24, 1930, Serial No. 34,627, and in Canada Oct. 25, 1929. Term of patent 3½ years.



The ornamental design for a wreath holder as shown.

81,050. COMBINED SET OF POWDER PUFFS AND CONTAINER THEREFOR. JOSEPH J. COSIN, Newark, N. J. Filed Apr. 18, 1929. Serial No. 30,888. Term of patent 7 years.

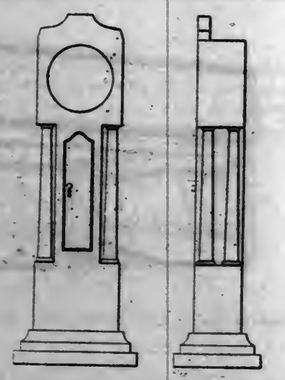


The ornamental design for a combined set of powder puffs and container therefor, substantially as shown.

81,051. STORE FRONT. JOHN J. DALY, West Newton, Mass., assignor to Spencer Chain Stores, Inc., Malden, Mass., a Corporation of Massachusetts. Filed Nov. 11, 1929. Serial No. 33,412. Term of patent 14 years.

The ornamental design for a store front, as shown.

81,052. BREAD TOASTER. HOWARD S. DENISON, Wichita, Kans., assignor to The Coleman Lamp & Stove Company, Wichita, Kans. Filed Feb. 21, 1930. Serial No. 34,604. Term of patent 7 years.

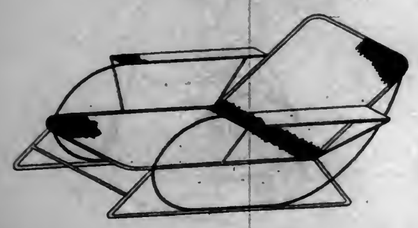


The ornamental design for a bread toaster as shown.

81,053. INCINERATOR. FRANK X. ENDERLE, Los Angeles, Calif. Filed Sept. 23, 1929. Serial No. 32,842. Term of patent 7 years.

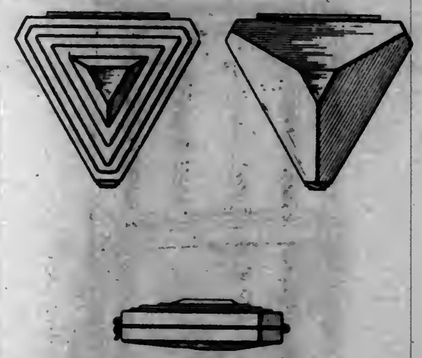
The ornamental design for an incinerator, substantially as shown and described.

81,054. CLOCK FRAME. ALEXANDER HART, New York, N. Y. Filed Feb. 8, 1930. Serial No. 34,461. Term of patent 14 years.



The ornamental design for a clock frame as shown.

81,055. AVIATOR'S HELMET. FREEMAN F. HEATER, Seattle, Wash. Filed July 2, 1929. Serial No. 31,928. Term of patent 14 years.

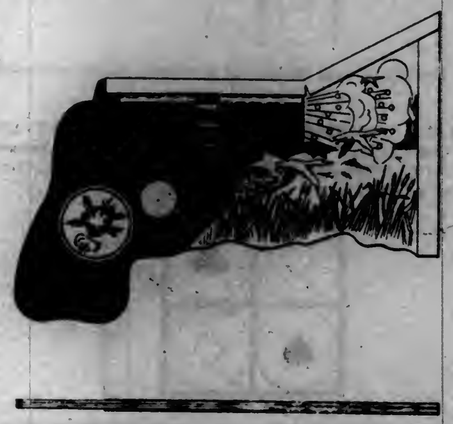


The ornamental design for an aviator's helmet, as shown and described.

81,056. CHAIR. MARIE KIRKPATRICK, Grand Rapids, Mich., assignor to Ficks Reed Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 27, 1929. Serial No. 33,961. Term of patent 3½ years.

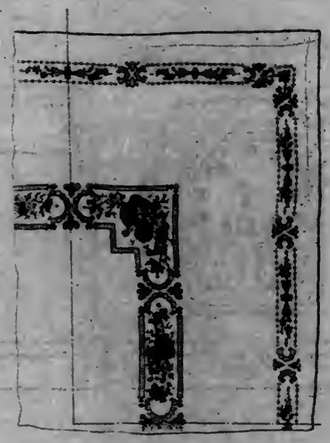
The ornamental design for a chair, as shown and described.

81,057. VANITY CASE OR SIMILAR CONTAINER. ABRAHAM KLEIN and LEO ESTEROW, New York, N. Y., assignors to Columbia Stamping Products Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1930. Serial No. 34,367. Term of patent 7 years.



The ornamental design for a vanity case or similar container, as shown.

81,058. FINGER RING. CHARLES M. LEVY, New York, N. Y. Filed Jan. 17, 1930. Serial No. 34,166. Term of patent 14 years.



The ornamental design for a finger ring, as shown.

81,059. TOY GUN. ALBERT T. LINNEY, Lexington, Ky. Filed Feb. 10, 1930. Serial No. 34,473. Term of patent 7 years.

The ornamental design for a toy gun, as shown.

81,060. EMBROIDERED TABLE COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed June 6, 1929. Serial No. 31,565. Term of patent 7 years.

The ornamental design for an embroidered table cover or the like as shown and described.

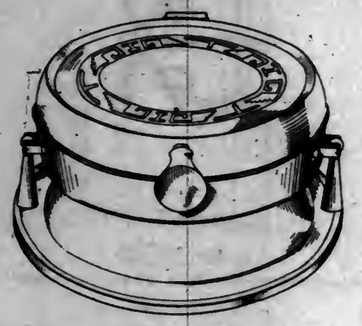
81,061. TUMBLER OR SIMILAR ARTICLE. JOHN E. MARSDEN, Philadelphia, Pa. Filed May 2, 1929. Serial No. 31,074. Term of patent 7 years.

The ornamental design for a tumbler or similar article as shown and described.

81,062. BUCKLE. GEORGE J. MEISEL and BENJAMIN SELESOV, New York, N. Y. Filed Feb. 8, 1930. Serial No. 34,462. Term of patent 3½ years.

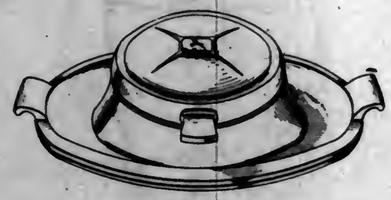
The ornamental design for a buckle, as shown.

81,063. PERCOLATOR. AMBROSE D. OLDS, Wichita, Kans., assignor to The Coleman Lamp & Stove Company, Wichita, Kans. Filed Feb. 21, 1930. Serial No. 34,606. Term of patent 7 years.



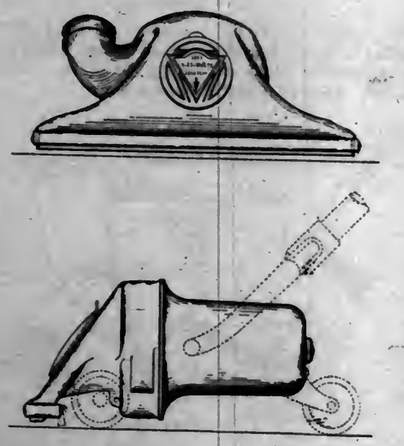
The ornamental design for a percolator as shown.

81,064. PERCOLATOR. AMBROSE D. OLDS, Wichita, Kans., assignor to The Coleman Lamp & Stove Company, Wichita, Kans. Filed Feb. 21, 1930. Serial No. 34,608. Term of patent 7 years.



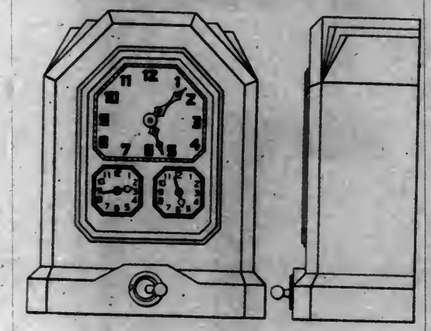
The ornamental design for a percolator as shown.

81,065. WAFFLE IRON. AMBROSE D. OLDS, Wichita, Kans., assignor to The Coleman Lamp & Stove Company, Wichita, Kans. Filed Feb. 21, 1930. Serial No. 34,609. Term of patent 7 years.



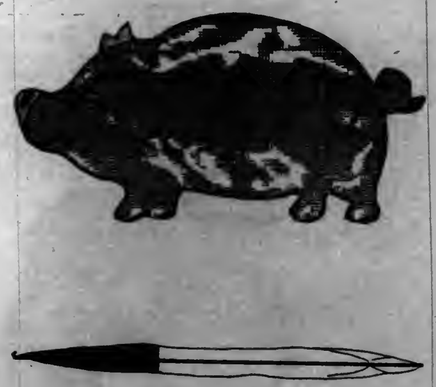
The ornamental design for a waffle iron as shown.

81,066. WAFFLE IRON. AMBROSE D. OLDS, Wichita, Kans., assignor to The Coleman Lamp & Stove Company, Wichita, Kans. Filed Feb. 21, 1930. Serial No. 34,610. Term of patent 7 years.



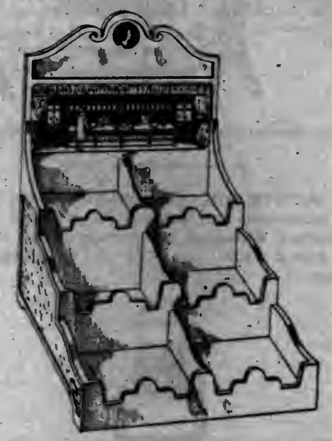
The ornamental design for a waffle iron as shown.

81,067. CASING FOR A SUCTION CLEANER OR SIMILAR ARTICLE. GERALD PAGE-WOOD, Evanston, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Feb. 23, 1929. Serial No. 30,176. Term of patent 7 years.



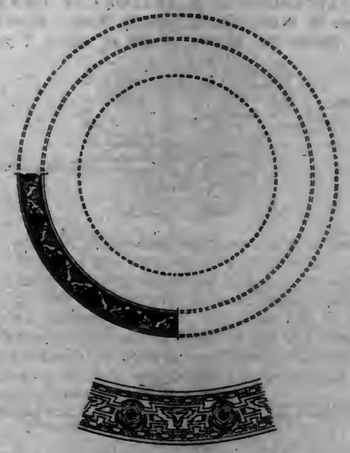
The ornamental design for a casing for a suction cleaner or similar article, as shown.

81,068. COMBINED CLOCK FRAME AND FACE. RAYMOND E. PATTEN, Oak Park, Ill., assignor to Edison Electric Appliance Company, a Corporation of New York. Filed Dec. 31, 1929. Serial No. 33,987. Term of patent 14 years.



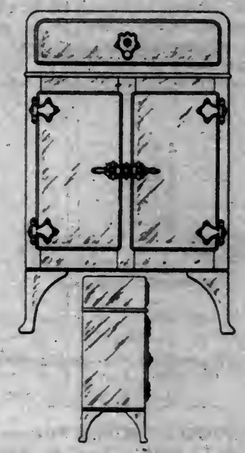
The ornamental design for a combined clock frame and face substantially as shown.

81,069. CUSHION. LUCILLE S. PATTERSON, Chicago, Ill. Filed Mar. 6, 1929. Serial No. 30,366. Term of patent 7 years.



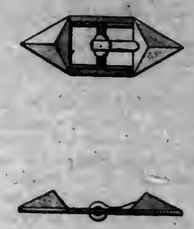
The ornamental design for a cushion as shown and described.

81,070. COMBINED VENDING AND DISPLAY STAND. ROBERT WALTER PHELPS, Chicago, Ill., assignor, by mesne assignments, to Julia King's Candy Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 13, 1930. Serial No. 34,118. Term of patent 7 years.



The ornamental design for a combined vending and display stand, as shown.

81,071. BORDER STRIP FOR SERVICE WARE. HENRY A. PICKARD, Chicago, Ill. Continuation of design application Serial No. 30,948, filed Apr. 19, 1929. This application filed Nov. 16, 1929. Serial No. 33,459½. Term of patent 7 years.

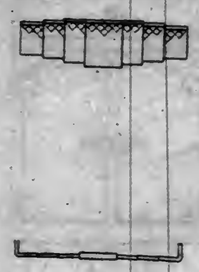


The ornamental design, for a border strip for service ware as shown and described.

81,072. REFRIGERATOR CABINET. HERMAN E. PLEASANT, Mansfield, Ohio, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 26, 1929. Serial No. 32,548. Term of patent 14 years.

The ornamental design for a refrigerator cabinet substantially as shown.

81,073. SHOE BUCKLE. GEORGE H. PULSIFER, Haverhill, Mass. Filed Feb. 18, 1930. Serial No. 34,525. Term of patent 8½ years.



The ornamental design for a shoe buckle, substantially as shown.

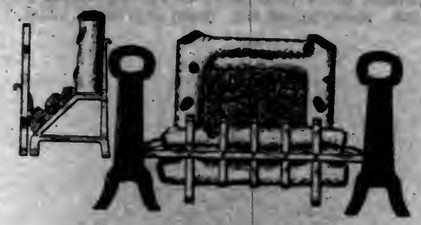
81,074. VEHICLE SIGNAL. EDWARD EMIL RICH, Chicago, Ill. Filed Nov. 29, 1929. Serial No. 33,584. Term of patent 14 years.

The ornamental design for a vehicle signal, as shown.

81,075. SUSPENDER BUCKLE OR THE LIKE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 3, 1929. Serial No. 32,652. Term of patent 3½ years.

The ornamental design for a suspender buckle or the like, as shown.

81,076. SHOE BUCKLE. WALTER EDWARD SMITH, Warwick Downs, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Feb. 14, 1930. Serial No. 34,536. Term of patent 3½ years.

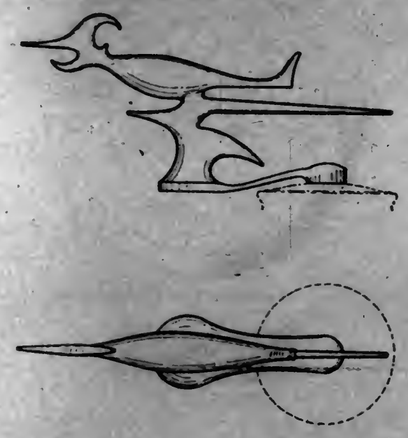


The ornamental design for a shoe buckle as shown.

81,077. SHOE BUCKLE. WALTER EDWARD SMITH, Warwick Downs, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Feb. 14, 1930. Serial No. 34,537. Term of patent 3½ years.

The ornamental design for a shoe buckle as shown.

81,078. GAS HEATER. ARCHIE LEE SPANGLER, Los Angeles, Calif. Filed Oct. 8, 1929. Serial No. 32,974. Term of patent 7 years.

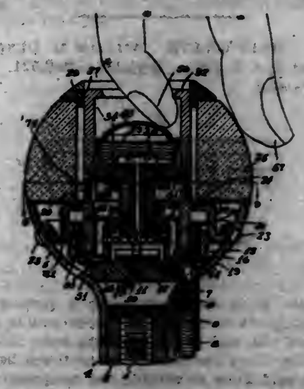


The ornamental design for a gas heater as shown.

81,079. BOTTLE FOR SOFT DRINKS. PAUL B. THOMPSON, Richmond, Va., assignor to National Pepsi-Cola Corporation, Richmond, Va., a Corporation of Virginia. Filed Apr. 3, 1929. Serial No. 30,728. Term of patent 14 years.

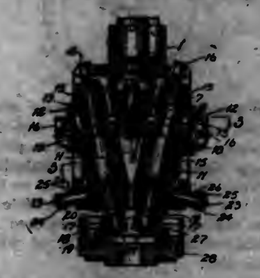
The ornamental design for a bottle for soft drinks as shown.

81,080. AUTOMOBILE RADIATOR-CAP ORNAMENT. STANLEY H. WADDINGHAM, Seattle, Wash. Filed Sept. 3, 1929. Serial No. 32,663. Term of patent 7 years.



The ornamental design for an automobile radiator cap ornament, as shown.

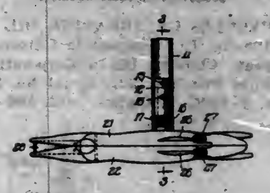
PATENTS



GRANTED APRIL 29, 1930

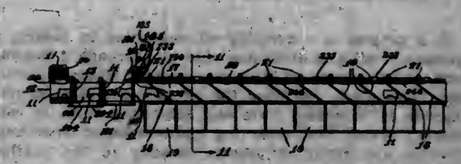
1,756,013. CIGAR LIGHTER. ALFRED F. JACKSON, Attleboro, Mass., assignor to Apco Mossberg Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed June 27, 1929. Serial No. 374,182. 4 Claims. (Cl. 219—32.)

4. In a cigar lighter of the kind described, a transparent base, a removable plunger in said base, an igniting element carried by said plunger, a terminal in said base connected to a suitable source of power, spring controlled means to normally retain said igniting element out of contact with said terminal, one end of said plunger having an open recess therein, and a spring pressed button to normally close the open end of said recess.



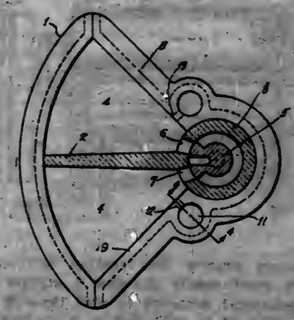
1,756,014. LAPPING TOOL. RAY D. STERRY, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 11, 1929. Serial No. 345,941. 3 Claims. (Cl. 51—108.)

1. A lapping tool comprising, in combination, a supporting frame, a plurality of hangers pivotally supported on said frame, a shaft rotatably mounted in each hanger, a lapping roll at the end of each shaft, said lapping rolls being conically disposed and arranged in a circular series whereby they are adapted to lap the inner surface of articles having a conical bore, spring devices engaging said hangers to force said lapping rolls against the work and means for rotating said shafts.



1,756,015. ANIMAL-RACING LURE. JOHN F. WHITE, Chicago, Ill., assignor to Harry B. Staver, Chicago, Ill. Filed Nov. 22, 1926. Serial No. 149,803. 2 Claims. (Cl. 272—4.)

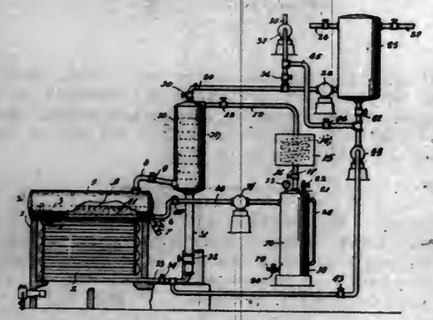
1. The combination of a lure, a support adapted to travel over a race course, means rockingly mounting said lure forwardly of its center of gravity on the support in such position as to coact with the ground, a spring mounted on said lure to cushion the contacts of the latter with the ground, whereby the engagements of said spring with the ground during the travel of the support



will cause the rear part of the lure to rock upwardly and its front part downwardly in simulation of the jumping actions of a live animal, and another spring associated with said lure to cushion the upward movement of the rear part of the same.

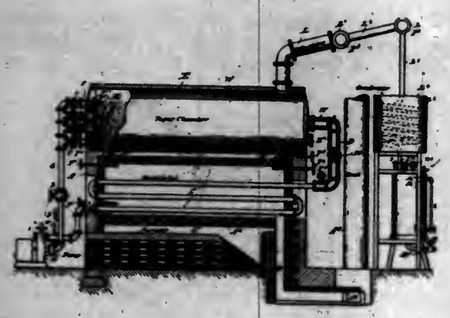
1,756,016. WEIGHTING AND GRADING MACHINE. WALLACE C. WRIGHT, Brookfield, N. H., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Aug. 20, 1927. Serial No. 214,417. 4 Claims. (Cl. 209—72.)

3. In a device of the kind described, the combination of means for feeding a plurality of pieces of hide or skin in succession, means for discovering cuts or holes in said skins, means for determining the thickness of the pieces of hide or skin, means for determining the degree of softness of the pieces of hide or skin, and electrically operated switching devices for segregating the pieces of hide or skin into groups in accordance with the different characteristics thereof.



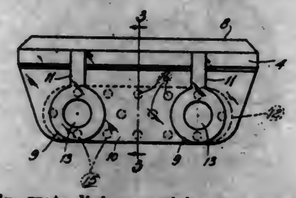
1,756,017. OSCILLATING ENGINE. JOHN BERGSEN, Sr., Brooklyn, N. Y. Filed Sept. 1, 1928. Serial No. 303,572. 3 Claims. (Cl. 121—41.)

1. In apparatus of the character described, an arcuate cylinder, a piston mounted to oscillate thereon, valvular



means for controlling the inlet and outlet of liquid to the cylinder at the opposite sides of the piston, an air receiver chamber located adjacent each end of the cylinder, a walled passage connecting the base of each air chamber to the corresponding end of the cylinder adjacent the base of the latter, the interiors of said air chambers being at all times in open communication with the interior of the cylinder, whereby air in said chambers is adapted to be trapped therein by liquid in the cylinder and to act as a cushion to preclude shocks incident to the operation of the piston in both directions.

1,756,018. PROCESS OF TREATING OIL. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 10, 1922, Serial No. 535,497. Renewed Nov. 2, 1925. 7 Claims. (Cl. 196—54.)

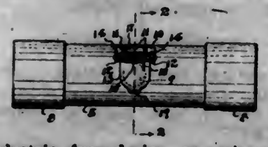


2. A process of converting oil, consisting in passing a mixture of oil and aluminum chloride, through a heating zone, and thence to an expansion chamber where vaporization takes place, removing the oil vapors and aluminum chloride in vaporized form and subjecting them to condensing action and returning the condensed aluminum chloride and reflux condensate directly to the heating zone.

1,756,019. PROCESS FOR PRODUCING LOWER-BOILING-POINT HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Continuation of application Serial No. 260,956, filed Nov. 4, 1918. This application filed Jan. 14, 1925. Serial No. 2,449. Renewed Jan. 22, 1929. 1 Claim. (Cl. 196—59.)

A continuous process for treating hydrocarbon oils, consisting in continuously charging a stream of raw oil under a mechanical pressure to and through a heating coil wherein the oil is subjected to a cracking temperature, in discharging the heated oil constituents from said coil into an enlarged vapor chamber wherein substantial conversion of the oil occurs, in dephlegmating the evolved vapors, in condensing and collecting the dephlegmated vapors, in continuously withdrawing heavy carbon-containing residual oil from said vapor chamber, in continuously forcing light unvaporized residual oil from said vapor chamber under a mechanical pressure to said stream of raw oil to be passed therewith through said heating coil for retreatment, and in maintaining a definite ratio of the volume of oil to the volume of vapor space in said vapor chamber by regulating the level from which the light residual oil in the vapor chamber is withdrawn.

1,756,020. CHAIN GRATE. WILLIAM M. DUNCAN, Alton, Ill. Filed Apr. 2, 1928. Serial No. 266,521. 2 Claims. (Cl. 110—40.)



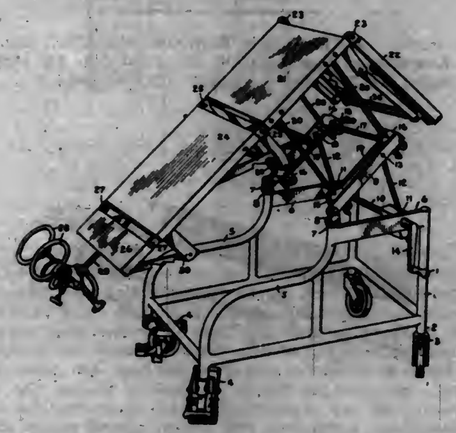
1. A chain grate link comprising a casting having a fuel supporting rib at the top, a web extending downwardly from said rib, and pivot receiving hubs integral with said web, the lower portion of the cast web being directly between said hubs to receive the compressive stresses transmitted from one pivot to the other, and a tension member embedded in said cast web and connecting said hubs to receive the tensile stresses transmitted from one pivot to the other.

1,756,021. ADVERTISEMENT. ANTONIO GRAU ESCASENA, Habana, Cuba. Filed Mar. 20, 1929, Serial No. 348,387, and in Cuba Mar. 7, 1929. 2 Claims. (Cl. 40—129.)

2. In advertisements, the arrangement of a casing engageable in one of its ends to the hub of a wheel; said casing having on its other end an opening; a shaft mounted loosely through a support embodied with the casing and within same; a disk secured to the shaft and having on its outer surface insignia visible through the opening of the casing, and an arm secured to the shaft, bearing a counterweight, the weight of which is equal to that of the disk.

1,756,022. INSPECTION AND VENTING MEANS FOR ELECTRIC FUSE DEVICES. FREDERICK A. FELDKAMP, Newark, N. J., assignor to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Dec. 22, 1928. Serial No. 327,782. 4 Claims. (Cl. 200—131.)

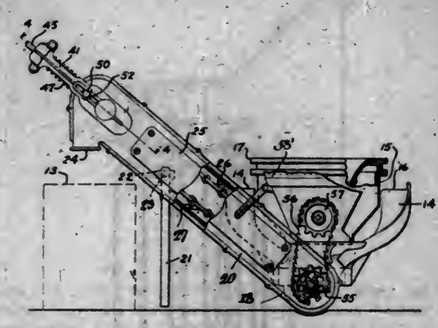
1. In an electric fuse device, an external casing to contain a fuse element having an opening in the wall



thereof providing direct communication between the interior of said casing and the surrounding atmosphere as well as means through which said fuse element may be inspected, a cover member for said opening, and means to yieldably retain said cover member in closed position and yet free to open under internal pressure.

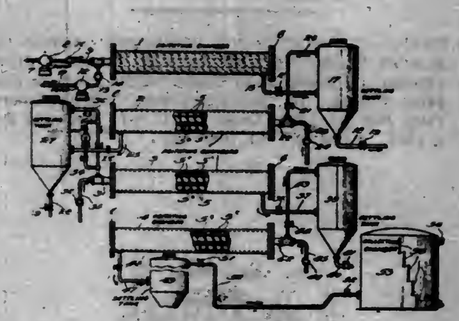
1,756,023. FABRICATED NEWEL-POST CONSTRUCTION. HAROLD FELSENTHAL, Chicago, Ill., assignor to Guarsteel Safety Stair Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1927. Serial No. 237,312. 4 Claims. (Cl. 189—38.)

1. In a newel post, a pair of spaced side members, comprising metal plates, side flanges on the inner surfaces of the plates, a flange on each lateral extremity of the side members forming interior channel-ways in conjunction with adjacent side flanges, and a pair of side plates having flanged side extremities engaged in said channel-ways, the last mentioned pair of plates being clamped intermediate their lateral extremities between the edges of the lateral flanges and the sides of the end flanges of the first-mentioned pair of side members.



1,756,024. OPHTHALMIC TABLE. GUSTAVE A. GALLOWITZ, New York, N. Y., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed June 10, 1926. Serial No. 114,965. 4 Claims. (Cl. 45—50.)

2. In an ophthalmic table the combination of a base frame, a subframe pivoted thereon, means for elevating the other end of said subframe, a table top mounted on said subframe by means of uniform elevating means supported entirely in and operating from said subframe.

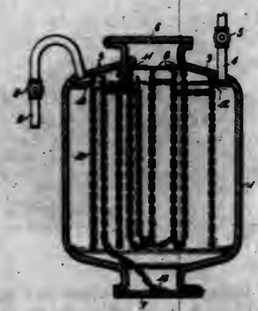


1,756,025. ASH-REMOVING DEVICE. CORTICE H. HALL, Paterson, N. J., assignor to Domestic Stoker Company, New York, N. Y., a Corporation of Delaware. Filed July 9, 1925. Serial No. 42,350. 10 Claims. (Cl. 110—165.)

4. In an ash remover for furnaces of the underfeed type, a horizontally arranged conveyor adapted to extend across the floor of the furnace ash pit beneath the fire pot and helically inclined ash directing members arranged to

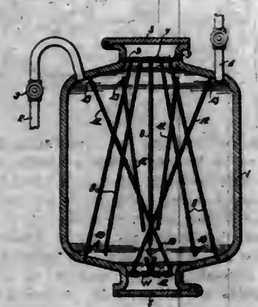
receive ashes falling from the upper and outer edges of the fire pot and to deflect the ashes into the range of action of the conveyor.

1,756,026. PROCESS OF REFINING OILS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 6, 1923, Serial No. 643,777. Renewed Feb. 20, 1928. 2 Claims. (Cl. 196—45.)



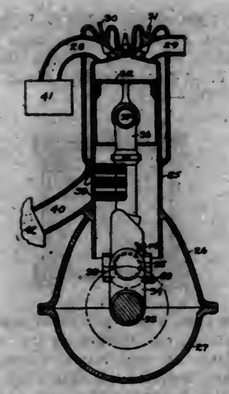
2. A process for refining oil, consisting in placing a stream of oil to be treated under a mechanically applied pressure, in simultaneously placing a stream of treating agent under a mechanical pressure, in uniting said stream of oil with said stream of the treating agent and in causing the commingled materials, while under mechanical pressure, to flow at high velocity in a spiral route through an elongated agitating vessel, and in causing the commingled materials to be partially deflected at intervals along said spiral route, wherein the oil and treating agent are rapidly caused to intimately commingle, in then introducing the commingled materials into an enlarged zone, wherein they assume a quiescent state, wherein the oil and treating agent separate, and in separately removing the oil and treating agent from said enlarged zone.

1,756,027. APPARATUS FOR REMOVING CARBONACEOUS DEPOSITS FROM OIL APPARATUS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 22, 1925, Serial No. 45,363. Renewed Feb. 2, 1929. 3 Claims. (Cl. 196—122.)



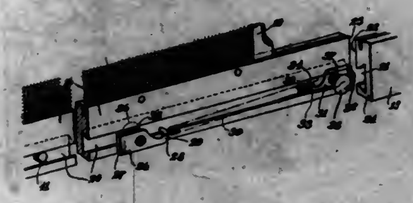
3. An apparatus for disrupting and removing carbon from an enlarged reaction chamber in an oil cracking ap-

paratus, comprising a single continuous flexible element releasably suspended intermediate its ends from a plurality of spaced points at the top of the chamber, different



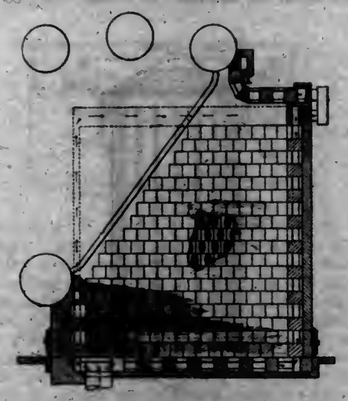
portions of said flexible element being disposed vertically through the mass of deposited carbon in the reaction chamber, said flexible element adapted to be withdrawn from the chamber to disrupt the carbon deposited therein.

1,756,028. APPARATUS FOR REMOVING CARBON DEPOSITS FROM OIL APPARATUS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 22, 1925, Serial No. 45,364. Renewed Feb. 2, 1929. 2 Claims. (Cl. 196—122.)



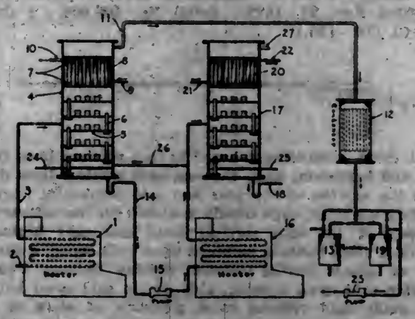
2. An apparatus for disrupting carbon deposits accumulating in the reaction chamber of an oil cracking apparatus, comprising an endless flexible element adapted to be releasably supported adjacent a normally closed enlarged opening in the chamber, a plurality of independent flexible members secured to said endless flexible element at spaced points thereof, said independent flexible members adapted to extend through said chamber and be releasably secured to the opposite end thereof, whereby said endless flexible element and said independent flexible members may be removed from the opening in said chamber as a unit.

1,756,029. INTERNAL-COMBUSTION ENGINE. HERBERT J. KLINE, Jackson, Mich. Filed July 5, 1927. Serial No. 203,345. 16 Claims. (Cl. 123—78.)



1. In an internal combustion engine, a cylinder, a combustion chamber, a piston, a port in said cylinder cut off from connection with said combustion chamber by said piston during normal low speed operation of said engine, and means actuated by the inertia forces acting on said piston beyond a predetermined engine speed for moving said piston to uncover said port.

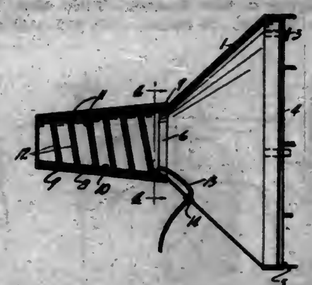
1,756,030. ADJUSTABLE WINDOW SCREEN. RUBIN KOWNATZKY, New York, N. Y. Filed Oct. 18, 1928. Serial No. 313,206. 9 Claims. (Cl. 156—38.)



4. In a screen, a pair of overlapping sections, each section having a channel opening onto the surface which is concealed by the other section, said channels registering with each other to provide a chamber, a pair of anchors at opposite ends of said chamber and associated with the ends of said sections respectively, and spring means in said chamber and operatively extending between said anchors for yieldably urging said ends toward each other; said anchors being removably arranged within said channels respectively and having each a portion which seals the end of the channel and a guide pin which extends across the chamber into the opposite channel.

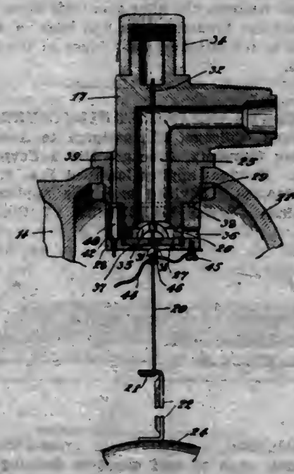
1,756,031. AIR-COOLED FURNACE BLOCK. VERNON G. LEACH, Chicago, Ill. Filed May 29, 1926. Serial No. 112,517. 8 Claims. (Cl. 110—1.)

1. A furnace block composed of fire clay having two rectangular portions integrally connected by a tie which has a portion of annular cross section of less width than the block.



1,756,032. ART OF CONTINUOUS DISTILLATION. NATHANIEL E. LOOMIS, Westfield, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 8, 1922, Serial No. 566,748. Renewed May 17, 1928. 12 Claims. (Cl. 196—100.)

1. The improvement in the art of distilling petroleum hydrocarbons which comprises passing the hydrocarbons through a conduit in which they are heated to a temperature at which vaporization tends to occur, thence into a vapor-liquid separating zone, withdrawing therefrom the lighter constituents as vapor and the heavier constituents as liquid, imparting additional heat to heavier constituents in said zone by heating in a conduit and returning a part of said withdrawn heavier constituents, and withdrawing the vapors thereby evolved with said lighter constituents.

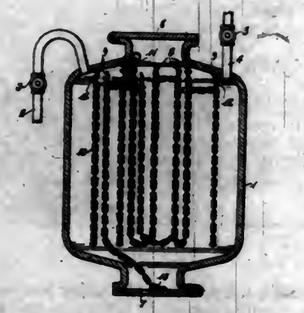


1,756,033. HEATING DEVICE. MONTE E. NORDAN, St. Louis, Mo. Filed Sept. 29, 1928. Serial No. 309,241. 1 Claim. (Cl. 219—39.)

In a device of the kind described, a conical air collector formed with relatively steep walls and having a flared mouth adapted to receive a conventional electric fan, the convergent end of the air collector being threaded, a plurality of spring clips around the margin of the flared mouth for releasably engaging the wire guard of the fan, a tapered, tubular heater casing having its wider end threaded for engagement with the convergent threaded end of the air collector, the walls of the said heater casing being sloped at a decidedly less degree than the walls of the air collector, a heat resisting lining for the inner face of the

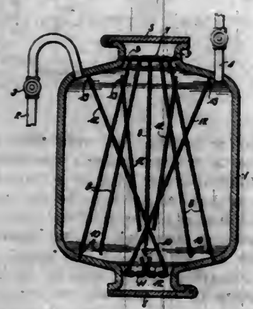
casing, a dielectric coil holder, the same being spirally grooved upon its inner face, and a resistance element disposed within the said spiral groove of the coil holder.

1,756,034. VACUUM TANK. GEORGE RAMSEY, Brooklyn, N. Y. Filed Mar. 23, 1928. Serial No. 264,042. 7 Claims. (Cl. 103—236.)



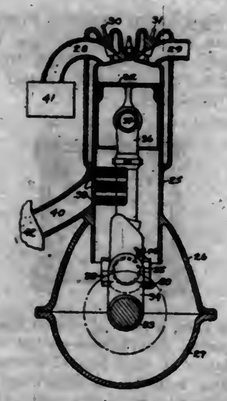
1. A vacuum tank for hydrocarbon engines comprising a receiving tank, a vacuum tank a cover for said vacuum tank, a fitting centrally located on said cover, a suction conduit in said fitting and leading to said vacuum tank, a suction control valve carried by said fitting and operable to open and close said conduit relative to said vacuum tank, means carried by said fitting for operating said suction control valve, a vent valve in said fitting for controlling a conduit from said vacuum tank leading to atmosphere, and a lever carried by said fitting and operated by said means to open said vent valve when said vacuum control valve is closed.

1,756,035. PROCESS FOR THE PRODUCTION OF COMBINATIONS OF RUBBER AND PAPER AND PRODUCT OBTAINED THEREBY. REED P. ROSS, Jackson Heights, and HAROLD E. CUDE, Floral Park, N. Y., assignors to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 9, 1925. Serial No. 61,571. 7 Claims. (Cl. 92—21.)



1. A process of manufacturing a waterproof paper which comprises beating paper making fibre, adding a protective colloid and an alkali thereto, mixing a dispersion of paper waterproofing material and a rubber dispersion with the beaten fibre, depositing the material and the rubber upon the fibre, and forming the treated fibre into a sheet.

paratus, comprising a single continuous flexible element releasably suspended intermediate its ends from a plurality of spaced points at the top of the chamber, different

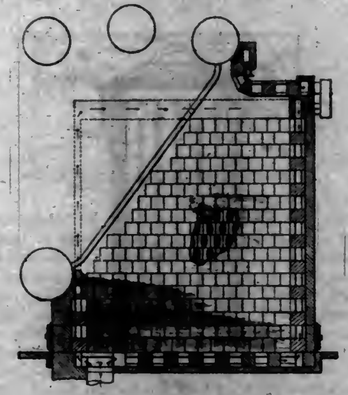


portions of said flexible element being disposed vertically through the mass of deposited carbon in the reaction chamber, said flexible element adapted to be withdrawn from the chamber to disrupt the carbon deposited therein.

1,756,028. APPARATUS FOR REMOVING CARBON DEPOSITS FROM OIL APPARATUS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 22, 1925, Serial No. 45,364. Renewed Feb. 2, 1929. 2 Claims. (Cl. 196—122.)

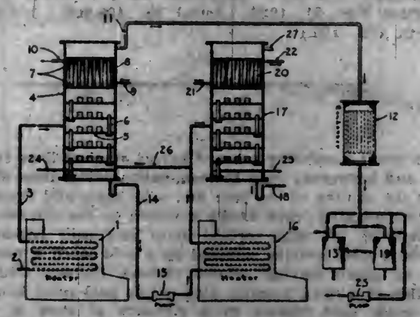
2. An apparatus for disrupting carbon deposits accumulating in the reaction chamber of an oil cracking apparatus, comprising an endless flexible element adapted to be releasably supported adjacent a normally closed enlarged opening in the chamber, a plurality of independent flexible members secured to said endless flexible element at spaced points thereof, said independent flexible members adapted to extend through said chamber and be releasably secured to the opposite end thereof, whereby said endless flexible element and said independent flexible members may be removed from the opening in said chamber as a unit.

1,756,029. INTERNAL-COMBUSTION ENGINE. HUBERT J. KLINE, Jackson, Mich. Filed July 5, 1927. Serial No. 203,345. 16 Claims. (Cl. 123—78.)



1. In an internal combustion engine, a cylinder, a combustion chamber, a piston, a port in said cylinder cut off from connection with said combustion chamber by said piston during normal low speed operation of said engine, and means actuated by the inertia forces acting on said piston beyond a predetermined engine speed for moving said piston to uncover said port.

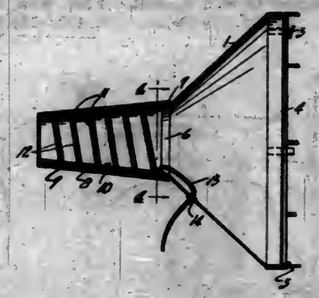
1,756,030. ADJUSTABLE WINDOW SCREEN. RUBIN KOWNATZKY, New York, N. Y. Filed Oct. 18, 1928. Serial No. 313,206. 9 Claims. (Cl. 156—38.)



4. In a screen, a pair of overlapping sections, each section having a channel opening onto the surface which is concealed by the other section, said channels registering with each other to provide a chamber, a pair of anchors at opposite ends of said chamber and associated with the ends of said sections respectively, and spring means in said chamber and operatively extending between said anchors for yieldably urging said ends toward each other; said anchors being removably arranged within said channels respectively and having each a portion which seals the end of the channel and a guide pin which extends across the chamber into the opposite channel.

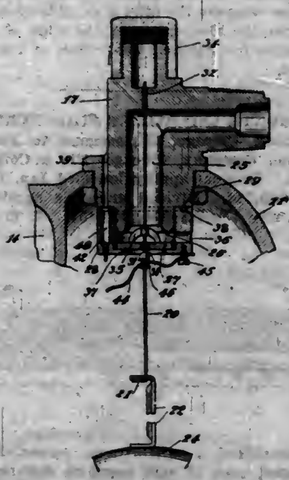
1,756,031. AIR-COOLED FURNACE BLOCK. VERNON G. LEACH, Chicago, Ill. Filed May 29, 1926. Serial No. 112,517. 8 Claims. (Cl. 110—1.)

1. A furnace block composed of fire clay having two rectangular portions integrally connected by a tie which has a portion of annular cross section of less width than the block.



1,756,032. ART OF CONTINUOUS DISTILLATION. NATHANIEL E. LOOMIS, Westfield, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 8, 1922, Serial No. 566,748. Renewed May 17, 1928. 12 Claims. (Cl. 196—100.)

1. The improvement in the art of distilling petroleum hydrocarbons which comprises passing the hydrocarbons through a conduit in which they are heated to a temperature at which vaporization tends to occur, thence into a vapor-liquid separating zone, withdrawing therefrom the lighter constituents as vapor and the heavier constituents as liquid, imparting additional heat to heavier constituents in said zone by heating in a conduit and returning a part of said withdrawn heavier constituents, and withdrawing the vapors thereby evolved with said lighter constituents.

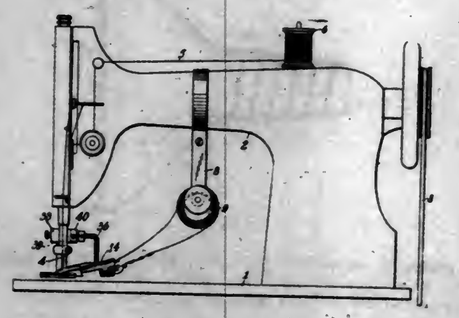


1,756,033. HEATING DEVICE. MONTE E. NORDAN, St. Louis, Mo. Filed Sept. 29, 1928. Serial No. 309,241. 1 Claim. (Cl. 219—39.)

In a device of the kind described, a conical air collector formed with relatively steep walls and having a flared mouth adapted to receive a conventional electric fan, the convergent end of the air collector being threaded, a plurality of spring clips around the margin of the flared mouth for releasably engaging the wire guard of the fan, a tapered, tubular heater casing having its wider end threaded for engagement with the convergent threaded end of the air collector, the walls of the said heater casing being sloped at a decidedly less degree than the walls of the air collector, a heat resisting lining for the inner face of the

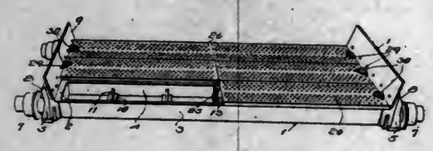
casing, a dielectric coil holder, the same being spirally grooved upon its inner face, and a resistance element disposed within the said spiral groove of the coil holder.

1,756,034. VACUUM TANK. GEORGE RAMSEY, Brooklyn, N. Y. Filed Mar. 23, 1928. Serial No. 264,042. 7 Claims. (Cl. 103—236.)



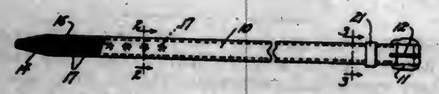
1. A vacuum tank for hydrocarbon engines comprising a receiving tank, a vacuum tank a cover for said vacuum tank, a fitting centrally located on said cover, a suction conduit in said fitting and leading to said vacuum tank, a suction control valve carried by said fitting and operable to open and close said conduit relative to said vacuum tank, means carried by said fitting for operating said suction control valve, a vent valve in said fitting for controlling a conduit from said vacuum tank leading to atmosphere, and a lever carried by said fitting and operated by said means to open said vent valve when said vacuum control valve is closed.

1,756,035. PROCESS FOR THE PRODUCTION OF COMBINATIONS OF RUBBER AND PAPER AND PRODUCT OBTAINED THEREBY. REED P. ROSS, Jackson Heights, and HAROLD E. CUDE, Floral Park, N. Y., assignors to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 9, 1925. Serial No. 61,571. 7 Claims. (Cl. 92—21.)



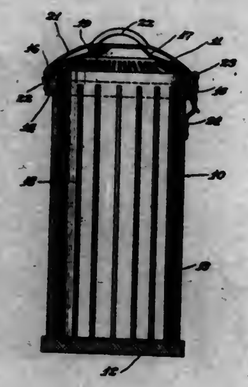
1. A process of manufacturing a waterproof paper which comprises beating paper making fibre, adding a protective colloid and an alkali thereto, mixing a dispersion of paper waterproofing material and a rubber dispersion with the beaten fibre, depositing the material and the rubber upon the fibre, and forming the treated fibre into a sheet.

1,756,036. SEWING MACHINE. CHARLES SEAMAN, Hollis, and GERHARD BRAF, Ozone Park, N. Y.; said Braf assignor to said Seaman. Filed Mar. 26, 1927. Serial No. 178,532. 19 Claims. (Cl. 112—138.)



1. A sewing machine comprising means to guide a binding into position to be stitched to a piece of material, means for guiding a filler strip along one longitudinal edge of said binding, means for inturning the edge of said binding carrying the filler whereby the filler also folds upon itself, and means to fold the binding about the edge of said material, and means for stitching said edges of the binding to said material.

1,756,037. GRATE AND PALLET STRUCTURE. EDWARD W. SHALLOCK, Chicago, Ill., assignor to American Ore Reclamation Company, Chicago, Ill., a Corporation of New York. Original application filed Jan. 9, 1928, Serial No. 245,284. Divided and this application filed Dec. 3, 1928. Serial No. 325,457. 7 Claims. (Cl. 266—21.)



4. In combination, a pallet frame, cross-members bracing said frame, each of said members defining a socket, adapters fitting into the sockets and secured to the cross members, and grate sections seating upon the frame, said grate sections and the adapters having cooperating means releasably securing the sections to the adapters.

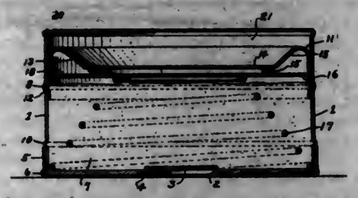
1,756,038. STRAP FOR SUITCASES, ETC. BENJAMIN H. SHWAYDER, Denver, Colo., assignor to Shwayder Trunk & Mfg. Co., Denver, Colo., a Corporation of Colorado. Filed Apr. 23, 1928. Serial No. 272,226. 5 Claims. (Cl. 24—17.)

1. A strap comprising a fabric band; a rubber envelope completely surrounding both faces and edges of said fabric band; a buckle secured at one extremity of said strap there being a series of buckle openings provided adjacent the other extremity thereof; and strengthening members adjacent said band and surrounding said buckle openings, said members being vulcanized into the interior of said rubber envelope.

1,756,039. RUBBER ICE-CREAM SHIPPER. SPENCER O. STAAKE, Eau Claire, Wis., assignor of one-half to Ralph W. Hutchens, Eau Claire, Wis. Filed Apr. 27, 1928. Serial No. 273,174. 6 Claims. (Cl. 150—52.)

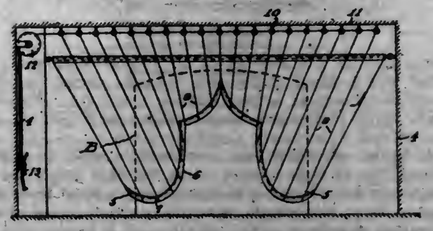
1. A shipper for cans of perishable goods, such for example as ice-cream, comprising a relatively rigid container formed to receive and conform with the shape of the can and comprising a molded plastic construction, the wall of which is relatively flexible so as to enable the shipper to conform to any irregularities such as bumps in the wall of the can and the ends of which are shaped to tightly cooperate with the ends of the can.

1,756,040. CHART. BENJAMIN TAFT, Flushing, N. Y. Filed Nov. 21, 1929. Serial No. 408,906. 1 Claim. (Cl. 116—130.)



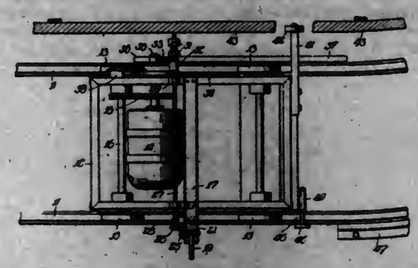
A chart comprising a board having vertical lines thereon and horizontal lines thereon, said vertical lines dividing the months of the year and said horizontal lines denoting quantity, pegs fixedly mounted on the intersecting points of the said vertical lines and said horizontal lines, a spool housing mounted upon said board, a plurality of spools having colored ribbons thereon mounted within said spool housing, pins within said spool housing to guide said ribbons to a plurality of slots in said spool housing, means on each spool to secure said ribbons to the aforesaid pegs, and spring means for rewinding said ribbon upon said spools.

1,756,041. INTERCHANGEABLE BRACELET AND BROOCH. ROBERT J. VANCE, Sr., Belleville, N. J. Filed Jan. 9, 1929. Serial No. 331,291. 8 Claims. (Cl. 63—3.)



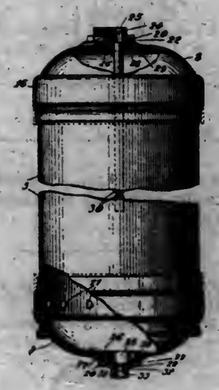
4. In a jewelry bracelet, an apertured setting plate, a removable ornament having an attaching pin adapted to be inserted through the apertures in said setting plate to effect the attachment of said ornament to said setting plate, and end links hingedly connected to said setting plate and having tongue members provided with bifurcated end portions adapted to embrace said ornament in supporting relation.

1,756,042. COSMETIC RECEPTACLE. WILLIAM E. WACKER, Newark, N. J., assignor to August Goerts & Co., Inc., a Corporation of New Jersey. Filed June 20, 1928. Serial No. 286,749. 4 Claims. (Cl. 132—82.1.)



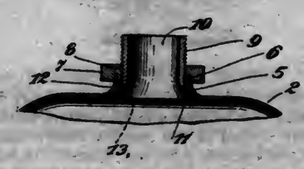
1. A receptacle of the class described comprising, a body having an open upper end, an annular top portion secured to the upper portion of said body, a horizontal inwardly extending annular flange formed on said top portion, a downwardly projecting annular piston engaging bead formed on said flange outwardly of the inner edge thereof, a piston movable within said body and spring means within said body and positioned between the bottom thereof and said piston for causing the latter to cooperate with the under side of said annular bead for closing the upper end of said body, the portion of said annular flange extending inwardly of said bead serving to hold a powder puff or similar article away from the pinching cooperating portions of said bead and piston.

1,756,043. STAGE CURTAIN OR DROP. FRANCIS E. WEIDHAAS, Bronxville, N. Y. Filed July 14, 1928. Serial No. 292,826. 18 Claims. (Cl. 272—22.)



8. In combination with a suspended curtain and a pulley system a selective, manually operated means for changing the contour of said curtain into a desired outline and fixed means for holding said contour at will.

1,756,044. LURE CARRIER FOR RACES. JOHN F. WHITE, Chicago, Ill., assignor to Harry B. Staver, Chicago, Ill. Filed Jan. 31, 1927. Serial No. 164,731. 6 Claims. (Cl. 272—4.)

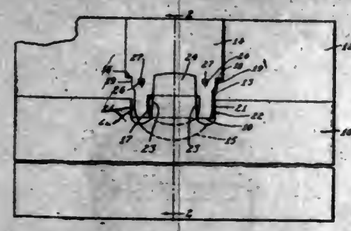


3. The combination of a carriage, an arm hinged on said carriage to rock in a vertical plane transverse to the direction of travel of said carriage, a lure, means mounting said lure on said arm, and means to rock said arm on its hinged mounting at intervals to cause the lure to leap hurdles.

1,756,045. BOILER CONNECTION. VALENTIN WILHELMI, Maywood, N. J. Original application filed Dec. 4, 1926, Serial No. 152,567. Divided and this application filed Apr. 26, 1927. Serial No. 186,604. 2 Claims. (Cl. 285—50.)

1. A boiler connection comprising, in combination with a boiler having an opening with an out-turned flange, a spud connection to said boiler, and a nut upon the spud connection and having a channel spaced from the threaded opening of the nut for receiving said flange.

1,756,046. BOILER CONNECTION. VALENTIN WILHELMI, Maywood, N. J. Original application filed Dec. 4, 1926, Serial No. 152,567. Divided and this application filed Feb. 18, 1928. Serial No. 253,848. 1 Claim. (Cl. 285—50.)



A boiler connection comprising, in combination with a boiler having an opening with an outturned flange surrounding said opening, a spud connection in the form of a hollow boss fitted to the opening, said boss being of smaller outside diameter than the width of the opening except at its inner end which is expanded to engage the inside of the boiler adjacent the opening, the boss projecting through the opening to the outside of the boiler and being externally threaded, and a nut screwed upon the boss and having a channel in one face separate from the threaded opening in the nut to receive the flange around the opening on the outside of the boiler; the spud connection thus being held securely by the gripping action of its expanded end and said nut.

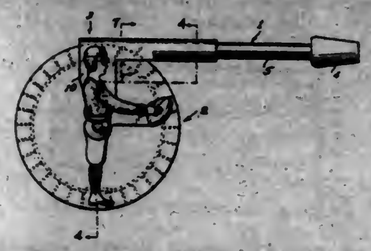
1,756,047. BAG OR ENVELOPE. JAMES S. WILEY, New York, N. Y., assignor to Kaelma Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 3, 1926. Serial No. 152,406. 4 Claims. (Cl. 229—68.)

2. In a bag or envelope, the combination of the bag body having a pair of opposed walls, a closure flap on one

wall, said wall being provided with a transverse slit spaced from and parallel with the fold line of the flap, a

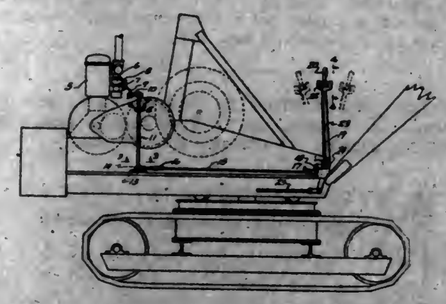
tongue extending from the other wall, and means on the flap for automatically projecting the tongue through said slit as the flap is closed.

1,756,048. LADY'S NOVELTY HAND BAG. THEOPHILUS G. WILLIAMS, Morristown, N. J. Filed July 2, 1927. Serial No. 203,100. 6 Claims. (Cl. 150—28.)



1. As an article of manufacture, a hand bag in simulation of an image embodying a body portion, head and feet, the body being stuffed to add rigidity thereto and the feet arranged of plantegrade form and adapted to support the image in upright position, and the body having a hollow within the stuffing with an acess opening thereto arranged with releasable closure means.

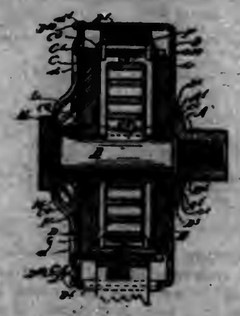
1,756,049. METHOD OF UTILIZING BUNDLED SCRAP METAL. FRITZ WÜST, Dusseldorf, Germany, assignor to the Firm Th. Goldschmidt A.-G., Essen, Germany. Filed Aug. 19, 1926, Serial No. 130,357, and in Germany Sept. 2, 1925. 3 Claims. (Cl. 75—22.5.)



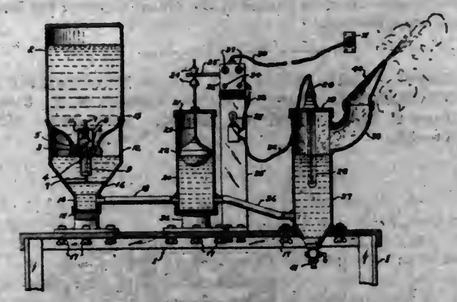
1. Method of treating bundled scrap metal, which consists in heating the metal bundles by electrical eddy currents to welding temperature and thereupon welding same into a homogeneous mass.

1,756,050. AIR-OPERATED TOY. JOHN M. ABRAMS, Brooklyn, N. Y. Filed Jan. 20, 1928. Serial No. 248,030. 7 Claims. (Cl. 46—46.)

7. In a whistle toy, in combination, a whistle tube, a wheel arranged to be rotated by air expelled from the tube, means rotatably supporting the wheel from the tube, a reed holder mounted within the tube and spaced from one side thereof whereby to provide a direct unobstructed passage for the air blown into the tube to impinge on said wheel, said reed holder having one end open and the other end closed and an opening intermediate its ends, whereby the reed-vibrating air is compelled to rejoin the air blown into the tube and to impinge on the wheel.

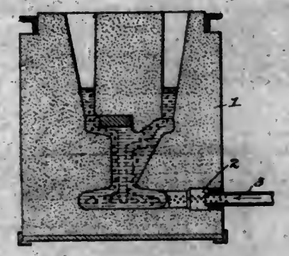


1,756,051. POWER CONTROL FOR EXCAVATORS. PAUL BURKE, Green Bay, Wis., assignor to Northwest Engineering Corporation, Green Bay, Wis., a Corporation of Wisconsin. Filed Apr. 18, 1928. Serial No. 271,088. 3 Claims. (Cl. 74—107.)



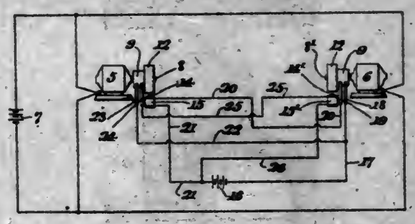
1. In an excavator, the combination with the prime mover, the throttle control valve for said prime mover for controlling its power and speed and a hand lever pivoted to move in a single plane for controlling one of the operating functions of the machine, of a handle pivoted on said lever to swing transversely to the path of movement of said hand lever, and an operating connection between said handle and throttle for moving said throttle irrespective of the position or movement of said hand lever.

1,756,052. REBOUND CHECK FOR VEHICLES. CHARLES S. BURTON, Oak Park, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 24, 1923. Serial No. 614,668. 14 Claims. (Cl. 267—10.)



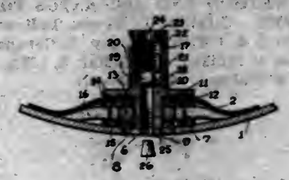
1. In a device for the purpose indicated, a rotatable drum, a fixed journal bearing member for the drum, a spring connecting the drum with the journal bearing member for being tensioned by the rotation of the drum in one direction and for rotating the drum in the opposite direction by its reaction, a fixed casing enclosing the drum and spring, a flexible connector wrapped around the drum and secured thereto at one end, the other end emerging from the casing at the periphery of the latter, a friction plate loose on the journal bearing lodged in the casing between one side wall thereof and the adjacent side of the drum, the casing comprising a side plate which is movable along the axis relatively to the casing body and non-rotatably engaged with said body, and spring means for stressing the friction plate against the drum located exteriorly of the casing and reacting between the journal bearing and said movable side of the casing for pressing the latter against the drum.

1,756,053. VAPORIZER. MAX COLTON, Newark, N. J. Filed Nov. 19, 1928. Serial No. 320,378. 1 Claim. (Cl. 219—38.)



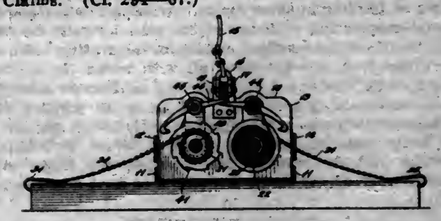
A vaporizer comprising in combination, a bottle reservoir, an intake chamber adapted to support said bottle reservoir in inverted position and to receive liquid therefrom, a vaporizing chamber connected to said intake chamber and adapted to receive liquid therefrom, a heating unit in said vaporizing chamber in contact with the liquid therein, the liquid level in said intake and vaporising chambers being the same, said liquid level being fixed and determined by the position of the mouth of said bottle reservoir, a control chamber connected to said intake and vaporising chambers and having a liquid level equal to that of these chambers, valve means, a pilot light, and a float supported by the liquid in said control chamber, said float being operatively connected to said valve means and serving to operate said valve means in accordance with the liquid level variations in said control chamber to thereby control the operation of said heating unit and said pilot light.

1,756,054. PROCESS OF WELDING. ABRAM G. CRUM, Pittsburgh, Pa., assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Feb. 12, 1927. Serial No. 167,872. 5 Claims. (Cl. 22—206.)



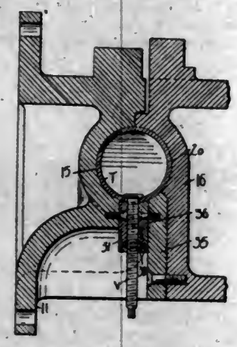
1. The method of welding by superheated molten metal, which comprises preliminarily melting the metal, superheating the same by passing a gas which will react exothermically with the metal into the molten mass, and bringing the superheated metal into engagement with the parts to be welded.

1,756,055. SYNCHRONOUS MOTOR. CHARLES W. EBELING, New York, N. Y., assignor to Harrison W. Rogers, Inc., a Corporation of New York. Filed Dec. 7, 1926, Serial No. 153,079. Renewed Mar. 4, 1930. 4 Claims. (Cl. 172—293.)



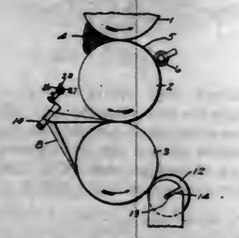
3. Two similar speed motors separated from each other and operated by the same character of electric current, a disk carried by the shaft of one motor and having a portion of its periphery magnetic, an electromagnet adjacent said periphery and in the path of the magnetic portion thereof, a switch controlled by the other motor, and a circuit including a source of electrical energy, the switch and the electromagnet, and through which circuit the switch operating motor controls the speed of the disk operating motor.

1,756,056. INFLATABLE SPORT BALL. JOSEPH E. DORWARD, New York, N. Y. Filed July 9, 1923. Serial No. 650,851. 3 Claims. (Cl. 273—65.)



1. In an inflatable ball having an outer casing and a bladder, a valve tube connected to said bladder, a valve therein, a plate permanently stitched to said casing, said plate being provided with a threaded opening, and means including a screw thread on said valve tube whereby said valve tube may be secured in said opening.

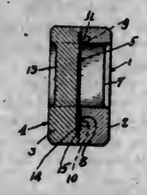
1,756,057. TIMBER-HANDLING DEVICE. CHARLES E. DOTY, Mount Vernon, and OTTO G. DESCH, New York, N. Y. Filed Mar. 7, 1928. Serial No. 259,713. 14 Claims. (Cl. 294—67.)



1. A lifting device for articles such as railroad ties and other heavy timbers, comprising a supporting member, a pair of spring actuated winding drums carried by the supporting member, a pair of flexible connecting members extending in opposite directions one from each drum, a gripping hook carried by each connecting member, and locking means for automatically locking the drums against unwinding movement when the supporting member is raised.

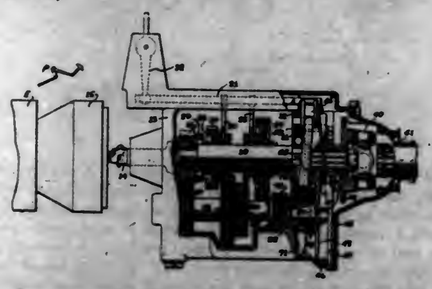
1,756,058. TUBE VULCANIZER. ANDREW J. FLEITER, Akron, HENRY C. BOSTWICK, Kenmore, and THEODORE A. MILLER, Akron, Ohio, assignors to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Original application filed Feb. 24, 1927, Serial No. 170,511. Divided and this application filed July 1, 1927. Serial No. 202,843. 3 Claims. (Cl. 18—35.)

1. In a vulcanizer for tubes, the combination of separable mold sections, the sections parting about the inner circumference of the tube about a line to one side of the valve stem, a recess in one of the sections, a removable plate secured in the recess, partially filling the same and having a channel for the reception of one side of the valve stem, a block secured to the other section fitting the recess, and a second removable plate secured to the block having a channel therein for the reception of the other side of the valve stem.



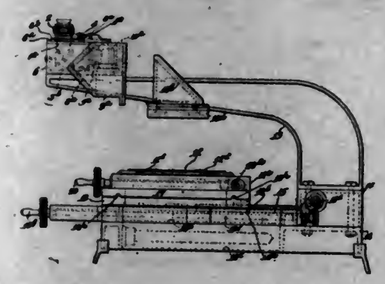
1,756,059. METHOD AND APPARATUS FOR PLYING UP RUBBER. CHARLES L. FOUTZ, Indianapolis, Ind., assignor to G & J Tire Company, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 6, 1924. Serial No. 697,186. 4 Claims. (Cl. 154—1.)

2. A machine for manufacturing laminated strips of rubber, rubberized fabric and the like comprising, in combination: a calender for passing the rubber, rubberized fabric or the like in sheet form; cutting means juxtaposed to and cooperating with one of the calender rolls for cutting the sheet into strips, means for separating some of the strips from the calender roll with which the cutting means cooperates and for transposing said strips laterally with respect to the calender roll so as to position the transposed strips in superimposed relation with respect to the strips remaining on the calender, means including a calender roll for pressing the superimposed strips into contact whereby the strips are united to form a laminated strip.



1,756,060. COMPRESSOR VALVE. ARTHUR S. HAWKS, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed July 7, 1925. Serial No. 41,940. 1 Claim. (Cl. 277—46.)

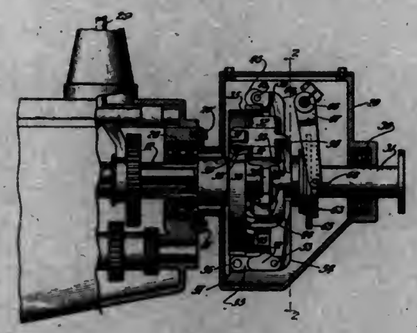
In a plate valve, the combination of seat and cap members clamped one to the other and each having a series of slots and bars, the slots and bars of one series being offset in relation to the slots and bars of the other series, a flat depression in the inner face of one of said members forming a valve chamber wall parallel with the inner face of the second member, a plurality of independent valve plates in said chamber one for each of the slots of one of



said series, means for locating the individual plates with reference to the slots and bars, a shallow recess for receiving and loosely confining said plates at one end thereof, and a longitudinal recess in the inner face of said second member intermediate said shallow receiving recess and the slots to accommodate flexing of the plates adjacent the confined ends thereof.

1,756,061. VARIABLE-SPEED POWER-TRANSMISSION MECHANISM. FRANK A. HAYES, Keyport, N. J. Filed June 9, 1924. Serial No. 718,742. 19 Claims. (Cl. 74—58.)

1. In a variable-speed power-transmission mechanism, in combination, a pair of gears shiftable into mesh while both are rotating, automatic means, including a pivoted locking member, for preventing shifting of the gears into mesh except when they have a predetermined pitch-line velocity ratio, automatic mechanism for gradually shifting the locking member to unlocking position while the said velocity ratio is approaching the predetermined valve and means then operable at will for shifting the gears into mesh.



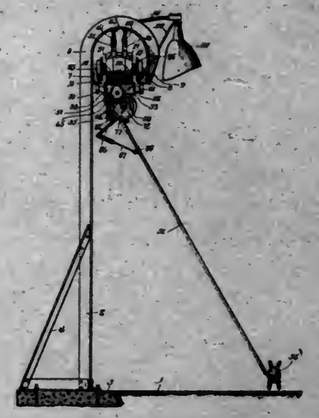
1,756,062. MEASURING STEREOSCOPE. LODEWYK J. R. HOLST, Brookline, Pa., assignor, by mesne assignments, to Brock & Weymouth, Incorporated, a Corporation of Delaware. Filed May 18, 1924. Serial No. 712,987. 3 Claims. (Cl. 88—29.)

2. In a measuring stereoscope comprising a base and means for supporting and adjusting views thereon, the

combination with said base of a frame for supporting the telescopes rigidly secured to the base, a pair of stereoscopic telescopes comprising prisms, objectives and eye pieces, of which the prisms are secured to the frame in fixed positions and the eye pieces and objectives are adjustable towards and away from each other thereon.

1,756,063. CLUTCH MECHANISM. IRVIN HUPP, Chicago, Ill. Filed Nov. 5, 1926. Serial No. 146,340. 14 Claims. (Cl. 192—53.)

1. In a clutch, the combination of two shafts, a circular member rotatable with one shaft, an element rotatable with the other shaft, levers pivoted on said element, friction shoes adapted to engage the periphery of said member, spring means for causing one end of said levers to press against said shoes, other levers pivoted on said element, spring means for pressing one end of said other levers against the periphery of said member, and means on said periphery with which said last mentioned levers coact.



1,756,064. STERILE INDICATING MEANS IN STERILIZING THERMOMETERS. ERNEST O. LINDBERG, Jamaica, N. Y., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed May 24, 1928. Serial No. 280,188. 2 Claims. (Cl. 40—68.)

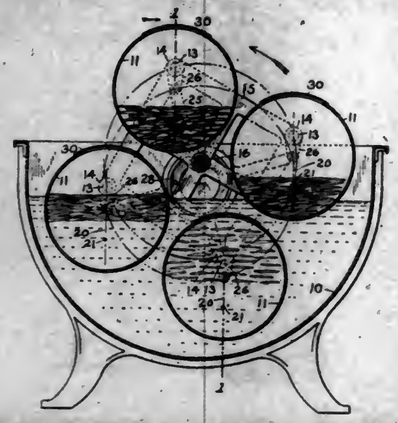
1. A hollow cap adapted to encase the upper end of a sterilizer thermometer and housing a spindle carrying a sterile indicating means thereon under constant downward spring tension therein, a cross pin mounted through said spindle and adapted to engage a seat in the upper edge of said cap, whereby a sterile and unsterile indicating means is combined in a sterilizer thermometer.

1,756,065. DOG-RACING APPARATUS. LEWIS E. MITCHELL, JOHN L. CONNORS, and SOLOMON M. PINELES, Chicago, Ill., assignors to Harry B. Staver, Chicago, Ill. Filed Aug. 29, 1927. Serial No. 216,246. 4 Claims. (Cl. 272—4.)

2. In an animal racing course in which dogs are induced to run behind a lure propelled along said course, a lure carriage, a lure arm supported on said carriage, an electric motor for moving said lure arm between an operative and inoperative position, an energizing circuit

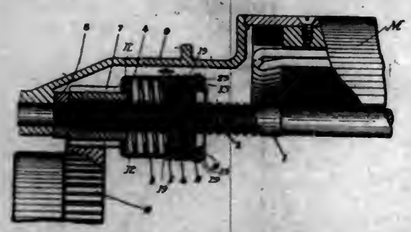
for said motor, a control switch on said carriage for said energizing circuit, and means on said course for operating said control switch.

1,756,066. DOG-RACING APPARATUS. SOLOMON MICHAEL PINELES, Chicago, Ill., assignor to Harry B. Staver, Chicago, Ill. Original application filed Aug. 29, 1927, Serial No. 216,246. Divided and this application filed Nov. 21, 1927. Serial No. 234,570. 4 Claims. (Cl. 104—94.)



1. In an animal racing course in which dogs are induced to run behind a lure propelled along said course, a rail track comprising two spaced rails, a carriage adapted to run on said rails, said carriage comprising two motors disposed in the direction transverse to said rails, each motor having a shaft and two rail wheels on said shaft in engagement with said rails, and frame members joining said motors and utilizing the frames of said motors as a part of the carriage structure.

1,756,067. DYEING PROCESS AND MECHANISM. ROBERT CARL RAHM, Wyomissing, Pa., assignor to Berks Engineering Company, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1928. Serial No. 264,298. 6 Claims. (Cl. 8—19.)

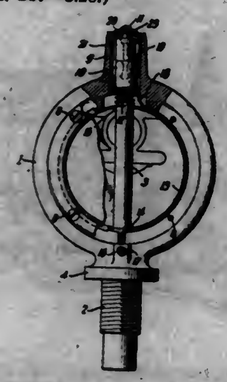


1. The improved method of dyeing which consists in partially loading a perforated-wall receptacle, and then repeatedly subjecting the contained goods to successive

dipping, horizontally-moving, and withdrawing action in a dyeing bath with positive maintenance in parallel vertical lines of the diametral plane which passes through the normal center of gravity of the contained goods.

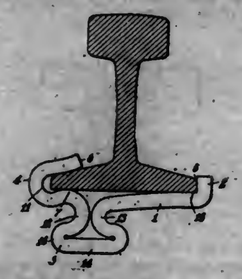
2. In combination with a dyeing vat, a perforated-wall receptacle revolvably mounted therein to swing about a fixed axis into and out of the dyeing liquid, the diametral plane which passes through the normal center of gravity of the contained goods being positively maintaned in parallel lines during successive revolutions of the receptacle.

1,756,068. ENGINE STARTER. JULIUS H. RICHARDS, Torrington, Conn., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Nov. 1, 1923. Serial No. 672,069. 6 Claims. (Cl. 74—7.)



1. An engine starter drive including a rotatable shaft, a driving member adapted to be moved into engagement with a member of the engine to be started, and a multiple disk friction clutch connected with the driving member for rotating it and operatively connected with the shaft for longitudinal movement thereof when the shaft is rotated and for rotary movement therewith, said clutch comprising a plurality of cooperating friction plates the driving set of which are independently mounted and actuated.

1,756,069. BREAKER FABRIC AND METHOD OF PREPARING THE SAME. WILLIAM K. SAWYER, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Apr. 6, 1926. Serial No. 100,170. 6 Claims. (Cl. 139—420.)

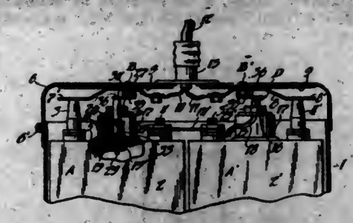


1. A fabric for incorporation in rubber articles having each cord consisting of an inelastic easily rupturable central element of sufficient strength only for resisting stresses incident to rubberising and preparing the article and a covering yarn wound spirally thereabout for holding the fabric together upon rupture of the central element in the finished rubber articles, said fabric being impregnated with rubber.

1,756,070. MOTOR HEAT INDICATOR. ALFRED B. SCHUPP, Richmond Hill, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed July 26, 1928. Serial No. 295,381. 7 Claims. (Cl. 240—8.28.)

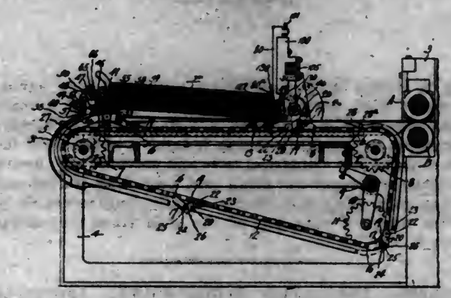
6. In a heat indicator for indicating the thermal condition of a vehicle motor, in combination, a thermometer having a transparent stem, a casing, an electric lamp mounted in the casing for illuminating the thermometer stem, said lamp including center and rim terminals, a spring supporting the lamp and pressing the center terminal into engagement with a portion of the casing, and a conductive spring clip embracing the rim terminal and serving as a lateral cushioning support for the lamp.

1,756,071. RAIL ANCHOR. CHARLES B. SHEPHERD, New York, N. Y., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1928. Serial No. 278,364. 10 Claims. (Cl. 238—330.)



1. A rail anchor comprising oppositely disposed rail base flange-engaging means and a spring loop disposed between said rail base flange-engaging means, said loop being provided with a relatively straight base and converging legs which give the loop a triangular configuration.

1,756,072. STORAGE-BATTERY CELL AND THE OPERATION THEREOF. ROSCOE J. SMITH, East Orange, N. J., assignor to Edison Storage Battery Company, West Orange, N. J., a Corporation of New Jersey. Filed Jan. 30, 1922. Serial No. 532,596. 14 Claims. (Cl. 136—178.)

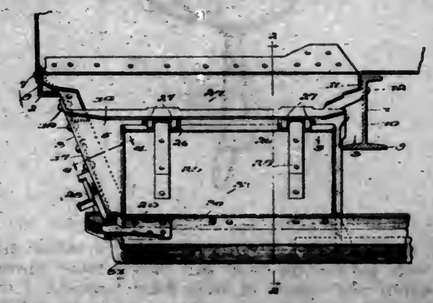


1. In combination, a battery cell having a container for the battery elements and electrolyte, instrumentalities for

effecting the connection and disconnection of the cell with and from a circuit, and means controlled by said instru-

mentalities for respectively effecting the sealing and venting of said container upon such connection and disconnection, substantially as described.

1,756,073. SHEET-FEEDING MEANS. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, Jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Nov. 28, 1927, Serial No. 236,161. Renewed Apr. 16, 1929. 19 Claims. (Cl. 271—44.)

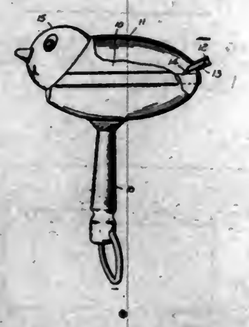


1. In a sheet feeding machine, the combination with means for supporting the rear end of a pile of sheets, of means movable into and out of engagement with the rear edges of successive bottom sheets in said pile for imparting relative forward movements thereto, a lever movable into and out of position to elevate the rear end of the remainder of said pile, a rock-shaft, a toggle link connection between said rock-shaft and said lever, and feed-off mechanism adapted to engage the rear end of the forwardly-displaced bottom sheet.

1,756,074. TROLLEY RETRIEVER. PAUL N. VAN EPP, Port Clinton, Ohio, assignor of one-third to Lake E. Owen, Springfield, Mo. Filed Feb. 27, 1928. Serial No. 257,332. 14 Claims. (Cl. 191—88.)

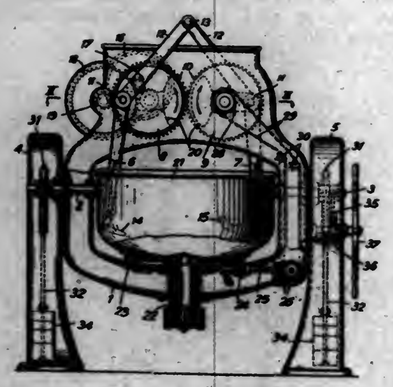
1. In a trolley retriever, a rope winding reel, separate coiled springs, of different power for controlling the rotatable movements of said reel, automatic means for connecting the more powerful spring with said reel to effect retrieving when said reel is rapidly revolved, locking means for said automatic means to hold said powerful spring in connection with said reel and means for automatically disconnecting said powerful spring from said reel when said reel is rotated in a rope unwinding direction to wind up said spring subsequent to a retrieving operation.

1,756,075. RAILWAY HOPPER CAR. WILLIAM E. WINE, Toledo, Ohio. Filed June 3, 1929. Serial No. 368,081. 5 Claims. (Cl. 105—280.)



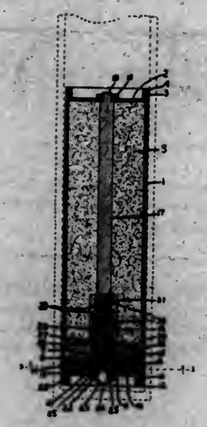
1. In a railway car, the combination with a hopper involving inner and outer side sheets and an inclined floor sheet, the outer marginal edge of the inner side sheet being bent inwardly, a door frame having a plurality of flanges respectively secured to the hopper sheets, the flange of the frame cooperating with the inner side sheet being secured to the inwardly bent portion thereof, and a door for closing the lading discharge opening defined by the frame.

1,756,076. METHOD AND APPARATUS FOR SELECTING CHECKS. HUGH E. WURZBACH and LESLIE H. WADSWORTH, Magna, Utah, assignors to Selector Corporation, Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 22, 1928. Serial No. 321,238. 3 Claims. (Cl. 194—101.)



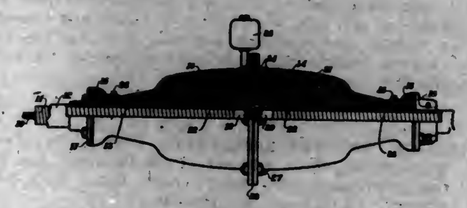
2. In an apparatus for selecting checks, means defining a downwardly inclined check conducting passage, a shoulder opposite the lower end of said passage, the bottom of said passage being open so as to permit checks striking said shoulder to rebound therefrom, a magnetized member in position to be hit by checks rebounding from said shoulder, whereby checks of paramagnetic material will be attracted by said magnetized member and prevented from rebounding therefrom while other checks will rebound therefrom, said magnetized member being so mounted as to permit checks attracted thereto to fall by their own weight and release themselves therefrom, and means for separately delivering checks rebounding from said magnetized member and checks attracted by said magnetized member and subsequently released therefrom.

1,756,077. RATTLE WITH SOUND-MAKING ATTACHMENT. ARTHUR ZADEK, New York, N. Y. Filed Dec. 18, 1929. Serial No. 414,881. 2 Claims. (Cl. 46—46.)



1. In combination, a rattle comprising a hollow circular body portion, the front wall thereof being convexed outwardly and capable of being flexed inwardly, a vent tube in the side wall of the body, a reed holder and reed mounted in the vent with the reed inside the said body, and a handle having one end disposed about the vent and secured to the side wall, the opposite end of the handle having an orifice to allow passage of air to and from the vent.

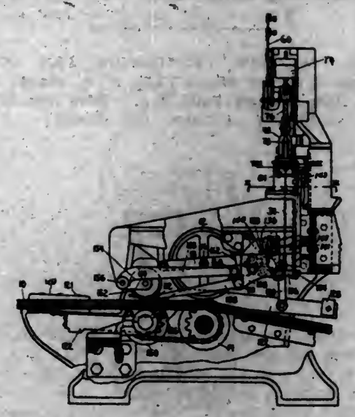
1,756,078. KNEADING AND MIXING MACHINE, PARTICULARLY FOR PASTE-LIKE GOODS. FRIEDRICH AESCHBACH, Aarau, Switzerland. Filed Feb. 21, 1930, Serial No. 430,336, and in Switzerland Dec. 17, 1929. 4 Claims. (Cl. 259—83.)



1. A kneading and mixing machine, particularly for dough-like goods, comprising in combination, a frame in the form of a tiltably mounted closed stirrup, two kneading implements the one of which being positioned in front of the said stirrup and the other behind the same and both implements connected to each other above the said stirrup, driving means for said implements and mounted in the upper part of said stirrup and comprising two toothed wheels meshing with each other and disposed in a vertical plane, a crank pin provided on each of the said toothed wheels and engaging one of the said implements and a trough, situated in the space confined by the said stirrup and rotatably mounted in the lower part of the same, and causing the said implements when actuated by the said toothed wheels to move in two intersecting elliptical paths within the said trough.

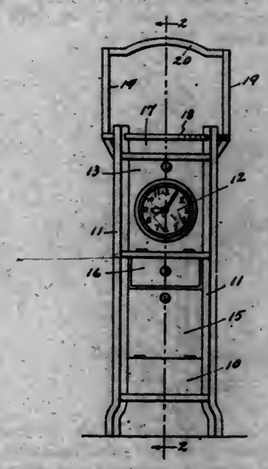
1,756,079. MORTAR SHELL. ROBERT J. ANDERSON, Whitman, Mass., assignor to National Fireworks, Inc., West Hanover, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1929. Serial No. 338,002. 6 Claims. (Cl. 102—12.)

1. A mortar shell comprising a cylindrical body having a closed head providing a chamber containing a main flammable or bursting charge, a casing having a chamber containing a propelling charge forming a closure for the lower end of said cylindrical body and provided with means operable by impact for firing said propelling charge and means connecting said casing to said body operable to insure complete expulsion of the shell from the mortar when fired.



1,756,080. INSULATED CABLE JOINT. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed June 1, 1926. Serial No. 112,747. 14 Claims. (Cl. 173—268.)

1. A joint for a conductor comprising means for forming electrical connection between adjacent ends of the conductor, and a sleeve of dielectric material surrounding said connecting means, said sleeve having a flux control member of conducting material electrically connected with said connecting means and extending outwardly into the body of said sleeve and longitudinally of said conductor away from said connecting means beyond the outermost point of electrical connection between said control member and said conductor.

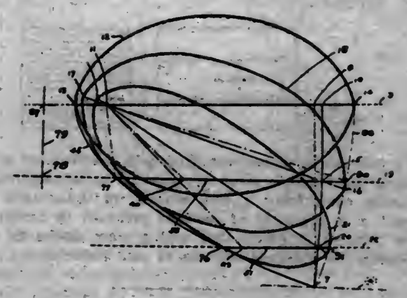


1,756,081. MEASURING MACHINE. HARRIE A. BALLARD, Beverly, Mass., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Feb. 9, 1928. Serial No. 253,065. 27 Claims. (Cl. 33—147.)

1. In a measuring machine, a support for a piece of work to be measured, an element for contacting with a piece of work on the support to measure a dimension thereof, an indicator, connections between the measuring element and the indicator to operate the latter, means for

holding the indicator set in indicating position, and manually operable means located in the work support and readily accessible for controlling the holding means for the indicator.

1,756,082. WORK STAND. JAMES D. BARLOW, Dallas, Tex. Filed Sept. 7, 1928. Serial No. 304,396. 1 Claim. (Cl. 312—146.)

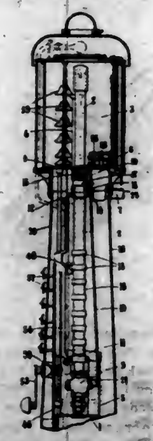


A general utility portable stand comprising a plurality of spaced vertical legs carrying sides and partitions forming compartments, said compartments having doors, one of said doors provided with an opening for receiving a clock, said legs extending upwardly beyond the uppermost of said closed receptacles, a circular frame member spaced from said uppermost closed receptacle, extending through and supported by each of said legs, and providing with the top of the uppermost closed receptacle an open receptacle for receiving suitable objects, and a handle for carrying the stand, formed by upright members connected to the top of the receptacle and to the circular frame member, and joined by a horizontal crosspiece above the circular frame member.

1,756,083. SHOE AND METHOD OF MAKING THE SAME. EDWARD BRENNER, Haverhill, Mass. Filed Apr. 15, 1929. Serial No. 355,188. 12 Claims. (Cl. 41—10.)

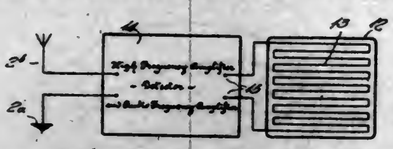
1. The herein described method of making an ornamental section of a shoe upper, which consists in providing two complemental portions of a predetermined design by forming apertures in separate pieces of material, placing one of said pieces on the other, with the apertures in one in a definite relation to those in the other, and securing to said pieces a third member cooperating with the design portions of both said pieces to produce the desired design.

1,756,084. REFLECTOR. MARTHA W. CAUGHLAN, Oakland, Calif. Filed Mar. 7, 1928. Serial No. 259,697. 11 Claims. (Cl. 240—41.)



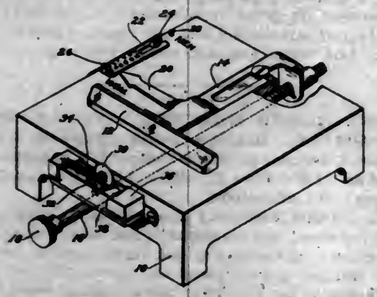
1. A reflecting surface formed of a family of diminishing ellipses, said ellipses produced by the intersections of a family of ellipsoids with a pencil of planes, said ellipsoids having a common proximate focus and having remote foci on a vertical arc drawn from a center on the axis of and to the rear of said surface and said pencil of planes drawn through said center and said remote foci respectively.

1,756,085. LIQUID MEASURING AND DISPENSING APPARATUS. MALCOLM JAMES CRAWFORD, London, England, assignor to Wayne Company, a Corporation of Indiana. Filed June 17, 1927. Serial No. 199,490. 5 Claims. (Cl. 221—100.)



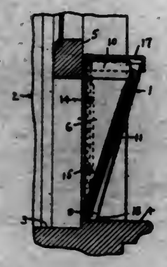
1. In a liquid measuring and dispensing apparatus, a measuring vessel, self closing inlet and serve valves therefor, a gland in the bottom of said vessel, a gauge tube vertically slidable in said gland and communicating at its upper end with the interior of the measuring vessel and at its lower end with a well pipe disposed therebeneath, a fork member connected with said gauge tube, a gauge locking member rotatable about a vertical axis disposed adjacent said fork, dogs on said locking member adapted to engage said fork upon rotation of said locking member

when one of said dogs is in horizontal alignment with said fork, but to prevent rotation of the locking member in all other positions, a cam plate rotatable co-axially with and



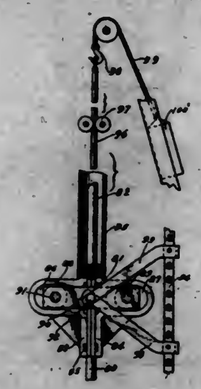
connected to said locking member and means for operatively connecting said cam plate with the inlet and serve valves.

1,756,086. SIGNALING SYSTEM. CHESTER L. DAVIS, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 21, 1928. Serial No. 300,979. 20 Claims. (Cl. 178—6.)



1. A television receiver comprising in combination means for receiving variable frequency energy, variable intensity apparatus comprising a coil having its inductance distributed in a plurality of sections disposed in horizontal planes parallel to each other and a glow discharge tube enveloping the different sections of said inductance.

1,756,087. MARKING AND GAUGING DEVICE. GEORGE N. GORDON, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 9, 1922. Serial No. 542,282. 11 Claims. (Cl. 33—4.)

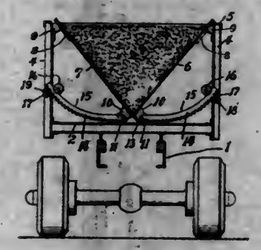


8. A device for marking ribbed insoles comprising, in combination, means for marking an insole, a support upon which the insole may be manipulated to move the rib transversely across the marking means, a mounting for said marking means enabling it to accommodate itself to the varying heights of different parts of the surface of the ribbed insole, a member for guiding the insole in a straight path, and means for adjusting said member toward and from said marking means to vary the location of the mark made by said means on the insole.

1,756,088. WINDOW VENTILATOR AND SCREEN. HOWARD Y. HODGE, Seneca Falls, N. Y., assignor to Alfretta Hodge, Seneca Falls, N. Y. Filed Nov. 12, 1928. Serial No. 318,797. 1 Claim. (Cl. 98—99.)

In a window ventilator, a pair of wedge shaped end plates with downwardly turned upper portions and an inwardly turned side portion, each of said plates adapted to be fixed to a window frame, said plates pivotally carrying an adjustable, U-shaped pivoted glass holding element and a screen with depending side and end portions adapted to fit over the top thereof.

1,756,089. LONG-STROKE PUMPING JACK. JOHN S. HUNTER, Coalinga, Calif. Filed Oct. 26, 1929. Serial No. 402,606. 1 Claim. (Cl. 74—14.)

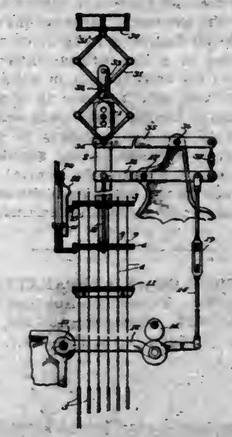


A device of the character described, including: a pair of chain loops; an upper sprocket and a lower sprocket for each of said chain loops, said sprockets being so placed that said chain loops will travel through parallel vertical planes; means for causing travel of said chain loops over said sprockets; a bracket extending inwardly from adjacent portions of said chains, the inward extension of said bracket being substantially one-half the diameter of said sprockets; a pump rod extending vertically from a pump; means engaging said pump rod, said means including a roller secured to the end portion of said bracket and a guide member secured to said rod, said guide member having a lateral slot receiving said roller; and guide rollers for preventing disalignment of said rod when said bracket is offset near an end of a vertical stroke.

1,756,090. ADVERTISING SIGN USING REFLECTED LIGHT. JAMES HUTTON, Monton, and JAMES BACON, London, England, assignors to James Bacon, London, England, and Herbert Heather, Catford, England. Filed Nov. 5, 1928, Serial No. 317,349, and in Great Britain Nov. 30, 1927. 2 Claims. (Cl. 40—77.)

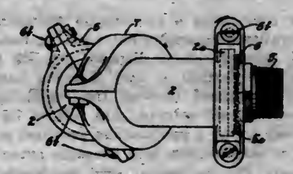
1. A mechanical advertising sign comprising a rotor having a plurality of flat surfaces carrying display matter, and a relatively stationary casing within which the rotor is mounted, which casing is provided with two light transmitting apertures disposed at an angle to one another so that light entering the casing through one of the apertures illuminates the flat surfaces in turn and is reflected by mirror means disposed so as to cause display matter to be made visible to the eye of the observer through the other aperture in the casing.

1,756,091. TRUCK FOR TRANSPORTING CONCRETE. EDWARD N. JONES, Pittsburgh, Pa., assignor to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1928. Serial No. 292,689. 15 Claims. (Cl. 298—24.)



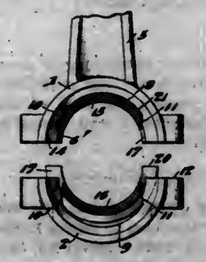
1. In truck body construction the combination of a floor, and a collapsible body comprising two plate members having their upper portions movably supported and their lower portions arranged to be brought into mutual contact, and means for supporting the plate members on the floor during movement of the plate members.

1,756,092. METHOD OF REFINING NICKEL-COPPER MATTE. FRANK EUGENE LATHE, Ottawa, Ontario, Canada. Filed Dec. 13, 1928, Serial No. 326,918, and in Canada Dec. 27, 1927. 6 Claims. (Cl. 75—66.)



2. A method of refining nickel-copper matte, which comprises retaining in the matte a substantial amount of iron sulphide and rapidly cooling the matte to increase the rate and completeness of solution in acid of the nickel sulphide constituent thereof, and leaching the matte with acid.

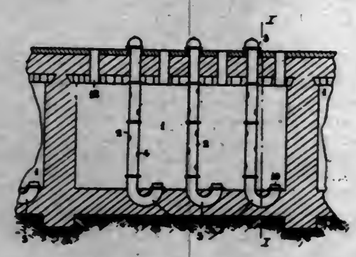
1,756,093. ATTACHMENT FOR LOOMS. HENRY K. MARTIN, Gloucester, N. J., assignor to Breslin Brothers Carpet Company, Inc., Gloucester, N. J. Filed July 2, 1929. Serial No. 375,429. 6 Claims. (Cl. 139—60.)



1. In a loom for weaving pile fabrics, lingo connections for controlling the figuring warps, a lifter board for said connections, a guide board, means for raising and lowering the lifter board, and means connected with said lifter board for imparting a lateral movement to said guide board.

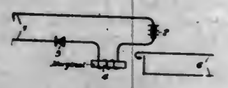
1,756,094. FLEXIBLE METALLIC COUPLING. CHARLES W. MCGUIRK, Albany, N. Y. Filed May 6, 1929. Serial No. 360,738. 3 Claims. (Cl. 285—96.)

1. In combination, a pair of pipe sections arranged in end to end relation, annular outwardly directed flanges formed on the adjacent ends of said pipe sections, a nipple partly received by said sections, resilient packing rings surrounding said nipple and contacting the adjacent pipe sections, and means including friction bearings cooperating with said flanges for holding the pipe sections associated for relative rotation and affording said coupling a maximum degree of flexibility.



1,756,095. BEARING BOX AND LINING THEREFOR. MARY C. NEUENFELT, Detroit, Mich. Filed June 6, 1928. Serial No. 283,357. 2 Claims. (Cl. 308—237.)

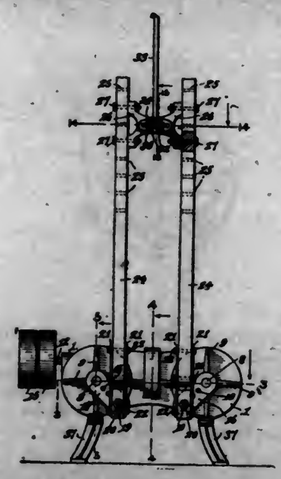
2. A shaft journal box comprising two bearing members to be secured together in abutting relation and having



recesses therein forming a central opening of greater diameter than the diameter of the shaft to be mounted, said members each being recessed within the central opening intermediate the points of abutment and said recesses being formed with the ends thereof in planes substantially at right angles to the abutment faces of the two members, bushings of corresponding form to be fitted within the last-mentioned recesses in a line substantially corresponding with the planes of the ends thereof in a manner that said bushings extend from said recesses to contact with the shaft, said bushings having their ends spaced from the abutment points of the two members to provide oil recesses, said bearing members having annular grooves on opposite ends thereof around the central recesses, and flanges on the ends of the bushings to lie within said annular grooves and extending to abut at their ends to close the oil recesses.

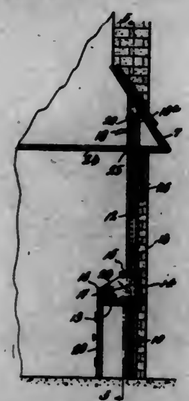
1,756,096. METHOD OF AND APPARATUS FOR BURNING SOLID FUEL. FRANCESCO NOVELLI, Pescina, Italy. Filed May 21, 1927, Serial No. 193,153, and in Italy May 27, 1926. 1 Claim. (Cl. 110—24.)

A furnace comprising a combustion chamber having in its top a plurality of charging holes having removable covers, vertical, tubular retorts disposed beneath and in correspondence with certain of said charging holes whereby fuel may be introduced through the remaining charging holes for heating said retorts, said retorts having perforations in their walls, a gas passage provided at the lower end of each of said retorts, said passages extending downwardly beneath the bottom of said combustion chamber and then upwardly to open into the combustion chamber at the bottom thereof.



1,756,097. ELECTRICAL DELAY-CIRCUIT ARRANGEMENT. ELIOT W. NILES, Bloomfield, N. J., and WILLIAM H. EDWARDS, Bayside, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1928. Serial No. 307,833. 5 Claims. (Cl. 179—84.)

1. A control circuit comprising a source of current, a marginal responsive device and a rectifier of the contact variety poled to oppose the flow of current from said source through said device, and controlled apparatus operated by said device.



1,756,098. PUMP JACK. LINNIS G. NORDSTROM, Galva, Ill., assignor of one-third to Edwin L. Stephenson, Galva, Ill. Filed Aug. 8, 1929. Serial No. 384,274. 3 Claims. (Cl. 74—14.)

1. A jack including a housing, crank arms supported outside thereof, means within the housing for rotating the crank arms simultaneously but in opposite directions respectively, means detachably connected to the housing for supporting it in either of two positions, pitmen connected to and adapted to be actuated simultaneously by the re-

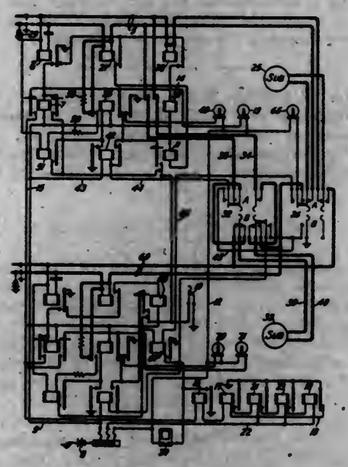
spective crank arms, brackets adjustably connected to the respective pistons, a coupling movably connected to the brackets, and a rod connected to and actuated by the coupling.

1,756,099. STORE FRONT. ZOE S. OSBORN, Colorado Springs, Colo. Filed Oct. 4, 1928. Serial No. 310,847. 1 Claim. (Cl. 20—40.4.)

In a store, a display front embodying a counter, a transparent panel extending upwardly from the front edge of the counter, a transparent panel extending rearwardly from the upper edge of said first panel, a vertically adjustable window arranged above the counter and adapted to contact with the upper side of said second panel when in closed position, and a panel arranged below the counter.

1,756,100. PROCESS FOR PREPARING COLORED NITROCELLULOSE VARNISHES. ERICH RICHTER, Bitterfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 14, 1927, Serial No. 183,894, and in Germany Feb. 1, 1926. 2 Claims. (Cl. 134—79.)

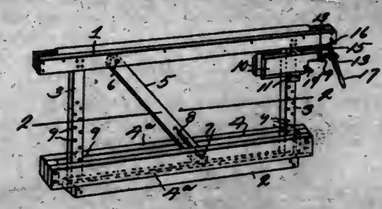
2. The process for preparing colored nitrocellulose varnishes which consists in intimately grinding fibrous



nitrocellulose with an insoluble coloring matter in the presence of water until a homogeneous magma is produced, freeing the same from water and treating it with a highly volatile liquid solvent for nitrocellulose, whereby the nitrocellulose is dissolved, the coloring matter being dispersed in colloidal form throughout the solution.

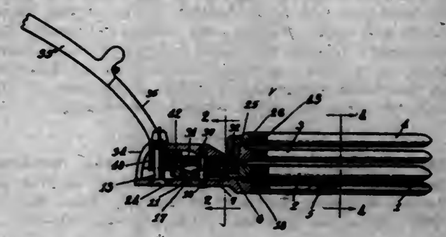
1,756,101. CHAIN. SAMUEL F. ROBIDOUE, Providence, R. I., assignor to Coyne, Robidoue & Co., Providence, R. I., a Copartnership of George A. Coyne and Samuel F. Robidoue, Providence, R. I. Filed Jan. 24, 1929. Serial No. 334,813. 2 Claims. (Cl. 63—4.)

1. A bracelet, chain or the like comprising a plurality of links, mesh fabric connecting said links comprising relatively movable parts with one part immovably embedded in one link and another part movable relative to the first part and immovably embedded in another link whereby the links are flexibly connected together.



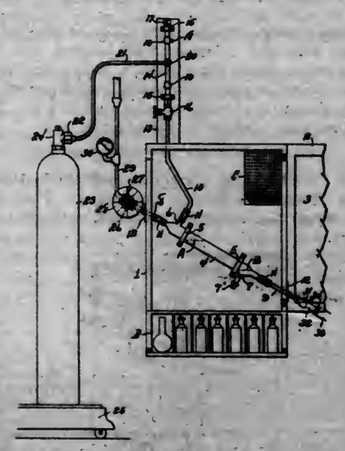
1,756,102. TELEPHONE SYSTEM. WILFRED M. ROSENKRANS, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 23, 1929. Serial No. 342,184. 1 Claim. (Cl. 179—42.)

In a telephone system, a line, a signal associated with said line adapted to be actuated intermittently in response to a call incoming on said line, a station on said line, a second station, a key for connecting said second station with said line and means responsive to the seizure of said line at said first station in answer to the incoming call for altering the characteristic of said signal and rendering said key ineffective to connect said second station with said line.



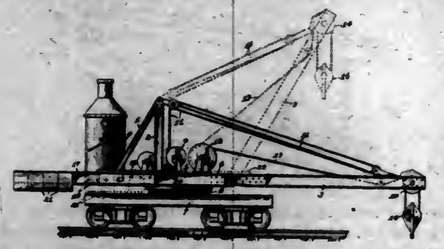
1,756,103. HIDE-STRETCHING DEVICE. COLEMAN SLEBODNIK, New Albany, Ind., assignor to Geo. Moser Leather Co., New Albany, Ind. Filed Aug. 25, 1928, Serial No. 302,074. Renewed Jan. 21, 1930. 3 Claims. (Cl. 149—21.)

2. The combination with a hide stretching frame having a side bar, of a butt stretching member slidably connected to opposite sides of the side bar, a tool receiving member carried by the butt stretching member, a tool



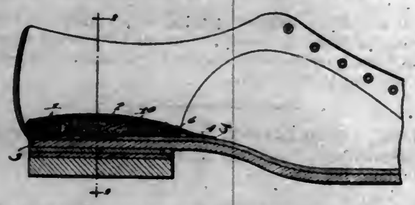
receiving member carried by the frame adjacent the first mentioned tool receiving member, said tool receiving members being adapted to receive a pulling implement.

1,756,104. MARCELING IRON. NELLIE STONE, Willamina, Oreg. Filed Aug. 28, 1928. Serial No. 302,617. 5 Claims. (Cl. 132—32.)



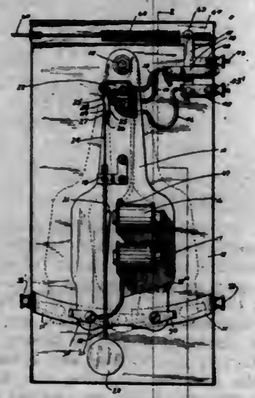
1. A marceling iron comprising a plurality of forks disposed one above the other and means for moving certain of said forks laterally with respect to the others, the other forks remaining stationary.

1,756,105. CHLORINATOR. CLAIR V. SWEARINGEN, Chattanooga, Tenn. Filed July 23, 1929. Serial No. 380,899. 1 Claim. (Cl. 210—28.)



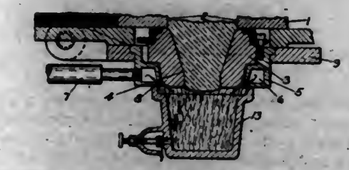
A device of the class described comprising a cylinder diagonally supported and formed of transparent material, means for connecting the upper end of the cylinder with a water supply, such means including a valve and means for indicating the amount of opening of the valve, discharge means connected with the lower end of the cylinder and valve controlled means for feeding chlorine gas to the upper part of the cylinder, said cylinder having a restricted outlet end for retarding the flow of water therefrom, whereby the water level in the cylinder acts to indicate when the desired proportions of water and gas are being fed.

1,756,106. COUNTERBALANCED CRANE. HAROLD E. SWENSON, Vallejo, Calif. Filed May 16, 1928. Serial No. 278,293. 2 Claims. (Cl. 212—49.)



1. In a crane, the combination with a deck, a movable boom mounted upon one end of the deck, and boom actuating mechanism mounted upon the deck, of a counterweight mounted upon the opposite end of the deck, said counter-weight comprising a pair of frame members slidably mounted along the sides of the deck and a counter-eight body mounted upon the outer ends of the frame members and connecting the same; means for moving the counterweight to shift the center of gravity of the crane relative to a load; and anti-friction rollers mounted upon the frame members and engaging the sides of the deck to ficilitate movement of the counter-weight.

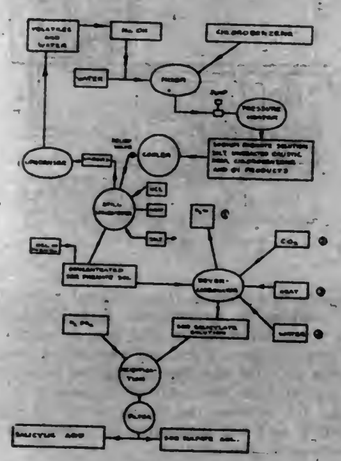
1,756,107. HEEL PAD. TOMIZO TANIGAWA, Honolulu, Territory of Hawaii, assignor of one-half to Fred K. Makino, Honolulu, Territory of Hawaii. Filed July 6, 1920. Serial No. 376,420. 3 Claims. (Cl. 36—37.)



3. A heel cushon composed of disks of pliable leather and fabric arranged in superposed relation and secured together around their edges with a filling between them composed of dry, finely comminuted, cured rubber providing great pliability, elasticity and mobility to the pad, thereby insuring comfort to the wearer.

1,756,108. SIGNALING SYSTEM FOR AUTOMOBILES. MARTIN G. TORSON, Kansas City, Kans. Filed Feb. 21, 1924. Serial No. 694,280. 4 Claims. (Cl. 200—90.)

1. In a device of the class described, a blinker comprising a housing, a frame pivotally mounted in said housing, an electromagnet carried on said frame, a pendulum mounted to swing on said frame and having an armature thereon, a circuit closer on said pendulum, means whereby the magnet may be energized to move the pendulum and a second switch adapted to be intermittently opened and closed by the movement of said pendulum.

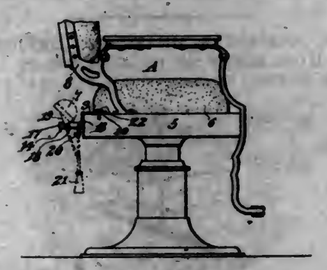


1,756,109. METHOD AND APPARATUS FOR SUPPORTING AND DELIVERING VISCOUS GLASS. OLIVER M. TUCKER and WILLIAM A. REEVES, Columbus, Ohio, assignors to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Sept. 14, 1925. Serial No. 56,214. 45 Claims. (Cl. 49—55.)

17. In a glass machine, a delivery orifice for glass, an annular ring positioned adjacent said orifice for annularly projecting a heating fluid beneath said orifice, and a cup movable into capping position with said orifice for enclosing said fluid and severing means periodically acting beneath said annular ring.

18. In a glass machine, a delivery orifice for glass, an annular perforated ring positioned adjacent said orifice, means for supplying said ring with a fluid for annularly projecting a fluid against the issuing glass, and a means acting in timed relation to the operation of the severing means for stopping the supply of said fluid.

1,756,110. MANUFACTURE OF PHENATES. WILLIAM H. WILLIAMS and EDGAR C. BRITTON, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed June 11, 1923. Serial No. 644,642. 3 Claims. (Cl. 260—154.)

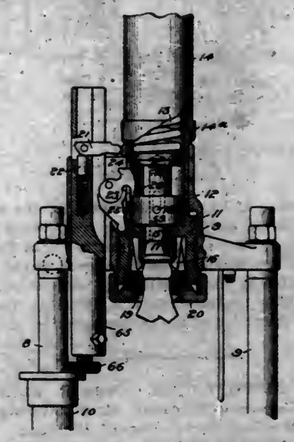


2. In a process of the character described, the steps which consist in reacting between monochlorobensene and sodium hydroxide solution, whereby a solution containing sodium phenate and sodium chloride is produced, separating unreacted chlorobensene and any volatile by-product, water, and sodium chloride therefrom, whereby a concentrated water solution of sodium phenate remains, and neutralizing any excess alkali by adding phenol.

1,756,111. PHOTOGRAPHIC-COPYING APPARATUS. ADRIAN W. WISNER, Tacoma, Wash. Filed Dec. 5, 1923. Serial No. 678,641. 9 Claims. (Cl. 95—34.)

1. A photographic copying apparatus of the character described, comprising a housing provided with a lens and shutter therefor said housing containing rolls for carrying and winding the film, and means for holding, for exposure over the shutter of the camera-lens, a section of the film, means for moving sections of predetermined length of film successively through said film-holding means, said film-moving means comprising a film-pulling roller, an operative connection from the film-pulling roller to the said film-winding roll, a ratchet-wheel carried by the shaft of said film-pulling roller, a lever-fulcrumed adjacent said ratchet-wheel and carrying a pawl engaging with the latter, and an operative connection between said lever and said shutter.

1,756,112. BARBER'S-CHAIR ATTACHMENT. ANGELO ANTINORO, Johnstown, Pa. Filed Apr. 1, 1929. Serial No. 351,744. 1 Claim. (Cl. 55—188.)



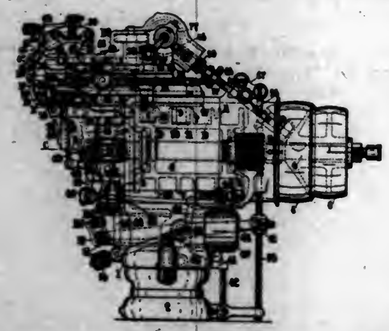
A barber's chair attachment, comprising a single thickness substantially U-shaped frame provided with opposed notches near the free ends thereof and in its uppermost edge, each notch presenting a vertically disposed wall and an outwardly inclined bottom to form a seat corresponding to the back of a head rest for the barber's chair, to be firmly held in said notches, a hanger formed with a shank secured medially of the frame and terminating in a circular head provided with a central hole to receive a common fastener for the cushion seat of the barbar's chair, said head of the shank being further provided with apertures concentrically of the hole for the engagement of a fastener in any one of the same, and a hook carried at the point of connection of the frame and shank.

1,756,113. ENVELOPE OPENER. LAMBERT BOLL, New York, N. Y. Filed Feb. 23, 1929. Serial No. 342,276. 8 Claims. (Cl. 120—35.)

1. An envelope-opener comprising a tubular body having a slot therein extending longitudinally thereof through which to insert an edge of the envelope, a slide operatively arranged within the body and provided with a series of inclined cutting members closely adjacent the slot for shearing off the inserted edge of the envelope, and means for operating said slide.

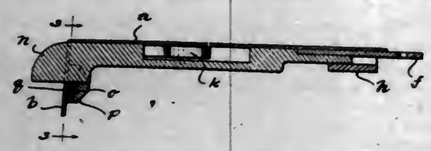
1,756,114. MACHINE FOR FILLING AND CAPPING BOTTLES. SAMUEL C. BOND, Holly Oak, Del. Filed Dec. 9, 1922. Serial No. 605,955. 13 Claims. (Cl. 226—77.)

10. The combination with a bottle filling and capping machine, of a filler head having a port therein, a combined filling and snifting valve controlling said port comprising concentric members movable in opposite directions for opening the ports controlled thereby, one of said members having a projection co-operating with the other member to open the latter when the first mentioned member is moved in a direction to close the port controlled thereby, and an operating handle connected with said last mentioned member.



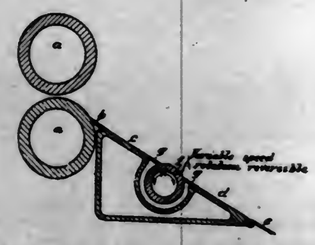
13. In a bottle, filling and capping machine, a filler head, means for applying caps to a bottle, a gasket to form a sealing contact with the bottle, means for contracting said gasket, and means actuated by the bottle for releasing said gasket to permit the expansion thereof.

1,756,115. BOX-TOE STRIP PACK. JOHN JOSEPH DALY, West Newton, Mass., assignor to Arden Box Toe Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 21, 1926. Serial No. 123,882. 1 Claim. (Cl. 206—60.)



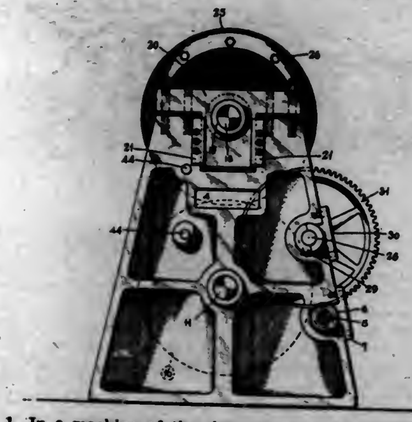
As a new article of commerce, a shipping pack comprising a plurality of strips of box toe material beveled on each longitudinal edge thereof and disposed in pairs with their beveled edges in reversed relation to each other, stiff protective top and bottom members for the pack and of greater width than the extreme width of the blanks thereof, and a bonding member extending about said pack and disposed across the beveled edges of said strips without contacting therewith and in protective relation thereto.

1,756,116. SOLE ROUNDING OR TRIMMING AND CHANNELING MACHINE. MARK THOMAS DENNE, London, England. Filed June 8, 1925, Serial No. 35,542, and in Great Britain June 11, 1924. 19 Claims. (Cl. 12—18.)



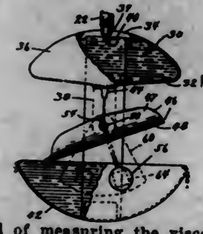
1. A machine of the type described, having a work support, a trimming knife, means to reciprocate said knife, means to move the work intermittently in the plane of operation of the trimming knife, a work guide, and means placed in action by the operator and while in action moving the work guide continually in a direction transverse to the plane of operation of the trimming knife.

1,756,117. COACH LATCH. JOHN B. FLYNN, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 14, 1928. Serial No. 246,672. 5 Claims. (Cl. 292—164.)



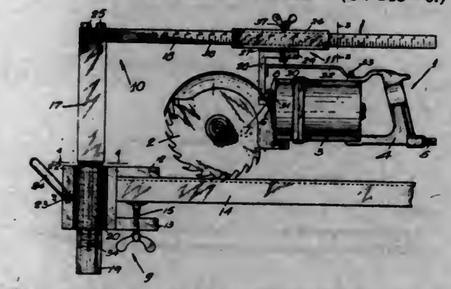
1. In a coach latch, the combination of a casing, a sliding bolt and other moving parts, and a reservoir secured to the casing and adapted to slidably engage the longitudinally guided face of said bolt and containing a lubricant to lubricate some of the moving parts.

1,756,118. INCLINED FEED TRACK FOR PLASTIC PLATE GLASS. RICHARD GENENGER, Aachen-Forst, Germany, assignor, by mesne assignments, to The American Bicheroux Company, a Corporation of Delaware. Filed Feb. 29, 1928, Serial No. 257,895, and in Germany Mar. 15, 1927. 5 Claims. (Cl. 49—33.)



1. An inclined feed track for plastic glass plates, comprising a movable supporting roller mounted so as to protrude above the upper surface of the track into contact with the glass plates and adapted to be driven so as to cause its surface to move at various speeds in and opposite to the direction of movement of the glass plates.

1,756,119. PUNCHING MACHINE. CHARLES A. GILL, Baltimore, Md., and FRANK J. GEY, Jr., Pittsburgh, Pa. Filed Dec. 22, 1927. Serial No. 241,901. 5 Claims. (Cl. 164—16.)

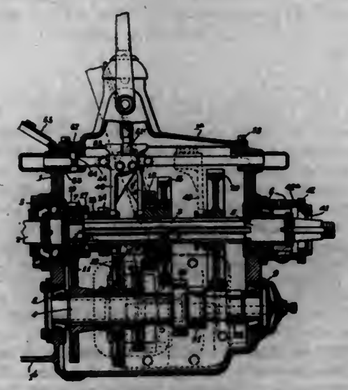


1. In a machine of the character described a die wheel comprising a rim having a peripheral groove coextensive with its periphery and centrally disposed with reference to the sides of the rim, annular grooves on each side of said rim, a die strip disposed on the periphery of said member having a tongue projecting into the peripheral groove of the rim, and ring gears disposed on each side of the rim having tongues extending into said side grooves.

1,756,120. VISCOSITY-MEASURING DEVICE. RICHARD J. HAUG, Nashua, N. H. Filed Oct. 26, 1925. Serial No. 64,778. 32 Claims. (Cl. 116—117.)

1. The method of measuring the viscosity of a liquid by the use of a hydraulic motor having a movable element, which method consists in discharging a stream of the liquid under constant pressure, upon the movable element of the motor and thereby displacing the movable element thereof, and observing the extent of such displacement.

1,756,121. SUPPORT FOR PORTABLE POWER SAWS. THERON L. HEDGPETH, Berkeley, Calif. Filed Jan. 4, 1928. Serial No. 244,411. 1 Claim. (Cl. 143—6.)

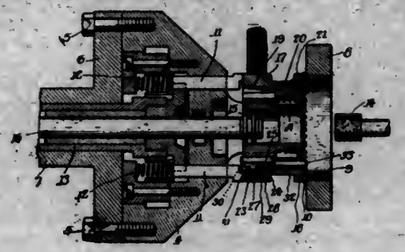


In a portable frame for power driven portable tools; clamping means; a standard having an arm extending

therefrom and being adjustably supported in said clamping means; a carriage slidable on said arm; a bracket provided with upper and lower horizontally extending arms, said bracket being attached to and depending from said carriage by said upper arm, and means carried by said lower arm for detachably securing said portable tool thereon.

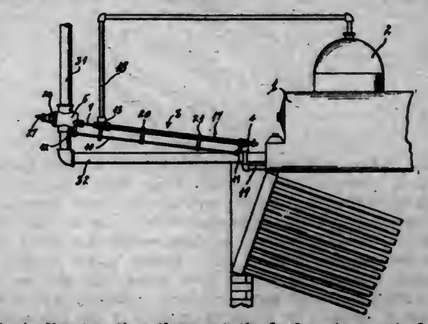
1,756,122. PROCESS FOR RECOVERING BORAX FROM BRINE. HENRY D. HELLMERS, Westend, Calif., assignor to West End Chemical Company, Oakland, Calif., a Corporation of California. Filed Oct. 24, 1925. Serial No. 64,686. 2 Claims. (Cl. 23—39.)

1. The method of recovering borax from brine containing borate in solution together with sodium carbonate, which consists in treating the brine with carbonic acid gas to precipitate some of the carbonates, removing the precipitated carbonates from the solution, and crystallizing out the borax by cooling.



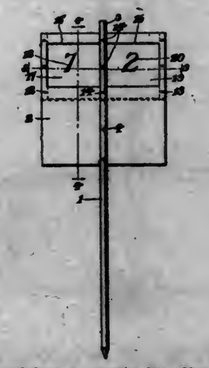
1,756,123. FIVE-SPEED TRANSMISSION GEARING. CLAUDE W. JARRETT and GEORGE HOWARD SKERRITT, Syracuse, N. Y., assignors to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 249,023. 3 Claims. (Cl. 74—58.)

2. In a transmission gearing, the combination of a housing, a conventional gear set in the housing including drive and driven shafts in axial alinement, a countershaft, change speed gearing between the shafts, some of the gears being shiftable; a spindle mounted at one end in the wall of the housing, an intermediary gear mounted on the spindle, a gear on the countershaft with which the intermediary gear meshes, a support detachably mounted in the housing and having a bearing in which the other end of the spindle is mounted, a shaft carried by the support, gears mounted on the shaft and shiftable into and out of mesh respectively with a gear on the countershaft and one of the gears on the driven shaft, also, another of the gears on the driven shaft being shiftable into and out of mesh with the intermediary gear, and means for selectively shifting the gears.



1,756,124. WORK HOLDER. HERBERT E. KEMPTON, KEITH F. GALLIMORE, and RAYMOND M. WOYTICH, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 16, 1925. Serial No. 2,776. 9 Claims. (Cl. 279—1.)

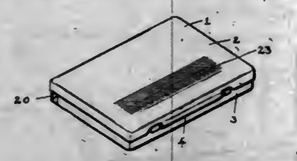
1. A work holding shuttle comprising in combination, a hollow cylindrical body open at both ends having an annular centering notch on one end and having a bore adapted to receive a gear blank in the other end, a plurality of independent clamping jaws shaped to fit between



the teeth of a gear mounted for longitudinal and radial movements in said bore, and means for holding said clamping jaws against lateral displacement.

1,756,125. DIRECT-ACTION THERMOSTATIC FEED-WATER CONTROL. OTTO B. KIBELE, Wilmington, Calif. Filed Jan. 10, 1927. Serial No. 160,218. 2 Claims. (Cl. 122—451.1.)

1. A direct action thermostatic feed water control for boilers, comprising a thermostatic tube adapted to be mounted at an angle, a casting at the lower end of said tube, said casting being connected to the water in the boiler, a fitting at the upper end of said tube, said fitting being connected to the steam in the boiler, a valve casing, rods extending between and secured to said valve casing and said casting, said fitting being slidably mounted on said rods, a valve in said casing in direct alinement with said tube, a rod extending from said valve and threaded into said fitting, a shaft extending from said valve out of the valve casing whereby said valve may be adjusted on its seat.



1,756,126. SIGNAL. JACK B. MAPLES, Middlesboro, Ky. Filed Dec. 5, 1928. Serial No. 323,944. 1 Claim. (Cl. 40—64.)

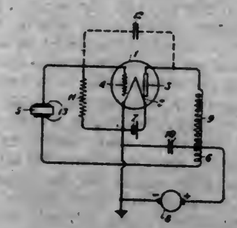
A signal comprising a vertically disposed rectangular front plate provided with a pair of opposed spaced open-

ings between its transverse median and its upper end, a back plate opposing the rear face of the front plate and having its lower end formed with a forwardly directed flange abutting such rear face below and in proximity to said openings, a pair of outer and an inner spacer member, arranged in spaced relation and interposed between and forming in connection with said plates a pair of spaced compartments, indicia carrying means removably mounted in said compartments and having the indicia thereon exposable through said openings, means for securing said plates and outer spacer members together, a standard having a portion intermediate its ends positioned against the outer face of said front plate between said openings, and means common to said plates, intermediate spacer member and standard for rigidly connecting them together.

1,756,127. SELF-FEEDING MATCH CASE. JOHN F. MARX, Rochester, N. Y., assignor of one-half to Gerald G. Burns, Rochester, N. Y. Filed Oct. 20, 1928. Serial No. 313,890. 2 Claims. (Cl. 206—33.4.)

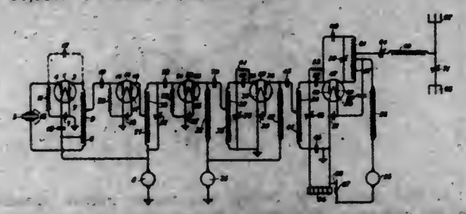
1. A match box having a bottom and a false bottom above it with a space between them, said false bottom being narrower than the box and leaving a slot between it and one side of the box through which a match can drop to the bottom, an ejector or feed mechanism below the false bottom consisting of a bow spring, a jaw carried on one end thereof adapted to slide along said slot as the bow spring is moved back and forth, a second slot in the bottom of the box by which the middle of the bow spring is guided as it is moved back and forth, a handle attached to the bow spring and extending through the slot in the bottom of the box to the outside of the box by which the bow spring and its jaw may be moved back and forth along the first named slot.

1,756,128. CASING CUTTER. ALBERT M. MONROE, Taft, Calif. Filed June 25, 1927. Serial No. 201,530. 6 Claims. (Cl. 81—195.)



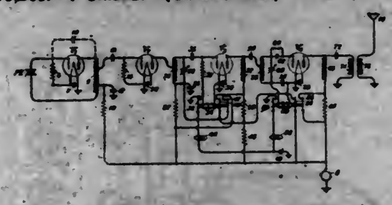
1. In a device of the type described, an anchoring head, casing engaging members slidably carried by said head, spring means for urging said members into operative position, locking means for holding said members in inoperative position and a weight for releasing said locking means.

1,756,129. OIL CAN FOR PRUNING SHEARS. HIROSHI NISHINAKA, Stockton, Calif. Filed Apr. 27, 1927. Serial No. 186,859. 4 Claims. (Cl. 30—11.)



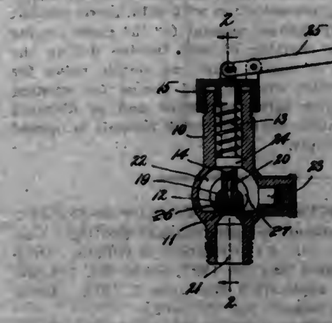
1. Means for oiling the pivot joint of the blades of a pruning shears having substantially round handles, comprising an oil container adapted to be disposed along one of the handles and having a nozzle adapted to terminate adjacent the contacting surfaces of the blades to the rear of but adjacent the pivot joint, means for clamping the container against the handle, and means provided on the container for preventing turning of said container relative to the handle.

1,756,130. OSCILLATION GENERATOR. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,336. 5 Claims. (Cl. 250—36.)



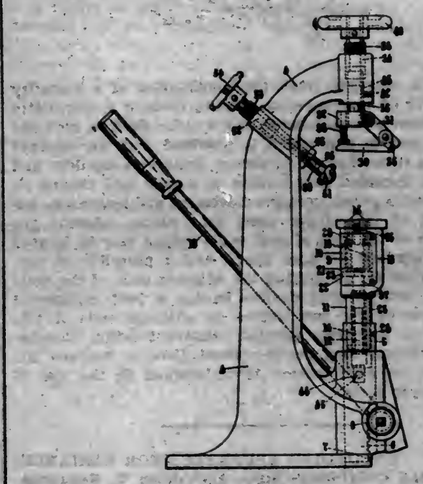
2. An oscillation generator comprising a three-electrode space discharge tube having input and output circuits coupled by virtue of the capacity existing between the electrodes of said tube to produce sustained oscillations, a piezo-electric element associated with the input circuit having a natural frequency substantially the same as the frequency for which the output circuit has a high and predetermined impedance, and means for starting said piezo-electric elements in vibration and for maintaining the continuity of said vibrations after being started.

1,756,131. HIGH-FREQUENCY-OSCILLATION GENERATOR. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,337. 5 Claims. (Cl. 250—36.)



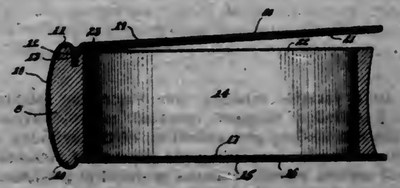
5. A harmonic producer for producing a harmonic of the frequency of an alternating current source, comprising a vacuum tube having plate, filament and grid electrodes, a resistance and a condenser effectively connected in parallel relationship between said grid and filament electrodes, and reactance elements included between the plate and filament electrodes resonant at a predetermined harmonic of the frequency of the source, the resistance and the condenser providing rectification of the current of the source.

1,756,132. HIGH-FREQUENCY-OSCILLATION GENERATOR. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 14, 1927. Serial No. 175,265. 7 Claims. (Cl. 250—36.)



1. In a system for deriving current of a high frequency from current of a comparatively low frequency, the combination of an oscillation generator of low frequency, a piezo-electric device for maintaining the constancy of the generated oscillations, a plurality of harmonic producers connected in tandem with respect to said oscillation generator each consisting of a three-element vacuum tube in the input circuit of which there is a grid condenser and leak, and means for preventing excessive discharges in the output circuits of said vacuum tubes when the biasing potentials impressed upon the input circuits of the respective tubes are below predetermined values.

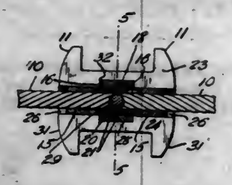
1,756,133. RELIEF VALVE. ERNEST G. PARKER, New Bedford, Mass. Filed June 5, 1926. Serial No. 113,866. 1 Claim. (Cl. 137—53.)



A relief valve of the class described comprising a body portion having a chamber therein; a valve seat in said chamber; a valve member comprising a plug of fusible metal having a valve seat contact washer thereon, said valve member being loosely mounted on said seat; a spring pressed plunger arranged to normally retain said valve member on said seat; said chamber having an inlet and an outlet, and a normally closed passage in which said plunger is located; said plunger having a passage therein leading into said chamber and normally closed to said inlet by said valve member; said body portion having a normally closed aperture therein through which a valve member may be passed to occupy its position on said seat when said valve is in assembled condition; and means to release said valve retaining plunger when a valve member is to be inserted into said body portion.

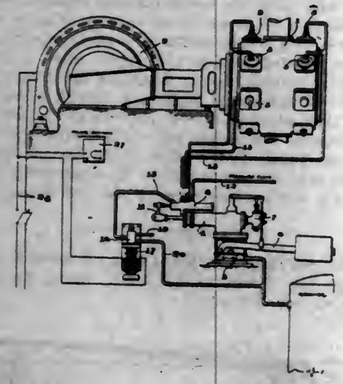
1,756,134. HEEL-ATTACHING MACHINE. FRANK HOWARD POCHIN, Leicester, England. Filed Oct. 15, 1927. Serial No. 226,478. 1 Claim. (Cl. 1—82.)

An apparatus for attaching heels to boots and shoes, comprising a frame, a shoe-supporting member adapted for vertical movement therein and formed with a recess, the portion of said member above the recess having nail-receiving apertures, an actuating rod slidable vertically in said member, a driver plate carried by said rod and operating in said recess, nail drivers having heads at their lower ends resting against said driver plate, a clamping plate screw-threaded to the actuating rod and clamping the drivers to said driver plate, said drivers being of such a length that when the driver plate is at the lower limit of its movement the upper ends of the drivers are received in said apertures, and a grub screw in the apertured portion of said member which by its adjustment operates to limit the driving movement of the nail driver.



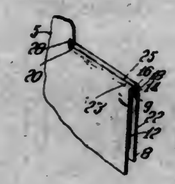
1,756,135. NOVELTY CONTAINER. JOSEPH A. RUSKIN, Chicago, Ill. Filed Apr. 20, 1929. Serial No. 356,844. 5 Claims. (Cl. 217—5.)

1. A device of the class described, comprising a main body portion provided with an article receiving recess, a



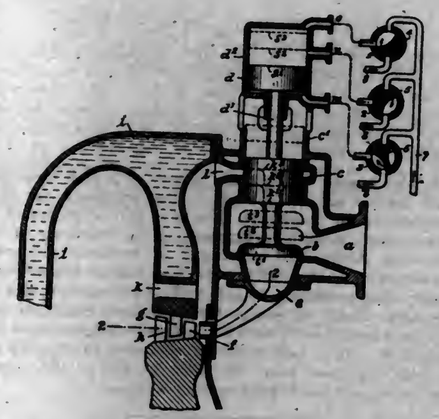
lower cover secured to said body portion, said body portion provided on its upper surface with a groove, a retaining strip adapted for insertion in said groove, an upper cover, and fly page having a portion of one edge projecting into said groove and held in place by said retaining strip, a continuation of said fly page secured to said upper cover whereby to hingedly mount said upper cover, substantially as described.

1,756,136. SECTIONAL DRIVE OR CONVEYER CHAIN. GEORGE D. RITTER, Carthage, N. Y. Filed July 13, 1927. Serial No. 205,875. 9 Claims. (Cl. 74—42.)



1. In a conveyer chain the combination of a plurality of sections of flexible twisted strand cable of substantially equal length arranged end to end, a collar fixed on each end of each section and which is provided with an external thread, a sleeve having an abrupt transverse shoulder and having a threaded bore formed to engage said thread on said sleeve to permit rotative movement and lengthwise adjustment of said sleeve along said collar, whereby the shoulders at the ends of each cable section may be located a predetermined distance apart, and a plurality of coupling devices for connecting the adjacent ends of the cable sections, each of said devices having a part engageable with parts on the two sleeves on adjacent ends of two sections to positively prevent relative rotation therebetween, whereby said predetermined distance between the shoulders on each section is maintained in the use of the conveyer chain.

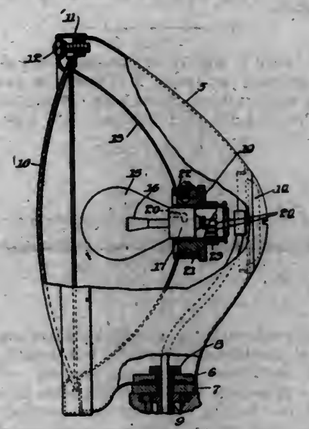
1,756,137. UNLOADING APPARATUS FOR VARIABLE-VOLUME COMPRESSORS. ALEXANDER V. SAHAROFF, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 22, 1928. Serial No. 321,109. 16 Claims. (Cl. 230—4.)



1. In a variable capacity compressor, the combination with a cylinder, pressure operated control valves controlling the loading and unloading of the cylinder, a distributor valve for controlling the passage of pressure fluid to said control valves, of means operated at predetermined times to admit control valve operating pressure fluid through said distributor valve in a reverse direction to the normal directional flow of fluid therethrough.

1,756,138. POCKET FOR GARMENTS. CARL E. SAHLSTROM, Chicago, Ill. Filed Oct. 26, 1928. Serial No. 315,128. 4 Claims. (Cl. 2—247.)

1. The method of facing a garment pocket opening which comprises stitching a facing piece upon the outer side of the garment fabric with its marginal edge along the position for the pocket opening, folding the facing piece back and stitching the folded back portion along the edge of the position for said opening and spaced from the line of fold to form a roll, cutting the pocket opening and turning the folded facing piece in through the opening and along the inner side of the garment fabric to invert the roll formed by the fold aforesaid.



1,756,139. NOZZLE-VALVE CONSTRUCTION FOR COMBUSTION TURBINES. MICHAEL SEDLMEIR, Mulheim-Ruhr, Germany, assignor to Holswarth Gas Turbine Co., San Francisco, Calif., a Corporation of Delaware. Filed June 22, 1927. Serial No. 200,741. 5 Claims. (Cl. 60—40.)

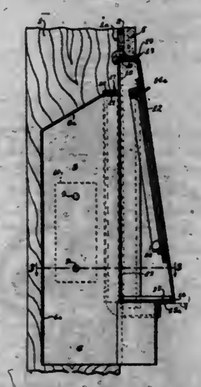
1. In an explosion turbine, the combination of a nozzle, a nozzle conduit for conducting explosion gases from an explosion chamber to said nozzle, an outlet conduit adapted to be placed in communication with said nozzle conduit to form an auxiliary exhaust passage for the gases issuing from the explosion chamber of said turbine during the scavenging period, a nozzle valve, an outlet valve for controlling said outlet conduit, and means for opening said valve, the latter being connected and so disposed relatively to each other that the outlet conduit is opened after the nozzle conduit.

1,756,140. FOCUSING DEVICE. CLIFFORD SKLAREK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed May 25, 1927, Serial No. 194,022. Divided and this application filed June 6, 1928. Serial No. 283,208. 6 Claims. (Cl. 240—44.)

1. In a lamp including a reflector and a lamp bulb cooperating with the reflector, the combination with a socket adapted to receive the lamp bulb; of means for supporting said socket including a sleeve receiving said socket, and a fixed block forming a holder for the sleeve, said sleeve being laterally adjustable in said block, and said

socket being adjustable lengthwise of the sleeve; resilient means on the sleeve having frictional contact with the socket for holding the same in adjusted position, and resilient means on the block having frictional contact with the sleeve for holding the same in adjusted position.

1,756,141. MARKING DEVICE. FREDERICK W. SPELLMEYER, East Orange, N. J. Filed Dec. 24, 1927. Serial No. 242,504. 1 Claim. (Cl. 91—62.5.)

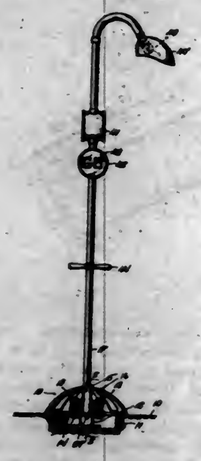


A marking device comprising in combination, a container for the marking medium, a discharge outlet therefor, a valve controlling said outlet and projecting therethrough for operation by pressure against the surface to be marked and one or more rigid guard elements upstanding adjacent and protruding at least as far as the end of the valve, whereby pressure of the device against an unyielding surface is ineffective to open said valve.

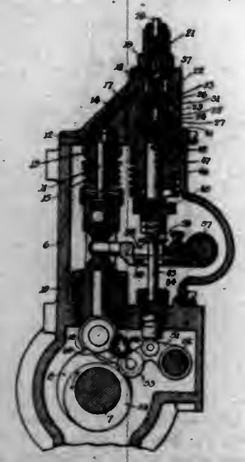
1,756,142. TOOTH BRUSH AND PASTE HOLDER. LOUIS SZAKÁCS, Naginey, Pa. Filed Oct. 25, 1928. Serial No. 315,021. 4 Claims. (Cl. 132—84.)

1. A device of the class described, comprising a sheet of material bent for presenting a top cover, a chamber back portion, and a chamber front portion, stitches securing the chamber back and front portions together, and other stitches dividing the chamber formed by the back and front portions into a plurality of brush sections, and pleated covers with central apertures automatically contracted by elastics, attached at the tops of each of the brush sections.

1,756,143. WALL-REGISTER CONSTRUCTION. FRANK Z. AHL, Sacramento, Calif. Filed Aug. 6, 1929. Serial No. 383,967. 5 Claims. (Cl. 98—114.)



1. A device of the character described comprising a stackhead having an opening leading to a register having flanged sides, the edges of the opening of said stackhead adapted to be aligned in a plane with the exterior of a wall supporting means, a face frame angularly extending from said edges of the stackhead opening in relative parallelism with said exterior of the wall supporting means, said face frame having a flange extending forwardly and adapted to receive on the inner side thereof the side flanges of a register.

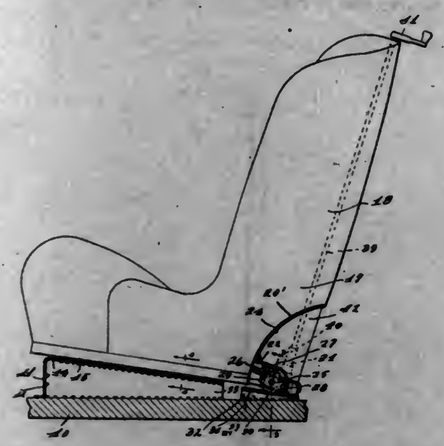


1,756,144. TRAFFIC SIGNAL. ARTHUR R. AMES, La Grange, Ill. Filed May 12, 1924. Serial No. 712,575. 11 Claims. (Cl. 177—337.)

7. In a traffic signal system, a plurality of stationary poles, a rotatable pole, means for removably supporting all of said poles, traffic directing lights at right angles carried by all of said poles, an electrical circuit including

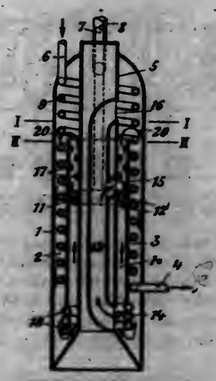
said lights, and means responsive to the movement of said rotatable pole for breaking the circuit through certain of the lights on said stationary poles and closing the circuit through the remainder of the lights on said stationary poles.

1,756,145. FUEL PUMP. CARROLL R. ALDEN, Detroit, Mich., assignor to Ex-Cell-O Aircraft and Tool Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 3, 1928. Serial No. 244,077. 15 Claims. (Cl. 123—139.)



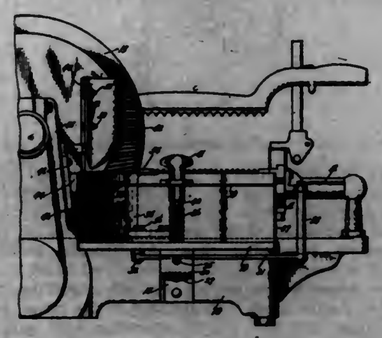
1. In a pump for supplying liquid fuel to the cylinder of an internal combustion engine, the combination of means providing a fuel receiving chamber adapted for communication with said cylinder, a piston operated from said engine and adapted on one of its strokes to compress the fuel in said chamber, a second chamber normally filled with liquid fuel, a third chamber normally drained, a main by-pass valve member having a stationary seat and providing a valve which when opened establishes communication between said first and second chambers, an auxiliary valve member extending axially of said first mentioned member and cooperating with a seat thereon to provide a valve controlling the flow of fuel from said first mentioned chamber to said third chamber, spring means acting on said auxiliary member and tending to hold both of said members seated, spring means tending to move said main member relative to said auxiliary member whereby to maintain said auxiliary valve closed, and means operable during the expulsion stroke of said piston to terminate the injection of fuel into said cylinder including a mechanism driven from the engine and operating to open said auxiliary valve whereby to relieve pressure in said first mentioned chamber.

1,756,146. BRICK MOLD. J. ADDISON CROWELL, Wallkill, N. Y., assignor to James B. Crowell & Son, Wallkill, N. Y., a Corporation of New York. Filed Jan. 24, 1929. Serial No. 334,672. 11 Claims. (Cl. 25—119.)



3. In a brick mold, a plurality of bottom panels, a plurality of partitions, a block of less length and width than said partitions positioned between each pair of panels, the upper side edges of said panels being normally flush with the bottom edges of said partitions, each of said panels and blocks having a dado intermediate its ends, and a metallic reinforcing strap in said dadoes, flush with the bottoms of said panels and blocks and extending longitudinally of said mold.

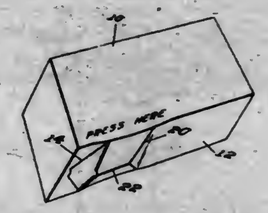
1,756,147. SEAT ASSEMBLY. JAMES H. CLARK, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 31, 1928. Serial No. 329,638. 7 Claims. (Cl. 154—14.)



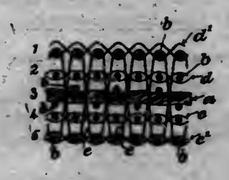
1. In combination, a supporting member, a seat member mounted for sliding movement relative to the supporting member, laterally spaced racks secured to one of said members, a shaft journalled in the other of said members, pinions upon said shaft and engageable with the racks aforesaid, a second shaft extending at substantially right angles to the shaft aforesaid, and terminating above the seat member, an operable connection between the two said shafts, and means including an operating handle carried by the second shaft above the seat member for rotating said second shaft to cause said pinions to move longitudinally of the racks and effect an adjustment of the seat relative to the support.

1,756,148. ABSORPTION REFRIGERATING MACHINE. GEORGE FERGUSON, The Hague, Netherlands, assignor to the Firm Gebrüder Sulzer Aktiengesellschaft at Winterthur. Filed Aug. 19, 1927, Serial No. 214,196, and in Switzerland Aug. 21, 1926. 4 Claims. (Cl. 62—118.)

1. In an absorption refrigerating machine a generator absorber comprising a tubular chamber, a heating pipe passing through said chamber, a tubular member concentrically disposed about and spaced from said pipe, a discharge pipe for returning refrigerant arranged in the space between said heating pipe and said tubular member, and a cooling coil concentrically disposed about and spaced from said tubular member.



1,756,149. SLICE COLLECTOR FOR SLICING MACHINES. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed July 17, 1926. Serial No. 123,044. 54 Claims. (Cl. 146—94.)



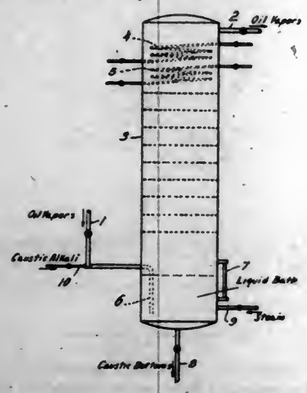
1. The combination with a slicing machine having a reciprocating table and a slicing knife of a slice receiver having a receiving surface below the surface of said table adjacent said knife, means for moving said receiver simultaneously in the same direction with said table, and means for directing slices broad side down on top of one another on said surface directly as they are severed from a piece on said reciprocating table.

1,756,150. READY-OPENING AND SELF-SEALING CARTON. ALBERT J. GANS, Los Angeles, Calif. Filed Nov. 14, 1928. Serial No. 319,407. 4 Claims. (Cl. 229—7.)

1. A ready-opening and self-sealing carton, including in combination, a top, sides, and bottom; one of the sides provided with a plurality of heavily scored lines adapted to be converted into self-closing cuts for use, and a number of lightly scored lines adapted to provide bends but not cuts, said heavily scored lines being at angles to the side edges of the carton and converging adjacent to the middle of said side, and one of the lightly scored lines parallel to the side edges of the carton and joining the said heavily scored lines.

1,756,151. WOVEN DRIVING BELTING. WILLIAM CHARLES GARDINER, Manchester, England, assignor to F. Reddaway and Company, Limited, Manchester, England. Filed May 29, 1928, Serial No. 281,426, and in Great Britain June 18, 1927. 4 Claims. (Cl. 139—458.)

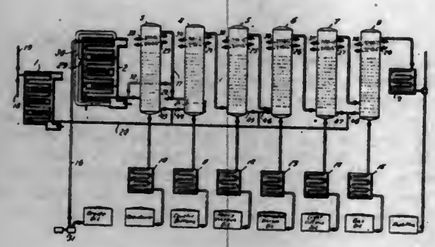
1. A multi-ply woven belt comprising vegetable fibre plies and a ply composed of elastic hair warps laid in under relative tension sufficient to develop elasticity in the elastic hair warps, said hair warps being enclosed in the weaving as a stratum in extended condition and bound in by the weaving process, to maintain the stretched condition of the hair warps and produce an elastic core, whereby the belt has slight further extensile capacity, but has a balance of contractile power, the elastic hair warps functioning to develop a contractile capacity exceeding the extensile capacity.



1,756,152. PROCESS FOR MANUFACTURING TOILET MATERIAL. TOKUJIRO HASHIMOTO, Tokyo, Japan. Filed Nov. 17, 1928. Serial No. 320,224. 5 Claims. (Cl. 167—91.)

1. A process for manufacturing a cosmetic for the skin consisting in dissolving india rubber in a volatile solvent with the aid of heat, adding water to said solution until the india rubber is present in the concentration of from 2 to 5% and boil said mixture under atmosphere pressure until the coagulative property of india rubber is lost, then distil the emulsion of india rubber under reduced pressure so as to drive away the volatile solvent.

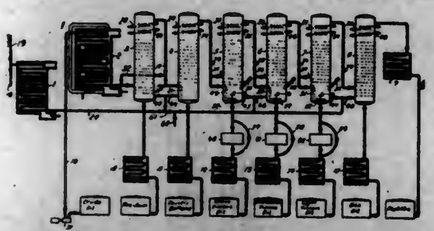
1,756,153. MANUFACTURE OF LUBRICATING OILS. EUGENE C. HERTHEL, Chicago, Ill., and HARRY L. PELZER, Highland, Ind., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 16, 1928. Serial No. 285,820. 3 Claims. (Cl. 196—36.)



1. In the distillation of petroleum stocks for the production of lubricating oils, the improvement which comprises vaporizing from the stock those constituents suit-

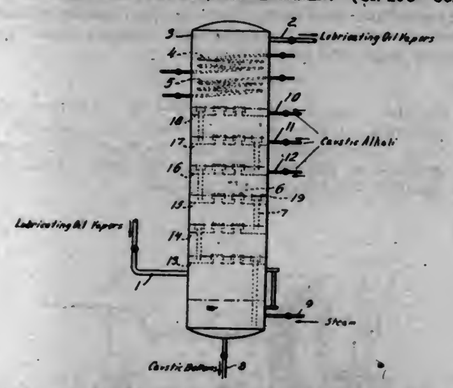
able as components of the desired lubricating oil, passing the vapors containing these constituents through a hot but externally unheated liquid oil bath by introduction beneath the surface thereof, maintaining this oil bath alkaline by supplying caustic alkali thereto, discharging

liquid from this bath, and taking off from this oil bath the components of the lubricating oil in the vapor state and condensing the same without permitting this condensate to contact as such with the liquid forming the oil bath.



1,756,154. REFINING HYDROCARBON OILS. EUGENE C. HERTHEL, Chicago, Ill., and HARRY L. PELZER, Highland, Ind., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 16, 1928. Serial No. 285,821. 5 Claims. (Cl. 196—36.)

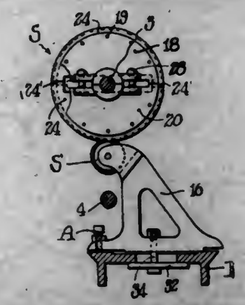
1. In the manufacture of distilled lubricating oils from petroleum stocks, the improvement which comprises flowing a stream of the stock through a heating zone into a vapor separating zone, heating the stock to a vaporizing temperature in the heating zone, separating the vapors and liquid oil in the vapor separating zone, passing the vapors separated in the vapor separating zone through a hot liquid oil bath maintained alkaline by supplying caustic alkali thereto, subjecting the vapors escaping from the hot alkaline oil bath to a fractionating operation and condensing high boiling constituents therein, taking off vapors from the fractionating operation and condensing a lubricating oil fraction therefrom.



1,756,155. REFINING HYDROCARBON OILS. EUGENE C. HERTHEL, Chicago, Ill., and HARRY L. PELZER, Highland, and JAMES G. STAFFORD, Whiting, Ind., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 16, 1928. Serial No. 285,822. 5 Claims. (Cl. 196—36.)

1. In the manufacture of distilled lubricating oils from petroleum stocks, the improvement which comprises flowing a stream of the stock through a heating zone into a vapor separating zone, heating the stock to a vaporizing temperature in the heating zone, separating the vapors from the liquid oil in the separating zone, passing the vapors separated in the vapor separating zone through a hot liquid oil bath maintained alkaline by supplying caustic alkali thereto, subjecting the vapors escaping from the

hot alkaline oil bath to a fractionating operation and condensing high boiling constituents therein, taking off vapors from the fractionating operation and condensing a lubricating oil fraction therefrom, and subjecting the lubricating oil fraction as condensed and while still at elevated temperature to contact with a comminuted solid adsorbent.

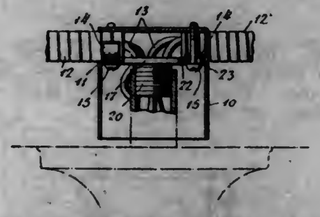


1,756,156. REFINING HYDROCARBON OILS. EUGENE C. HERTHEL, Chicago, Ill., and HARRY L. PELZER, Highland, Ind., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 16, 1928. Serial No. 285,823. 2 Claims. (Cl. 196—36.)

1. In the distillation of petroleum stocks for the production of lubricating oils, the improvement which comprises vaporizing from the stock those constituents suitable as components of the desired lubricating oil, passing the vapors containing these constituents successively through a series of hot alkaline liquid oil baths by introduction beneath the surface thereof, supplying caustic alkali to a bath other than the first in the series, passing liquid from this bath to the preceding bath and so on through the series in countercurrent to the vapors, discharging liquid from the first bath in the series, taking off from the last bath in the series the components of the lubricating oil in the vapor state and condensing the same without permitting this condensate to contact as such with the liquid forming the oil baths.

1,756,157. DECKLING AND SCORING MACHINE. OSCAR A. JOURET, Moosup, Conn., assignor to The Lester & Wasley Company, Inc., Norwich, Conn., a Corporation of Connecticut. Filed Oct. 22, 1928. Serial No. 314,159. 6 Claims. (Cl. 92—68.)

6. An apparatus of the class described comprising in combination, a bed, a pair of shafts rotatably supported thereby, co-operating feed rolls on said shafts for feeding a sheet, a bracket adjustable on said bed having a bearing portion between said shafts, coacting rolls for acting on a sheet fed forwardly by said feed rolls one of which is mounted on one of said shafts and the other of which

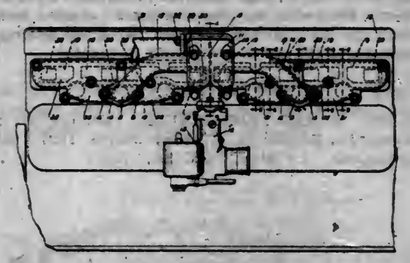


is rotatable on the bearing portion of said bracket and means associated with said bed and bracket whereby said bearing may be moved to move the roll therein towards and away from the other.

1,756,158. MANUFACTURE OF DITHIO DERIVATIVES FROM ALDEHYDES. GERALD J. LEUCK, Evanston, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 11, 1926. Serial No. 128,709. 7 Claims. (Cl. 260—54.)

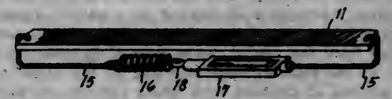
1. A process for manufacturing a dithio derivative of an aldehyde which comprises causing a mixture of the aldehyde, an acid substance and a water soluble sulfide of a metal to react to form a dithio derivative of the aldehyde.

1,756,159. HICKEY AND MOUNTING THEREFOR. ALFRED LIEBOWITZ, Mount Vernon, N. Y. Filed Apr. 23, 1928. Serial No. 272,082. 2 Claims. (Cl. 247—20.)



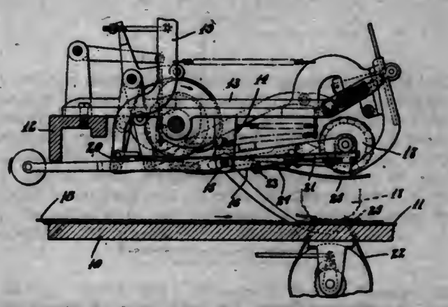
1. In an electrical connection, a casing, straps therein for securing electric conduits in position in the casing, fasteners for fixing said straps in the casing, and a hickey in said casing including laterally extending arms engaging said straps and fasteners and secured in position by the latter.

1,756,160. METHOD OF PRESSING WHEEL NAVES AND SIMILAR ARTICLES. KARL LOHS, Aue-in-Sachsen, Germany. Filed Sept. 14, 1928, Serial No. 306,048, and in Germany Apr. 6, 1927. 4 Claims. (Cl. 29—159.3.)



1. The method of forging wheel-naves and similar articles out of a single piece, which comprises pressing a heated, substantially solid blank in opposite directions and simultaneously forcing a portion of the flowing metal laterally of the direction of pressure, whereby an article having axially opposite recesses separated by an internal web and having an external flange is produced, and then again pressing said article and simultaneously forcing the flowing metal laterally of the direction of pressure along a lane spaced from said first flange.

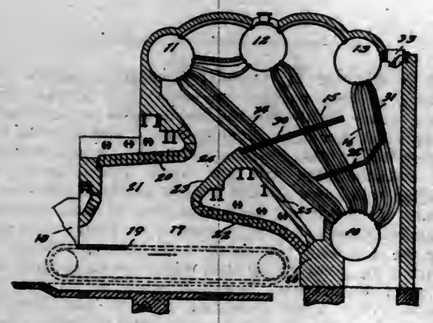
1,756,161. MANIFOLD. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed Oct. 13, 1924. Serial No. 743,443. 7 Claims. (Cl. 123—122.)



1. A manifold for internal combustion engines comprising an inlet passage for receiving a flow of intake gases, means for dividing the flow of gases into a plurality of branches, means for dividing each of said branches into a plurality of other branches, an outlet for said branches for communication with the engine intake, means for heating said gases at each of said points of division by means of the exhaust gases conducted in each case from those cylinders which are supplied by the intake gases passing the said respective points of division, and means for heating the gases during their flow between the last said point of division and their said points of outlet to the engine intake while permitting them to pass from the first point of division to the second point of division without being heated.

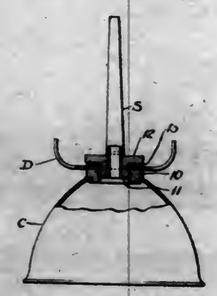
1,756,162. BLADE-SHARPENING DEVICE FOR LAWN MOWERS. KAMEKICHI MINAMI, Los Angeles, Calif. Filed Aug. 4, 1928. Serial No. 297,505. 1 Claim. (Cl. 76—82.1.)

A sharpening device, comprising a file, cords extending from the ends thereof, and a spring and turnbuckle interposed between the ends of said cords whereby the file may be clamped to a lawn mower frame to contact with the blades.



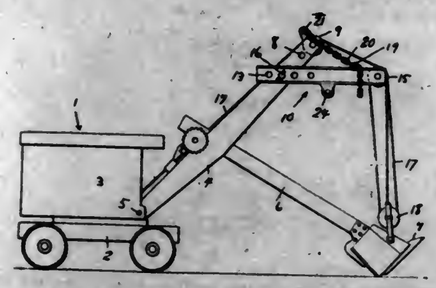
1,756,163. MARKING MACHINE. DANA E. HARDING, Melrose, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1928. Serial No. 244,880. 2 Claims. (Cl. 101—95.)

1. In a device of the kind described, the combination of a pivotally mounted frame, a plurality of character wheels rotatably mounted at the end thereof, a platen, an endless conveyor adapted to move material to be worked on over



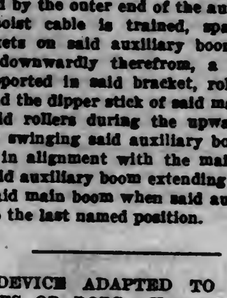
the platen, means for moving the frame about its pivot to bring the character wheels into engagement with the material being fed over the platen, a resilient member secured to said pivotally mounted frame and adapted to engage with the moving material in advance of the engagement therewith by the character wheels, and to maintain the material being worked on at rest during the engagement of the character wheels therewith.

1,756,164. WATER-TUBE BOILER. ARTHUR W. PATTERSON, Jr., Roselle, N. J. Filed July 5, 1927. Serial No. 203,402. 3 Claims. (Cl. 122—302.)



1. The combination with a water tube boiler of the Sterling type having a lower drum and a plurality of upper drums and tubes connecting said drums, of a furnace having a fire box extending in front of the lower drum, a back combustion arch extending from a point adjacent the lower drum forwardly over the rear portion of the firebox and then rearward and upward to a point adjacent the intermediate portion of the front tubes, a cross baffle extending from the top of the back arch transversely of the tubes in the same general direction as the upper face of said portion of the back arch which extends rearward and upward, and a second baffle having a section spaced below said cross baffle and extending transversely of the tubes and another section extending upwardly from the end of said section longitudinally of the tubes to the rear drum.

1,756,165. GRIPPING DEVICE FOR OIL CANS AND THE LIKE. EDWARD R. PETRIE, New York, N. Y. Filed Mar. 13, 1928. Serial No. 261,226. 4 Claims. (Cl. 221—33.)

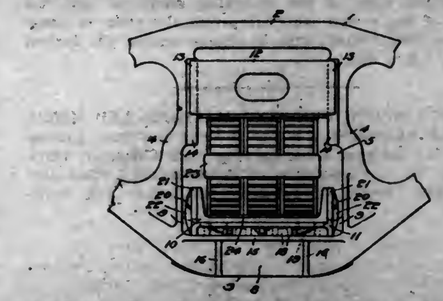


1. A gripping device for containers of the class described comprising a central apertured body portion, and a finger piece part extending from said body portion, and spaced clips on said body portion for retaining the same in connection with a support.

1,756,166. AUXILIARY BOOM FOR EXCAVATORS. GEORGE W. ACUFF, Jr., St. Louis, Mo. Filed Feb. 7, 1929. Serial No. 338,225. 2 Claims. (Cl. 214—135.)

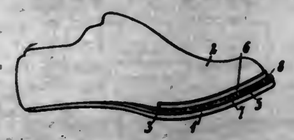
2. In an excavator, in combination with a main boom, a dipper stick operatively associated with said main boom, a dipper carried by the outer end of said dipper stick, a hoist cable attached to the dipper to lift the same, an auxiliary boom attached at its inner end on the upper end of the main boom for vertical swinging movement, a sheave carried by the outer end of the auxiliary boom over which the hoist cable is trained, spaced transversely aligned brackets on said auxiliary boom extending outwardly and downwardly therefrom, a transverse shaft rotatably supported in said bracket, rollers mounted on said shaft, and the dipper stick of said main boom adapted to engage said rollers during the upward movement of said stick for swinging said auxiliary boom to a position substantially in alignment with the main boom, and the free end of said auxiliary boom extending beyond the adjacent end of said main boom when said auxiliary boom has been swung to the last named position.

1,756,167. DEVICE ADAPTED TO BE SCREWED ONTO PIPES OR RODS. HENRY W. AVERY, Cleveland, Ohio. Filed Feb. 15, 1926. Serial No. 88,202. 3 Claims. (Cl. 137—91.)



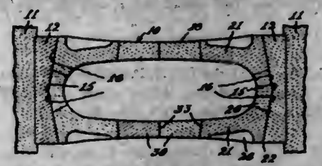
1. A device adapted to be screwed onto a threaded pipe or rod comprising an expansible sleeve formed from a strip of corrugated stock rolled into annular shape, an unthreaded ring seated in one of the circumferential grooves formed by the corrugations of said stock and constituting the thread engaging part of the device, said ring being held from rotation relative to the sleeve and formed of relatively soft material into which a thread may be cut when the device is screwed onto the threaded pipe or rod.

1,756,168. RAILWAY TRUCK. DONALD S. BARROWS, Rochester, N. Y. Filed Sept. 14, 1928. Serial No. 306,019. 15 Claims. (Cl. 105—197.)



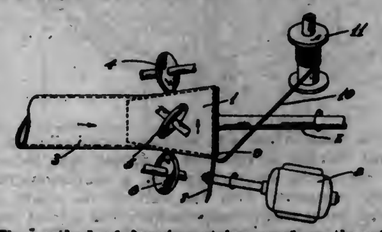
1. In a truck, in combination, a side frame formed with compression and tension members spaced at intermediate portions thereof by bolster guide columns leaving a window

opening therebetween, the tension member beneath the window opening being provided with a spring seating por-



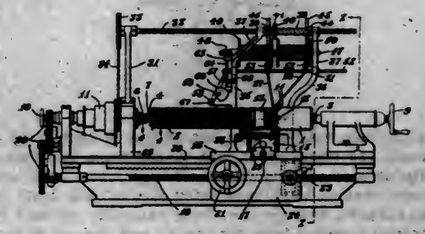
tion, a nest of springs seated on said portion, and diagonal reinforcing members disposed below the spring seating area of said spring seating portion.

1,756,169. FOOTWEAR. JAROSLAV BENDA, Prague, Czechoslovakia. Original application filed Oct. 11, 1924, Serial No. 743,140, and in Czechoslovakia Oct. 9, 1923. Divided and this application filed May 11, 1926. Serial No. 108,402. 2 Claims. (Cl. 36—78.)



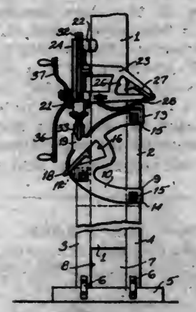
1. A welted footwear wherein the welt is composed of a body strip and a facing strip made of different materials, the body strip being stitched to the sole and the facing strip cemented to the body strip by means of a celluloid solution.

1,756,170. RETORT STRUCTURE. EDWIN G. BLACKWELL, New York, N. Y. Filed Sept. 22, 1927. Serial No. 221,243. 9 Claims. (Cl. 202—223.)



1. In combination with spaced vertical walls, a retort abutting said walls comprising courses of fire abutting bricks laid in planes transverse to said walls including vertical planes of contact between each of said bricks and bricks contiguous thereto, the vertical planes of contact of said bricks on to opposite sides of each brick converging toward the exterior of said retort.

1,756,171. PROCESS OF MAKING RUBBER THREAD. FRED W. BOMMER, Everett, Mass. Filed Sept. 2, 1927. Serial No. 217,289. 4 Claims. (Cl. 164—17.)

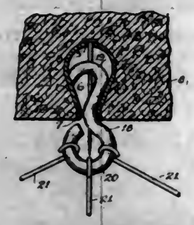


1. The method of forming strips, cord or thread comprising, providing an elastic tube of rubber or like elastic material, applying a cutter to the periphery of the tube near an end thereof, maintaining the end of the tube at the cutter abnormally stretched and distended with relation to the distention of the rest of the tube, and simultaneously rotating the tube and feeding the distended end thereof toward the cutter to remove a continuous, helical strip or thread therefrom.

1,756,172. THREAD-CUTTING MACHINE. FRED W. BOMMER, Everett, Mass. Filed June 5, 1928. Serial No. 283,045. 2 Claims. (Cl. 164—69.)

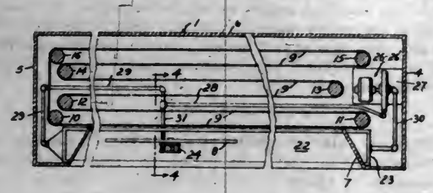
1. In a machine for cutting a thread or strip from a tubular body of rubber or like elastic material, the combination with a rotary cutter having a shearing edge, of a mandrel on which said tubular body may be mounted, said mandrel having on its surface a helical groove and presenting to the cutter a shearing edge or wall, means to rotate the mandrel, means to rotate the cutter, and means to move the cutter with its shearing edge in contact with the shearing edge of said helical groove to effect a shearing cut on said tubular body and remove therefrom a continuous thread or strip.

1,756,173. SHORE-ADJUSTING TOOL. GEORGE B. BOSCO, Chicago, Ill. Filed Mar. 12, 1928. Serial No. 260,822. 1 Claim. (Cl. 254—100.)



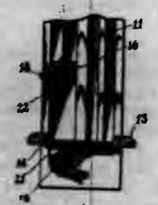
A tool for adjusting a pair of overlapping struts comprising a fitting adapted to embrace one of the struts, means for adjustably securing said fitting to said one strut, a guideway on said fitting, a screw plunger in said guideway and secured against rotation relative to said fitting, said fitting being relatively movable axially of said plunger, a bearing part on said plunger adapted to engage the other strut, and an operating handle mounted on said fitting and geared to said plunger.

1,756,174. WALL TIE. GEORGE B. BOSCO, Chicago, Ill. Filed May 2, 1928. Serial No. 274,478. 1 Claim. (Cl. 72—105.)



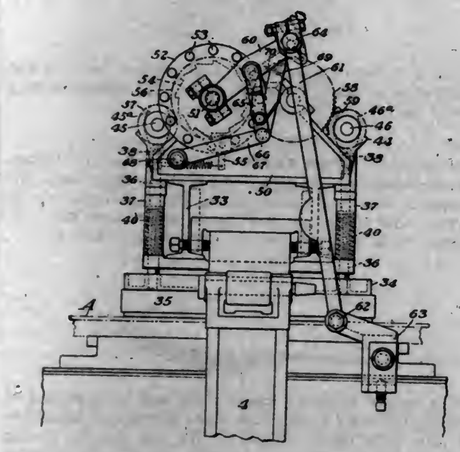
An anchoring device comprising a channel member adapted to be embedded in a structural unit and having an opening extending longitudinally thereof, the sides of

said channel converging toward said opening, and a bendable tie rod slidable in said opening, the inner end of said rod being located in said channel and being bent to form a bearing head having inclined bearing surfaces adapted to engage said converging sides, one of said bearing surfaces being substantially flat and being formed on the inner extremity of said tie rod, said head being of greater



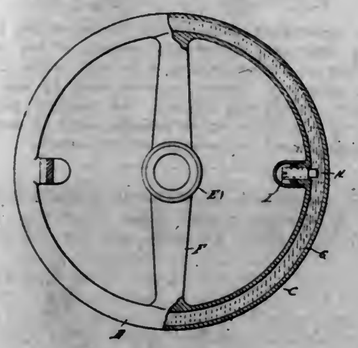
breadth than said opening but of less breadth than said channel, the thickness of said tie rod being less than the width of said opening to permit said head to be turned in said channel, said head being also of less depth than said channel whereby the inner extremity of said head is normally spaced from the base of said channel to permit a limited axial movement of said tie relative to said channel.

1,756,175. ILLUSORY TRAVEL-SCOPE. JOHN G. BOYD, Oakland, Calif. Filed June 1, 1927. Serial No. 195,607. 4 Claims. (Cl. 46—37.)



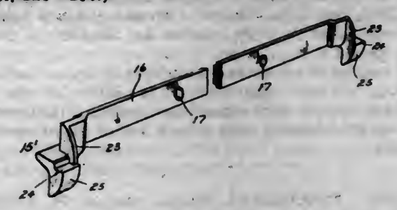
4. In a device of the class described, a miniature representation of a fluid borne object of travel fixedly disposed in the appropriate fluid therefor and arranged to be viewed from an external point at a side thereof, a movable panoramic background therefor, means for moving said background, a fluid operable propeller on said representation, and means for imparting motion to said fluid to operate said propeller for cooperation with said panorama to indicate self-propulsion of said representation.

1,756,176. WINDOW FLY SCREEN. ADOLPHE BRIÈRE, Montreal, Quebec, Canada. Filed Aug. 12, 1927. Serial No. 212,442. 2 Claims. (Cl. 156—39.)



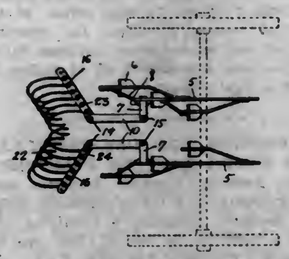
1. The combination with a lower window sash having a bottom rail formed at its longitudinal center with a vertically extending recess intersecting a horizontally extending bore provided with locking pins, of an attaching strip of slightly less width than said rail, a bracket fixed to the center thereof, and having an ear extending into the said vertically extending recess, said ear being slightly longer than the depth of said recess, and engaged by the locking pin, and screen material attached to the inner longitudinal edge of the attaching strip, so that the weight of the screen material pivots the strip to cause the outer longitudinal edge to engage against the bottom of the bottom rail.

1,756,177. BLOCK PRINTING MACHINE AND METHOD OF PRINTING. WILLIAM PENN BRINTON, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1928. Serial No. 247,819. 12 Claims. (Cl. 101—199.)



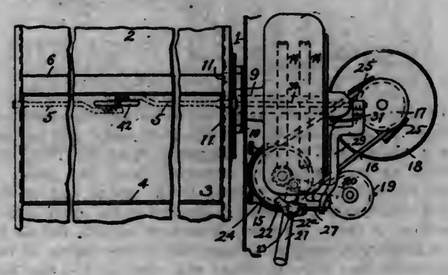
1. In a block type printing machine, a guided movable printing head, means for moving the material through the machine in a step-by-step manner, and a printing surface on the head divided in two directions, each part of the printing surface being movable up and down to a limited extent on the head relatively to the other.

1,756,178. VIBRATION DAMPENER. ALANSON P. BRUSH, Detroit, Mich. Filed Aug. 26, 1925. Serial No. 52,660. 2 Claims. (Cl. 74—6.)



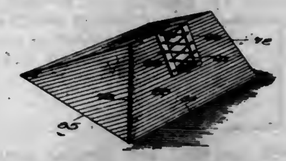
1. The combination with a rotary shaft, of a fly wheel mounted thereon, a vibration dampener mounted on the other end of the shaft comprising a continuous annular chamber concentric with the axis of the shaft, a low viscosity liquid within said chamber and a local constriction at one point within the chamber for resisting the flow of the fluid therein.

1,756,179. RANGE. WILLIAM A. BUSBEE, Belleville, Ill. Filed Mar. 25, 1927. Serial No. 178,313. 3 Claims. (Cl. 126—190.)



1. An oven frame, an oven door, a concealed hinge element having ends including curved surfaces terminating in a bearing edge, said element secured to the door for rotation within the frame, securing means comprising cylindrical projections secured to the inner lower face of said door, said projections being positioned in holes, which holes are formed in said hinge element, and bolts positioned in threaded engagement in holes formed in said cylindrical projections.

1,756,180. CULTIVATOR ATTACHMENT. WILLIAM F. CECIL, Holland, Mo. Filed May 16, 1929. Serial No. 363,466. 3 Claims. (Cl. 97—8.)



1. An attachment of the class described comprising a bracket adapted to be attached to a cultivator, a bar adjustably engaged with the bracket to extend laterally therefrom, a beam, means for adjustably connecting the beam with the bar, said beam having a plurality of notches at one edge and a plurality of openings one in the rear of each notch, and a plurality of teeth having curved shank portions straddling the edge provided with a notch, one curved shank seated in each notch and said curved shank terminating in eyes and bolts extending through the eyes and threadedly engaged in the openings.

1,756,181. SAFETY DEVICE FOR WASHING MACHINES. ARTHUR R. CURTIS, Cleveland, Ohio. Filed Mar. 31, 1924. Serial No. 703,050. 15 Claims. (Cl. 192—135.)

9. In a washing machine, the combination with a horizontally disposed rotatable cylinder having an opening in its cylindrical wall and a lid for the opening adapted to be secured thereto to close the opening, of mechanism for rotating the cylinder, a manually operable controller for said mechanism, and means interposed between the controller and lid for locking the controller when the lid is open.

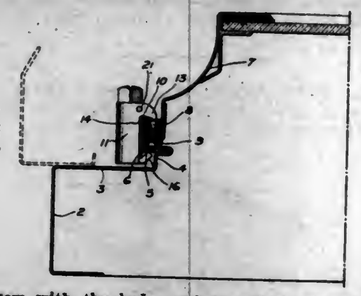
1,756,182. AUXILIARY SEAT. BRENT S. DRANE, Charlotte, N. C. Filed Jan. 20, 1928. Serial No. 248,178. 8 Claims. (Cl. 155—182.)

1. A frameless auxiliary seat of fabric material, said seat comprising a bottom portion, a back portion, and side portions, said side portions comprising webs joining the outer margin of said back portion with the outer margin of said bottom portion, the outer margins of all of said portions forming in effect a strap adapted to extend under the legs and across the back of the user, and means to adjust the perimeter of said seat along said margins.

1,756,183. INNER-TUBE PATCH. CLARENCE E. DUNLAP, Sioux City, Iowa. Filed Jan. 7, 1929. Serial No. 330,820. 1 Claim. (Cl. 152—26.)

An inner tube patch of preformed shape, comprising a layer of uncured rubber, a layer of protective fabric adhering to the adhesive face thereof, and a layer of cured rubber united with the rear face thereof, the edge of the cured layer being bevelled through a majority of its thickness, and the remainder of its thickness together with all of the uncured layer and the fabric, being cut off squarely to leave a shoulder of cured rubber completely covering the rear face of the uncured layer.

1,756,184. GAUGE-GLASS FITTING. GEORGE ERNST, Newark, N. J. Filed Dec. 1, 1927. Serial No. 236,971. 10 Claims. (Cl. 251—50.)



1. A device of the character set forth including a valve body, and a gauge head having lateral detachable connection therewith, said body carrying a coaxial yoke structure, a packing gland, and adjustable means to cause the yoke structure to exert pressure on said gland.

1,756,185. CLAMPING MEANS FOR CASKETS. JOSEPH E. FALCK, Pittsburgh, Pa., assignor to National Casket Company, Incorporated, Pittsburgh, Pa., a Corporation of New York. Filed May 10, 1927. Serial No. 190,159. 2 Claims. (Cl. 27—17.)

1. Clamping means for caskets, comprising a channel shaped body of substantially uniform cross section hav-

ing open end portions freely open throughout substantially the entire width of the channel, a screw in said body projecting through one end, means for interlocking

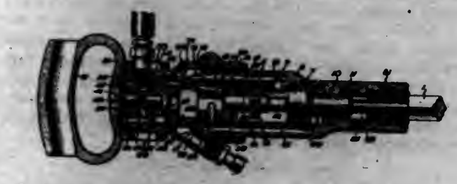
the screw with the body, and engaging means operable by the screw and movable through the other end of said body.

1,756,186. RESILIENT SCREW STUD. PAUL E. FENTON, Thomaston, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 24, 1928. Serial No. 308,040. 3 Claims. (Cl. 24—213.)

2. A resilient screw stud, having a two-diameter head provided with a ledge on its larger portion, and a shell surrounding the head and having a series of spring wings bulged outwardly, the tips of said wings overlying the ledge.

1,756,187. ELECTRIC WELD FORM SPACER. WALLACE A. FERRIS, Los Angeles, Calif. Filed Feb. 12, 1927. Serial No. 167,818. 1 Claim. (Cl. 72—122.)

In the art of concrete fireproofing for steel structures, a spacer for maintaining a predetermined distance between the side of a metallic structural element and a member of a wooden form to confine the concrete, said spacer consisting in a staple forming a standard pointed at one end for insertion into the wooden mold member and provided at the other end with a bend forming a driving head adapted to contact with the metallic structural element to be encased; and a cross bar fixed to the legs of the staple near the pointed ends thereof to serve as a stop to gage the depth to which the ends will be driven.



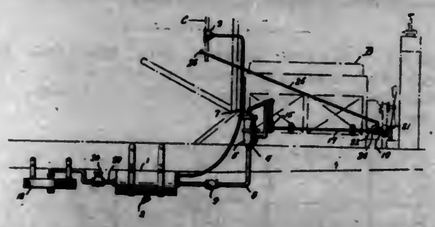
1,756,188. METHOD OF PRESERVING EGGS AND THE YOLKS AND WHITES THEREOF. JOSEPH FOUSEK, San Francisco, Calif. Original application filed May 11, 1927, Serial No. 190,655. Divided and this application filed Mar. 5, 1929. Serial No. 344,598. 1 Claim. (Cl. 99—11.)

The method of preserving the yolks of eggs, consisting in taking by weight equal parts of yolk of egg and sugar and mixing this composition under a temperature of approximately 50 degrees Reaumur until smooth and of the consistency of honey.

1,756,189. METHOD OF PRESERVING EGGS AND THE YOLKS AND WHITES THEREOF. JOSEPH FOUSEK, San Francisco, Calif. Original application filed May 11, 1927, Serial No. 190,655. Divided and this application filed Mar. 5, 1929. Serial No. 344,599. 1 Claim. (Cl. 99—11.)

The method of preserving the whites of eggs, consisting in taking by weight equal parts of the whites of eggs and sugar and mixing this composition under a temperature of 50 degrees Reaumur until smooth and of the consistency of syrup.

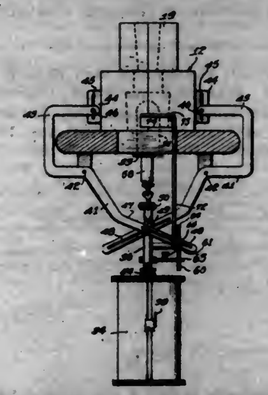
1,756,190. PERCUSSIVE TOOL. GEORGE H. GILMAN, Belmont, Mass. Filed Mar. 5, 1921, Serial No. 449,667. Renewed Sept. 12, 1929. 19 Claims. (Cl. 121—17.)



1. In a percussive tool, a cylinder and a piston presenting opposed pressure surfaces, means providing a chamber communicating with said cylinder adjacent its pressure surface and adapted to be closed from communication with said cylinder by said piston at the end of its stroke, and means providing for preadmission of motive fluid between said opposed surfaces before closure of said chamber and for cutting off of motive fluid after said chamber is again opened.

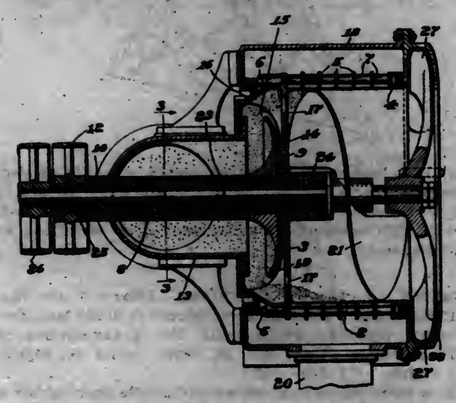
1,756,191. PROCESS FOR DRY DISTILLATION OF VINASSES UNDER REDUCED PRESSURE. JOSEPH GUILLISSEN, Anderlect-Brussels, Belgium, assignor, by mesne assignments, to L'Union Chimique Belge, Societe Anonyme, Brussels, Belgium, a Company of Belgium. Filed Nov. 8, 1923, Serial No. 673,549, and in Belgium Dec. 15, 1922. 1 Claim. (Cl. 202—52.)

In the process of producing ammonia and amines utilizable commercially and acetone, subjecting vinasses to pyrogenous distillation under a pressure of approximately 60 m/m of mercury and in the presence of such an amount of lime as is required to produce acetone.



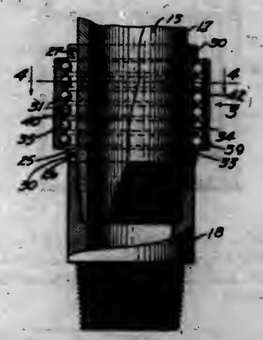
1,756,192. AIR-PRESSURE APPARATUS FOR AUTOMOBILES. JOHN HANSON, Pelican Rapids, Minn. Filed May 10, 1927. Serial No. 190,276. 1 Claim. (Cl. 230—38.)

In an air pressure device for an automobile the combination of an air pump fixed to the automobile and including a piston and a stem extending upwardly from the piston, an arm extending upwardly from the pump, a lever pivoted between its ends to the upper end of the arm and pivotally connected at one end to the upper end of the stem, a shaft, bearings adapted to support the shaft, in a horizontal position at one side of the engine of the automobile and with its front end close to the fan belt of the engine, an eccentric secured to the rear end of the shaft and a strap associated therewith, a rod secured to the eccentric strap and having a ball and socket con-



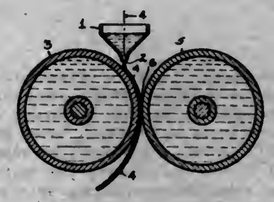
nection with the other end of the lever, a stub shaft, a bearing adapted to be secured to the engine to rotatably support the stub shaft close to the fan belt, a pulley secured to the stub shaft for contact with the fan belt having a clutch face, the front end of said first shaft being of non-circular formation, a clutch member having a bore provided with a non-circular portion receiving said end of the shaft, a spring normally holding said second clutch member in engagement with said clutch face of the pulley, and means by which said clutch member may be withdrawn from engagement with said clutch face and held out of engagement therewith.

1,756,193. APPARATUS FOR MOLDING PLUGS AND THE LIKE. CHARLES MARVIN HART, Waycross, Ga. Filed Oct. 15, 1927. Serial No. 226,475. 8 Claims. (Cl. 22—92.)



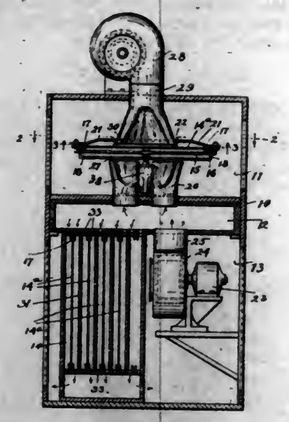
3. Molding apparatus comprising a horizontal base provided with an opening, a pair of relatively movable complementary mold sections arranged on said base, a retractable core slidably mounted in said opening and normally arranged within said mold, a cylinder, a piston mounted to reciprocate in said cylinder and provided with a piston rod projecting from one end thereof, a pair of levers pivotally supported intermediate their ends and connected at one end to each of said sections, and connections between said piston rod and the opposite ends of said levers.

1,756,194. PROCESS AND MACHINE FOR THICKENING PULP. ANTON JOSEPH HAUG, Nashua, N. H. Filed Sept. 4, 1926. Serial No. 133,579. 15 Claims. (Cl. 92—35.)



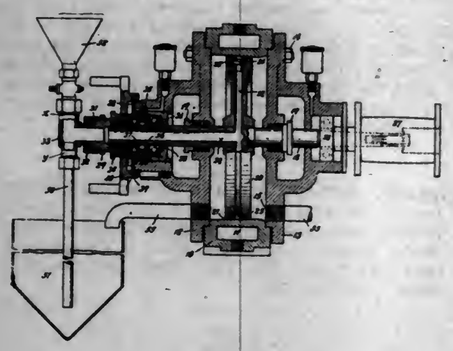
1. In a pulp thickening machine, the combination of a screening drum adapted to be revolved rapidly to create centrifugal force for promoting the screening action, means for conducting the material to be thickened into the interior of said drum, whereby the thickened pulp will collect upon the inner surface of said drum, and means revolving independently of said drum for advancing only the pulp on and closely adjacent to the screening surface toward the outlet therefor.

1,756,195. ANTIFRICTION BEARING FOR DRILL PIPES. HALL H. HOLDAWAY, Long Beach, Calif., assignor to Byron Jackson Co., West Berkeley, Calif., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,231. 10 Claims. (Cl. 308—6.)



1. In an anti-friction bearing for drill pipe, the combination of: an inner race having a number of ball channels, said inner race being adapted to surround a drill pipe and having a groove connected to all of said ball channels; an outer race adapted to surround said inner race, said outer race having ball channels arranged to align with said ball channels of said inner race, and said outer race having a groove connected to all of said ball channels of said outer race; balls in said ball channels, said balls being inserted through said grooves when they are aligned; and an insert for filling one of said grooves.

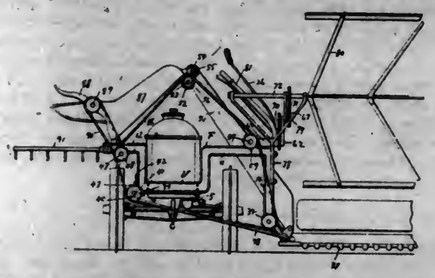
1,756,196. METHOD OF MAKING METAL SHEETS. BEN F. HOPKINS and JOHN V. O. PALM, Cleveland Heights, Ohio, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1928. Serial No. 256,226. 1 Claim. (Cl. 207—10.)



In a method of casting metal strips, the steps which consist in pouring against a horizontal roll at a point materially above the central horisontal plane thereof, molten metal in a column approximating the width and thickness of the desired strip, maintaining the temperature of said roll sufficiently below that of the metal to at least partially solidify the latter between its point of engagement with the roll and the central horisontal plane thereof, and then engaging the partially solidified strip with a second roll while maintaining a relationship between the rolls adapted to compress and size the resulting metal strip.

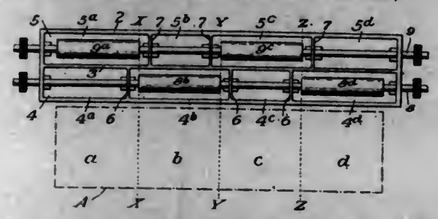
1,756,197. FILM DRIER. GEORGE W. HOPKINS, Cleveland, Ohio. Filed Feb. 23, 1926. Serial No. 89,967. 13 Claims. (Cl. 34—26.)

1. In a drier, a cabinet having means for rapidly rotating a film about a transverse axis, and having means for creating an air flow on opposite sides of the film while it is being rotated.



1,756,198. HOMOGENIZING MACHINE. GUY CLEMENT HUBBELL, London, England. Filed Oct. 9, 1925. Serial No. 61,395. 10 Claims. (Cl. 83—13.)

1. The combination with a homogenizing machine having a pair of working surfaces arranged closely adjacent to one another to form a narrow gap through which the material to be treated is forced by centrifugal force, means to produce a rapid relative rotation of said surfaces and thereby establishing the centrifugal force aforesaid and simultaneously setting up a suction effect in the material on its way to the narrow gap, of means including said centrifugally developed suction for automatically returning the material to said machine for retreatment after it has been discharged from said machine.



1,756,199. TRACTOR GRAIN BINDER. ANTON P. KAMROWSKI, Cochrane, Wis. Filed Feb. 9, 1928. Serial No. 253,058. 4 Claims. (Cl. 56—22.)

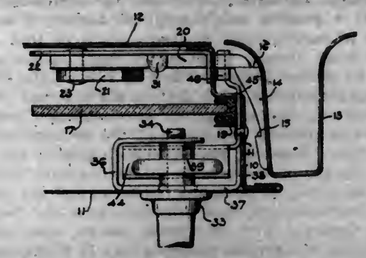
1. As a new article of manufacture, an attachment frame for supporting the parts of a binder on a tractor comprising a bar bent to provide a U-shaped portion one leg of which merges into a relatively long sidewardly extending arm merging into a depending arm, said depending arm merging into a rearwardly extending side arm, the

other leg of the U-shaped portion merging into a relatively short sidewardly extending arm which in turn merges into a rearwardly extending side bar.

1,756,200. COLOR FOUNTAIN FOR BLOCK PRINTING MACHINES. WALTER F. KAUFMAN, Lancaster, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1928. Serial No. 299,969. 10 Claims. (Cl. 101—210.)

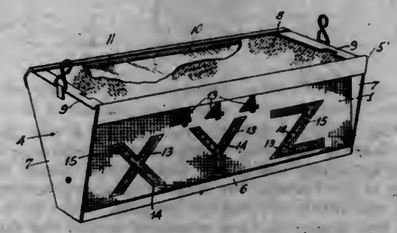
1. A color carriage having a plurality of longitudinally extending troughs, each of said troughs having transverse partitions therein.

1,756,201. LOUD-SPEAKER. JOHN E. KIERNAN, Brooklyn, N. Y. Filed Dec. 9, 1927. Serial No. 238,732. 2 Claims. (Cl. 179—108.)



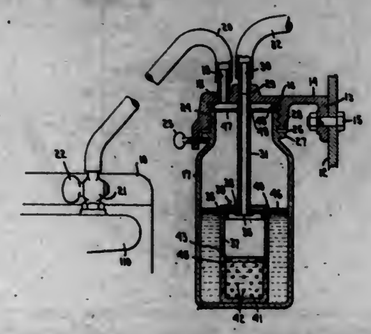
1. In a loud speaker, a diaphragm, a plurality of electromagnets arranged around said diaphragm, armatures for said electromagnets, and angular extensions at each end of said armatures for communicating vibrations to said diaphragm.

1,756,202. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 16, 1926. Serial No. 95,033. 9 Claims. (Cl. 292—165.)



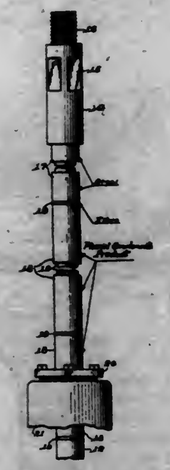
2. A latch mechanism for an automobile door having a sliding window of a width substantially equal to the full width of the body of the door with the side edge thereof

in close proximity to the jamb face of the door comprising inside and outside latch operating devices carried by the door on opposite sides of the projected path of movement of said sliding window and operable independently of each



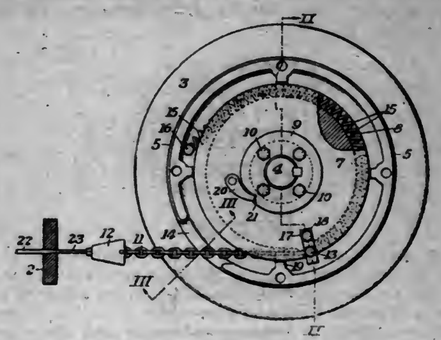
other, and an interlocking device extending across a vertical side of the door substantially opposite the operating devices in a horizontal plane and partaking of a movement of oscillation in the transverse vertical plane in its interlocking function.

1,756,203. SIGN, TABLET, OR THE LIKE FOR DAY AND NIGHT DISPLAY. GEORGE LINDSEY, Stoke Newington, London, England. Filed Aug. 31, 1928, Serial No. 303,339, and in Great Britain Oct. 6, 1927. 4 Claims. (Cl. 40—130.)



1. A sign comprising a sheet of light transmitting material having its front face roughened to scatter light rays passing through the sheet, portions of the front face being left smooth to define characters to be displayed when the sign is illuminated by light passing through the same, the rear face of said sheet having a reflecting medium applied thereto in back of the characters.

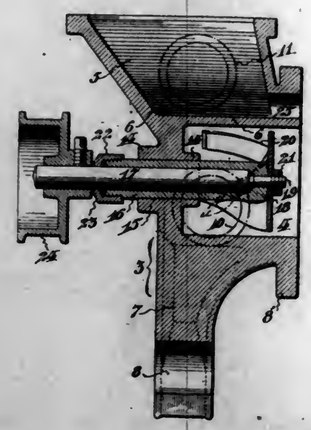
1,756,204. VACUUM-CLEANER APPARATUS. HERMAN C. LINN, Cleveland, Ohio, assignor to William F. Rawlings, Cleveland, Ohio. Filed Dec. 16, 1926. Serial No. 155,279. 4 Claims. (Cl. 261—122.)



3. In apparatus of the character described, the combination of a chamber adapted to receive liquid therein and having a discharge port, a second chamber also adapted to receive liquid and mounted within said first-named chamber and having a closed bottom and a multiplicity of small openings in its lateral walls, an inlet conduit connected to said inner chamber, a float disposed in said first-named chamber and substantially closing the end of the space between said inner and outer chambers, and a second float mounted in said inner chamber and carrying a screen through which air from said inlet conduit must pass before contacting said liquid.

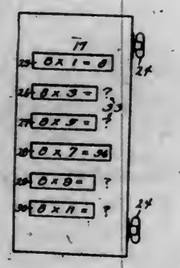
1,756,205. POLISHED ROD FOR OIL-WELL PUMPING. SUMNER B. MERRICK, Hanover, Mass., assignor to Merrick & Longbottom, Inc., a Corporation of Delaware. Filed Sept. 1, 1928. Serial No. 303,452. 14 Claims. (Cl. 255—28.)

1. A polished rod, comprising a core, a normally fixed radial extension upon each of the opposite ends of said core, a tube surrounding said core between said extensions, and one or more washers also surrounding said core between said extensions, said washers swelling when immersed in a liquid and creating a fluid-tight joint between said extensions and said tube.



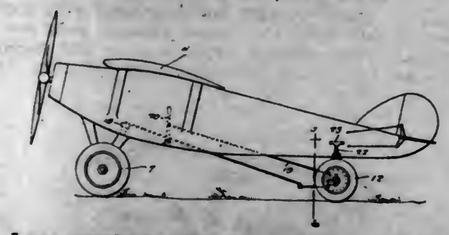
1,756,206. ROD OR WIRE DRAWING BLOCK. FRANK H. NULLMEYER, Struthers, Ohio. Filed Oct. 21, 1924. Serial No. 744,895. 9 Claims. (Cl. 205—20.)

7. Apparatus for drawing wire comprising a block, a chain having a wire gripping chuck, a retracting means for the chain within the block and to which the chain is attached, a block engaging portion on the retracting



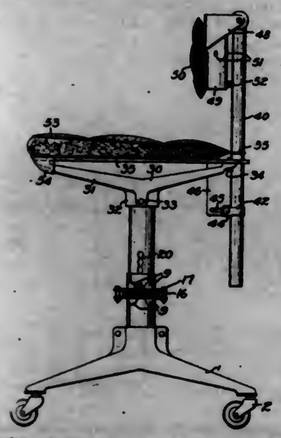
means, said retracting means being movable from a position where the chain is retracted to a position where the chain is fully extended, a spring for yieldably opposing the movement of the retracting means to the fully extended position, and for returning the retracting means to a position where the chain is retracted, means on the block adapted to engage the block engaging portion of the retracting means when the chain is fully extended, whereby motion is transmitted from the block to the retracting means, and a holding mechanism for retaining the retracting means between the said two positions.

1,756,207. CIRCULATING PUMP FOR POWER UNITS. JOSEPH S. OECHSLE, Philadelphia, Pa., assignor to Metalweld Service Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 20, 1925. Serial No. 44,738. 4 Claims. (Cl. 103—89.)



1. In a circulating pump, a casing having intake and outlet chambers, a pump impeller arranged for rotation within the intake chamber, means for completing the path of circulation of a fluid pumped by said impeller from said intake chamber to said outlet chamber, and means for permitting the thermo-siphonic passage of said fluid into said outlet chamber from a point exterior of said intake chamber.

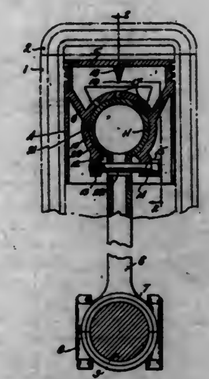
1,756,208. TEACHING DEVICE. MATTIE PEELEN, Sanborn, Iowa. Filed Mar. 12, 1928. Serial No. 261,074. 3 Claims. (Cl. 35—2.)



1. In a teaching device, a casing including a screen, a ribbon movable under said screen, problems with answers displayed on said ribbon, each problem and answer extending transversely of the ribbon's direction of movement, and the problems being arranged in equally spaced succession, the screen being provided with a sight opening constructed so as to reveal a problem and its answer simultaneously, and with another opening constructed so as to reveal a problem and conceal its answer, a web of material of substantially the same width as that of an opening being formed between the sight openings and adapted to conceal a problem and its answer, the spacing of the openings being twice that of the problems, whereby alternate problems may be simultaneously centered under the respective openings, and the problem between said alternate problems may be simultaneously concealed beneath the web, whereby as the ribbon is gradually moved in one direction, a particular problem and its answer may be first displayed, then fully concealed, and then the problem displayed with its answer hidden, and whereby first one pair of alternate problems may be displayed, and then a succeeding pair of alternate problems may be displayed while the pair just displayed is concealed.

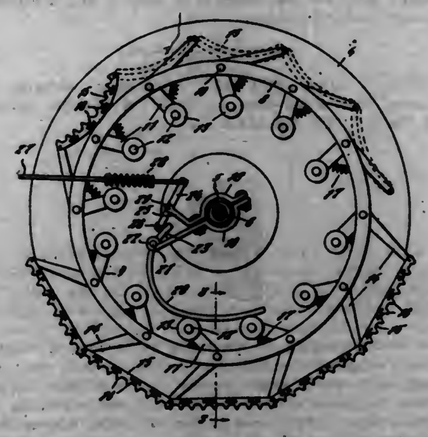
1,756,209. LANDING GEAR FOR AEROPLANES. HENRY H. PHILLIPS, Judith Gap, Mont. Filed Aug. 9, 1928. Serial No. 298,510. 1 Claim. (Cl. 244—2.)

In an aeroplane including a fuselage, a rear landing gear therefor including a transversely extending semi-elliptical spring, means for securing the center of the spring to the fuselage, the ends of the spring terminating below and within the plane of the sides of the fuselage, a dead axle having its ends extending beyond the sides of the fuselage, means for securing the ends of the spring to the dead axle, and dirigible wheels carried by the ends of the axle and disposed beyond the sides of the fuselage.



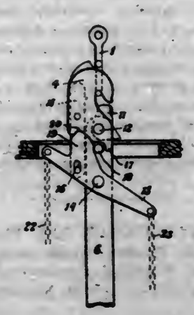
1,756,210. CHAIR. ERNEST RACE, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 23, 1928. Serial No. 248,595. 6 Claims. (Cl. 155—95.)

6. A portable chair of the office type having a relatively broad base that may be readily moved about a floor,



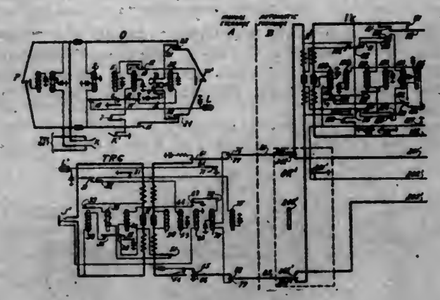
a seat, a telepscoping tubular connection between the base and seat, one portion of said tubular connection being swiveled relative to the other, and a ball-bearing between said tubular portions having an annular ball race of substantial diameter to provide a bearing at a substantial distance from the axis of the tubular support.

1,756,211. PISTON AND CONNECTING ROD. ALLAN E. REID, Boston, Mass., assignor to Reid Piston Company, Brookline, Mass., a Corporation of Massachusetts. Filed Dec. 19, 1928. Serial No. 327,006. 18 Claims. (Cl. 74—108.)



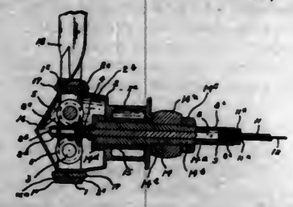
1. The combination of a piston with a connecting rod, the piston comprising an integral bearing element spaced from the inner surface of the piston head, said element having a journal opening, and the connecting rod having a pivot member permanently united to it, said connecting rod being capable of assembly with the piston by movement of the pivot member axially into the journal opening in the bearing element.

1,756,212. SAFETY ATTACHMENT FOR VEHICLE WHEELS. BOYD REYNOLDS, McKeesport, Pa. Filed July 10, 1928. Serial No. 291,590. 2 Claims. (Cl. 301—48.)



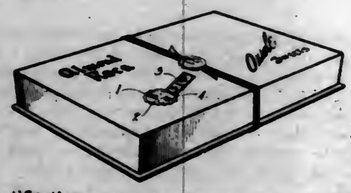
1. A safety attachment for a vehicle wheel comprising a plurality of ground engaging elements mounted on the wheel, means for normally holding the elements out of ground engaging position, a bracket fixed to the axle of the wheel having spaced angular extensions, a pivoted lever carried by one extension, a pivotally mounted shoe carried by the other extension, said lever having one end overlapping the adjacent end of the said shoe whereby pivotal movement of the lever will cause the outer end of the shoe to be moved into engagement with underlying ground engaging elements for placing the latter in ground engaging positions, an operating rod connected to said lever, and a shock absorber associated with said rod.

1,756,213. RELEASING GEAR FOR USE WITH LOWERING APPARATUS. LESLIE HAMPTON ROBINSON, Chiswick, London, England. Filed Apr. 18, 1929, Serial No. 356,245, and in Great Britain Apr. 19, 1928. 14 Claims. (Cl. 9—23.)



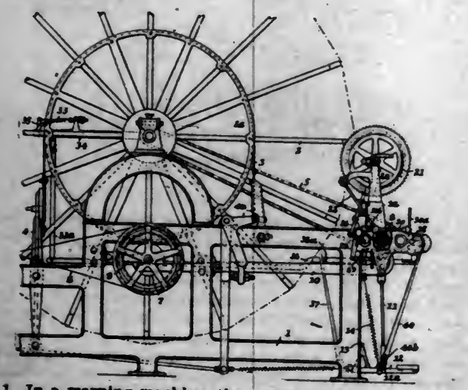
7. Lowering and releasing gear for ships' boats including a pair of supports fore and aft the boat, a hook pivotally mounted on each support and control mechanism within the boat for effecting release of said hooks, each hook comprising a shank, a mouth at the upper end of said shank and a tail projection adapted to abut with said support to prevent the transmission of strain to said control mechanism on the load being applied at an inclination.

1,756,214. TELEPHONE TRUNKING SYSTEM. NORMAN H. SAUNDERS, Homewood, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 28, 1928. Serial No. 278,512. 25 Claims. (Cl. 179—27.)



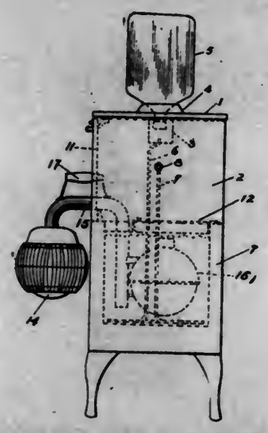
1. In a telephone system, a trunk line extending from a first to a second exchange, a second trunk line extending from the second exchange to a third exchange, an automatic switch at the second exchange terminating said first trunk line, means for operating said switch to connect with said second trunk line to extend a call from the first exchange to the third exchange, a battery at said second exchange connected to both said trunk lines, and means responsive to the answering of the call for disconnecting said battery from both of said trunk lines.

1,756,215. FAN. WILLIAM H. SCHNEIDER, Milwaukee, Wis. Filed Oct. 17, 1921, Serial No. 508,276. Renewed Mar. 25, 1929. 2 Claims. (Cl. 170—163.)



1. In combination, a rotary fan comprising a body portion, having pivotally mounted radial blades; an automatic controlling member remotely positioned with respect to said fan, and including a casing; a flexible, non-extensible member projecting therefrom; means within said casing for causing said non-extensible member to move axially; a sheath surrounding said non-extensible member, and means for operatively connecting said non-extensible member and said blades to transmit controlling motions of said non-extensible member to said blades, to thereby automatically vary the angular setting of said blades.

1,756,216. IDENTIFICATION AND PRICE TAG. WILLIAM H. SEELEY, Tacoma, Wash., assignor to Brown & Haley, Tacoma, Wash., a Corporation of Washington. Filed June 25, 1927. Serial No. 201,494. 1 Claim. (Cl. 40—2.)

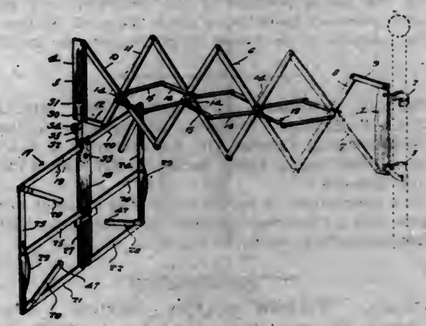


An identification and price bearing tag for merchandise, said tag comprising an ornamental identification portion provided on its under side with an adhesive whereby it may be permanently attached to an article without impairing its ornamental appearance, and a price bearing portion disconnectably attached to said identification portion and adapted when removed therefrom to leave the ornamental portion in a symmetrical form.

1,756,217. WARPING MACHINE. GRANT SIPP, Paterson, N. J., assignor to Sipp Eastwood Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 28, 1928. Serial No. 322,439. 12 Claims. (Cl. 28—30.)

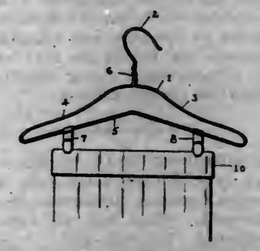
1. In a warping machine, the combination of the frame, driven means including a revoluble reel on which to wind the warp, a rotated driver for said means, and a collapsible shifter system movable by the operator to shift the driver into driving relation to said means, said system in one of its collapsed and extended states holding said member further from said means than when in the other state.

1,756,218. WATER COOLER. RUSSELL T. SMITH, Cincinnati, Ohio, assignor to The Crosley Radio Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed May 31, 1929. Serial No. 367,320. 3 Claims. (Cl. 62—143.)



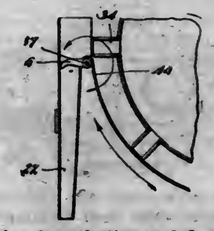
1. In a device of the character described, a cabinet having in its lower portion a refrigerating compartment suitably insulated, with a movable cover, a movable closure for that portion of one of the sides of the cabinet above said compartment, said closure having clearance for the connecting element between the portions of a portable refrigerating unit, the evaporator of which is inserted into the cabinet, the space above the compartment as disclosed by said side closure being sufficient to permit of insertion of said evaporator, and tubular connection from an elevated source of supply of water passing down through the compartment and thence upwardly to a convenient point for use, where it is coupled with a tap that extends from the cabinet.

1,756,219. GOLF PUTTER. WILLIAM C. SPIKER, Atlanta, Ga. Filed May 31, 1928. Serial No. 281,834. 1 Claim. (Cl. 273—77.)



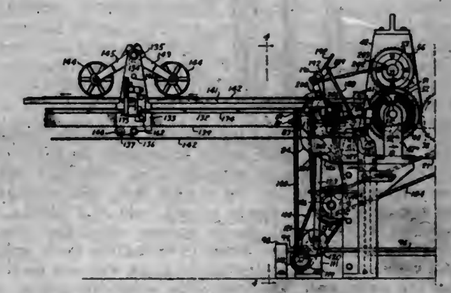
A head for a golf club having a top surface of substantially rectangular outline and a ball striking face disposed at a right angle thereto, a longitudinal groove formed medially in said top surface and extending the entire length thereof, said groove providing similar fields to either side and said fields being oppositely bevelled, the bottom surface of the groove and said bevelled surfaces having their side edges all lying in parallel relation and adapted to have contrasting colors whereby one field of the top surface will be visible at whatever angle the light rays strike said top surface, for the purpose set forth.

1,756,220. COLLAPSIBLE BOOK HOLDER. LEROY EDMUND STACKPOLE, Sanford, Me. Filed Dec. 28, 1927. Serial No. 243,077. 1 Claim. (Cl. 248—1.)



In structure of the class described, a bracket for attachment to a support, an additional bracket, a vertically arranged lazy tong structure including a series of vertically disposed intersecting cross arms pivotally secured together at their points of intersection, the outermost arms being pivotally connected to the adjacent brackets, a horizontally arranged lazy tong structure for bracing the vertically arranged lazy tong structure, said horizontally disposed lazy tong structure including a plurality of angular lugs secured on the opposite sides of the points of intersection of the cross arms of the vertically disposed lazy tong structure, pivotally connected arms secured at their outer ends to their respective lugs on the respective sides of the vertically disposed lazy tong structure, both of said lazy tong structures being adapted for simultaneous operation.

1,756,221. GARMENT HANGER AND STRETCHER. HARRY E. STALEY, Rochester, N. Y. Filed Oct. 15, 1928. Serial No. 312,452. 1 Claim. (Cl. 223—62.)



A garment hanger formed of a single piece of wire, the upper portion of which is shaped to support a coat, the lower portion having two inclined members therein sloping down and out from the center, a spring clamp mounted to slide on each inclined member, the clamps being adapted to hold and hang up trousers by the bottom, the clamps and inclined members being so related that the weight of the trousers hanging from the clamps will tend to make the clamps slide down and out on the inclined members and separate the clamps from each other and draw the garment between the clamps out tight and straight, the hanger as a whole being adapted to be sprung in at the ends to facilitate the sliding of the clamps down and out, the ends of the hanger when released being adapted to spring out and help stretch the garment supported between the clamps.

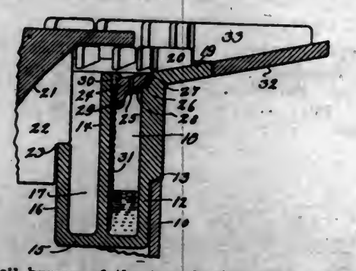
1,756,222. CHERRY DROPPER. WESLEY S. SWETT, Newtonville, Mass., assignor to United Candy Company, Boston, Mass., a Corporation of New York. Filed June 25, 1925. Serial No. 39,508. 5 Claims. (Cl. 107—1.)

1. In a machine for selecting and depositing candy inserts or the like, a rotatable drum adapted to contain a mass of candy inserts, means on said drum for receiving individual inserts from the mass in said drum, a fixed guard cooperative with said receiving means for retaining the individual inserts in said means, a plurality of delivery conduits, and a plurality of picker fingers arranged to operate near the termination of said guard to select the inserts and transfer the same to said delivery conduits.

1,756,228. CUTTING MECHANISM. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor to George W. Swift, jr., Inc., Bordentown, N. J., a Corporation of New Jersey. Filed Aug. 21, 1928. Serial No. 301,041. 24 Claims. (Cl. 164—68.)

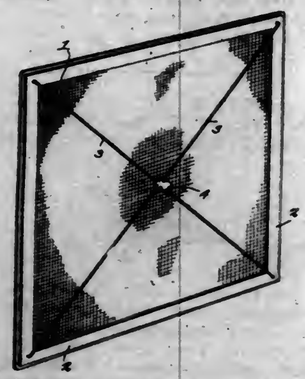
1. In a machine for severing successive portions from a continuous web, the combination with web-cutting mechanism, of means actuable by the web from the same normal position of rest for all speeds of said web for controlling the operation of the cutting mechanism, operating connections for driving said web-cutting mechanism, said operating connections including variable speed transmission mechanism, and means variable with the variable speed mechanism for starting and stopping said web-cutting mechanism from and at a fixed position of rest.

1,756,224. SAFETY RAZOR. ARISTEDS A. THEODOROPULOS, New York, N. Y. Filed Nov. 26, 1927. Serial No. 235,782. 3 Claims. (Cl. 30—12.)



1. In a safety razor, a safety member with wide openings, for clamping a razor blade against a top member, an auxiliary safety member slidably mounted on the said safety member, and a set screw threadedly passed thru the auxiliary safety member and abutting the said saftely member so that the operative size of the wide openings of the safety member may be adjusted.

1,756,225. UNION CHECK VALVE. SOREN THURSTENSEN, Louisville, Ky., assignor to Henry Vogt Machine Co., Louisville, Ky. Filed Jan. 2, 1926. Serial No. 78,963. 7 Claims. (Cl. 251—121.)

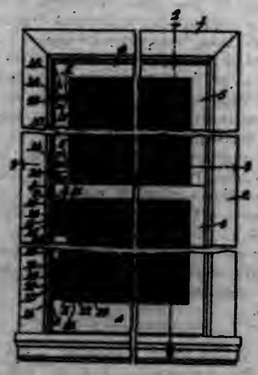


5. In a check valve comprising a tubular body having identical detachable valve seats at each end thereof, a ball valve slidable in said body between the seats thereof and adapted to close either seat, a flat grid centrally secured in said body to prevent closing contact between said valve and one of said seats, and means carried by said grid to guide the valve toward and from its seat.

1,756,226. OIL BURNER. GEORGE E. TILLER, Sioux City, Iowa. Filed Oct. 22, 1928. Serial No. 314,267. 6 Claims. (Cl. 158—67.)

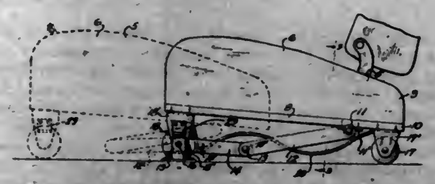
1. An oil burner of the type having concentric, spaced walls, connected at their lower extremities to form an annular well, a feed pipe communicating with said well, a burner ring closing the top of said well, and provided with openings for the escape of gas, said ring having a substantially horizontal flange resting upon the outer wall and a vertical, inner flange receiving the inner wall, and a cylindrical wick encircling the inner wall and spaced from the outer wall, extending from near the bottom of the well, and received between the vertical flange of the burner ring and the inner wall.

1,756,227. SCREEN FOR AUTOMOBILE WINDOWS AND THE LIKE. JOHN TORRENT, Muskegon, Mich. Filed Aug. 29, 1929. Serial No. 389,225. 1 Claim. (Cl. 156—14.)



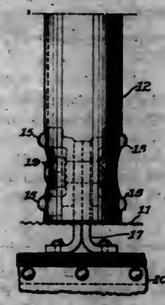
A screen including a resilient frame, a screen fabric connected to and surrounded by the frame, diagonally disposed resilient members secured at their ends to the respective corner portions of the frame and crossed adjacent to the center of the screen, said members being joined at their point of crossing, and a handle extending from the joined portions of the members, each of the crossed members including a single piece of resilient material adapted to be bowed by pulling on the handle.

1,756,228. SOLVENT FOR CELLULOSE NITRATE. JOHN P. TRICKEY, Evanston, Ill., assignor to Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 3, 1928. Serial No. 297,370. 9 Claims. (Cl. 134—79.)



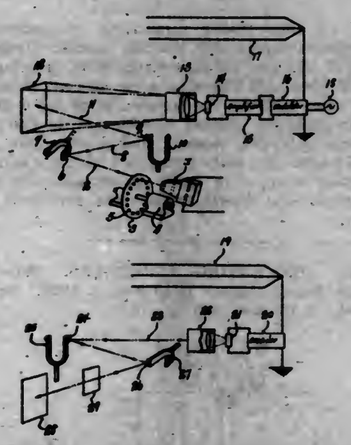
9. A composition of matter comprising cellulose nitrate, a gum, and a plasticiser dissolved in a solvent comprising tetrahydrofurfuryl acetate.

1,756,229. WINDOW-SCREEN DEVICE. WILLIAM TURNER, Portland, Oreg. Filed Feb. 19, 1929. Serial No. 341,116. 3 Claims. (Cl. 156—14.)



2. In a device of the class described, a window screen adapted for mounting in the guide of a window frame, a tubular member in the screen, a shoe adjustable in the screen and slidable in the guide, a stem carrying the shoe and slidable in the tubular member, a cam lever pivotally mounted on the stem and engaging the tubular member to advance and retract the shoe with respect to the guide, and a compression spring abutting against the shoe and against the tubular member.

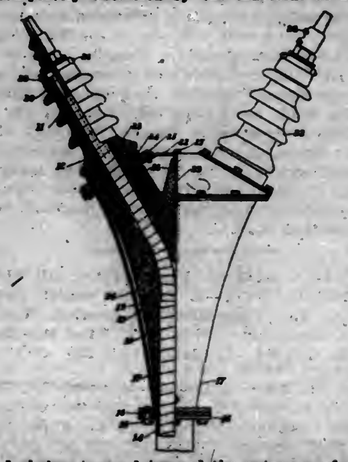
1,756,230. AUTOMOBILE SEAT. HERMAN L. VAN VALKENBURG and SWIFT MILLER, Wauwatosa, Wis., assignors to The Paralock Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 19, 1926. Serial No. 123,559. 4 Claims. (Cl. 155—14.)



4. A longitudinally movable vehicle seat, comprising a body portion mounted to move horizontally, a link mechanism pivotally connected to the body portion adjacent one end and to a support adjacent the other end and permitting the seat to move horizontally independently of other movements, and means for preventing any vertical movement of the seat except from a normal position.

1,756,231. AIRPLANE. GEORGE E. ARMINGTON, Wickliffe, and ROBERT G. NIGHTINGALE, Cleveland, Ohio, assignors to The Glenn L. Martin Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 5, 1927. Serial No. 231,246. 3 Claims. (Cl. 244—31.)

1. In combination, a hollow strut having opposed openings in the walls thereof, brackets secured to the inner sides of said walls having sockets opposite said openings, a fitting extending into said strut endwise to a position between said brackets, and a bolt extending through said brackets and fitting with the head and nut thereof enclosed by said sockets.



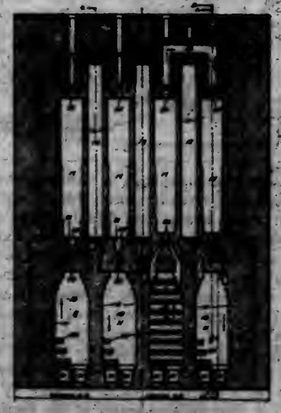
1,756,232. TELEVISION APPARATUS. JOSEPH JOHN ARNAUD, South Milwaukee, Wis. Filed Feb. 17, 1928. Serial No. 255,042. 6 Claims. (Cl. 178—6.)

1. The method of preparing an equalising screen for a searching ray, which traverses a projection screen according to a rule that obliges it to remain longer directed to some portions of the screen than to others, or traces lines more congested in some portions of the projection screen than in others; said method consisting in: causing this ray to traverse a photographic plate according to said rule; and then developing said plate.

1,756,233. OUTLET FOR MULTIPLE-CONDUCTOR CABLES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 16, 1927. Serial No. 175,656. 17 Claims. (Cl. 247—6.)

1. The combination with a multiple conductor cable having an outer metallic sheath, of a body of solid dielectric material having a main passage therein for receiving said cable and having branch passages for the individual conductors of said cable, said main and branch passages being completely encircled by the material of said body,

said body being tapered toward the entrapce of said cable to said main passage and a metal housing tapered to conform to the surface of said body of dielectric material and disposed adjacent thereto and connected to said sheath.

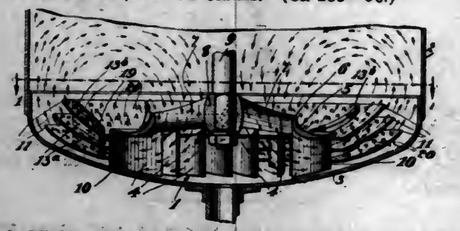


1,756,234. PITCH-COKING PROCESS AND PRODUCT. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 16, 1919, Serial No. 330,988. Renewed Mar. 21, 1924. 17 Claims. (Cl. 202—5.)

3. A process which comprises coking a mixture containing pitch and a sufficient proportion of bauxite to prevent substantial foaming of the mixture during coking thereof.

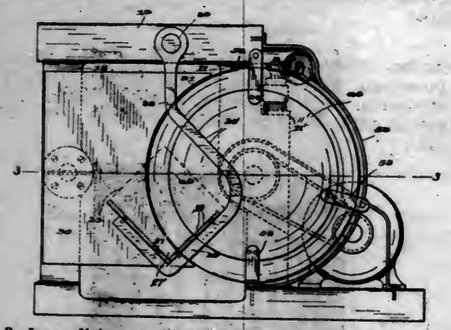
8. A mixture containing pitch and a sufficient proportion of bauxite to prevent substantial foaming of the mixture during coking thereof.

10. Coke made by coking a mixture of pitch and bauxite and substantially ash-free as regards residues other than bauxite.



1,756,235. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1928. Serial No. 620,582. 9 Claims. (Cl. 202—143.)

1. In a coke oven battery, in combination: a series of alternate parallel horizontally elongated coking chambers

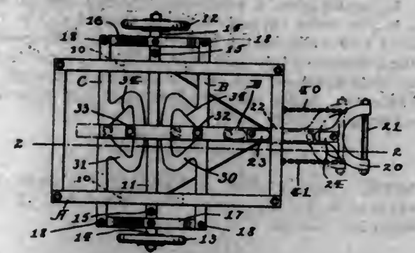


and heating walls, said heating walls respectively comprising vertical combustion flues; a plurality of horizontal flues in each half of each heating wall and respectively connecting a plurality of the combustion flues of their respective heating walls; each of the horizontal flues being also communicably connected with one of the horizontal flues of an adjacent heating wall; a plurality of pairs of end to end individually regulable and reversible cross-wise extending regenerators adjacent the coking chambers and the heating walls, there being only a pair of the end-to-end positioned regenerators directly connected with the combustion flues of a single heating wall, whereby the alternate regenerators of the battery may be operated for flow in one direction while the intermediate regenerators are operated for flow in the opposite direction; substantially as specified.

1,756,236. MIXING, DISSOLVING, OR SIMILAR APPARATUS. HENRY S. BEERS, Westport, Conn., assignor to The Turbo-Mixer Corporation, New York, N. Y., a Corporation of New York. Filed May 29, 1929. Serial No. 366,794. 21 Claims. (Cl. 259—96.)

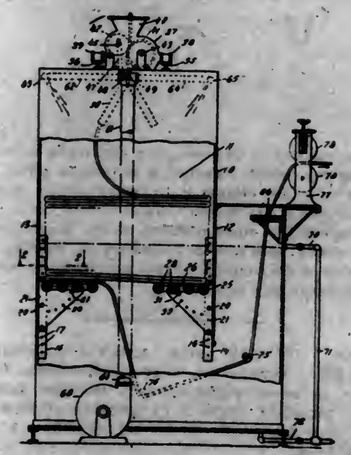
1. Mixing, dissolving or reducing apparatus, comprising means for producing mix-circulation, and adjacent such means, a plurality of spaced plates substantially parallel to the planes of adjacent mix-flow and provided with toothed surfaces, whereby the mix is forced through the plate spaces and refractory components are reduced by tooth action.

1,756,237. SLICING MACHINE. EWALD BREDOW, Albany, N. Y., assignor of one-half to A. W. Meyer, Albany, N. Y. Filed Aug. 19, 1927, Serial No. 214,050. Renewed July 1, 1929. 3 Claims. (Cl. 146—102.)



3. In a slicing mechine and in combination, a frame, a vertically disposed circular knife rotatively mounted on a horizontal axis, means for rotating said knife, and a pendent rack manually oscillatable on an axis parallel to the axis of said knife at one side of said knife, said rack having a substantially V-shaped seat for material to be sliced, said seat being open at its end adjacent the knife and adapted to support the material exposed for engagement by the hand of an operator, the supporting faces of said seat extending at substantially a right angle toward the vertical plane of said knife, whereby material on said seat may be fed toward the knife entirely by the pressure of the operator, and independently of the action of gravity, with the inclined faces of the seat serving to guide the material.

1,756,238. HOSPITAL EQUIPMENT. LAURA A. CHAMBERS, St. Louis, Mo. Filed Apr. 9, 1928. Serial No. 268,507. 4 Claims. (Cl. 4—113.)



2. In a device of the character described, a pan of rigid material, there being a depression formed in said pan comprising a central portion of substantial area and a converging trough leading therefrom, a portion of said trough having a rigid cover, and an inflatable ring overlying the edge of said pan and overlying the covered portion of said trough.

1,756,239. TRAILER. PAUL B. CHOJNACKI and EDWARD P. CHOJNACKI, Los Angeles, Calif. Filed Feb. 12, 1929. Serial No. 339,306. 4 Claims. (Cl. 280—33.55.)

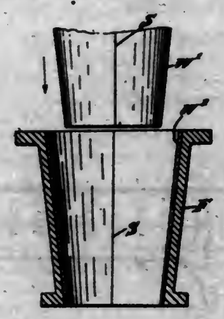
3. A two wheel trailer, comprising, in combination, a body frame having an axle, steering knuckles pivoted upon the ends of said axle having steering arms, carrying wheels journaled upon said knuckles, a tie element securing the steering arms whereby the steering arms are operated in unison to guide the steering wheels, said tie element having a cam operating element, and a draw bar slidably fulcrumed upon said body frame and having a cam engaging element adapted to assist in transmitting steering movement to said wheels through the movement of said draw bar.

1,756,240. PROCESSING APPARATUS. WILLIAM L. CONRAD, Boston, Mass. Filed Aug. 2, 1928. Serial No. 296,945. 9 Claims. (Cl. 8—19.)

2. Apparatus of the character described comprising a receptacle, means for feeding material into said receptacle,

and means for supporting the material in the receptacle, means for withdrawing the material from the bottom layer in the receptacle, said supporting means being angularly adjustable and vertically adjustable.

1,756,241. CLIP FOR WRITING TOOLS. CHARLES F. DOEBLER, New York, N. Y., assignor to Benjamin Frank, New York, N. Y. Filed Sept. 22, 1922. Serial No. 589,754. 16 Claims. (Cl. 24—11.)



16. A clip comprising two superimposed flat loops adapted to be fitted unto a tubular body, a tongue for each loop integral therewith projecting therefrom tangentially to the plane thereof and bent downwardly with respect thereto, and a corrugation in one of said tongues substantially the entire length thereof, the other tongue being disposed within said corrugation.

1,756,242. WRITING TOOL. CHARLES F. DOEBLER, New York, N. Y., assignor to Benjamin Frank, New York, N. Y. Filed Sept. 26, 1922. Serial No. 590,598. 12 Claims. (Cl. 120—9.)

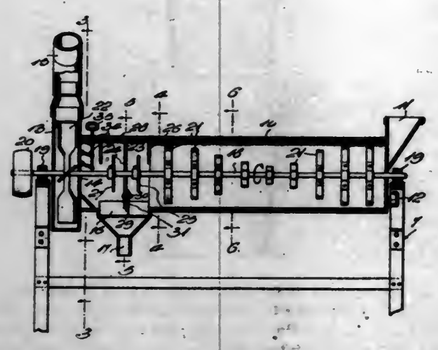
1. A pencil comprising in combination, a substantially tubular body portion, a tip at one end thereof, a cap at the opposite end, and a hollow outer casing comprising a plurality of separate removable tubular sections surrounding said body portion, said sections forming a cylinder tapering towards said tip and having annular depression near its junction therewith to facilitate the handling of said pencil during operation.

1,756,243. METHOD OF MAKING MULTIPLE WALL CONTAINERS. WILLIAM E. BENSON, Wollaston, Mass., assignor of one-half to Theodore M. Prudden, Hingham, Mass. Filed Sept. 15, 1927. Serial No. 219,627. 3 Claims. (Cl. 93—36.)

1. The method of forming a side wall of a multiple wall container consisting in inserting an outer side wall into a form, and in inserting a second side wall within said first laid wall with an interposed layer of adhesive, said second wall having its vertical edges in abutment and disposed out of alignment with those of the first laid wall.

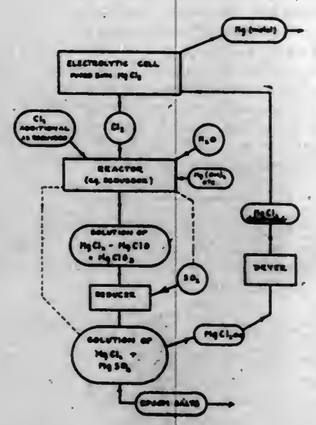
1,756,244. APPARATUS FOR ANNEALING GLASSWARE. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 20, 1926. Serial No. 82,421. 18 Claims. (Cl. 49—47.)

5. An apparatus for annealing glassware, which comprises a tunnel having a wall exposed to the influence of the outer atmosphere, means for directing heating and cooling media against the outer surface of said wall at selected intervals longitudinally thereof to control the temperature in said tunnel.



8. An apparatus for annealing glassware, comprising a tunnel having a metallic wall exposed to the influence of the outer atmosphere, means for projecting unconfined streams of a heating medium against said wall in regulable quantities at intervals longitudinally thereof to control the temperature in said tunnel.

1,756,245. DENTAL CROWN REMOVER. OSCAR A. FLAGSTAD, Minneapolis, and RUEBEN G. LEE, Hoffman, Minn. Filed Oct. 10, 1927. Serial No. 225,298. 8 Claims. (Cl. 32—10.)



1. A dental crown remover comprising a pair of jaws adapted to grip the sides of the crown, a link pivotally connecting the jaws, a tooth engaging screw threaded in and operating through the link between the jaws, and yieldable means associated with said screw for effecting a clamping action to the jaws.

1,756,246. GRAIN-CLEANING PROCESS AND MACHINE. THOMAS E. FORSTER, Wichita, Kans., assignor, by direct and mesne assignments, to The Forster Manufacturing Company, Wichita, Kans., a Corporation of Kansas. Filed Dec. 22, 1927. Serial No. 241,899. 10 Claims. (Cl. 83—30.)

1. A process of cleaning smut and the like from grain comprising the steps of producing a high-velocity air current in a cylinder having a smooth imperforate inner surface and violently whirling said current circumferentially of the cylinder, feeding grain into said cylinder, and relatively controlling the air current and the grain feeding to cause all of the individual grains to be violently whirled and carried in suspension by said current.

1,756,247. MAKING MAGNESIUM CHLORIDE FROM CHLORINE AND A MAGNESIUM BASE. THOMAS GRISWOLD, Jr., and RALPH M. HUNTER, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 2, 1928. Serial No. 289,673. 10 Claims. (Cl. 204—19.)

1. In a method of making magnesium chloride, the steps which consist in reacting chlorine and sulphur dioxide upon a suitable magnesium base in the presence of water to form chiefly magnesium chloride and magnesium sulphate, separating the magnesium chloride so formed, and electrolyzing the said chloride to produce magnesium metal and the chlorine to react with the magnesium base whereby the said chlorine is cycled in the process.

1,756,248. AZO DYE AND PROCESS OF MAKING THE SAME. HENRY JORDAN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 3, 1927. Serial No. 165,759. 17 Claims. (Cl. 260—87.)

1. A dye having affinity for vegetable fibre and containing the following group

where R is a substituted or unsubstituted aromatic radial without a hydroxyl group attached to the nucleus.

1,756,249. NONSPILLABLE CONTAINER. SOLOMON KAUFMAN, New York, N. Y. Filed Mar. 21, 1927. Serial No. 177,177. 19 Claims. (Cl. 215—37.)

1. A non-spillable container having an open end, an automatic closure normally closing the open end including a movable member adapted to be actuated and held in open position for the discharge of the contents of the container therefrom or to allow for the placing of contents within the same, and means for causing said movable member to automatically return to closed position when the container is tilted and the member is released, said member thereafter remaining in closed position regardless of the position of the container.

1,756,250. JUICE EXTRACTOR. FRANK H. KREUTER, Philadelphia, Pa. Filed Apr. 25, 1928. Serial No. 272,816. 1 Claim. (Cl. 100—41.)

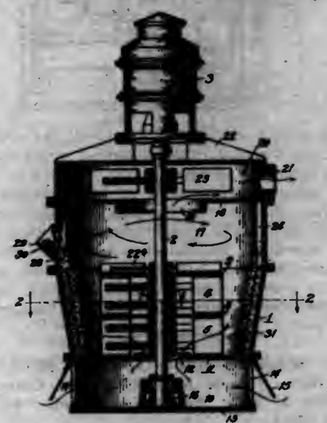
In a device of the class described, a plurality of side members connected along one edge by a fold, approximately parallel series of oppositely projecting elements carried by the side members and constituting pressure devices, and shoulders formed between the projecting elements and those edge portions of the side members remote from the fold, the shoulders being reversely positioned, alined transversely, and each positioned to directly engage the edge portion of an article of fruit placed between the side members.

1,756,251. PHTHALIC-UREA RESIN AND PROCESS OF MAKING SAME. BORIS N. LOUGOVOY, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Jan. 28, 1924. Serial No. 689,187. 34 Claims. (Cl. 260—2.)

1. A resinous material comprising the reaction products of urea, phthalic anhydride and formaldehyde.

12. A solution of the sirupy reaction product of urea, an organic acid, and formaldehyde, in an organic solvent.

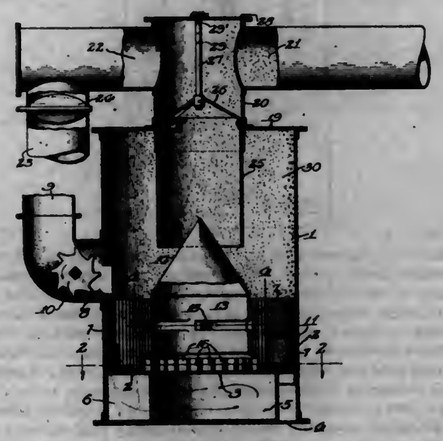
18. A resinous material comprising the reaction products of a dibasic carboxylic acid, an aldehyde, and a carbamid compound corresponding to the formula NR_2CXNR_2 in which X is an atom of the oxygen-sulphur group, which compound is capable of forming an amorphous condensation product with the aldehyde.



1,756,252. SYNTHETIC PRODUCT AND PROCESS OF MAKING SAME. BORIS N. LOUGOVOY, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J., a Corporation of New Jersey. Filed Apr. 21, 1924. Serial No. 708,017. 28 Claims. (Cl. 260—3.)

1. A white solid comprising the reaction product of a phenolic body on dimethylol urea.

5. A molding composition containing the crushed and dried reaction product of a phenolic body on a methylolurea containing a filler, the opacity of the final product made therefrom being determined by the amount of filler therein.



13. A molding composition containing the crushed and dried reaction product of a phenolic body on an acid-containing reaction product of an aldehyde and a carbamid derivative.

1,756,253. DEVICE FOR REDUCING MATERIALS. HENRY G. LYKKEN, Minneapolis, Minn. Filed Dec. 9, 1925. Serial No. 74,223. 29 Claims. (Cl. 83—46.)

1. A reducing device, comprising a chamber, a rotor therein, means for feeding air into the lower part of the rotor, means for feeding the material to be reduced into the chamber for reducing action thereon by the air acted upon by said rotor, and means for conveying the reduced material and air from above said rotor.

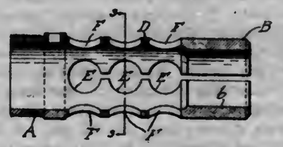
1,756,254. FLUIDIZER AND METHOD OF FLUIDIZING. HENRY G. LYKKEN, Minneapolis, Minn. Filed Jan. 11, 1928. Serial No. 245,971. 24 Claims. (Cl. 83—46.)

1. A device for fluidising materials, comprising a chamber for containing material to be reduced, and means within the chamber for causing vorticose action of a fluid and forcing said fluid against said material for reducing the latter, said means directing the fluid tangentially to the inner surface of the vortex.

1,756,255. COMBUSTIBLE. STERNER ST. P. MEEK, U. S. Army, Philadelphia, Pa. Filed Sept. 8, 1925 Serial No 55,120. 7 Claims. (Cl. 52—24.) (Granted under the act of Mar. 8, 1883, as amended Apr. 30, 1928. 370 O. G., 757.)

1. A combustible composition including an oxygen carrier, a reducing agent, a binder and a non-fulminating salt of mercury.

1,756,256. EYELET. FRANKLIN G. NEUBERTH, Ansonia, Conn., assignor to The S. O. and C. Company, Ansonia, Conn., a Corporation of Connecticut. Filed Oct. 5, 1923, Serial No. 666,862, and in Germany Sept. 13, 1923. Renewed Apr. 9, 1927. 15 Claims. (Cl. 24—141.)

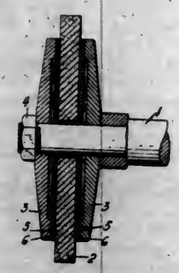


1. An eyelet for invisible eyeleting having the entering end of its barrel shaped to provide a plurality of pushing portions formed to engage the stock at points removed from the lacing hole to facilitate pushing the stock, alternating with a plurality of portions formed to engage the edge of the lacing hole to facilitate the passage of the end of the eyelet barrel through one or more of the layers of the stock.

1,756,257. METHOD OF MANUFACTURING FASTENERS. FRANKLIN G. NEUBERTH, Ansonia, Conn., assignor to The S. O. and C. Company, Ansonia, Conn., a Corporation of Connecticut. Original application filed Oct. 5, 1923, Serial No. 666,862, and in Germany Sept. 13, 1923. Divided and this application filed Dec. 30, 1925, Serial No. 78,414. Renewed July 24, 1929. 4 Claims. (Cl. 113—51.)

1. That improvement in methods of manufacturing eyelets which comprises scoring and scalloping an eyelet barrel and thereafter upsetting the open entering end of the barrel to provide a blunted work-engaging end.

1,756,258. FEED FINGER FOR MACHINE TOOLS. JAMES R. O'CONNELL, Elmira, N. Y., assignor to Morrison Machine Products, Inc., Elmira, N. Y. Filed Apr. 13, 1927. Serial No. 183,811. 10 Claims. (Cl. 29—62.)

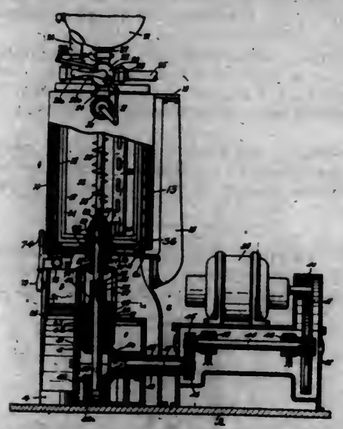


1. A work advancing feed finger for a machine tool having a hardened work gripping end, a spring portion

adjacent thereto and located at a distance from said end and a slot extending lengthwise of the feed finger from the work gripping end through the spring portion thereof, said slot having a plurality of enlargements in said spring portion of the feed finger, which reduce the cross sectional area of the spring finger at the enlargements in said slot.

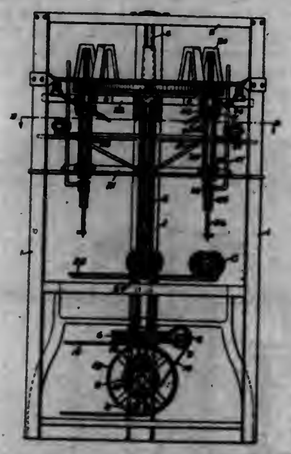
10. A work advancing feed finger for machine tools including a substantially tubular body portion divided lengthwise into a plurality of spring jaws each of which includes a spring portion terminating in a work gripping end, the spring portion of said spring jaw being provided with rounded recesses in the side edges thereof, said recesses being largest at the portions of the spring jaws adjacent to the work gripping ends thereof and being of gradually reduced size toward the other ends of said spring jaws, to provide portions of said jaws of varying reduced cross sectional area, said variation in cross sectional area serving to distribute deflections of the material in said spring jaws substantially equally throughout the portions thereof of reduced cross sectional area, and a series of holes in said jaws of graduated size, the largest holes being nearest to the work gripping end of said spring jaw to effect further graduated reduction at intervals in cross sectional area of said spring jaws.

1,756,259. MOUNTING FOR ABRASIVE WHEELS OR THE LIKE. GEORGE W. PERKS, Akron, Ohio, assignor to The George W. Perks Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 22, 1926. Serial No. 149,828. 6 Claims. (Cl. 51—168.)



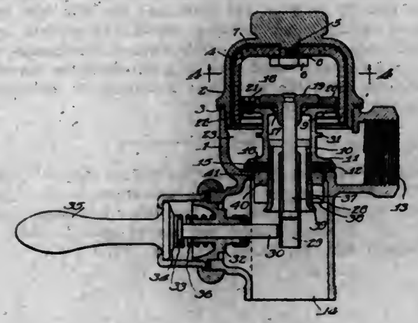
1. A mounting for abrasive wheels having surfaces with minute elevations and depressions, comprising plates at the sides of the wheel, wire mesh between the plates and the wheels, and means to force the mesh against the sides of the wheel sufficiently to cause the wire mesh to embed within the depressions on the wheel.

1,756,260. ARTIFICIAL MINNOW. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 24, 1925. Serial No. 39,241. 1 Claim. (Cl. 43—47.)



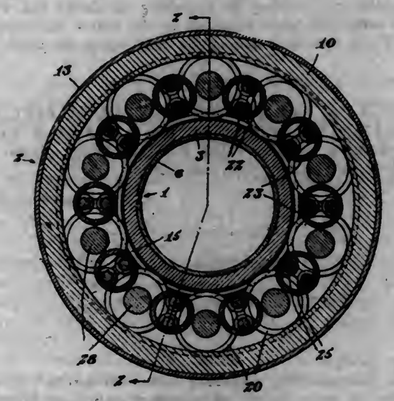
A fish lure comprising a body open at both ends, a leader at the forward end of the body, a hook carrier located within the body and attached to the leader, an obstruction on the leader adapted to engage the forward end of the body to prevent forward movement of the body over the leader, the body having a slot opening from the tail end thereof, a projection upon the carrier passing through the slot, a hook carried by the projection, rear hooks removably attached to the carrier and passing out through the tail end of the body, and an inextensible ferrule surrounding the tail end of the body and abutting said rear hooks to prevent rearward or lateral movement of said bait body.

1,756,261. FREEZING APPARATUS. LEROY S. PFOUTS, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 15, 1927. Serial No. 212,977. 8 Claims. (Cl. 62—114.)



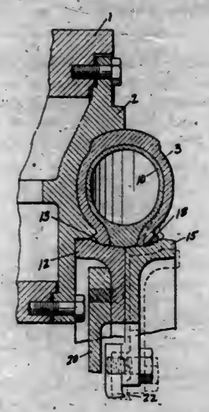
1. In apparatus of the class described, the combination of an upright freezing cylinder having upper and lower heads and inner and outer rotatable members arranged to rotate in opposite directions, a driving mechanism below said freezing cylinder, concentrically arranged shafts connected with elements of said driving mechanism and said rotatable members, respectively, and inter-related elements carried by said shafts below said lower head and arranged to prevent flow of liquid escaping from said cylinder downwardly onto said driving mechanism.

1,756,262. MACHINE FOR CORING CABBAGES OR THE LIKE. IRA G. SHARPE, Liberty Center, Ohio. Filed Nov. 4, 1927. Serial No. 230,960. 16 Claims. (Cl. 146—52.)



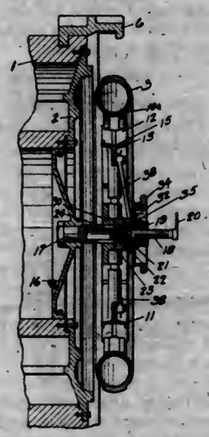
5. In combination with a work table and means to operate same, a series of normally inoperative corers, means to impart traveling movement to said corers as a unit with respect to the movement of the work table, means to effect relative vertical movement between the table and corers, means to rotate each corer clockwise during said vertical movement in one direction and during said movement of the corers as a unit, and means to rotate each corer counter-clockwise during said vertical movement in the opposite direction and during said movement of the corers as a unit.

1,756,263. FLUSH VALVE. WILLIAM E. SLOAN, Chicago, Ill. Filed Apr. 9, 1927. Serial No. 182,518. 5 Claims. (Cl. 137—93.)



1. A flush valve comprising a casing, a piston in said casing dividing it into an upper and a lower chamber, a valve member connected with said piston and located in the lower chamber, a seat co-operating with said valve member, a nonmetallic lining in said upper chamber which engages said piston and acts as a guide therefor, said non-metallic lining open at one end and closed at the other end, and means for relieving the pressure in said upper chamber when it is desired to operate the valve.

1,756,264. ROLLER BEARING. GEORGE W. TAYLOR, Wellesley, Mass., assignor, by mesne assignments, to Harold J. Clark, Watertown, Mass. Filed Dec. 17, 1926. Serial No. 155,390. 8 Claims. (Cl. 308—206.)

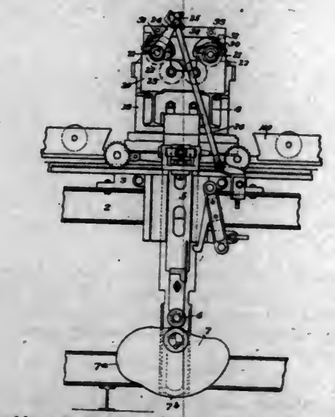


1. In a roller bearing, inner and outer concentric sleeves, parallel opposed faces on said sleeves forming a race, a series of supporting rollers mounted between and rolling on the opposed bearing faces of said sleeves, each of said rollers having an annular groove therein, a pair of separating rollers between each pair of adjacent supporting rollers, a retaining ring extending around each of said pairs of separating rollers and projecting into said annular groove in each of said adjacent supporting rollers, and means on said outer sleeve cooperating with said annular grooves to prevent longitudinal displacement of said supporting rollers.

1,756,265. MOLD. WALTER P. VOTH, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 18, 1926. Serial No. 129,903. 17 Claims. (Cl. 18—38.)

1. An apparatus for vulcanizing tires, comprising a mold and a curing ring, a portion of the ring being rigidly attached to the mold and another portion of the ring being movable toward and from its position in the complete ring.

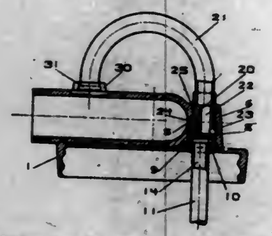
1,756,266. MOLD. WALTER P. VOTH, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 18, 1926. Serial No. 129,904. 12 Claims. (Cl. 18—38.)



1. In an apparatus for the vulcanization of pneumatic tires, the combination of a mold, a transversely divided curing ring adapted to form a seat for the beads of the tire and the air bag, a support with which the ring may be moved toward and from the mold, a rigid arm connecting the support with a ring segment, and a mechanism carried by the support and connected with a second ring segment for moving it toward and from the axis of the mold.

1,756,267. VARNISH OR LACQUER AND METHOD OF PREPARING THE SAME. HAROLD F. WAKEFIELD, Newark, N. J., assignor to Bakelite Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1927, Serial No. 170,750. Renewed May 19, 1928. 2 Claims. (Cl. 134—26.)

1. Method of preparing non-penetrative varnishes and lacquers from reactive resins of the phenol-aldehyde type,

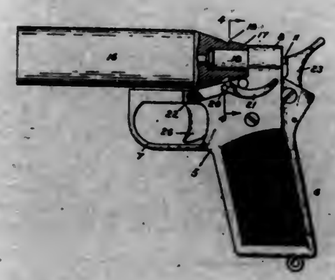


comprising effecting a partial transformation of the reactive resin to the insoluble resinoid modification by application of heat, commingling it with a solvent for the reactive component, and mechanically converting the mixture into a colloidal dispersion.

1,756,268. BLOCK PRINTING MACHINE. HARRY A. WEBSTER, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Aug. 17, 1928. Serial No. 300,210. 41 Claims. (Cl. 101—199.)

1. In a block printing machine, a printing head having a plurality of separate block sections each of which is relatively movable into a printing or a non-printing position, a common operating means for all the sections, and an individual mechanism for each section for selectively holding it in one of said positions.

1,756,269. SIPHON BOTTLE. EMIL WEINHEIM, New York, N. Y. Filed Nov. 1, 1928. Serial No. 316,581. 5 Claims. (Cl. 215—4.)



5. In a siphon bottle, means for charging liquid with a gas under pressure and for discharging the charged liquid comprising means for mounting a cooperating cartridge of compressed gas; and a single valve member for controlling all fluid entrance and exit from said siphon bottle.

1,756,270. SPRING WHEEL. PERCIVAL L. WHITTENBERGER, Bisbee, Ariz. Filed May 10, 1928. Serial No. 276,666. 1 Claim. (Cl. 152—32.)

In a spring wheel including a hub having an annular body secured thereon and a tire supporting rim arranged concentrically in spaced relation to the annular body, opposed pairs of lugs arranged on the outer peripheral face of the annular body and the inner peripheral face of the rim, said pairs of lugs being formed with oppositely threaded sockets and expansible coil springs disposed radially between the body and the rim, the ends of each spring being disposed within the sockets, eyes formed integrally on the opposite ends of the springs, the outer peripheries of said eyes being threaded for threaded engagement with the sockets in a manner to detachably secure the springs therein.

1,756,271. PISTOL FOR DISCHARGING SIGNAL CARTRIDGES. SAMUEL WILEY, Metuchen, N. J. Filed Dec. 11, 1928. Serial No. 325,325. 5 Claims. (Cl. 42—1.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A firearm comprising a frame having a rearwardly inclined upper wall, a fixed breech on the frame in rear of the inclined wall, a tube secured in the fore part of the breech and spaced from the inclined wall, a firing pin in the tube, means for actuating the firing pin, a cartridge retaining latch mounted in the frame and directed toward the tube and means for depressing the latch.

1,756,272. MEANS FOR CONTROL OF LIFT AND BALANCE OF AIRCRAFT. CHARLES ARTHUR WRAGG, Washington, D. C. Filed Feb. 19, 1926. Serial No. 89,416. 4 Claims. (Cl. 244—29.)

1. A balanced lift regulating means for aircraft in combination, a main wing, an auxiliary wing having comparatively short chord, the leading edge of said auxiliary wing being in a plane below but not forward of the trailing edge of said main wing the gap being less than the maximum thickness of said main wing, said auxiliary wings adapted to tilt to vary the gap and said gap becoming less as the angle of said auxiliary wing is increased.

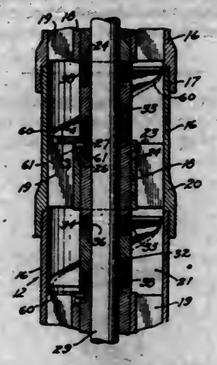
1,756,273. SIGNAL CAP FOR PNEUMATIC TIRES. FRANCIS Y. WYNKOOP, Denver, Colo. Filed Sept. 11, 1928. Serial No. 305,168. 8 Claims. (Cl. 116—34.)

1. In a tire-valve-casing cap a subnormal pressure indicator comprising a whistle in the wall of the cap, a plug carrying a tube centrally within the cap, and a

spring operated plunger adjustably and slidably mounted within the tube and having a spring stop at one end

adapted to press against the tire valve stem when the cap is positioned on the casing, said plug forming a stop for the end of the casing.

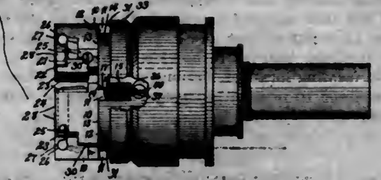
1,756,274. SIGNALING CONDUCTOR. GUSTAVUS A. ANDEREGG, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1926, Serial No. 157,442, and in Great Britain June 15, 1926. 15 Claims. (Cl. 178—45.)



1. The method of producing a signaling conductor having an inner conducting portion and a metallic covering fitting said portion loosely, which comprises forming the conducting portion with external projecting portions, applying the covering over said projecting portions, and subsequently loosening the covering by deforming the projecting portions.

1,756,275. LIQUID TREATMENT. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill., assignor to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1929. Serial No. 365,581. 8 Claims. (Cl. 210—28.)

1. A process of treating water for ice making which comprises subjecting the water to treatment with alkaline earth zeolite sand then with lime.



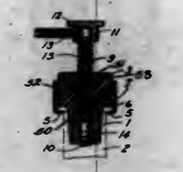
1,756,276. SLIDING BEARING BUSHING FOR PUMP CONSTRUCTION. ALFRED H. BOWLER, Jr., Los Angeles, Calif., assignor, by mesne assignments, to Kimball-Krogh Pump Company, a Corporation of Delaware. Filed Apr. 26, 1927. Serial No. 186,639. 8 Claims. (Cl. 103—90.)

1. In a rotary pump, the combination of: a plurality of spaced bearing supports; a plurality of bearings, one being supported by each bearing support, said bearings being movable in an axial direction relative to said bearing supports but not rotatable relative thereto; a shaft adapted to rotate in said bearings; an element secured to said shaft between said bearings, the extremities of said element being in contact with the adjacent ends

of said bearings; and means for axially moving said shaft, either of said bearings being capable of moving axially with said element.

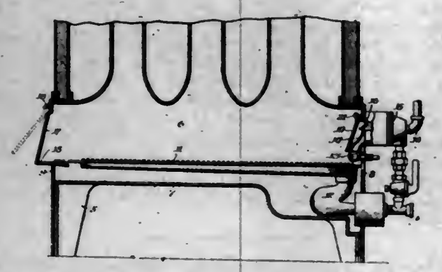
1,756,277. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a Corporation. Filed July 18, 1929. Serial No. 379,164. 1 Claim. (Cl. 10—95.)

In a self-opening die-head, the combination with a body-member having an axial bore and formed in its outer end with a plurality of substantially-radial guide-grooves opening through its front face and through its periphery and intersecting the said bore; of a rearwardly-facing anchoring-shoulder provided in a side-wall of each of the said guide-grooves; a plurality of chaser-carriers bodily movable radially in the said body-member and each comprising a body-portion bearing at its rear face upon the front face of the said body-member and formed with an integral rearwardly-projecting tang reciprocating in one of the said guide-grooves; and a forwardly-facing anchoring-shoulder formed in one side of the said tang and located in position to co-act with the anchoring-shoulder of the said guide-groove to resist the lateral and perpendicular canting of the chaser-carrier in conjunction with the bearing of the rear face of the body-portion of the same upon the front face of the body-member.



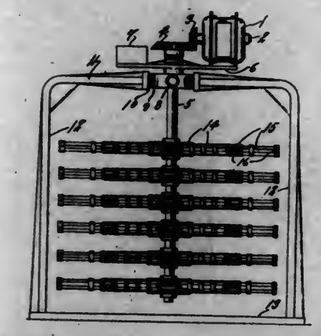
1,756,278. CONVEYER BELT. THOMAS E. BUCKNER, Plaska, Tex. Filed Mar. 11, 1929. Serial No. 346,059. 1 Claim. (Cl. 19—78.)

A follower for conveyer belts, wherein the belt is provided with a transversely extending rib; a fork-shaped follower unit adapted to have its back edge portion dis-



posed against one side of the rib, a brace unit comprising a plate for disposition against the opposite side of the rib, a plurality of spring fingers extending laterally from said plate, the free ends of said fingers being offset for tensional engagement against the prongs of the said fork.

1,756,279. VALVE FOR MEASURING AND DISPENSING FLUID. LORN CAMPBELL, Jr., Lakewood, Ohio. Filed May 17, 1928. Serial No. 278,470. 1 Claim. (Cl. 215—77.)

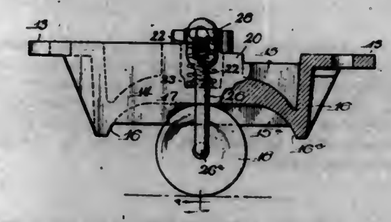


In a fluid container, a dispensing opening therefor, a fluid dispensing device for said container comprising a cap, a bored sealing member, means to secure said cap and sealing member on said container, a valve disposed in the bore of said sealing member comprising a tube extending through said sealing member, a closure for the end of the tube adapted to engage the end of the sealing member to compress the same, valve parts adjacent the end of the tube adapted to be closed by the sealing member, the sealing member having a flexible internal annulus adapted to resiliently engage said tube in fluid tight engagement therewith.

1,756,280. GAS-BURNING APPARATUS. GLEN C. CARNAHAN, Chicago, Ill., assignor to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1928. Serial No. 292,243. 1 Claim. (Cl. 158—7.)

A fluid fuel burning apparatus comprising a walled combustion chamber including front and rear walls, means for burning fluid fuel in said chamber, the front and rear walls each having an opening therethrough, a pivotally mounted door for normally closing said opening in the rear wall and opening outwardly from said chamber, and a door normally closing said opening in the front wall of said chamber and pivotally mounted for swinging inwardly only of said chamber.

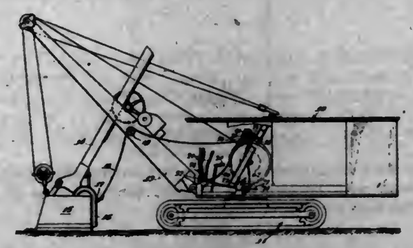
1,756,281. METHOD OF DRYING OR TREATING TIMBER AND THE LIKE. FRANK W. CHERRINGTON, Toledo, Ohio. Continuation of application Serial No. 681,295, filed Dec. 17, 1923. This application filed June 14, 1928. Serial No. 285,466. 8 Claims. (Cl. 34—24.)



1. The hereindescribed method of treating or drying timbers or other like materials, which resides in rotating the material so as to cause progressive movement of the duct contents thereof from one end to the opposite end of the ducts and outwardly of the axis of rotation.

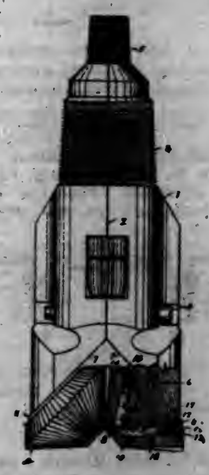
1,756,282. HIGH-SPEED TOOL-STEEL ALLOY. GEORGE R. COULS, Detroit, Mich. Filed Sept. 1, 1927. Serial No. 217,007. 3 Claims. (Cl. 75—1.)

3. High speed tool steels containing about one and one-half percent of vanadium and about one percent of copper.



1,756,283. SIDE BEARING. GEORGE S. CRAWFORD, Chicago, Ill., assignor to Sophie L. Woods, Chicago, Ill. Filed Jan. 21, 1927. Serial No. 162,438. 8 Claims. (Cl. 308—226.)

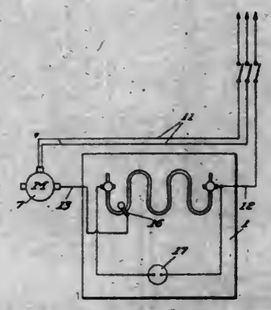
1. In a side bearing, in combination with a bearing member presenting a bearing surface on one side and being constructed for attachment to a bolster on its other side, a transversely disposed roller engaged with said bearing surface, a transversely disposed vertically movable bar on the bolster side of said bearing member, a U-bar embracing the sides of said bearing member and pivotally connected to said transverse bar, said U-bar having a bottom member engaged with said roller and an expansion coiled spring acting in a vertical direction only interposed between said bar and said bearing member.



1,756,284. POWER-DIPPER DOOR-LATCH RELEASE. LAGAR R. CULVER, Los Angeles, Calif., assignor of one-half to John W. Prillaman and Ella F. Prillaman, Vista, Calif. Filed Jan. 28, 1929. Serial No. 334,519. 8 Claims. (Cl. 214—146.)

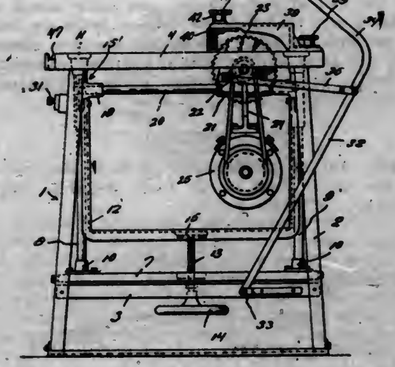
1. In a power dipper door latch releasing device, a rotatably mounted shaft, a winding drum loosely mounted on said shaft, a cable secured to and adapted to wind onto said drum, which cable is connected to the dipper door latch of the shovel with which the device is associated, means providing a slip drive connection between said drum and shaft, whereby said drum tends to rotate to wind the cable thereon, and maintain the same under a tension insufficient to actuate the latch, an arcuate brake

shoe arranged for operation adjacent to said drum, means for moving said brake shoe into frictional engagement with the cable on said drum, and pedally actuated means for providing a greater frictional connection between the drum and shaft whereby tension is applied to the cable sufficient to release the door latch.



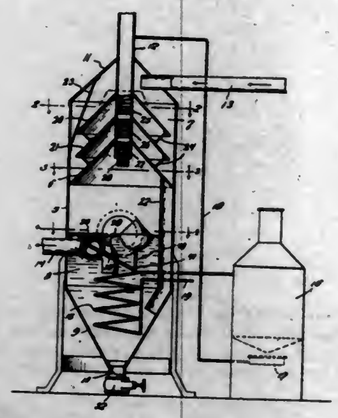
1,756,285. DRILL. HARRY R. DECKER, Houston, Tex., assignor to Decker Oil Tool Company, Houston, Tex., a Corporation of Texas. Filed Sept. 27, 1926. Serial No. 137,912. 6 Claims. (Cl. 255—71.)

1. A drill including a head, a spindle thereon, a rotatable cutter on said spindle, said spindle having an external annular groove and the cutter having an internal annular groove, said grooves registering, when said parts are assembled to form an annular channel, wall sockets in said channel, a fusible metal ring filling said channel and sockets and retaining the cutter on the spindle.



1,756,286. APPARATUS FOR DETERMINING VARIATIONS IN THE PHYSICAL CONDITIONS OF AGITATED MATERIALS. ARTHUR W. FARRALL and GROVER D. TURNBOW, Davis, Calif. Filed May 6, 1926. Serial No. 107,303. 7 Claims. (Cl. 259—1.)

1. An apparatus for determining variations in the physical conditions of agitated materials including in combination a motor for agitating the material, a current measuring instrument in series with the motor, said current measuring instrument including a current actuated pointer, a scale over which said pointer moves, and a plurality of manually adjustable indicating pointers juxtaposed with relation to the current indicating pointer for



automatically indicating certain operations to be performed upon the agitated material, said current indicating instrument adapted to carry a substantially full load of current for the motor except at the moment of starting.

1,756,287. WOOD-SAWING MACHINE. PERRY G. FRESHWATER and ORVILLE G. FISHEL, Newton, Iowa. Filed Sept. 24, 1928. Serial No. 308,041. 1 Claim. (Cl. 143—47.)

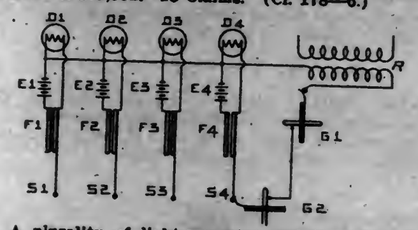
In combination, a wood sawing machine comprising a frame, a table top arranged thereon and provided with a longitudinal slot, stationary vertically disposed guides arranged in the frame, a unit arranged for vertical adjustment within the frame between the guides, castings carried by the opposite ends of the vertically adjustable unit, each of said castings including a vertically disposed sleeve to accommodate the respective stationary vertical guides, and horizontally disposed sleeves on opposite sides of the vertical sleeve, longitudinally extending guide rods having their ends receivable in the respective horizontal sleeves, a saw carriage slidably mounted on said longitudinal guide rods of the vertically adjustable units, a circular saw blade mounted on the carriage, means for actuating the circular saw blade, said saw blade adapted to protrude through the slot in the table top, and means for moving the carriage along the longitudinally disposed guide rod to force the circular saw blade through the stock placed on the table top across said slot.

1,756,288. GAS AND OIL SEPARATOR. HARLAN D. GRAY, ERVIN AUXTER, and JOHN ARTHUR NOBLE, Sr., Shreveport, La., assignors, by direct and mesne assignments, to Superior Oil and Gas Separator Company, Incorporated, Shreveport, La., a Corporation of Louisiana. Filed Dec. 17, 1928. Serial No. 326,686. 5 Claims. (Cl. 183—2.7.)

2. The combination, in a gas and oil separator, of an expansion chamber having a settling chamber communicating therewith, means for delivering oil and gas into the upper portion of the expansion chamber, a conical baffle arranged in said expansion chamber to receive the incoming oil and spread it in a thin film to fall in a curtain adjacent the wall of such chamber, gas outlet means communicating with the expansion chamber below the conical baffle and with the top of the settling chamber, means to prevent gas from passing from the settling chamber except through said communicating means, and means for drawing oil from the settling chamber.

1,756,289. DRAFTING BOARD. MILO M. HARDING, Los Angeles, Calif. Filed Jan. 23, 1929. Serial No. 334,469. 2 Claims. (Cl. 240—2.)

1. A drafting board comprising a board member having a central opening, a glass panel set in said opening, a hollow open-top reflector secured to the underside of said board member beneath said panel and gradually increasing in depth from front to rear of the board member to form a base adapted to support said board member at an inclination on a desk or table top the rear of the reflector being curved inwardly for assuring maximum reflection, and a lamp socket mounted in the deeper rear end of said reflector.

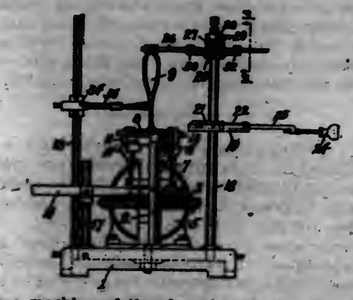


1,756,290. COMBINATION SINK AND GARBAGE RECEPTACLE. CHARLES G. HIBNER, Los Angeles, Calif. Filed Apr. 2, 1928. Serial No. 266,468. 3 Claims. (Cl. 4—289.)

1. In a combination sink and garbage receptacle, a sink member with a pocket extending downwardly from the bottom side of said sink member and provided with an outlet orifice adapted for connection with the sink drainage, a garbage receptacle positioned in said pocket and supported at its upper side on the bottom of the sink, a perforate lid for said receptacle, and a flange on the

upper side of said receptacle for supporting the same and provided with perforations in said flange outside of the wall of said receptacle.

1,756,291. CELL PERSISTENCE TRANSMITTER. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Jenkins Laboratories, Washington, D. C., a Corporation of the District of Columbia. Filed July 16, 1928. Serial No. 292,992. 13 Claims. (Cl. 178—6.)



1. A plurality of light-current translating devices, an impulse storing element in circuit with each device, and means for connecting the storing elements into a common circuit.

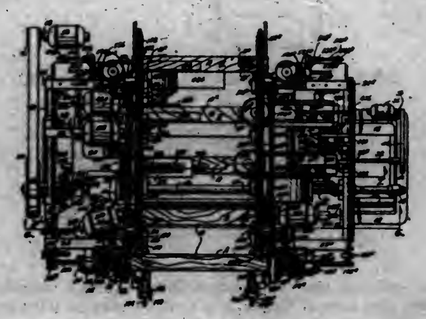
1,756,292. SCALE PAN. REINHOLD A. KOPP, Chicago, Ill., assignor to W. M. Welch Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 8, 1929. Serial No. 353,298. 7 Claims. (Cl. 265—27.)

1. In a scale having a pan supporting standard, an integral structure comprising a pan having legs telescoping into said standard.

1,756,293. WORK-TRUING MEANS. FRANK W. KREMNEC, Toledo, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 14, 1927. Serial No. 175,174. 6 Claims. (Cl. 49—7.)

4. In a machine of the class described, means for holding and rotating a work-piece, means operable to effect a centering of the work-piece with respect to the holding means, and means for exerting pressure against the work-piece in spaced relation to the holding means and transverse to its axis of rotation to correct distortion in a softened portion of the work-piece intermediate said holding and pressure means, said pressure means having provisions for limiting the extent of its pressure applying movement to the work-piece.

1,756,294. RUN-REPAIRING MULTIPLE-NEEDLE HAND TOOL. WILLIAM H. LEAVIN, New York, N. Y., assignor to Gotham Knitbac Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed July 31, 1929. Serial No. 382,483. 10 Claims. (Cl. 66—1.)



1. In a multiple needle run repairing hand tool, a handle, a plurality of needles projecting from one end of said handle and means whereby all but one of said needles may be placed out of operative position.

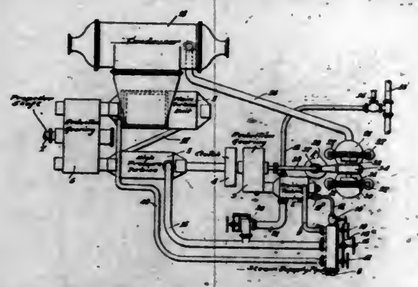
1,756,295. GENTLEMAN'S CRAVAT, FOUR-IN-HAND TYPE. BORRIS MORRIS LEVIN, San Francisco, Calif. Filed Apr. 9, 1929. Serial No. 353,746. 1 Claim. (Cl. 2—146.)

The attachment of a prearranged cravat filler to the body of the cravat by duel lines of hand stitches, and the lines of hand stitches commencing at opposite ends of the cravat, crossing each other in approximately the mathematical center of the cravat and ending approximately three-fifths of the length of the cravat from where each started.

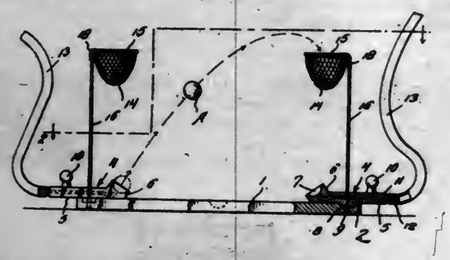
1,756,296. WINDOW-FRAME MACHINE. SØREN MADSEN, Clinton, Iowa, assignor to Curtis Companies, Incorporated, Clinton, Iowa. Filed Sept. 27, 1927. Serial No. 222,294. 24 Claims. (Cl. 144—5.)

1. In a machine of the class described, means for advancing stock through the machine in successive steps, routing units for operating on the stock at different steps in its advancement, means for automatically, vertically, oscillating said units and for automatically moving the units lengthwise of the stock for forming countersink and through mortises in successive steps.

1,756,297. SILENCER. HIRAM PERCY MAXIM and ROLAND B. BOURNE, Hartford, Conn., assignors, by mesne assignments, to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Filed June 27, 1927. Serial No. 201,951. 3 Claims. (Cl. 137—160.)



1. A silencer comprising two headers one of them with an opening therethrough, a grouping of substantially identical, spirally wound sheets, whose spirally wound edges abut said two headers, said sheet arranged in superposed interwound relation so that in a cross-section parallel to the headers the inner and the outer ends of the wound edges are substantially symmetrically spaced on an inner and an outer concentric circle respectively, the inner straight edges of the sheets together with the header walls defining an inner centrally extending chamber communicating with the exterior through said opening, and a plurality of integrally formed projections on said spirally wound sheets, said projections being parallel to the header engaging edges of the sheets and being axially displaced with respect to each other on two adjacent sheets, thus defining the depth and width of the spirally winding passages formed between two adjacent sheets.

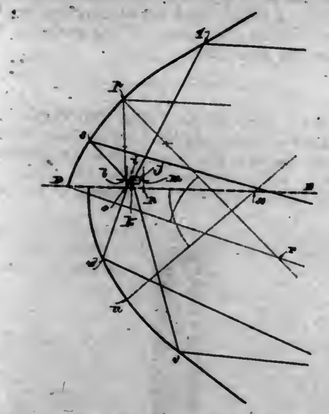


1,756,298. CRUISING-TURBINE ARRANGEMENT. JOHN F. METTEN, Philadelphia, Pa. Filed Mar. 15, 1926. Serial No. 94,976. 10 Claims. (Cl. 60—68.)

6. The combination with a cruising turbine, of a normal steam supply means therefor, a supplemental steam supply, means for controlling said supplemental supply by governing mechanism, an exhaust pipe adapted for cooperation with the normal supply, an exhaust pipe adapted for cooperation with the supplemental supply,

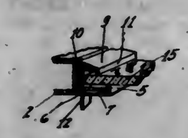
means for shutting off said normal supply while said supplemental supply continues, and means whereby said normal exhaust pipe is automatically rendered inoperative when said normal supply is cut off, thereby permitting the supplemental exhaust to operate.

1,756,299. GAME. JOHN C. OWENS, East Liverpool, Ohio. Filed Mar. 8, 1929. Serial No. 345,343. 2 Claims. (Cl. 273—85.)



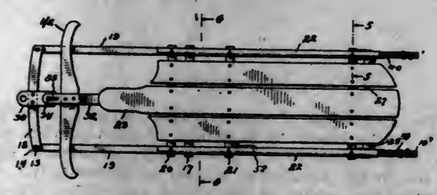
1. A game of the class described comprising a base, a pair of units pivoted on the respective ends of the base for swinging movement in a horizontal plane, each unit including a body formed at its inner end with a ball-receiving and supporting cavity, a basket, supporting means therefor extending upwardly from each of the units, and means for projecting the ball from its cavity in a direction toward the opposite basket.

1,756,300. AEROFOIL. KENNETH NOBLE PEARSON, Netheravon, Shepperton, England. Filed Aug. 8, 1927, Serial No. 211,428, and in Great Britain Apr. 12, 1927. 9 Claims. (Cl. 244—29.)



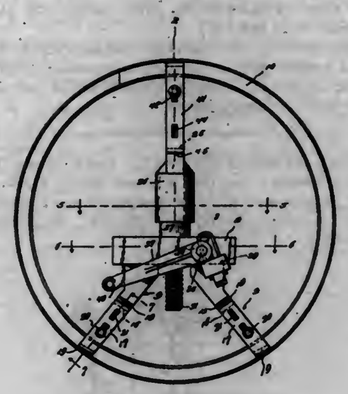
1. An aileron having two opposed convexly curved surfaces adapted to be subjected to the action of wind pressure, a rotatable axle about which the aileron is eccentrically mounted to turn, and means for rotatably adjusting the aileron about the axle to present different portions of the surfaces to the wind pressure, each surface having curves of different curvature in cross-sectional planes substantially at right angles to each other, with the curve of greater curvature of one surface and the curve of lesser curvature of the other surface in one of the planes and the curve of greater curvature of the said other surface and the curve of lesser curvature of the said one surface in the other plane.

1,756,301. REFLECTOR FOR RAYS EMITTED BY A LUMINOUS SOURCE. JACQUES LOUIS PECH, Montpellier, France. Filed Nov. 14, 1927, Serial No. 233,277, and in France Nov. 16, 1926. 1 Claim. (Cl. 240—41.)



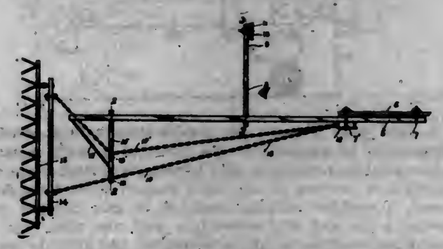
A reflector consisting of an upper and a lower part having substantially a common axis, the upper part comprising an outer parabolic surface having its focus on the common axis and an inner spherical surface forming a continuation of the parabolic surface and having its center and its focus below the axis; and the lower part comprising an outer parabolic surface having its focus on the common axis and in front of the focus of the upper parabolic surface and an inner spherical surface forming a continuation of the lower parabolic surface having its center on the axis and its focus below the axis.

1,756,302. GLASS-FASTENING DEVICE. EDWARD PENDERY, Newport, Ky., assignor to The Higgin Manufacturing Company, Newport, Ky., a Corporation of West Virginia. Filed Mar. 14, 1928. Serial No. 261,604. 12 Claims. (Cl. 189—77.)



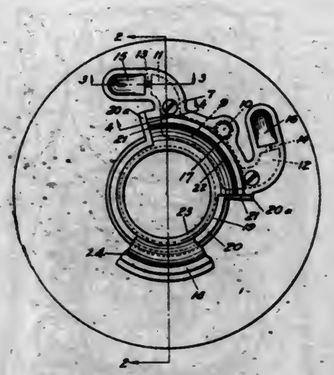
1. In a sash a shoulder defining a glass opening, a ledge extending inwardly from said shoulder and forming a bearing for said glass, a glass fastening member with a head having a portion adapted to abut said shoulder and a portion adapted to overlie the upper surface of said glass, a tine attached to said head, and a hole through said ledge for the passage of said tine, said tine being bent over on the under side of said ledge.

1,756,303. SLED. ROSS M. G. PHILLIPS, New Haven, Conn. Filed Apr. 1, 1927. Serial No. 180,271. 3 Claims. (Cl. 280—22.)



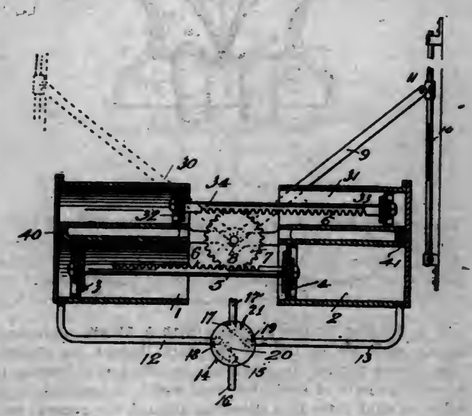
2. In a sled; a body member; a rock shaft supported relatively thereto; runners connected with the body member; a draw bar connected with each of the runners near the rear ends thereof; a steering bar; a connection between the steering bar and rock shaft whereby a straight line movement of the steering bar will actuate the rock shaft; and means associated with the body member to prevent such straight line movement when desired, comprising a rock lever movable into and out of the path of a projection on the draw bar.

1,756,304. COMBINED RIM TOOL AND TIRE CARRIER. JOSEPH A. PLOURDE and ADELORD J. TETREAULT, Chicopee Falls, Mass. Filed Jan. 23, 1929. Serial No. 334,409. 1 Claim. (Cl. 224—29.)



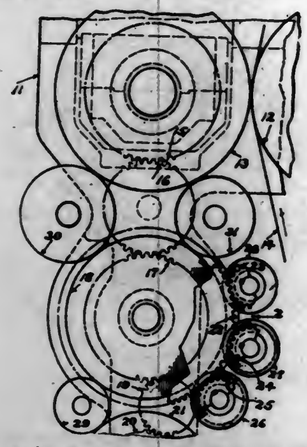
In a device of the class described, a relatively fixed body, a pair of rigid rim-engaging arms provided at their outer ends with rim contacting lugs on one side, a pair of links adjustably mounted by means of a pin on the opposite sides of said arms, said links being provided at their outer ends with rim-engaging hooks, and being also provided at their inner ends with additional hooks, said arms being formed with shoulders with which said last named hooks are engaged to relieve the pin of shearing strain, a guide screw in said arm extending through a slot in said link to prevent pivotal movement of link, and an adjustable arm on said body provided with rim-engaging means at its outer end.

1,756,305. HITCH FOR AGRICULTURAL IMPLEMENTS. EDWARD F. RAMSEIER, Edberg, Alberta, Canada. Filed Sept. 3, 1929. Serial No. 390,193. 4 Claims. (Cl. 97—5.)



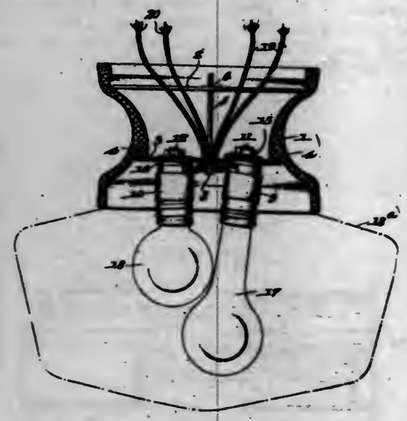
1. A hitch of the class described, comprising a pole for attachment to a plow, a flexible element connected to the forward end thereof and extended substantially lengthwise of the pole to beyond its rear end for attachment to the draw-bar of a drag harrow, and a jib rigidly projecting from the pole and having openings through which the flexible element is passed.

1,756,306. IGNITION DEVICE FOR OIL BURNERS. HILMER F. RODLER, West New York, N. J., assignor to Calvin J. Mummert, West New York, N. J. Filed Nov. 26, 1926. Serial No. 150,722. 3 Claims. (Cl. 158—28.)



1. An ignition unit for oil burners comprising a base plate and air collar, said air collar having a groove at its upper end extending part way around the same, walls integral with the collar forming a gas channel, a gas admission port opening into said channel, a pair of gas burners connected with said channel at separated points around the periphery of the collar, and a ring around the air collar and resting in the groove and supported by the collar.

1,756,307. PNEUMATIC MOTOR. HAROLD ROWNTREE, Scarsdale, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 16, 1924. Serial No. 732,362. 11 Claims. (Cl. 121—44.)



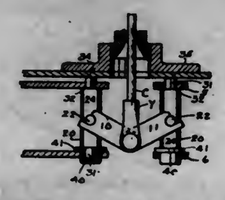
1. In a door-operating motor, the combination of a larger operating cylinder, a smaller opposing cylinder, said cylinders having pistons therein, and means for maintaining the pressure in the opposing cylinder substantially less than the operating pressure at the moment of initiation of the door movement of the motor, and for causing the pressure in the opposing cylinder to gradually build up to and be maintained at a pressure at least equal to the operating pressure during the closing movement of the motor.

1,756,308. INKING MECHANISM FOR PRINTING PRESSES. LOUIS A. SCHMIDT, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed July 30, 1928. Serial No. 296,170. 9 Claims. (Cl. 101—349.)

1. In an inking mechanism for a printing press, an ink distributing cylinder, an ink roller having its peripheral surface helically grooved and in operative engagement with the cylinder, and means for rotating the cylinder at one peripheral speed and the roller at a different speed.

1,756,309. LIGHTING FIXTURE. ROY W. SCHWEIKER, Lansdale, Pa. Filed Aug. 22, 1927. Serial No. 214,596. 4 Claims. (Cl. 240—78.)

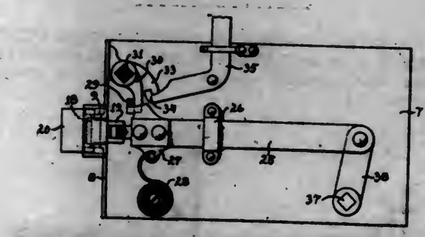
3. A lighting fixture provided with a fixture plate having an aperture in the central part thereof, an electric lamp socket carried by said plate in offset relationship to the central part of said plate and which is inclined in relation to said plate in a direction toward the general central axis of the fixture, a long-necked electric lamp carried by said socket and having its bulb disposed in the general central axis of the lighting fixture and adapted for normal use, circuit wires from said socket which run through the aforesaid aperture, a second electric lamp socket carried by said fixture plate in offset relationship to the central part of said plate, a short-necked electric lamp carried by the said last-named socket and disposed above the bulb and the long-necked lamp, and circuit wires independent of the aforesaid circuit wires, connected to said last-named socket and running through the aforesaid aperture.



1,756,310. PROCESS OF VULCANIZING RUBBER. WINFIELD SCOTT, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 28, 1927. Serial No. 236,372. 16 Claims. (Cl. 18—53.)

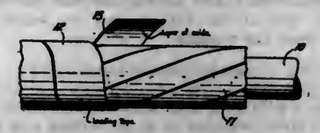
1. The process of vulcanizing rubber which comprises heating a mixture of rubber and sulphur in the presence of an accelerator comprising the aldehyde derivative of the reaction product of a mercapto compound containing a C—SH grouping with an aliphatic amine, said amine being free of an aryl substituent group.

1,756,311. METHOD OF CLEANING METALS. WALDO L. SEMON, Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1929. Serial No. 341,562. 9 Claims. (Cl. 148—8.)



1. The method of cleaning metals which comprises treating metals with a solution comprising a strong non-oxidizing acid and a small proportion of an arylamino derivative of a benzothiasole.

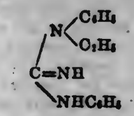
1,756,312. BRAKE ASSEMBLY. JOHN SNEED, Ferndale, Mich., assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 18, 1928. Serial No. 286,154. 14 Claims. (Cl. 188—78.)



1. The combination of a brake shoe having spaced parallel thrust parts with aligned openings therein, a thrust member supported at its ends in said openings, and a retaining member having side walls engaging the wall of one of said openings and having an outwardly flared brim of greater diameter than said opening.

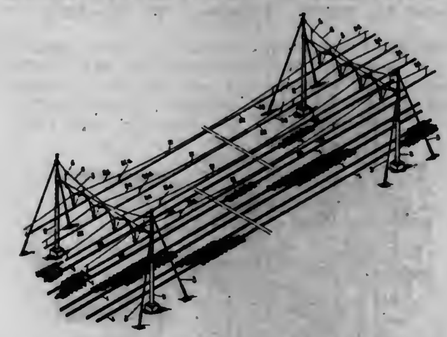
1,756,313. DOOR FASTENER. LEO THOMAS TAFFE, Detroit, Mich. Filed Sept. 28, 1927. Serial No. 222,509. 3 Claims. (Cl. 292—195.)

1. In a door fastener, the combination with a housing adapted to be attached to the door, of a latch member intermediately pivoted in said housing, a striker plate engageable by one end of said latch member to hold the door closed, a member slidably mounted in said housing and having a pin and slot connection with the other end of said latch member, a spring acting on the slidable member to retract the same and to hold the latch member normally in engagement with the striker plate, a rockable door handle shank having a projecting lug engageable with the slidable member to advance the same and thereby unlatch the door, said lug having a rearwardly and downwardly projecting heel, and a dog having a toe movable into position to engage said heel and thereby prevent the unlatching of the door by the operation of the handle



1,756,314. CONDUCTOR. WILLIAM B. TEN EYCK, deceased, Montclair, N. J., by Christine Z. Ten Eyck, administratrix, Montclair, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,334. 8 Claims. (Cl. 178—45.)

1. A loaded signaling conductor requiring a heat treatment to high temperatures comprising a conducting core, a magnetic loading material wrapped closely about the core, and a coating of reducible material on said loading material separating the loading material from the conducting core.

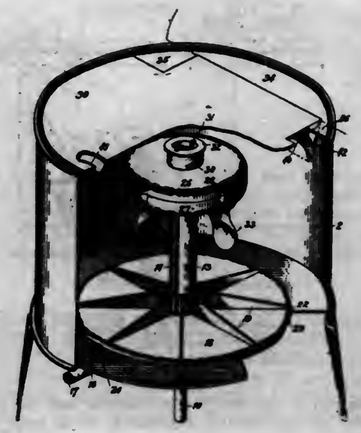


1,756,315. RUBBER VULCANIZATION PROCESS. WILLIAM P. TER HORST, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 28, 1927. Serial No. 236,370. 2 Claims. (Cl. 18—53.)

1. A process of vulcanizing rubber or similar material which comprises combining with the rubber sulfur an unsymmetrical tri-substituted guanidine accelerator having the formula

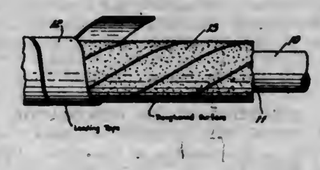
and vulcanizing the rubber.

1,756,316. APPARATUS FOR MOUNTING WIRES. SYLVESTER M. VIELE, Altoona, Pa. Filed Nov. 30, 1927. Serial No. 236,786. 10 Claims. (Cl. 191—41.)



1. In an apparatus for mounting wire, the combination of a cross member; a contact wire; an insulated laterally rigid frame-work between the cross member and the contact wire; and a vertically yielding laterally rigid supporting connection between the contact wire and the frame-work.

1,756,317. METAL PICKLING. JAMES C. VIGNOS, Nitro, W. Va., assignor to The Rubber Service Laboratories Co., Akron, Ohio, a Corporation of Ohio. Filed Apr. 18, 1928. Serial No. 271,118. 18 Claims. (Cl. 148—8.)

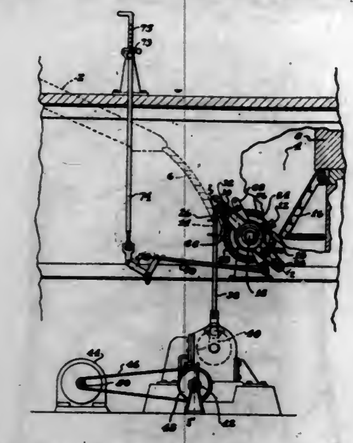


1. The process of cleaning a metal surface which comprises immersing such metal in a sulfuric acid solution containing a small proportion of the reaction product of an aldehyde and a salt of an aryl substituted dithiocarbamic acid.

1,756,318. WASHING MACHINE WITH MULTIPLE LIQUID-IMPELLING DEVICE. WILLIAM H. VOSS, Davenport, Iowa. Filed Mar. 18, 1925. Serial No. 15,219. 25 Claims. (Cl. 259—101.)

1. In a washing machine, a tub adapted to contain cleansing liquid, two liquid impelling members disposed in said tub and adapted to be adjustably maintained in spaced apart relation so as to receive therebetween variant volumes of the material to be cleansed, and means for positively rotating said liquid impelling members.

1,756,319. CONDUCTOR. JESSE F. WENTZ, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 9, 1925. Serial No. 13,943. 11 Claims. (Cl. 178—45.)

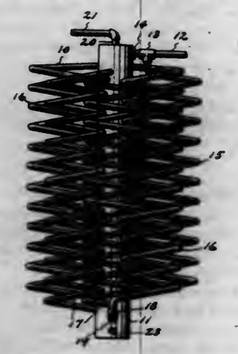


1. A loaded signaling conductor comprising a central conductor having a rough, exterior surface, and a magnetic loading material wrapped closely about the rough surface, said loading material requiring heat treatment to develop high permeability therein, and the permeability of which is sensitive to strain, said rough exterior surface contacting with said loading material at a large number of closely spaced areas, thereby preventing the loading material from welding securely to said surface during the heat treatment.

1,756,320. FURNACE. SIGURD J. A. WIEBE, East Orange, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1924. Serial No. 750,535. 4 Claims. (Cl. 83—52.)

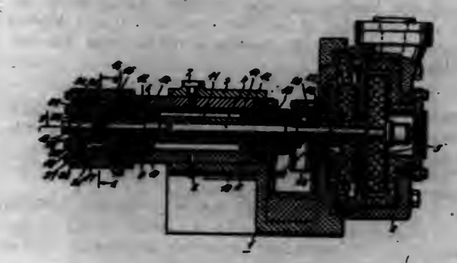
1. A furnace having, in combination, a clinker grinding roll, a carrier lever adapted to be oscillated about an axis arranged in alinement with the axis of the roll, means for oscillating said lever, an actuating pawl carried by the lever and suitable connections adapted to rotate the roll in one direction, a second pawl carried by said lever

and suitable connections for rotating the roll in the opposite direction, and manually operable means for selectively rendering said pawls operative and inoperative to



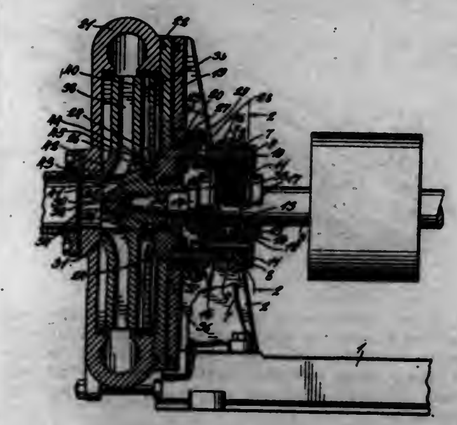
drive the roll at the will of the operator and for varying the extent of the effective movements of at least one of said pawls.

1,756,321. PULVERIZED-FUEL-BURNING APPARATUS. BERTRAM J. CROSS, Piermont, N. Y., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Jan. 16, 1925. Serial No. 2,751. 5 Claims. (Cl. 110—104.)



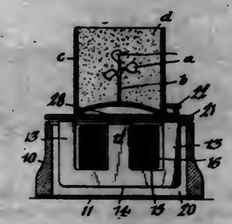
1. A pulverized fuel burner including a nozzle member having a fuel discharge tip portion including a passage of long and narrow cross-section and a plurality of flaring channels discharging therefrom, said channels being arranged side by side with their outlets alternately staggered.

1,756,322. MULTIPLE-FLUID GENERATOR. STUART A. WIER, Dallas, Tex., assignor to Tridex Corporation, Dallas, Tex., a Corporation of Delaware. Original application filed Feb. 14, 1927, Serial No. 168,161. Divided and this application filed Apr. 11, 1929. Serial No. 354,345. 7 Claims. (Cl. 122—245.)



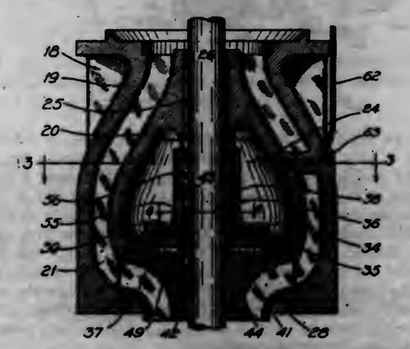
1. In a generator of the character described, a generating unit comprising a central vertical column, a vertical pre-heating coil at one side of the column and having its upper end connected with a water supply and its lower end connected to the lower end of the column, a plurality of vertical circulating coils disposed radially of the column and having both their upper and lower ends connected to the column, and a vertical steam coil at one side of the column and having one end connected with the upper end of the column and its lower discharge end free from the column.

1,756,323. CENTRIFUGAL PUMP. ELMER R. WILFLEY, Denver, Colo., assignor to A. R. Wilfley and Sons, Inc., a Corporation of Colorado. Filed Aug. 27, 1928. Serial No. 302,192. 6 Claims. (Cl. 103—103.)



1. In a device of the class described, a support, a tubular member rotatably secured to the support, a shaft slidably mounted in the tubular member, means for preventing relative rotation between the shaft and tubular member, resilient means for exerting a force tending to move the shaft longitudinally with respect to the tubular member and a centrifugal device for moving the shaft longitudinally against the force of the resilient means.

1,756,324. CENTRIFUGAL PUMP. GEORGE F. WILFLEY, Denver, Colo., assignor to A. R. Wilfley and Sons, Inc., a Corporation of Colorado. Filed Sept. 10, 1928. Serial No. 304,869. 5 Claims. (Cl. 103—103.)

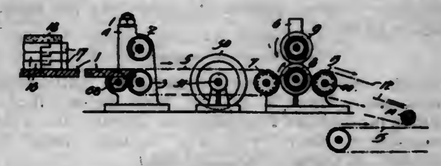


1. A centrifugal pump, comprising, in combination, a casing forming a runner chamber provided at one side with an inlet opening, the other side having an enlarged central opening, a cylindrical member extending through the central opening, means for forming a seal between the wall of the central opening and the outer surface of the cylindrical member, a shaft extending through the cylindrical member and terminating within the casing, a runner carried by the shaft, said runner having one or more sets of auxiliary blades on the side adjacent the cylindrical member, the side of the runner having the auxiliary blades being provided with a circular depression concentric with the shaft, the cylindrical member having a portion extending into the circular depression, said inwardly extending portion having a groove adapted to catch slippage and return it to the auxiliary blades and a stuffing box for forming a seal between the shaft and the cylindrical member.

1,756,325. APPARATUS FOR TREATING DENTAL INVESTMENTS. REGINALD V. WILLIAMS, Buffalo, N. Y. Filed Mar. 19, 1926. Serial No. 96,004. 1 Claim. (Cl. 259—72.)

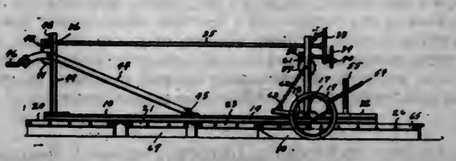
A portable device for removing trapped gas or air from the liquid investment of a dental flask, comprising a casing including a chamber open at its upper end, an electromagnet housed within said chamber and rigidly suspended from the top of the casing, said electromagnet including a central pole and side poles and a coil for carrying an alternating current surrounding said central pole, the upper end of the central pole terminating below the level of the corresponding ends of the side piles, a vibratory cover plate mounted on the open end of said casing over said electromagnet for completing the magnetic circuit, said cover plate also constituting a support for the dental flask, adjusting screws for detachably holding the plate on the casing and for regulating the vibrating stroke thereof, and a spring applied to one of said screws and bearing against the underside of said cover plate for moving the same in a direction away from the electromagnet between the changes of frequency of current.

1,756,326. SELF-ADJUSTING INTERMEDIATE BUSHING. JOHN A. WINTROATH, Los Angeles, Calif., assignor to Peerless Pump Company, Los Angeles, Calif., a Corporation of California. Filed July 30, 1925. Serial No. 46,978. 8 Claims. (Cl. 103—102.)



1. In a deep well turbine pump, the combination of: a pump head at the surface of the ground; a pump section suspended from said pump head and a substantial distance therebelow; an impeller in said pump section; a shaft operably connecting said impeller and a source of power adjacent said pump head; and a self-adjusting, self-centralising bearing positioned below the surface of the ground and journalling said shaft to prevent said shaft from whipping when rotating.

1,756,327. BEAD-SETTING RING. FRED L. ALLENSWORTH, Akron, Ohio, assignor to the Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 12, 1928. Serial No. 305,554. 8 Claims. (Cl. 154—9.)



1. A bead setting ring having a split retaining ring secured thereto, said retaining ring being split at one point only of its circumference and unattached with respect to said head setting ring throughout approximately one half of its circumference including the split.

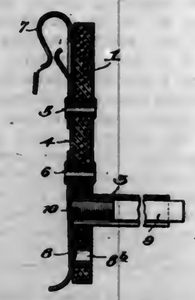
1,756,328. METHOD AND APPARATUS FOR FORMING PLASTIC EXPLOSIVES INTO STRINGS. ANTON ERIK ANDELIN, Bromarf, Bjorknas, Finland, assignor to Finska Forcit-Dynamit Aktiebolaget, Hango, Finland, a Corporation of Finland. Filed Dec. 1, 1928, Serial No. 323,085, and in Sweden Oct. 31, 1927. 4 Claims. (Cl. 18—9.)

1. Apparatus for preparing plastic explosive material in string form for use in the manufacture of dynamite cartridges and the like, which comprises a pair of pressing rollers adapted to press a quantity of plastic material into sheet form, a pair of cooperating grooved rollers, means for feeding said material from said pressing rollers to said grooved rollers, said last named rollers being adapted to form the material into a plurality of continuous strings separated from one another, and means for conveying said formed strings away from said grooved rollers, said apparatus including a drive shaft, and clutch members for releasably connecting said drive shaft to the pressing rollers and the grooved rollers.

1,756,329. ROAD-GRADING DEVICE. HARRY R. ANDREW, Roswell, N. Mex. Filed June 19, 1928. Serial No. 286,633. 8 Claims. (Cl. 37—160.)

1. In a device of the character described, a wheeled crank axle, a main frame supported at its rear portion on said axle, a suitable lever attached to said axle, means comprising a worm and a worm wheel the latter being fastened on a transverse shaft, said shaft being connected to said lever by a flexible connection, a longitudinal shaft having a hand wheel at its rear portion and a worm at its forward portion, said worm meshing with a worm wheel fastened on a forward transverse shaft, said shaft supported by a suitable hitch, and a plurality of converging and diverging scraper blades suitably fastened to said main frame.

1,756,330. SPLICING STRUCTURE FOR CANTED RAILS. VICTOR C. ARMSTRONG, Hackensack, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1929. Serial No. 383,448. 8 Claims. (Cl. 238—167.)

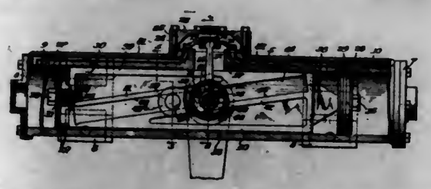


1. In a rail joint, the relatively canted rails, and a joint bar having an offset adapting the bar to the differential relative degree of cant between the two rails.

1,756,331. PROCESS OF RECOVERING VOLATILE PLASTICIZERS FROM CELLULOID AND THE LIKE. HARRY P. BASSETT, Cynthiana, Ky. Filed Feb. 10, 1927. Serial No. 167,380. 6 Claims. (Cl. 260—133.)

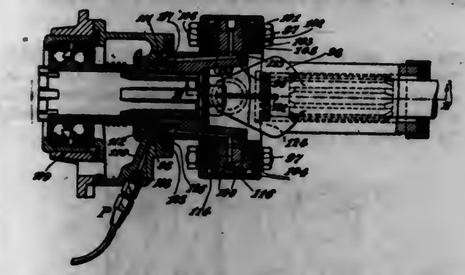
1. The herein described process of removing and recovering volatile plasticizers from celluloid and the like which comprises immersing the material to be treated in water containing a weak organic salt of a strong base, passing a current of steam therethrough to drive off the volatile plasticizing material present and recovering the volatile products driven off.

1,756,332. COMBINED MOTOR BEARING AND BRUSH HOLDER. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 255,458. 6 Claims. (Cl. 171—324.)



1. In an electric motor, a brush carrier comprising a non-metallic member, and an integral wire terminal blank and brush holder including a flat portion adapted to be attached to the carrier and a laterally offset tubular brush holding portion, a brush therein, and wire terminal engaging means connected to said flat portion and a clip pivotally mounted on said carrier adapted to engage the end of said brush holder to retain said brush therein.

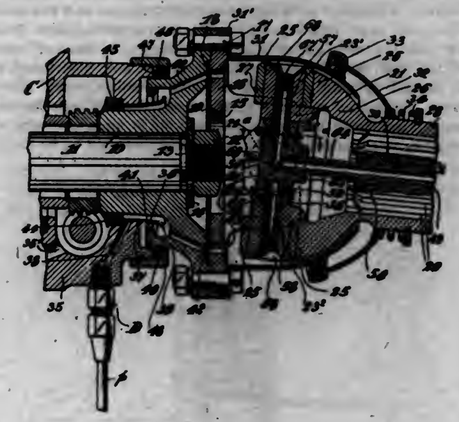
1,756,333. EXTENSION DEVICE. SIDNEY J. BERTHERMAN, Chepachet, R. I., assignor to L. & B. Jewelry Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 7, 1929. Serial No. 412,465. 2 Claims. (Cl. 24—71.)



1. In an extension device for flexible bracelets, a plurality of sections hingedly connected to fold together, means for securing bracelet ends to the free ends of the end sections, a latch opening in one section, a cooperating resilient U-shaped catch on one of the end sections, and a member struck from the stock of the said end section and folded over the base of said catch to lock said catch to the said end section.

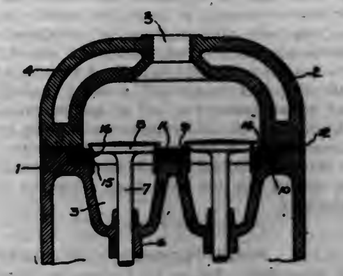
1,756,334. REVERSING-GEAR MECHANISM. CLARENCE CASPER BERTRAM, Chicago, Ill., assignor to Barco Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1922. Serial No. 600,659. 14 Claims. (Cl. 121—41.)

1. In a device of the character described, in combination, a fluid pressure operated motion imparting element having a rectilinear motion translating abutment arranged at an acute angle to the axis of said motion imparting element and non-rotatably slidable in guides, a motion imparting element to be moved by and engaging said abutment, a valve for controlling application of fluid pressure to said motion imparting element, gearing having a part thereof connecting said valve to said element to be moved, and manual control means for said valve connected to said element to be moved through another part of said gearing.



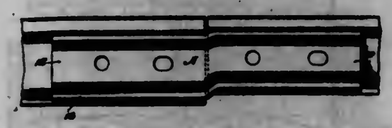
1,756,335. TRUNNION JOINT AND THE LUBRICATION THEREOF AND OF ASSOCIATED PARTS. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Auto Research Corporation, a Corporation of Delaware. Filed June 19, 1924, Serial No. 720,927. Renewed Sept. 12, 1929. 6 Claims. (Cl. 64—89.)

1. In apparatus of the character described, in combination, a pair of shafts, a universal joint connecting said shafts and including a clevis structure including a sleeve on one of said shafts and exposed at its clevis end, a clevis structure including a sleeve on the other of said shafts, a conduit conveying lubricant length wise of the first sleeve and through the clevis jaw structure to supply the bearings of the universal joint, an inlet for said conduit fixed during operation of the joint, a conduit through the other clevis structure, and means closing the inner end of said latter structure to confine the lubricant in its flow from the second mentioned clevis conduit.



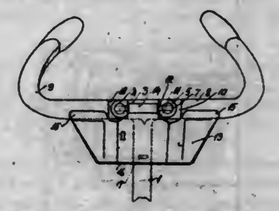
1,756,336. TRUNNION JOINT AND THE LUBRICATION THEREOF AND OF ASSOCIATED PARTS. JOSEPH BIJUR, New York, N, Y,. assignor to Auto Research Corporation, a Corporation of Delaware. Filed Mar. 25, 1925. Serial No. 18,092. 30 Claims. (Cl. 64—89.)

1. In a mechanical transmission, in combination, a lubricated trunnion joint, associated mechanism, means for supplying lubricant from said trunnion joint to said associated mechanism, said means comprising a conduit leading outward from the trunnion joint, a lubricant feeder



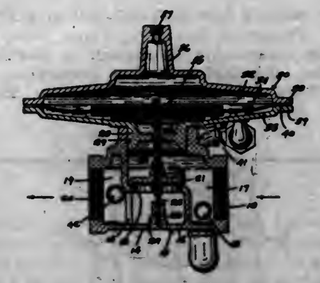
carried by a rotating part of the trunnion joint and delivering lubricant to said conduit, a fixed inlet supplying said feeder, and means preventing leak of lubricant from the course of flow between the inlet and the feeder.

1,756,337. POPPET VALVE. THOMAS BOWLER, North Vancouver, British Columbia, Canada. Filed Apr. 10, 1928. Serial No. 268,947. 4 Claims. (Cl. 128—188.)



1. The combination with a cylinder and a poppet valve, of a seat adapted to be held against vertical displacement and adapted for lateral displacement.

1,756,338. BULLDOZED COMPROMISE JOINT BAR AND BLANK. DANIEL LAWRENCE BRAINE, Brooklyn, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed June 5, 1929. Serial No. 368,607. 5 Claims. (Cl. 238—167.)

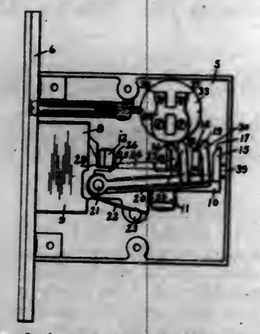


1. A blank from which a compromise joint bar is adapted to be bulldozed provided with a fishing surface having medial enlargement of metal within planes defining the inner and outer limits of said surface to compensate for draw of the metal of the blank incident to vertically offsetting the blank to compensate for the difference in the height of the rails.

1,756,339. ADJUSTABLE HANDLEBAR FOR BICYCLES, MOTOR BICYCLES, AND THE LIKE VEHICLES. CHARLES EMANUEL BROBERG, Copenhagen, Denmark. Filed Aug. 7, 1928, Serial No. 297,945, and in Denmark Jan. 19, 1928. 2 Claims. (Cl. 208—124.)

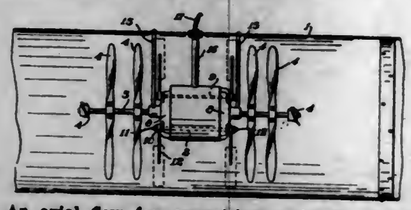
1. In handle bars for motor cycles, cycles and the like vehicles, the combination of two laterally extending arms, means for attaching these arms rotatably to the handle bar stem, a lock plate with two brackets engaging the arms of the handle bar in either their open operative position or in their folded down inoperative position, means for locking said lock plate with the handle bar arms in either of the extreme positions, to the effect that when the arms are locked in their folded down position unauthorized removal of the vehicle is prevented.

1,756,340. LOW-PRESSURE CUT-OFF. CHARLES L. BRYANT, Cleveland, Ohio. Filed Feb. 1, 1928. Serial No. 251,062. 6 Claims. (Cl. 137—153.)



1. A low-pressure cut-off, comprising: a valve, biased to closed position; a motor, connected to said valve to open said valve; a motor duct, leading to said motor; a normal duct, leading from the line beyond said valve; a starting duct, leading from the line ahead of said valve; and a control valve, normally connecting said normal duct to said motor duct, but shiftable to connect said starting duct to said motor duct.

1,756,341. ELECTRICAL CONDUCTOR. OLIVER E. BUCKLEY, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 758,984. 12 Claims. (Cl. 178—45.)



1. In a continuously loaded conductor which requires a heat treatment to high temperatures to develop one of its magnetic properties, a copper conductor having near its surface a zone of a material containing a far greater amount of oxygen per unit volume than does the conductor at its center.

1,756,342. LOCK. JOSEPH CARLIN, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed July 2, 1927. Serial No. 203,172. 6 Claims. (Cl. 70—46.)

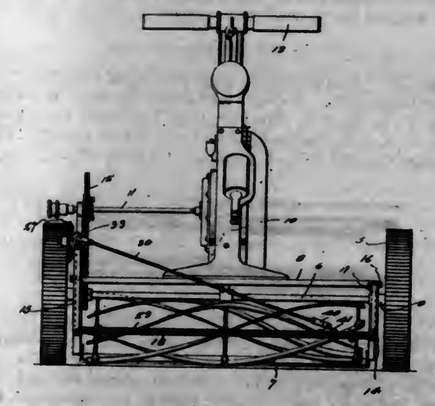
1. In a door lock, a case, a bolt mounted in the case having a stem, a key operated roll-back mounted in the case, a plurality of pairs of engaging elements on said stem and roll-back, each pair comprising one element on the stem and one on the roll-back, said pairs of elements being adapted to be successively engaged during the operation of the roll-back to impart an extra long throw to the bolt, and a tumbler pivoted to the bolt, said tumbler having an end extending between the elements on said bolt and adapted to be engaged by said roll-back.

1,756,343. MEANS FOR MOVING AIR AGAINST PRESSURE. FREDERICK CHARAVAY, Piqua, Ohio, assignor, by mesne assignments, of one-half to Hartsell Industries, Inc., Wilmington, Del., a Corporation of Delaware. Filed Oct. 10, 1927. Serial No. 225,137. 2 Claims. (Cl. 230—122.)

1. An axial flow fan comprising a circular casing, a motor having an armature, mounted axially thereof, the shaft of said armature projecting from both ends of said motor, a plurality of airfoil propellers mounted in balanced staggered relation on each end of said shaft.

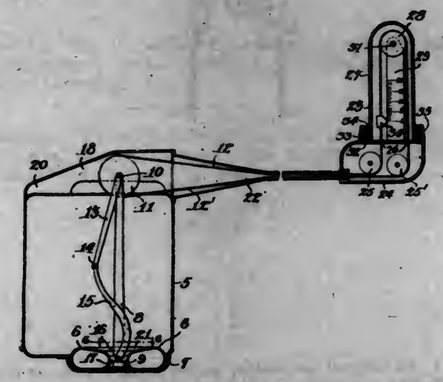
1,756,344. BUILDING ROADS. KARL DAMMANN, Essen, Germany. Filed July 2, 1928, Serial No. 290,041, and in Germany July 11, 1927. 4 Claims. (Cl. 94—23.)

1. A method of constructing roads which consists in superimposing on a suitable base a layer of metal stones, filling the interstices between the stones with sand, rolling down the said layer, removing the sand from the upper surface of the stones, and prior to the admission of traffic to the surface of the layer applying directly thereto a compressible layer binding covering which will be compressed substantially simultaneously with the layer thereunder by the action of the traffic subsequently passing thereover.



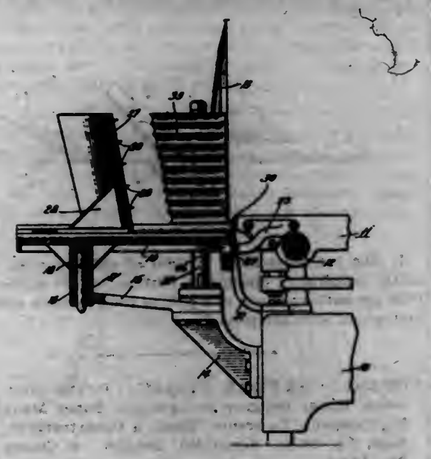
1,756,345. LOCKING MECHANISM. EDWARD LEE DUNN, East Orange, N. J., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 3, 1928. Serial No. 309,955. 12 Claims. (Cl. 187—49.)

5. In an elevator system in which control mechanism is provided for controlling the operation of the elevator car and in which a hatchway gate is provided at each of a plurality of landings; mechanism for interlocking said control and said gates, each interlock mechanism comprising, a member movable by the corresponding gate upon opening thereof, a member adapted to be moved in one and the same direction upon operation of said control mechanism from off position into either starting position, a member associated with both of said other members and positioned to be moved by said second mentioned member, upon movement thereof as a result of the operation of said control mechanism to either start position, into such cooperative relation with said first mentioned member and to be main-



tained in such relation by said second mentioned member as to prevent movement of said first mentioned member and thus lock said gate, said second mentioned member, upon return of said control mechanism to off position, moving to release said third mentioned member and thereby release the first mentioned member, unlocking said gate; and means common to all of said interlock mechanisms and operable by said control mechanism, upon operation thereof from off position into either start position, to cause movement of all of said second mentioned members into locking relation with their respective first mentioned members.

1,756,346. WEED-TOPPING ATTACHMENT FOR LAWN MOWERS. FRANK C. J. DURSCH, Philadelphia, Pa. Filed Sept. 15, 1928. Serial No. 306,233. 5 Claims. (Cl. 56—238.)

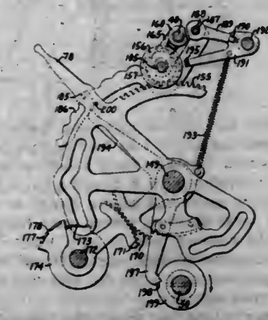


1. A topping attachment for lawn mowers comprising a substantially U-shaped frame adapted for attachment forwardly of the mower, a reciprocating cutter carried by the frame and extending transversely of the mower, a power take off means at one side of the frame, and a reciprocating drive rod operatively connected at one end to said power take off means and extending transversely of the mower with its opposite end operatively connected to said cutter, said power take off means comprising a shaft rotatably mounted at the upper end of one side of said frame, a sprocket wheel on the shaft, an eccentric operatively connected with the drive rod, and gears operatively connecting the shaft and the eccentric.

1,756,347. LIQUID-LEVEL INDICATOR. THOMAS M. EYNON, Philadelphia, Pa. Filed Mar. 31, 1921. Serial No. 457,277. 5 Claims. (Cl. 73—82.)

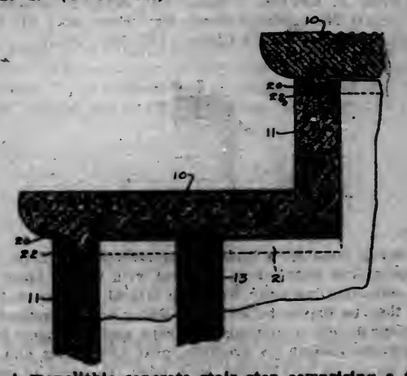
8. In an automobile indicator for gasoline depth, a tank, a float-operated wheel, a support for the wheel, a belt carried by the wheel, an indicator base, a pair of idlers rotatably supported in the base, a casing resting upon the base and transparent in one portion, packing for the casing, a pulley rotatably supported within the casing adapted to be rotated by said belt and a pointer carried by the belt and visible through the casing.

1,756,348. SLICE RECEIVER. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Aug. 16, 1926. Serial No. 129,825. 11 Claims. (Cl. 146—94.)



1. The combination with a slicing machine having a slicing knife and a relatively movable support for material to be sliced, of a slice receiver having a receiving surface disposed below the surface of said support and having a horizontally movable slice support disposed above said receiving surface, said slice receiver also having an upstanding abutment adjacent the edge of said receiver for preventing the lower edges of said slices from moving outwardly toward the outer edge of the slice receiver.

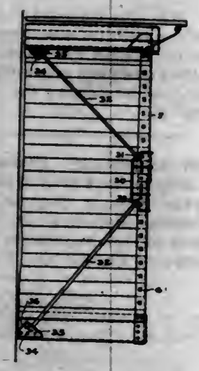
1,756,349. IRON SMELTING. RICHARD FRANCHOT, Washington, D. C., assignor to Ferro Chemicals, Inc., Washington, D. C., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 262,047. 10 Claims (Cl. 75—14.)



1. In smelting iron ores with solid carbonaceous fuels and preheated air in a blast furnace to produce iron alloys, fuel gas and slag, the process which comprises diverting a limited amount of hot gases and saline vapors from the hot zone of the furnace and introducing the air blast at a temperature below 900° F.

1,756,350. CASH REGISTER. FREDERICK L. FULLER, Ilion, N. Y., assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Original application filed May 23, 1919, Serial No. 299,112. Divided and this application filed Mar. 7, 1927. Serial No. 173,391. 9 Claims. (Cl. 235—130.)

1. In a machine of the class described, the combination of a plurality of sets of depressible keys, a differentially adjustable element adapted to be adjusted to a plurality of positions, a flanged disk appropriate to each of said sets of keys and having notches in the flanges for normally permitting the operation of a key in each set, and means controlled by said differentially adjustable element for adjusting all of said disks, whereby only a key in one set may be operated.



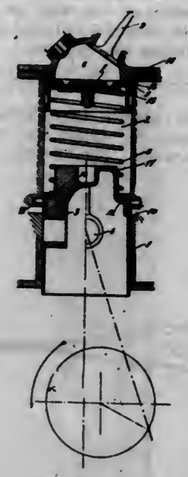
1,756,351. CONCRETE STEP. JOHN GENTILE, Cleveland, Ohio. Filed Oct. 1, 1928. Serial No. 309,409. 4 Claims. (Cl. 72—96.)

1. A monolithic concrete stair step comprising a tread and an integral riser extending upwardly from the tread,

the tread having a rib extending along the bottom surface thereof, and the riser having a groove, said groove being wider and of less depth than said rib, whereby wedging action of the rib against the walls of said groove is eliminated and the weight on each tread is directed vertically onto the adjacent riser.

1,756,352. RAILWAY-CAR CONSTRUCTION. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 18, 1929. Serial No. 340,731. 12 Claims. (Cl. 105—411.)

1. In a railway car having upper and lower frame members, the combination of an end wall comprising two metallic plates secured together along a horizontal line, each of said plates provided with a flange adjacent a vertical margin, a member connected to the flange of each plate, and upper and lower diagonal braces, each having one end attached to said member, one of said braces having its opposite end attached to said upper frame member and the other of said braces having its opposite end secured to said lower frame member.



2. In a railway car having upper and lower frame members, the combination of an end wall comprising two metallic plates secured together along a horizontal line, each of said plates provided with a flange adjacent a vertical margin, a member connected to the flange of each plate, and upper and lower diagonal braces, each having one end loosely attached to said member, one of said braces having its opposite end attached to said upper frame member and the other of said braces having its opposite end secured to said lower frame member.

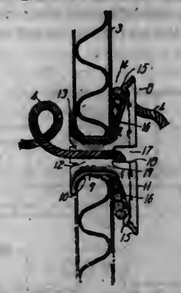
1,756,353. REPAIR SHIM FOR BRAKE LININGS. SAMUEL A. GRUBER, Verona, Pa., assignor of one-half to Hyatt M. Cribbs, Verona, Pa. Filed May 21, 1929. Serial No. 364,770. 1 Claim. (Cl. 188—249.)

A repair shim for a brake lining riveted on a band comprising a thin metal strip provided with spaced apart fingers extending inwardly from one lateral edge so that the shim may be driven between the lining and its supporting band, the fingers straddling the rivets, and the fingers being of sufficient length to protrude past the lining and the band, so as to be clinched back over the band to clamp the shim in place.

1,756,354. INTERNAL-COMBUSTION ENGINE OF THE TWO-STROKE TYPE. CHARLES EMILE HEIBIG, Menecy, France. Filed Aug. 24, 1928, Serial No. 301,870, and in Germany Aug. 31, 1927. 4 Claims. (Cl. 123—66.)

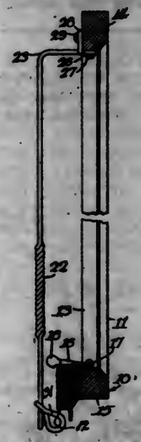
4. An internal combustion engine of the two stroke type, including a cylinder, a lower piston reciprocating therein, an upper piston reciprocating in said cylinder, resilient connecting means between the pistons, an upper exhaust port, a lower admission port, the said cylinder having an expansion groove formed therein to allow the gas between the two pistons to expand during the power stroke, a stop limiting the upward movement of the upper piston, and means carried by the opposing faces of the pistons to provide a cushion effect between them.

1,756,355. METHOD OF AND MEANS FOR PREPARING CORD FABRIC FOR TIRE BUILDING. KIRBY T. HENDERSON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 14, 1928. Serial No. 306,035. 10 Claims. (Cl. 154—2.)



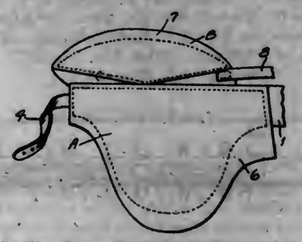
1. The hereindescribed method of splicing plies of tire fabric comprising spacing a portion of the splice away from the surface of one of a pair of rolls between which the juxtaposed plies are passed.

1,756,356. ONE-PIECE EYELET. IRVING HILL, Lawrence, Kans., assignor to Lawrence Paper Manufacturing Company, Lawrence, Kans., a Copartnership. Filed Sept. 14, 1928. Serial No. 306,036. 4 Claims. (Cl. 24—141.)



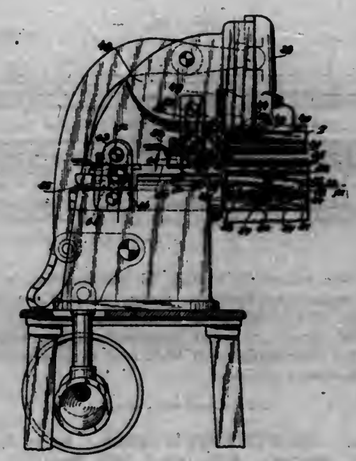
1. In a fastener of the character described, a tubular body having a radial flange at one end for anchoring to a

flap, and a disk at the other end having an opening registering with the opening of the tubular body and radial slots



extending from its periphery toward its center, said disk having radially spaced bosses on its under surface extending toward said flange.

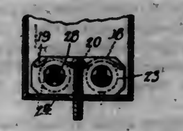
1,756,357. WINDOW-OPERATING DEVICE. CHARLES HILMER, Chicago, Ill. Filed Dec. 6, 1928. Serial No. 324,077. 4 Claims. (Cl. 268—134.)



1. In combination, a window comprising an upper and lower sash, a fastening device on the adjacent rails of said sashes for locking said sashes together, an operating device, means for attaching said device to the upper rail of said upper sash, said device extending outwardly and downwardly, a handle on the lower end of said device, and means on said device for engaging said fastening device for holding said upper sash in adjusted position.

1,756,358. COMBINED HIP AND KIDNEY PAD FOR FOOTBALL PLAYERS. WILLIAM A. INGRAM, Jeffersonville, Ind., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 2, 1928. Serial No. 289,808. 12 Claims. (Cl. 2—2.)

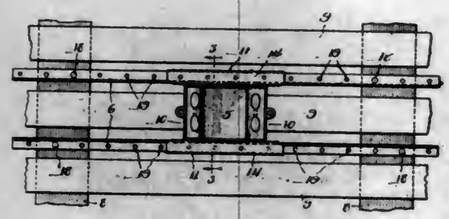
1. A protecting device for foot ball players, comprising hip pads, and kidney pads arranged in overlapping relation with said hip pads and pivotally connected intermediate their front and rear ends to said hip pads, thereby producing an articulated structure in which the front end portions of the kidney pads are capable or rocking, upwardly and downwardly relatively to the hip pads.



1,756,359. MEANS FOR THE MANUFACTURE OF PAPER BOXES, CARDBOARD BOXES, AND THE LIKE. EMIL JAGENBERG, Dusseldorf, Germany. Filed Sept. 2, 1926, Serial No. 133,112, and in Germany Dec. 3, 1925. 14 Claims. (Cl. 93—56.)

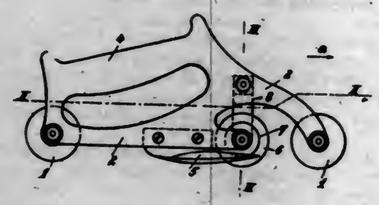
9. In a device of the kind described in combination, a lower supporting die, an upper pressure die, and longitudinally movable sections on said latter die, a knife on said longitudinally movable section, a counter knife, linked to the upper section and cooperating with the other knife, both knives adapted to engage a reinforcing strip, and an additional knife engageable with the lower section and adapted to engage an additional reinforcing strip.

14. A device for attaching reinforcing strips to the corners of boxes comprising, in combination, an anvil and a die movable with relation to each other, guiding means for guiding a pair of separate and superimposed strips between the anvil and die, and means for operating said anvil and die for applying strips to the inside and outside surfaces of the corners of a box disposed between said anvil and die.



1,756,360. CABLE CLAMP. CHESTER A. JOHNSON, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1926. Serial No. 89,852. 8 Claims. (Cl. 247—25.)

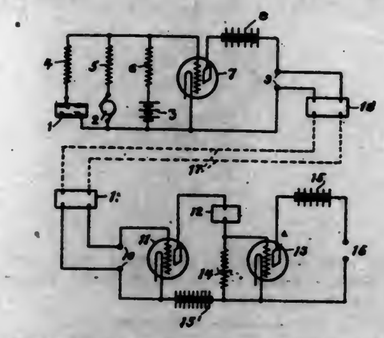
1. A cable clamp for a box having cable receiving openings therein in one wall adjacent another wall of the box comprising, in combination, a yoke slidable along the first wall toward the second wall, a screw to draw said yoke



toward the second wall to clamp cables entering said holes, a plate carried on said yoke having an edge against said second wall, said plate having a transverse slot therein, and a lug on the yoke slidable in said slot, said plate having bushing holes therein positioned to bush the ends of cables clamped by said yoke.

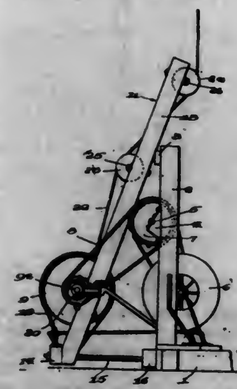
1,756,361. OUTLET-BOX MOUNTING. CHESTER A. JOHNSON, Chicago, Ill., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 11, 1926. Serial No. 134,770. 11 Claims. (Cl. 247—22.)

2. A box mounting having, in combination, a box, a pair of supporting members, means on said box adapted to engage said members to mount said box in one position, and means on said member-engaging means arranged for interengagement with said bars to mount said box in a second position.



1,756,362. SHEET-METAL CUTTER. HUGO JUNKERS, Dessau, Germany. Filed Oct. 5, 1925, Serial No. 60,696, and in Germany Jan. 8, 1925. 2 Claims. (Cl. 164—84.)

1. A device for cutting corrugated sheet metal comprising a frame, two circumferentially corrugated rollers with parallel axes mounted in line on said frame to support a cutter on and to space same relative to the metal sheet to be cut, a rotary cutting element on one of said rollers and a blade fixed to said frame in cooperative relation with said rotary cutting element and adapted to engage the lower face of the metal sheet.



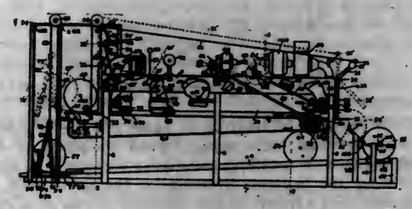
1,756,363. SYSTEM FOR PICTURE TRANSMISSION. MAX KAGELMANN, Berlin-Niederschonhausen, and ADOLF EULENHÖFER, Konigswusterhausen, near Berlin, Germany, assignors to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Apr. 13, 1928, Serial No. 269,738, and in Germany Apr. 23, 1927. 15 Claims. (Cl. 178—53.)

1. A picture transmission system comprising, in combination, a transmitting apparatus for scanning the picture to be transmitted and producing picture currents corresponding to the individual picture elements, means associated with said transmitting apparatus for producing synchronizing current impulses superimposed upon said picture currents and being of a different intensity from said picture currents, a transmission channel for sending said picture currents and said synchronizing currents simultaneously to a receiving station, receiving apparatus for reconstructing the picture operated synchronously with

said transmitting apparatus by said synchronizing currents, and means at said receiving station responsive only to currents of distinct intensity, for separating said synchronizing currents from said picture currents.

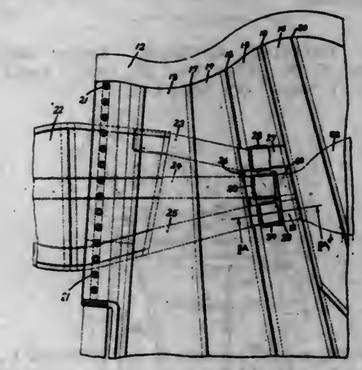
1,756,364. ATTACHMENT FOR WELL-DRILLING RIGS. IRA A. KARNS, Wichita Falls, Tex., assignor to Herbert J. Hausler. Filed May 14, 1927. Serial No. 191,350. 4 Claims. (Cl. 254—187.)

1. The combination with a well drilling rig employing conventional draw works having a line shaft, of an auxiliary unit comprising a drum for raising and lowering the swabbing or bailing devices in a well, said drum being rotatably mounted in an auxiliary frame, means for securing said frame to said rig just off the floor thereof and independent thereof, and means whereby said drum is driven from the line shaft of the rig.



1,756,365. DRAPERY-SUSPENSION FIXTURE. CHARLES W. KIRSCH, Sturgis, Mich., assignor, by mesne assignments, to Kirsch Company, Sturgis, Mich., a Corporation of Michigan. Filed Jan. 31, 1927. Serial No. 164,693. 7 Claims. (Cl. 156—20.)

5. A curtain pole provided with a longitudinal groove, a conventional hollow, longitudinally slotted curtain rod

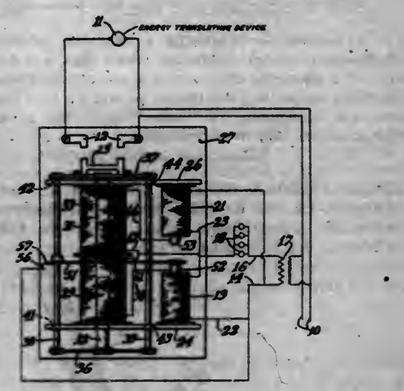


mounted in said groove and having its slotted wall disposed in the mouth of said groove, sheaves and carriers therefor mounted in said groove between the ends of said rod and the ends of said pole, two sets of carriers, each including a master carrier, engaged with the slotted wall of said rod and slidable on the latter, a draw-cord engaged with said sheaves and said master carriers, and drapery suspension devices mounted on said carriers.

1,756,366. LAUNDRY DRIER. ELMER KNUTSEN, Bellingham, Wash. Filed Feb. 25, 1929. Serial No. 342,365. 12 Claims. (Cl. 34—12.)

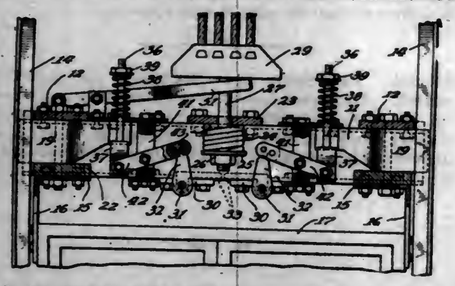
1. In a laundry drier, a drying chamber having capacity to contain several laundry baskets, a plurality of foraminous cylindrical laundry baskets disposed side by side in said chamber with the axes of said baskets transverse of said chamber, a gudgeon fastened to each end of each of said baskets protruding therefrom in the axis thereof, means applied to said gudgeons to retard their movement through said chamber, means applied to the peripheries of said baskets to cause said peripheries to move faster than said gudgeons in said chamber, and means to cause heated air to pass through said chamber and among and through said baskets.

1,756,367. CORSET CONSTRUCTION. LESTER H. LOEFFEL, New Haven, Conn., assignor to The Berger Brothers Company, New Haven, Conn. Filed Dec. 17, 1927. Serial No. 240,892. 2 Claims. (Cl. 2—27.)



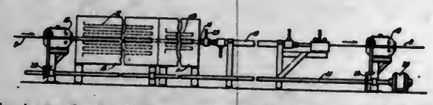
2. In a corset or the like, a one piece body portion, said body portion having a slit within its margins, said slit being intersected at each of the ends thereof by transverse slits forming two adjacent tabs, strips of binding material secured one to each of said tabs, said strips projecting beyond the tabs so as to lie in overlapping relation and providing an opening through the corset body therebetween, said strips of binding material being secured to said body adjacent the ends of said opening.

1,756,368. RESISTOR AND METHOD OF MAKING SAME. SIEGMUND LOEWE, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Sept. 2, 1925, Serial No. 54,081, and in Germany Nov. 6, 1924. 8 Claims. (Cl. 201—75.)



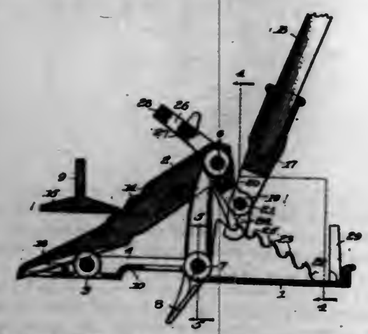
8. A high resistance unit adapted to withstand high temperature without losing its resistivity including a non-conductive rod having the spiralled end of a metallic conductor attached to the surface of each end of said rod, said rod ends being provided with a coating of a concentrated resistance material, the surface of said rod between said ends being provided with a less concentrated coating of said resistance material.

1,756,369. SWITCH-OPERATING APPARATUS. NOLAN C. LOVELL, Birmingham, Ala. Filed Apr. 7, 1928. Serial No. 268,861. 7 Claims. (Cl. 175—375.)



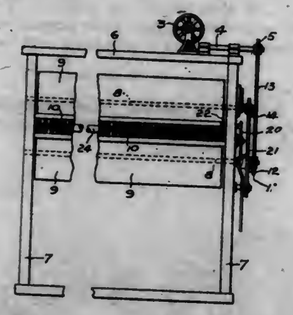
7. In a switch operating mechanism, a low voltage circuit, an electro-magnet in the circuit and energised when the circuit is closed, a solenoid in parallel with the electro magnet, a second electro-magnet energised when the circuit is closed and having an associated solenoid in parallel with the first mentioned electro-magnet and solenoid and opposed thereto, said electro-magnets being in spaced relation, connected movable cores for the solenoids and adapted to reciprocate in the plane of the electro-magnets, contact members carried by the opposed electro-magnets and each connected with its associated solenoid, a flexible armature movable with the solenoids and extending between the opposed electro-magnets to be attracted to the nearest electro-magnet, a contact member carried by the flexible armature to coact with the contact member of the nearest electro-magnet when said electro-magnet is energised, a common wire for the circuits of the two solenoids carried by the flexible armature, a switch operated by the movable cores, and a plurality of push buttons each adapted to complete the low voltage circuit.

1,756,370. SAFETY DEVICE FOR ELEVATORS. CHARLES G. LUEHRMAN, Chicago, Ill. Filed May 27, 1929. Serial No. 366,119. 4 Claims. (Cl. 187—86.)



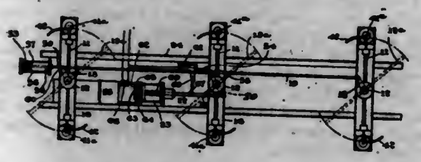
3. An elevator safety device comprising a cross beam, pairs of gripping jaws carried thereby, spring actuated means for actuating said jaws, levers for supporting said springs against operation, crank shafts and dogs for holding said levers, and a lever arm for actuating said crank shafts.

1,756,371. CONTINUOUSLY-LOADED CONDUCTOR. PAUL S. MCCANN, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 6, 1927, Serial No. 203,732, and in Great Britain July 22, 1926. 9 Claims. (Cl. 178—45.)



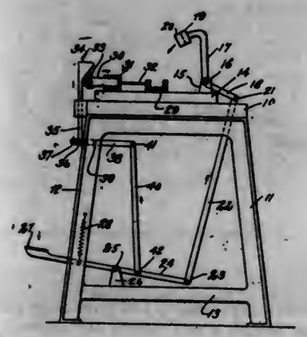
1. A method of improving a magnetic property of a continuously loaded conductor which has a non-adherent layer of a magnetic alloy about a central conductor which comprises subjecting the loaded conductor to a heat treatment and elongating the loaded conductor at any time after it enters said heat treatment.

1,756,372. TRACK LINER. BENJAMIN S. MCCLELLAN, Chicago, Ill., by Kate B. McClellan, conservator, Chicago, Ill. Filed Mar. 4, 1927. Serial No. 172,876. 7 Claims. (Cl. 254—44.)



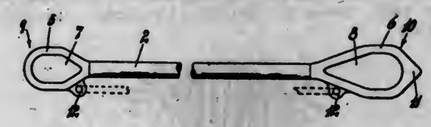
1. A track liner having a substantially flat base, a blade located beneath the base between the ends thereof, said blade being approximately as wide as the base and arranged to extend crosswise thereof, said blade having lugs extending upward through slots in the base, a rock arm on the upper side of the base at said blade and having its lower end rigidly connected to said blade, upright ears on the base at said lugs, an axle member extending through said ears and lugs for pivotally connecting the arm and its blade to the base, a track shifting lever connected to the upper end of said arm, and means for actuating said lever.

1,756,373. METHOD OF TREATING SHINGLES AND THE LIKE. JOSEPH A. MCKERCHER, New Westminster, British Columbia, Canada. Filed Jan. 23, 1928, Serial No. 248,943, and in Canada Nov. 22, 1927. 3 Claims. (Cl. 91—68.)



1. The method of treating shingles and the like immediately following their being dipped in paint or stain which consists in brushing the dipper surface in a zig zag manner in the general direction of the grain and then subjecting said surface to the stippling action of a carpet covered roller.

1,756,374. CIRCUIT BREAKER. HUMPHREYS MILLIKEN, Montreal, Quebec, Canada. Filed Feb. 13, 1928. Serial No. 254,052. 12 Claims. (Cl. 200—148.)



1. In a circuit breaker, a blade normally held between main contacts, hollow supports for said contacts, auxiliary contacts positioned centrally of the hollow supports, horns secured to the blade to frictionally engage with the auxiliary contacts before and after the blade is moved clear of its contacts, and means to supply air through the hollow supports to completely surround the auxiliary contacts to prevent burning of same when the circuit through the horns is broken.

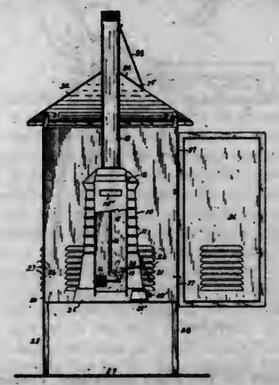
1,756,375. LOLLIPOP MACHINE. MORRIS MILLION, Brooklyn, N. Y. Filed Dec. 22, 1928. Serial No. 327,883. 1 Claim. (Cl. 107—8.)

A lollipop making machine comprising a table, a platform carried by said table and supporting a bracket, a bell-crank lever having its apex fulcrumed on said bracket, a knife holder carried by the upper end of the forwardly and downwardly bent arm of said bell-crank lever, a plurality of knives held in said holder, an operating lever pivoted to the lower end of the other arm of said bell-crank lever, a foot operated lever for moving said operating lever upward to lower said knives, a substantially U-shaped trough on said platform within the path of said knives, adapted to receive the candy, to be cut upon the lowering of said knives, said trough having a plurality of slots in its front wall allowing the introduction of sticks to be combined with the cut candy in said trough and lifting therefrom, a sliding plate having a plurality of transverse channels formed therein for the reception of the sticks, a guide for said plate, a roller carried by the front edge of said plate, and an operating member having a cam face wider on top and narrow below adapted to engage upon its downward movement the roller to move said plate forward and press the sticks thereon into the candy in said trough, a downwardly directed stem on said member, and a means for connecting said stem with the foot operated lever allowing a feeding of the sticks against the candy simultaneously with the operation of the knives for embedding the sticks into the candy after cutting the same by said knives.

1,756,376. METHOD OF MAKING WELDLESS ELEVATOR LINKS. GEORGE W. MOORE, Long Beach, Calif., assignor to R. E. Moore, Piedmont, Calif. Filed Nov. 18, 1927. Serial No. 234,228. 4 Claims. (Cl. 29—148.)

1. A method of forming a weldless elevator link which consists in rolling a bar of uniform cross sectional diameter into a section of reduced central diameter, both ends remaining the same dimension in cross section as the original bar, then flattening the ends and then cutting apertures in both ends to form eyes.

1,756,377. FIELDER'S GLOVE. ELMER NOLTE, St. Louis, Mo., assignor to Rawlings Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 14, 1926. Serial No. 141,511. 5 Claims. (Cl. 2—19.)



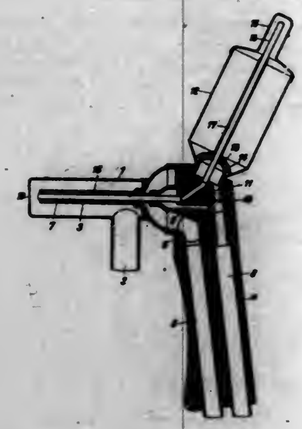
5. A baseball glove or mitt provided with a thumb, an index finger or corresponding portion, and a web consisting of a relatively wide member arranged transversely of the space between said parts, with its bottom edge spaced away from the crotch between said thumb and finger, the top edge of said web being cupped forwardly so as to overcome the tendency of a ball to slide upwardly out of the pocket formed by said web, thumb and index finger.

1,756,378. APPARATUS FOR CLEANING CONDENSER TUBES. WILLIAM F. OBERHUBER, East Lansdowne, Pa. Filed July 3, 1922. Serial No. 572,570. 5 Claims. (Cl. 15—104.06.)

1. A rubber slug for use in cleaning condenser tubes by passage through the tubes and scraping engagement with their walls having a free central longitudinal passage to allow pressure discharge of the fluid through it.

1,756,379. HEATER FOR POULTRY HOUSES AND ANALOGOUS PURPOSES. JOHN B. OLSON and RUBY R. YOUNG, Fort Atkinson, Wis., assignors to James Manufacturing Company, Fort Atkinson, Wis. Filed July 5, 1927. Serial No. 203,468. 4 Claims. (Cl. 126—58.)

1. A poultry house heater having in combination a portable casing provided with a roof spaced therefrom and a closed bottom, legs supporting said casing, a stove mounted on said bottom and having a smoke pipe extending through said roof, a ventilating flue outside of said stove and communicating with said pipe, the lower portion of said flue being spaced from said bottom, and the sides of said casing having openings positioned above the lower end portion of said ventilating flue in order to insure means for continuously ventilating the heater.

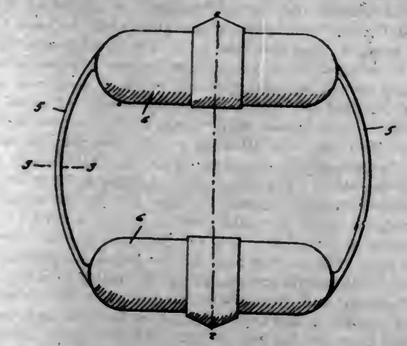


1,756,380. RUBBER MAT. GEORGE S. OSBORN, Hartford, Conn. Filed Mar. 22, 1928. Serial No. 263,737. 10 Claims. (Cl. 154—49.)

8. A rubber floor covering comprising a sponge rubber body having its top of open cellular structure presenting

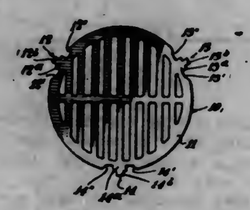
an exposed sponge rubber tread and having rind on its bottom and sides and a border united to said side rind, said border also having an exposed cellular sponge rubber top and outer side.

1,756,381. APPARATUS FOR THE PRODUCTION OF MOLTEN LIQUID, COATS OF ENAMEL, GLASS, AND THE LIKE BY SPRAYING UPON METAL, STONE, OR OTHER SURFACES OR BODIES. AUGUST PAHL, Berlin-Wilmersdorf, Germany. Original application filed Jan. 28, 1927, Serial No. 164,827, and in Germany Feb. 25, 1925. Divided and this application filed June 25, 1927. Serial No. 201,495. 3 Claims. (Cl. 91—12.2.)



1. Apparatus of the class described, comprising a container, a duct to discharge powder from the container, said duct having an intake end at an elevated point in the container and above the lever of the powdered material in the container, a burner tube in which the discharge end of the first named duct is arranged, said burner tube having a gas intake and also having a discharge opening, a duct for compressed air leading to the lower portion of said container and provided with a controlling valve, a duct in the burner tube arranged around and spaced from the discharge portion of the first named duct and a duct for compressed air leading to the inner end of the last named duct, the discharge ends of the last named duct and of the powder discharge duct being opposite the discharge, burner opening, of said burner tube.

1,756,382. GLUE PRODUCT. GUSTAV PALME, Strehla-on-the-Elbe, Germany. Filed Jan. 16, 1928. Serial No. 247,047. 1 Claim. (Cl. 87—7.)

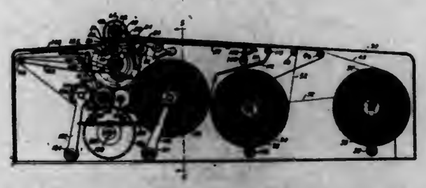


A glue product having the form of a polygonal shaped body, the area of which does not substantially exceed the size of a finger nail, having a plurality of edgewise projections that are reduced in width toward their free ends to provide a series of edges which will aid a user in determining the quality of the product.

1,756,383. SWIMMING TUBE. WILLIAM B. PETZ, Plymouth, Mich. Filed Apr. 20, 1929. Serial No. 356,729. 2 Claims. (Cl. 9—17.)

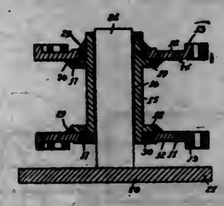
1. A device of the class described comprising a continuous tube, having oppositely disposed flap like portions and the remaining oppositely disposed portions inflatable, said flap like portions having their walls extending together completely closing the ends of said inflatable portions, air valves in the inflatable portion.

1,756,384. GRATE FOR STOVES AND THE LIKE. MADISON RUSSELL PORTER, New York, N. Y. Filed May 25, 1928. Serial No. 280,415. 13 Claims. (Cl. 126—59.5.)



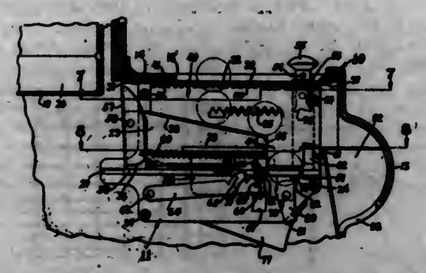
1. A grate for stoves and the like comprising a main grate body provided with a plurality of elongated lugs to receive removable leg members and to be received by apertures in a removable main stove body member, each of said lugs being provided with a recess on each side thereof to permit each of the leg members to be brought into binding position with respect to the main grate body.

1,756,385. PRONGED FASTENER. HENRY V. RAU, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed Sept. 24, 1927. Serial No. 221,712. 2 Claims. (Cl. 248—22.)



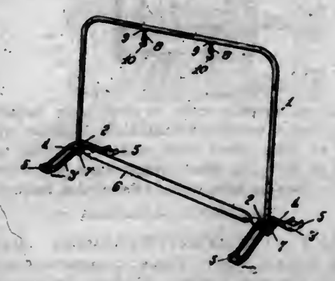
1. In combination, a flat member, a pronged fastener secured to the member, the fastener comprising a body, prongs extending in the same direction from the body on its opposite sides, one of the prongs extending through the flat member and being curved into a hook extending beyond the body of the fastener, the second prong passing through the flat member and being bent in the same direction as the first prong and engaging the flat member to hold the fastener in place on the member.

1,756,386. AUTOGRAPHIC REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 17, 1927. Serial No. 161,588. 12 Claims. (Cl. 282—16.)



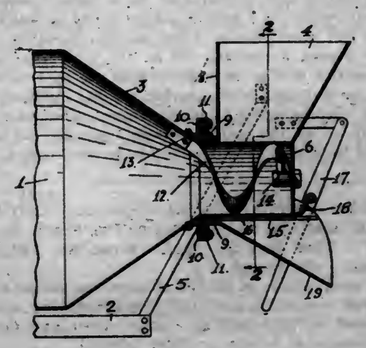
1. In an autographic register, the combination of a record strip supply roll, a record strip receiving roll, a feed roller engaging the periphery of the record strip supply roll to unwind the record strip, a gear connected with said roller, a feed roller engaging the periphery of the record strip receiving roll to wind the record strip onto the receiving roll, a second gear connected with the second mentioned roller driving means for said feed rollers including a gear meshing with both of the above mentioned gears, a power gear, and a friction device between the power gear and one of the feed rollers, and resilient means for holding the feed rollers against the supply and receiving rolls.

1,756,387. MACHINE FRAME. GEORGE T. RONK, Cedar Rapids, Iowa. Filed May 8, 1928. Serial No. 275,905. 3 Claims. (Cl. 219—10.)



1. A machine frame comprising a pair of parallel and spaced plates, each having sleeve receiving openings, a sleeve supported in each set of corresponding openings, each sleeve having circumferential flanges supported adjacent to the inner faces of said plates, said openings being larger than the sleeves and smaller than the flanges to form annular grooves about said sleeves, the sleeves and plates being welded together to form an integral frame.

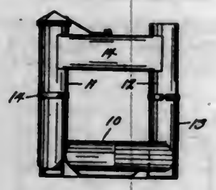
1,756,388. COIN-CONTROLLED MECHANISM. WILLIAM H. ROWE, Los Angeles, Calif. Filed Mar. 23, 1929. Serial No. 349,378. 12 Claims. (Cl. 194—58.)



1. In a coin actuated plunger, a housing including spaced side plates, a plunger movable between said side plates, a pair of locking dogs, each of said dogs including an upwardly projecting lip adapted to normally engage said plunger to prevent movement of said plunger and a cam surface on the upper portion of said dogs to engage a coin.

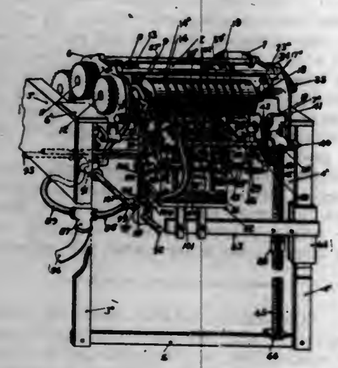
1,756,389. SIGN-SUPPORTING FRAME. CHRISTIAN SCHNEIDER, Chicago, Ill. Filed Apr. 3, 1929. Serial No. 352,076. 3 Claims. (Cl. 40—125.)

1. A sign support comprising supporting members each consisting of a piece of conventional channel-bar having a flat middle portion and flat end portions, the middle portion being offset upwardly from the end portions and provided with a central opening, an inverted U-shaped sign supporting member having threaded extremities adapted to pass through said openings, a collar on each of said threaded extremities having flat side faces adapted to engage the flanges of the supporting members to hold the latter in predetermined position relatively to the U-shaped member and to rest upon the middle portions of said supporting members to support said U-shaped member thereon, and nuts on the extremities of the latter below the middle portions of said supporting members for rigidly clamping the latter against said collars.



1,756,390. CONCRETE MIXER. PETER F. SCHNEIDER, San Francisco, Calif., assignor to Transit Mixers, Inc., San Francisco, Calif., a Corporation of Nevada. Filed June 22, 1929. Serial No. 372,944. 8 Claims. (Cl. 83—73.)

1. A mixing machine comprising a mixing member; a material-feeding member having one opening in communication with the mixing member and another opening communicating with the exterior; a conveying member within the feeding member adapted to selectively direct the material through either opening; and means for controlling the opening to the exterior.

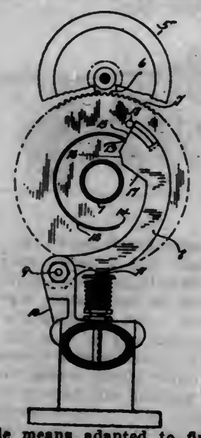


CARNEGIE LIBRARY OF ATLANTA

1,756,391. OIL-BURNING STOVE. CLAUDE SIEBRING, George, Iowa. Filed June 7, 1929. Serial No. 369,083. 12 Claims. (Cl. 126—93.)

1. In an oil burning stove, a stove body including upright flues and a winding combustion chamber connecting said flues at their lower ends, and a combined tank and brace united with the flues intermediate their ends, portions of the flues forming end walls of said tank.

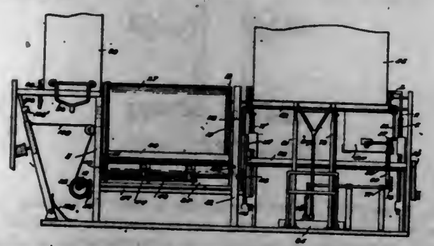
1,756,392. ZIGZAG-PILE-FORMING MACHINE. WALTER HAROLD SMITH, Toronto, Ontario, Canada, assignor to Business Systems Limited, Toronto, Canada, a Corporation of Canada. Filed Feb. 23, 1929. Serial No. 342,255. 16 Claims. (Cl. 270—39.)



1. In a zigzag pile forming machine, a pair of web feeding rollers each provided on its periphery with a longitudinal groove and with a diametrically opposite longitudinal and radial recess, a bar member movable radially in each recess, a creasing rib on the outer face of each bar normally within the periphery of the feed roller, and means for automatically carrying the bar outward as the rib and corresponding opposing groove come to a meshing position as the rollers revolve, whereby the web interposed between the feed rollers is pinched into a crease.

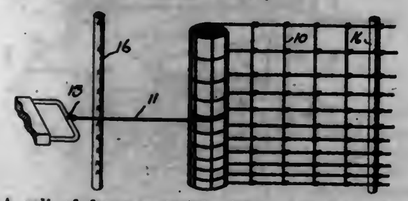
1,756,393. COMPOSITION BLACKBOARD AND METHOD OF MAKING SAME. FOSTER DEE SNELL, Brooklyn, N. Y. Filed Dec. 23, 1927. Serial No. 242,293. 9 Claims. (Cl. 35—15.)

1. A composition of matter adapted for use as a blackboard and comprising a vitreous matrix having uniformly distributed therethrough an opaque, inert and finely divided, somewhat harder granular mineral.



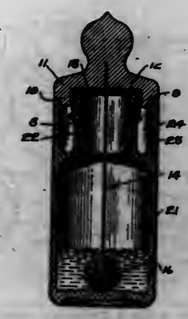
1,756,394. BOILER CLEANER. NORMAN L. SNOW, Detroit, Mich., assignor to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 19, 1924. Serial No. 714,513. 16 Claims. (Cl. 122—392.)

1. In a boiler cleaner, the combination with a rotatable blower element, of a valve for controlling the admission of cleaning fluid thereto, a pivotal lever for actuating said valve, said lever being formed with a free end provided with an offset face said lever being further provided with a second face in the normal plane of the



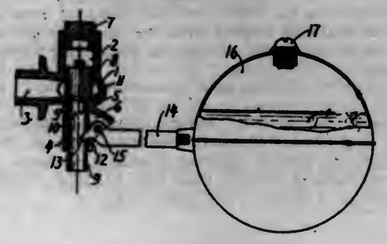
lever, and movable means adapted to first engage said offset face to open said valve and to then engage said second named face to maintain the valve in open position.

1,756,395. DUPLICATING MACHINE. ROBERT E. L. SPENCE, Jr., Miami, Fla. Filed Oct. 7, 1927, Serial No. 224,699. Renewed Nov. 16, 1929. 7 Claims. (Cl. 101—52.)



1. In a machine of the class described, in combination, a revoluble printing drum having a body form and an opening for a separable address form, and means for replacing the address form in said opening after each printing movement of the drum, said means including a form holding member which is adapted to move radially as the drum rotates, and a device for feeding a chain of address forms longitudinally through the drum, the forms being successively engaged by the movable form holding member.

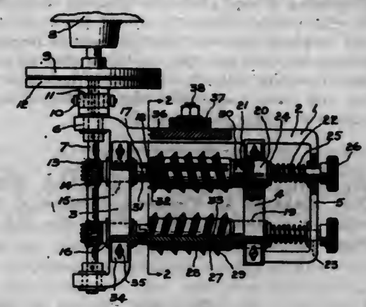
1,756,396. FENCE MATERIAL AND METHOD OF MAKING THE SAME. CLARENCE WINFRED SPICER, Plainfield, N. J. Filed July 17, 1928. Serial No. 293,439. 3 Claims. (Cl. 206—59.)



1. A roll of fence material with a separate pull wire rolled longitudinally of the fence material whereby the fence material will be unrolled when the pull wire is pulled.

1,756,397. BOTTLE FOR CONTAINING FLUIDS. JOHN H. SPOHN, Jr., San Francisco, Calif. Filed July 25, 1927. Serial No. 208,105. 1 Claim. (Cl. 215—43.)

A bottle for containing liquids comprising a container having a cylindrical neck, threads on said neck, a cylindrical wall spaced from said neck and joined to said container to form a cup, a closure for said container and said cup comprising a cap adapted to engage the threads on said neck to seal said container, and a handle secured to said cap, said handle having an annular fillet portion depending into said cup and engaging said container whereby said cup is sealed simultaneously with the sealing of said container.

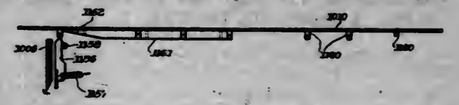


1,756,398. FLOAT VALVE. SVERRE JOHAN STEENSEN, Oslo, Norway. Filed July 16, 1927, Serial No. 206,334, and in Norway Nov. 1, 1926. 2 Claims. (Cl. 137—104.)

2. In a float valve a casing having a cylinder chamber, a supply branch leading to said chamber and a delivery tube leading from said chamber, a valve in the casing comprising a piston arranged for movement in the said chamber and having a delivery tube arranged for movement in the delivery tube of said casing and provided with a port at the end attached to the piston, a float and a float lever pivoted to the casing and having a nose extending into an opening in one side of the discharge tube of the valve.

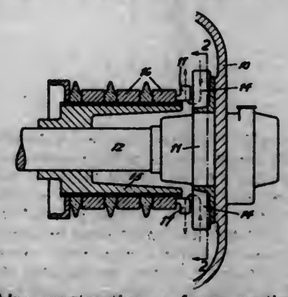
1,756,399. SAW-SHARPENING DEVICE. JONATHAN ROBERT STOWELL, Vancouver, British Columbia, Canada. Filed June 13, 1928. Serial No. 285,174. 4 Claims. (Cl. 76—38.)

1. A saw sharpening device comprising a frame, a pair of helically threaded cutting elements rotatably mounted in the frame, a horizontal bearing carried by the frame in elevated relation thereto, a horizontal saw arbor longi-



tudinally slidable in said bearing and coacting means carried by the arbor and bearing for securing the arbor in different positions of adjustment.

1,756,400. LIGHT-SENSITIVE MATERIALS AND PROCESS OF MAKING THEM. MAXIMILIAN PAUL SCHMIDT and WILHELM KRIEGER, Wiesbaden-Biebrich, Germany, assignors to Kalle & Co. Aktiengesellschaft, Wiesbaden-Biebrich, Germany. Filed Jan. 28, 1928, Serial No. 250,326, and in Germany Feb. 22, 1926. 24 Claims. (Cl. 95—7.)



1. The process of preparing light-sensitive materials, which consists in incorporating a stable diazo compound into a solution of a cellulose derivative the hydrogen atom of at least one hydroxyl group of which is substituted.

1,756,401. TABULATOR. OSCAR J. SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 23, 1928. Serial No. 294,769. 4 Claims. (Cl. 197—176.)

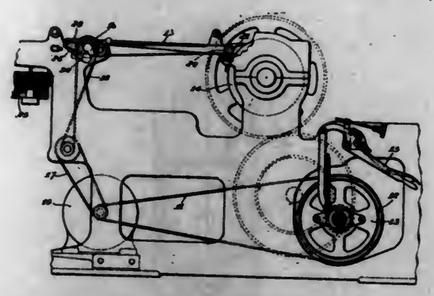
4. In a cross-tabulator, a member having stops defining successive columnar positions, an escapement for said member, a bar on said member, said bar having a dwell portion extending across the face between stops defining a plurality of columnar positions, and manually operable means to lift said bar and thus free said member from the control of said escapement.

1,756,402. COOLING ARRANGEMENT FOR MACHINE BEARINGS. PHILIPP SUTER, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Jan. 25, 1926, Serial No. 83,502, and in Germany Feb. 2, 1925. 1 Claim. (Cl. 308—77.)

In machine construction, a frame portion, a bearing including a portion carried by said frame portion, a shaft

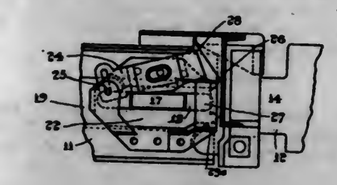
journaled in said bearing, said bearing portion being provided with fins extending radially with respect to the axis of rotation of said shaft and disposed on the interior side of said frame portion, a slip ring carried by said shaft for rotation therewith and disposed in proximity to said bearing portion, and fan blades carried by said slip ring and extending laterally outwardly therefrom toward said fins and being cooperable with the latter to induce air circulation within said machine.

1,756,403. METHOD OF ELECTRICALLY WELDING PIPES. CHARLES M. THOMSON, Westmount, Quebec, Canada. Filed Jan. 18, 1929. Serial No. 333,372. 3 Claims. (Cl. 219—6.)



1. The method of making welded pipe which consists in bending upwardly the sides of a strip of skelp to form a channel, thickening the upturned edges, gradually bringing the edges of the skelp into abutting relation placing a welding strip in the groove between the adjacent edges and electrically welding the strip and the edges of the skelp so that the weld does not quite penetrate the pipe wall, but makes the depth of the weld substantially the thickness of the skelp.

1,756,404. BROOM. JOURNEY FRANKLIN TIMBERLAKE, Charlottesville, Va. Filed June 15, 1929. Serial No. 371,203. 4 Claims. (Cl. 15—173.)

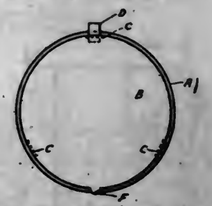


1. In a broom of the class described, a handle, a holder carried by said handle and including a socket for accommodating the handle, an open ended bridle, a bow attached to the end portions of said bridle, and a connection between said socket and the central portion of said bow, said central portion of the bow having an opening formed therein, a hanger including a suspension rod member arranged in said bridle, a central bolt passing through said opening, and a thumb nut carried by said bolt and confined within said connection.

1,756,405. PRINTING-PRESS DELIVERY. BURT F. UPHAM, Brookline, Mass., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1927. Serial No. 163,012. 1 Claim. (Cl. 101—280.)

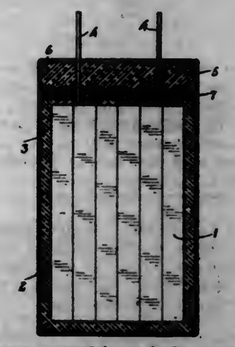
The combination with a printing couple and a variable speed driving means for the same, of a continuous conveyor device for delivering sheets from said couple and constant speed driving means for said device.

1,756,406. DRAWBAR-KEY SAFETY DEVICE. ERNEST R. VIBERG, Montreal, Quebec, Canada. Filed Feb. 7, 1925. Serial No. 7,648. 7 Claims. (Cl. 213—50.)



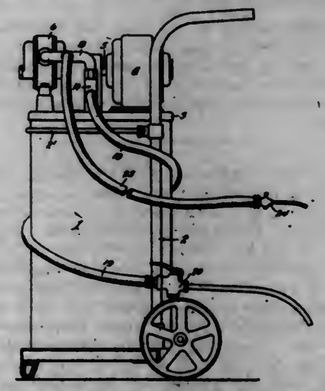
6. Draft key retaining means including a bracket for engagement to the center sill and provided with a passage therethrough aligned with the draft key slot in the sill, and means on the bracket for positioning across said passage.

1,756,407. OIL STILL. ARNOLD CHARLES VOBACH, Whiting, Ind., and EUGENE C. HERTHEL, Chicago, Ill., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 12, 1927. Serial No. 167,712. 5 Claims. (Cl. 196—116.)



4. In an oil cracking still a furnace having a heating flue connected at one end to a fire-box and at the other end to a stack flue, a battery of heating tubes connected in multiple arranged in and extending through the heating flue in the furnace, a still drum and connections including a pump for circulating oil therefrom through the heating tubes of the battery in multiple and back to the still drum, and cores located and extending through the heating tubes in the said heating flue except those first exposed to the heating gases from the firebox and those last exposed to the heating gases passing from the heating flue to the stack flue.

1,756,408. COMBINATION POWDER PUFF AND CLEANSER. JAMES T. WALKER, Pelham, and HARRY O. WEITLICH, New Rochelle, N. Y., assignors to W. S. T. Sani-Products Corp., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 16, 1928. Serial No. 312,798. 4 Claims. (Cl. 132—78.5.)



1. In a combination powder puff and cleanser, a body member, a plurality of removable leaves interposed one upon another and attached to said body member by a plurality of stitches near the margin, the exposed side of the body member constituting a powder puff.

1,756,409. TOP-SEALING PROCESS. ARTHUR J. WEISS, West Orange, N. J., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 4, 1927. Serial No. 210,560. 8 Claims. (Cl. 175—41.)

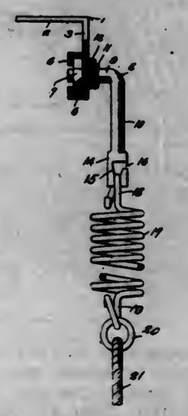
1. A condenser comprising a body, a container therefor, a filler of easily fusible material, a less readily fusible compound for sealing the container, and a layer of heat insulating material having a melting point intermediate that of said filler and that of the compound for sealing the container.

1,756,410. FLUSHING AND CLEANING DEVICE. AUSTIN L. WERTZ, Cleveland, Ohio. Filed Mar. 19, 1927. Serial No. 176,825. 17 Claims. (Cl. 184—1.5.)

1. In a device of the class described, a tank, a pump, an intake pipe for said pump leading into said tank, a discharge conduit leading from said pump, a container arranged within said tank and into which said conduit discharges, said discharge conduit having a vertically disposed portion, an injector arranged within said vertically disposed portion, a connection leading from said vertically disposed portion and in open communication with said injector, said container having an opening therein connecting the same with said tank.

1,756,411. DRY MOLDING. WILLIAM B. WESCOTT, Boston, Mass., assignor to Rubber Latex Research Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 10, 1927. Serial No. 239,215. 16 Claims. (Cl. 18—55.)

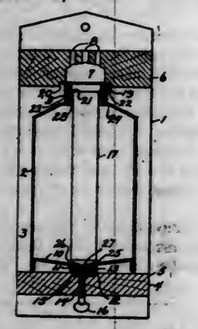
4. In the manufacture of rubber articles, the process which comprises compounding a mass of fillers including fibers with preserved latex, admixing with the latex ingredients to prevent tackiness of the subsequently dried material, drying the compounded mass to form an agglomerated body, dividing the dried material into loose fibers carrying rubber derived from the latex, said fibers being non-tacky, shaping the divided fibers into the desired form and thereafter vulcanizing with the aid of heat and pressure.



16. As a new composition of matter for producing molded rubber articles, a mass of loose shredded asbestos fibers coated with unvulcanized non-tacky rubber from latex gelled in situ.

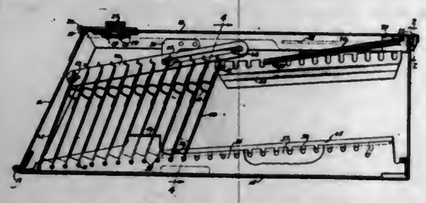
1,756,412. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 8, 1930. Serial No. 419,371. 2 Claims. (Cl. 24—95.)

1. A button comprising a body shell, a hard metal insert in said shell, a soft metal extruded cap, the said cap having a peripheral rim pressed about the said body shell to thereby form a non-separable unit.



1,756,413. BALL-BEARING SWING HINGE. NORMAN H. WILKE and JOHN J. WILKE, Toledo, Ohio. Filed July 3, 1928. Serial No. 290,216. 2 Claims. (Cl. 248—64.)

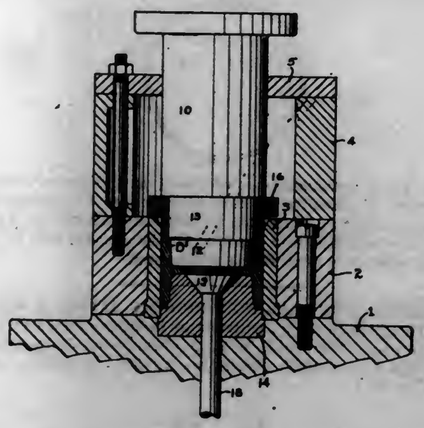
2. In a swing hinge, a bracket including a substantially vertical flange, an anti-friction bearing, and means for mounting the bearing on one side of the flange, the bearing



including a collar extended through the flange and journaled therein, a suspension member including a shank and a shaft disposed at an angle to each other, the shaft extending through the collar and into the bearing, and a fastening device located on the opposite side of the flange from the bearing and passing through the collar and the shaft.

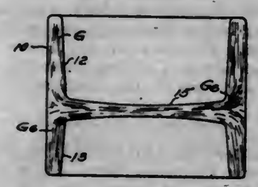
1,756,414. FUMIGATING DEVICE. CAREY CARTER WINCHESTER, Brookhaven, Ga., assignor to National Cedarchex Corporation, Fulton County, Ga., a Corporation of Georgia. Filed Apr. 14, 1928. Serial No. 270,134. 8 Claims. (Cl. 299—20.)

1. A disinfecting device including a holder, having spaced lateral projections, a container for a disinfecting substance adapted to be inserted between and supported by said projections, a tube constituting a chamber adjustably inserted within the container open at its upper end and having an aperture in its lower end, establishing communication with said container, spring means engageable with said tube and container to maintain the tube and container in operative position with respect to the projections, and means carried by the holder to adjustably engage the perforation in said tube to control the flow of the fumigating substance from the container into said tube.



1,756,415. CREDIT FILE. RODNEY J. WOOD, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Jan. 12, 1923. Serial No. 612,182. 9 Claims. (Cl. 45—2.)

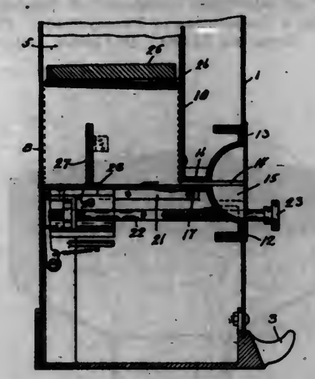
2. In a filing device, a plurality of file units, a plurality of overlapping swinging members attached to each file unit to retain sales slips, and swinging indicating means located behind certain of said swinging members to coact with and swing relatively to the next succeeding swinging member for separating temporarily filed sales slips from permanently filed slips.



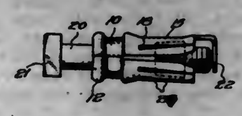
1,756,416. PROCESS FOR MAKING PIPE COUPLINGS. HARRY WOODHEAD, Cleveland, Ohio, assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,610. 9 Claims. (Cl. 29—156.)

1. The process of forming large pipe couplings having inside tapered wall conforming to the pipe thread taper, consisting of heating a metal billet, placing the billet within a cylindrical female die and squeezing it between a pair of accurately aligned male dies so shaped as to first squeeze the center of the billet, forcing the metal laterally and radially, stopping the lateral flow by the cylindrical surface of the female die and turning metal outwardly along

the conical sides of the male dies and continuing this squeezing until the space between the male and female dies are substantially filled and thereafter shearing out the web between the tapered surfaces thus formed on the interior of the double cupped wall leaving a substantially cylindrical member with the taper as described.



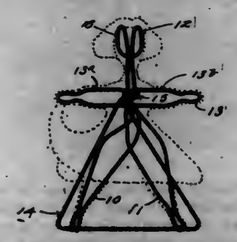
1,756,417. PIPE COUPLING. HARRY WOODHEAD, Cleveland, Ohio, assignor to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 7, 1926, Serial No. 79,785. Renewed Mar. 10, 1930. 5 Claims. (Cl. 285—203.)



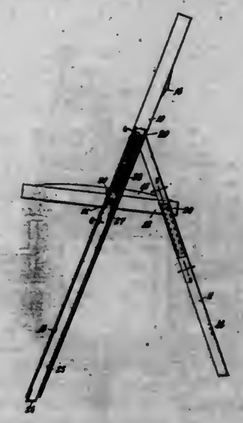
1. A pipe coupling of the character described, consisting of a seamless forged cylindrical member of steel or the like, having its structure nodules elongated and so positioned as to form a grain, and threaded nearly full length substantially uniformly transversely to said grain throughout.

1,756,418. ENVELOPE-DISPENSING MACHINE. HAROLD B. WOODS, Hudson, Mass., assignor, by mesne assignments, to Consolidated Automatic Merchandising Corporation, a Corporation of Delaware. Filed Jan. 8, 1927. Serial No. 159,967. 7 Claims. (Cl. 312—56.)

1. An envelope dispensing machine comprising a support for a stack of envelopes arranged flap down, a separator reciprocally movable beneath the stack and having a flat horizontally disposed finger projecting forwardly at each end of said support and arranged to be passed between the flap and body of the bottom envelope in the stack at each end thereof as the separator is moved forwardly, said fingers having aligned end faces for engagement with the bottom of the fold between the flap and body and having their under sides beveled to the adjacent ends of said faces to form a relatively sharp corner portion for separating the flap from the body preliminarily.



1,756,419. EXPANSION SHIELD. LOTHAR R. ZIFFERER, Columbia, Pa. Filed Sept. 9, 1927. Serial No. 218,473. 3 Claims. (Cl. 85—2.4.)



2. An expansion shield comprised of two complemental substantially semi-cylindrical sheet metal sections formed to provide an expansible cylindrical body having internal longitudinal ribs substantially parallel to the axis of the body and inclined inwardly from the inner end of the shield, and a non-circular expander movable longitudinally of the shield in engagement with said ribs and adapted to direct a radial force thereupon, and other longitudinally disposed internal ribs cooperating with the expander for guiding and preventing relative rotation of the same, said last named ribs extending longitudinally at an angle relative to said first mentioned ribs.

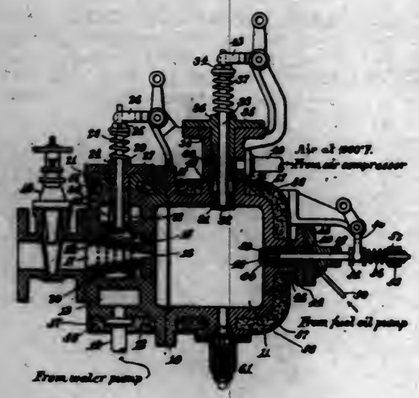
1,756,420. EFFIGY. FLORA BIRUM BAKER, Grants Pass, Oreg. Filed Dec. 6, 1927. Serial No. 238,130. 1 Claim. (Cl. 46—40.)

A frame for an effigy comprising angularly related lower loops having constricted lower portions and having their upper middle portions widened and gradually decreasing in width in the direction of their upper and lower ends, a third lower loop arranged in rear of said first loops and connected at its upper end to the upper ends thereof, an upper loop extending upwardly from the upper ends of said lower loops and having its upper end portion bent back upon itself, and loops extending horizontally and in opposite directions beyond the juncture of said upper and lower loops and having constricted outer ends.

1,756,421. COLLAPSIBLE CHAIR. WILLIAM J. BAUMS, New York, N. Y., assignor to Project Holding Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1927. Serial No. 225,439. 7 Claims. (Cl. 155—142.)

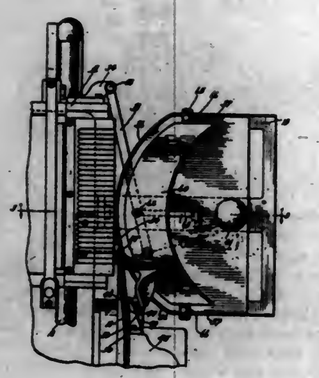
7. A collapsible chair, comprising a pair of front legs and a pair of rear legs pivotally secured to each other, a seat swingably carried by the one pair of legs and pivotally and slidably secured to the other pair of legs, and means movable relatively to one of said pairs of legs for imparting a rotary movement to the said seat and including members projected beyond the lower extremities of said latter pair of legs when the chair is collapsed.

1,756,422. SPRINKLER TOP FOR CONTAINERS. CLARENCE P. COOK, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 20, 1927. Serial No. 227,379. 1 Claim. (Cl. 215—48.)



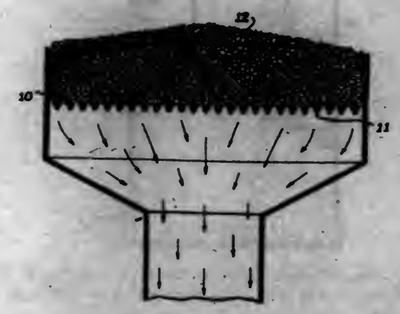
In a dispensing device of the character described, a bottle or the like and a stopper therefor, said stopper being of cork or like material, and having associated therewith a sprinkler device by which a relatively small amount of the liquid contents of the bottle may be distributed through the cork when in position on the bottle, means for securing the sprinkler device to the cork, said cork and associated sprinkler device being freely removable from the bottle and replaceable thereon as a whole without injury to the cork, so that a relatively large amount of the liquid contents of the bottle can be distributed through the bottle neck.

1,756,423. PRESSURE-FLUID GENERATOR. JOHN T. DALCHER, Bayonne, N. J. Filed June 23, 1925. Serial No. 39,050. 4 Claims. (Cl. 60—46.)



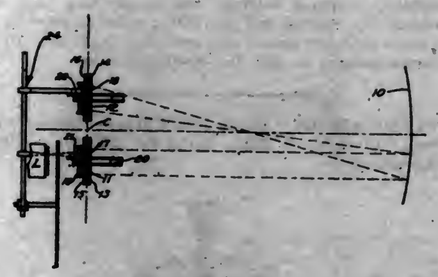
3. In a device of the class described, the combination of a combustion chamber, means for admitting highly

heated compressed air into said chamber, means for admitting fuel-oil into said chamber, a perforated nozzle communicating with the interior of said chamber, a water-



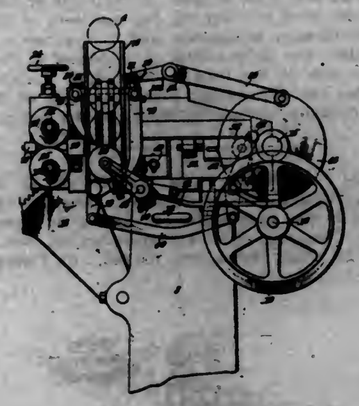
jacket around said nozzle and in communication with the perforations thereof, a water-chamber, and a valve operable to establish and interrupt a communication between said water-jacket and water-chamber.

1,756,424. SLICE RECEIVER AND COLLECTOR. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Aug. 16, 1926. Serial No. 129,826. 27 Claims. (Cl. 146—94.)



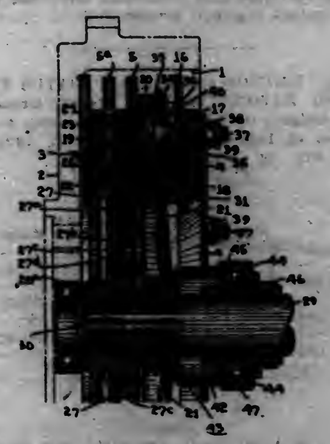
1. The combination with a slicing machine having a slicing knife, of a receiver for slices formed by said machine, and means for adjusting said receiver both downwardly and bodily horizontally away from the slicing knife to accommodate and stack additional slices one upon the other as they are deposited thereon.

1,756,425. CALCINED BAUXITE AND METHOD OF PRODUCING SAME. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 19, 1925. Serial No. 38,284. 10 Claims. (Cl. 75—58.)



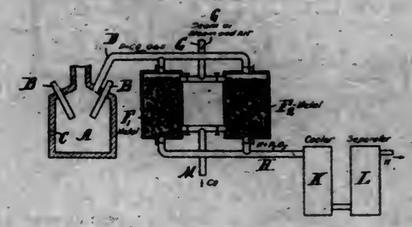
1. Process of calcining bauxite, comprising crushing the bauxite, and by the substantially complete combustion of carbonaceous fuel mixed therewith heating the bauxite and by such heating driving off free and combined water and without substantial reduction of non-aluminous material fitting the pieces of bauxite together to a coherent coarsely porous mass substantially free from carbon.

1,756,426. PHOTOGRAPHIC PRINTING. FRANK E. GARBUTT, Los Angeles, Calif. Filed Nov. 28, 1927. Serial No. 236,140. 2 Claims. (Cl. 88—24.)



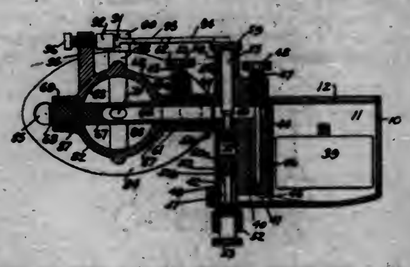
1. In a system of optical printing of motion picture film, the combination of a real image forming mirror, interconnected and synchronously driven means for moving a film strip having a series of developed images thereon and a raw film strip side by side in opposite directions in planes located on the same side of the said mirror and through substantially equal conjugate foci thereof, an aperture plate between said developed film strip and said mirror having an aperture through which a limited portion of the image area of the moving developed film strip is visible from the said mirror, and means for illuminating the image area of the developed film strip at the aperture whereby a real image thereof will be formed and printed by said mirror upon a corresponding portion of said oppositely moving raw film strip.

1,756,427. FORMING AND ASSEMBLING MACHINE AND PROCESS. JAMES E. GUNTER, Baltimore, Md. Filed Sept. 12, 1927. Serial No. 219,015. 25 Claims. (Cl. 140—88.)



1. In ring forming and placing mechanism, a mandrel, material feeding mechanism, means to form a ring of said material around said mandrel, mechanism to sever a formed ring from the material and means to transfer said ring from said mandrel to an adjoining member.

1,756,428. CLUTCH. FRANK H. JONES, Cleveland, Ohio, assignor to Allen B. Whitney and Frank H. Jones, Upper Sandusky, Ohio. Filed Jan. 19, 1925. Serial No. 3,390. 6 Claims. (Cl. 192—68.)

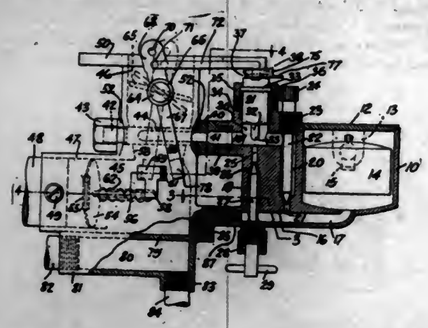


1. A clutch comprising cooperating friction members adapted for mounting respectively on driving and driven members, a pressure release plate, an outer retaining plate disposed adjacent the pressure release plate, pressure springs interposed between the former and the latter, the pressure release plate being provided with ears having slots formed therein, pivotally mounted levers having turned extremities engaging said slots and constituting pivotal connections between the levers and the release plate, and means for rocking the levers to impart movement to the release plate against the pressure of said pressure springs.

1,756,429. METHOD OF PRODUCING PHOSPHORIC ACID AND HYDROGEN. MARKUS LARSSON, Niagara Falls, N. Y., assignor, by mesne assignments, to Du Pont Ammonia Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 31, 1925, Serial No. 19,581, and in Sweden Apr. 15, 1924. 5 Claims. (Cl. 23—165.)

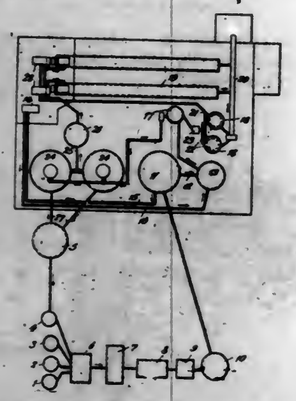
1. The method of producing phosphoric acid and hydrogen gas which comprises reacting upon a phosphide of a metal reducible by hydrogen by means of hydrogen monoxide to oxidize the phosphorus of the phosphide substantially into phosphorous pentaxide and to set free the hydrogen of the hydrogen monoxide.

1,756,430. CARBURETOR. ANILO MIJARES, Yonkers, N. Y. Filed Apr. 30, 1926. Serial No. 105,718. 4 Claims. (Cl. 261—51.)



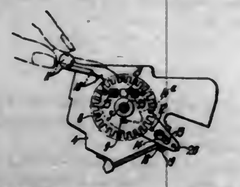
1. In a carburetor for gas engines with a throttle lever control, having a float controlled liquid fuel supply, a main liquid fuel valve, an auxiliary liquid fuel check valve, means for preventing closing of the said auxiliary check valve when the throttle lever of the engine is advanced to starting position, the said auxiliary valve being adapted to close automatically by the suction in the engine and the momentum of the liquid fuel in line of travel of the said auxiliary valve as soon as the throttle lever of the engine is returned to its normal position after starting, an air connection to the carburetor, and a hinged swing check within the carburetor adapted to adjust automatically the amount of air admitted into the carburetor in proportion to the speed of the engine.

1,756,431. CARBURETOR. ANILO MIJARES, Yonkers, N. Y. Filed Oct. 19, 1926. Serial No. 142,653. 5 Claims. (Cl. 261—49.)



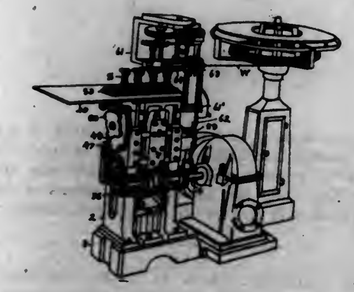
1. In a carburetor for gas engines with a throttle lever control, having a float controlled gasolene supply, a main gasolene valve, and an air inlet check valve, an auxiliary gasolene valve controlling a by-pass from the said gaso-

lene supply, means for preventing closing of the said auxiliary gasolene check valve when the throttle lever of



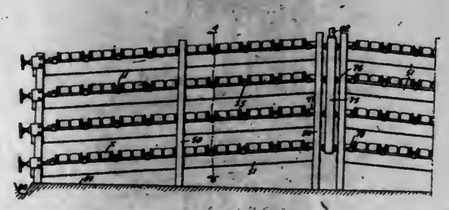
the engine is advanced to starting position, the said means being operably disposed to prevent simultaneously opening of the said air inlet check valve.

1,756,432. CONTINUOUS SULPHATE PROCESS. WILLIAM CAULDWELL MUNRO, Montreal, Quebec, Canada, assignor to William D. Mount, Lynchburg, Va. Filed Apr. 13, 1927, Serial No. 183,368, and in Canada Mar. 1, 1927. 9 Claims. (Cl. 92—9.)



1. In a continuous process for preparing the pulping liquor for the sulphate process the steps of continuously supplying a quantity of green liquor to a continuous decanter, separating solids from the liquor therein, in the form of sludge, filtering the sludge, returning the filtrate to the process, discarding the solids, transferring the decanted liquor continuously to storage and continuously withdrawing the stored liquor for causticization.

1,756,433. TYPEWRITING MACHINE. CARL E. NORIN, Jersey City, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 8, 1927. Serial No. 204,274. 14 Claims. (Cl. 197—121.)



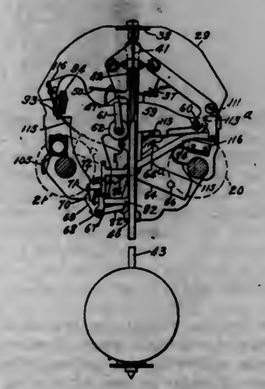
1. In a typewriting machine, the combination with a carriage having a platen, a platen-shaft and a line-space mechanism of a fractional line-space mechanism to rotate the platen in two directions a distance less than a line-space, including a toothed wheel rotatable with the platen, a lever having a clearance hole for the shaft, a projecting dog on the lever operable to engage between the teeth of the wheel, said lever actuable diametrically of the platen across the shaft to bring the dog and teeth of the wheel into interlocking engagement and then actuable to rock the platen, and self-centering seats formed in the shaft-clearing hole of the lever, to seat upon the shaft and determine the forward and backward stroke of the lever for fractionally line-spacing the platen for typing.

1,756,434. MACHINE FOR FABRICATING SPRING STRUCTURES. DAVID T. OWEN, Cleveland, Ohio, assignor to The Owen Automatic Spring Machinery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 21, 1926. Serial No. 156,202. 61 Claims. (Cl. 140—11.)

1. A machine for producing spring structures, including automatic mechanism for collocating spiral wire springs with their corresponding end loops in the same plane, combined with means for connecting said loops of the collocated springs together automatically.

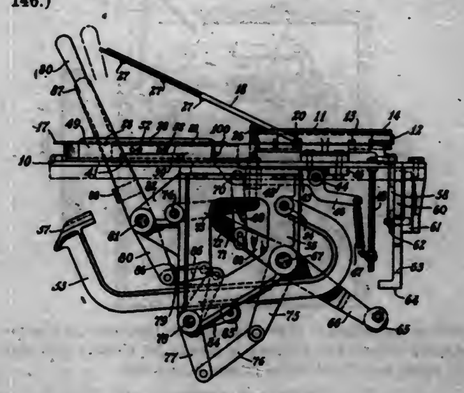
1,756,435. METHOD OF AND APPARATUS FOR PREPARING RAYON. LEWIS A. PALEY, Grand Island, N. Y., assignor to Du Pont Rayon Company, Inc., a Corporation of Delaware. Filed June 15, 1925. Serial No. 37,402. 31 Claims. (Cl. 18—8.)

29. In a drum for use in connection with the manufacture of rayon, substantially cylindrical body portion adapted to receive cakes of freshly spun rayon, a head formed on each end of the cylinder having rolling edges of larger diameter than the cylinder, and an annular rib formed on the cylinder between each head and its nearest cake, said rib being adapted to throw off liquid from the rayon so as to keep said rolling edges dry during the spinning operation.



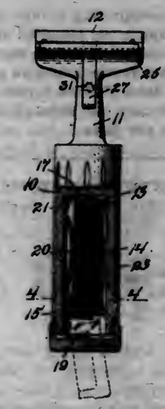
31. A drum for use in connection with rayon having a cylindrical surface provided with a series of openings, an imperforate section between said series of openings, and means on said imperforate section to prevent the cakes from spreading during treatment.

1,756,436. ANTENNA. VICTOR I. PEARSON, Hecla, S. Dak. Filed Oct. 8, 1927. Serial No. 224,794. 2 Claims. (Cl. 250—33.)



1. An antenna comprising a staff, a cylinder disposed adjacent one end of the staff, the latter being coincident with the axis of the cylinder, and outwardly directed radial fingers carried by the cylinder at an intermediate point in the height of the latter, the cylinder having a ring disposed in surrounding relation to it and the fingers being connected with said ring.

1,756,437. CLOCK AND SIMILAR INDICATOR. ARTHUR F. POOLE, Ithaca, N. Y., assignor to Poole Manufacturing Co., Inc., a Corporation of New York. Filed Jan. 6, 1927. Serial No. 159,323. 28 Claims. (Cl. 58—30.)

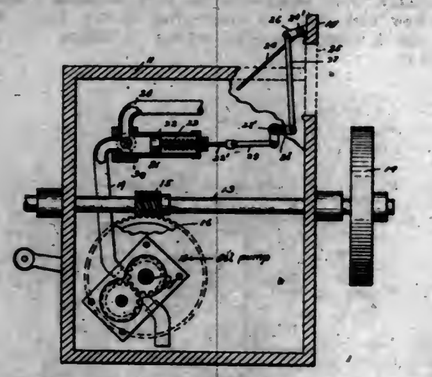


28. In an electric clock, the combination of a battery, an electromagnet, a circuit including said battery and magnet, an armature, contact means for said circuit releasably held in open circuit condition by said armature and when released operable into closed circuit condition, a buffer spring engaged by said armature when it approaches its attracted position, said armature automatically reengaging said means as it approaches attracted position, whereby said armature during its rebound from said spring will restore said means to open circuit condition to permit complete retraction of the armature.

1,756,438. METHOD OF AND APPARATUS FOR ASSEMBLING SHOE PARTS. CHARLES M. RICHARDSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 6, 1928. Serial No. 267,881. 8 Claims. (Cl. 12—146.)

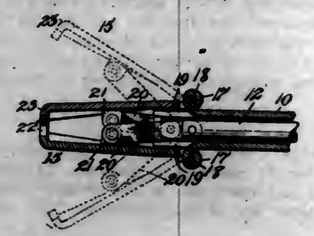
1. The method of assembling a rubberized fabric shoe tongue blank with a fastener and a lining which comprises determinately positioning the blank in substantially flat form, determinately moving opposite margins of the blank to bring them into juxtaposition and parallel relation to each other and while it is so held placing the lining about the blank, securing the margins of the blank to the margins of the lining, and securing a fastener to the margins of the blank.

1,756,439. SAFETY RAZOR. JACOB SCHICK, East Orange, N. J., assignor to Magazine Repeating Razor Company, a Corporation of New Jersey. Filed Feb. 8, 1926. Serial No. 85,632. 2 Claims. (Cl. 30—12.)



2. A razor comprising a casing, a holder slidable in the casing and adapted to be partially withdrawn therefrom, the holder including a lip at its outer end, and a flanged cap for closing the end of the casing and adapted for engagement with the lip for withdrawing the holder.

1,756,440. CINEMA OR ANALOGOUS PROJECTING APPARATUS. FRIEDRICH SEUFERT, Munich, Germany, assignor of one-half to Hermann Seufert, Brooklyn, N. Y. Filed Feb. 17, 1928, Serial No. 255,146, and in Germany Oct. 22, 1927. 8 Claims. (Cl. 88—19.4.)



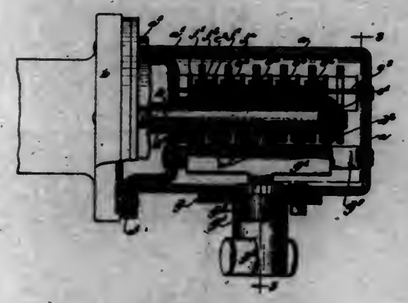
3. In a cinema or the like projecting apparatus, the combination with driving means for said apparatus, of lu-

bricating means driven by said first named means, a fire preventing shutter for the gate, means actuated by said

lubricating means for opening said shutter when the former is being driven and automatic means for closing said shutter when said lubricating means is stopped.

1,756,441. GRASPING DEVICE. MILTON WILLIAMS SMITH, Caldwell, N. J. Filed Mar. 12, 1929. Serial No. 346,427. 1 Claim. (Cl. 294—115.)

A grasping device comprising a tube and slitted at the end and on opposite sides, the material slitted being rolled back on the outside of the tube to form knuckles, jaws having knuckles hinged to the knuckles on the tube, a rod slidable in the tube, links pivoted to the rod and the jaws and disposed so as to pass out through the slits when the rod is pushed to open the jaws.



1,756,442. AEROPLANE BOAT. ESTAFIT TEMENS, Elizabeth, N. J. Filed Mar. 6, 1929. Serial No. 344,760. 2 Claims. (Cl. 244—25.)

1. In combination with a flying aeroplane-boat of the class described having a plurality of combination gas and electric motor driven propellers, a base supporting each of said combination prime movers and provided with inclined sides terminating at a point, a block attached on said aeroplane boat and pivotally supporting said base at said point, and a pair of wedge members adjustably mounted on said block and on opposite sides of said pivot point and engaging said inclined sides for holding the prime mover stationarily and upon adjustments changing the positions of said prime mover.

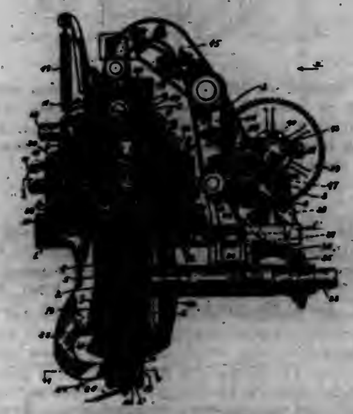
1,756,443. COUNTER. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to Veeder-Root Incorporated, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 7, 1928. Serial No. 259,719. 2 Claims. (Cl. 235—117.)

1. In a recording register having register wheels and a recording platen, the combination of a supporting plate, a supporting casing, studs supported by said plate and said casing, a second supporting plate supported by the studs, a main shaft mounted in said supporting plates, said number wheels being mounted on the main shaft, means

to actuate the number wheels, squared studs mounted in the first named supporting plate and casing, said platen being mounted between the studs and being movable toward and from the number wheels, and means to actuate the platen.

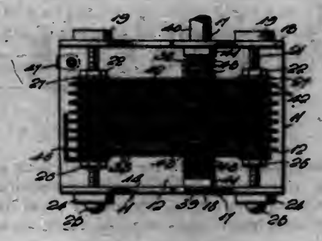
1,756,444. ELECTRIC HEATING MEANS. RUDOLF VON BROCKDORFF, Munich, Germany, assignor to Schutte and Koerting Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1929, Serial No. 338,141, and in Great Britain June 16, 1928. 1 Claim. (Cl. 219—19.)

An electric heating means, comprising a wire having helical portions of relatively small diameter at intervals therein, and the said wire also having helical portions of relatively large diameter located alternately with respect to the first named portions; the turns of the first and second named portions extending in reverse directions with respect to each other, means for insulating the adjoining turns of the said coils from each other, and means having connection with said heating means at its opposite ends and constituting the sole means of support therefor.



1,756,445. BATTERY TERMINAL. ALBERT H. WALDO, Roxborough, Pa. Filed Aug. 28, 1928. Serial No. 302,575. 1 Claim. (Cl. 173—259.)

A storage battery terminal comprising a casting having a portion thereof forming a connector for a storage battery post, a frusto-conical portion on said casting having internal screw threads throughout the length thereof, and a frusto-conical insert enclosing the end of a cable, screw threads on said insert extending to one end thereof for engaging the internal screw threads in the frusto-conical portion of said casting, said insert having a slitted portion at

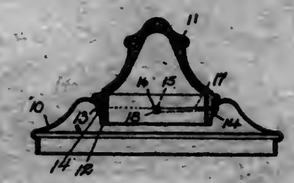


one end and a housing portion at the other end, the slitted portion being spaced from the housing portion, and said housing portion extending into the frusto-conical portion of said casting when said insert is screwed to a limiting position therein for preventing leakage of acid into said connector, said housing portion being adapted to receive the insulated portion of the cable.

1,756,446. GAS TURBINE. SIMON ABRAHAMS, New York, N. Y. Filed Sept. 10, 1928. Serial No. 304,870. 1 Claim. (Cl. 60—41.)

A gas turbine, comprising a gas compression chamber mounted upon a frame, a piston, a turbine arranged to rotate around said gas chamber, ports formed in said gas chamber and adapted to direct exploded gas against the blades of said turbine, a hollow stem and depending shaft formed integrally with said turbine and extending below said gas chamber, an air intake at the lower end of said hollow shaft and air ports formed at the upper part of said shaft to provide air circulation for cooling purposes, gas intake and exhaust ports in said gas chamber, a sleeve valve adapted to open and close said ports, a crankshaft carried in suitable bearings upon said frame, a gear upon said crankshaft, a gear upon said hollow shaft, connecting gears and shafts between aforesaid gears and adapted, by the rotation of said turbine to turn said crankshaft, a rocker arm pivotally mounted on said frame and linked to said piston at one end and connected at its other end, by means of a link, to the crank of the said crankshaft; the said link connection functioning to practically stop the piston movement during the explosion and expulsion of the compressed gas, a rocker arm pivotally and slidably connected at one end to said valve sleeve and having upon its other end a roller adapted to engage the said crankshaft, a cam member upon said crankshaft adapted to engage said roller to actuate said sleeve, a spring interposed between said sleeve and cylinder to move the valve sleeve to its lowermost position, and a spark plug for igniting the compressed gas.

1,756,447. VARIABLE CONDENSER. GROVER F. BEHRINGER, Defiance, Ohio, assignor to The American Steel Package Company, Defiance, Ohio, a Corporation of Ohio. Filed Aug. 28, 1926. Serial No. 132,229. 15 Claims. (Cl. 175—41.5.)



1. In an electrical condenser the combination of a frame, parallel bearing extensions integral with the sides of the frame and adjustable means for constricting the sides to cause the extensions to approach each other.

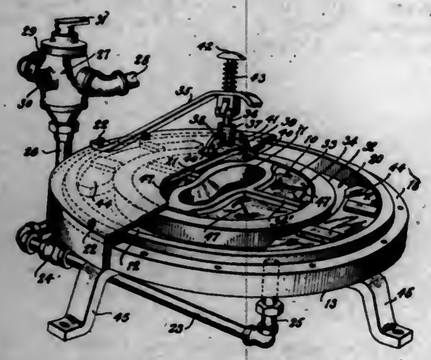
1,756,448. BAND FOR PERSONAL WEAR. SIDNEY O. BIGNEY, Attleboro, Mass., assignor to S. O. Bigney & Company, Attleboro, Mass., a Corporation of Massachusetts. Filed May 28, 1929. Serial No. 366,626. 6 Claims. (Cl. 241—8.)

1. A method of forming a strap, which consists in forming spaced circumferential grooves at intervals along a length of tubing of a diameter slightly greater than the thickness of the strap to which it is applied, slotting the tube along its length, inserting the edge of the strap into said slot of the tube, compressing the tube to grip the strap and breaking the stock of the tube at the grooves.

1,756,449. TOP FOR PERCOLATORS. WILLIAM G. BILLERMAN, Newark, N. J. Filed Feb. 12, 1930. Serial No. 427,685. 2 Claims. (Cl. 53—3.)

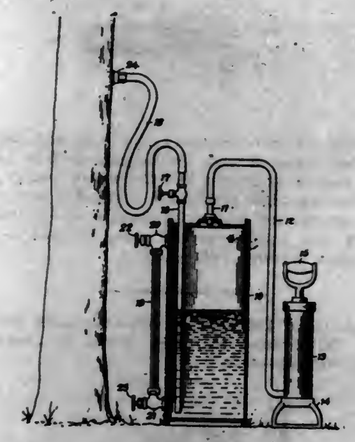
1. A top for percolators comprising a perforated lid, a dome resting on the edges of the perforation of the lid and having a flange extending through the perforations, the flange having a slightly raised portion on its outer face and having holes diametrically opposed to said raised portion, and a spring wire bail to snap over the raised portion and with ends turned inwardly and extending into the holes.

1,756,450. CUTTER BAR FOR COAL-CUTTING MACHINES AND THE LIKE. WILLIAM CHRISTIE BLACK, Dudley, England, assignor to Matthew Smith Moore, Brussels, Belgium. Filed Aug. 25, 1927, Serial No. 215,397, and in Belgium Sept. 13, 1926. 10 Claims. (Cl. 262—83.)



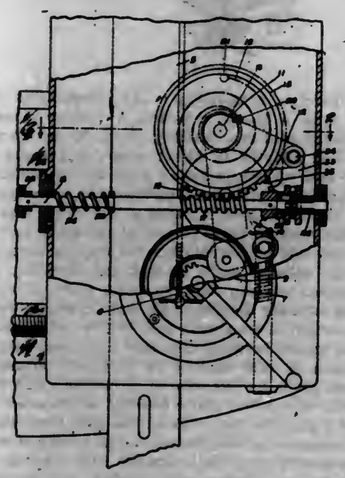
9. The combination of a cutter bar comprising a threaded rod having slots with longitudinally cylindrical bottom walls cut through its thread, and cutter picks having longitudinally cylindrical bases adapted to fit in said slots.

1,756,451. HAIR-PERMANENT-WAVING APPARATUS. HARRY BONAT, New York, N. Y. Filed July 26, 1928. Serial No. 295,429. 5 Claims. (Cl. 132—33.)



1. Apparatus of the character described comprising a protector composed of thin strips of heat-resisting material joined in pivotal relation, a standard extending perpendicularly from said protector and having a pawl member punched therefrom, and a spool having ratchet teeth on one end thereof extending radially outwardly from near the axis of the spool, said ratchet teeth being adapted for engagement with said pawl member.

1,756,452. PRESSING MACHINE. EUGENE E. CLEMENTS, New Haven, Conn., assignor to The L. Candee and Company, New Haven, Conn., a Corporation of Connecticut. Filed July 15, 1927. Serial No. 205,916. 17 Claims. (Cl. 18—2.)

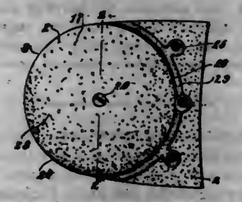


1. A pressing machine comprising opposed walls, one of which has an article receiving opening, means for fixedly holding an article therein, resilient material disposed between said walls around said opening, and means for expanding or contracting said material.

1,756,453. METHOD OF TREATING TREES AND APPARATUS THEREFOR. PAUL H. DAVEY and HOMER L. JACOBS, Kent, Ohio, and JAMES A. DAVEY, Sound Beach, Conn.; said Homer L. Jacobs assignor to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Filed Jan. 2, 1929, Serial No. 329,753, and in Canada Oct. 10, 1927. 4 Claims. (Cl. 47—58.)

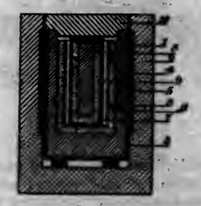
1. A method of injecting fluid into trees comprising forming an opening crosswise of the fibers, anchoring and seating a diffusing means in said opening, and forcing fluid into the diffusing means under a pressure in excess of the hydrostatic pressure of the sap.

1,756,454. SPRING COUNTERBALANCE FOR DRILL SPINDLES. WILLIAM C. DE ROO, Cincinnati, Ohio, assignor to The Fosdick Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 16, 1927. Serial No. 219,945. 3 Claims. (Cl. 77—36.)



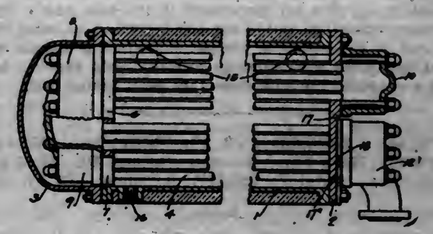
1. In a device of the class described the combination of a vertically adjustable tool spindle having rack teeth thereon, a gear meshing with the rack rotatable for raising and lowering the spindle, a shaft, a coil spring having its one end attached to said shaft, a gear train operative through the first mentioned gear for actuating the shaft whereby to wind and unwind the spring for effecting a spring counter-balance of the spindle, a movable spring pressed transverse shaft, means connecting the transverse shaft and the second end of the coil spring whereby the tension on the coil spring normally resists movement of the spring pressed shaft, a toothed catch adapted for movement into and out of the path of one of the gears in said gear train and means on said transverse shaft for effecting movement of the catch for locking the gear train upon failure of the coil spring to oppose movement of the spring pressed shaft.

1,756,455. CAR DOOR. GEORGE BINET DOREY, Evanston, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1926. Serial No. 104,426. 1 Claim. (Cl. 189—46.)



A sliding door for railway cars including a metallic body portion defining the main body of the door and inwardly extending marginal wall portions angularly related with respect to the main body portion and cooperating therewith to provide a box shaped structure, said main body portion having rigidifying means embossed therein and extending outwardly of the box shaped section, said rigidifying means being adapted to provide reinforcement horizontally across the door, said reinforcement terminating short of the vertical marginal sections of the box shape; and supplementary reinforcement for the inner side of the door disposed in the box shape portion of the door, said last named reinforcements extending diagonally across the corners of the door and adapted to bridge as beams the space intermediate the embossed rigidifying means and the marginal sections to thereby provide with said rigidifying means continuity of reinforcement intermediate the vertical marginal sections.

1,756,456. HEEL. WASHINGTON E. FORRESTER, Baltimore, Md. Filed Aug. 27, 1929. Serial No. 388,702. 4 Claims. (Cl. 36—39.)

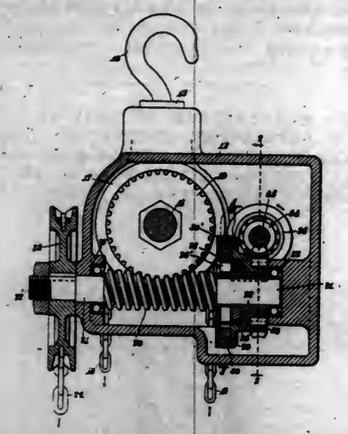


1. The combination in a rubber heel having a circular socket, of a ring fitting in said socket, means for holding the ring permitting and restraining its rotation, a rubber disc in said ring presenting a bottom surface which serves as the tread surface of the heel, said ring having means for engagement by a tool to rotate the ring and disc, and means for securing the disc against rotation relatively to the ring.

1,756,457. MANUFACTURE OF OBJECTS CONSISTING OF REFRACTORY, INSULATING, ABRASIVE, OR LIKE SUBSTANCES. MARCEL FOURMENT, Paris, France. Filed Dec. 13, 1927, Serial No. 239,748, and in France Dec. 21, 1926. 8 Claims. (Cl. 266—1.5.)

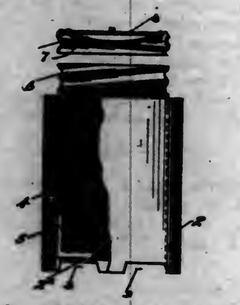
2. The process of baking objects of tubular form of a refractory and dielectric substance, by placing a piece of conducting heat resisting material capable of being heated to a high temperature by induced currents, in the interior of the tubular object to be baked, in leaving a space between said piece and the object to be baked, thereafter heating the piece by means of induced electric current to a temperature sufficient to bake the object.

1,756,458. TUBE SHEET. CHARLES W. GORDON, Pleasantville, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Jan. 4, 1929. Serial No. 330,179. 8 Claims. (Cl. 257—230.)



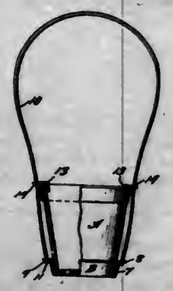
1. As a new article of manufacture, a tube sheet provided with a plurality of spaced groups of tube holes and a groove in one face of the tube sheet located between and separating two of the groups of tube holes.

1,756,459. CHAIN HOIST. FRANK L. GORMLEY, Chicago, Ill. Filed July 12, 1929. Serial No. 377,750. 20 Claims. (Cl. 254—170.)



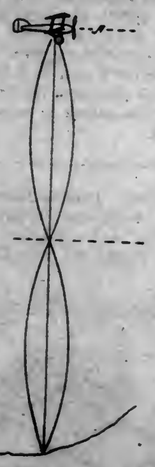
1. In a chain hoist, a casing provided with supporting means therefor; a shaft rotatable therein; a chain-supporting sprocket wheel revoluble with said shaft; a worm

gear keyed to said shaft; a worm meshing with said gear; means on one end of said worm for rotating it; mechanism



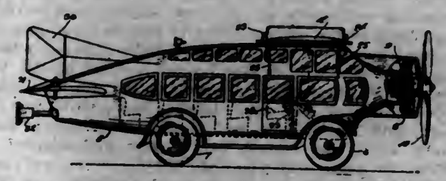
at the opposite end of said worm and operable thereby for retarding the rotation of said worm; and manually actuated means for releasing said retarding mechanism.

1,756,460. COFFEE STEEPER. GEORGE I. GREEN, Los Angeles, Calif. Filed Sept. 23, 1929. Serial No. 394,598. 2 Claims. (Cl. 53—3.)



1. Apparatus, for steeping coffee, comprising, in combination, a coffee pot immersible in the pan, and a coffee steeper immersible in the pot and including an outer shell to rest on the bottom of the pot and which is spaced from and surrounds a foraminous receiver; said receiver having a concaved top with cross-bars for a fishing tool.

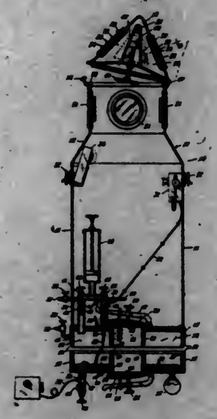
1,756,461. HANDLE FOR FLOWERPOTS AND SAUCERS. HANS PETER HANSON, Chicago, Ill. Filed May 31, 1928. Serial No. 281,737. 9 Claims. (Cl. 47—35.)



1. In combination a flowerpot, a saucer, a resiliently actuated handle and locking clips resiliently joining the flowerpot, saucer and handle.

1,756,462. ALTIMETER. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Apr. 18, 1924. Serial No. 707,408. 2 Claims. (Cl. 250—11.)

1. A safety device for an airplane for indicating its approach to an obstruction and comprising a sending set carried by the airplane and having pronounced directional characteristics for propagating radio waves of a length corresponding to the desired flight height of the airplane and adapted to be reflected back by the surface of the ground to the airplane, a receiving set also carried by the airplane for receiving the reflected radio waves, and means connected with the sending and receiving sets for indicating when the propagated and reflected waves are in and out of phase.



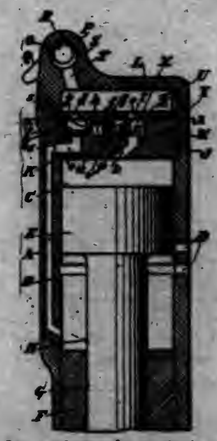
1,756,463. COMBINED AUTOMOBILE AND AEROPLANE. ANTON JEZEK, Hopkins, Minn., assignor of one-half to Gustave A. Bethke, Hopkins, Minn. Filed Mar. 7, 1928. Serial No. 259,769. 2 Claims. (Cl. 244—12.)

1. The combination with a vehicle of the class described comprising a body mounted on traction wheels and provided with an air propeller and driving means, of a hollow superstructure of substantially the same width of the body and having end openings, a pair of wings slidably mounted in said superstructure and adapted to be projected out of and retracted into said superstructure in opposite directions, said wings being provided with racks, and said superstructure having mounted therein pinions engaging with said racks, for the purpose of moving said wings, the shafts of said pinions being coupled together for conjoint movement and provided with means for simultaneously moving both wings by the manual operation of either shaft.

1,756,464. SUBMARINE SAFETY DEVICE. VICTOR EMANUEL JORGENSEN, THORVALD JOHANNES JORGENSEN, and OLUF KRISTIAN JORGENSEN, Hempstead, N. Y. Filed Mar. 8, 1928. Serial No. 259,987. 7 Claims. (Cl. 114—16.7.)

3. A safety buoy comprising a substantially cylindrical tube formed with a neck portion at its top and having its lower part closed by a bottom member adapted to engage and form a compact fitting with a counterpart substantially corresponding in shape to said bottom member, means arranged in said bottom parts for entering the said

buoy, a plurality of tubes formed in the latter for the supply of air and as an outlet for water, a pyramidical lid attached to the said top, and means for admitting air through the latter, and further means for disposing of the inflow of water, substantially as shown and described.

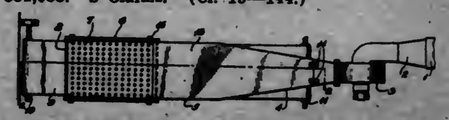


1,756,465. EXHAUST MANIFOLD. WILLIAM B. JUPP, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1928. Serial No. 260,855. 1 Claim. (Cl. 137—160.)

The combination with an exhaust manifold for a multiple cylinder internal combustion engine, said manifold extending parallel to the line of the cylinders and having extensions at angles thereto communicating with the exhaust ports of said engine, the manifold being formed to permit the escape of exhaust gases therefrom at one end only, said end being at an angle to the rest of the manifold, of a three-quarters annular shaped compartment integral with the manifold and communicating therewith so that one end of the annulus is in line with the length of the manifold and the other end is in line with the exhaust end of the manifold.

1,756,466. VALVE FOR ROCK DRILLS. ALBERT R. MACK, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 28, 1928. Serial No. 309,101. 4 Claims. (Cl. 121—18.)

1. In a fluid actuated rock drill, the combination of a cylinder and a piston, a free exhaust port in the cylinder controlled by the piston, a valve chest having a rectangular valve chamber, inlet passages leading from the valve chamber to the cylinder, a pressure actuated distributing valve in the valve chamber having flanges slidable over the inlet passages for controlling the admission of pressure fluid

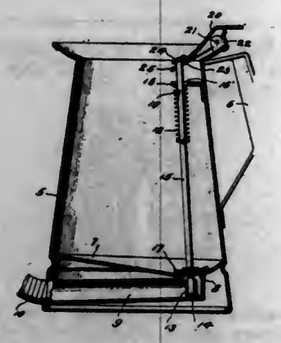


into the cylinder, and supply ports in the valve chest to admit pressure fluid into the ends of the valve chamber for actuating the valve and for supplying the inlet passages.

1,756,467. THEFTPROOF POCKET. BENJAMIN MAYER, New York, N. Y. Filed Oct. 25, 1928. Serial No. 314,858. 2 Claims. (Cl. 2—254.)

1. In combination with a theft proof pocket, front material formed with a patch, a patch cover of equal size and similar shape as that of the patch, a lever supporting the patch cover at one of its ends, a plate attached to the front material and pivotally supporting said lever intermediate of its ends, a spring for normally urging patch cover from over the patch, a bar pivotally attached at one of its ends on the other end of the said lever, a slide joined to the other end of the bar, a guide for the slide, an auxiliary strip attached to the front material and supporting the said guide, and a button attached on the guide and arranged to engage a button hole for closing the pocket and for simultaneously holding the patch cover over the patch.

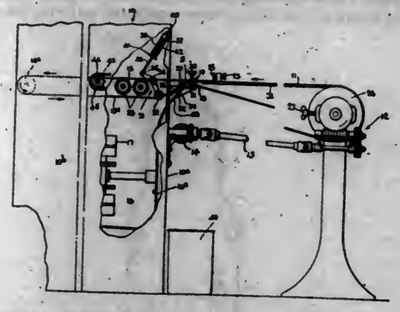
1,756,468. PNEUMATIC APPARATUS FOR PRODUCING MATS OR BATS OF FIBROUS MATERIALS. CONRAD G. MOLLER, New Canaan, Conn., assignor to American Hair & Felt Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 29, 1929. Serial No. 351,083. 3 Claims. (Cl. 19—144.)



1. Pneumatic apparatus for producing mats or bats of fibrous materials comprising a moulding chamber having a perforated wall, means for producing a fibre laden air current and a flared conduit having a stream line conformation for conveying the fibre laden air current into said moulding chamber.

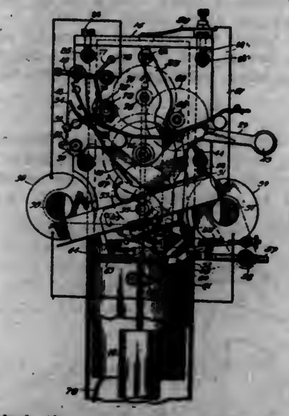
1,756,469. AEROPLANE. LEROY DAVID MOSS, Beloit, Kans. Filed May 8, 1928. Serial No. 276,145. 1 Claim. (Cl. 244—29.)

In an aeroplane, a wing having recesses in the trailing edge thereof, an aileron arranged in said recesses and pivoted to the wing, arms extending downwardly from the ailerons, supports located below and rigid with respect to the wing, vertical shafts rotatably connected to the rear sides of the supports and provided at their upper ends with arms, links connecting the arms of the ailerons and the arms of the shaft, and vertical vanes fixedly secured to and extending rearwardly from the shafts.



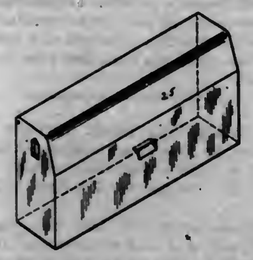
1,756,470. OIL MEASURING AND DISPENSING CAN. VINCENZO PAONE, Utica, N. Y. Filed June 17, 1929. Serial No. 371,595. 2 Claims. (Cl. 221—16.)

1. A liquid dispensing device comprising a container having an open top and provided in its bottom with an outlet, an upwardly opening valve for said outlet, a vertical rod carrying said valve and extending to said open top of the container, fixed guides for the upper and lower portions of said rod, a thumb-operated lever fulcrumed between its ends upon the upper end of the container and having an opening in its inner end through which said rod passes, the upper end of said rod being provided with a shoulder over the inner end of the lever to impart upward movement to said rod upon depression of the outer end of said lever, and a spring exerting a constant downward valve-closing force upon said rod, said rod having a notch adapted to snap into engagement with said upper guide upon complete raising of the rod by depression of said outer end of the lever, said opening having an end adapted to laterally force said rod and disengage its notch from said upper guide upon upward movement of said outer end of the lever from its valve-open position.



1,756,471. CONFECTION-COATING APPARATUS. JOSEPH PICCOLO and JOHN W. VILLANO, Brooklyn, N. Y. Filed May 21, 1927. Serial No. 193,213. 6 Claims. (Cl. 91—3.)

3. In a set-up of confection coating apparatus, including an enrober, a perforated belt overlying said enrober, and a feed table for delivering uncoated confections to the enrober, the delivery end of the table being located in line with the receiving end of said perforated belt, said ends being substantially spaced in a horizontal direction, said entire space between said ends being located beyond



said enrober whereby particles from said uncoated confections will fall without entering said enrober or coming into contact with said belt.

1,756,472. ELECTRIC CLOCK. ARTHUR F. POOLE, Pelham Manor, N. Y., assignor to Poole Manufacturing Company, Inc., Westport, Conn., a Corporation of New York. Filed Jan. 10, 1924. Serial No. 685,387. 32 Claims. (Cl. 58—30.)

1. In a clock the combination of a pendulum, means acting directly on the pendulum adapted to give said pendulum an impulse, a detent to render said impulse means inoperative on said pendulum, arc determining means for said pendulum adapted to move said detent and release said impulse means and means exclusive of said arc determining means and operable to restore said detent.

1,756,473. FORM AND MOLD. JOHN N. RAUBER, Rochester, N. Y. Filed Oct. 21, 1927. Serial No. 227,730. 2 Claims. (Cl. 25—121.)

1. In a form for molding an article of cement comprising face, back and end plates of sheet metal, said face

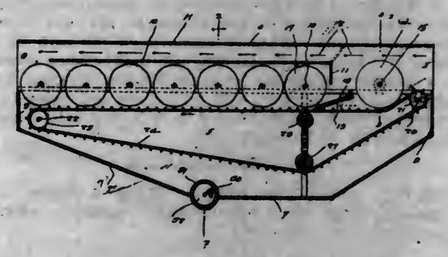


plate being made of integral sheet material consisting of side and bottom portions extending at substantially right angles to each other, joined together by an inclined portion, said bottom portion being provided with an upstanding flange, said back and end plates being substantially flat, and means for locking said plates together with an edge of the back plate in engagement with an edge of said flange.

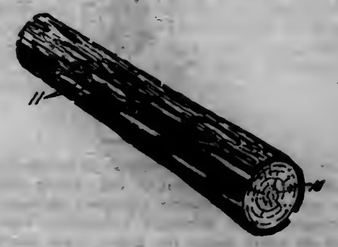
1,756,474. RUBBER FOOTWEAR ARTICLE AND METHOD OF MAKING. HOWARD A. RAYMOND, Somerville, Mass., assignor to American Rubber Company, East Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 25, 1927. Serial No. 228,704. 2 Claims. (Cl. 41—26.)

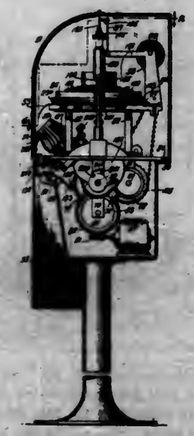
1. A method of manufacturing waterproof footwear which consists in forming a thin layer of rubber composition, printing upon the exposed surface of the same while supported against stretching, assembling the constituents of footwear to form a shoe with said layer forming the exterior of the upper and vulcanising.

1,756,475. COTTON GIN. HENRY T. AHRENS, Charlotte, and OTTO G. AHRENS, Stockdale, Tex. Filed Mar. 28, 1929. Serial No. 350,660. 4 Claims. (Cl. 19—35.)



1. A machine of the class described comprising an elongated housing with a partition extending transversely thereacross, a plurality of rotary saws mounted in the housing below the partition, a screen separator cylinder journaled in the housing, a belt of the endless type, means for supporting the belt in an orbit so that the upper run extends below the cylinder and the saws, transverse cleats across the belt, means for moving the belt, a separator above the belt between the cylinder and the saws and inclining downwardly from the cylinders and the saws.

1,756,476. EAVE SHINGLE SUPPORT. ALFRED AUDET, Salem, Mass. Filed Mar. 22, 1929. Serial No. 349,140. 1 Claim. (Cl. 108—26.)

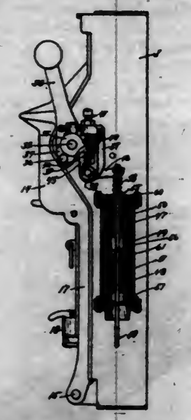


A metallic eave support for composition shingles consisting of a strip of sheet metal to be attached to the roof boards and projecting downward below the ends of said boards and having drainage openings, said support being provided at its lower edge with an integral flange against which the first courses of the composition shingles may abut, said flange consisting of a doubled part, one edge of said flange projecting below the body of the strip, and struck-out lugs formed in making said drainage openings, said lugs bearing against the projecting edge to stiffen the same.

1,756,477. PROCESS OF SEASONING LOGS. ORLO A. BARTHOLOMEW, Kansas City, Mo. Filed Mar. 14, 1929. Serial No. 346,944. 7 Claims. (Cl. 34—24.)

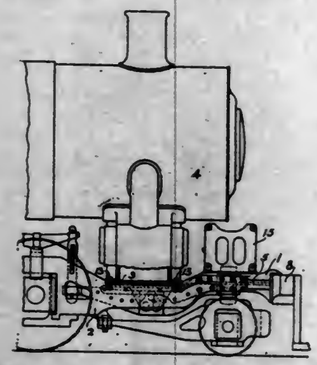
1. A method for preparing logs for seasoning comprising: removing a portion of the bark therefrom, said bark being removed at substantially uniformly spaced areas about the surface of the log.

1,756,478. METHOD OF AND MACHINE FOR MAKING CUPS. CHARLES S. BATDORF, Brooklyn, N. Y. Filed Sept. 9, 1925. Serial No. 55,301. 67 Claims. (Cl. 93—60.)



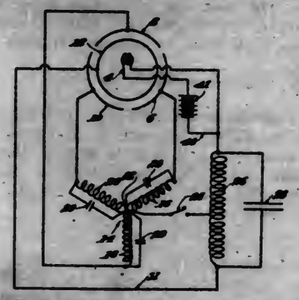
2. A method of making cups, comprising, forming a cup with upward flutes from a sheet of dry and thin

flexible material, and rolling a bead outwardly and inwardly around the fluted mouth portion of the cup while still dry.



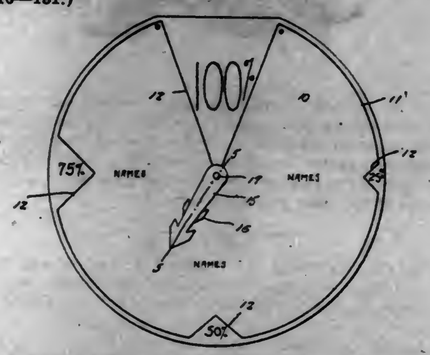
61. A cup making machine, comprising, means for forming a molded cup from a sheet of flexible material, revoluble means for folding down the free ends of the folds, means for turning under the edges of the free ends of the folds to form a bead around the rim of the cup, and means for actuating the specified means.

1,756,479. LOW-VOLTAGE RELEASE MECHANISM FOR SWITCHES. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Oct. 23, 1923. Serial No. 670,382. 3 Claims. (Cl. 200—102.)



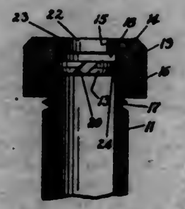
1. The combination of a switch, electromagnetic means for controlling the opening of the switch comprising an axially movable rod having shoulders thereon, a pair of electromagnet coils arranged concentric with said rod and spaced apart along the same, cores movable in the coils along the rod into and out of engagement with the shoulders respectively and being normally held out of engagement therewith when the coils are energized and acting as hammers on the shoulders to move the rod endwise when either of the coils is deenergized.

1,756,480. LOCOMOTIVE BUMPER BRACKET. JAMES G. BLUNT, Schenectady, N. Y. Filed May 20, 1929. Serial No. 364,493. 7 Claims. (Cl. 105—173.)



3. In a locomotive structure, the combination of a cylinder saddle; two side frame members, extending integrally from the front pedestals to the front of the cylinder saddle; a bumper beam; and a bumper bracket, comprising a rearward extension interposed between and secured to the said side frames.

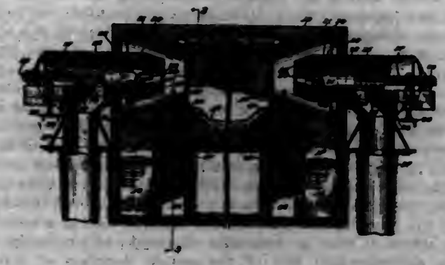
1,756,481. THERMIONIC TUBE. VANNEVAR BUSH, Chelsea, Mass., assignor, by mesne assignments, to Powel Crosley, Jr., Cincinnati, Ohio. Filed Oct. 7, 1919. Serial No. 329,021. 2 Claims. (Cl. 250—27.)



1. A thermionic tube circuit comprising a thermionic tube having a filament, a grid, and a plurality of plates, input and output circuits associated with the grid and plates respectively, and means for energizing the plate circuit comprising a multiphase source adapted to have its separate phases connected with the separate plates, the multiphase source being arranged to deliver a voltage of peaked wave form to maintain the excitation of the plate circuit at a substantially constant value.

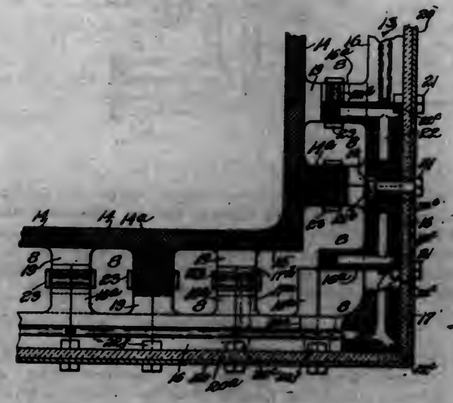
1,756,482. DEVICE FOR ENCOURAGING DENTAL CORRECTION. NEVA A. BUSHONG, Lagrange, Ind. Filed July 13, 1929. Serial No. 378,061. 4 Claims. (Cl. 116—131.)

1. A device of the class described for encouraging dental correction comprising a card, indicia on the card at 90° intervals, a hand swingably mounted on the card to be moved in relation to the indicia, said indicia being formed by a circular line having inwardly directed V-shaped projections at 90° intervals, said projections increasing in a clockwise direction, a pasteboard tooth having a slit therein adapted to be pasted on the card.



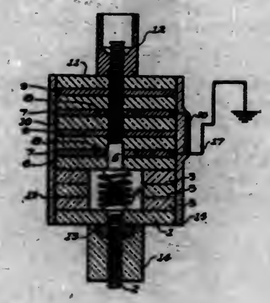
1,756,483. LAWN SPRINKLER. MILES E. ESTEP, Los Angeles, Calif. Filed June 23, 1925. Serial No. 39,013. 4 Claims. (Cl. 299—18.)

1. A lawn sprinkler for throwing a noncircular spray comprising: a cap provided with a perpendicular aperture



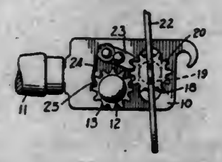
and adapted to be secured to an upright tubular outlet element; and a disc retained by said cap and provided with inclined slots having inner edges extending within the projection of the aperture in said cap upon said disc, said slots being inclined relative to vertical radial planes spaced about the periphery of said disc, said cap being provided with a shoulder adapted to contact with said disc and with a second shoulder spaced therefrom.

1,756,484. OPEN-HEARTH FURNACE. WILLIAM GAST, Philadelphia, Pa. Filed June 23, 1921. Serial No. 479,763. 8 Claims. (Cl. 263—15.)



1. In a reverberatory furnace, a furnace head having a gas port and an air port surrounding the gas port and means to longitudinally move the gas port relatively to the air port.

1,756,485. FURNACE. ARTHUR F. HALL, Philadelphia, Pa., assignor to Hall Arch Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 15, 1927. Serial No. 219,647. 15 Claims. (Cl. 72—102.)

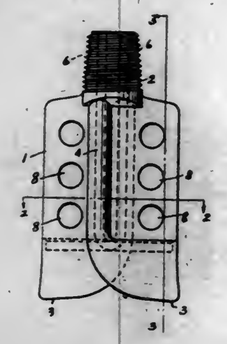


1. A block unit for walls consisting of a molded body of refractory heat insulating material and a reinforcing metal skeleton embedded in said body, said skeleton being made with bars disposed at the surface of said body and constituting corners of the block.

1,756,486. ELECTRIC CONDENSER FOR HIGH-TENSION IGNITION CIRCUITS. CASHLY A. HENRY, Dayton, Ohio. Filed Nov. 7, 1928. Serial No. 317,782. 4 Claims. (Cl. 123—148.)

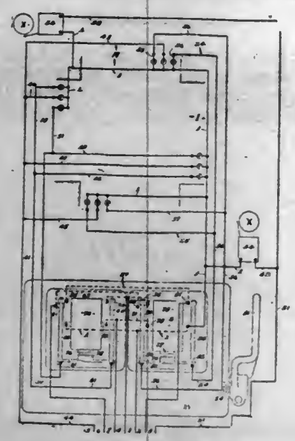
1. A device of the type described comprising a plurality of primary plates, a plurality of secondary plates alternately placed between said primary plates, dielectrics separating said plates, a core passing through said plates and making an electrical connection with the primary plates, a ground connection to said secondary plates, a resistance coil in contact with the other end of said core, a terminal on said coil, and an insulating cylinder receiving said plates and coil for the purpose specified.

1,756,487. CAN OPENER. JOHN H. HILLIARD, New York, N. Y., assignor to The Turner and Seymour Mfg. Company, a Corporation of Connecticut. Filed Aug. 16, 1929. Serial No. 386,418. 9 Claims. (Cl. 30—3.)



1. In a device of the character described, a pair of toothed pinions, means for moving the pinions into and out of operative engagement with each other, and means for maintaining a predetermined relation between said pinions when out of engagement, such that the teeth of the pinions will come into meshing register as the pinions are moved into engagement with each other.

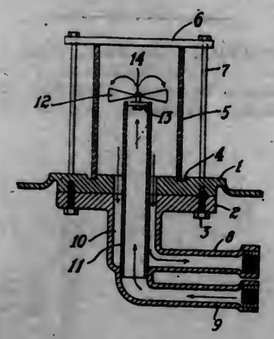
1,756,488. METHOD OF TREATING SEEDS TO SECURE UNIFORM GERMINATION. JOHN L. KELLOGG, Chicago, Ill., assignor to Warren-Teed Seed Company, Chicago, Ill., a Corporation of Nevada. Filed Nov. 15, 1928. Serial No. 319,723. 24 Claims. (Cl. 47—58.)



1. In a method of treating seeds of the same kind, but of varying degrees of hardness, to secure uniform germination, the steps of soaking the seeds in a color-fixing liquid, separating out the seeds that swell as the result of such soaking, scarifying the remaining seeds in the presence of a liquid, soaking the scarified seeds, and then separating out the seeds that swell as the result of said last soaking.

1,756,489. DRILL. WILLIAM W. LANDRUM, League City, Tex., assignor of one-half to H. G. Mobley, Houston, Tex. Filed July 27, 1929. Serial No. 381,646. 5 Claims. (Cl. 255—61.)

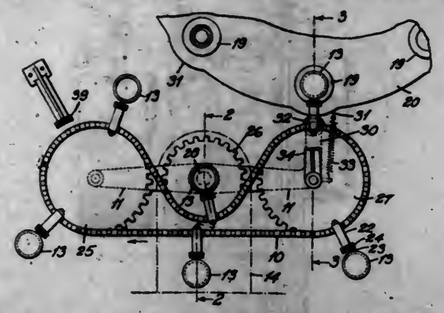
1. A drill having water channels leading downwardly therethrough from its upper end and turned laterally across the opposite sides of the drill and terminating in transverse upwardly directed discharge nozzles.



1,756,490. TRAFFIC SIGNALING SYSTEM. KENNETH W. MACKALL, Syracuse, N. Y., assignor to Crouse-Hinds Co., Syracuse, N. Y., a Corporation of New York. Filed Sept. 12, 1924. Serial No. 737,273. 2 Claims. (Cl. 177—339.)

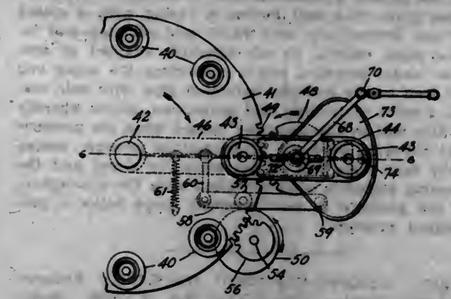
1. In a traffic signaling system, the combination of a group of signals of the type operable by the making and breaking of electrical circuits, said group including two sets of signals, one set including stop and go signals presented in one direction and stop and go signals presented in the opposite direction, and the other set including stop and go signals in another direction at an angle to the first mentioned direction and stop and go signals presented in the opposite direction to the last mentioned stop and go signals normally the go signals of either set being active while the stop signals of the other set are active, means for controlling the normal operation of the signals including a normally closed switch member in the circuits controlling the signals of the group, a normally idle electromagnet, an armature for the magnet carried by and movable with the switch member, means for controlling the flow of current through the windings of the magnet and thereby the actuation of the armature and the throwing of the switch out of its normally closed position, contacts for engaging the switch member when it is thrown out of its normal position, the contacts being connected in circuit with the stop signals of both sets, the switch member having a handle by which it may be operated manually to shift the armature when the magnet is de-energized and set the stop signals of both sets and break the circuit to the go signals.

2. In a traffic signal system of the type operable by the making and breaking of electrical circuits, the combination of a plurality of groups of signals located at different street intersections, each group comprising a set including a pair of stop and go signals presented in one direction along one street and stop and go signals presented in the opposite direction and the other set including stop and go signals presented in one direction along an intersecting street and stop and go signals presented in the opposite direction along the intersecting street, electrical circuits including a timing switch for normally controlling the signals at all the intersections, a movable switch member for each group of signals normally closing the said circuit through the stop and go signals, means for setting all the stop signals of all the groups and breaking the circuit through the go signals, said means comprising a normally idle electromagnet for each group of signals, the magnet having an armature connected to said switch member to move the same and a remote switch for controlling the flow of current through the windings of all the magnets thereby actuating the armature and the switch member to break the circuit through all the go signals and close the circuit through all the stop signals, each switch member having a handle by which it may be manually operated independently of the electromagnet and of the switch members at other intersections.



1,756,491. FLOW INDICATOR. WALTER H. MARSH, Pittsburgh, Pa. Filed Sept. 30, 1929. Serial No. 396,081. 2 Claims. (Cl. 116—117.)

1. A flow indicator comprising a supporting bracket having a glass cylinder clamped thereon forming a fluid chamber, an inlet conduit passing vertically into said chamber and an outlet passage concentric with said inlet passage at the bottom of said chamber, and means within said chamber for indicating flow of fluid therethrough.



1,756,492. APPARATUS FOR DELIVERING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford Empire Company, Hartford, Conn., a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,239. 22 Claims. (Cl. 49—5.)

13. Apparatus for transferring mold charges of molten glass from a glass feeder having a discharge outlet to a moving mold device, a supporting frame, a hub mounted at each end of the frame, each of said hubs carrying a pair of sprocket wheels spaced apart, a chain conveyor having upper and lower chains, said chains carried by said sprockets, a vertical bracket secured to the upper and lower chains, a mold charge transfer cup mounted on an upper extension of said bracket, means associated with the frame for positioning the cup at the outlet to receive a mold charge, means associated with the frame for inverting the

cup at the mold to discharge its contents into said mold, and means associated with the mold for causing the cup to travel with the mold during the discharge of the mold charge.

1,756,493. FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor, by mesne assignments, to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 17, 1914, Serial No. 343,813. Renewed Dec. 10, 1919. 53 Claims. (Cl. 49—5.)

6. A glass-shaping die having a flaring inlet and flaring outlet meeting in a contracted neck passage provided with a fluid film lining.

36. In a glass machine, a plurality of molds movable in a closed path, a transferring or distributing receptacle for delivering separated charges of glass to the molds, and means for moving said distributing receptacle with a moving mold while delivering glass thereto and then returning the receptacle into similar delivering relation to a succeeding mold.

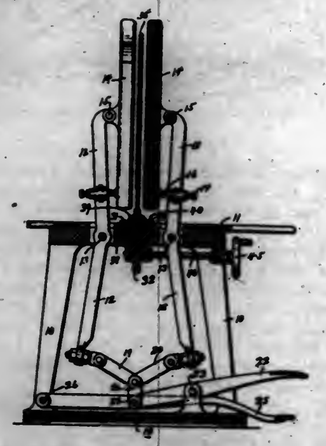
1,756,494. SHUTTLE-SPINDLE PIVOT. FRANKLIN ROBINSON, Paterson, N. J. Filed Feb. 9, 1929. Serial No. 338,706. 3 Claims. (Cl. 139—208.)

2. In a shuttle spindle pivot, a pivot pin, an unthreaded head upon one end of said pin, said pin directly inwardly of the head being provided with a threaded enlargement, the opposite end of said pin being formed with a threaded socket, a threaded plug adapted for threaded engagement within the socket, and a threaded head upon the outer end of said plug.

1,756,495. WEEDER. ARCHIE ROWLEY, Havre, Mont. Filed Jan. 31, 1929. Serial No. 336,525. 1 Claim. (Cl. 97—40.)

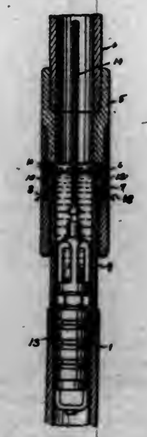
An agricultural machine including a frame, wheels for supporting the rear end of the frame, bearings at the forward end of the frame, elongated shafts extending through the bearings, wheels at the lower ends of the elongated shafts, said bearings adapted to slide over the elongated shafts, a shaft supported within the frame, drums on the shaft, cables wound on the drums, means for anchoring the cables tothe upper ends of the shafts, means for rotating the drums to wind the cables on the drums to raise the forward end of the frame, and a rotary cutting member supported on the frame for cutting vegetation over which the machine is moving.

1,756,496. WINDOW SCREEN. PHILIP WARNICK, Elizabeth, N. J. Filed Apr. 23, 1929. Serial No. 357,382. 4 Claims. (Cl. 156—39.)



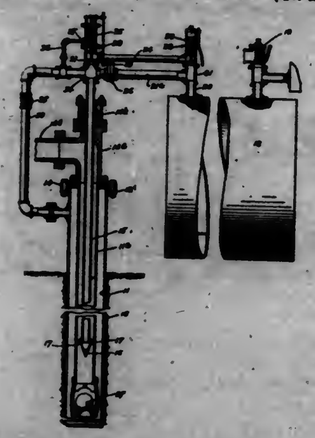
1. A device for clamping the side edges of a window screen comprising a stationary plate provided with a flange, a movable plate provided with a flange, a link pivoted on said stationary plate, means pivotally connected with said link to bear against the movable plate to cause the latter to move laterally when said link is rotated.

1,756,497. METHOD OF TREATING ALFALFA, CLOVER, AND OTHER HARD-SHELLED SEEDS TO PROMOTE PROMPT GERMINATION AND REMOVE WEED SEEDS THEREFROM. HARRY R. WARREN, Chicago, Ill., assignor to Warren-Teed Seed Company, Chicago, Ill., a Corporation of Nevada. Filed Nov. 15, 1928. Serial No. 319,718. 23 Claims. (Cl. 47—58.)



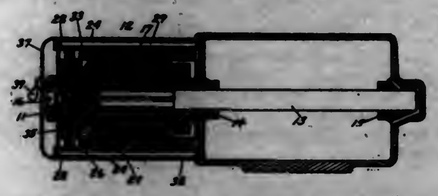
21. In a method of treating seeds of the same kind but of varying degrees of hardness to secure uniform germination, the steps of soaking the seeds in a glucose solution, separating out the seeeds that are swelled by such soaking, moderately scarifying the remaining seeds, soaking the scarified seeds in a glucose solution, separating out the seeds that are swelled by such second soaking, and drying the separated seeds, whereby a glucose coating is left thereon.

1,756,498. HOSIERY PRESS. BASIL J. YANCHENKO, New York, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 8, 1926. Serial No. 121,160. 10 Claims. (Cl. 223—17.)



1. A press comprising in combination, a frame, cooperating press jaws pivoted therein with their meeting press faces disposed vertically, a table carried on the frame and beneath the press jaws, said table being provided with a lengthwise guide slot therein vertically below the pressing plane of the jaws and extending substantially the length of the jaws, a carrier movable in the guide slot, garment forms mounted on the carrier and projecting up through the slot and supported in pressing position thereby, means to move the carrier, and operating means to open and close the press jaws.

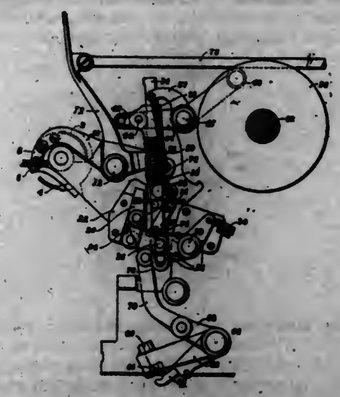
1,756,499. TUBING DRAIN. WILLIAM H. ALLEN and MORRIS E. STANDIFER, Goose Creek, Tex. Filed Dec. 27, 1927. Serial No. 242,944. 3 Claims. (Cl. 103—221.)



1. A device of the character described having a tubing provided with a drain passageway and including relatively rotatable parts having means effective to open and close said passageway, said means being characterised by the provision of oppositely disposed coacting seats and operative connections whereby one of said seats may be positively moved away from the other seat and positively moved in to and held in seated relation with said other seat.

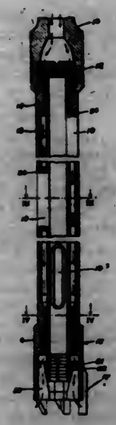
1,756,500. APPARATUS FOR EXHAUSTING WELLS. CHARLES A. ANDERSON, Los Angeles, Calif. Filed May 22, 1928. Serial No. 279,764. 1 Claim. (Cl. 103—231.)

An apparatus for lifting liquids from deep wells comprising an induction pipe extending downwardly into said well below the fluid level therein, a discharge nozzle at the lower end of said induction pipe, an eduction pipe extending downwardly around the induction pipe to a point below the nozzle, a check valve at the lower end of said eduction pipe, said well having a casing with a closed upper end downwardly into which said eduction and induction pipes extend, an air reservoir adapted to contain air under pressure, means connecting the upper end of the well casing and the induction pipe with said reservoir, a valve controlling said connection, means whereby said valve will be automatically opened when the pressure in said reservoir reaches a predetermined pressure, means whereby said valve will be automatically closed and the well casing placed in communication with the atmosphere when the pressure in said reservoir drops below a predetermined pressure.



1,756,501. DYNAMO-ELECTRIC MACHINE. VINCENT G. APPLE, Dayton, Ohio. Filed Feb. 7, 1928. Serial No. 252,589. 12 Claims. (Cl. 172—36.)

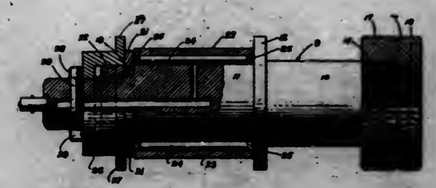
1. A dynamo electric machine field element comprising, a core of magnetic material, a winding thereon and extending beyond the end thereof, a perforated metal cylinder surrounding said extending end at some distance therefrom, and a mass of insulation molded thru and about said extending end, and between said extending end and said cylinder and thru the perforations in said cylinder, to bind the whole together, into a unitary structure, wherein necessary parts are insulated one from another.



1,756,502. PRESSER-FOOT MECHANISM FOR SEWING MACHINES. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 19, 1919, Serial No. 291,267. Renewed July 18, 1928. 9 Claims. (Cl. 112—61.)

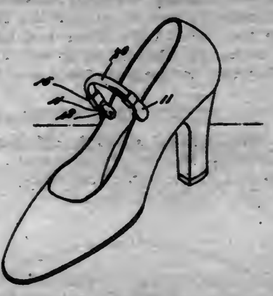
1. A sewing machine having, in combination, stitch forming devices, a work support, a presser foot, a presser foot carrier, a wedge block and connections between the same and the presser foot carrier, a locking wedge block for engaging the first wedge block, means for moving the lock-

ing wedge block to lock and unlock the carrier during each cycle and operations, a pull-off and connections between the locking wedge block and the pull-off for varying the thread drawing off action of the pull-off.



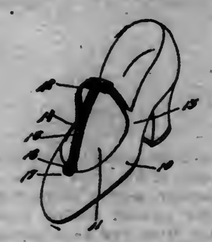
1,756,503. CORE DRILL. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Oil Tools, Inc., a Corporation of California. Filed Jan. 31, 1928. Serial No. 250,829. 5 Claims. (Cl. 255—72.)

1. A well drill including a body having a longitudinally disposed chamber formed therein, said chamber being open at its lower end, a bit at the lower end of said body adapted to cut away an annular area at the perimeter of the bore leaving a portion of formation in alignment with the chamber of an area permitting it to enter the chamber as the drill is advanced through formation, means permitting circulating fluid to be discharged downwardly through the body without gaining access to said chamber, said body having a plurality of comparatively large openings formed therethrough at spaced intervals along its length exposing formation in the chamber to circulating fluid passing along the body exteriorly of the body.



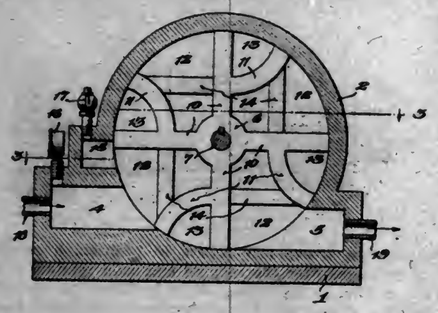
1,756,504. WRIST PIN. REUBEN C. BAKER, Coalinga, Calif. Filed Jan. 30 1929. Serial No. 336,047. 7 Claims. (Cl. 74—38.)

7. A wrist pin comprising a wrist pin body, a flange arranged intermediate the ends of the same to divide the body into a crank bearing portion and a pitman bearing portion, the outer extremity of the pitman bearing portion being reduced in diameter, a sleeve arranged over the pitman bearing portion, a plurality of rollers interposed between the sleeve and the pitman bearing portion, means



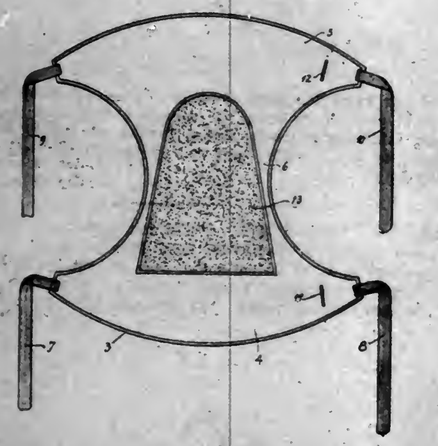
retaining the sleeve and rollers in position, a retainer collar arranged over the reduced end, said retainer collar having a flange cooperating with the flange on the body to retain a pitman bearing therebetween, and means removably securing said retainer collar in position.

1,756,505. SHOE STRAP. FREDERICK A. BALLOU, Nayatt, R. I., assignor to B. A. Ballou & Co. Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 6, 1928. Serial No. 252,214. 6 Claims. (Cl. 36—58.5.)



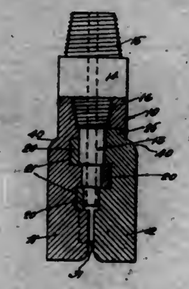
1. An extendible shoe strap having an attaching member at each of its ends, an extendible core connected to said attaching members, and a flexible tubular sleeve secured to and covering said core substantially from one clip to the other.

1,756,506. SHOE STRAP. FREDERICK A. BALLOU, Nayatt, and ROGERS T. STAFFORD, East Providence, R. I., assignors to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 13, 1928. Serial No. 269,837. 4 Claims. (Cl. 36—58.5.)



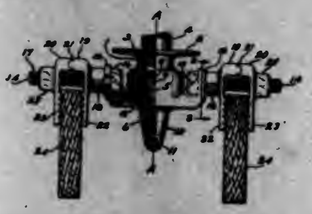
1. In combination, a shoe having a foot opening with an instep strap extending across from one side of the shoe to the other, a connecting strap extending from the forward edge of the foot opening to said instep strap, means for detachably securing the connecting strap to said instep strap, and means for detachably securing said connecting strap to the forward edge of said foot opening.

1,756,507. VACUUM DEVICE. JOHN A. BELHUMEUR, Esmond, R. I. Filed Mar. 8, 1929. Serial No. 345,876. 8 Claims. (Cl. 230—134.)



1. A vacuum device of the character described comprising a cylinder having an inlet, an outlet opposite to and disposed on a plane lower than said inlet, an air relief chamber formed in said cylinder above said inlet having a valve controlled relief port, a rotor in the cylinder having a hub, a plurality of radially extending arms carried by said hub and disposed at right angles to each other, and an arm carried by each of said radially extending arms intermediate the ends of the latter and having its free end curved outwardly whereby to provide alternate large and small chambers having their inner ends closed.

1,756,508. SWADDLING CLOTH. MADELEINE BERSIN, Colonia del Valle, Mexico. Filed June 12, 1928. Serial No. 284,800. 1 Claim. (Cl. 128—284.)



A swaddling cloth including tapered front and back sections, the outer ends of which are cut on outwardly curved lines, an intermediate section connecting the front and back sections, and opposed flexible elements secured to the corners of the front and back sections, said sections having slots adjacent the corners thereof on the same side of a medial longitudinal line through the cloth, one of the flexible elements of each section extending through the slot adjacent the opposite corner of said section around the body of a child in one direction, and the other element of each section being extensible about the body in an opposite direction and secured to the first named element of said section.

1,756,509. EXPANDING DRILL OR REAMER. STEWART L. CAMPBELL, Berkeley, Calif., assignor to John Grant, Los Angeles, Calif. Filed Feb. 14, 1928. Serial No. 254,241. 9 Claims. (Cl. 255—76.)

1. In an expansive tool of the character described, a substantially cylindric body, a cutting element integral with the body and lying substantially in a plane radial to the central vertical axis of the body, a central pivot mandrel extending down through and below the body and screw-threadedly mounted therein, the inner edge of said cutting element having a bearing lug through which the lower part of the pivot mandrel passes and by which it is supported, another cutting element lying substantially in a plane radial to said central vertical axis and having spaced bearing lugs surrounding the pivot mandrel, whereby said last mentioned cutting element is swingingly supported upon the pivot mandrel to swing about the central vertical axis of the body.

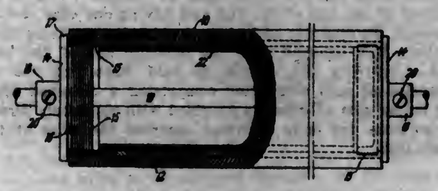
1,756,510. SUPPORT FOR CONDUCTORS. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 9, 1928. Serial No. 311,357. 7 Claims. (Cl. 191—35.)

1. A conductor support comprising an inverted cup-shaped member provided with means to secure it to an overhead support and means to secure the conductor to the said member in insulated relation thereto, integrally and diametrically disposed means projecting upwardly from the inverted edge of the member and each provided with an open end slot, a headed and threaded member disposed in each slot and projecting therefrom and having a substantially common axis, rotatable means on the threaded portion to secure each headed member to its supporting means, a pair of separately formed holding members slidably and rotatably mounted on each headed member, means on each of the holding members to engage and grip an insulating member and hold the said means in fixed relation to the conductor, and means on the holding members to engage and permit the member to pivot about said engaging means and rotating means on each headed member to force the holding members together and into holding relation with the insulating member.

1,756,511. FIREPLACE. HARRY P. DOWLER, Clearfield, Pa. Filed Oct. 13, 1928. Serial No. 312,283. 1 Claim. (Cl. 126—121.)

A sectional fireplace comprising a fire box section, a smoke dome section, a smoke pipe section and a casing,

a U-flange formed along the upper front edge of said casing a depending lip formed along the lower front edge of said smoke dome section adapted to be received within said U-flange to interlock casing and said smoke dome section in assembled position, a skirt formed on said smoke pipe section adapted to seat over the upper end of said

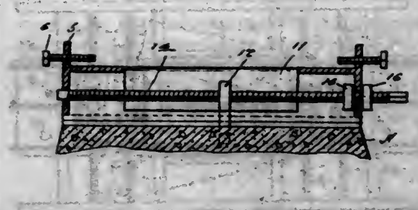


smoke dome section when in assembled position, the front surfaces of said smoke dome section and said smoke pipe section extending in approximately the same plane from the front of said fireplace to the back thereof, a damper in said fire box section, and all of said sections being so formed that they may nest one within the other when dismantled.

1,756,512. VARIABLE CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed Jan. 16, 1924. Serial No. 686,547. 3 Claims. (Cl. 175—41.5.)

1. A variable condenser comprising a fixed element, a movable element, a shaft, means operated by the shaft for actuating the movable element, an operating knob for said shaft, a spring for pressing the movable element against the fixed element, a screw in the shaft for regulating the tension of the spring, and an operating knob for the screw.

1,756,513. TYPEWRITING MACHINE. WILLIAM F. HELMOND, Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 13, 1928. Serial No. 269,628. 9 Claims. (Cl. 197—147.)

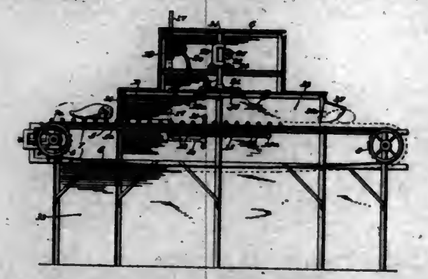


1. In a typewriter-platen, a core of rubber-coated metal tubing, and means to deaden sound vibrations transmitted within the metal tube, said means including a single-coated varnished paper-sheeting to be loosely rolled up to form a plurality of layers and to be inserted into the tube so as to hug the inner surface thereof due to the tendency of the coated side of the paper to expand with sufficient tension to insure a firm contact against the tube.

1,756,514. CLAMP FOR POSITIONING METALLIC CURB EDGING. CHARLES S. HEMPSTEAD, New Salem, Pa., assignor of one-half to William B. Wharton, Pittsburgh, Pa. Filed Oct. 31, 1928. Serial No. 316,292. 2 Claims. (Cl. 25—118.)

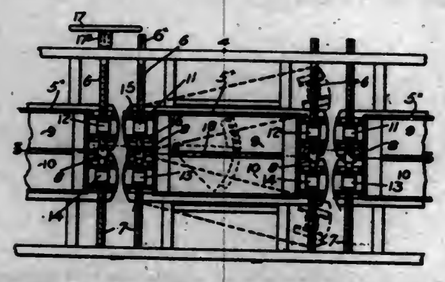
1. In combination with a curbing-form a clamp including a central portion seated on the curbing-form and an end portion extending downwardly from one end thereof and spaced from the inner surface of said curbing-form, together with an inturned portion extending from said end portion into contact and cooperating with the said inner surface of the curbing-form.

1,756,515. ADJUSTABLE MOTOR BASE. JENNINGS T. HULSEY, Webb City, Mo. Filed May 5, 1928. Serial No. 275,461. 2 Claims. (Cl. 248—15.)



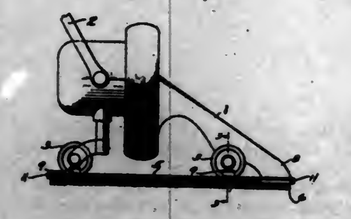
1. In an adjustable base for electric motors, comprising a pair of bearing plates, a hollow base provided with laterally disposed supporting flanges, said flanges being adapted to rest on said bearing plates and for slidable relation thereon, an upwardly projecting member adapted to be fixed in a suitable foundation, guide means on said hollow base for engagement with the upwardly projecting member and a threaded member extending longitudinally through said base and through said upwardly projecting member, whereby the base may be shifted upon said bearing plate when the same is rotated.

1,756,516. CUTTING TOOL. HANS KLOPSTOCK, Berlin, Germany. Filed Nov. 14, 1928, Serial No. 674,672, and in Germany Jan. 15, 1923. 3 Claims. (Cl. 29—95.)



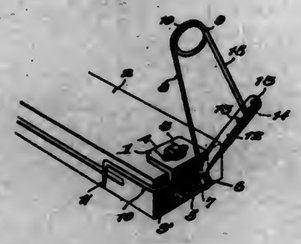
1. A metal cutting tool, the upper face of which is provided with intersecting blunt cutting edges, each of said cutting edges being formed by a strip, said strips having a shoulder parallel to said cutting edges, a depressed portion being formed back of said shoulders and a fillet connecting the shoulder and depressed portion, said fillet being of smaller radius than would be worn by a chip in a face without a depression.

1,756,517. MEAT-WASHING MACHINE. FLOYD A. KNIGHT and CLELL E. ROWE, Cedar Rapids, Iowa. Filed Apr. 21, 1928. Serial No. 271,786. 7 Claims. (Cl. 146—194.)



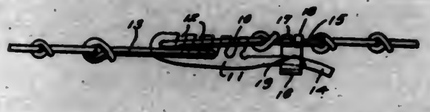
3. In a meat-washer, the combination with a conveyor, a spraying head extending diagonally across the conveyor, and provided with a series of spray nozzles directed toward said conveyor.

1,756,518. CARGO-DISCHARGING APPARATUS. LEVY MCMILLAN, Toronto, Ontario, Canada. Filed Jan. 29, 1929. Serial No. 335,871. 5 Claims. (Cl. 214—15.)



5. In a cargo discharging apparatus for cargo boats, the combination with a discharge hopper located beneath the cargo space, of a framework carried beneath the hopper, a pair of doors located beneath the hopper mouth and forming a closure therefor, a pair of spaced apart slotted flanges extending from the upper face of each door at each side of the longitudinal centre thereof, threaded spindles mounted in the frame and extending through the slots of the door, each formed by members having right and left hand threaded portions, a universal joint connection connecting the inner ends of the threaded members together, and a nut mounted on the right and left hand threaded portion of each member and located between the flanges of the corresponding door.

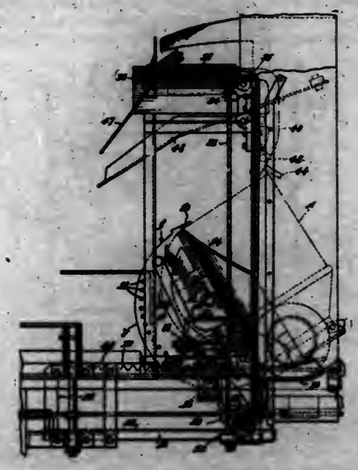
1,756,519. ATTACHMENT FOR SUCTION CLEANERS. THOMAS J. MOORE, Lake Ronkonkoma, N. Y., assignor to Samuel E. Kimball, New York, N. Y. Filed Apr. 21, 1928. Serial No. 271,669. 2 Claims. (Cl. 15—246.)



1. The combination with a portable suction floor cleaner having ground-wheels for engaging the floor and provided at one end with a suction-nozzle, of a floor rubbing device comprising a member having an area substantially sufficient to include said ground-wheels when placed beneath said cleaner and to receive the weight of the superimposed cleaner, one edge of said member being cut away to fit around said nozzle, said member being provided with releasable fasteners for removably engaging said cleaner to hold it in place, the under side of said member being provided with rubbing means for engaging and acting upon the floor.

1,756,520. LOOM TEMPLE. HARRY J. MYERS, Central Falls, R. I. Filed Feb. 9, 1929. Serial No. 338,844. 7 Claims. (Cl. 139—195.)

4. A loom temple attachment including a substantially U-shaped spring arm having a selvage loop retainer on the inner side thereof, means to pivotally connect the arm to the temple box, stop means engageable with the arm to limit pivotal movement thereof in one direction, and a strap pivoted to the temple box and connected to the outer side of the arm above said pivotal point of the strap to yieldably hold the arm engaged with the stop means.



1,756,521. CHAIN CONNECTER. HENRY NISCHKE, South Milwaukee, Wis., assignor of one-half to Anton Hartmann, Wescott, Wis. Filed July 17, 1928. Serial No. 293,828. 3 Claims. (Cl. 24—70.)

1. A chain fastener comprising an elongated link, a bar pivoted to one end of the link and having one edge thereof notched, the opposite end of the bar having an elongation, a chain link engaged with the opposite end of the link, and a securing clip carried by said chain link for the reception of said elongation comprising a J-shaped plate the longer arm of which is provided with oppositely directed portions the ends of which embrace the sides of the chain link.

1,756,522. CAN-EJECTING MECHANISM. WALTER H. PAULSON, Chicago, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Filed July 16, 1928. Serial No. 293,018. 13 Claims. (Cl. 29—84.)

1. The combination in a can washing machine of a pivotally mounted can reversing cradle adapted to be rotated for reversing a can from inverted to upright position; a can ejecting member pivotally mounted upon said cradle and adapted upon actuation to project outwardly from the can engaging surface of said cradle; and means

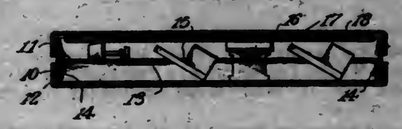
for actuating said can ejecting member during the final stage of each can reversing operation, substantially as described.

1,756,523. MOVING DISPLAY SIGN. LOUISE R. PORTS, Troutdale, Oreg. Filed Dec. 11, 1928. Serial No. 325,289. 4 Claims. (Cl. 40—97.)

1. In a device of the class described, the combination of a case, display panels disposed in oppositely disposed sides of the case, endless chains disposed about supporting elements disposed within oppositely disposed ends of the case, a driving element for the chains, a multiple of display sign boards hingedly mounted upon the endless chains and adapted for displaying below the bottom edge of the case in continuous display as the chains are rotated about the supporting elements and a disk secured to one of the upper stub shafts disposed at the outer end of the display case and a display disposed upon the disk and said display disposed so as to appear and disappear as the disk is rotated.

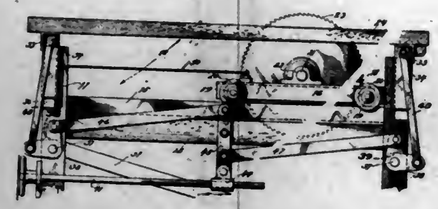
1,756,524. EXPANSIVE REAMER AND DRILL. JAMES J. SANTIAGO, Los Angeles, Calif., assignor to John Grant, Los Angeles, Calif. Filed Dec. 27, 1927. Serial No. 242,747. 11 Claims. (Cl. 255—76.)

1. In a combined reamer and drill, the combination of a body, a reaming cutter offset to one side of the body axis, a drill of the flat type mounted on the body, and the mountings of the drill and reaming cutter being such that they may be relatively rotated about the central longitudinal axis of the body between positions where the drill bit is substantially in the plane of offset of the reaming cutter and where the drill bit is substantially perpendicular to that plane.



1,756,525. STOCKING-PROTECTING FOOTWEAR. ARISTEDE A. THEODOROPULOS, New York, N. Y. Filed Apr. 4, 1928. Serial No. 267,217. 2 Claims. (Cl. 2—61.)

1. An elastic stocking protector comprising a protector member having a foot portion, a pair of strings extended along opposite edges of the foot portion, and attached at their ends to the foot portion, an arch strap having its ends slidably connected to the said strings so as to be movable along the lengths of the strings, a plurality of strings attached to the foot portion along the lengths of the first mentioned strings, and other strings attached to the arch strap, and tied to the nearest strings of the second mentioned strings so as to hold the arch member as positioned along the first mentioned strings.

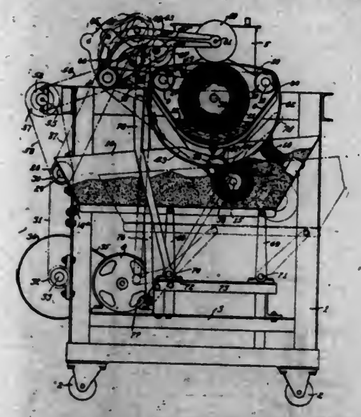


1,756,526. TOY HOUSE. ANDREW THOMPSON, Niagara Falls, N. Y., assignor to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed May 19, 1928. Serial No. 278,953. 3 Claims. (Cl. 46—37.)

1. A collapsible toy house comprising a shallow box having two lids, in one of which the box is removably ar-

ranged bottom up, vertical outer walls consisting of a foldable strip of cardboard inserted between the sides of the box and the adjacent sides of the said lid and supported thereby, and the other lid fitted down over the top of the walls, said foldable strip being adapted when folded to be housed in the box when the house is collapsed.

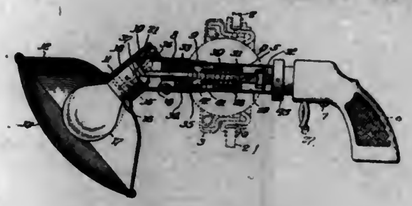
1,756,527. POWER-SAW. HIRAM F. THOMPSON, Oakland, Calif. Filed May 3, 1926. Serial No. 106,217. 2 Claims. (Cl. 143—132.)



2. A saw table comprising a portable main frame, a table top supported by the frame, transverse members arranged adjacent the ends of the frame and upon which said table top rests, a hinge connection between the table top and one of said transverse members, guide means associated with said transverse members and said main frame whereby the former may be adjusted vertically relative to the saw, and operative means for vertically adjusting said transverse members in unison, said means comprising shafts extending transversely of the frame at the opposite ends thereof, bell crank levers at one end of each shaft, a crank arm at the other end of each shaft, connecting rods connecting the bell crank levers to said transverse members, connecting rods connecting the crank arms to the transverse members whereby rotation of said shafts will impart vertical movement to said transverse members, a centrally pivoted lever carried by the frame intermediate said shafts, links connecting the bell cranks to opposite ends of said lever whereby swinging movement of the lever will impart swinging movement to the bell cranks and consequently the shafts in unison, a feed nut pivotally connected to one end of said lever, a screw shaft carried by the frame and engaging said feed nut whereby rotation of the screw shaft will cause swinging movement of said lever and consequently impart vertical movement to said table top through the medium of said shafts and connecting rods.

1,756,528. LACQUER. DEXTER J. TIGHT, San Francisco, Calif., assignor to R. N. Nason & Co., San Francisco, Calif., a Corporation of California. Filed June 3, 1924. Serial No. 717,553. 6 Claims. (Cl. 134—79.)

4. The method of manufacturing an improved nitrocellulose lacquer consisting of treating a known lacquer by a process including the adding of a pigment which is transparent or semi-transparent in the film so that when the improved lacquer is applied to a surface in a finishing or coating operation, the same will dry with a dull substantially flat transparent finish.

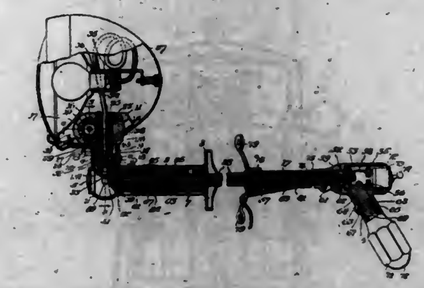


1,756,529. APPARATUS FOR TREATING TIRE BANDS. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Sept. 17, 1926. Serial No. 136,117. 13 Claims. (Cl. 91—41.)

1. A machine for coating an annular article with coating composition comprising supporting means for carrying an annular article suspended therefrom, means for actuating the supporting means whereby the article is carried in rotary movement, means for applying a fluid

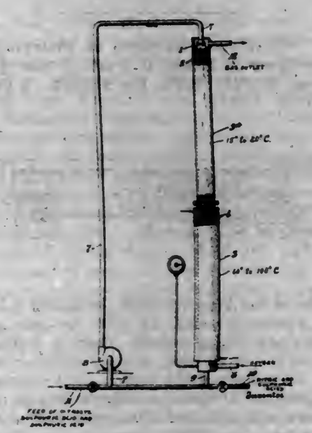
coating composition to one surface of the article, and means for applying a non-fluid coating composition to another surface of the article.

1,756,530. SPOTLIGHT. GEDOR W. ALDEEN, Rockford Ill., assignor to Fyrac Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Feb. 12, 1927. Serial No. 167,633. 4 Claims. (Cl. 240—41.)



1. A device of the character described comprising, a reflector, a hollow elbow bracket having one arm extending from the rear of said reflector and secured relatively thereto and having another arm arranged at an oblique angle to the first arm, a lamp socket member slidably mounted in the first said arm, means engaged with said bracket for sliding said socket member back and forth in said bracket whereby to adjust the focus of a lamp with respect to said reflector, means mounted in said second arm slidable at an oblique angle to the axis of said socket member for maintaining electrical contact with a lamp carried by said socket during movements of the latter, and a spring in said second arm for urging said contact means toward said lamp.

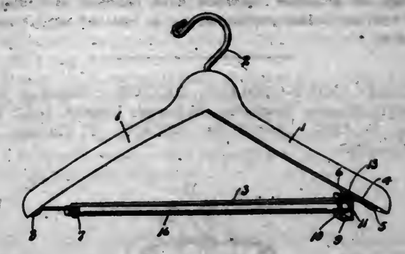
1,756,531. POST LIGHT. GEDOR W. ALDEEN and EDWIN W. NORTH, Rockford, Ill., assignors to Fyrac Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed May 12, 1928. Serial No. 277,165. 8 Claims. (Cl. 240—61.)



1. In a light of the character described, an elbow shaped tubular bracket adapted to be fixedly secured to a support, a hollow sleeve within the outer end of said bracket having a gear secured to its inner end and a head on its other end external of the bracket, said sleeve, head and gear being rotatable together, a second hollow sleeve rotatably mounted within the first said sleeve and head and having a gear secured to its inner end adjacent the first said gear and a worm gear secured to its other end within

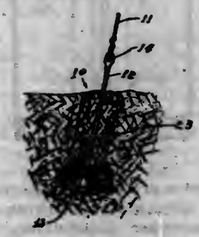
said head, a lamp casing pivotally mounted on a pivot extending through said head on an axis perpendicular the axis of said sleeves, means gearing said pivot mounting to said worm gear, and two independently operable

means extending through the inner end of said bracket adapted for driving separately the first said gears for rotating their respective sleeves simultaneously but independently of each other.



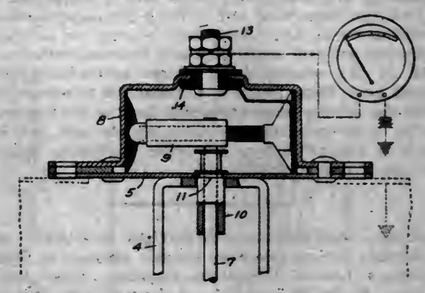
1,756,532. MANUFACTURE OF NITRIC ACID. MARTIN BATTEGAY, Mulhouse, Haut-Rhin, France, assignor, by mesne assignments, to The Calco Chemical Company, Inc., a Corporation of Delaware. Filed Feb. 8, 1927, Serial No. 165,594, and in France Oct. 19, 1926. 21 Claims. (Cl. 23—159.)

12. The process which consists in forming nitric acid by the oxidation of a nitrosyl sulphuric acid solution formed by dissolving nitrogen peroxide in sulphuric acid by means of oxygen led in countercurrent in a column into the liquid nitrosyl sulphuric acid and sulphuric acid so that the oxygen acts directly upon the nitrosyl sulphuric acid, the oxygen being supplied in such excess as to avoid the presence of oxides of nitrogen at the top of the column.



1,756,533. PANTS HANGER. CARL T. BATTS, Grand Rapids, Mich. Filed Jan. 30, 1928. Serial No. 250,362. 6 Claims. (Cl. 223—62.)

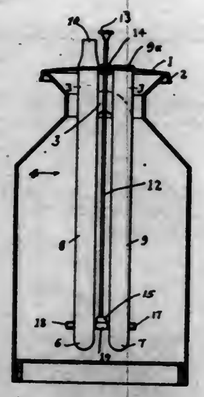
1. A pants hanger comprising, a wire rod having means at its ends adapting it for attachment to a coat hanger, said rod adjacent one end thereof being formed into a U-shaped seat open at its upper side, a U-shaped sheet metal stirrup mounted on the rod adjacent the other end thereof and depending below the same, and a second rod larger in cross sectional area than said wire rod having one end thereof connected with said stirrup below said



wire rod, the opposite free end of said second rod being adapted to detachably connect with said seat for the purposes described.

1,756,534. CONE ANCHOR. ALBERT B. CHANCE, Centralia, Mo. Filed June 27, 1927. Serial No. 201,685. 2 Claims. (Cl. 189—90.)

1. In an anchoring device for guy wires and the like, the combination of a metal member having an upper portion of the shape of a frustrum of relatively steep slope with a smooth outer surface and a lower outside portion of the shape of a frustrum of less slope, said member having a tension member axially attached to said member, whereby said upper portion is adapted to wedge a filling against the walls of a hole to form a compact ring of filling above said lower portion, and the said lower portion of said member is adapted to exert a substantially less wedging effort on said filling than the wedging effort exerted by the said upper portion.



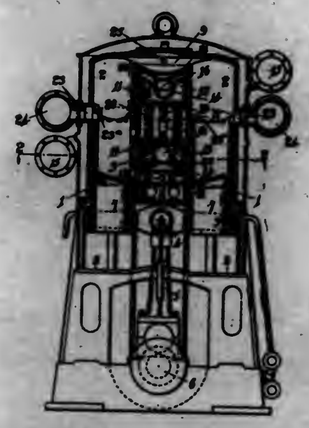
1,756,535. RHEOSTAT TANK FITTING ASSEMBLY. MOSES E. CHENEY, La Crosse, Wis., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Apr. 11, 1929. Serial No. 354,874. 6 Claims. (Cl. 201—48.)

6. The combination of a gasoline tank with a rheostat chamber adjacent said tank and subject to the vapors from gasoline in said tank; a wiper in said chamber; a float-operated member extending from the tank into said rheostat chamber and actuating said wiper; said member

being controlled by the buoyancy of the gasoline in said tank; and a plain bearing for said member permitting seepage of gasoline between said bearing and member, said bearing being supported by a wall of said rheostat chamber.

1,756,536. MILK-COOLING DEVICE. HERMAN CLEVENGER, Monroe Township, Delaware County, Ind. Filed Dec. 8, 1927. Serial No. 238,630. 2 Claims. (Cl. 257—199.)

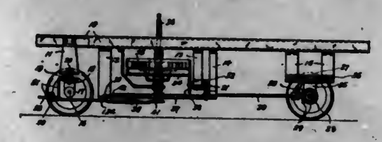
1. A cooler device of the kind described, comprising a support member adapted to constitute a closure of the opening in the container, a circulatory conduit having a return bend therein and whose adjacent body portions are extended in parallelism and spaced apart, thence by return bends that are directed at right angle to the first named bend, being extended in parallelism and spaced apart from each other and from the first named body portions, and through and being secured to said support member, and a reciprocatory stirrer having transverse arms operable between the opposed faces of the body portions of the said conduit.



1,756,537. SEPARATION OF MONONITRONAPHTHALENE DISULPHONIC ACIDS. WILLIAM J. COTTON, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 13, 1926. Serial No. 88,149. 13 Claims. (Cl. 260—159.)

1. In the separation of 2-nitronaphthalene-4.8-disulphonic acid from another nitronaphthalene disulphonic acid, the process which comprises treating a hot solution containing said disulphonic acids with a magnesium salt to form the magnesium salt of the 2-nitronaphthalene-4.8-disulphonic acid, and subsequently cooling the solution to crystallize out said magnesium salt from said solution.

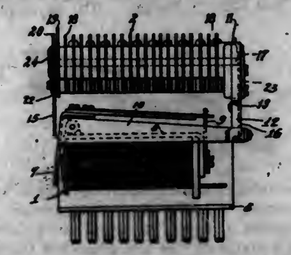
13. In the separation of 2-nitronaphthalene-4.8-disulphonic acid from isomeric nitronaphthalene-disulphonic acids, the process which comprises forming the magnesium salt of 2-nitronaphthalene-4.8-disulphonic acid and causing it to crystallize from a solution containing about 20 per cent of free sulphuric acid.



1,756,538. INTERNAL-COMBUSTION ENGINE. ADAM CRAIGON, Toronto, Ontario, Canada, assignor to Craigon Engines Limited, Hamilton, Canada. Filed Aug. 9, 1928. Serial No. 298,524. 6 Claims. (Cl. 123—53.)

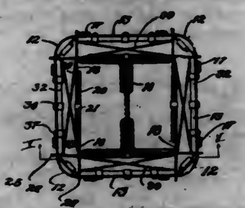
5. In an internal combustion engine, the combination of a cylinder; a piston movable therein; a combustion chamber laterally offset relative to, and having a port communicating with, the cylinder; a piston valve forming one wall of the combustion chamber; a cylinder parallel to the engine cylinder forming a guide for the piston valve and having a port in its wall, the said piston valve being adapted to control the communication between said port and the interior of the engine cylinder; a port in the

engine cylinder wall remote from the combustion chamber and controllable by the piston; a passage through the piston valve forming a communication between the combustion chamber and the port in the valve cylinder wall; and a poppet valve controlling said passage.



1,756,539. VEHICLE. RAYMOND DE FILIPPIS, Brooklyn, N. Y., assignor to Hanna D. Findley, New York, N. Y. Filed Aug. 5, 1927. Serial No. 210,877. 1 Claim. (Cl. 46—48.)

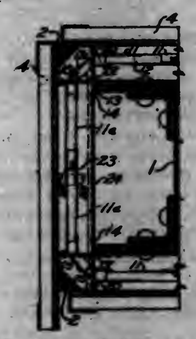
A vehicle of the type set forth, including a body, front and rear wheels therefor, an axle for one set of the wheels, said axle being movable about a vertical axis to steer the vehicle, a steering member rotating in synchronism with the wheels of the vehicle, said steering member having a plurality of cams of different design, and means engaging the said axle and a selected one of said cams, said means being resiliently mounted for disengagement with one of the cams and engagement with another of the cams, said axle and said body having coacting brackets to support the body on the axle, and a pin passing through said brackets to form the vertical pivot mentioned, one of said brackets having a convex portion about the pin, said convex portion having bearing relation with the other bracket about the pin, to permit the axle to tilt laterally.



1,756,540. ELECTROMAGNETIC SWITCH. FRITZ DÖRING, Berlin-Frohnau, and KONRAD MÜLLER, Berlin-Siemensstadt, Germany, assignors to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Oct. 11, 1926, Serial No. 140,811, and in Germany Feb. 18, 1926. 3 Claims. (Cl. 200—105.)

1. In a sequence switch, a switch cylinder, a plurality of cams mounted on said cylinder, a motor magnet for operating said cylinder, two cooperating L-shaped brackets, projecting means on said brackets for mounting said cylinder and motor magnet with the axis of one parallel to the axis of the other, and a plurality of spring contact

sets arranged in rows on both sides of said cylinder and mounted on said brackets in operative relation with said cams.



1,756,541. MEANS FOR FORMING PLASTIC COLUMNS. EDMUND BERNARD DOWD, Chicago, Ill. Filed July 31, 1926. Serial No. 126,144. 22 Claims. (Cl. 25—118.)

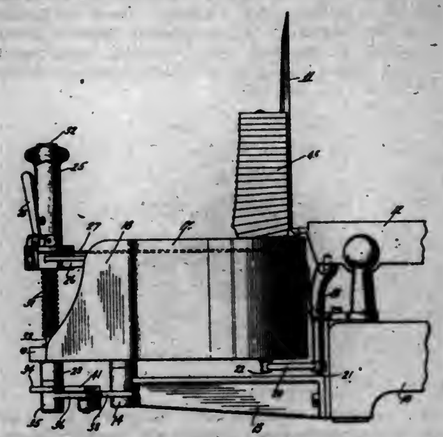
12. Means for forming plastic material about an inner structure to provide a composite column, including lagging comprising corner sections, intermediate sections complemental to said corner sections, spacing bands to embrace said inner structure said spacing bands having projections engageable with said corner sections, angular members disposed intermediate said projections adjacent said intermediate sections, clips for detachably securing said angular members to said adjacent sections, and struts tensioned between said bands and intermediate members.

21. Means for forming plastic material about an inner core, including side and corner sections of lagging, and means mountable within said lagging for centering the same with respect to said core and for engaging said lagging to support the same around said core in spaced relationship thereto, said lagging being removable from said means without injury to said plastic material to leave a casting having a periphery of said plastic material.

1,756,542. FORMING MEANS FOR COMPOSITE COLUMNS AND THE LIKE. EDMUND BERNARD DOWD, Chicago, Ill. Filed May 21, 1927. Serial No. 193,218. 17 Claims. (Cl. 25—118.)

9. As an article of manufacture, an element comprising an angular extended portion, a portion at substantially

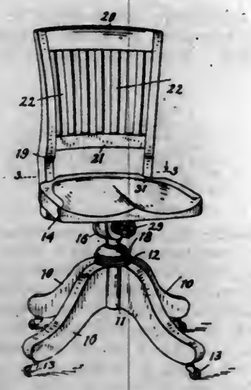
right angles thereto having a loop therein, an angularly bent channel portion on said second mentioned portion, and spaced projections on said second mentioned portion adapted to engage an object therebetween, said element being adjustably engageable with similar elements to provide reinforcing means.



16. Means for forming plastic material to provide a column, including corner supports, adjustable bands for generally outlining said column, and means associated with said bands for attaching the same in spaced relationship to said supports, said means providing a gage line on an outer portion of said supports.

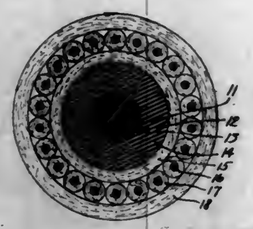
1,756,543. AUTOMATIC TIME SWITCH. BENJAMIN F. FLEGEL and FREDERICK W. FLEGEL, Racine, Wis. Filed May 22, 1926. Serial No. 110,971. 5 Claims. (Cl. 200—40.)

1. An automatic time switch, comprising a time mechanism having a winding shaft and a timing sleeve thereabout, a time indicating dial adjustably mounted on and carried by the sleeve, outwardly and inwardly offset hands adjustably carried by the dial, a rotary electric switch adjacent the time mechanism and having an outwardly projecting shaft, a frame, a spring mechanism carried by said frame and having a tubular shaft connection with the switch shaft and also having a star wheel with offset fingers, some of said fingers being offset outwardly and other of said fingers being offset inwardly, stud shafts projecting from the frame, independent stop members journaled on the stud shafts of said frame and having segmental stop flanges positioned in the paths of movement of the offset fingers and engaged thereby and also having projections in the paths of movement of the offset hands and engaged thereby to trip the fingers and permit the spring mechanism to turn the switch to on or off position, and independent spring members yieldingly maintaining the projections and the flanges in finger and hand engaging position.



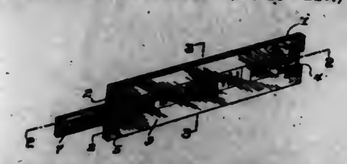
1,756,544. MECHANISM FOR ASSEMBLING SLICES. JOSEPH FOLK, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Aug. 16, 1926, Serial No. 129,327. Renewed Sept. 19, 1929. 23 Claims. (Cl. 146—94.)

1. The combination with a slicing machine, of a receiver for slices formed by said machine, means for directing



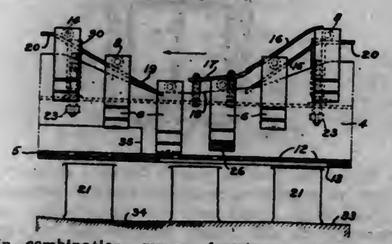
said slices onto said receiver as they are formed, means for rotating said receiver about an upright axis, an adjusting means removed from the axis of rotation of said receiver, mechanism connected to said adjusting means and operable through rotation of said receiver to actuate said adjusting means.

1,756,545. CHAIR CONSTRUCTION. FRANK F. FORTNEY, Bedford, Ohio, assignor to The B. L. Marble Chair Company, Bedford, Ohio, a Corporation of Ohio. Filed June 7, 1928. Serial No. 283,498. 2 Claims. (Cl. 155—157.)



1. A chair construction of the type described comprising a seat member, and a back member adapted to be movably associated therewith under spring tension and having post portions normally lying adjacent the edges of the seat so that the seat and back are in the proper relative positions, said seat being provided with recesses adjacent the post portions, and said post portions being disposed so that a substantial clearance space is provided between the edges of the recesses and the front face of each post portion when the seat and back are in the normal position, the edges of the recesses and the front face of each post portion being so arranged as to cooperate to effect a cam action during forward movement of the back to normal position, whereby the fingers of the chair occupant will be pushed into the said clearance space.

1,756,546. SUBMARINE CABLE. JOHN J. GILBERT, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1923. Serial No. 680,170. 4 Claims. (Cl. 178—63.)



1. A submarine signaling cable comprising a signaling conductor or conductors, armor wires spaced therefrom and composed of material having a resistivity of twenty microhms per centimeter cube or more.

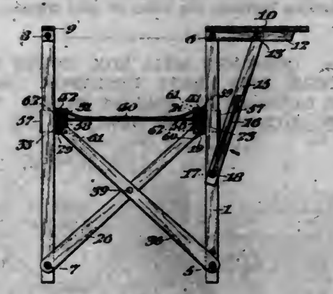
1,756,547. INTERCHANGEABLE NAME PLATE. OSWALD HANSEN, New York, N. Y. Filed Jan. 25, 1929. Serial No. 334,917. 3 Claims. (Cl. 40—140.)

1. An interchangeable name plate provided with spaced reinforcing strips forming a longitudinally extending centrally disposed channel, transparent celluloid sheets secured to said strips at the opposite sides thereof to provide a substantially rigid casing having oppositely disposed windows, outwardly turned guide lips formed in the sheets at the ends of said channel, and adapted to receive a plurality of interchangeable letters in said channel.

1,756,548. CAN-FILLING MACHINE. OSWALD H. HANSEN, Milwaukee, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed Aug. 9, 1926. Serial No. 127,986. 8 Claims. (Cl. 226—100.)

1. In combination, means forming a single annular series of measuring pockets each having an outlet, means for revolving said pockets about an axis, means for supplying the same kind of material to all of said pockets, means for transporting receptacles in succession about the same axis so that each receptacle is exposed directly to the outlet of several of said pockets, and means for delivering the contents of said pockets to said receptacles through said outlets.

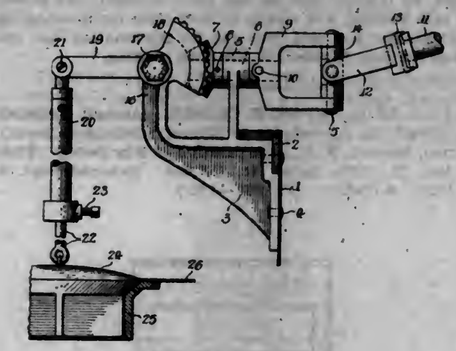
1,756,549. PROCESS OF STERILIZING FOOD. OSWALD H. HANSEN, Cedarburg, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed June 15, 1929. Serial No. 371,303. 10 Claims. (Cl. 99—8.)



1. The process of sterilizing, which comprises, heating granular solids alone to sterilizing temperature, and cooling the sterilized solids by admitting sterile liquid to the voids thereof.

1,756,550. PROCESS OF STERILIZING FOOD. OSWALD H. HANSEN, Cedarburg, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed June 15, 1929. Serial No. 371,304. 9 Claims. (Cl. 99—8.)

6. The process of sterilizing, which comprises, heating batches of granular solids alone in succession to temperatures below the sterilizing temperature of the solids, and subsequently admitting to the voids of each batch sufficient liquid of temperature sufficiently high to effect complete sterilization of the batches of mixture.

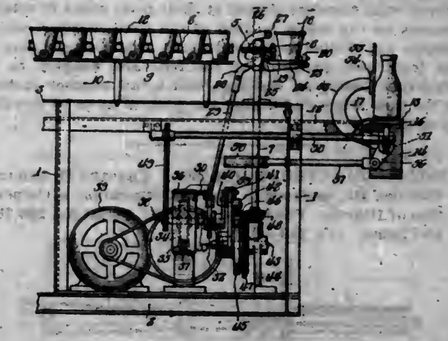


1,756,551. CHAIR. THOMAS R. HAYES, Monrovia, Calif. Filed Feb. 2, 1928. Serial No. 251,285. 5 Claims. (Cl. 155—140.)

1. A collapsible chair comprising relatively movable frames having leg stiles upon which rider plates having relatively normal inturned flanges forming a pocket are arranged to slide, a seat rail rigidly connecting the oppositely disposed rider plates and arranged to support a seat

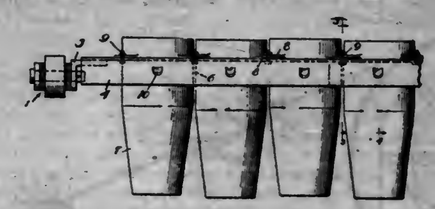
formed of flexible material, and a locking bar floatingly engaged in said pocket and rotatably associated with said rider plates arranged to frictionally engage said rider plates with said leg stiles.

1,756,552. VALVE-OPERATING MECHANISM. LEONARD F. HEITZ, Lake Mills, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1928. Serial No. 306,221. 1 Claim. (Cl. 137—21.)



In combination with a weigh can having a valve controlled outlet, a bracket supported on said weigh can, a gear segment operatively mounted on said bracket and having an extended arm, a connection from said arm to said valve, a pinion in operative mesh with said gear segment, and a shaft having a bearing on said bracket and operatively supporting said pinion, said shaft having universally swingable means for manual rotation thereof.

1,756,553. UNLOADING MECHANISM FOR BOTTLE WASHERS. IRVING R. HIPPENMEYER, Waukesha, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1927. Serial No. 206,483. 2 Claims. (Cl. 198—20.)



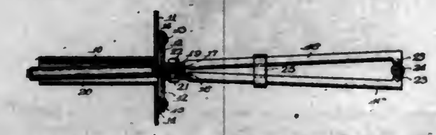
1. In a bottle washing apparatus, an intermittently operable belt, a series of bottle pockets having lateral hinged attachment to said belt, a stationary track adapted to support said pockets in upright position, said track having a separable section adapted to be lowered whereby

a group of bottle pockets thereby supported may be lowered to invert said pockets, and a bar mounted in rigid

relation to said movable section of track and adapted to engage said pockets to force them down following the lowering of said section of track.

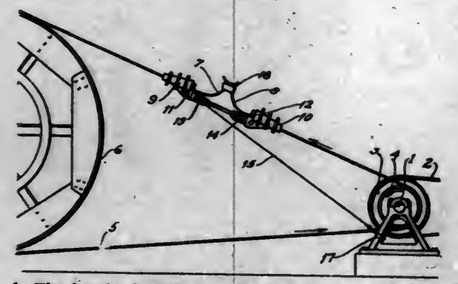
1,756,554. BOTTLE-WASHING MACHINE. IRVING R. HIPPENMEYER, Waukesha, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1928. Serial No. 318,319. 2 Claims. (Cl. 198—131.)

1. In a bottle washing machine, a bottle conveyor comprising a pair of spaced belts, a plurality of successively arranged cross members mounted on said belts, said cross members being channel shaped and provided with a series of openings in the web portion thereof, and a series of bottle pockets respectively secured in said openings, the flanges of said channel shaped cross members extending laterally adjacent the walls of said pockets and having portions thereof in abutment with said pocket walls.



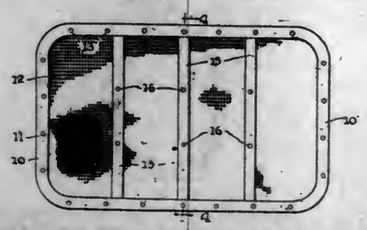
1,756,555. TOY ANIMAL. HELEN SARGENT HITCHCOCK, New York, N. Y. Original application filed Aug. 28, 1925, Serial No. 53,066, Patent No. 1,681,537, dated Aug. 21, 1928. Divided and this application filed July 31, 1928. Serial No. 296,441. 2 Claims. (Cl. 46—40.)

2. A toy bird, of the aquatic class, comprising a flat base on which the members of the bird may be mounted, a front vertically-inclined member of flat thin material and



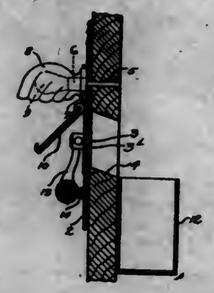
shaped to represent the head, long neck and breast or body of the bird, said front member having a tongue at its lower end which is pivoted in a slot in said flat base, lateral curved wing members slotted at their front edges to receive tongues on the breast portion of the front member, which tongues are pivoted in the slots, said wings being widest at the front and narrower at the rear and adapted to be supported loosely on the base, and a tail member pivoted to the base below and behind the wing so as to be movable up or down.

1,756,556. ELECTRODE HOLDER. CHARLES H. HOLLUP, Chicago, Ill., assignor to Hollup Corporation, a Corporation of Illinois. Filed July 18, 1928. Serial No. 293,761. 12 Claims. (Cl. 219—8.)



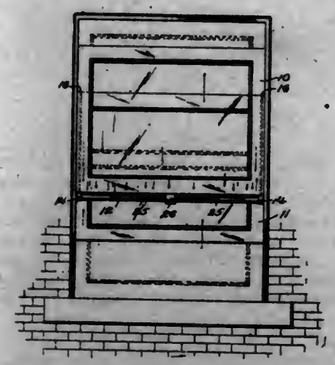
1. An electrode holder comprising a metal clamp, a heat insulating member to which said clamp is secured and a handle also secured to said heat insulating member at a point remote from said clamp.

1,756,557. BELT TIGHTENER. WILLIAM E. HORNER, Ranger, Tex., assignor to Lory J. Mildren, Ponca City, Okla. Filed Jan. 8, 1929. Serial No. 331,142. 5 Claims. (Cl. 254—53.)



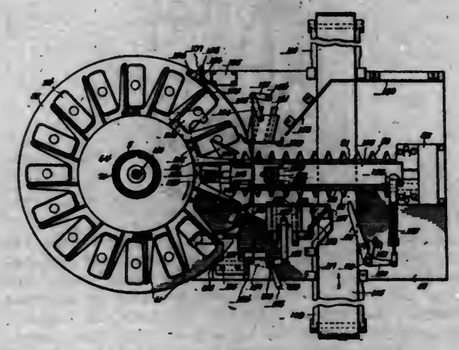
1. The herein described method of tightening belts supported by a power pulley and a driven pulley which consists in clamping the two ends of the belt, fastening one end of a rope or cable to one of the clamps, passing it back and forth through the pulleys carried by the clamps, fastening the other end of the rope or cable to an anchor and utilizing the power pulley to cause the belt to travel in a direction to move the clamps away from the anchor to thereby draw the clamps together by the tension of the anchored portion of the rope or cable so that the two ends of the belt will be in position to be clamped together.

1,756,558. BAKING TRAY. ARTHUR KATZINGER, Glencoe, Ill., assignor to Edward Katzinger Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1927. Serial No. 240,730. 4 Claims. (Cl. 53—6.)



1. In a tray for baking hard-crusted breads, the combination with a relatively fine meshed bottom for contact with the dough, supported by and in contact with a relatively coarse meshed bottom, a frame composed of strap metal rebent longitudinally to form parallel spaced flanges enclosing and gripping the sides and ends of said bottoms, and reinforcing means between the sides and ends of said bottom constituting transverse bars riveted to said bottoms and extending between the sides of said frame.

1,756,559. COMBINED MAIL BOX, HOUSE NUMBER, KNOCKER, AND LIGHT THEREFOR. EDWARD J. KNAPP, La Grange, Ill. Filed Oct. 28, 1926. Serial No. 144,607. 1 Claim. (Cl. 40—130.)



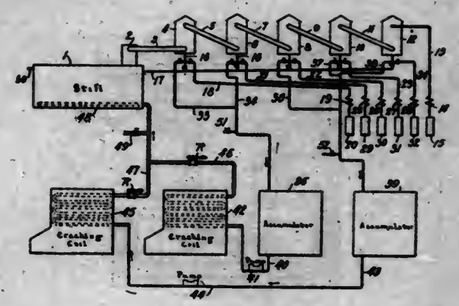
In a device of the class described, a plate adapted for securement to a wall having an opening therethrough, said plate having a slot therethrough for registering with the opening in the wall, a door hinged to said plate to close the said slot, indicia on said door, a knocker hinged to said plate, an integral boss on said plate to receive the impact of said knocker, and means on said plate for illuminating said knocker and said door and for illuminating said slot when the door is raised to the open position.

1,756,560. WINDOW CLOSER. ADOLPH KRUEGER, Newark, N. J., assignor to Marvel Specialties Corporation, Newark, N. J., a Corporation of New Jersey. Filed Apr. 21, 1927, Serial No. 185,633. Renewed Sept. 4, 1929. 6 Claims. (Cl. 268—123.)

1. A window closer comprising a spring closing means, a connection operated by the closing means and connecting the closing means and a suitable anchor, the connection thus acting to put the means under tension when the window is open, a trip for releasing the closing means and a gutter to direct rain from the window to the trip to expedite the accumulation of water to operate the trip.

1,756,561. APPARATUS FOR FILLING AND CAPPING BOTTLES. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 3, 1924, Serial No. 696,456. Divided and this application filed Oct. 7, 1926. Serial No. 139,960. 3 Claims. (Cl. 198—213.)

1. In apparatus of the class described, the combination of a stationary table, a helical blade rotatable on a horizontal axis adjacent the surface of said table, said blade being adapted to laterally receive bottles between its convolutions and slide them along the surface of said table, a retaining guide positioned laterally of a portion of said blade, and a belt conveyor positioned on the surface of said table beneath and transversely of said blade, said conveyor being operable to carry bottles into engagement with said blade and so retain them until engaged by said retaining guide.



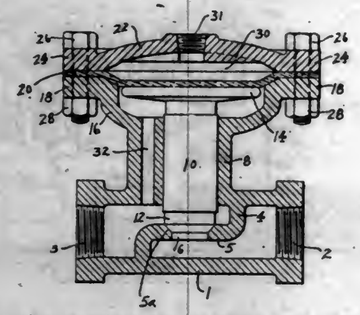
1,756,562. ELECTRIC SOCKET. WILLIAM LINDSAY, Chicago, Ill., assignor to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Feb. 25, 1928. Serial No. 256,850. 7 Claims. (Cl. 173—362.)

1. In an electric socket, in combination, a two-part housing comprising a cap and a skirt, means within said housing for supporting circuit connector means, and resilient latch members secured to said cap and having latching engagement with said supporting means, said supporting means having shoulder means, said latch members having movable extremities, said skirt having a portion adapted to exert a force upon said extremities to bend same about said shoulder means.

1,756,563. ART OF CRACKING HYDROCARBONS. LOUIS LINK, Baton Rouge, La., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 28, 1923. Serial No. 641,825. 8 Claims. (Cl. 196—48.)

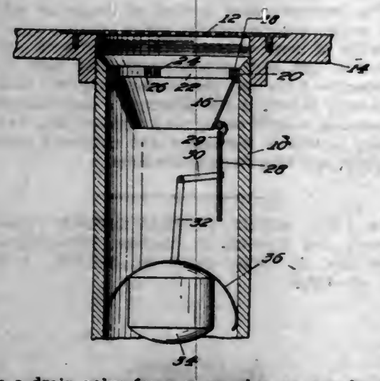
6. Process for converting hydrocarbon oils, comprising distilling a body of the oil, passing vapors formed thereby through a series of fractional condensation zones, accumulating separate bodies of condensate from such condensation zones, simultaneously cracking such bodies of condensate in separate cracking zones, and passing the cracked product into the body of oil undergoing distillation.

1,756,564. METHOD FOR PREPARING MATS FOR USE IN MAKING PRINTING PLATES. EARLE MARTIN, Cleveland, Ohio. Filed Aug. 9, 1929. Serial No. 384,780. 2 Claims. (Cl. 91—54.3.)



1. The hereindescribed method of preparing mats for use in making printing plates, which consists in stacking a plurality of pairs of mats with the mats of each pair face-to-face, and with moisture-containing pads between the respective pairs and then maintaining the stack in a substantially saturated atmosphere in a closed chamber at a temperature above freezing for a sufficient time to permit the mats to become thoroughly and uniformly moistened throughout, and then freezing the mats.

1,756,565. SCENIC DISPLAY DEVICE. CONRAD B. MAURER and HOWARD P. MAURER, Philadelphia, Pa. Filed Feb. 18, 1929. Serial No. 340,716. 2 Claims. (Cl. 40—126.)

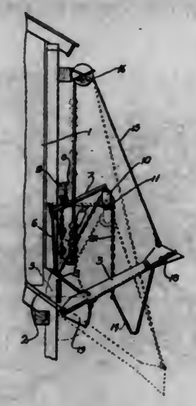


1. A device of the character stated comprising a base, a pair of standards rising therefrom, a shaft provided with a roughened surface rotatable between said standards, means for driving said shaft, mountain scenery arranged around the front and sides of said standards with an elongated open space at the front of the device, and an endless belt of pliable fabric, a textile material as silver cloth secured to one face of said belt throughout its entire length but loosely applied at intervals to provide an effect symbolic of a water fall during belt operation.

1,756,566. COOLING-FLUID-CONTROL VALVE. JULIUS C. MOODY, Franklin, Pa., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 1, 1928. Serial No. 258,214. 9 Claims. (Cl. 230—212.)

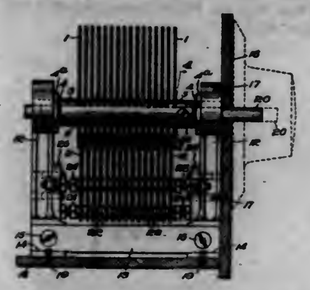
1. A valve structure for regulating the cooling fluid in a gas compressing system comprising a casing providing a chamber forming a conduit for said fluid, a valve for controlling said conduit, and means whereby movement of said valve is controlled solely by the pressure of said cooling fluid and of said gas.

1,756,567. CHECK VALVE. RAGNAR PEARSON, Chicago, Ill. Filed Jan. 3, 1928. Serial No. 244,212. 3 Claims. (Cl. 182—14.)



1. In a drain valve for a sewer pipe, an annular member adapted to be fitted into the interior of the upper end of the pipe, a gate hingedly attached to the lower end of the annular member, a float within the pipe and link means of connection between the gate and the float, and spring guide means for maintaining the direction of motion of the float vertically along the vertical axis of the pipe.

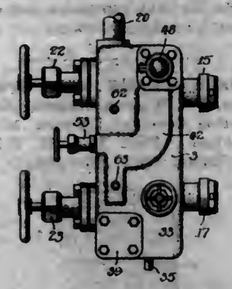
1,756,568. METALLIC WELDING ROD. HARRY R. PENNINGTON, Chicago, Ill., assignor to Hollup Corporation, a Corporation of Illinois. Filed Aug. 4, 1927, Serial No. 210,571. Renewed Mar. 12, 1930. 1 Claim. (Cl. 219—8.)



A welding rod comprising two lengths of welding metal, one length being of base metal and the other being an alloy of mechanically workable metal, enclosing said first length and mechanically secured to the exterior thereof.

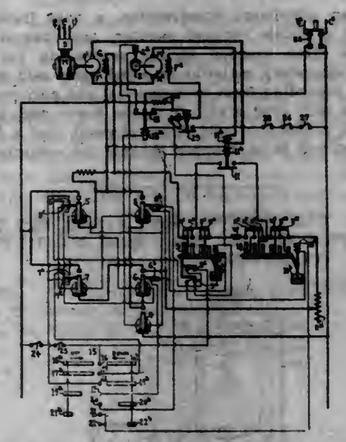
1,756,569. SAFETY CUT-OFF FOR COAL CHUTES. MAX POWELL, Chicago, Ill., assignor to Ogle Construction Company, a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 54,686. 2 Claims. (Cl. 193—20.)

1. In a coal loading apparatus, a coal storage bin, a stationary coal chute extending therefrom, a swingable gate for closing said chute at an intermediate point, a movable chute pivoted to said stationary chute, a safety coal cut off member secured to an intermediate part of said movable chute for closing the mouth of said stationary chute when said movable chute is elevated, and yieldable means connecting the said movable chute and the said swingable gate for substantially simultaneous movement to prevent or to permit the escape of coal from the bin.



1,756,570. ELECTRIC-CIRCUIT TUNING DEVICE. WILLIAM A. READY, Brookline, Mass. Filed Oct. 23, 1926. Serial No. 143,718. 7 Claims. (Cl. 175—41.5.)

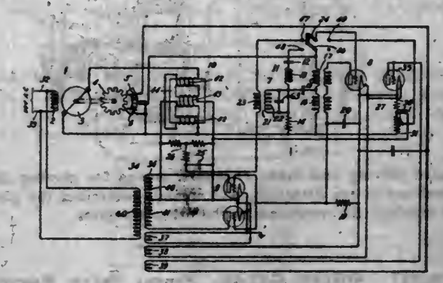
1. An electric circuit tuning device having a hollow shaft provided with a slit, a tuning plate member carried by said shaft and plate fastening means integral with said plate member, said plate fastening means passing through the slit in the hollow shaft and a portion thereof being upset against the inner face of the bore of the shaft, thereby positively interlocking said tuning plate member with said shaft.



1,756,571. REFRIGERANT-COMPRESSOR-CONTROL MANIFOLD. JOHN C. SCOVEL, Jr., Chicago, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 9, 1928. Serial No. 311,827. 8 Claims. (Cl. 230—239.)

1. A device of the class described, comprising a manifold body having a suction chamber, an antechamber, a discharge chamber and an oil trap chamber, and having a by-pass passage connecting said discharge chamber with said antechamber and a by-pass passage connecting said oil trap chamber with said suction chamber, said body having a port interconnecting said suction chamber and said antechamber and a port interconnecting said discharge chamber and said oil trap chamber, said body having means for the connection of said suction chamber

and said discharge chamber respectively with the suction port and the discharge port of a refrigerant compressor, and having means for the connection of said antechamber and said oil trap chamber respectively with the suction line and the discharge line of a refrigerant circulating system, and valve means for severally controlling said by-pass passages and said interconnecting ports.



1,756,572. MOTOR-CONTROL SYSTEM. EDWIN W. SEEGER, Milwaukee, Wis., assignor, by mesne assignments, to Cutler-Hammer Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 21, 1925. Serial No. 57,513. 8 Claims. (Cl. 172—239.)

1. The combination with a motor and a generator for supplying current thereto, of a sectional resistance connected in the field circuit of said generator, a device for excluding certain sections of said resistance from the field circuit of said generator to accelerate said motor, and means acting independently of said device for shunting certain of the resistance sections controlled by said device when the current supplied to said motor by said generator exceeds a given value.

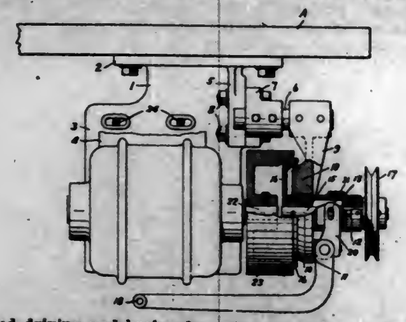
1,756,573. REGULATOR SYSTEM. HUGH M. STOLLER, Mountain Lakes, and GEORGE C. PORTER, Midland Park, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1928. Serial No. 307,189. 18 Claims. (Cl. 171—119.)

1. A speed regulator system comprising a motor having stator and rotor windings, a source of alternating current having the frequency thereof varied according to the motor speed, means for varying the phase of the current from said source according to the frequency thereof, a detector space-discharge device having space current supplied thereto by said source and having the input circuit connected

to said phase varying means, rectifier-amplifier space discharge devices controlled by said detector device, and an inductive reactance in the circuit of said rotor winding controlled by said rectifier-amplifier devices for maintaining the motor speed constant.

1,756,574. VITAMINE PRODUCT AND PROCESS OF OBTAINING THE SAME. JOKICHI TAKAMINE, deceased, Passaic, N. J., by Caroline Takamine, administratrix, New York, N. Y., and Jokichi Takamine, jr., Clifton, N. J., and Nobuchika Fujita, Tokyo, Japan, assignors to Takamine Ferment Company, New York, N. Y., a Corporation of West Virginia. Filed Apr. 18, 1924. Serial No. 707,543. 11 Claims. (Cl. 167—81.)

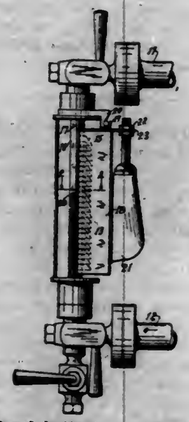
11. The process which consists in propagating a fungus growth upon a culture medium, and extracting the vitamine and other soluble substances contained in the mass, then separating the vitamine substances from the liquid and treating the same with barium hydrate, then removing the barium content of the resulting solution and precipitating the solution with acetate of lead, then removing the lead content from the supernatant liquid and precipitating said liquid with a silver nitrate, and finally removing the metallic content from the resulting compound.



1,756,575. METHOD FOR SUBSTITUTING ALKYL GROUPS IN THE AROMATIC NUCLEUS. ALBERT VERLEY, Isle St. Denis, France. Filed July 7, 1927, Serial No. 204,141, and in France Mar. 31, 1927. 2 Claims. (Cl. 260—168.)

1. A method of obtaining a substituted aromatic derivative by the substitution of an alkyl radical for hydrogen in an aromatic nucleus, the said method consisting in allowing an alkyl sulphuric acid to react with an aromatic hydrocarbon containing the said nucleus in presence of an alkali metal pyrosulphate.

1,756,576. TRANSMISSION APPARATUS. MAX T. VOIGT, Reading, Pa., assignor, by mesne assignments, to American Safety Table Company, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1928. Serial No. 310,203. 3 Claims. (Cl. 192—18.)



2. Transmission apparatus comprising in combination spaced driving and brake elements, a crosshead, parallel guides for the crosshead, a revoluble shaft carried by the

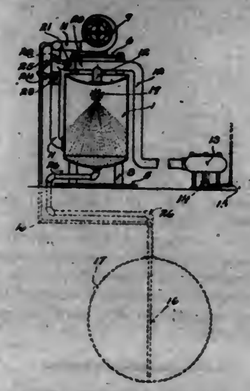
cross-head and provided at one end with a pulley and at the other end with a driven element arranged between the

spaced driving and brake elements, means for moving the crosshead in one direction, and springs encircling the pins for moving the crosshead in the other direction.

1,756,577. BOILER GAUGE. SYDNEY FRANK WESTON, East Putney, London, England, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 21, 1925, Serial No. 63,856, and in Great Britain Jan. 10, 1925. 8 Claims. (Cl. 73—54.)

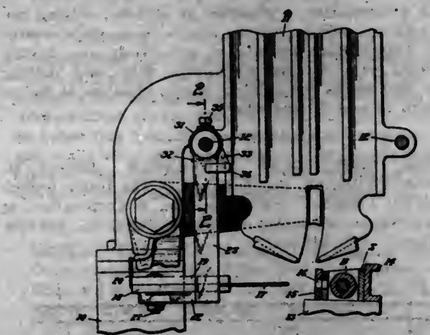
1. In a water level indicator, a plurality of superposed inclined plates at one side of said indicator, and a light-transmitting medium mounted for illumination by rays of light passing between some of said plates.

1,756,578. GELATIN-SHEET COPYING MACHINE. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a Corporation of West Virginia. Filed July 23, 1928. Serial No. 294,608. 16 Claims. (Cl. 101—133.)



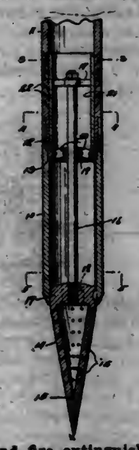
1. In a machine of the class described, a frame adapted to have mounted therein spindles carrying gelatin sheet rolls and an impression bed over which said sheet is trained for the exposure of the gelatin for copying purposes, rack teeth on each side of the said bed, and trackways associated with the said rack teeth and said rack teeth and trackways merging into a downward curved portion at the front of the machine, an impression carriage mounted on the said trackways and adapted to be moved outward and back over the said impression bed, and downwardly over the downward curved portion of said frame, gears on the said carriage on the said impression bed and engaged by the said rack teeth on the said frame.

1,756,579. BASE FRAME FOR SPRING-CUSHION SEATS. ABRAM C. WIENER, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Michigan. Filed Mar. 26, 1928. Serial No. 264,915. 4 Claims. (Cl. 155—180.)



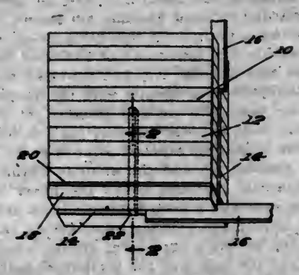
1. In an upholstery construction, a base frame consisting of a double channel member, one channel being above the other, cushion springs secured in the lower channel, upholstery material mounted upon said springs, an apron depending from said material and enclosing said springs, a welt cord attached to the lower edge of said apron and received in said upper channel, and a locking member sprung in said upper channel for retaining said welt cord.

1,756,580. CARBURETOR. JOHN ASTROM, Fort Wayne, Ind. Filed May 31, 1924. Serial No. 717,070. 2 Claims. (Cl. 261—29.)



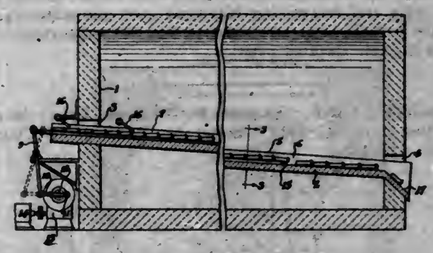
1. The combination of a fuel supply tank, a closed atomising tank located at a higher level than said supply tank, said atomising tank having an open unobstructed interior, a return pipe leading from the lower end of said atomising tank to said fuel tank, an air pipe leading into the lower portion of said atomising tank, externally located means for forcing a blast of air through said pipe into said tank, an outlet pipe leading from the upper end of said atomising tank, a fuel spray nozzle located within said atomizing tank adjacent its upper end and directed downwardly for projecting a spray of fuel downwardly in a fine mist to thereby create a mist-zone extending downwardly from said nozzle to the bottom of said tank and laterally to the sides of said tank in a cone-like formation, whereby the air is forced to pass in an upward direction through the downwardly passing mist of fuel, means for drawing fuel from said fuel tank and forcing such fuel under pressure through said nozzle, whereby the outwardly passing air entrains a mist of fuel with the fuel in a finely divided state.

1,756,581. MOUNTING FOR WEFT DETECTORS. CARL P. BERGSTROM, Millbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1929. Serial No. 332,693. 8 Claims. (Cl. 139—269.)



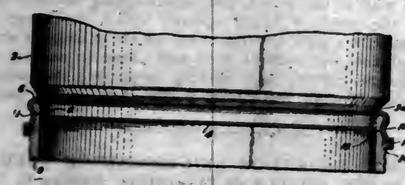
1. In a weft detector for a loom having a surface to be detected, a normally fixed member substantially parallel to the surface to be detected, a support longitudinally and angularly adjustable on the member, a weft engaging detecting element mounted on the support, and a guiding device mounted on the member and held in adjusted angular position on the member and determining the position and path of movement of the support when the latter moves in a direction away from the surface to be detected, and cooperating with the support to limit the movement of the latter along the member in the direction of the length of the latter.

1,756,582. UNDERGROUND FIRE EXTINGUISHER. JOHN W. BUTLER, McKeesport, Pa. Filed Dec. 15, 1928. Serial No. 326,195. 5 Claims. (Cl. 299—110.)



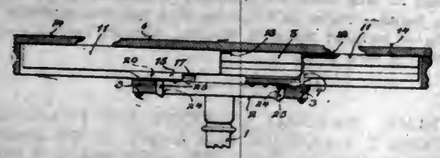
1. An underground fire extinguisher including a barrel having laterally extending perforations and open at its lower end, a hollow perforated driving point constituting the lower end of the barrel and movable vertically therein, the barrel being adapted to be connected to a source of water supply, a sleeve operatively connected to the point and when the point is projected closing the perforations in the wall of the barrel, and means acting automatically when the point is forced upward within the barrel by contact with a solid stratum to cut off the passage of water through the point and to move said sleeve to uncover the said lateral perforations, thereby permitting the passage of water through the lateral perforations of the barrel.

1,756,583. EXPANSION AND SHRINKAGE TAKE-UP IN BLOCK AND PLANK FLOORING. BROOKS W. CADWALLADER, Los Angeles, Calif. Filed Oct. 24, 1928. Serial No. 314,765. 1 Claim. (Cl. 20—7.)



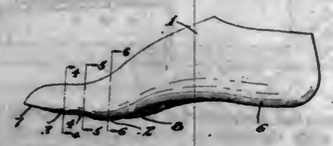
A parquetry flooring, comprising a plurality of rectangular blocks, each block composed of a plurality of parallel planks joined along their longitudinal edges, a pin passing transversely through aligned openings in the planks of each block to reinforce the same and comprise the unitary block, a groove extending around the periphery of each block adjacent the medial line thereof, splines adapted to be fitted in said grooves for joining adjacent blocks, and means in each block for absorbing horizontal compression and tensile strains in the floor, said means comprising a strip of resilient material inserted between two adjacent planks of each block.

1,756,584. MATERIAL CONVEYER FOR FURNACES. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Original application filed Jan. 3, 1927, Serial No. 158,516. Divided and this application filed Nov. 30, 1928. Serial No. 322,804. 2 Claims. (Cl. 214—18.)



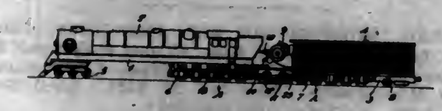
1. A material conveyer for furnaces including a hearth provided with channels to receive articles to be conveyed through the furnace, bars located in the bottoms of the channels, means for reciprocating the bars for moving articles resting thereon, and downwardly and forwardly inclined pawls mounted in the furnace having their end portions extending into the channels and resting on the articles therein, and the end portions of the pawls engaging the articles when the bars are moved backward for preventing the articles from moving backward therewith.

1,756,585. BOTTOM CONSTRUCTION FOR CANS. ROWLAND JOHN CURTIS, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Nov. 10, 1927. Serial No. 232,323. 8 Claims. (Cl. 220—73.)



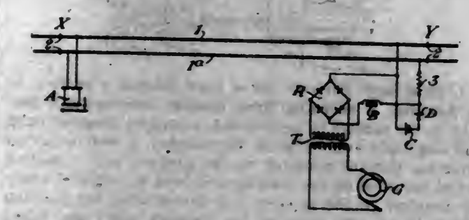
1. A sheet metal can comprising a body portion having an annular flange at its lower end and an inwardly disposed downwardly inclined annular rib spaced therefrom, a bottom having a peripheral channel portion adapted to be received within the lower end of the body and to contact with the said annular rib, and provided with an annular flange adapted to co-operate with the flange upon the body to form a seam, the inclined annular rib of the body extending over said annular channel portion for substantially its entire width, the exposed point of contact between the inclined annular rib and the annular channel portion being a substantial distance above the lower containing portion of the can, and a hoop located within said channel portion and having an annular shoulder to engage said seam, said hoop having a peripheral groove into which the lower portion of the body and the peripheral portion of the bottom are adapted to be pressed, the hoop extending downward a considerable distance beyond the seam.

1,756,586. EXTENSION TABLE. HERBERT H. DRAW, Watertown, Wis., assignor to Watertown Table-Slide Company, Watertown, Wis., a Corporation of Wisconsin. Filed Feb. 6, 1928. Serial No. 252,367. 8 Claims. (Cl. 45—113.)



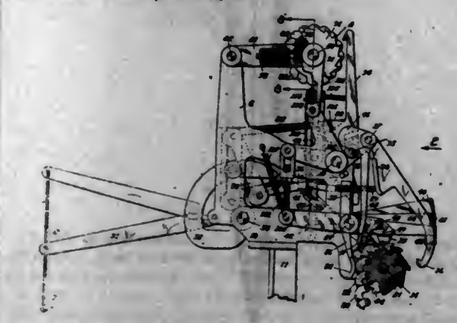
1. An extension table comprising a support, a table top rigidly mounted on said support, a vertically movable rail, a slide rail guided on said vertically movable rail, an extension leaf mounted on said slide rail, means carried by the slide rail for raising the same upon projection, and means actuated by the raising means for supporting the rails in their elevated position.

1,756,587. LAST. ERNEST W. DURKEE, Lynn, Mass. Filed July 21, 1928. Serial No. 294,446. 1 Claim. (Cl. 12—133.)



In a last of the kind described, two projections on the bottom thereof located adjacent to the inner edge of the last, one in a position corresponding to the metatarsal joint of the great toe, and the second projection located in a position corresponding to the proximal phalanx of the great toe, the first projection being of greater height and length than the second and a substantially narrow portion of the normal last bottom between said projections, whereby corresponding recesses and an intermediate ridge-like gripping portion will be formed on the insole of a shoe made on said last.

1,756,588. LOCOMOTIVE CONSISTING OF TWO VEHICLES PROVIDED WITH SEPARATE GROUPS OF WHEELS. ERIK OTTO ERIKSSON, Lidingo, Sweden, assignor to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden, a Corporation. Filed Jan. 20, 1928, Serial No. 248,230, and in Sweden Oct. 27, 1927. 13 Claims. (Cl. 105—38.)



1. In a locomotive, a plurality of vehicles, driving machinery on one vehicle, driving wheels on another vehicle, motion transmitting mechanism operatively and flexibly connecting said driving machinery with said driving wheels, and means for guiding said mechanism to follow movement of said driving wheels.

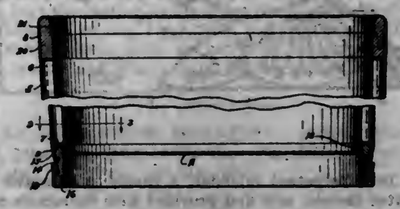
1,756,589. ELECTRICAL APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1929. Serial No. 336,584. 4 Claims. (Cl. 246—41.)

1. In combination, a source of alternating current, a direct current load, a rectifier interposed between said source and said load, a reserve source of direct current also connected with said load, and an asymmetric unit connected in series with said reserve source in such direction as to prevent the output current from said rectifier from flowing through said reserve source.

1,756,590. TWO-WEAVE LOOM DOBBY. ALBERT A. GORDON, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 1, 1927. Serial No. 237,071. 10 Claims. (Cl. 139—74.)

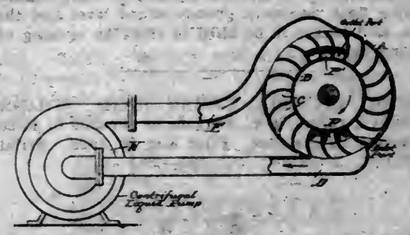
1. In a pattern mechanism for looms, a main pattern surface movable about a fixed axis, a set of fingers to cooperate therewith, an auxiliary pattern surface, means separate from the fingers to establish connection between the auxiliary pattern surface and the fingers, means to render the main pattern surface alternately operative and inoperative, and means to move and hold the auxiliary pattern surface out of controlling position with respect to the connections when the main pattern surface is operative.

1,756,591. SHEET-METAL CURTAIN ROLLER. HAROLD W. HACK, Short Hills, and JOHN M. LAYNG, Glen Ridge, N. J., assignors to Stewart Hartshorn Company, a Corporation of New Jersey. Filed Jan. 8, 1929. Serial No. 331,061. 2 Claims. (Cl. 156—36.)



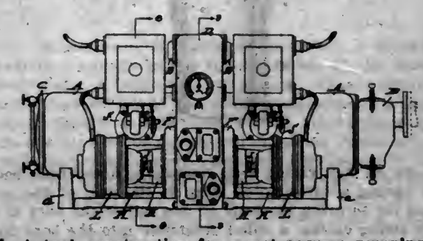
2. The combination with a metal curtain roller having a longitudinal slot the edges of which lie in the periphery of the roller and are parallel, the bottom of which is of greater area than the opening between said edges, and the sides of which are resilient, of a wooden filling strip having its outer face lying in the periphery of the roller and its side walls near said face engaged and compressed by the edges of the slot leaving the lower portion of said strip free to expand beneath said points of engagement.

1,756,592. PULLEY. FRANK G. HARRISON, Massillon, Ohio, assignor to The Spun Steel Corporation, Canton, Ohio, a Corporation of Ohio. Filed May 19, 1926. Serial No. 279,110. 2 Claims. (Cl. 64—17.)



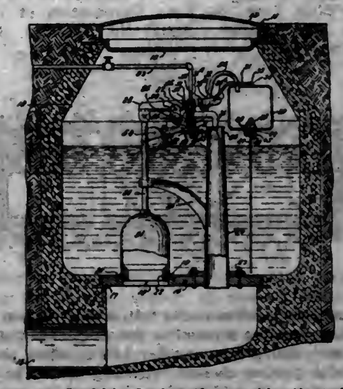
2. An adjustable V pulley and the like including an inner tubular body, an outer tubular body slidable upon the inner body, and means for securing the bodies at any desired position of adjustment with respect to each other, including circumferentially spaced angled slots in one of the bodies, and similar circumferentially spaced angular apertures in the other body, and clamping means for each aperture and slot including a bolt having a shank provided with an angular portion fitting the angular aperture and a flat side portion fitting the width of the slot.

1,756,593. BOTTOM CONSTRUCTION FOR CANS. MARTIN L. HUNKER, Dover, Ohio, assignor to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Dec. 6, 1927. Serial No. 238,070. 2 Claims. (Cl. 220—73.)



1. A sheet metal can comprising a body portion having an outturned, substantially horizontal, annular flange at its lower portion, terminating in a downturned peripheral flange, a bottom having a peripheral, upwardly disposed, inverted channel portion adapted to be received within the lower end portion of the body and to contact with said outturned flange, the inner side of the annular channel portion of the bottom being flush with the inner wall of the body, and a hoop located within the annular channel portion of the bottom and having a tapered peripheral groove into which the lower end portion of the body and the termination of the channel portion are adapted to be pressed.

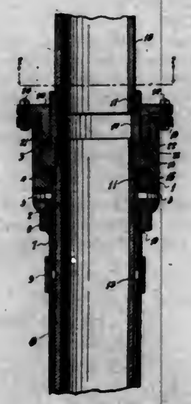
1,756,594. ROTARY GAS PUMP. IRVING C. JENNINGS, South Norwalk, Conn. Filed Sept. 4, 1924, Serial No. 735,937. Renewed Jan. 24, 1928. 4 Claims. (Cl. 230—75.)



1. A rotary gas pump employing a liquid as the motivating agent, comprising a casing, a rotor therein having peripheral displacement chambers, suitable ports for allowing the fluid to be pumped to enter and leave said chambers, a pump for forcing said liquid into said casing under pressure thereby to place a pressure on said fluid, and a liquid return to the pump.

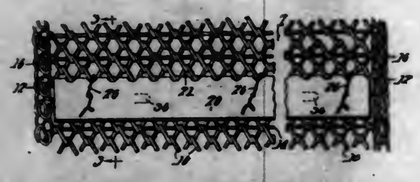
1,756,595. DUPLEX WET VACUUM PUMPING APPARATUS. IRVING C. JENNINGS, South Norwalk, Conn. Filed Sept. 6, 1927. Serial No. 217,671. 5 Claims. (Cl. 103—6.)

1. A tank construction for a wet vacuum pumping apparatus adapted to have a pumping unit secured thereto comprising a horizontally extending receiving tank for the returns, and a forwardly extending smaller supplemental receiving tank connected therewith to either or both sides of which a pumping unit can be secured.



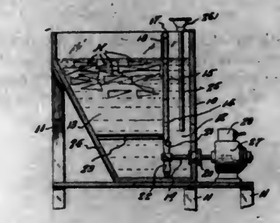
1,756,596. SEWER-FLUSHING DEVICE. LOUIS F. KATONA, Los Angeles, Calif. Filed Feb. 21, 1929. Serial No. 341,598. 21 Claims. (Cl. 182—5.)

1. In a sewer flushing device, the combination of: a well adapted to contain a body of flushing fluid and having an



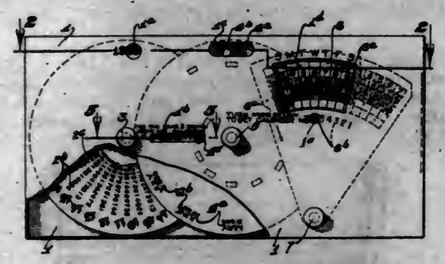
outlet communicating with a sewer; a flushing valve normally closing said outlet; valve operating means including an actuating bucket adapted to open said valve when said bucket receives a predetermined amount of water; a service water pipe line having a discharge conduit adapted to discharge service water directly into said actuating bucket; a normally closed service valve in said pipe line; and means controlled by the body of flushing fluid in said well and functioning to open said service valve when said flushing fluid reaches a predetermined level and thereby cause said bucket to be filled to effect an opening of the flushing valve.

1,756,597. OIL-WELL CASING HEAD. WILLIAM E. KENNAN, Lefors, Tex., assignor of one-half to James M. Thomas, Pampa, Tex. Filed Aug. 30, 1928. Serial No. 303,082. 3 Claims. (Cl. 285—22.)



1. An oil well casing head comprising a centrally bored body having a surrounding ledge in the wall of the bore, means for securing the body at one end of the bore to an outer string casing, a collar insertible into the bore from the other end with the inner edge opposing said ledge, means for attaching an inner string casing to the collar to be supported thereby, a packing between the said inner edge of the collar and said ledge, packing surrounding the collar adjacent said inner edge, and means working between the collar and the body for compressing said last packing.

1,756,598. CONVEYER BELT. VERNON C. KING, Worcester, Mass., assignor to Wickwire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed June 1, 1929. Serial No. 367,681. 3 Claims. (Cl. 198—195.)

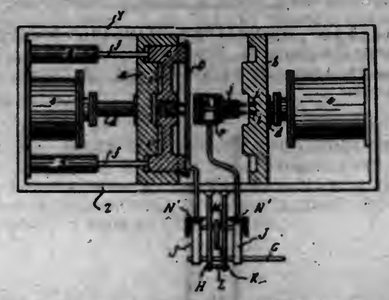


1. In an interlaced conveyor belt, a body portion, a transverse flange member secured to the work-engaging surface of said belt, said flange member having offset projections on one edge portion thereof extending below the work-engaging surface of said belt, and means to secure said flange member in position.

1,756,599. APPARATUS FOR DYEING HAT BODIES AND SIMILAR MATERIALS. KARL FRIEDRICH KRANEY, Guben, Germany. Filed Feb. 27, 1929. Serial No. 343,231. 5 Claims. (Cl. 8—19.)

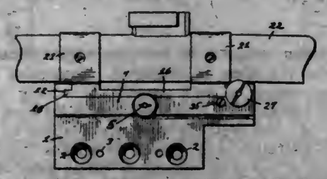
1. In an apparatus for dyeing aggregate piece material, such as a plurality of hat bodies, a tub, a vertical partition extending upwardly through said tub from its bottom to subdivide the interior thereof to provide a mixing chamber and a dyeing chamber, a perforate bottom screen in the lower end of said dyeing chamber spaced above the bottom of said tub, a perforate side screen between the upper end of said dyeing chamber and said mixing chamber, said side screen forming a part of said vertical partition extending above the normal fluid level of the dye solution with which the tub is supplied, and means below the bottom screen and between said dyeing chamber and said mixing chamber for alternately circulating the dye solution in opposite directions through the bottom and side screens and between said dyeing chamber and mixing chamber, so that the piece material is alternately massed on said bottom screen subject to the flow of the dye solution therethrough and then whirled about the interior of said dyeing chamber to break up the mass and shift about the individual pieces into new relative positions.

1,756,600. PERPETUAL CALENDAR. ROYAL B. LEE, San Diego, Calif. Filed Nov. 16, 1929. Serial No. 407,761. 6 Claims. (Cl. 40—113.)



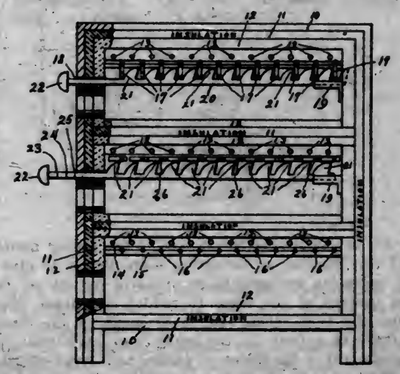
1. In a perpetual calendar, a casing, a rotatable disk mounted therein, said disk provided with characters representing the years and sets of index characters corresponding to said years, a second disk provided with characters representing months, and a slot for each month arranged to uncover a certain index character, said casing provided with openings therein adapted to expose at one time, characters representing a single year date, characters representing a single month of a year, and an index character exposed by the slot in said second disk, and a weekly calendar member arranged to be set according to the said exposed index character.

1,756,601. GAP DETECTOR FOR RAILWAY SWITCHES. ROBERT S. MCELHANEY, Barton, Ohio. Filed June 18, 1929. Serial No. 370,561. 9 Claims. (Cl. 246—476.)



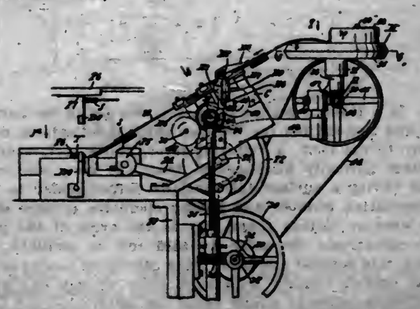
1. A gap indicating signal for railway switches or the like, comprising a vertically movable signal, rockable means for supporting said signal, and means connecting the switch and said rockable means to release the latter and thereby the signal upon accidental movement of the switch.

1,756,602. ATTACHMENT FOR CASTING MACHINES. ALBERT WOOD MORRIS, Drexel Hill, and SAMUEL PRICE WETHERILL, Jr., Haverford, Pa., assignors to Wetherill-Morris Engineering Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 22, 1929. Serial No. 365,164. 19 Claims. (Cl. 22—94.)



1. A casting remover comprising driving means, a casting holder adapted to enter between open mold parts and receive a casting as it is ejected from the mold, a movable frame for the holder operable to place the holder in position to take the casting and to place the holder in position to deposit the casting away from the receiving position, said driving means being mechanically connected to the holder to start and end its travel by slow and gentle movements.

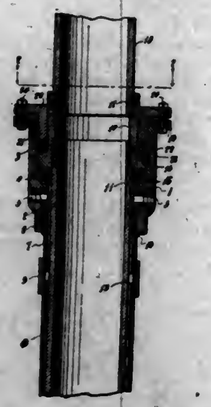
1,756,603. GUN-SIGHT MOUNTING. RUDOLF NOSKE, San Francisco, Calif. Filed Sept. 19, 1927. Serial No. 220,455. 6 Claims. (Cl. 33—50.)



1. A gun sight mounting comprising a fixed plate arranged to be rigidly secured upon the breech of a rifle; a mounting plate arranged to be rigidly secured upon the fixed plate; a sight mounting member pivotally mounted upon the mounting plate; an adjusting screw threaded into mounting plate and engaging the sight mounting member; a retaining collar mounted upon the screw and engaging the sight mounting member; and means for rigidly securing the collar upon the screw in frictional engagement with the sight mounting member for moving said member when the screw is turned.

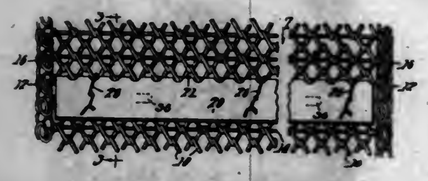
1,756,604. HEAT CONTROL FOR BAKE OVENS. ALBERT OBERHEIM, Charlotte, N. C.; Mabel Oberheim executrix of said Albert Oberheim, deceased. Filed Jan. 4, 1928. Serial No. 244,476. 1 Claim. (Cl. 107—55.)

In a baking oven, a baking compartment, a plurality of heating elements in the upper portion of the baking compartment, a plurality of spaced vanes pivotally mounted transversely of the baking compartment, a longitudinally slidable rod disposed beneath the vanes, a cam on the rod for each vane, said rod extending to the outside of the baking compartment, said rod being adapted to slide to cause the cams thereon to move the vanes towards a horizontal position to form a protective partition between the heating elements and the lower portion of the baking compartment.



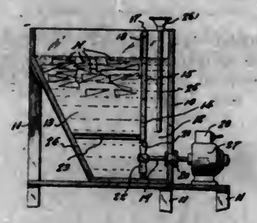
1,756,605. MECHANISM FOR COLLECTING AND FEEDING SCREW EYES. DWIGHT E. PRIEST, Worcester, Mass., assignor to Parker Wire Goods Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 26, 1928. Serial No. 295,557. 18 Claims. (Cl. 10—162.)

6. A machine for assembling and feeding screw-eyes comprising a rotatable hopper, an assembling rod projecting into said hopper and along which said screw-eyes are slidable, and a plurality of rod clamping devices effective to hold said rod in predetermined operative position, said clamping devices having projections thereon and said rod having recesses to receive said projections, whereby said rod is held from axial movement.



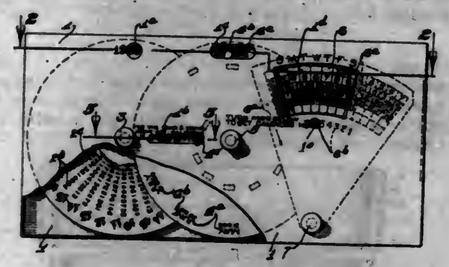
outlet communicating with a sewer; a flushing valve normally closing said outlet; valve operating means including an actuating bucket adapted to open said valve when said bucket receives a predetermined amount of water; a service water pipe line having a discharge conduit adapted to discharge service water directly into said actuating bucket; a normally closed service valve in said pipe line; and means controlled by the body of flushing fluid in said well and functioning to open said service valve when said flushing fluid reaches a predetermined level and thereby cause said bucket to be filled to effect an opening of the flushing valve.

1,756,597. OIL-WELL CASING HEAD. WILLIAM E. KEENAN, Lefors, Tex., assignor of one-half to James M. Thomas, Pampa, Tex. Filed Aug. 30, 1928. Serial No. 303,082. 3 Claims. (Cl. 285—22.)



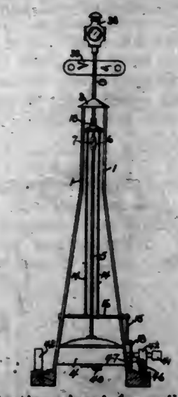
1. An oil well casing head comprising a centrally bored body having a surrounding ledge in the wall of the bore, means for securing the body at one end of the bore to an outer string casing, a collar insertible into the bore from the other end with the inner edge opposing said ledge, means for attaching an inner string casing to the collar to be supported thereby, a packing between the said inner edge of the collar and said ledge, packing surrounding the collar adjacent said inner edge, and means working between the collar and the body for compressing said last packing.

1,756,598. CONVEYER BELT. VERNON C. KING, Worcester, Mass., assignor to Wickwire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed June 1, 1929. Serial No. 367,681. 3 Claims. (Cl. 198—195.)



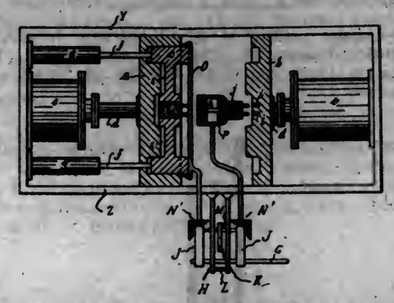
1. In an interlaced conveyor belt, a body portion, a transverse flange member secured to the work-engaging surface of said belt, said flange member having offset projections on one edge portion thereof extending below the work-engaging surface of said belt, and means to secure said flange member in position.

1,756,599. APPARATUS FOR DYEING HAT BODIES AND SIMILAR MATERIALS. KARL FRIEDRICH KEANEY, Guben, Germany. Filed Feb. 27, 1929. Serial No. 343,231. 5 Claims. (Cl. 8—19.)



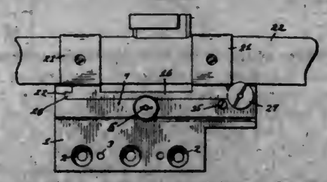
1. In an apparatus for dyeing aggregate piece material, such as a plurality of hat bodies, a tub, a vertical partition extending upwardly through said tub from its bottom to subdivide the interior thereof to provide a mixing chamber and a dyeing chamber, a perforate bottom screen in the lower end of said dyeing chamber spaced above the bottom of said tub, a perforate side screen between the upper end of said dyeing chamber and said mixing chamber, said side screen forming a part of said vertical partition extending above the normal fluid level of the dye solution with which the tub is supplied, and means below the bottom screen and between said dyeing chamber and said mixing chamber for alternately circulating the dye solution in opposite directions through the bottom and side screens and between said dyeing chamber and mixing chamber, so that the piece material is alternately massed on said bottom screen subject to the flow of the dye solution therethrough and then whirled about the interior of said dyeing chamber to break up the mass and shift about the individual pieces into new relative positions.

1,756,600. PERPETUAL CALENDAR. ROYAL B. LEE, San Diego, Calif. Filed Nov. 16, 1929. Serial No. 407,761. 6 Claims. (Cl. 40—113.)



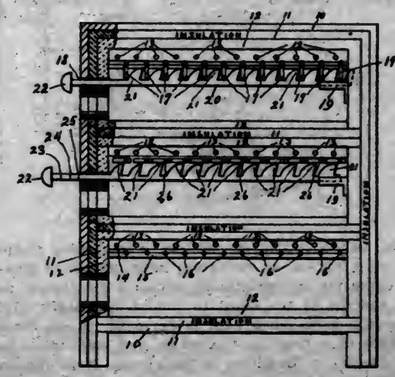
1. In a perpetual calendar, a casing, a rotatable disk mounted therein, said disk provided with characters representing the years and sets of index characters corresponding to said years, a second disk provided with characters representing months, and a slot for each month arranged to uncover a certain index character, said casing provided with openings therein adapted to expose at one time, characters representing a single year date, characters representing a single month of a year, and an index character exposed by the slot in said second disk, and a weekly calendar member arranged to be set according to the said exposed index character.

1,756,601. GAP DETECTOR FOR RAILWAY SWITCHES. ROBERT S. MCELHANEY, Barton, Ohio. Filed June 18, 1929. Serial No. 370,561. 9 Claims. (Cl. 246—476.)



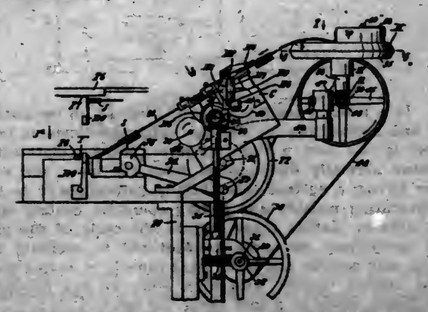
1. A gap indicating signal for railway switches or the like, comprising a vertically movable signal, rockable means for supporting said signal, and means connecting the switch and said rockable means to release the latter and thereby the signal upon accidental movement of the switch.

1,756,602. ATTACHMENT FOR CASTING MACHINES. ALBERT WOOD MORRIS, Drexel Hill, and SAMUEL PRICE WETHERILL, Jr., Haverford, Pa., assignors to Wetherill-Morris Engineering Company, Philadelphia, Pa., a Corporation of Delaware. Filed May 22, 1929. Serial No. 365,164. 19 Claims. (Cl. 22—94.)



1. A casting remover comprising driving means, a casting holder adapted to enter between open mold parts and receive a casting as it is ejected from the mold, a movable frame for the holder operable to place the holder in position to take the casting and to place the holder in position to deposit the casting away from the receiving position, said driving means being mechanically connected to the holder to start and end its travel by slow and gentle movements.

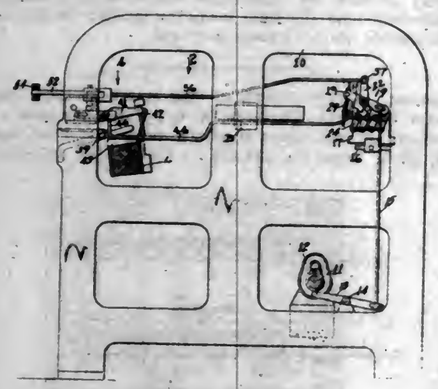
1,756,603. GUN-SIGHT MOUNTING. RUDOLF NOSKE, San Francisco, Calif. Filed Sept. 19, 1927. Serial No. 220,455. 6 Claims. (Cl. 33—50.)



1. A gun sight mounting comprising a fixed plate arranged to be rigidly secured upon the breech of a rifle; a mounting plate arranged to be rigidly secured upon the fixed plate; a sight mounting member pivotally mounted upon the mounting plate; an adjusting screw threaded into mounting plate and engaging the sight mounting member; a retaining collar mounted upon the screw and engaging the sight mounting member; and means for rigidly securing the collar upon the screw in frictional engagement with the sight mounting member for moving said member when the screw is turned.

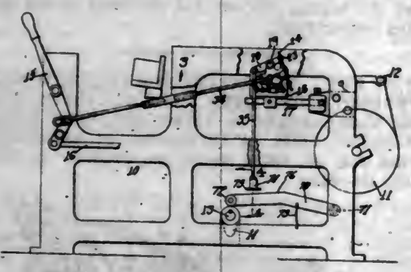
1,756,604. HEAT CONTROL FOR BAKE OVENS. ALBERT OBERHEIM, Charlotte, N. C.; Mabel Oberheim executrix of said Albert Oberheim, deceased. Filed Jan. 4, 1928. Serial No. 244,476. 1 Claim. (Cl. 107—55.)

In a baking oven, a baking compartment, a plurality of heating elements in the upper portion of the baking compartment, a plurality of spaced vanes pivotally mounted transversely of the baking compartment, a longitudinally slidable rod disposed beneath the vanes, a cam on the rod for each vane, said rod extending to the outside of the baking compartment, said rod being adapted to slide to cause the cams thereon to move the vanes towards a horizontal position to form a protective partition between the heating elements and the lower portion of the baking compartment.



1,756,605. MECHANISM FOR COLLECTING AND FEEDING SCREW EYES. DWIGHT E. PRIEST, Worcester, Mass., assignor to Parker Wire Goods Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 26, 1928. Serial No. 295,557. 18 Claims. (Cl. 10—162.)

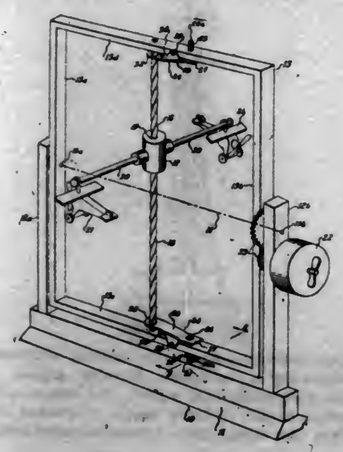
6. A machine for assembling and feeding screw-eyes comprising a rotatable hopper, an assembling rod projecting into said hopper and along which said screw-eyes are slidable, and a plurality of rod clamping devices effective to hold said rod in predetermined operative position, said clamping devices having projections thereon and said rod having recesses to receive said projections, whereby said rod is held from axial movement.



ATLANTA PUBLIC LIBRARY GEORGIA

1,756,606. COMBINED FILLING AND WARP STOP MOTION FOR LOOMS. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1927. Serial No. 209,653. 17 Claims. (Cl. 139—336.)

1. In loom stopping mechanism, a warp stop motion, a filling stop motion, an actuating lever, means to give said lever operative movements in opposite directions, means under control of the warp to render said lever effective to stop the loom when said lever rocks in one direction and there is a fault in the warp, and additional means under control of the filling to render said lever effective to stop the loom when said lever rocks in the other direction and there is a fault in the filling.



1,756,607. WARP STOP MOTION. JOHN REGAN, New Bedford, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1927. Serial No. 226,976. 6 Claims. (Cl. 139—360.)

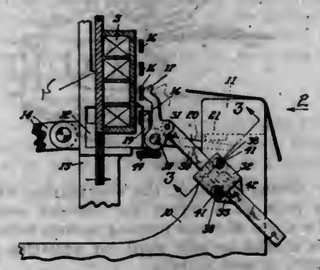
1. In a loom, a warp stop motion having an oscillating rod and a mounting for the rod which is adjustable relatively to the loom, a vibrating lever, and a reciprocating member normally disconnected from the lever and said lever having a surface substantially perpendicular to the reciprocating member and having operative contact with the lever at certain times only in the cycle of the pick and operatively connected to said rod to oscillate the latter, said member and lever being capable of having operative driving contact with each other at any one of a continuous series of points along the lever.

1,756,608. MACHINE FOR USE AS MECHANICAL TOYS AND OTHER PURPOSES. MAURICE J. REIDER, Canton, Ohio. Filed Jan. 11, 1930. Serial No. 420,078. 3 Claims. (Cl. 272—31.)

2. A machine including a base, supporting means extending upwardly from the base, a frame pivotally mounted on the supporting means for rotating about a laterally extending axis, a gravity actuated mechanism operatively mounted on the frame, the frame including end members on opposite sides of the axis of rotation of the frame, and the gravity actuated mechanism including a mass member

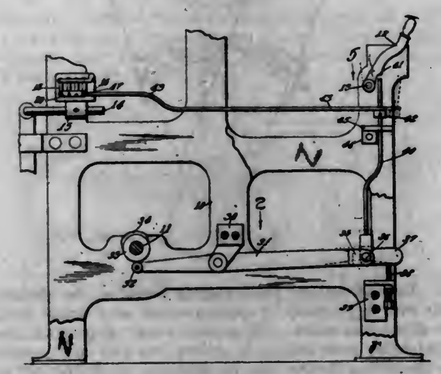
mounted in the frame for successive movement by action of gravity between the ends of the frame towards one end thereof when the other end is positioned above the axis of rotation of the frame, and means intermittently rotating the frame about its axis of rotation for successively positioning the ends of the frame above its axis of rotation.

1,756,609. CONTAINER-CHARGING ICE-CREAM SCOOP. ELLIOTT M. STORY, Worcester, Mass. Filed June 19, 1929. Serial No. 372,190. 2 Claims. (Cl. 226—19.)



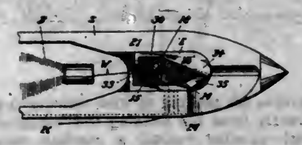
1. A scoop adapted to hold an edible container and manipulate the same to charge it, comprising a pair of jaws conforming to and adapted to wholly receive an elongated container, a hinge connection between the inner ends of the jaws whereby they are adapted to be closed upon the container and opened to release the same, the outer ends of the jaws forming a cutter adapted to penetrate a mass of ice-cream into which the jaws are forced, handles extending from the inner ends of the jaws whereby

CARNEGIE LIBRARY OF ATLANTA



the latter may be manipulated and opened, each jaw and its handle being a single sheet metal member, a spring cooperating with the handles to close the jaws, a head adapted to support the container against endwise movement by pressure exerted thereon by the material into which the jaws are forced, and head-confining means connecting the head with said hinge conection and locating the head between the inner ends of the jaws, the head being independent of the jaws, so that the latter may be opened and closed without movement of the head.

1,756,610. PROTECTOR MECHANISM FOR LOOMS. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 6, 1928. Serial No. 267,970. 3 Claims. (Cl. 139—187.)



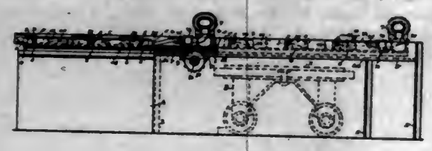
1. In a friction device for a protector mechanism of a loom having a lay which moves backwardly and forwardly and having a protector rod which is movable to stopping and non-stopping position, a guide, a bar pivotally connected to the finger at one end and the other end extending through said guide, said guide being angularly movable and having frictional elements between which the bar is slidable while the lay is moving either backwardly or forwardly.

1,756,611. WARP STOP MOTION FOR LOOMS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1928. Serial No. 316,834. 8 Claims. (Cl. 139—360.)

1. In a warp stop motion, a non-circular detector rod to be oscillated about its axis and located at the rear of the loom, control mechanism movable from running to stopping position and located at the front of the loom, a regularly moving lever, a weighted actuator member pivoted to the lever beneath the control mechanism and normally in alignment with the latter, and a control rod operatively connected at its rear end to the detector rod and at its forward end to the actuator member, said weighted actuator member being movable by the lever toward the stopping mechanism and tending to move out of alignment with the stopping mechanism and also tending to cause oscillation of the detector rod, inability of the detector rod to rock on its axis holding the actuator member in alignment with the stopping mechanism to move the latter form running to stopping position as the lever moves upwardly.

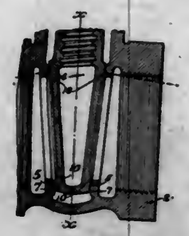
1,756,612. SELF-THREADING SHUTTLE. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1929. Serial No. 332,658. 3 Claims. (Cl. 139—217.)

1. In a shuttle having provision for supporting a bobbin from which extends a weft end, said shuttle having a thread passage through which the weft extends, a pair of coacting tensioning elements one of which is normally stationary with respect to the shuttle, and a pivot for the other element removed from the first named element with respect to the length of the shuttle, said second named element moving about its pivot into engagement with the first named element and being acted upon to move toward the first named element when the weft from the bobbin is moving in the normal direction through the thread passage, said second named element tending to move away from the first named element when the weft is reversed as to its direction through the thread passage.



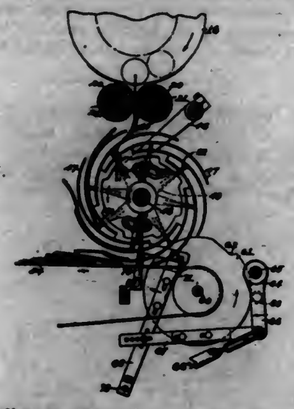
1,756,613. CAN OPENER. LOGAN R. WHITNEY, Los Angeles, Calif., assignor to Whitney-Jarvis Company, Louisville, Ky., a Corporation of Kentucky. Filed Jan. 9, 1929. Serial No. 331,266. 1 Claim. (Cl. 30—3.)

A can opener comprising a single plate of material shaped to form a handle and having a slot cut through one edge thereof to form a cutting blade extending across the end of said plate, both edges of said cutting blade being beveled to form cutting edges and curved to meet in a puncturing point, the edge of said slot opposite said blade having a part thereof adapted to form a fulcrum about which said blade may be swung to utilize the inner cutting edge thereof in the separation of the top of a can from the body thereof, and a guard extending substantially across the mouth of said slot, and having a part thereof



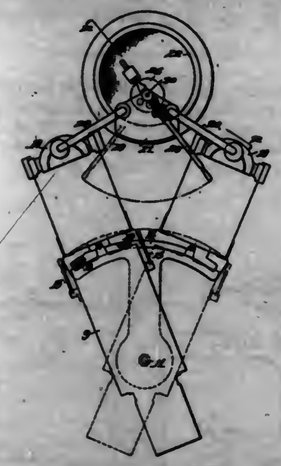
shaped to form a fulcrum about which the blade may be swung to utilize the other cutting edge of said blade in a can opening operation.

1,756,614. LIFTING AND TRANSFERRING DEVICE. JOHN A. WIENER, Oswego, N. Y., assignor to Oswego Board Corporation, Oswego, N. Y., a Corporation of New York. Filed Apr. 23, 1929. Serial No. 357,510. 10 Claims. (Cl. 214—1.)



2. A machine for picking up and transferring wet sheets of fibre directly from the molding bed, comprising a frame formed with parallel tracks, a carriage adapted to be trundled over said tracks towards and from said bed, a floating open bottom vacuum box supported by said carriage adapted to be projected into the molding chamber means to stop the box when it registers with the sheets, means to connect the box and carriage whereby said carriage may continue its forward travel after such registry is effected and to cause said box to gravitate towards the sheets, means to create a vacuum in said box, said vacuum adapted to become effective when the box makes contact with the top surface of the sheets, means to reciprocate said carriage, and means to break the vacuum to enable the sheets to gravitate to another conveyor.

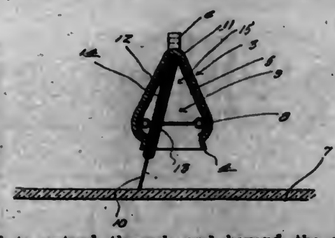
1,756,615. VALVE. DANIEL R. WOLFF, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 27, 1927. Serial No. 229,049. 6 Claims. (Cl. 251—167.)



1. The combination of a valve body, passages from the exterior to the interior thereof, angularly disposed circular body seats surrounding each passage and formed integrally with the body by a yielding neck, a seating face on each seat, a gate member having angularly disposed circular seating faces thereon to engage the seating faces on the body seats, both sets of seating faces being of limited width and one set of the seating faces having a crowned contour with the apex of the crown adjacent the inner edge of the face and each arranged to form an unbroken circular line of contact with its co-operating face when they meet and means on the gate to receive other means to move the gate, the angularity of the planes of the contacting portions in the two sets of faces coinciding.

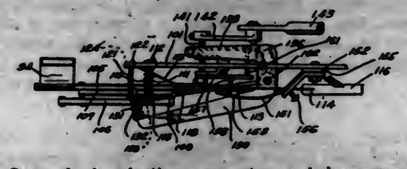
1,756,616. DELIVERY FAN. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Original application filed Aug. 8, 1922, Serial No. 580,437. Divided and this application filed Jan. 19, 1925. Serial No. 3,509. Renewed Mar. 27, 1929. 6 Claims. (Cl. 93—93.)

1. In a folding machine, the combination with a pair of folding rolls, of a rotary fan delivery comprising a shaft and a series of vanes forming pockets between them, and means carried by said shaft for adjusting the depth of a plurality of said pockets.



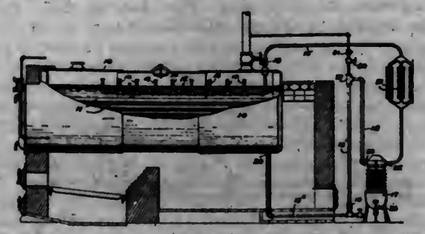
1,756,617. MULTIPLE CASTING MACHINE. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 19, 1926. Serial No. 130,208. 5 Claims. (Cl. 22—70.)

1. In a stereotype plate casting machine, the combination with a plurality of casting boxes, of a single means for filling the boxes with molten metal, a pouring spout terminating just over each casting box and means whereby the filling means can be operated to deliver to any spout and at the same time close the others.



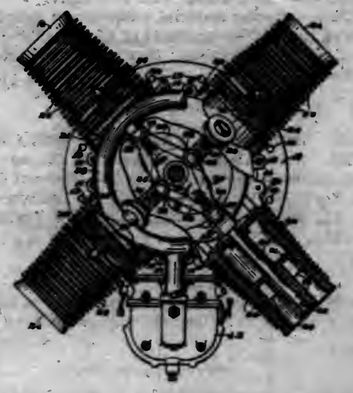
1,756,618. WINDSHIELD WIPER. THEODORE A. ZIELINSKI, Detroit, Mich. Filed July 9, 1928. Serial No. 291,245. 2 Claims. (Cl. 15—255.)

1. A windshield wiper of the class described comprising an elongated hollow casing having a longitudinally extending discharge mouth, the side walls of said casing converging rearwardly, the outer longitudinal edges of said walls being bent inwardly and having inclined stop flanges extending for the full length thereof, a wiper hingedly mounted in the apex portion of the casing, and



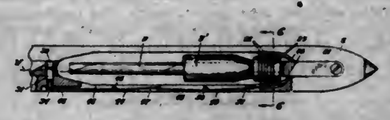
adapted to extend through and beyond the mouth for alternate engagement with the stop flanges, heating elements extending along the walls of the casing, and said wiper being movable with respect to the casing and alternately cooperating with the walls of the casing to provide heat entrapping chambers.

1,756,619. CHECK-CONTROLLED APPARATUS. HUGH B. WURZBACH and LESLIE H. WADSWORTH, Magna, Utah, assignors to Selector Corporation, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 25, 1928. Serial No. 249,438. 10 Claims. (Cl. 194—103.)



1. In a check selecting apparatus, a balance memoer, means for delivering a check to said balance member, two delivering chutes, means for moving one of said delivering chutes into alignment with said balance member upon deposition of a check of certain weight in said balance member and for moving the other of said chutes into alignment with said balance member upon deposition of a check of other than said certain weight in said balance member, and means for ejecting a check from said balance member into the chute which is thus moved into alignment therewith.

1,756 620. CONTINUOUS-SURFACE BLOW-DOWN SYSTEM FOR BOILERS. DAVID ROBERT YARNALL, Philadelphia, Pa. Filed Mar. 5, 1920. Serial No. 363,469. 8 Claims. (Cl. 122—400.)



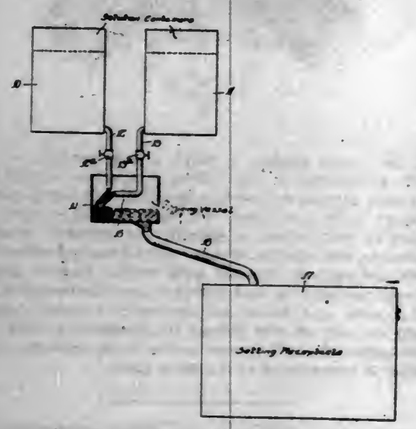
1. In a steam generating system utilizing a boiler, a skimmer, an artificial cooler, a precipitator, connections through the cooler from the skimmer to the precipitator, upwardly extending return connections from the precipitator from a point below to a point above the level of the water in the boiler, a connection from these return connections extending from the point above the water level in the boiler to the interior of the boiler and a steam jet injector in said last-named connection located at a point above the level of the water in the boiler and adapted to accelerate the speed of the water in the last connection.

1,756,621. INTERNAL-COMBUSTION ENGINE. GUSTAF ANDERSON, Lynn, Mass. Filed Mar. 15, 1928. Serial No. 261,848. 4 Claims. (Cl. 74—14.)

1. In a cam engine, a shaft, a cam secured to said shaft, a plurality of cam rollers in operative relation to said cam, pivoted connections between each roller and its adjacent roller on either side thereof, piston rods connected to said rollers, a plurality of cylinders equal in number to the number of cam rollers arranged about said shaft and radially disposed with respect thereto, pistons slidably mounted in said cylinders and connected to the piston rods, and means for imparting a power impulse stroke to each of said pistons in succession to move the same outwardly with respect to the shaft, whereby rotary motion is transmitted to the drive shaft.

1,756,622. SHUTTLE FOR WEFT-REPLENISHING LOOMS. FRANCIS E. ASHTON, Chester, Pa., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1929. Serial No. 347,785. 13 Claims. (Cl. 139—257.)

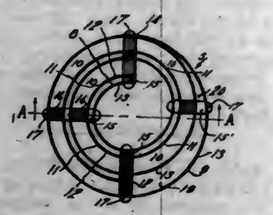
1. In a weft replenishing mechanism having a lay, a shuttle carrying a bobbin, a transferrer device to expel a depleted bobbin from the shuttle, a pair of relatively movable friction elements in the shuttle operating normally to tension the weft drawn from the bobbin, a device in the shuttle to support the bobbin and capable of movement with respect to the shuttle under influence of the transferrer device at the time of transfer, and connections interposed between the tension mechanism and the bobbin supporting device operative at the time of transfer to render the tension mechanism temporarily inoperative to tension the weft.



1,756,623. BASE EXCHANGE MATERIAL AND METHOD OF PREPARING SAME. ABRAHAM S. BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1924. Serial No. 708,671. 15 Claims. (Cl. 23—113.)

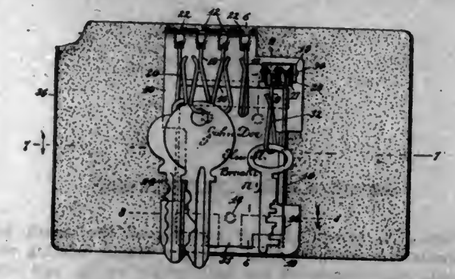
10. The process of preparing a metallo-silicate which comprises treating an alkali metal silicate with a quantity of acid in excess of that required to neutralise the total alkalinity, then mixing it with a solution of an alkali metal amphoterate and drying the resulting gel.

1,756,624. BASE EXCHANGE SUBSTANCE. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1924. Serial No. 754,202. 20 Claims. (Cl. 23—113.)



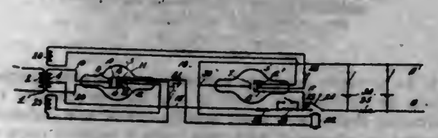
4. A base exchange material comprising a granular solid containing the reaction products of a hydroxide of one of a group of metals comprising iron and aluminum and an alkali metal silicate.

1,756,625. METHOD OF PREPARING METALLO-SILICATES. ABRAHAM SIDNEY BEHRMAN, Chicago, Ill., assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1925. Serial No. 22,253. 3 Claims. (Cl. 23—113.)



2. In the manufacture of gel zeolites by admixture of a solution containing silicate with a solution containing alumina, the process which comprises flowing small proportioned streams of the silicate solution and of the alumina containing solution into mutual contact in interfering jets, completing the mixture in transit, collecting the mixture thus produced and delivering it through a conduit to a receiver, and allowing development of gel in said receiver.

1,756,626. SILENCER. ROLAND B. BOURNE, Hartford, Conn., assignor, by mesne assignments, to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Filed July 22, 1927. Serial No. 207,787. 21 Claims. (Cl. 137—160.)

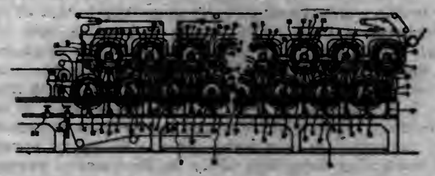


1. A device for conducting a flow of gas to or from an apparatus and limiting the transmission of wave pulsations therethrough, comprising a spirally disposed conducting channel and a series of adjacent chambers laterally disposed with respect thereto, said chambers being acoustically coupled to said channel.

1,756,627. KEY CASE. JOSEPH BREWER, New York, N. Y. Filed Feb. 4, 1927. Serial No. 165,929. 2 Claims. (Cl. 150—40.)

2. A key case carrier plate having spaced elongated openings therein, and inturned side portions spaced with respect to one face of the plate, said side portions being disposed substantially perpendicular to the edges presented by said openings.

1,756,628. CONSTANT-POTENTIAL APPARATUS. VANNEVAR BUSH, West Medford, Mass., assignor to Raytheon, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1925. Serial No. 60,502. 8 Claims. (Cl. 171—97.)



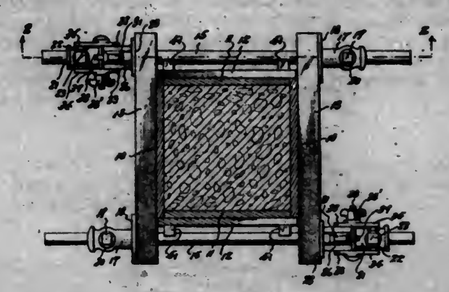
1. In combination, a source of alternating current, a load circuit connected thereto and normally inoperative, a rectifier interposed therebetween whereby unidirectional pulsatory current is derived, a device across the load circuit for removing the pulsations and means in series with the load circuit and responsive to rectified current for rendering the load circuit operative.

1,756,629. EXTENDIBLE VISE SUPPORT. ALBERT W. CAMPBELL, Bay City, Mich. Filed July 25, 1927. Serial No. 208,213. 5 Claims. (Cl. 81—41.)

1. An extendible vise-support comprising a stationary base plate, an extendible vise supporting member slidably mounted thereon, and a foldable leg pivotally secured to the end of said supporting member, and adapted to be accommodated between the base and the supporting member when the vise support is not in use.

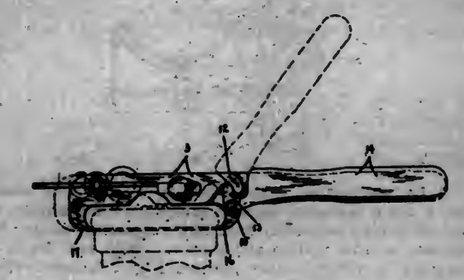
1,756,630. DRIER APPARATUS FOR PAPER-MAKING MACHINES. RUSSELL CARPENTER, Three Rivers, Quebec, Canada. Filed Nov. 3, 1927. Serial No. 230,793. 4 Claims. (Cl. 34—48.)

1. In a paper making machine, the combination with a series of drier rolls, of a series of rotary carriers located in close proximity to said rolls and in axial alignment therewith, each of said carriers being rotatively free relatively to its respective roll and being movable axially to and from rotative engagement therewith whereby the carrier may at times be driven directly by its roll at the same peripheral speed, each of said carriers consisting of an annular sheave having a grooved periphery coinciding with the periphery of its respective roll, means for rotatively supporting each sheave independently of the axis of its respective roll, said last-mentioned means consisting of a fixed member and an annular series of anti-friction rollers mounted thereon and rotatively supporting the sheave, and means for axially moving each sheave into rotative engagement with its respective roll, substantially as described.



1,756,631. NUT-FASTENING INSTALLATION. FRED S. CARR, Newton, Mass., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1927. Serial No. 162,279. 4 Claims. (Cl. 85—2.4.)

1. A fastener installation comprising, in combination, a support having an aperture formed therein, a nut having a base portion seated against one face of the support and an internally threaded portion extending from said base portion through said aperture, said internally threaded portion having a wing portion also passing through the support, said wing portion cooperating with a portion of the support to prevent turning of the nut relative to the support and a lateral projection extending from one of said portions and engaging the other face of the support, said base portion and said lateral projection thereby normally holding the nut against accidental removal from support prior to threading a screw into the internally threaded portion of the nut.

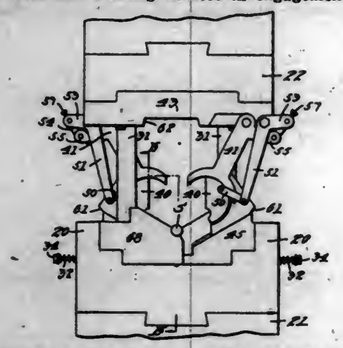


1,756,632. MEANS FOR LOCKING UP CONCRETE-POURING FORMS. SAMUEL S. COLT, Orange, N. J. Filed July 11, 1928. Serial No. 291,855. 10 Claims. (Cl. 144—291.)

1. In a form locking apparatus, the combination with a tie-rod, of an abutment block slidably adjustable thereon, means for retaining said abutment block in adjusted fixed relation to said tie-rod, a wedge member slidable relative to said abutment block, and an independent releasable

means carried by said abutment block and cooperative with said wedge member to lock the latter in operative form clamping position.

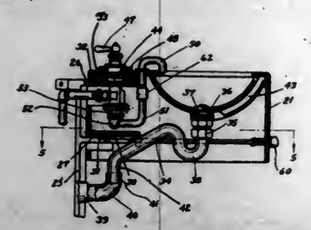
1,756,633. PORTABLE CAN OPENER. CHARLES D. CUMMINGS, Tully, N. Y., assignor of twenty-five per cent to Leo E. Fuller, Syracuse, N. Y., and forty-nine per cent to Alexander F. Fuller and Charles A. Allen, Portsmouth, N. H. Filed Apr. 9, 1927. Serial No. 182,385. 1 Claim. (Cl. 30—3.)



In a device of the class described, a plate having a slot in one end, a cutting wheel rotatably mounted on the plate with its cutting edge adjacent the inner end of the slot, a second plate, a shaft journaled in the second plate, a driving wheel on one end of the shaft, means for rotating the shaft, a hook formed in the other end of the second named plate, means for slidably mounting the second named plate on the first named plate with the shaft positioned in the slot in the first named plate and between the cutting wheel and the outer end of the slot, a lever pivotally mounted on the first named plate, a hook at one end of the lever articulating with the hook on the second named plate whereby the pivoting of the lever will move the driving wheel to and from the cutting wheel.

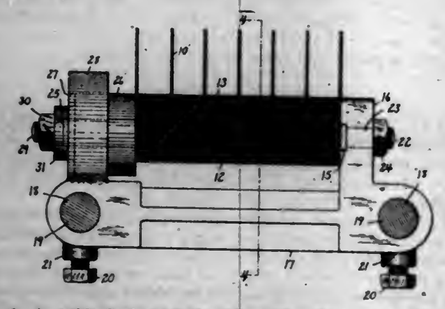
1,756,634. CRANK-SHAFT-TWISTING MACHINE. MARK H. DAMERELL, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1926. Serial No. 158,009. 21 Claims. (Cl. 29—6.)

7. A crankshaft twisting machine having, in combination, a fixed die, a fixed pivot member associated therewith, a movable die, means to advance said movable die to operative position adjacent said pivot, and means to move said die relative to said fixed die and angularly about said pivot member to engage and twist the shaft.



19. In a press for positioning the throws of a multi-throw crankshaft, a set of holding devices, and a set of twisting devices for the several throws of the crankshaft, a movable member, and means operated by the movement of

said member in one direction to first place the holding devices and the twisting devices in engagement with the

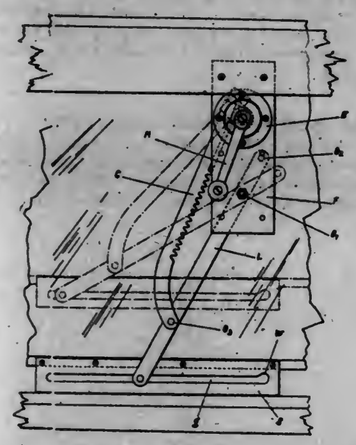


crank throws, and to then rotate the twisting devices relative to the holding devices and in opposite directions, while said holding devices grip the shaft.

1,756,635. COMBINATION LAVATORY AND CLOSET. WALTER R. DENNIS, Fergus Falls, and EDWARD J. BAEHR, Wadena, Minn. Filed Mar. 28, 1929. Serial No. 350,559. 20 Claims. (Cl. 4—3.)

1. In combination, a closet having a supporting member, a drain extending through said supporting member, a branch issuing outwardly from said supporting member in angular relation thereto and connected with said drain, a lavatory, a vertical pivot positioned in alignment with said branch and independent thereof, a lavatory swingably mounted on said pivot for movement to cover or uncover said closet, and a drain connected to said lavatory and swivelly connected to said branch.

1,756,636. ADJUSTABLE GUIDE DEVICE FOR MULTIPLE STRANDS. CHARLES A. DREISBACH, New Haven, Conn., assignor to Standard Radial Blast Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1929. Serial No. 349,702. 8 Claims. (Cl. 51—1.)

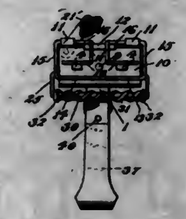


1. A guide-device of the class described comprising a mounting-bar; a plurality of spacer-plates mounted upon the said bar; and a plurality of relatively-long guide-plates interposed between the said spacer-plates and constructed so as to be radially removable from the said bar.

1,756,637. METHOD OF PREPARING BY-PRODUCT CALCIUM SULPHATE FOR PLASTER. ROBERT SHAVER EDWARDS, Brookline, Mass., assignor to Rumford Chemical Works, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 9, 1927. Serial No. 182,543. 10 Claims. (Cl. 23—122.)

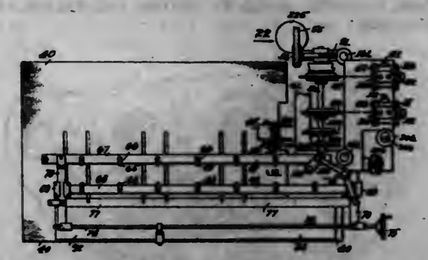
8. In the process of treating by-product gypsum, having compounds which develop acidity upon dehydration of the gypsum, those steps which consist in treating with sulphuric acid in excess of the amount required to decompose the compounds present and in neutralising the free acids of the compounds and the excess sulphuric acid with lime.

9. In the process of treating by-product gypsum to improve the crystal structure of the plaster made therefrom, such by-product gypsum being deficient in crystal growth and containing impurities which in the form of gypsum are non-deleterious but which are rendered actively deleterious to the plaster by the heat of dehydration of the gypsum, those steps which consist in treating the gypsum with sulphuric acid in excess of the amount required to react with and decompose the impurities which are rendered deleterious by the heat of dehydration of the gypsum, and then neutralizing the acids of the deleterious impurities and the excess sulphuric acid with lime to convert them into stable compounds not rendered reactive by heat.



1,756,638. MECHANISM FOR RAISING AND LOWERING SLIDING WINDOWS. EDMOND ETORÉ, Courbevoie, France. Filed Oct. 8, 1927, Serial No. 224,844, and in France Dec. 2, 1926. 2 Claims. (Cl. 268—126.)

1. In a combined window regulator and locking device, a casing adapted to be secured to the window support, a shaft journaled in the casing, a handle for rotating the said shaft, a gear loosely fitted on the said shaft and provided with a sleeved extension, a combined actuating and locking member carried by the said shaft and adapted to cooperate with the said sleeve and casing for preventing rotation of the said gear, means for normally holding the locking member in locking engagement with said casing, said locking member being shiftable by the said shaft incident to rotation thereof to cause disengagement of said locking member from the casing and subsequently establishing driving relation through the locking member between the said shaft and said gear extension.

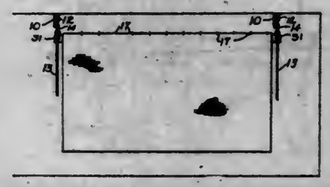


1,756,639. SHAVING IMPLEMENT. GILBERT F. GREENE, Washington, D. C. Filed Dec. 21, 1928. Serial No. 327,697. 16 Claims. (Cl. 30—12.)

1. A shaving implement comprising a blade holder adapted to support a blade with a sharpened portion of the blade projecting forwardly from the holder, abutment means to overlap the rear portion of the blade, clamping means carried by the holder and adapted to bear against the upper face of the projecting portion of the blade to bind the blade against the holder and flex the blade, a guard pivotally mounted and movable into position to bear

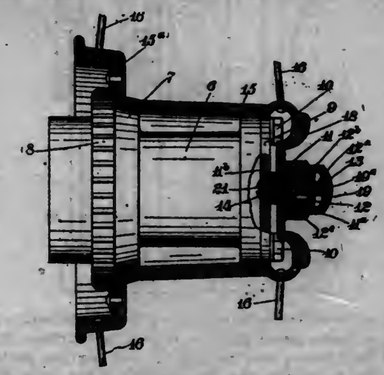
against the under face of the blade along its sharpened edge, and means urging the guard upwardly when bearing against the blade.

1,756,640. SCARFING MACHINE. WINFRED S. GRIFFITH, Worcester, Mass., and EDWARD H. HATHAWAY, Apponaug, R. I., assignors to Graton & Knight Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 12, 1928. Serial No. 305,474. 20 Claims. (Cl. 69—11.)



2. A scarfing machine comprising a scarfing knife, fluid-operated means to cause an initial pressure of said knife against the work, and means to vary the duration of operation of said fluid-operated means.

1,756,641. GROUND STAKE. GEORGE F. HAMILTON, RICHARD R. HOLZAPFEL, FREDERICK J. GIRTY, and CLARENCE LAWTON, Richmond, Ind. Filed Jan. 5, 1928. Serial No. 244,667. 1 Claim. (Cl. 173—31.)

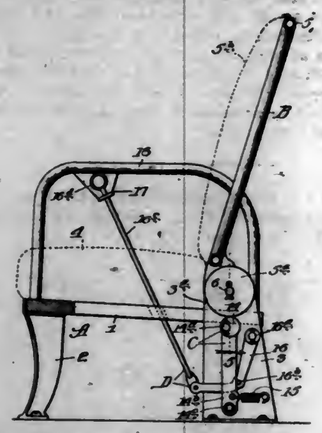


A ground stake for electric current comprising a plurality of tubular sections, a coupling for connecting each two of the sections detachably together by pressure, a downwardly tapering cone member attached to the lower end of the lower section by pressure, a pointed terminal carried by the lower end of the cone member and forming a continuation thereof in contour, an electrode extending from said terminal through said cone member, a conductor autogenously attached to said electrode and extending upward through all of said sections of pipe and couplings, and a cap attached by pressure to the upper end of the upper section of pipe and having a curved channel therein through which said conductor extends from the upper pipe outward through the side of said cap whereby the conductor will not be damaged as the cap is struck to drive the device into the ground.

1,756,642. RUG-HANGING APPARATUS. EBER B. HORNE, East Cleveland, Ohio. Filed Jan. 12, 1928. Serial No. 246,350. 4 Claims. (Cl. 211—128.)

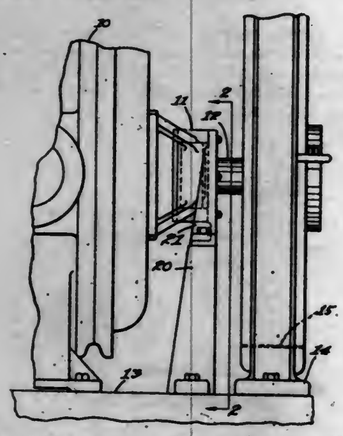
4. In a rug hanging apparatus, the combination of a pole having a row of rug supporting pins in the upper surface thereof, a stiff tube extending lengthwise thereof substantially from end to end and snugly embedded in the material of the pole to reinforce the same, and supporting devices tightly secured to the pole adjacent each end and having portions extending beneath the reinforced pole.

1,756,643. DETACHABLE WHEEL HUB. CHARLES O. HOWARD, Columbus, Ohio, assignor of one-third to Thomas K. Wissinger and one-third to Milton A. Pixley, Columbus, Ohio. Filed Feb. 3, 1928. Serial No. 251,669. 4 Claims. (Cl. 301—9.)



1. In the combination of a permanent hub part having a threaded stem, a removable hub part, a retainer plate in non-rotative engagement with said stem for securing the removable hub part on the permanent hub part, and a nut threaded on said stem; co-operating latching means in said threaded stem and nut for securing said retainer plate in engagement with the removable hub part.

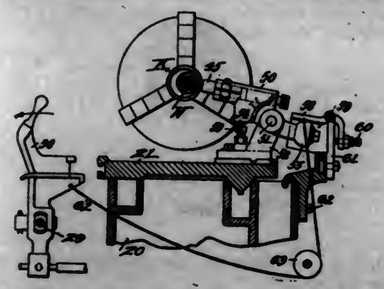
1,756,644. ADJUSTABLE-BACK CHAIR, ETC. CHARLES R. HULTGREN, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Dec. 20, 1926. Serial No. 155,921. 5 Claims. (Cl. 155—160.)



1. In combination with a frame adapted to support a seat, a swinging back having a pivot-member rigidly con-

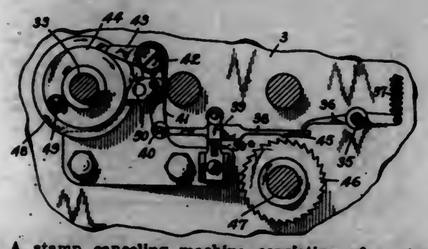
sected therewith, an eccentric frictional gripping device coacting with said pivot-member, means yieldingly holding

said eccentric device in locking-grip engagement with said pivot-member, and means for releasing said eccentric member from gripping engagement with said pivot-member.



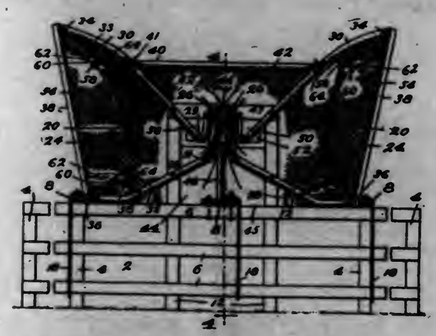
1,756,645. EXTERNAL SUPPORT FOR BEARINGS OF MOTOR-DRIVEN PUMPS. IRVING C. JENNINGS, South Norwalk, Conn. Filed May 3, 1926. Serial No. 106,425. 4 Claims. (Cl. 103—87.)

1. A motor-driven rotary pumping unit comprising a pump casing, a main pump shaft mounted in bearings at each side of said casing and having one end portion projecting outwardly to receive the unsupported rotor of a driving motor, and an external support firmly secured to the shaft bearing on the motor side of the pump casing, said pump and support being mounted upon a common base and said support having an upper portion provided with a circular flange on one face extending into and closely fitting a cylindrical recess at the outer end of the shaft bearing.



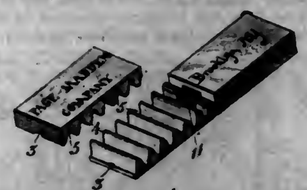
1,756,646. WHEEL-DRESSING DEVICE FOR GRINDING MACHINES. FRANKLIN JUDGE and ALDEN M. DRAKE, Greenfield, Mass., assignors to Greenfield Tap & Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1925. Serial No. 16,759. 12 Claims. (Cl. 125—11.)

12. In a grinding machine, a work holder, a wheel, a wheel dressing tool positioned, when operative, in proximity to said holder, a hand lever effective in one position to cause relative travel of said tool past said wheel to dress the wheel, and effective in another position



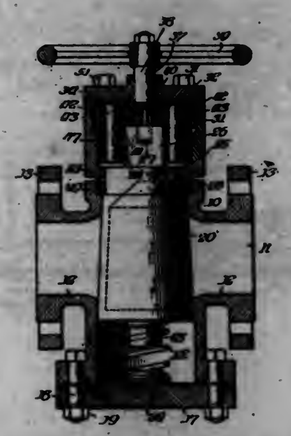
to cause relative travel of greater extent to permit replacement of the work, and to simultaneously displace said tool transversely to the wheel axis from operative position.

1,756,647. STAMP CANCELING MACHINE. OMER FRANÇOIS LEFEBVRE, Montreal, Quebec, Canada. Filed June 22, 1928. Serial No. 287,514. 11 Claims. (Cl. 101—235.)



1. A stamp canceling machine consisting of a stamp roller and a pressure roller and means to automatically stop said rollers until the rear end of postal matter fed thereto passes a predetermined point.

1,756,648. FLYTRAP. EMIL V. LILLIAN, Lindsborg, Kans. Filed May 12, 1928. Serial No. 277,156. 6 Claims. (Cl. 119—156.)



1. A structure of the character described consisting of a passageway through which animals may pass, brush means arranged within said passageway for brushing insects from the animals, an insect catching compartment disposed above said passageway, a pair of oppositely disposed chutes arranged above said passageway for collecting and directing the insects to said compartment, the exit ends of said chutes being arranged adjacent to each other and communicating with the lower portion of the compartment, and a third chute arranged above the passage at a point between said pair of chutes and having an exit at its upper portion communicating with the compartment.

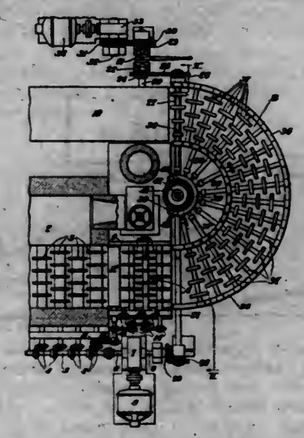
1,756,649. WASHBOARD-TENSIONING DEVICE. JESSE F. MADDEN, Rockville Center, N. Y., and EDWIN E. OVERHOLT, Washington, D. C., assignors to Page Madden Company, Inc., Brooklyn, N. Y. Filed Aug. 21, 1928. Serial No. 301,092. 10 Claims. (Cl. 242—153.)

1. A device of the character described, comprising upper and lower mating pieces for pressing the thread, the upper mating piece being formed in sections, the device being provided with a cutaway portion in the path of the thread at the point where said sections meet, whereby to free a section of the thread from pressure.

1,756,650. PLUG VALVE. JESSE C. MARTIN, Jr., San Francisco, Calif. Filed June 16, 1926. Serial No. 116,262. 9 Claims. (Cl. 251—108.)

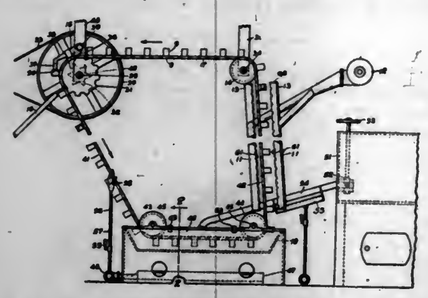
1. In an operating unit for valves and the like in combination with the valve body and valve stem projecting therefrom, a casing having detachable connection with said body and containing and forming a part of valve operating means engaging said stem, a packing for said stem, said casing engaging said packing and serving as a gland therefor.

1,756,651. STRAIN INSULATOR. SAMUEL S. MATTHEWS, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 18, 1927. Serial No. 176,352. 6 Claims. (Cl. 173—366.)



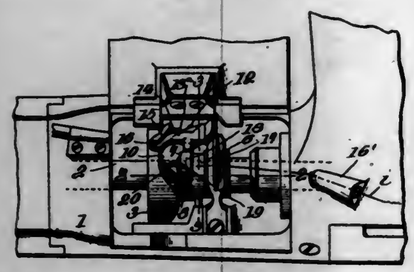
2. An insulator comprising an insulating member, and metal fittings secured thereto by transversely disposed bolts whose axes are at right angles to each other, shims interposed between the bolts and the insulating member and of such length as to extend beyond the sides of the insulating member, each shim having a surface to conform to the surface of the insulator which it engages and means at the ends of the shims to engage the bolts.

1,756,652. PRESSURE, TEMPERATURE, AND VACUUM SAFETY RELIEF VALVE. JOSEPH ADOLPHUS MAYNARD, Boston, Mass. Filed Nov. 6, 1924. Serial No. 748,081. 6 Claims. (Cl. 277—45.)



6. A relief device for hot water systems, such as a hot water boiler, comprising a housing having an inlet and an outlet connected by a passage, a valve seat, a removable tube extending through said passage and having an exteriorly formed valve engaging the seat to close said passage, said tube and valve being supported on said seat solely by their own weight, said tube also having a passage therethrough, and a fusible plug normally closing said last passage.

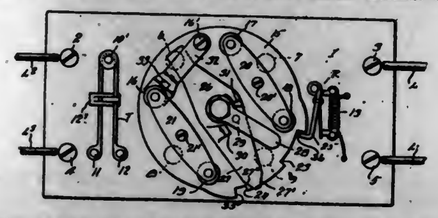
1,756,653. FURNACE-CHARGING CONVEYER. ARTHUR R. MCARTHUR, Gary, Ind., assignor to American Sheet and Tin Plate Company, a Corporation of New Jersey. Filed Oct. 19, 1928. Serial No. 313,545. 2 Claims. (Cl. 198—127.)



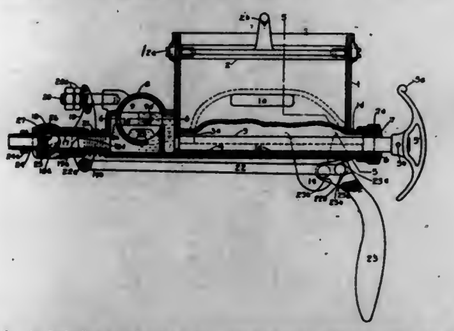
1. A semi-circular connecting conveyer unit serving to connect two parallel conveyer units, said semi-circular unit comprising a frame, a plurality of tapered conveying rollers journaled transversely of said frame with their smallest diameter ends at the inner side of said frame, alternate ones of said rollers being idler rollers and the other of said rollers being driven rollers, said driven rollers having the inner ends of their shafts extended materially beyond said frame, bevel pinions on said extended ends of said shafts, a ring gear meshed with all of said pinions, and means for rotating said ring gear.

1,756,654. CASTING MACHINE. HARRY C. MERRILL, Cincinnati, Ohio, assignor to The Eagle-Picher Lead Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 8, 1927. Serial No. 182,160. 14 Claims. (Cl. 22—76.)

1. In a device for casting metallic bars, the combination of a container for holding a quantity of molten metal, a support means disposed above the container, a drive member and a conveyor roller carried by the support means, a second conveyor roller adapted to extend into the container of molten metal, an endless conveyor comprising a plurality of hollow molds and disposed about the drive member and the conveyor rollers, the drive member imparting continuous motion to the conveyor, and the second roller serving to immerse each mold in the container of molten metal for filling the mold with the molten metal, means for subsequently directing a cooling medium upon the filled molds whereby to solidify the metal contained therein, and means comprising a hammer member mounted adjacent the drive member, for striking each mold as it approaches the hammer thereby loosening the metallic bar from the interior of the mold and assuring its discharge therefrom.



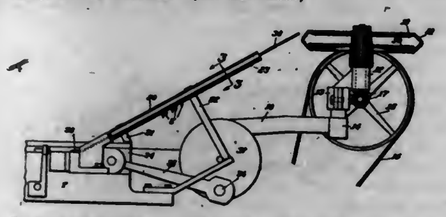
1,756,655. THREAD-CONTROLLING MECHANISM FOR SEWING MACHINES. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1928. Serial No. 302,809. 6 Claims. (Cl. 112—248.)



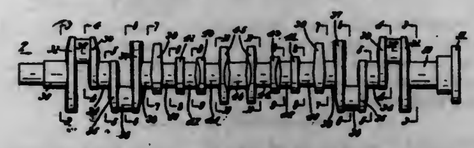
1. A thread controller for sewing machines comprising a rotating shaft, a thread controlling element mounted on said shaft and having a laterally projecting flange, thread guides located within and without the periphery of the flange, an arm for each thread guide, said arms extending laterally beyond the flange and connected at their outer ends, each arm having a curved face leading through a slot to a guide eye forming the thread guide, and means for supporting said arms.

1,756,656. CIRCUIT BREAKER. EDGAR D. MOORE, Cleveland, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Apr. 17, 1926. Serial No. 102,658. 7 Claims. (Cl. 175—294.)

1. A circuit breaker comprising in combination a base member upon which are mounted and held in fixed position a plurality of pairs of contact members, conductors connected to said members, a plurality of bridging members to engage and connect the contact members of a given pair, means to manually actuate the bridging members to either a closed or an open position, electrically operated means connected in series with one of said pairs of contacts to hold the bridging members in closed position relative to the contact members under normal conditions and to release said hold when current in the conductors exceeds a predetermined value, means to maintain one of the bridging members out of engagement with its contact member until the manually operated means is reversed and means having a time lag operating to electrically connect one contact of each pair of contacts to effect the release of the holding means at a current value less than the said predetermined current value.

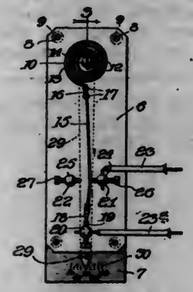


1,756,657. GREASE FEEDER. WILLIAM L. MORRIS, Chicago, Ill., assignor to Bendix Aviation Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 7, 1916, Serial No. 113,653. Divided and this application filed May 5, 1928. Serial No. 275,540. 18 Claims. (Cl. 221—47.4.)



10. A lubricant feeder for detachable connection to a ported receiving device comprising a spherical joint face to permit relative angular movement, and means for holding the joint face in contact with a receiving device to permit relative movement but insuring a tight joint bearing on the spherical surface.

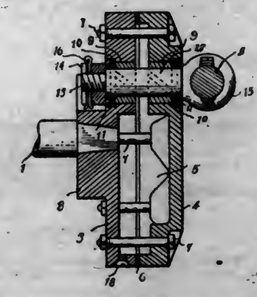
1,756,658. MECHANISM FOR FEEDING SCREW EYES. ARAKEL M. OHAN, Worcester, Mass., assignor to Parker Wire Goods Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 26, 1928. Serial No. 295,561. 6 Claims. (Cl. 10—165.)



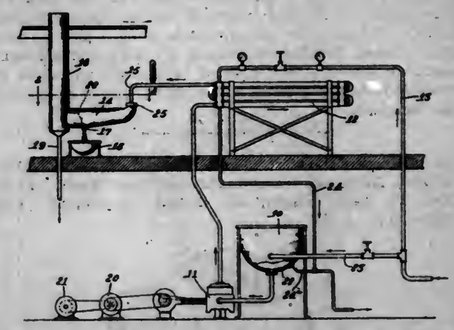
3. A mechanism for feeding screw-eyes comprising a rotating hopper, an assembling rod having a substantially circular portion with a free end and projecting therein and loosely held thereby, and an inclined tubular guide member for said rod mounted in fixed position and having a longitudinal opening in its lower side to permit passage of the points of the screw-eyes.

1,756,659. COUNTERBALANCED CRANK SHAFT. JOHN A. OLDSON, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 19, 1928. Serial No. 293,916. 2 Claims. (Cl. 74—38.)

1. An eight-throw crankshaft having eight crank pins positioned in two planes perpendicular to each other and having a single integral counterweight associated with each crank pin but positioned on the opposite side of the crankshaft axis therefrom, the two end counterweights and the two middle counterweights being centered substantially on a prolongation of the line joining the axis of the associated crank pin with the axis of the crankshaft, and the four counterweights associated with the four remaining crank pins being offset substantially 45° from the line joining the axis of the associated crank pin with the axis of the crankshaft and being substantially in axial alignment with each other, each end and middle counterweight being of a mass and radius effective to substantially counterbalance its associated crank pin and parts associated therewith, and each intermediate pair of counterweights acting together to counterbalance the resultant of the two intermediate crank pins and parts associated therewith.



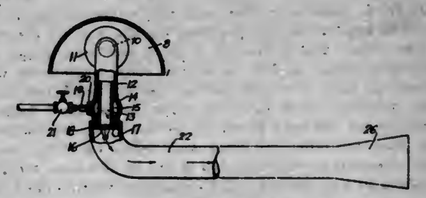
1,756,660. THERMOSTATIC DEVICE. STANLEY PERRY, Chicago, Ill., assignor to Automatic Burner Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1928. Serial No. 280,497. 14 Claims. (Cl. 200—139.)



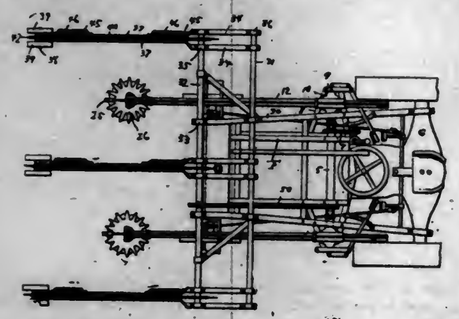
1. In a thermostatic switch device, the combination of a thermostatic coil anchored at one end, an abutment, and a flexible member operatively engaged at one end with the other, movable, end of said coil and having endwise abutting engagement at its other end with said abutment, said flexible member between its ends being in sprung condition.

1,756,661. FLYWHEEL AND SELF-OILING WRIST PIN. ARCHIE R. PRESCH, San Marcos, Tex., assignor of one-half to Walter H. Bauerschlag, San Marcos, Tex. Filed Aug. 16, 1928. Serial No. 300,013. 2 Claims. (Cl. 74—38.)

1. A fly wheel comprising separable parts having a chamber formed therebetween to receive lubricant, openings formed in the parts in coincident relation, bushings in said openings, packing and washers fitted in the outer ends of the openings, and a wrist pin loosely mounted in the bushings and passing through the packing and washers.

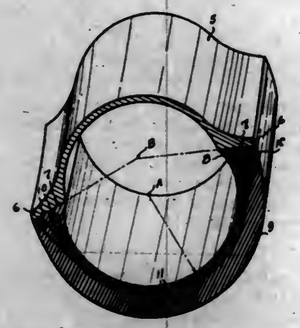


1,756,662. METHOD OF AND APPARATUS FOR COOKING CANDY. WILLIAM P. REED, Chicago, Ill. Filed Dec. 5, 1929. Serial No. 411,869. 4 Claims. (Cl. 107—4.)



3. Apparatus for cooking candy including; a heated cooking coil; a receptacle for the mixed ingredients; means for forcing the mixed ingredients from said receptacle through said coil to cook the same, and a separator to receive the cooked candy issuing from the coil, said separator permitting escape of the steam generated in the candy while in the cooking coil.

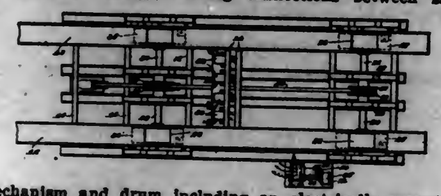
1,756,663. SMOKE CONSUMER. JOHN SABOL, Brooklyn, N. Y. Filed Aug. 31, 1928. Serial No. 303,253. 1 Claim. (Cl. 110—49.)



In a smoke consuming furnace having a smoke collecting hood positioned in a chimney, a pipe flared at one end thereof extending into the hood, a sleeve open at both ends thereof in the said pipe, a chambered coupling screw threadedly connected to the sleeve, a tapering end on the sleeve, a correspondingly tapered end in the coupling surrounding the tapered end of the sleeve, arranged to form between them a restricted passageway, a steam line connected to the coupling and an outlet pipe secured to the taper bearing end of the coupling provided with a flared end extending into a combustion chamber for the purpose specified.

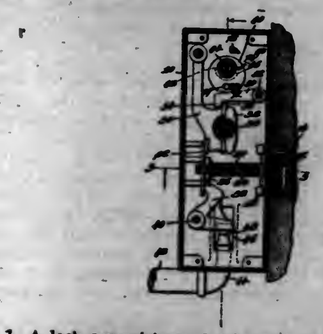
1,756,664. CANE CUTTER. MASAICHI SASAKI, Lihue, Territory of Hawaii. Filed Apr. 17, 1928. Serial No. 270,782. 9 Claims. (Cl. 56—17.)

1. A crawling cane attachment of the class described including, in combination, a frame structure for attachment to a tractor, a transverse bar, means for attaching the bar to the frame structure, a transverse shaft, means for journalling the transverse shaft to the frame structure in front of the bar, a plurality of pairs of bars rockable on the shaft and having elongated loop members receiving the transverse bar, the forward ends of each pair of bars having spaced parallel extensions, a chain and sprocket mechanism between each pair of extensions, sprockets of the mechanism being fixed to the shaft, knives projecting from the chain.



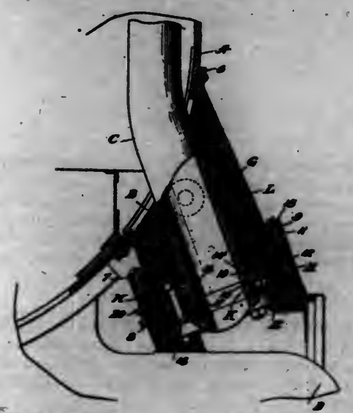
1,756,665. PNEUMATIC TIRE AND RIM CONSTRUCTION. ALVIN H. SHOEMAKER, Seattle, Wash. Filed Nov. 19, 1925. Serial No. 69,995. 3 Claims. (Cl. 152—20.)

1. In a pneumatic tire and rim construction, a rim, inclined bead receiving portions on the rim at the sides of the same, and a tire of a cross sectional shape substantially equal to but in excess of a semi-circle when seated on said rim, and having spaced apart non-elastic bead portions, each provided with an inclined base for reception on the bead receiving portions, the inclination of the bead receiving portions and beads effecting an air tight connection when the beads are on the bead receiving portions in the presence of air pressure within the tire.



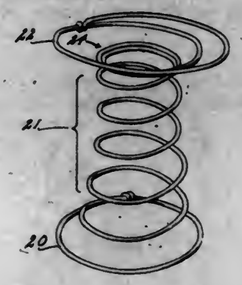
1,756,666. BRAKE-TESTING APPARATUS. CHARLES F. SMITH, Quincy, Mass., assignor, by direct and mesne assignments, to Brake Synchrometer Co., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1927. Serial No. 174,259. 1 Claim. (Cl. 234—1.5.)

In an apparatus for testing the brakes of a vehicle, the combination of a tape, a rotatable drum engaging and arranged to move the tape uniformly over predetermined distances in a given interval of time, mechanism for moving said drum, an electric circuit operating means for making an impression on said tape, means for opening and closing said electrical circuit at intervals corresponding to fixed distances of travel of the vehicle wheel, a source of electrical energy, driving connections between said



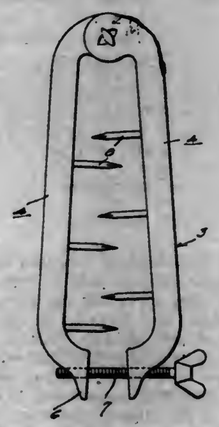
mechanism and drum including an electrically operated clutch, and means actuated by the operating mechanism for the vehicle wheel brake for connecting said source simultaneously with said circuit and said electrically operated clutch.

1,756,667. PANIC-EXIT LOCK. JOHN OTTO SOEMER, Newark, N. J. Filed Jan. 27, 1927. Serial No. 163,971. 3 Claims. (Cl. 292—21.)



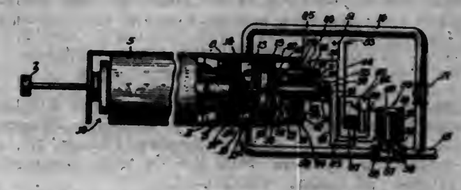
1. A lock comprising a latch, separate and independent mechanisms for retracting the latch from within and without a door, a lock mounted upon the outside of the door, connections between the lock and the latch-retracting mechanism from without the door to render the outer retracting mechanism inoperative, comprising an operating spindle extending through the door from the lock, a rotary locking eccentric, and connections between the spindle and eccentric for imparting one-half a revolution to the eccentric upon a complete revolution of the spindle.

1,756,668. STEAM-PIPE CONNECTER. GEORGE D. SPRANKLE, Tipton, Pa. Filed Mar. 30, 1926. Serial No. 98,594. 5 Claims. (Cl. 285—30.)



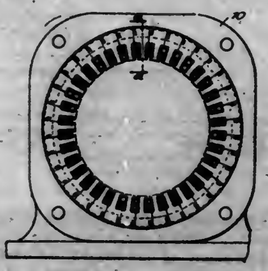
1. A device of the character described, including in combination, a locomotive smoke box shell having an opening, a steam pipe passing freely through said opening and connected to the steam chest outside of said smoke box, a flanged sleeve spaced from and surrounding said pipe and sealed to said shell around said opening, a single flange on said steam pipe at its lower end and a dished unsplit flexible diaphragm secured to the flanges of said pipe and said sleeve.

1,756,669. COILED SPRING. MAURICE STURNITZ, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 22, 1928. Serial No. 287,601. 2 Claims. (Cl. 5—256.)



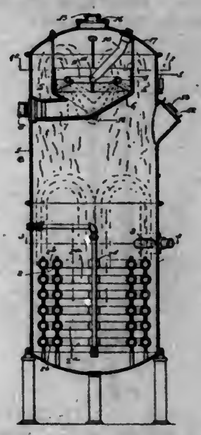
1. A helical spring comprising a body portion, a top end coil of greater diameter than the body portion, and a spacing ring of less diameter than either the top end coil or the body portion, said top end coil and spacing ring lying in parallel planes at right angles to the longitudinal axis of the spring, said spacing ring directly connected to said top end coil and said body portion by arcs of helical spirals in a manner to cause said top end coil and said spacing ring to compress and lie in the same plane upon application of light loads along the longitudinal axis of the spring without substantially compressing the body portion of the spring.

1,756,670. VULVA CLAMP. LESTER A. TREAT, Blandford, Mass. Filed Aug. 6, 1928. Serial No. 297,679. 3 Claims. (Cl. 128—346.)



1. A vulva clamp comprising a pair of complemental members pivotally connected at one end, penetrating needles carried by the respective members and means for securing the member in adjusted position.

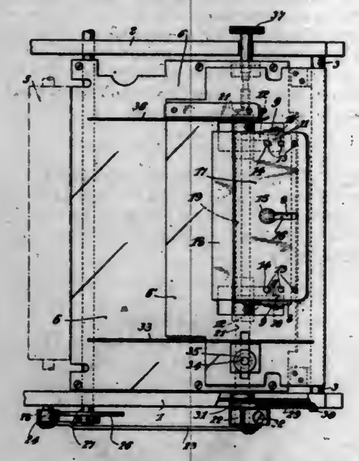
1,756,671. SPEED-RESPONSIVE DEVICE. CARROLL R. ALDEN, Detroit, Mich., assignor to Ex-Cell-O Aircraft and Tool Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 30, 1926. Serial No. 84,814. 4 Claims. (Cl. 200—80.)



1. In a governor device of the class described having governing mechanism responsive to the rotation of a spindle, a housing comprising a sleeve adapted to be mounted at one end in a machine frame concentric with the spindle, a closure carried by the sleeve at the other end, said closure being entered into the sleeve from the first end and serving to mount the governing mechanism.

1,756,672. DYNAMO-ELECTRIC MACHINE. JOHN M. BARR, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1922. Serial No. 594,151. 23 Claims. (Cl. 171—252.)

1. A magnetic core of the partially closed slot type having the teeth thereof pivotally supported so adjacent teeth can be swung apart to allow formed coils to be inserted in the slots.

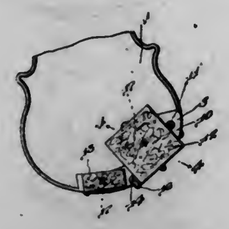


1,756,673. VACUUM PAN. ARNOLD W. BAUMANN, Chicago, Ill. Filed Jan. 25 1926. Serial No. 83,493. 2 Claims. (Cl. 261—115.)

1. In evaporating apparatus including an upright tank, a condenser unit in the upper portion centered in the tank

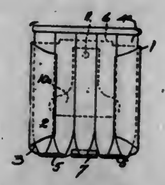
to provide an annular passage leading to the space above said unit; the condenser including an upwardly open vessel with an annular spray pipe therein disposed horizontally below the upper edge of the vessel and perforated to discharge a cooling spray distributed over the entire horizontal cross-sectional area of said vessel, the vessel having an outlet disposed below said spray adapted for connection to a source of suction.

1,756,674. FEED MECHANISM FOR ROTARY DUPLICATING MACHINES. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1926. Serial No. 151,300. 10 Claims. (Cl. 271—8.)



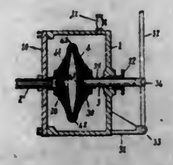
1. The combination with a printing couple comprising a rotary printing cylinder and a coacting impression roller, of means independent of but correlated with the printing cylinder for advancing a card toward and a substantial distance between the printing couple, said means including a card carrier reciprocable on one side of said printing couple only and along a path substantially at right angles to the longitudinal axis of said printing cylinder.

1,756,675. CLUSTER STEM. GREGORY BROWN, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed June 27, 1928. Serial No. 288,713. 4 Claims. (Cl. 240—85.)



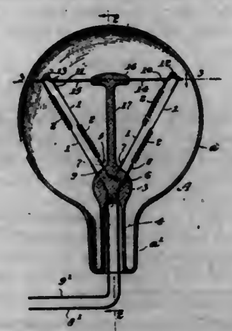
1. A cluster stem comprising a drawn tubular shell having a portion of its side wall near the lower end thereof spun to present an inwardly directed shoulder, a conductor receiving element comprising a transverse ring-shaped base portion set in the mouth of said shell against said shoulder and having an integral depending longitudinal loop or eye, the wall of said shell at the rim or mouth portion thereof and below said shoulder being bent inwardly to hold said ring-shaped part against said shoulder, and integral means on the mouth portion of said shell and on said conductor receiving element respectively in locking engagement with each other to prevent said conductor receiving element from turning in said shell.

1,756,676. SHOULDER PAD. OLIVER S. COLBENTSON, Chicago, Ill. Filed Nov. 8, 1924, Serial No. 748,706. Renewed Aug. 20, 1928. 14 Claims. (Cl. 84—280.)



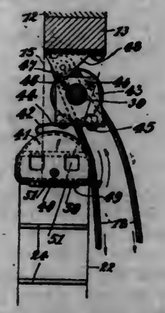
1. A body rest for a violin or a similar stringed musical instrument, comprising a relatively rigid plate conforming on one edge to the outer contour of the end of the violin which normally rests against the body of the player, means for clamping said plate upon the violin at its edge, said plate having an offset bend therein by which the main body of the plate is spaced from the body of the violin, a curved extension on the plate extending around the said end of the violin and arranged in relatively close relation to the adjacent surface thereof, the free end portion of the extension being separate therefrom, said free end portion being adjustable in its plane, and clamping means for securing it to the extension in adjusted positions.

1,756,677. MAGAZINE AND CLIP HOLDER. CHARLES J. COOK, Detroit, Mich. Filed May 12, 1928. Serial No. 277,854. 2 Claims. (Cl. 224—15.)



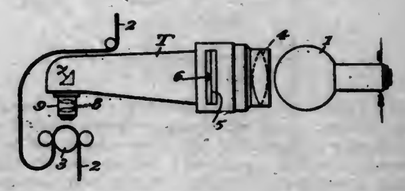
1. A holder of the character described having forwardly and inwardly flexed sides adapted to form guides for the end shells in a clip, forwardly extending stops on the lower end of holder, said stops being adapted to support the lower ends of said clipped shells, a spring one extremity of which is secured to the inner side of said holder towards its upper end having lateral extensions at its opposite end so that said opposite end is adapted to bear against several of the clipped shells and hold them frictionally against said guides, and an extension integral with said holder at its upper end which is flexed rearwardly and downwardly adjacent to the rear of said holder so as to form a loop for a belt therebetween, the end of said extension being bent forwardly around the lower end of said holder.

1,756,678. SUCTION PUMP. WILLIAM GORDON CUMMING, Montreal, Quebec, Canada, assignor to Cumming Pump Corporation Limited, Montreal, Canada, a Corporation of Canada. Filed Mar. 10, 1928. Serial No. 260,618. 15 Claims. (Cl. 230—160.)



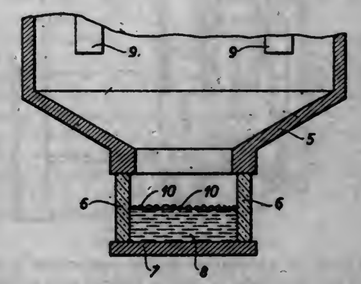
1. In a disc pump, a container, a pair of separable discs mounted therein, one of which has a valved inlet, and means to move one disc to and from the other disc.

1,756,679. INCANDESCENT ELECTRIC LAMP. WILLIAM L. CUMMINGS, Berwyn, Ill., assignor to The Electron Relay Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1928. Serial No. 327,325. 6 Claims. (Cl. 176—16.)



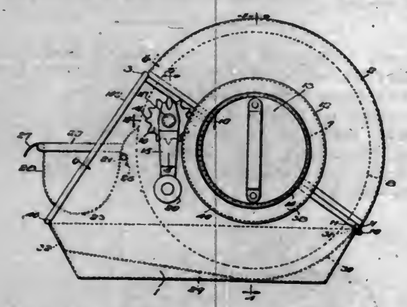
1. An incandescent electric lamp for the purpose specified, comprising a lighting element consisting of a filament and a field coil electrically connected in series, means for mounting said filament and field coil in substantially parallel relation with the filament in the magnetic field surrounding said field coil, said filament and field coil having high and low resistances to electric currents, respectively, and a coating applied to said filament having the property that it will emit white light of high actinic value when heated to incandescence.

1,756,680. VENETIAN BLIND. ARTHUR H. DODGE, New York, N. Y., assignor to J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 4, 1926. Serial No. 133,535. 6 Claims. (Cl. 156—17.)



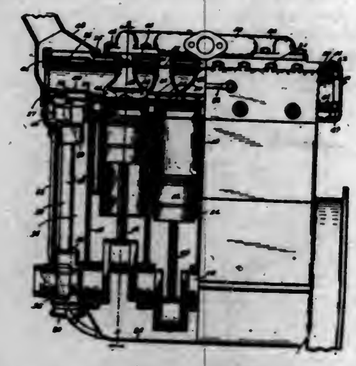
5. In a Venetian blind having a pivotally mounted tilting bar and a plurality of slats carried by the tilting bar, a brake device associated with the tilting bar and having a part connected thereto and provided with a face which is eccentric to the pivotal points of the tilting bar, whereby the tilting bar is held more securely in place in its substantially horisontal position than it is in other positions thereof.

1,756,681. PROCESS AND APPARATUS FOR PHOTOGRAPHIC SOUND RECORDING AND REPRODUCING. JOSEF ENGL, Berlin-Grunewald, HANS VOGT, Berlin-Wilmersdorf, and JOSEPH MASSOLLE, Berlin-Grunewald, Germany, assignors, by mesne assignments, to William Fox, Woodsburgh, N. Y. Filed Apr. 26, 1927, Serial No. 186,658, and in Japan Aug. 11, 1925. 2 Claims. (Cl. 179—100.3.)



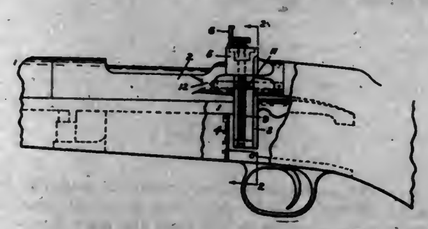
1. In apparatus for photographically recording sound on a moving film, the combination of a light source, the intensity of illumination of which is varied in correspondence with sounds to be recorded, optical means for producing a relatively wide band of light of high intensity from said source, a reducing microscope, an optical prism in the path of said band and spaced a substantial distance from said light band producing means for deflecting the light band through a substantial angle and through said microscope, means for continuously progressing a film past said prism and microscope and for maintaining a loop in the film in advance of the microscope, said loop embracing the zone of said prism, and means for supporting the moving film opposite the object glass of the microscope at a uniform predetermined distance therefrom whereby a reduced image of said band is projected on the film in the form of a fine line transverse to the direction of movement of the film.

1,756,682. METALLIC-VAPOR-RECTIFIER CATHODE. ARTHUR GAUDENZI and ERNST KOBEL, Baden, Switzerland, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Jan. 12, 1929, Serial No. 332,220, and in Germany Jan. 14, 1928. 2 Claims. (Cl. 250—27.5.)



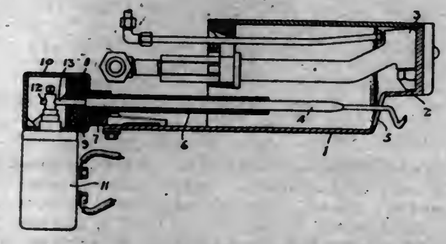
1. In a metallic vapor electric current rectifier, the combination of anodes, a fluid metallic cathode, a container for said anodes and said cathode, and a layer of metallic chips floating on said cathode.

1,756,683. ICE-CREAM FREEZER. BERT DELL GILSON, Chicago, Ill., assignor of one-half to Samuel J. Rosenthal, Chicago, Ill. Filed May 12, 1928. Serial No. 277,295. 6 Claims. (Cl. 257—98.)



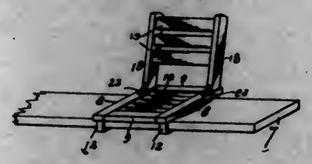
1. In a device of the kind described a lower casing having an opening at one end, an upper casing disposed above and hingedly connected to said lower casing and forming therewith a hollow enclosure, a hollow cylinder adapted to hold a refrigerant disposed within said casings and journaled in bearings formed in abutting edges of said casings, a catch formed by overlapping edges of said casings to hold said casings and said cylinder in operative position, a tubular projection on a journaled portion of said cylinder, a removable closure member for said projection, a ring gear attached to said projection, a second gear rotatably mounted on one of said casings, a handle on said second gear, a collecting pan pivotally mounted in said opening of said lower casing, said pan having an extension for contacting said cylinder to scrape particles therefrom, the botttom of said pan curved transversely and longitudinally, and a pan adapted to be removably positioned in the bottom of said lower casing, said pan having an arcuate portion for passing about said cylinder, and means co-operating with said pan to hold said pan in position.

1,756,684. SLEEVE-VALVE ENGINE. JULES HALTENBERGER, Indianapolis, Ind., assignor to Jules Haltenberger, Incorporated, Indianapolis, Ind., a Corporation of Indiana. Filed May 12, 1920. Serial No. 108,633. 51 Claims. (Cl. 123—81.)



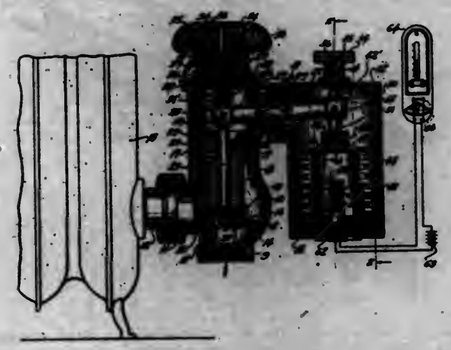
1. An internal combustion engine, comprising a cylinder having a cylinder head, a piston reciprocable in said cylinder, a core having a passage, a sleeve-valve mounted in the cylinder head and around said core and controlling the connection between said passage and a port of said cylinder, and means for driving said sleeve-valve with a combined axial reciprocation and circumferential oscillation so that any point thereon travels in a closed curved path.

1,756,685. REAR SIGHT. JAMES L. HATCHER, Brooks Field, Tex. Filed Jan. 2, 1925. Serial No. 195. 2 Claims. (Cl. 33—56.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



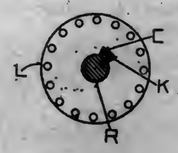
1. The combination with a rifle having a receiver provided with a groove formed in one side thereof and laterally extending projections on each side of the groove formed with aligned recesses, of a pin in the recesses formed with a threaded transverse groove, a sight support mounted to slide in the receiver groove, a rotatable element carried by the support and threadedly engaging the groove of the pin to lock the pin in place and, when rotated, cooperating with the pin to bodily move the support in elevation.

1,756,686. ELECTRIC IGNITION FOR OIL BURNERS. ARTHUR P. HOLDEN and PHILIP MORGAN, Toronto, Ontario, Canada. Filed Mar. 19, 1926. Serial No. 96,074. 4 Claims. (Cl. 175—115.)



1. In an oil burner, the combination with a burner nozzle, of an electric current transformer, a pair of parallelly arranged sparking terminals having one end directly secured to the terminals of the transformer and extending into the path of discharge from said nozzle, and insulating means secured to the transformer and surrounding the sparking terminals.

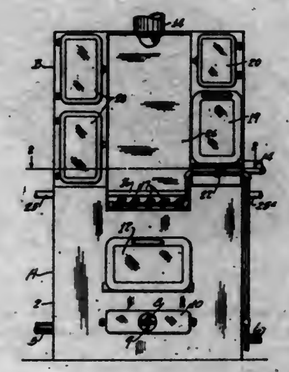
1,756,687. REMOVABLE FOLDING SEAT. JOHN F. HOLLIDAY, Washington, Ind., assignor to Hincher Manufacturing Company, Washington, Ind., a Corporation of Indiana. Filed Apr. 30, 1929. Serial No. 359,283. 6 Claims. (Cl. 155—133.)



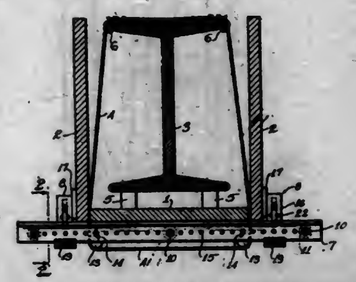
1. The combination with a chair-seat and a chair-back hinged thereto, of securing means comprising resilient metal straps secured to the seat having front ends bent to form hooks and other portions bowed downwardly to cushion the seat and increase the holding tension on the hooks.

1,756,688. AUTOMATIC FLUID-TEMPERATURE-CONTROL VALVE. FRANK L. HUTCHINSON, Wauwatosa, Wis. Filed Sept. 19, 1927. Serial No. 220,591. 5 Claims. (Cl. 236—42.)

1. A valve for fluid radiators, comprising a main casing having a fluid opening, a valve member controlling said opening, a valve rod extending through the main casing having an enlarged ring-shaped opening in one portion thereof, a turning member having an inverted cup-shaped lower end portion engaging the upper end of the valve rod, an auxiliary casing connected with the main casing, a thermostatically expansible member within the auxiliary casing having an extension with an enlarged ring-shaped opening, a lever having an intermediate fulcrum and having one end pivoted in each of the aforementioned ring-shaped openings, and adjustable yielding means in connection with the thermostatically expansible member.



1,756,689. SYNCHRONOUS-MOTOR COUPLING. CHARLES FRANCIS JENKINS, Washington, D. C., assignor to Jenkins Laboratories, Washington, D. C., a Corporation of the District of Columbia. Filed Oct. 30, 1925. Serial No. 65,866. 1 Claim. (Cl. 172—120.)

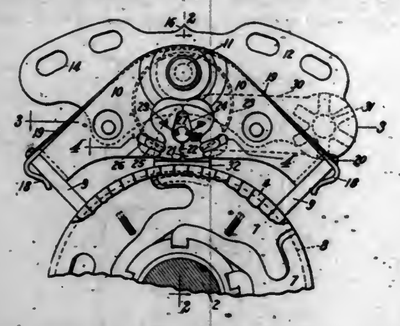


A synchronous motor structure comprising a rotor, a shaft on which said rotor is supported, and means for positively limiting the rotary movement of the rotor with respect to said shaft including a keyway carried by the rotor, a cooperating key carried by the shaft, and yieldable means between said key and said keyway.

1,756,690. COMBINED COOKING AND HEATING APPARATUS. WILLARD M. JOHNSON, Kansas City, Mo., assignor of twelve and one-fourth per cent to William A. Oberkrom, twelve and one-fourth per cent to Peter S. Jamerson, twelve and one-fourth per cent to Paul C. Jamerson, and twelve and one-fourth per cent to Jewell H. Hall, Kansas City, Mo. Filed July 12, 1928. Serial No. 292,185. 3 Claims. (Cl. 126—5.)

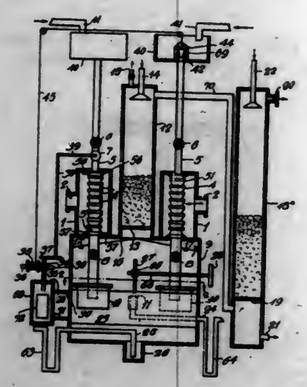
1. A combined cooking stove and heating apparatus, comprising a boiler composed of a number of vertically-disposed sections that are provided with water circulating passageways and gas circulating passageways, a baking oven imbedded in said boiler and having some of its walls spaced away from the sections of the boiler so as to form a gas circulating flue, a gas burner under said oven that supplies heat to the oven and also to the sections of the boiler, a water supply manifold connected to the upper ends of the sections of the boiler, a water return pipe leading to the lower portion of the boiler, gas burners arranged in a space in the upper portion of the boiler so as to form the top burners of a gas cooking stove, a summer baking oven arranged over the boiler, and a separate gas burner for heating said summer oven.

1,756,691. FORM CLAMP. HENRY H. LAMPERT, Chicago, Ill. Filed June 8, 1928. Serial No. 283,833. 1 Claim. (Cl. 25—131.5.)



In a clamp of the class described, a beam comprising a pair of spaced angle bars, two legs of said angle bars being arranged in spaced parallel planes so as to provide a slot in said beam, the other legs of said angle bars being arranged in a single plane so as to provide a seat, a cleat supported on said beam and including a shank extending through said slot, a head integrally formed on one end of said shank and having grooves therein for receiving the edges of said parallel legs, said shank having a keyway, and a wedge in said keyway spanning said slot for bearing between the seat of said beam and one end of said keyway to lock said cleat against movement longitudinally of said slot.

1,756,692. BRUSH-LIFTING MECHANISM FOR ELECTRIC MOTORS AND THE LIKE. GEORGE H. LELAND, Dayton, Ohio, assignor of one-half to The Leland Electric Company, a Corporation of Ohio. Filed Sept. 4, 1928. Serial No. 303,681. 10 Claims. (Cl. 171—324.)

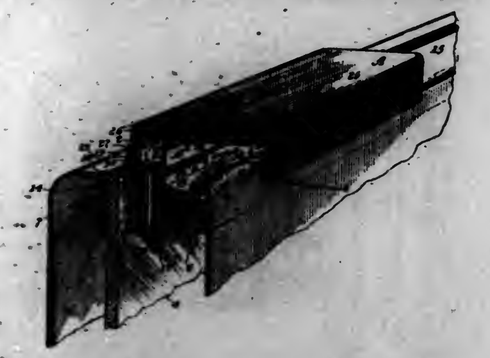


1. In a brush lifting mechanism for electric motors and the like comprising a movable device having means for supporting a brush for movement therewith into and out

of engagement with the commutator of said motor, and an actuating device having means for connecting the same with said brush supporting device, an operating member

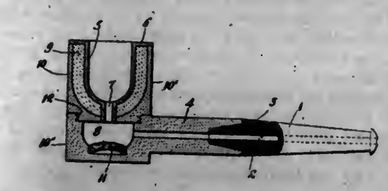
movable in a substantially radial direction with relation to said commutator to control the movement of said actuating device, and a link to connect said operating member with said actuating device.

1,756,693. METHOD OF AND APPARATUS FOR TREATING VAPORS, GASES, AND THE LIKE. NILS GERHARD LINDERBORG, New York, N. Y. Filed Apr. 28, 1923. Serial No. 635,201. 29 Claims. (Cl. 183—114.6.)



1. The method of treating heated gases or vapors which consists in subjecting the same to the action of a cooling medium under vacuum then imparting eddies to the resulting mass of condensates and cooling medium, and then isolating the condensates.

3. In an apparatus for condensing heated gases or vapors, a chamber to receive the gases or vapors, a pipe extending through said chamber, said pipe having openings into said chamber, means to cause a stream of cooling medium to flow through said pipe, said openings acting to permit the gases or vapors to be drawn into said pipe and carried along with the flow of the cooling medium, and a trap or seal for the end of the pipe to prevent the reverse flow of the gases or vapors through said pipe.



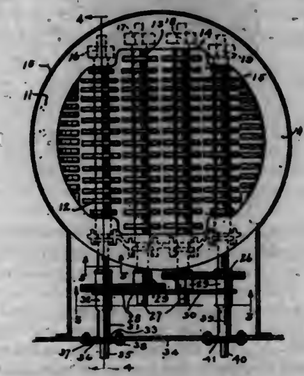
1,756,694. ARM REST FOR AUTOMOBILES. HARRY M. LOEHR, La Grange, Ill., assignor of one-fourth to Frank H. Foster and one-fourth to George H. Shank, Chicago, Ill. Filed June 28, 1928. Serial No. 288,904. 7 Claims. (Cl. 155—198.)

1. In a device of the class set forth, an anchor adapted for attachment to the window-sill at a point inside the glass, and an arm-rest provided with means at its underside detachably engaged with said anchor, said means being provided with instrumentalities permitting the arm-

rest to move forwardly or backwardly on said anchor, and means for locking the arm-rest in either its forward or rear position.

1,756,695. PIPE. EUGENE LUCAS, Babylon, N. Y. Filed Apr. 8, 1926. Serial No. 100,484. 5 Claims. (Cl. 131—12.)

2. A clay pipe comprising in combination a bit, a stem, a body portion formed in the plastic state of three bowls into an integral unit and glazed internally and externally, said body portion consisting of an inner bowl, an outer bowl, and a lining between said inner and outer bowls of heat insulating material.



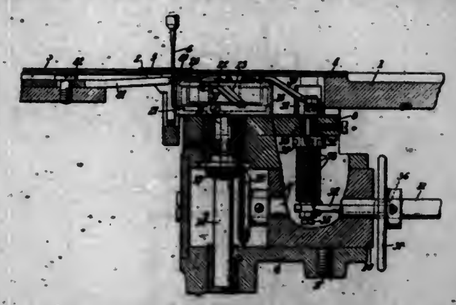
1,756,696. STOVE PIPE. GEORGE MCNEE, Belwood, Ontario, Canada. Filed Dec. 2, 1927. Serial No. 237,315. 3 Claims. (Cl. 285—186.)

1. In a stove pipe the combination with a pipe length having a longitudinal groove formed in one edge adapted

to receive the other edge, and means for locking the inserted edge in said groove at one end, of a rivet secured at the other end of the pipe adjacent to one edge, and a latch arm pivoted at one end adjacent the other edge of the pipe and having a slot extending radially from its pivot adapted to slidably receive said rivet and having a laterally extending notch at one end to lock with the rivet to secure the pipe in the closed position.

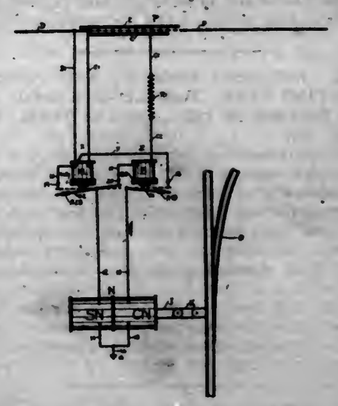
1,756,697. FURNACE-GRATE-BAR CONSTRUCTION. HARRY W. NEAL, Indianapolis, Ind., assignor to Hall-Neal Furnace Company, Indianapolis, Ind. Filed Oct. 26, 1928. Serial No. 315,137. 5 Claims. (Cl. 126—181.)

1. In a furnace, a grate bar removably carried in the furnace, a shank on the forward end of the bar, a gear slidably carried on the shank but fixed to rotate therewith, a shaft having a socket adapted to fit over the end of the shank extending through said gear, a removable plate on said furnace, through which said shaft extends, and a shoulder on said shaft bearing against said plate whereby said shaft socket is held on said shank.



1,756,698. SAFETY GASOLINE HOSE. JOHN M. ODEN, Brooklyn, N. Y. Filed Jan. 11, 1927. Serial No. 160,362. 3 Claims. (Cl. 137—90.)

1. A gasoline hose comprising a flexible pervious metallic liner, a rubber cover therefor, a flexible sheath interposed between the liner and the cover, an end shield at the end of the hose overlying the end edges of said sheath and cover, means rendering both said sheath and said shield impervious to passage of liquid hydro-carbon fuel therethrough to the cover, and said sheath and shield being in engagement with each other to provide a joint impervious to the passage of liquid hydro-carbon fuel therethrough to said cover.

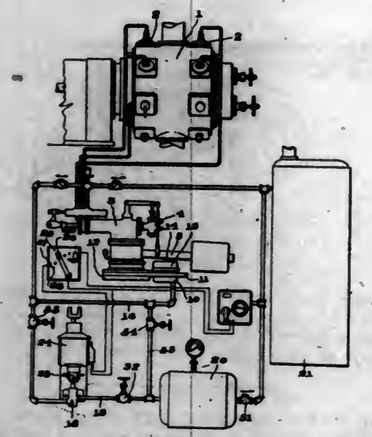


1,756,699. ROTARY-HOOK SEWING MACHINE. WILLIAM NELSON PARKES, Brooklyn, N. Y., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Aug. 11, 1927. Serial No. 212,172. 7 Claims. (Cl. 112—184.)

1. In a sewing machine, a reciprocatory needle, a vertical-axis loop-taker performing a multiple of rotations during each reciprocation of the needle, a bobbin-carrier journaled in said loop-taker, stationary means for restraining said bobbin-carrier against rotation with the loop-taker, a movable finger adapted to impart a short

oscillation to the bobbin-carrier in a direction opposite to the direction of rotation of the loop-taker, and means for actuating said finger to oscillate the bobbin-carrier once only for each needle reciprocation.

1,756,700. ELECTRICALLY-OPERATED TRACK SWITCH. FRANK H. RICHTERKESSING, Louisville, Ky., assignor to Cheatham Electric Switching Device Company, Lousville, Ky. Filed Mar. 11, 1927. Serial No. 174,526. 13 Claims. (Cl. 246—227.)

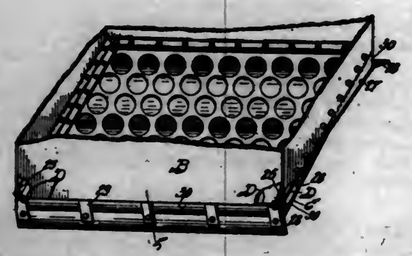


1. In a switch operating system the combination of an electrically operated track switch, a trolley conductor, trolley contactor to be engaged by a current collector, separate circuits for conducting current to the track switch solenoids for operating the switch in the direction desired when the current collector engages the trolley contactor with "power on" or "power off", control switches to control each branch circuit individually, each switch provided with an operating coil, one switch to close the circuit for operating the track switch "straight ahead" when the system works "power off", and the other switch to close the circuit for operating the track switch to the "curved" position when the system works "power on" and open the controlling circuit of the other switch to prevent operating currents being applied to both operating solenoids simultaneously.

1,756,701. UNLOADING MECHANISM FOR COMPRESSORS. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 18, 1926. Serial No. 149,090. 14 Claims. (Cl. 230—28.)

1. The combination with an air or gas compressor, unloading mechanism therefor, and a pressure governor in-

cluding a pivoted lever for controlling operation of said unloading mechanism, of pressure operated means acting upon said lever to operate said pressure governor to unload the compressor upon the cutting off of operating power of the compressor and to maintain said unloading mechanism in unloading position while the compressor is stopped.

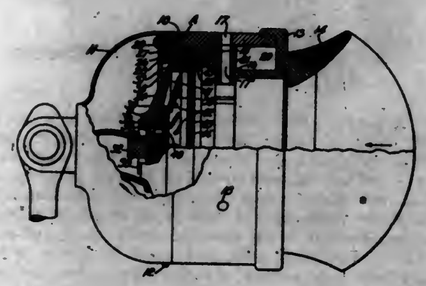


1,756,702. NUT-MEAT PRODUCT AND PROCESS OF PRODUCING SAME. JOSEPH L. ROSENFIELD, Alameda, Calif. Filed Mar. 30, 1925. Serial No. 19,279. 9 Claims. (Cl. 99—11.)

5. The hereindescribed process of producing a nut meat product which consists in malting the nuts, arresting the malting process after it has progressed to a desired degree, the arrest of malting being effected by heat, and the heating being continued until the nuts and their sprouted germs are roasted, blanching the nuts, and finally reducing the nuts and their sprouted germs to a homogeneous edible mass.

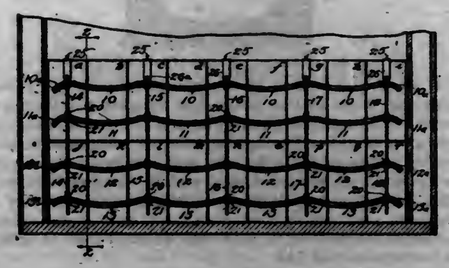
6. A nut meat product comprising a homogeneous mass of roasted malted nuts; the nuts together with their sprouted germs being comminuted into a homogeneous edible mass.

1,756,703. BATTERY BOX. EUGENE W. SCHELLENTRAGER, Shaker Heights, Ohio, assignor to The Atlas Bolt & Screw Co., Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 8, 1927. Serial No. 173,686. 12 Claims. (Cl. 105—51.)



1. A battery box including a drainable bottom plate to support battery trays, and a drain plate below said bottom plate and sloping downwardly from said bottom plate toward both sides of said box and extending beyond both of said sides.

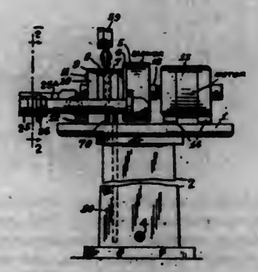
1,756,704. ELECTRICAL OUTLET DEVICE. HAROLD E. SLADE, Glen Ridge, N. J., assignor to Beaver Machine & Tool Co. Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 28, 1927. Serial No. 178,942. 3 Claims. (Cl. 173—338.)



3. An electrical outlet comprising a substantially cylindrical, transversely divided two part housing including a cap member and a body member, said body member having a pair of parallel through apertures therein and also having opposed slots to accommodate conductor cords and said cap member having seats in its inner end registering with the inner ends of said apertures, blade engaging spring contacts in said apertures and having wire engaging means seated in said recesses, means for securing said cap to said body member and a protecting metallic shell completely enclosing said housing and having an inwardly deflected flange engaging a corresponding shoulder on the outer end of said housing, and having an outwardly deflected flange for securing said housing to a support, said outwardly deflected flange and shell having opposed aligning passages therein for the reception of a duplex electrical conductor, said passages being aligned with the slots in said body member.

1,756,705. VOICE SCREEN. WALTER F. SMITH, Jr., New York, and THEODORE H. CRABTREE, New Brighton, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1927. Serial No. 229,558. 8 Claims. (Cl. 179—121.)

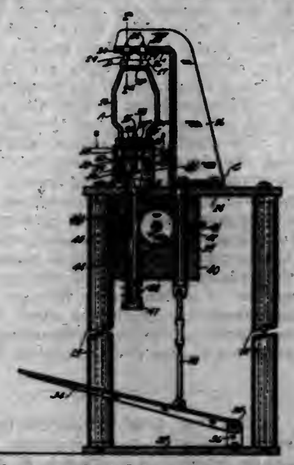
3. A telephone transmitter comprising a pair of electrodes, resistance varying material in contact with said electrodes, a perforated diaphragm for actuating the resistance varying material, the size of the perforations in said diaphragm being such that the effective driving force of the air waves is diminished at low speech frequencies and not affected at high speech frequencies.



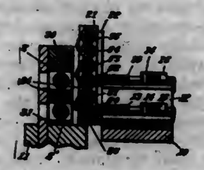
1,756,706. PROTECTOR FOR ICE IN TRANSIT. OTTO STRUVE, Dwight, Ill. Filed July 5, 1929. Serial No. 376,020. 9 Claims. (Cl. 105—376.)

1. An ice protector of the character described comprising a network of cushioning material adapted to lie upon the exposed vertical surface of a row of cakes of ice, with supporting means for holding said network suspended to lie upon such surface in operative position.

2. The combination of claim 1 hereof in which shock absorbing elements of said network are of rope.



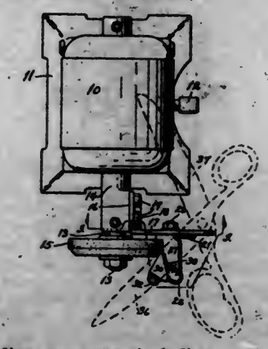
1,756,707. OIL-BURNING APPARATUS. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor, by mesne assignments, to Sundstrand Engineering Company, Rockford, Ill., a Corporation of Illinois. Filed July 17, 1922. Serial No. 575,642. 10 Claims. (Cl. 158—36.)



1. A compact oil-burning apparatus having, in combination, a supporting structure, a shaft journalled in said structure, said structure containing a blower chamber, an air pump chamber, an oil pump chamber, a valve chamber and a mixing chamber, an impeller mounted on said shaft in the mixing chamber, a valve disk mounted on said shaft in the valve chamber, a rotor mounted on said shaft in the oil pump chamber, a rotor mounted on said shaft in the air pump chamber, and fan blades on said shaft in the blower chamber, said structure having therewithin an air inlet passage establishing communication between the atmosphere and the air pump chamber, a passage connecting the air pump chamber to the mixing chamber, and a passage connecting the oil pump chamber to the valve chamber, the valve chambes being connected to the mixing chamber by a port controlled by said valve disk.

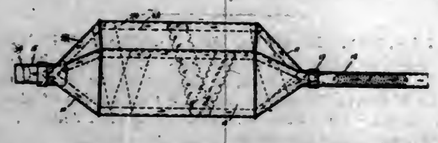
1,756,708. SHOE-HEEL-SETTING DEVICE. WALTER A. THUM, St. Louis, Mo. Filed Jan. 30, 1928. Serial No. 250,467. 9 Claims. (Cl. 12—125.)

1. A heel-set including an approximately U-shaped body-member adapted to embrace the shoe-assembly, in combination with a second member shiftable relatively to the body-member for co-operative engagement with the shoe-assembly, and means adapted for engagement with the legs of the body-member for retaining the second member in shifted position in setting the heel to the shoe.



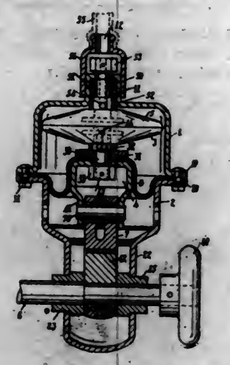
1,756,709. METHOD OF CONTROLLING WEFT ENDS IN AUTOMATIC LOOMS. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 16, 1928. Serial No. 293,223. 15 Claims. (Cl. 139—257.)

1. The method of controlling weft ends in a weft replenishing mechanism which consists in tying together the ends of weft extending from two reserve bobbins, and transferring one bobbin and leaving the other bobbin untransferred, the weft end of the untransferred bobbin resisting directly the pull of the weft of the transferred bobbin to cause the last named weft to be unwound as the bobbin attached thereto is picked.



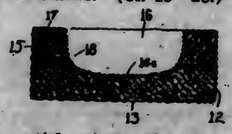
1,756,710. GRINDING APPARATUS. MARTIN TUTTLE, Des Moines, Iowa. Filed Mar. 12, 1928. Serial No. 261,147. 1 Claim. (Cl. 51—102.)

In a grinding apparatus including a motor having a grinding wheel mounted on its armature shaft, an attach-



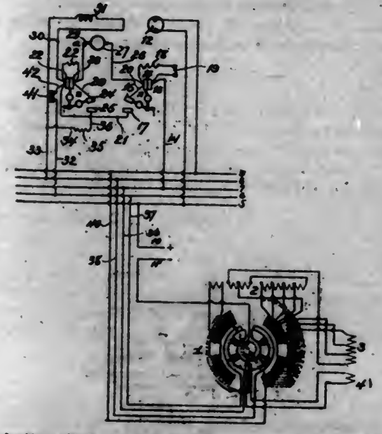
ment comprising a bracket rigidly fixed to the motor and extending laterally therefrom, a movable bracket extending across said fixed bracket and adjustable longitudinally thereof, means for maintaining said movable bracket in a position at right angles to the fixed bracket, a support for a work object carried by the upper end of the movable bracket, the line of adjustment of the movable bracket relative to the fixed bracket being parallel with a line through the axis of the grinding wheel and through the point of contact of a work object on said support with the periphery of said wheel, whereby a constant bevel may be maintained on the edge of the work object being ground, said movable bracket also being adjustable transversely of said movable bracket and the work support being correspondingly pivotally adjustable on the movable bracket, whereby a work object on the support may be caused to engage a different point on the periphery of the wheel without changing its angular relation to a line drawn through the point of contact and through the axis of the wheel, together with graduations to guide in making corresponding adjustments of the movable bracket transversely and of the work support.

1,756,711. MUFFLER FOR INTERNAL-COMBUSTION ENGINES. HAROLD E. VAN VOORHEES, Indianapolis, Ind., assignor of one-half to Francis F. Hamilton, Indianapolis, Ind. Filed Jan. 16, 1928. Serial No. 246,925. 4 Claims. (Cl. 137—160.)



1. A muffler for exhaust gases of an internal combustion engine including an outer drum, an inner drum spaced therefrom, a plurality of partitions mounted between said drums for separating the space therebetween into a plurality of passage-ways, and means for connecting said passage-ways with the exhaust pipe of the engine, whereby an impulse of gas will be divided into a plurality of sectional impulses directed through their respective passage-ways, said drums being involute in cross section.

1,756,712. AIR COMPRESSOR. HENRY H. VAUGHAN, Montreal, Quebec, and WILLIAM G. CUMMING, Westmount, Quebec, Canada, assignors to Cumming Pump Corporation Limited, Montreal, Canada, a Corporation of Canada. Filed Feb. 25, 1929. Serial No. 342,598. 13 Claims. (Cl. 230—160.)



1. In an air compressor, a pump chamber, a pump comprising two discs mounted therein, a flexible diaphragm forming a portion of the chamber wall, the reciprocating element of the pump carrying one of the discs secured to the diaphragm, and means to reciprocate such element.

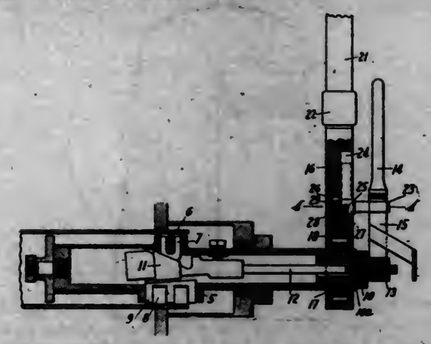
1,756,713. RUBBER-SPONGE SOAP DISH. WALDEMAR VERNET, New York, N. Y. Filed Dec. 3, 1929. Serial No. 411,274. 2 Claims. (Cl. 45—28.)

1. As a new article of manufacture, a sponge rubber soap dish made of two pieces, one forming a bottom and the other upstanding walls forming a rim for said bottom, one of said pieces having the integral substantially non-porous rubber skin left thereon, said bottom and said walls being made of sponge rubber readily compressible, non-warping, and not decomposed by the constant presence of moisture, said bottom portion and said wall portions being cemented together with said skin therebetween to stiffen and reinforce said dish.

1,756,714. LIMIT-SWITCH DEVICE. HARRY A. WACKERLY, Alliance, Ohio, assignor to The Morgan Engineering Company, Alliance, Ohio. Filed May 25, 1922. Serial No. 563,734. 7 Claims. (Cl. 172—152.)

1. Limit switch means for motor control, comprising a movable member carrying contacts, fixed contacts for co-operation with the movable contacts, means connected with the movable member of said switch and operable by an electric motor driven means for shifting the movable switch member in one direction, and single solenoid electro-magnetic means connected with the movable member of the switch and operable to shift the same in the reverse direction when the circuit of the electric motor is reversed.

1,756,715. BUTTON. FRANKLIN R. WHITE, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 2, 1929. Serial No. 396,863. 8 Claims. (Cl. 24—95.)

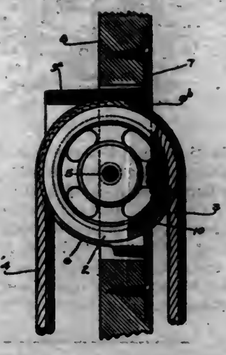


1. A button head comprising a body of shell formation, a cap having a soft metal insert pressed to distortion within the peripheral rim of the cap to form a substantially unitary cap and the rim of said cap being pressed over the body shell.

1,756,716. SUPPORTING BAR. KARL H. WHITNEY, Kirksville, Mo., assignor to Whitmanis Manufacturing Company, Inc., Kirksville, Mo., a Corporation of Missouri. Filed Mar. 1, 1928. Serial No. 258,236. 5 Claims. (Cl. 211—128.)

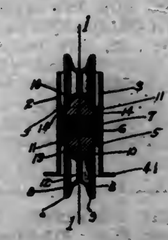
2. A supporting bar comprising a first bar section having an overhanging lip at one end, a second bar section hinged to said first bar section substantially at the base of said lip, a third bar section movable telescopically relative to one of said first and second bar sections, means to lock said third bar section to its adjusted position, and shoes at opposite ends of said supporting bar adapted to engage supporting abutments, said bar sections and shoes being adjustable from an angular idle position into an operative position between two abutments in which position they are all in substantial alignment.

1,756,717. WRENCH. GUSTAV WIEDEKE, Dayton, Ohio, assignor to Gustav Wiedeke Company, Dayton, Ohio, a Copartnership consisting of Gustav Wiedeke, Otto Wiedeke, and Robert Wiedeke. Filed Apr. 27, 1928. Serial No. 273,865. 8 Claims. (Cl. 81—61.)



1. In a wrench of the character described, comprising a body portion movable about a transverse axis, a socket member rotatably mounted in said body portion and adapted to receive the shank of a tool, and means to cause said socket member to rotate with said body portion when the latter is moved in one direction and to permit said body portion to rotate with relation to said socket member when it is rotated in the other direction, said body portion having a radial recess in one face thereof, a pin having one end pivotally mounted in said recess and adapted either to lie within said recess or to extend outwardly beyond said body portion and substantially parallel with said axis.

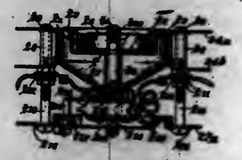
1,756,718. LATCHING DEVICE. GUNTHER PHILIP WILD, Philadelphia, Pa. Filed May 5, 1928. Serial No. 275,413. 1 Claim. (Cl. 292—254.)



In a latch device of the character stated, a fixed casing having a passage entirely therethrough, a pair of endwise movable independent latches arranged within said passage, the outer end of each keeper being bevelled and notched and the inner ends of said keepers being hollowed out and marginally provided with a male and female arrangement of parts for meshing engagement, a spring arranged between said latches and seated in the hollowed out parts of said latches, and means including a fixed strap having pendant terminals with which the notched parts of said latches engage to limit the outward movement of said latches.

1,756,719. SASH PULLEY. FRED C. ANDERSEN and CLARENCE P. BIRD, Bayport, Minn., assignors, by mesne assignments, to Andersen Foundry Company, Bayport, Minn., a Corporation of Minnesota. Filed Aug. 22, 1927. Serial No. 214,654. 1 Claim. (Cl. 16—210.)

A sash pulley comprising a housing having a grooved pulley mounted therein, a facing plate on said housing having a slot through which the pulley projects, a shoulder or ledge on said facing plate at the upper end of said slot having a curved edge facing the groove in said pulley and co-operating with the sash cord to close the gap between the end of said slot and the cord, and a tongue at the lower end of said slot extending upwardly into the pulley groove to close the gap between the periphery of the pulley and said facing plate.



1,756,720. SASH PULLEY. FRED C. ANDERSEN and CLARENCE P. BIRD, Bayport, Minn., assignors, by mesne assignments, to Andersen Foundry Company, Bayport, Minn., a Corporation of Minnesota. Filed Feb. 29, 1928. Serial No. 258,082. 2 Claims. (Cl. 16—215.)

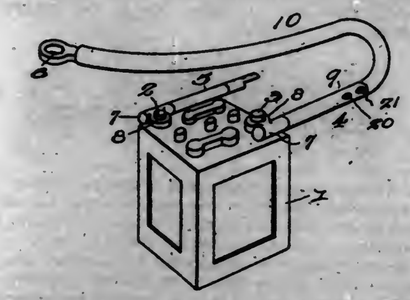
1. A sash pulley having a housing composed of oppositely arranged plates having recesses or depressions formed therein, and provided with orifices, a sheave composed of sheet metal rings having inwardly and outwardly flaring edges and a central opening, the walls of said ring members intermediate to said edges being secured together, a bushing of fibrous material having its outer portion fitting between the flanged inner edges of said sheave, said bushing having a central bore therethrough and provided on each side with lateral protruding sections whereon the flanged edges of said sheave are seated, the end faces of said sections being flush substantially with said flanged

edges, the faces of said bushing sections opposing the inner faces of the depressions of said housing, and a pin passing through said housing plates and said bushing, and having its ends headed in the depressions of said housing plates.

1,756,721. ELECTRIC STOVE. CHARLES C. ARMSTRONG, Huntington, W. Va., assignor to The Armstrong Electric and Manufacturing Corporation, a Corporation of Delaware. Original application filed Aug. 3, 1925, Serial No. 47,830. Divided and this application filed Feb. 18, 1928, Serial No. 255,423. Renewed Mar. 4, 1930. 7 Claims. (Cl. 200—139.)

1. In combination with a thermostatic member, a shaft having a shoulder, a sheet metal member, a spring washer and screw for holding said member frictionally in connection with said shoulder, spring arms on said sheet metal member, a mercury tube carried by said spring arms, an indicator arm of said sheet metal member, an indicator arm of sheet metal having projections at its opening for engaging a kerf of said shaft and a scale over which the arms move, substantially as described.

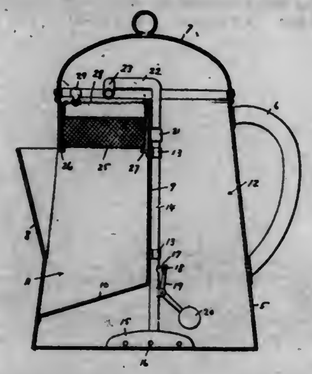
1,756,722. PULP PRODUCT AND PROCESS OF MAKING THE SAME. ROBERT B. ARNOLD, Richmond, Va., and RALPH M. HIXON, Ames, Iowa, assignors to Tobacco By-Products & Chemical Corporation, Louisville, Ky., a Corporation of Delaware. Filed Nov. 12, 1927. Serial No. 232,944. 1 Claim. (Cl. 92—20.)



In a process of making a pulp product from tobacco waste material, the steps which comprise extracting nicotine from said material and also removing from it all other constituents which are readily soluble in water, then mechanically reducing the extracted tobacco plant material to a mass of matted strips, drying said matted mass, then beating said dried mass in water, together with other materials to produce a pulp, using said pulp to form a sheet and drying the sheet.

1,756,723. PROCESS FOR TREATING ANIMAL HAIR AND WOOL WITH CHLORINE. ERICH BÖHM, Vienna, Austria. Filed Nov. 22, 1927, Serial No. 235,125, and in Austria Dec. 1, 1926. 5 Claims. (Cl. 8—21.)

1. A process for carroting animal hair and wool comprising the step of applying to the hair and wool aqueous solutions of hydrogen chloride and a chlorate and causing the two substances to react with each other in contact with the hair and wool.

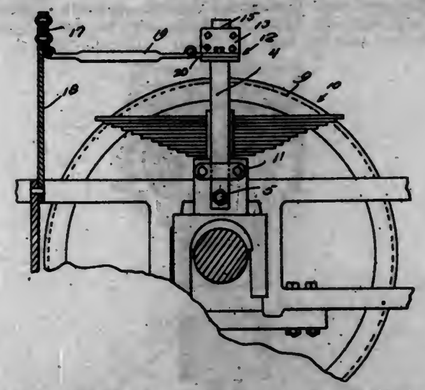


1,756,724. BATTERY TERMINAL. OSWELL L. BOOSINGER, Independence, Kans. Filed Oct. 13, 1927. Serial No. 225,933. 1 Claim. (Cl. 173—259.)

A battery terminal as herein shown and described, comprising a terminal head provided with a ring for connection with a battery post and having a socket in one end, a cable section having a reduced end to snugly fit said socket of the terminal head and having a similar reduced opposite end, a sleeve having a socket similar in size and shape to the socket of the terminal head to receive the other reduced end of said cable section, said sleeve being formed with a tongue of semi-circular form in outline, a conductor member having a tongue of semi-circular form in outline to make a joint with the similar tongue of the sleeve, fastening means passing through said tongues to form a circular joint, and insulating sleeves

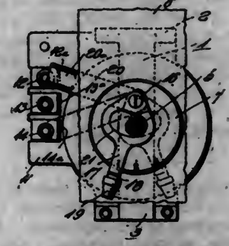
covering said cable section and conductor member entirely to protect and cover all metal surfaces and to form an insulating covering of uniform size and shape throughout.

1,756,725. COFFEEPOT. CLAUDE GEORGE BORDEAUX, Slingerlands, N. Y. Filed June 12, 1929. Serial No. 370,353. 1 Claim. (Cl. 53—3.)



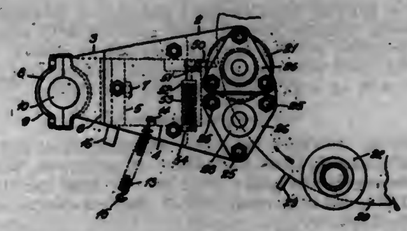
As a new product of manufacture, an accessory for use in association with a coffee maker of the class described comprising a hollow concavo-convex base having water inlet apertures, a tube rising vertically therefrom and provided with a vent port, a bell crank mounted on the tube below said port, a valve carried by one arm of the bell crank and cooperable with said port, and a float carried by the remaining arm, a substantially L-shaped pipe having a vertical branch fitted telescopically and detachably over the end portion of said tube, and a horizontally right angularly disposed apertured distributing head carried by the horizontal branch of said L-shaped pipe.

1,756,726. WHEEL-FLANGE LUBRICATOR. CHARLES A. BROST, Glasgow, Mont., assignor of one-fourth to Frank Miller and one-fourth to Thomas Dignan, Glasgow, Mont. Filed Dec. 12, 1927. Serial No. 239,515. 1 Claim. (Cl. 184—3.)



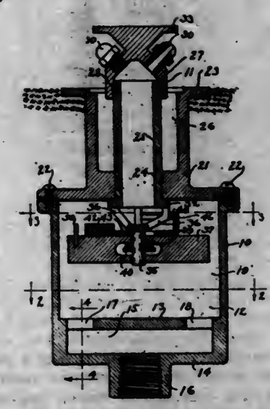
In a structure of the class described, in combination, a locomotive body, a car wheel, a saddle strap disposed adjacent the car wheel, a supporting strap pivotally connected at its lower end to the saddle, a horizontally disposed guide strip on the saddle, and said strap extending upwardly through and beyond said guide strip and having its upper end curved and overhanging the flange of the car wheel, a pair of clamping plates, means for securing one of said plates to the upper overhanging end of the supporting strap, a casing carried by the clamping plate,

lubricating means in the casing and adapted to maintain itself in contact with the wheel flange through the action



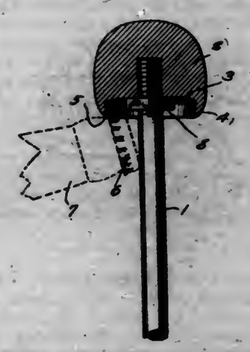
of gravity, a hinged strap connected to one of said clamping plates, a second hinge strap connected to said body and a link connected with said hinge strap.

1,756,727. ELECTRICAL CONTROL APPARATUS. WILLIAM M. BROWER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Sept. 3, 1926. Serial No. 133,431. 7 Claims. (Cl. 200—11.)



1. An electrical control apparatus comprising a frame, a shaft member journaled in said frame, an insulated panel structure carried by said frame, a plurality of contacts supported on said panel structure, a switching device journaled in said frame at a point remote from said shaft member, a control lever for said switching device, said control lever being angularly movable to a multiplicity of positions including opposite limiting positions and an intermediate position and surrounding opposite sides of said shaft member and limited at opposite ends of its path of movement by abutment with said shaft member.

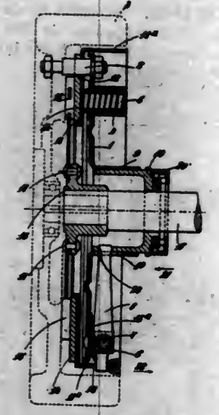
1,756,728. MULTIPLE PRESS HEAD FOR GLASSWARE-SHAPING MACHINES. CLINTON S. BUDD, Clarion, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Nov. 3, 1925. Serial No. 66,513. 12 Claims. (Cl. 49—85.)



1. Glass-working apparatus comprising a rotary mold table, molds carried thereby, lugs carried by said table in advance of certain of said molds, a press head mounted to swing on a horizontal axis, a plurality of pressing plungers carried by said press head and movable successively to a position above a pressing station to which said molds are brought by the rotation of said table, a lug carried by said press head and adapted to be engaged by said first named lugs to swing said press head from a position in which one of said plungers is at the said pressing station to a position where another of said plungers is at the said pressing station, and a spring for returning said press head to its initial position when said lugs are disengaged.

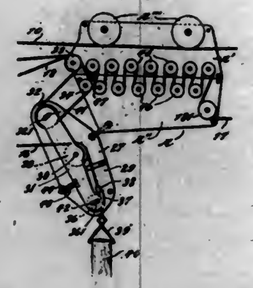
1,756,729. SPRINKLER. WALTER H. COLES and BERT J. NELSON, Troy, Ohio, assignors to The Skinner Irrigation Company, Troy, Ohio, a Corporation of Ohio. Filed Mar. 12, 1928. Serial No. 260,985. 18 Claims. (Cl. 299—61.)

1. A device of the class described comprising a support adapted to receive water under pressure, a sprinkling member rotatably mounted on said support and having a sprinkling nozzle, a device rotatably mounted adjacent said member and adapted to be revolved by the power of the water supplied to said support, and means carried by said device and adapted to be urged outwardly under the action of centrifugal force so as to strike said member and impart a rotative impulse to said sprinkling member for each revolution of said device.



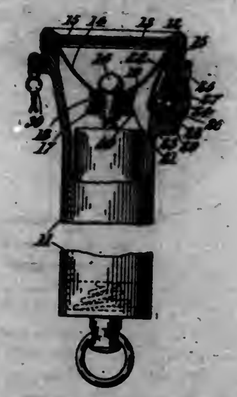
1,756,730. DECAPPER FOR BOTTLES. CLEMONS C. CROSBY, Belmond, Iowa. Filed May 20, 1929. Serial No. 364,560. 2 Claims. (Cl. 65—46.)

1. A bottle opener comprising a standard, a head on the upper end of the standard, the head being provided in its lower end with a recess defining a circumferentially continuous flange constituting a shoulder which, cooperat-



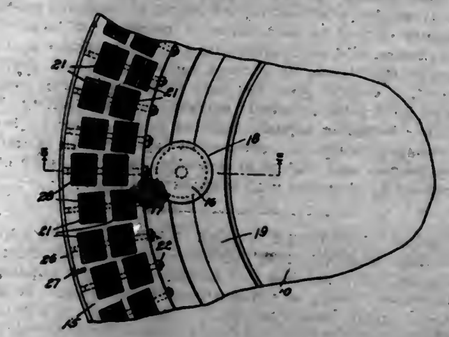
ing with the standard, forms a means whereby a bottle cap may be removed at a point anywhere around the standard and the head and means for securing the lower end of the standard, thereby to maintain the standard anchored in an approximately vertical position.

1,756,781. DISK FRICTION CLUTCH. EDOUARD JEAN DASROZIERS, Paris, France. Filed Mar. 9, 1928, Serial No. 260,483, and in France Mar. 23, 1927. 5 Claims. (Cl. 192—68.)



1. In a friction clutch, the combination of a plate fixedly connected to one of the clutch parts and rotating therewith, a friction disk arranged in spaced relation to said fixed plate, a compression plate located intermediate said friction disk and said fixed plate, a peripheral lip to said compression plate surrounding said fixed plate, a plurality of members pivotally connected to said fixed plate on the opposite side thereof to said compression plate, means for oscillating said members relative to said fixed plate, and means associated with the lip of said compression plate with which said members engage directly for displacing said compression plate relative to said friction disk.

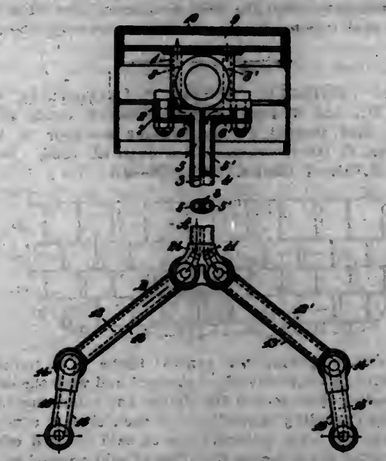
1,756,782. SKIDDING CARRIAGE. JOSEPH H. DICKINSON, Winter Park, Fla., assignor to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York. Filed May 6, 1927. Serial No. 189,204. 3 Claims. (Cl. 212—87.)



1. In a hoisting and conveying device comprising a main supporting cable, a traveling carriage adapted to traverse said cable and divided into an upper and a lower section, an outhaul cable lacing together said sections and attached at one end to the lower section of said carriage.

1,756,783. PORTABLE ELECTRIC LAMP. JOHN DOWNS, Acton Green, England, assignor to himself and Watts Finchem and Company, Limited, London, England. Filed Sept. 24, 1928, Serial No. 308,003, and in Great Britain May 25, 1928. 3 Claims. (Cl. 240—10.5.)

1. A portable electric lamp comprising, a cell containing member having a reflector mounted at one end thereof, a lamp holder mounted in the reflector, a switch mounted on and in electric connection with the cell containing member and adapted to be actuated to make and break electrical contact with the reflector, switch actuating mechanism mounted on the cell containing member accessible at the exterior thereof for forcing said switch into contact with the reflector, and an electrical insulating and gas tight elastic member interposed between the switch and said actuating mechanism to seal the cell containing member against passage of gas thereinto, the said elastic member yielding to permit operation of said mechanism to actuate the switch.



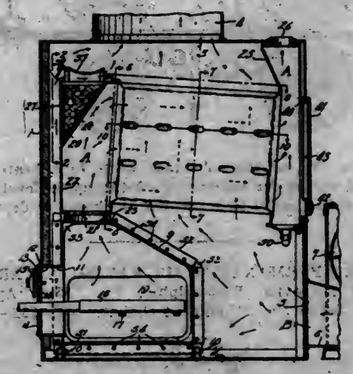
1,756,784. GRINDING WHEEL. THOMAS F. EMMINGER, West View, Pa., assignor to Pittsburgh Clay Pot Company, a Corporation of Pennsylvania. Filed July 15, 1925. Serial No. 43,765. 2 Claims. (Cl. 125—5.)

1. A grinding wheel having a plurality of openings for receiving abrading elements and provided with slots in the periphery adjacent said openings and an element supporting shaft extending through said openings and provided with an angular end seated in said slots.

1,756,785. PISTON-COOLING DEVICE FOR INTERNAL-COMBUSTION ENGINES. PAUL FUNKE, Berlin-Schoeneberg, Germany. Filed Dec. 19, 1928, Serial No. 327,118, and in Germany Jan. 7, 1928. 3 Claims. (Cl. 123—176.)

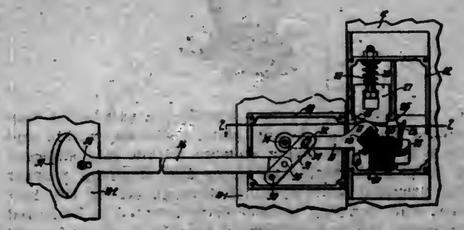
1. In an internal combustion engine a twin tube fixed on the piston and communicating with the cooling chamber thereof, a twin casing mounted on the free end of said twin tube, two bearing sleeves symmetrically arranged in said casing normally to the direction of motion of said piston, a hollow pin lodged in each of said sleeves, two

passages in said casing each connecting one of said hollow pins to one tube of said twin tube, an articulated tube conductively connected to each of said hollow pins, and means for relieving said articulated tubes from additional stresses.



1,756,736. FASTENER. FELICE GALLINA, West New York, and SIGISMONDO GALLINA, Hoboken, N. J. Filed May 12, 1927. Serial No. 190,782. 1 Claim. (Cl. 24—205.)

In a device of the class described, a plurality of strips having fastening members attached to said strips in staggered relation whereby the fastening members of one strip may project into the spaces between the fastening members of the other strip, one set of fastening members having laterally projecting members on one side thereof and having lengthwise slots in the side opposite said projections, said slots extending inwardly from the free ends of said members, the other set of fastening members having on one side edge thereof depressions to receive said projections of the first mentioned fastening members in locking engagement therein, and having on their opposite side edges, laterally extending projections extending inwardly from their free ends, said projections being adapted to slide and be guided in said slots of said first members and to close the spaces between said first and said second fastening members, and a slider for engaging and disengaging the sets of fastening members.

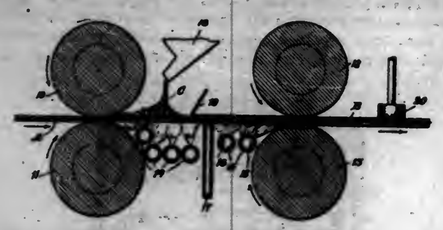


1,756,787. HEATER. WILLIAM JOHN GAMBLE, Allentown, Pa., and ALFRED E. STACEY, Jr., Caldwell, and WILLIAM B. THORNTON, Newark, N. J., assignors to Carrier Engineering Corporation, Newark, N. J. Filed Dec. 31, 1927. Serial No. 243,972. 34 Claims. (Cl. 126—116.)

1. A heater comprising a unit formed of a plurality of sheet metal plates spaced from one another face to face to form flues, and having their adjacent end edges connected along their entire lengths to one another in pairs and their adjacent edges of both top and bottom along their entire lengths connected to one another also in pairs which are different from the first mentioned pairs, to divide the flues into separate non-communicating groups which extend in directions crosswise of one another, a header con-

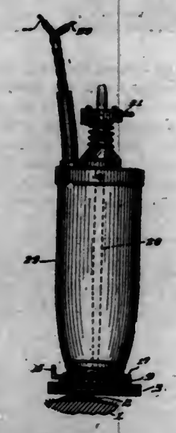
nected to said unit and communicating with one group of flues, at one end thereof, another header connected to the other end of said unit and communicating with the other end of said one group of flues, a fire box connected to the first mentioned header, a casing enclosing said headers, unit and fire box, and means for circulating a fluid to be heated, through said casing, around said headers and fire box, and through said other group of flues.

1,756,738. ELECTRIC ELEVATOR-DOOR INTERLOCK. RAY C. GREEN, Salt Lake City, Utah. Filed Feb. 9, 1928. Serial No. 253,178. 6 Claims. (Cl. 187—31.)



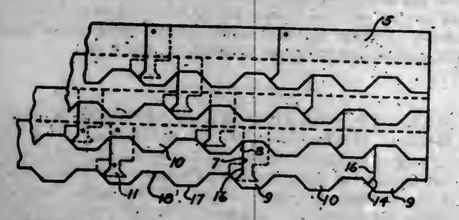
3. The combination with a door and an electric elevator door interlock including a door jamb having a box attached thereto, an opening defined in one end of said box, electrical contacts spaced apart from each other in said box, a pressure block spaced apart from said contacts, a door movable relatively to said jamb, a pivoted latch bolt carried by said door, said latch bolt having a head insertable through said opening and into the space between said contacts and said pressure block; of an oscillating link having one end thereof pivoted on said door, a slotted portion effective to cause said link to engage said latch bolt, and means operable to oscillate said link.

1,756,789. APPARATUS FOR APPLYING A SOFT-METAL SURFACING TO HARD-METAL PLATES. AUGUST GUNTHARD, Arcola, N. J., assignor to The Chemical Equipment Manufacturing Company, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 7, 1928. Serial No 304,602. 3 Claims. (Cl. 207—14.)



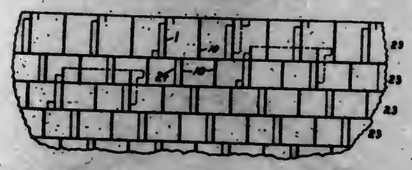
1. An apparatus for applying a soft metal coating or surfacing to hard metal plates, sheets, strips or the like comprising means for feeding the same horizontally in a

given direction, means below the plate for progressively heating and cooling the same in the direction of its movement, means for flowing onto the plate at its initial point



of heating the coating substance while in a heated fluid state and means for smoothing off the upper level of the coating while heated to a uniform thickness or depth.

1,756,740. PERMANENT-HAIR-WAVING APPARATUS. HARRY HANOVER, Philadelphia, Pa. Filed Apr. 11, 1928. Serial No. 269,046. 4 Claims. (Cl. 132—86.1.)

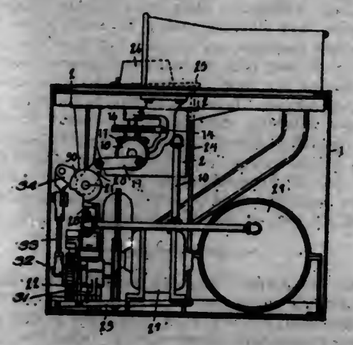


1. In a device of the class described, a hair-holder comprising a top plate, a bottom plate, a slideway within said bottom plate, a clamping member within said slideway and slidable therein, said plates and clamping member being provided with openings through which the hair passes, said clamping member being adapted to be moved to intersect the passage formed by said openings in said plates whereby the hair is compressed and securely held.

1,756,741. COMPOSITION SHINGLE. NORMAN P. HARSHBERGER, Pasadena, Calif., and RUSSELL P. HARSHBERGER, South Bend, Ind.; said Russell P. Harshberger assignor to said Norman P. Harshberger. Filed Apr. 19, 1926. Serial No. 102,879. 4 Claims. (Cl. 108—7.)

4. Strip shingles comprising a plurality of units placed in a row with their adjacent ends lapping, the edge of said units which is adapted to be exposed having a plurality of projections of similar shape, each projection adjacent the lapping ends of two units being formed by a projection of one unit having locking means in connection therewith and by a projection of another unit having locking means which cooperates with the locking means of the other projection, said two projections having registering sides.

1,756,742. SHINGLE. NORMAN P. HARSHBERGER, Chicago, Ill., and RUSSELL P. HARSHBERGER, South Bend, Ind.; said Russell P. Harshberger assignor to said Norman P. Harshberger. Filed July 12, 1926. Serial No. 121,761. 7 Claims. (Cl. 108—7.)

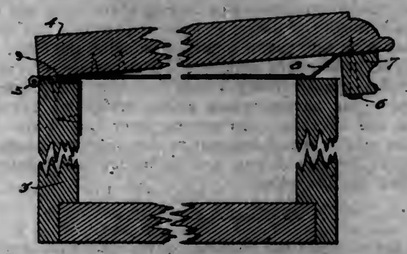


1. A shingle having the general shape of a parallelogram, with two opposite edges straight and with the other two opposite edges crooked but similar and complementary, and a slit extending inwardly from each of said straight edges, one slit being adjacent one of said crooked edges, and the other slit adjacent the other of said crooked edges.

1,756,743. ROOFING MATERIAL. NORMAN P. HARSHBERGER, Pasadena, Calif. Filed July 12, 1928. Serial No. 292,079. 10 Claims. (Cl. 108—7.)

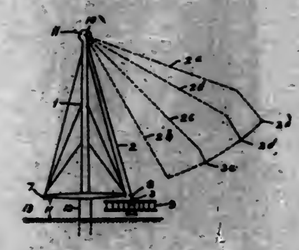
1. A covering for roofs comprising a section of material having a portion formed with a recess and having another portion formed with a tongue, said tongue being formed by converging cuts in the same edge portion extending inwardly therefrom, a portion of said tongue being of greater width than a portion of the recess, the said recess being engageable with the tongue of a like section of material, and the said tongue being engageable with the recess of another like section of material.

1,756,744. COATING MACHINE. CHARLES T. HATCH, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Mar. 16, 1928. Serial No. 262,165. 6 Claims. (Cl. 91—45.)



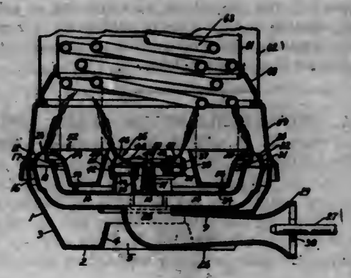
1. In a structure of the class described, the combination of a tank, a plurality of spray nozzles adapted to deliver fan-like sprays disposed in alignment and mounted for rotative movement, said spray nozzles being provided with axially disposed fluid intakes depending into said tank, an air supply conduit, flexible connections for said air supply conduit to said nozzles, a control valve for said air conduit, a cam operatively associated with said control valve, a pan table disposed above said tank, means for actuating said cam controlled from said pan table, pinions on said nozzles, a reciprocatingly mounted rack operatively associated with the several pinions, and operating connections from said cam to said rack.

1,756,745. RADIO APPARATUS. EDWIN E. HOBBS, Independence, Kans. Filed Feb. 4, 1928. Serial No. 251,793. 2 Claims. (Cl. 250—20.)



1. In static eliminator, the combination of a support, an antenna associated therewith, an insulated conducting wire leading from said antenna, a bare coil forming a part of said insulated conducting wire, a casing enclosing said coil, a chemical composition filling said casing and surrounding said coil, an insulated portion of said conducting wire leading from said casing to a set, a ground element composed of a closed metal casing, insulating means therefor, a filling in said casing and surrounding box, and a wire leading to said casing from a set.

1,756,746. CEDAR CHEST. JOHN B. HOGAN, Altavista, Va., assignor to The Lane Company, Inc., a Corporation of Virginia. Filed Apr. 27, 1928. Serial No. 273,296. 1 Claim. (Cl. 217—57.)

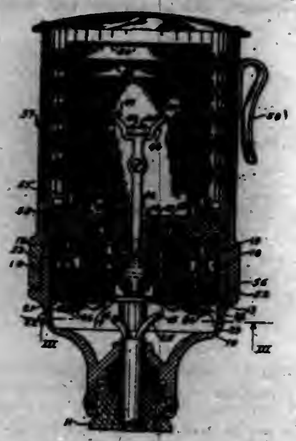


The combination with a container, of a cover adapted to close the container, and a resilient metal sealing strip secured at one edge to the cover, with its body normally deflected downwardly from the cover, and adapted to engage the top edges of the walls of the container and compressible toward the cover when the cover is closed, thereby sealing the joint between the cover and the top edges of the walls.

1,756,747. AEROPLANE-LANDING MEANS. LIONEL HOLLAND, Calcutta, British India. Filed Aug. 16, 1928, Serial No. 300,078, and in British India June 12, 1928. 20 Claims. (Cl. 244—2.)

1. Apparatus for despatching and landing aeroplanes, comprising a landing mast; a pivoted arm carried by said mast, and revolvable thereabout; an attachment device on the outer end of said arm for receiving an aeroplane; means balancing and controlling said arm in such manner that under the weight of a motionless aeroplane hanging from the end of the arm, the said arm will assume a downwardly inclined position, but which arm, as the aeroplane gathers speed around the mast, revolves about and will assume a raised position gradually approaching the horizontal, with its end sweeping through a path having a continually increasing radius and means for releasing or attaching an aeroplane at the desired position of the arm to the horizontal.

1,756,748. WATER-HEATER GAS BURNER. ROBERT C. HOYT, Oakland, Calif. Filed Dec. 9, 1926. Serial No. 153,506. 6 Claims. (Cl. 122—250.)

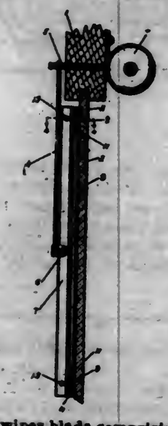


1. A burner of the character described comprising a gas chamber, two sets of tubular discharge arms extending therefrom, and two independent burner rings supported on the sets of arms respectively and arranged in concentric relation, the said rings provided with perforations arranged to discharge the gas in a column defined by the burner rings.

1,756,749. FILAMENT MOUNTING FOR GAS-DETECTING APPARATUS. WILLIAM F. HUNT, New Brighton, and JOHN K. MABBS, Bayside, N. Y., and WALTER B. ROWLAND, Upper Montclair, N. J., assignors to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Aug. 13, 1928. Serial No. 299,406. 18 Claims. (Cl. 73—51.)

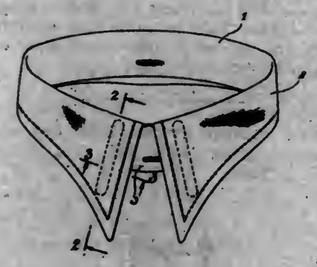
1. A head for gas detectors comprising a base, a protective jacket adapted to be secured to said base and a

filament holding unit engaging said jacket and means holding said filament holding unit and jacket in engage-



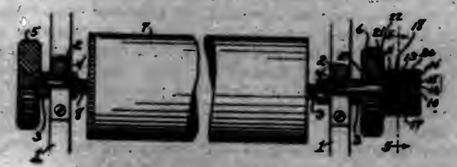
ment, said holding means being so situated that they can be operated only when the jacket is separated from the base.

1,756,750. CANDY-CUTTING MACHINE. DENNIS T. IGOU, Springfield, Ohio. Filed June 18, 1928. Serial No. 286,179. 9 Claims. (Cl. 107—21.)



1. In a device of the character described, a support freely movable over a table, a horizontally arranged anvil carried by said support, a knife cooperating with said anvil pivoted to said support, a gage member carried by said support at the side of the forward end of said anvil, said gage member having a ledge connected therewith and extending inwardly and rearwardly to support the outer ends of the severed candy sticks.

1,756,751. WINDSHIELD-WIPER BLADE. WILLIS H. IVES, Owego, N. Y. Filed Jan. 19, 1928. Serial No. 247,939. 2 Claims. (Cl. 15—255.)

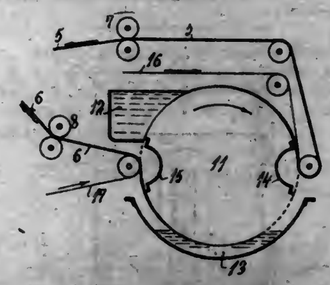


1. A windshield wiper blade comprising a channel formed holder, a wiper element secured therein, roller supports secured in the channel of said holder adjacent its ends, and rollers on said supports, the plane of said rollers lying below the plane of the free edge of said wiper element.

1,756,752. SOFT COLLAR. GUSTAVE JACOBY, Louisville, Ky., assignor to The Enro Shirt Company, Louisville, Ky., a Corporation of Kentucky. Filed Nov. 6, 1928. Serial No. 317,527. 8 Claims. (Cl. 2—132.)

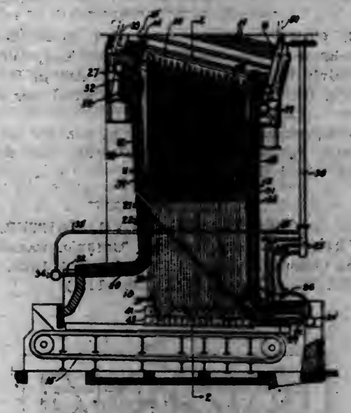
1. A soft collar of the turned down type having a multiply outer fold, and having on the inner ply on the face adjacent to the outer ply a transversely arranged strip connected to form a pocket by stitching to the inner ply, whereby the stitching is not visible on the outer face of the outer ply, and a stiffening strip within the pocket, the inner ply having an opening at the end of the pocket near the junction of the fold to enable the insertion and removal of the stiffening strip.

1,756,753. PAPER-ROLL ADJUSTMENT FOR TYPEWRITERS, ETC. CHARLES W. JEFFRIES, Lake Charles, La., assignor of one-half to Earl C. Reid, Lake Charles, La. Filed Aug. 27, 1928. Serial No. 302,220. 5 Claims. (Cl. 197—146.)



1. In a device for the purpose set forth, the combination with a platen roll, having square trunnions on the ends thereof, sleeves having squared bores receiving the trunnions therethrough, supports for the sleeves holding the same from longitudinal movement, a turning wheel on each sleeve, one of said trunnions having a threaded end projecting through the sleeve, a block comprising a nut which is screwed on said end, a collar surrounding the block and having an inner lipped engagement with the sleeve, a cylindrical cap member arranged over the collar interengaging therewith and having spring means influencing the said cap in one direction, lugs on the inner end of the cap, and the turning wheel adjacent to said cap having notches to receive the lugs therein, and connecting means between the block and the collar.

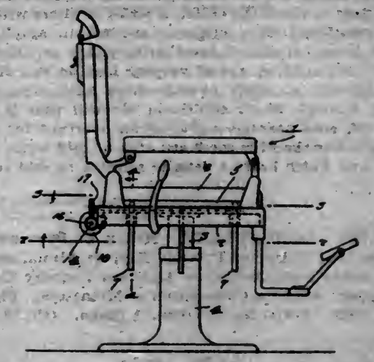
1,756,754. METHOD OF MANUFACTURING THICK WEBS OF WOOD PULP, CELLULOSE, AND SIMILAR MATERIALS. HARALD JENSEN, Oslo, Norway. Filed Dec. 18, 1928, Serial No. 326,831, and in Norway Dec. 23, 1927. 8 Claims. (Cl. 92—39.)



1. In the production of pulp the process which consists in submitting pulp to the action of a suction drum adapted to cause the pulp to settle on parts of its exterior surface by way of a suction action and to be loosened or removed from the same on other parts of its surface, bringing pulp

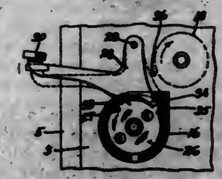
so removed and suitably diluted to another part of the surface adapted to cause such pulp to settle and form a web and then removing this web, carrying it to a press for re-

moving excessive moisture and thereupon together with a second web to a press for uniting them to a uniform, thick web.



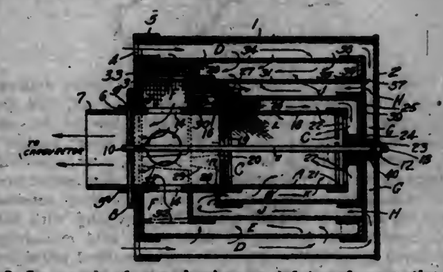
1,756,755. FURNACE. HOWARD J. KERR, Westfield, N. J., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Sept. 24, 1926. Serial No. 137,409. 4 Claims. (Cl. 122—235.)

1. A furnace chamber having a fuel feeding device in its lower part, a wall of said chamber having parallel, substantially vertical wall cooling tubes extending along the wall and spaced relatively widely apart, upper and lower headers connected respectively to the upper and lower ends of said tubes, a row of slag screen tubes extending across the furnace chamber with their upper ends extending along said wall between said wall cooling tubes, and connections to supply a cooling fluid to said slag screen tubes and said wall cooling tubes.



1,756,756. BARBER'S CHAIR. IRA S. MITCHELL, Kansas City, Mo. Filed Nov. 14, 1928. Serial No. 319,807. 1 Claim. (Cl. 155—25.)

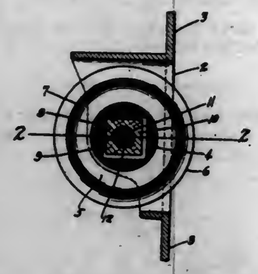
In a barber's chair of the character described provided with a bottom, an independent seat having recesses in its lower side, a pair of rack bars rigidly attached at their upper ends to the bottom of the seat adjacent the recesses therein, and extending through the bottom of the chair, guide sleeves arranged on the bottom for the depending rack bars, said guide sleeves and the chair bottom having communicating openings, an elongated shaft extending across the bottom of the chair at right angles to the rack bars, cog wheels secured on said shaft for rotation therewith in the recesses in the seat and the communicating openings in the sleeves and the chair bottom and having meshing engagement with the teeth of the respective rack bars for raising and lowering the seat, one end of the chair projecting beyond the rear end of the bottom of the



chair, and means mounted on the chair and associated with the shaft for rotating the same in a manner to raise the seat.

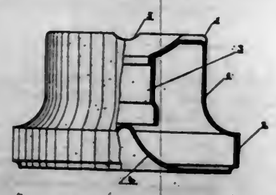
1,756,757. TOWEL CABINET. GOTTFRID OLSON, Minneapolis, Minn., assignor to Steiner Sales Company, Salt Lake City, Utah. Filed Dec. 19, 1925. Serial No. 76,528. 6 Claims. (Cl. 312—38.)

1. A towel cabinet comprising an upper compartment for the soiled toweling, and a lower compartment for the clean toweling, a door which when open opens both compartments, there being a partition between the compartments and a space between the partition and door when closed, a friction roll in the upper compartment over which the clean towel extends between the end of the partition and the closed door, both as the clean toweling is drawn upwardly over the friction roll and downwardly in its course through the bottom of the cabinet, portions of the toweling being adapted to be held in contact with each other as the towel web ascends and descends, a soiled towel roller in the upper compartment, and a feed roll therefor geared to said friction roll, and a friction block in the rear of the cabinet over which the soiled towel is adapted to pass and a gate normally resting thereon to straighten the toweling before reaching the soiled towel roll.



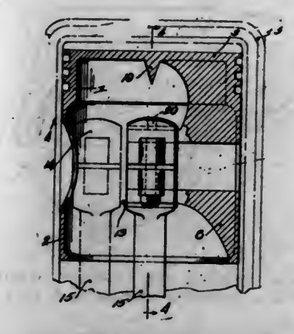
1,756,758. AIR CLEANER. FREDERICK STRATTNER OREM, Baltimore, Md. Filed Nov. 9, 1927. Serial No. 232,063. 12 Claims. (Cl. 183—73.)

6. In an air cleaner having an inlet and an outlet, a tubular filter through the wall of which all required air



will normally pass to the outlet, said cleaner having a series of apertures between the filter and said outlet through which the air which passes through the filter wall must pass to reach the outlet, a series of filters within said first mentioned filter disposed one within another, said filters being capable of functioning either as filters or as baffles, in that they are of varying lengths and diameters and provide an open passage from said inlet to said outlet through which additional air will pass if and as required, said passage including an aperture the area of which is less than the combined area of said series of apertures and which bears a definite relation to said combined area.

1,756,759. SASH PULLEY. HARRY F. PETERSON, Baytown, and CLARENCE P. BIRD, Bayport, Minn., assignors, by mesne assignments, to Anderson Foundry Company, Bayport, Minn., a Corporation of Minnesota. Filed Feb. 29, 1928. Serial No. 258,080. 1 Claim. (Cl. 16—21.5.)

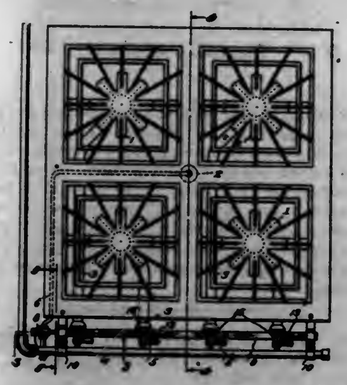


A sash pulley comprising a housing, a sheave having a hub fitting within said housing and provided with an orifice, a bushing of fibrous material fitting within said orifice and having a bore therethrough, a member mounted in said housing and passing through the bore of said bushing and whereon said bushing and sheave are adapted to turn freely, the inner wall of said hub around said orifice having a groove or recess formed therein intermediate to the ends of the orifice and extending through a substantial portion of the inner surface of said hub, said groove being adapted to allow sufficient outward expansion of said bushing to insure continual freedom of revolution of said sheave and bushing on said member when said bushing is exposed to moisture.

1,756,760. ASH TRAY OR SMOKER'S STAND. OTTO REICH, Vienna, Austria. Filed June 3, 1926, Serial No. 113,489, and in Austria June 9, 1925. 1 Claim. (Cl. 131—51.)

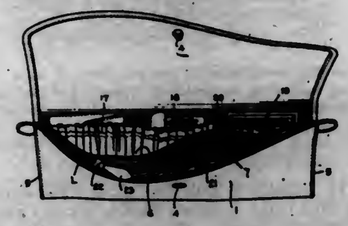
In an ash tray, a bowl, an upward projection approximately in the center of the bottom of said bowl, said projection flaring downwardly and outwardly toward the sides of said bowl, a cover for said bowl, said cover having a hole approximately in the center thereof, a substantially cylindrical tube attached to said cover and articulated with said hole, said cylindrical tube extending substantially vertically downward into close proximity with said projection in the bottom of said bowl, said cylindrical tube being of such dimensions that a cylindrical projection of said tube strikes the downwardly flaring sides of said projection in the bottom of said bowl.

1,756,761. PISTON AND CONNECTING ROD. ALLAN E. REID, Boston, Mass., assignor to Reid Piston Company, Brookline, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1929. Serial No. 342,917. 9 Claims. (Cl. 74—108.)



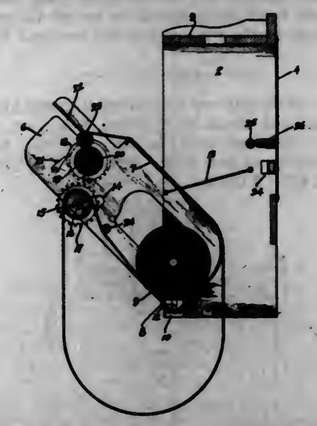
1. The combination of a piston with a connecting rod, the connecting rod having a journal opening whose axis is transverse to that of the piston, and a pivot member permanently united to the piston and adapted to fit within the opening in the connecting rod.

1,756,762. COMPOSITION. CHARLES T. RILEY, Rosiclare, Ill., assignor of one-fourth to J. Coy Lay, one-fourth to E. Calvin Clark, and one-fourth to Arthur H. Cronk, Rosiclare, Ill. Filed Aug. 3, 1928. Serial No. 297,371. 2 Claims. (Cl. 106—35.)



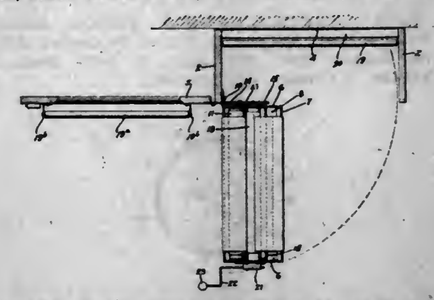
1. A composition consisting of a mixture of finely ground salt, cement, fire clay, calcspar, and fluorspar thoroughly mixed together.

1,756,763. AUTOMATIC GAS-STOVE LIGHTER. GUISEPPE RUGGIERO, Port Colborne, Ontario, Canada, and JOHN DE CESARE, Roseto, Pa. Filed Jan. 4, 1929. Serial No. 330,342. 2 Claims. (Cl. 158—115.)



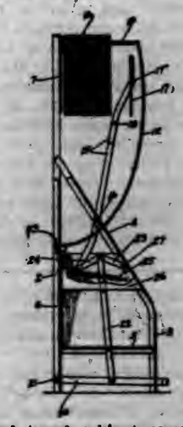
2. In combination with a gas stove provided with a pilot burner having a pushbutton valve and a spring for holding the valve closed, a bar slidably arranged at the front of the stove and having vertically arranged openings therein, a clip pivoted in each opening, a spring engaging each clip and holding the same projected above the top of the bar, each main burner of the stove having a cock, a cam connected with each cock, said cams engaging the clips on the opening movement of the cocks for moving the bar in one direction, the springs permitting the clips to lower when the cocks are moved to closed position and the cams pass over the clips and a part on the bar engaging the pushbutton of the valve whereby the valve is opened when the bar is moved by the opening movement of a main cock, the spring of the pushbutton acting to hold the parts in normal position.

1,756,764. HAND BAG. LOUIS ALBERT SAMSTAG, New York, N. Y., assignor to Samstag & Hilder Bros., Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1927. Serial No. 192,210. 1 Claim. (Cl. 150—28.)



A hand bag having parallel front and back walls, the back wall having an extension forming a closure flap adapted to overlie the upper portion of the front wall and to be connected therewith when in closed position, an intermediate partition extending longitudinally of the bag between the front and back walls and forming a compartment in conjunction with the front wall and a locking device associated with the top edges of the front wall and the partition forming the compartment and located below the top edges of the front wall and the partition, said locking device being adapted to be manipulated to seal the compartment throughout its length.

1,756,765. TOWEL CABINET. FRANK G. STEINER, Chicago, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 12, 1926. Serial No. 94,184. 2 Claims. (Cl. 312—38.)



1. A towel cabinet comprising relatively movable outer and inner sections having substantially open fronts said inner section having inclined guide slots in said sides, a closure member for the rear of the inner section, said inner section being adapted to receive a supply of clean towels in its lower portion, a feed roll mounted in said inclined slots in the inner section, a take up roll mounted adjacent to and normally in gear with the feed roll, the relative movement of said inner and outer sections changing said inclined slot to a practically horizontal position adapting said feed roll to be conveniently ungeared from said take up roll and separated therefrom to allow the stretching of a clean web thereover and when the inner section is moved outwardly the loose end of the web may be conveniently carried up between the inner section and the rear wall of the outer section to said take up roll.

1,756,766. TOWEL CABINET. FRANK G. STEINER, Chicago, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 31, 1926. Serial No. 98,771. 1 Claim. (Cl. 312—38.)

A towel cabinet comprising an outer section with side walls and an opening in its front and bottom portions, a horizontally swinging door hinged to one side of the outer section having a pressure roller thereon and a horizontally swinging inner section hinged to the same said wall of the outer section said inner section being adapted to receive a clean towel supply, delivery and take up feed rolls mounted in the upper portion of said inner section and having a driving connection between them the construction being such that the web of clean towel may be stretched from the clean towel supply in the inner section up over said delivery roll and from thence be loopel downwardly through the opening in the bottom of the outer section, thence carried upwardly in the rear of said rolls, a take up roll whereon the loose end of the towel roll may be wound for contact with said take up feed roll and adapted to be revolved thereby, said inner section being adapted to swing outwardly on its hinges to a position at substantially right angles to said outer section thereby exposing both the front and rear of said inner section for convenience in stretching the towel web to said delivery feed roll and from thence to loop the towel below the inner section, thence upwardly to a take up roll.

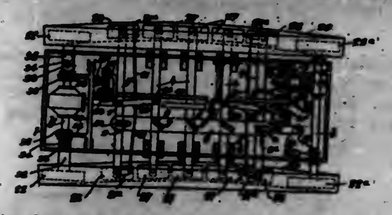
1,756,767. INDIVIDUAL-TOWEL CABINET. FRANK G. STEINER, Chicago, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed July 2, 1928. Serial No. 289,827. 7 Claims. (Cl. 312—38.)

1. An individual towel cabinet comprising a frame, a horizontal support in the upper portion of said frame

whereon a number of individual towels are suspended, a follower plate for engaging and pressing the towels backwardly in said frame, a spring connected with and normally urging said follower against the towels, toggle links operatively connected with said plate, and means for operating said links to move said plate outwardly and relieve its pressure on the towels.

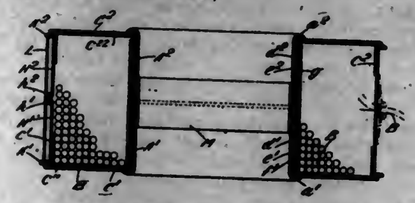
1,756,768. PISTON. LESLIE J. THOMAS, Arlington Heights, Mass., assignor to Vera C. Batchelder, Arlington Heights, Mass. Filed Sept. 23, 1927. Serial No. 221,498. 4 Claims. (Cl. 74—108.)

1. A piston comprising a solid aluminum head, a cylindrical aluminum skirt integral with the head, a hard metal ring embedded concentrically in the cylindrical skirt near its free end with the outer peripheral face of the hard metal ring flush with, or outwardly of, the outer peripheral face of the skirt, the said skirt with the embedded ring being divided into a plurality of segments, and means carried by the segments near the ends opposite the head for adjusting said ends radially, the said segments springing adjacent the head upon radial movement of the ends opposite the head.



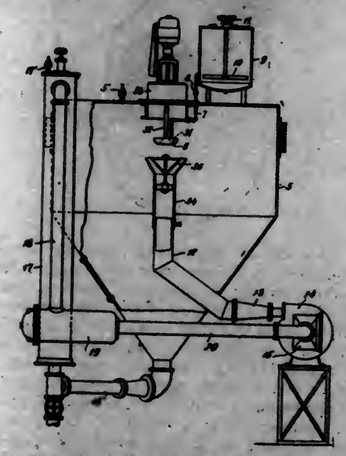
1,756,769. WRIST-WATCH BRACELET. CHARLES R. TOST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 2, 1928. Serial No. 316,667. 4 Claims. (Cl. 24—71.)

1. An extensible connector for wrist watch bracelets and the like comprising an upper plate adapted for attachment to a bracelet end, a curved resilient connector plate pivoted at one of its end portions to said upper plate intermediate its ends, and a similarly curved bottom plate pivoted at one of its end portions to the opposite end portion of the connector plate and having its free end adapted for attachment to another bracelet end, hooks at the opposite sides of the upper plate between the forward end thereof and said connector plate pivot, and cooperating projections on the bottom plate to interengage with said hooks when the plates are pressed into overlapping juxtaposition, the resilient connector plate being flattened and lengthened during the application of closing pressure to permit said hooks to snap over said projections.



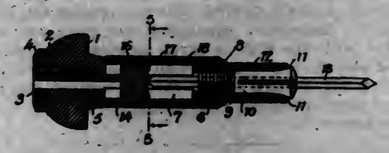
1,756,770. ENDLESS TRACK VEHICLE. RICHARD R. W. VENZLAFF and OTTO F. BUCK, Berlin, Germany. Filed Feb. 10, 1928, Serial No. 253,456, and in Germany Mar. 1, 1927. 5 Claims. (Cl. 180—9.1.)

1. A track-laying vehicle comprising a pair of flexible tracks upon which the vehicle travels, means for driving said tracks, a plurality of cross-beams, some of said cross-beams being laterally displaceable, trucks carried by the respective end portions of the respective cross-beams, supporting wheels carried by said trucks, and vertically disposed pins rigid with the laterally displaceable cross-bars, in combination with a slide guided between said frame and movable cross-bars and formed with slots disposed at an



angle to the longitudinal central line of said slide and receiving said pins respectively, means for preventing lateral displacement of said slide, and means for at will moving said slide endwise in either direction.

1,756,771. CARTON FOR PACKING REELS OF WIRE AND THE LIKE. ALFRED ERNEST WATSON and FREDERICK PLUTTE, London, England. Filed Oct. 6, 1927, Serial No. 224,406, and in Great Britain Oct. 27, 1926. 5 Claims. (Cl. 242—188.)



1. A carton in which a coil of insulated or uninsulated wire, string or the like is enclosed and efficiently protected during transit and use, comprising end discs and circumferential rings, each of said rings having one end connected to one of said end discs and its other end abutting against the opposed end of the other ring, the abutting ends of said rings being flexible to permit the withdrawal therebetween of the wire or the like enclosed within said rings.

1,756,772. METHOD OF COATING MATERIALS. LOUIS WEISBERG and ROGER B. STEVENS, New York, N. Y., assignors to Alchemic Gold Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 25, 1927. Serial No. 186,479. 5 Claims. (Cl. 91—68.)

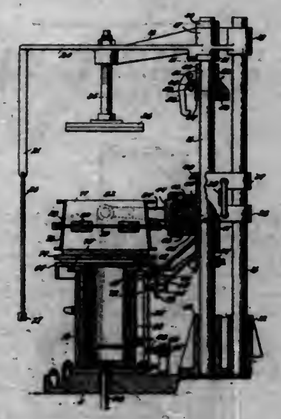
1. The process of coating finely divided materials, which comprises subjecting a suspension of the material in a volatile chemically non-reactive solvent solution of the coating composition subdivided by centrifugal force to a heated gas and separating the coated material from the gas and solvent vapors.

1,756,773. HAND TOOL. ALFRED WENDT, Fresno, Calif. Filed Sept. 7, 1926. Serial No. 133,995. 1 Claim. (Cl. 279—50.)

A device of the character described, comprising a tubular shank having a pair of oppositely disposed slots and interior [illegible] in one end, a handle secured to said shank at its other end, a follower mounted in said tubular shank and having wings fitting in said slots of the shank and provided with threads upon their periphery, a sleeve encircling the entire length of said tubular shank and having interior threads to engage the threads on the periphery of said wings of the follower, a tool having its inner end in engagement with said follower, a chuck consisting of a pair of jaws flared at their outer ends and through which jaws said tool passes and is adapted to be clamped, said chuck having a threaded stem engaging said interior threads of the tubular shank, and a sleeve surrounding said chuck and shaped at one end to bear against the flared portion of the jaws of said shuck and having an interiorly threaded portion to engage a portion of the threads on the stem of said chuck to effect the opening and closing of the jaws of said chuck.

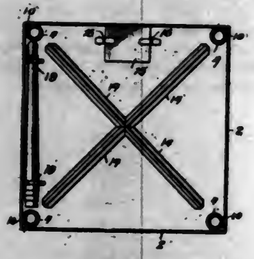
1,756,774. ELECTRIC LIGHTING FIXTURE. EDWIN BIRD WILSON, Forest Hills, N. Y., assignor to Design Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,442. 5 Claims. (Cl. 240—52.)

4. In a lighting fixture, a first set of profile members having slots therein and adapted to interlock with one another solely by means of said slots, one member of said first set of profile members having an angular portion cooperating and interlocking with an auxiliary profile member to form a second set of profile members, said auxiliary profile member intersecting and interlocking with another member of said first set of profile members, to hold the component parts of the entire fixture in fixed angular relation to one another.



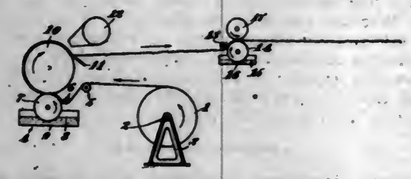
1,756,775. EXTENSIBLE FASTENING. JOHN FREDERICK FRANKLAND WINNING, Hanwell, England, assignor to John Frederick Frankland Winning, Francis Percy Torr, and Alfred Hilton, trading as The Bag Frame and Components Company, Hoxton, England. Filed July 11, 1927, Serial No. 204,950, and in Great Britain May 6, 1927. 3 Claims. (Cl. 292—281.)

1. An extensible fastening for a pair of relatively movable parts, comprising a pair of main telescoping members for attachment, respectively, to said parts, one of said main members having rack teeth, a pawl pivoted to the other main member, spring means normally urging said pawl into engagement with said rack to prevent relative movement of said main members in one direction and yieldable to permit said pawl to ride over said rack in the opposite direction; and a controlling member for said pawl slidable lengthwise of one of said main members and provided with parts engageable, respectively,



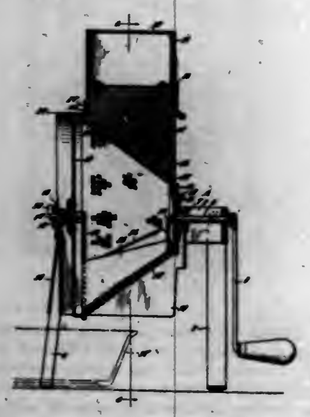
with one side of said pawl to hold said pawl in engagement with said rack when said controlling member is moved lengthwise of its associated telescoping member in one direction, and with the other side of said pawl to lift said pawl out of engagement with said rack when said controlling member is moved lengthwise of its associated telescoping member in the opposite direction, said pawl being free to engage said rack when said controlling member is in its intermediate position.

1,756,776. MOLDING MACHINE. JOHN RICHARD WOOD, Hatboro, Pa., assignor to New Process Multi-Castings Company, a Corporation of New Jersey. Filed June 2, 1926. Serial No. 113,111. 10 Claims. (Cl. 22—45.)



10. A molding machine including, in combination, a sectional flask rotatably associated with said machine and comprising a cope member and a drag member, a pattern plate mounted for pivotal movement on said cope member, means for jolting cope molding sand in said cope downwardly against said pattern plate and simultaneously jolting said pattern downwardly against drag molding sand in said drag.

1,756,777. CARD TABLE. FREDERIC EMERSON WRIGHT, New York, N. Y. Filed Oct. 21, 1927. Serial No. 227,726. 2 Claims. (Cl. 45—11.)

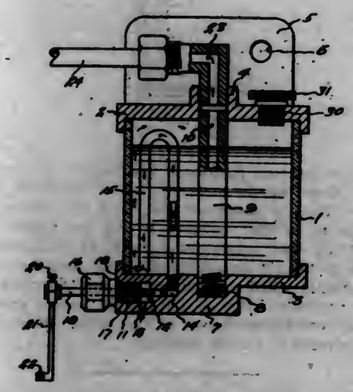


1. A table, including a top having openings therein, sleeves fixed to the top and registering with said openings, and removable hollow legs coupled to said sleeves, said hollow legs of different diameters whereby said legs can be telescoped one within the other when detached from the table.

1,756,778. METHOD FOR MAKING COLORED CREPE PAPER WITH INSOLUBLE DYES AND RESULTING PRODUCT. GARDNER R. ALDEN, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Nov. 12, 1926. Serial No. 147,959. 26 Claims. (Cl. 92—64.)

1. A method for treating colored crepe paper, which comprises treating a sheet of the same with a concentrated solution of a solid reagent, inert with respect to the paper, and containing a fixing reagent therein.

1,756,779. VEGETABLE GRATER. JOHN A. ANDRUSIS, Brooklyn, N. Y. Filed Feb. 7, 1928. Serial No. 252,599. 4 Claims. (Cl. 146—92.)



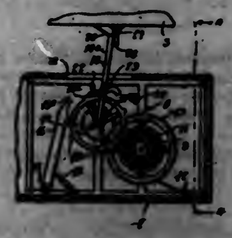
1. A device of the class described comprising a supporting frame comprising a rectangular frame, front and rear yoke members pivotally connected with the rectangular frame so that they can be folded, a cross piece in the rectangular frame adjacent the rear thereof, a shaft journaled in the rear of the rectangular frame and in said cross piece, a handle on the outer end of the shaft, a disk on the front end thereof, the front part of the rectangular frame having a bearing notch therein, a cutting member of frusto-conical shape having its small end closed and its large end open, a cross piece connected with the front end, a pintle carried thereby engaging the bearing, means for detachably connecting the small end of the member with the disk, a cover member detachably connected with the rectangular frame, a hopper carried thereby for directing articles placed therein against the frusto-conical member and a presser member removably arranged in the hopper.

1,756,780. METATARSAL-PAD LOCATOR. JOSEPH L. BARTH, Bismarck, N. Dak. Filed July 26, 1928. Serial No. 295,386. 7 Claims. (Cl. 282—1.)

1. A device of the character set forth including a plate upon which the foot is adapted to be placed and embodying sections adjustable relatively to provide an opening therebetween in registration with the arch of the foot, a flexible plate below the first plate, a receptacle in which the plates are mounted, means positioning the second plate above the base of the receptacle, means for bowing the flexible plate upwardly through said opening, and an inking member normally disposed in the receptacle below said plate and means mounting said inking member for movement to a position above and across said plates.

1,756,781. AUXILIARY FEEDING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JEAN B. BERGOUGNOUX, Los Angeles, Calif. Filed July 15, 1929. Serial No. 378,506. 3 Claims. (Cl. 123—198.)

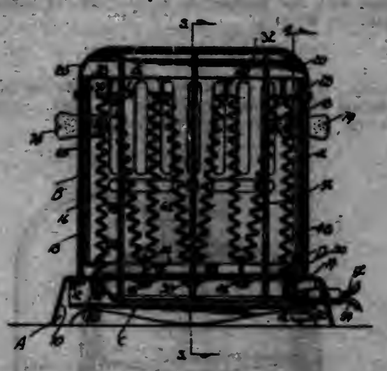
1. An auxiliary feeding device for internal combustion engines comprising a cylindrical fluid receiving reservoir, upper and lower cap plates fitted thereon, a hollow interiorly threaded boss centrally formed on said upper cap plate, a threaded recess in said lower cap plate, a tubular member interconnecting said cap plates and fitted within said boss and said recess and formed with a transverse



port adjacent its upper end, a chamber open to the atmosphere formed in said lower cap plate, an air passage connecting said chamber with the interior of said reservoir, said air passage forming means to eject air at the bottom of the reservoir so that the same may rise through the liquid, and means to vary the amount of air entering said reservoir.

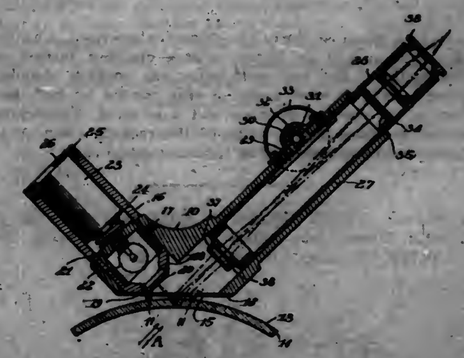
1,756,782. WIRE REEL. JAMES EDGAR BURNETT, Beardstown, Ill. Filed Mar. 30, 1927. Serial No. 179,549. 1 Claim. (Cl. 242—116.)

A device of the class described comprising a base, an upright secured thereto, a second upright hingedly connected with the base, a top piece hingedly connected with the upper end of one upright, means for detachably connecting the top piece with the upper end of the other upright, said uprights having holes therein, a reel having its pintles engaging the holes, each pintle having a square inner part, which forms a shoulder for bearing against the inner face of an upright, a stationary flange at one end of the reel, a removable flange at the other end thereof, said latter mentioned flange having a square hole therein to receive the square part of a pintle and a pin passing through the square part for holding the flange in place.



1,756,783. SPRING MOTOR. ARTHUR H. COLLINS, Jacksonville, Fla., assignor of one-half to Leonard B. MacCullough, Jacksonville, Fla. Filed Jan. 8, 1927. Serial No. 159,844. 4 Claims. (Cl. 185—38.)

1. In combination, a spring motor including a ratchet wheel, a lever adapted to be actuated in one direction by the motor and in the opposite direction by engagement with a swingingly mounted member, a detent engaging the ratchet wheel, a pawl carried by the lever and adapted to retract the detent and engage the ratchet wheel during the movement of the lever in said second direction, and a trip adapted to retract the pawl during the movement of the lever in said first direction.

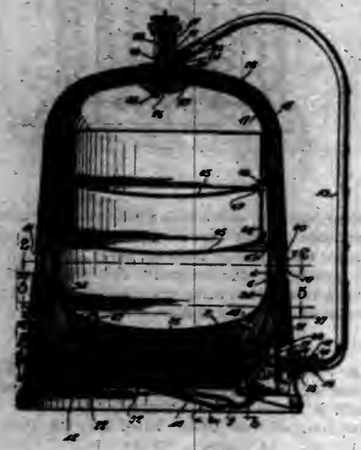


1,756,784. ELECTRIC TOASTER. ERNEST S. JOHNSON, Webster City, Iowa, assignor to Knapp-Monarch Company, Webster City, Iowa, a Corporation of Delaware. Filed Dec. 18, 1929. Serial No. 414,952. 9 Claims. (Cl. 219—19.)

6. An electric toaster comprising a support, a casing formed of a single piece of material having tongues adapted to project through slots formed in said support, a pair of side walls pivotally mounted on said casing and adapted when in vertical position to come within the outline of said casing, a single spring projected through said support for coaction with said pair of side walls to retain them

in vertical position, and an assembly retainer mounted on the underside of said support having slots therein to receive said tongues for holding said spring in position against accidental displacement, and when said tongues are bent to retain the casing, its support and said assembly retainer in assembled position.

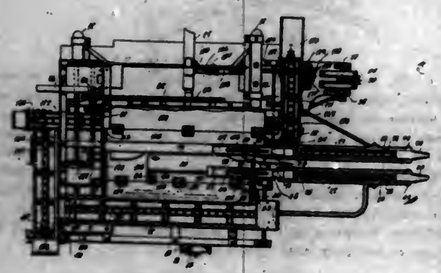
1,756,785. OPTICAL MEASURING INSTRUMENT. GEORGE B. GALLASCH, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,527. 13 Claims. (Cl. 88—14.)



1. An instrument for measuring the distance between spaced optical surfaces of a transparent body comprising a source of light and means for projecting a beam therefrom against said optical surfaces at an inclination adapted to produce spaced reflections thereof from said optical surfaces, respectively, lens means for focusing said reflections, and a scale disposed in the path of said reflections for observation in conjunction therewith to measure the distance between said reflections as an indication of the distance between said optical surfaces.

1,756,786. CERAMIC MATERIAL AND BINDING AGENT AS WELL AS A PROCESS FOR PRODUCING SUCH MATERIAL. VICTOR MORITZ GOLDSCHMIDT, Oslo, and ROLF KNUDSEN, Borgestad, near Skien, Norway, assignors to Borgestad Fabrikker, Borgestad, near Skien, Norway. Filed Oct. 18, 1926, Serial No. 142,519, and in Norway Oct. 24, 1925. 4 Claims. (Cl. 106—11.)

1. Process of producing a building product including artificially produced magnesium orthosilicate comprising

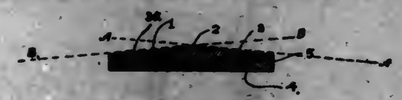


the steps of producing a mixture of substances comprising talcum and magnesium oxide and subjecting the mixture to burning so adjusted as to temperature and duration as to result in the entire quantity of talcum and of magnesium oxide in the mixture entering into chemical reaction with one another so as to form the magnesium orthosilicate Mg_2SiO_4.

1,756,787. STEAM COOKER. CHARLES L. GOUGHNOUR, Jefferson City, Tenn. Filed May 26, 1927. Serial No. 194,372. 9 Claims. (Cl. 53—2.)

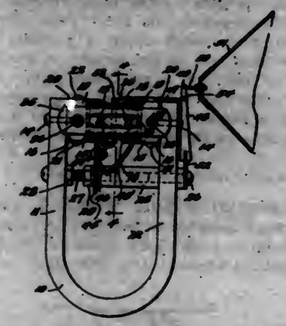
1. In a steam cooker of the character described, a heater base section and an upper cooking chamber formed of two sections, the two sections of the cooking chamber being formed of sheet metal, a ring carried by each section of the cooking chamber and a wedging interlocking connection between the rings of the cooking chamber to cause binding engagement of the sheet metal joint.

1,756,788. GRAIN-HEADING MACHINE. EDWARD J. HALE, Minco, Okla. Filed June 27, 1928. Serial No. 288,772. 6 Claims. (Cl. 130—30.)



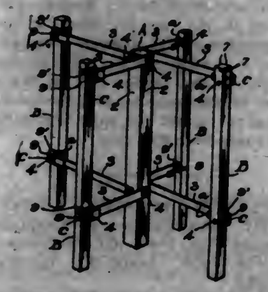
2. A machine of the class described having grain heading mechanism, means to grip the grain, said heading mechanism being designed to move the grain relative to the first mentioned means so that the latter will partially head the grain, a hood over said heading mechanism, conveyer means, and said hood serving to direct the grain headed by the first mentioned means into said conveyer.

1,756,789. METHOD OF MAKING CEMENTITIOUS MATERIAL OF CELLULAR TEXTURE. GEORGE BOOLE HINTON, Mexico City, Mexico. Filed Oct. 24, 1927. Serial No. 228,479. 1 Claim. (Cl. 106—18.)



The method of making a cellular fabric which comprises aerating and agitating a mixture of cement pulp and a frothing flotation reagent to form a froth of cement coated bubbles of small and substantially uniform size, incorporating in the froth bubbles of larger size, whereby the larger bubbles will be enveloped by the smaller bubbles.

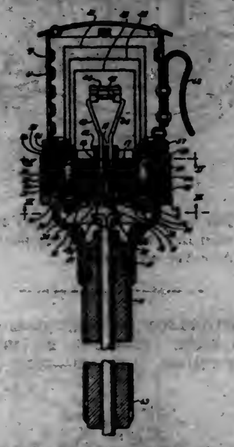
1,756,790. DRIVING BELT FOR CONE PULLEYS. STEPHEN M. KELLOGG, Knoxville, Tenn. Filed Aug. 23, 1926. Serial No. 130,900. 5 Claims. (Cl. 74—63.)



1. In a belt and pulley structure, the combination of a pair of cone pulleys and a belt applied to said pulleys, said belt having on its working or inner side and along its entire length two slanting longitudinal faces meeting approximately midway between the edges of the belt and one of said faces bearing on one pulley and the other face bearing on the other pulley.

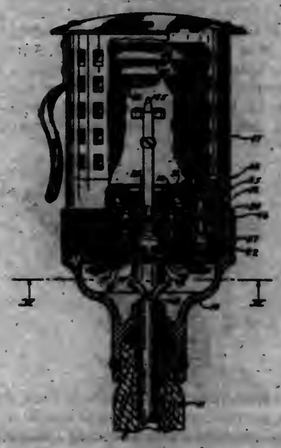
1,756,791. LOUD-SPEAKER UNIT. MATTHEW K. KUCHINSKY, Newark, N. J. Filed July 2, 1928. Serial No. 289,984. 10 Claims. (Cl. 179—119.)

1. In a loud speaker, in combination, a magnet having substantially parallel arms, a pair of cooperating pole pieces associated with said arms, a second pair of cooperating pole pieces associated with said arms, one pair of pole pieces being in a region of greater flux from said magnet than the other, and means to adjust the flux distribution to equalize it through the two pairs of pole pieces.



1,756,792. FOLDING SUPPORT. CHARLES R. LETTS, Johnson City, N. Y. Filed May 10, 1926. Serial No. 107,884. 3 Claims. (Cl. 248—41.)

1. A folding support comprising a central vertical standard rectangular in cross section, upper and lower outwardly

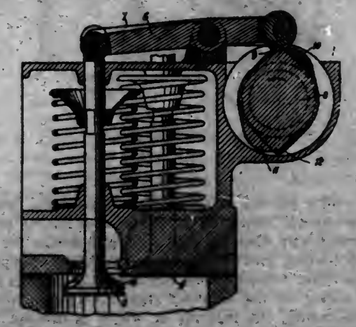


extending metal arms pivotally mounted on each face of the rectangular standard, the arms secured to each face being disposed in vertical alinement, vertical legs pivotally secured to the outer ends of the metal arms, and a trough shaped rest mounted on one face of each leg in alinement with a corresponding surface of the standard, the outer end of each arm resting in its respective trough shaped rest.

1,756,793. HEAD FOR GAS DETECTORS. JOHN K. MABBS, Bayside, and HERMANN C. STELLING, Orangeburg, N. Y., assignors to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Aug. 1, 1928. Serial No. 296,857. 14 Claims. (Cl. 73—51.)

1. In a head for gas detectors of the class described, the combination of a supporting member, a filament mounted on said supporting member, gauze jackets surrounding said filament, means for holding said jackets against said supporting member, conductors for supplying current to said filament, said conductors including a resilient portion normally in a position to open the circuit, and means actuated by said jackets when held against said supporting member to force the resilient portion of said conductor to a position to close said circuit.

1,756,794. HEAD FOR GAS DETECTORS. JOHN K. MABBS, Bayside, N. Y., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Aug. 13, 1928. Serial No. 299,405. 8 Claims. (Cl. 73—51.)

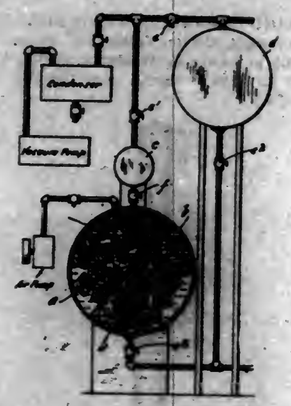


1. In a gas detector head the combination of a base, a plurality of gauze jackets above said base in coaxial relation, a filament within said jackets, means including a switch on said base for supplying current to said filament and means carried by one of the outer jackets for operating the switch.

1,756,795. FLUID-EXPANDED PISTON FOR OIL PUMPS. JOHN F. MITCHELL, Cotton Valley, La., assignor of forty-five per cent to Lewis G. Williams, Cotton Valley, La. Filed June 11, 1927. Serial No. 198,160. 1 Claim. (Cl. 103—179.)

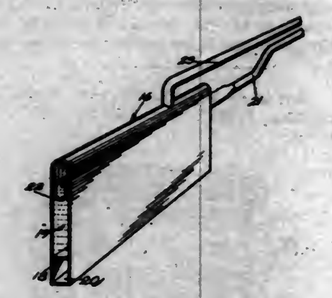
In a device of the class described, a well casing, a piston operating within said casing and having an upper open and unobstructed end portion provided with thin expansible walls of uniform thickness, the piston including a tubular extension having a lower open end acting as a casing cleaning element, the extension having a reduced portion providing an annular chamber at the end of the tubular piston, the extension being provided with ports extending radially thereof, to provide for the passage of material from the annular chamber to the inner portion of the extension.

1,756,796. EXHAUST VALVE. WARREN NOBLE, Detroit, Mich. Filed May 6, 1927. Serial No. 189,228. 10 Claims. (Cl. 123—90.)



1. In combination with an internal combustion engine cylinder, two exhaust valves, and timing means for each of said exhaust valves, said timing means operating simultaneously and to close one of said valves immediately after a substantial reduction in pressure within the cylinders is attained.

1,756,797. METHOD FOR RECOVERY OF SURPLUS PRESERVATIVES IN TREATMENT OF TIMBER. RALPH H. RAWSON, Portland, Oreg. Filed June 8, 1926. Serial No. 115,417. 2 Claims. (Cl. 99—12.)

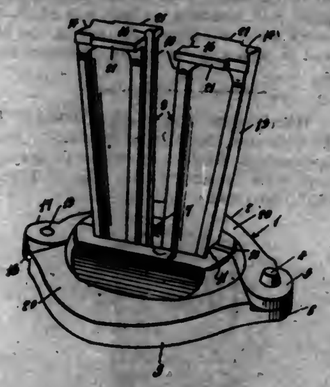


1. In the preservative treatment of timber, the method of preventing subsequent bleeding which consists in apply-

ing a partial vacuum and simultaneously heating the timber through the medium of a liquid, with the timber submerged, to a temperature maintained in excess of that of

boiling water under the given vacuum, whereby rapidly to vaporize and expand the moisture, imprisoned in the pores of the timber, to such volume as to crowd out substantially all preservative not retained by the walls of the pores.

1,756,798. HEAT-ABSORBING MEANS FOR SHEET-GLASS APPARATUS. JOSEPH A. RESCH, Toledo, Ohio, assignor to Libbey-Owens Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 28, 1927. Serial No. 178,889. 5 Claims. (Cl. 49—17.)

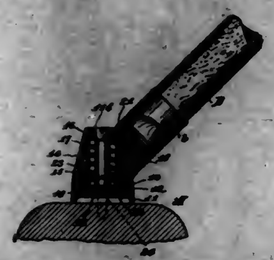


1. A cooler for use in sheet glass apparatus, comprising a hollow casing consisting of two compartments separated by a horizontally disposed partition, and means for passing a liquid cooling medium through the upper compartment only, the lower compartment containing a gaseous medium.

3. A cooler for use in sheet glass apparatus, comprising a hollow casing, the interior of which is divided horizontally into an upper large compartment and a lower somewhat smaller air compartment, and means for passing a cooling medium through the upper larger compartment only.

1,756,799. CASING COVER AND TOOL HOLDER FOR WELLS. FREDERICK W. SADLER, Oklahoma City, Okla. assignor of one-fourth to Barbara E. Turney, Oklahoma City, Okla. Filed May 26, 1928. Serial No. 280,791. 3 Claims. (Cl. 24—263.)

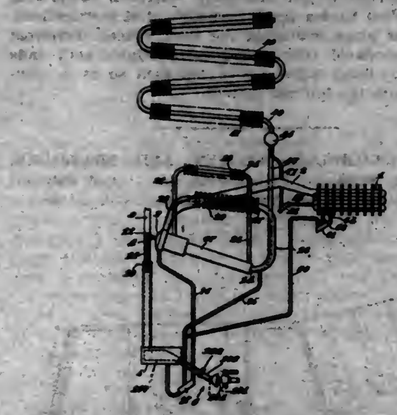
1. A tool for wells, comprising a casing cover formed in separable sections, said sections having complementary recesses in their abutting faces forming an opening in the cover, the end walls of said recesses on opposite sides of the joints between the sections being provided with inwardly extending portions, and slips engaging in said opening and



straddling the joints between the sections and having faces conforming to said inwardly extending portions to prevent separation of the cover sections.

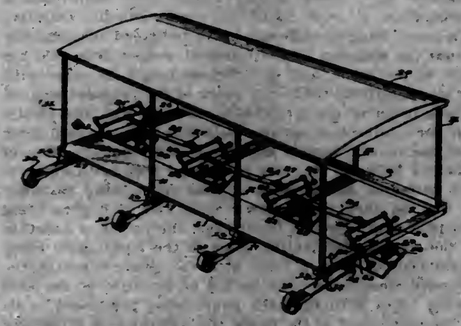
1,756,800. DISTORTION MOTOR. MORRIS A. SCHWARTZ, Los Angeles, Calif. Filed Feb. 23, 1928. Serial No. 256,314. 10 Claims. (Cl. 171—125.)

1. A distortion motor having a plurality of energized field poles, a rotor having a shaft and a plurality of conducting coils arranged concentric to the shaft, the coils being insulated one from the other, a common conductor connecting each of the coils to the shaft, and means to energize each coil in succession whereby the coils may be successively heated to distort the magnetic lines of force.



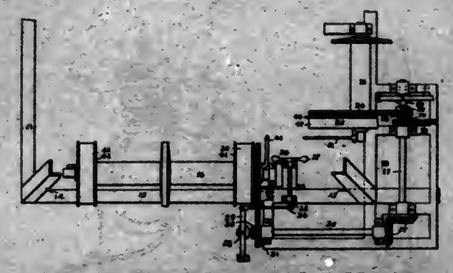
1,756,801. HANDLE-ADJUSTING MEANS. CHARLES S. TRIPPEDA, New York, and ANTHONY J. DICHIARO, Brooklyn, N. Y., assignors, by direct and mesne assignments, of one-fourth to Eugene Scavone, New York, N. Y., and one-fourth to Benjamin Fichtelberg, New York, N. Y. Filed Feb. 23, 1928. Serial No. 256,811. 1 Claim. (Cl. 306—3.)

In a device for adjustably securing a handle to a head, including a base element having means whereby to secure the same to the head and having a threaded hole therein,



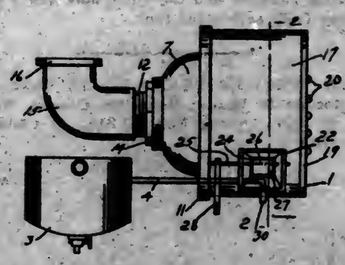
as well as a countersunk depression and a clutch surface at the top outside of said depression and concentric with said hole, a handle element presenting at its under side a mating clutch surface and having a pocket therein, an internal ledge on the handle element in said pocket, a headed fastener having a threaded reduced zone adapted to engage the threaded hole in the base element and having a shoulder at the base of said threaded zone adapted to bear against the bottom of said countersunk depression, and a spring in said pocket and coiled about said headed fastener, said spring exerting pressure at its upper end against the under side of the head of the fastener and exerting pressure at its lower portion against said ledge.

1,756,802. FLUID PUMPING. LYMAN F. WHITNEY, Boston, Mass., assignor, by mesne assignments, to Stator Refrigeration, Inc., a Corporation of Delaware. Filed Jan. 6, 1927. Serial No. 159,842. 8 Claims. (Cl. 230—102.)



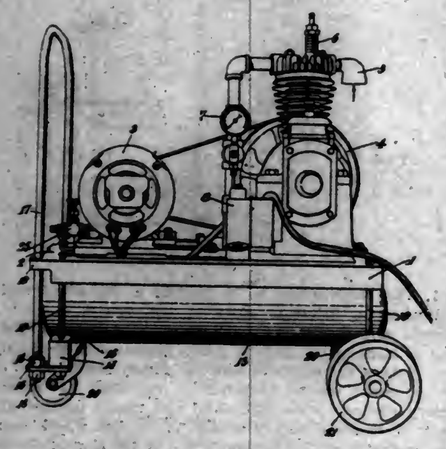
2. Apparatus of the character described comprising a fluid duct including means for pumping fluid, said means comprising two aspirator nozzles with propellent condensers adjoining the outlets of each of the same, a cooler between one of the condensers and the succeeding aspirator, and a third condenser connected to the outlet of the condenser adjoining the outlet of the second aspirator nozzle.

1,756,803. BERRY-PICKER'S VEHICLE. JACOB D. W. WILLIAMS, Tabor, N. C. Filed Apr. 13, 1928. Serial No. 269,765. 8 Claims. (Cl. 280—29.)



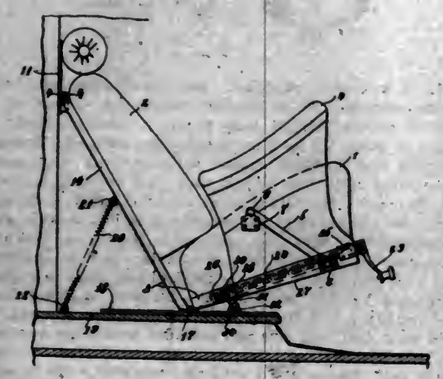
1. In combination a portable frame, to be moved over the ground, a longitudinal seat for seating a number of people, a plurality of horizontally disposed bands in advance of the seat upon which such people repose in a leaning posture, and foot rests supported from the frame.

1,756,804. DRILLING RIG. MERTON T. ARCHER, Pittsburgh, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 31, 1928. Serial No. 266,415. 2 Claims. (Cl. 254—185.)



1. The combination of a derrick, a calf-wheel and a bull-wheel at adjacent sides of the derrick, a pair of shafts mounted in an approximately horizontal plane and at right angles to each other, gears mounted on adjacent ends of the shafts to transmit rotary motion from one to the other, means mounted on one shaft to transmit rotary motion to the calf-wheel and means on the other shaft to transmit rotary motion to the bull-wheel, means for imparting rotary motion to one of the shafts, clutches for making either wheel inoperative, and two clutch-operating means adjacent to each other and the adjacent ends of the two wheels.

1,756,805. ROTARY VAPORIZING CARBURETOR. WALTER J. BAKER, Chillicothe, Mo. Filed Dec. 8, 1928. Serial No. 324,721. 2 Claims. (Cl. 261—79.)

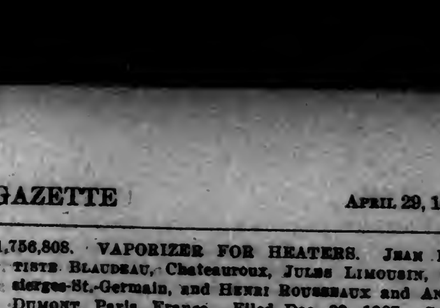


1. In a rotary vaporizer, the combination with the intake manifold of an internal combustion engine, of a central circular hollow body having circumferentially a series of elongated inlet ports extending obliquely through its wall and provided axially with an outlet pipe communicating with the hollow body and adapted to communicate with the intake manifold of the engine, an annular duct or chamber surrounding said hollow body and communicating with the inlet ports therein, a Venturi-tube communicating with said annular duct or chamber and with atmosphere, a main fuel feed pipe communicating with said Venturi-tube and with a source of liquid fuel, and auxiliary fuel feed pipe registering with the end of said main fuel feed pipe and provided within the annular duct or chamber with nozzle portions adapted to vent liquid fuel therein, and a rotatably mounted valve in said Venturi-tube inwardly of said feed pipes to regulate the admission of a mixture of air and fuel to said annular duct or chamber to be drawn therefrom by suction into the hollow body in oblique streams of high velocity to produce in the hollow body a rotary gyrating column of explosive mixture capable of vaporising liquid particles of fuel and collect the dry vapor at the axis of rotation of the rotating column of air and fuel.

1,756,806. PORTABLE AIR-COMPRESSING UNIT. HOWARD W. BEACH, Caldwell, N. J. Filed Oct. 28, 1927. Serial No. 229,311. 7 Claims. (Cl. 230—235.)

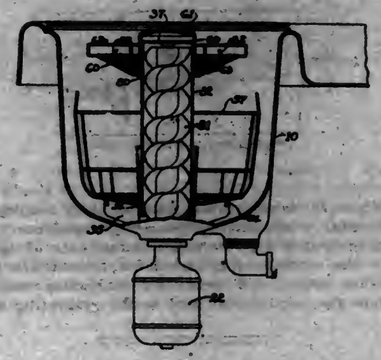
1. In a portable fluid compressing unit, the combination of a main frame member, a compressor thereon, a plurality of pressure tanks located beneath said main frame member, bolster members at each end supporting said tank members from below, and a connection between one tank and said compressor whereby that tank serves as a cooling and settling chamber, a connection between the cooling and settling chamber and the other tank and a discharge connection from said other tank.

1,756,807. VEHICLE SEAT. SAMUEL DUNCAN BLACK and ROBERT D. BLACK, Baltimore County, Md. Filed Apr. 8, 1927. Serial No. 181,919. 5 Claims. (Cl. 155—116.)



5. A seat having a swinging support for the front, a sliding support for the rear and separate means for adjusting the seat about the swinging support, changing the location and position of the seat, rocking it from upright to reclining position and the reverse.

1,756,808. VAPORIZER FOR HEATERS. JEAN BAPTISTE BLAUDEAU, Chateauroux, JULES LIMOUSIN, Sassierges-St.-Germain, and HENRI ROUSSEAUX and ANDRÉ DUMONT, Paris, France. Filed Dec. 29, 1927. Serial No. 243,454. 2 Claims. (Cl. 257—248.)

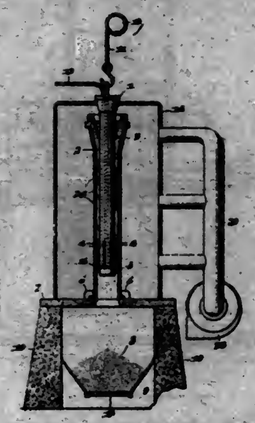


1. A vaporiser of the character described, comprising a tubular shell having deep, circumferential corrugations, and annular pipes embracing the shell, spaced therefrom and accommodated within said corrugations, both ends of each pipe being connected to the shell so as to communicate with the interior thereof.

1,756,809. COMBINED CORSET AND BRASSIÈRE. ANNIE K. BRENNAN, Philadelphia, Pa. Filed July 21, 1924. Serial No. 727,186. 2 Claims. (Cl. 2—43.)

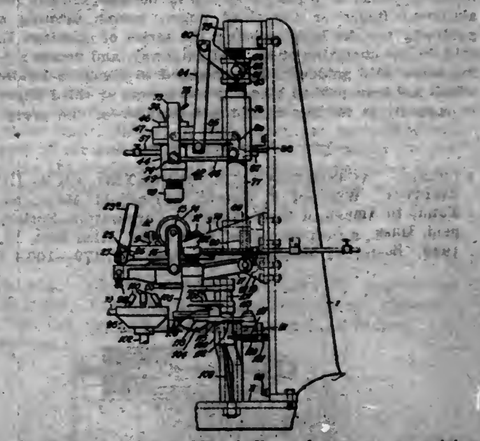
2. In a corset and brassière, the combination with the brassière of a corset of the flexible type comprising in combination a front panel of non-stretchable material, said panel being of sufficient width to extend substantially across the abdomen of the intended wearer, from one hip bone to the other, and of sufficient length to cover with its lower portions the pelvic bones of the intended wearer, a back panel of non-stretchable material, and two elastic side gores interposed between said panels, one of said gores and one of said panels being provided along the line of juncture between the said panel and gore with cooperative fastening means, each of said gores being narrower at the top than at the lower edge and each gore being provided with a welted lower edge, the points of juncture of the welted edges of the gores to the front panel being positioned to lie at a level with the pelvic bones of the intended wearer, and the points of juncture of the said welted edges with the back panel being positioned to lie at the upper part of the nates, the resistance to stretching of the welted lower edge being greater than that of the other parts of the gores thereby producing a more forcible girdling pull along the line following said welted edges, and across the panels between these edges, than is produced by the portions of the gores above said welted edges.

1,756,810. UPPER BASKET FOR DISHWASHERS. FRANK G. BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Aug. 12, 1927. Serial No. 212,460. 2 Claims. (Cl. 141—9.)



1. In combination with a dishwasher of the type having a central tower through which radial jets of water are forcibly ejected, a wire basket comprising an inner or suspension ring of smaller diameter than the end of the tower fitting on the end of the tower and supported thereby, an outer ring, radial wires connecting the two rings and extending from the inner ring outwardly and then downwardly and then upwardly and outwardly to the outer ring, and concentric rings secured to the radial wires to form an inclined basket bottom for supporting glass tumblers and the like radially around the tower in an inclined position.

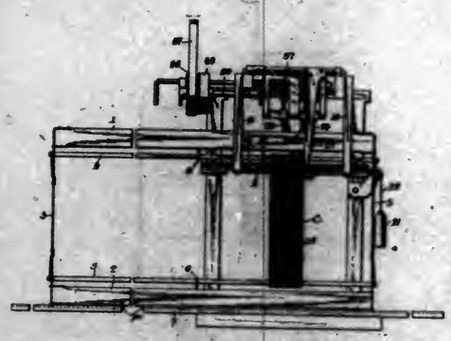
1,756,811. SHAVING BRUSH. HOWARD J. BROWNSBERGER and HARRY R. MCCONNELL, Toledo, Ohio. Filed Sept. 11, 1923. Serial No. 662,048. 1 Claim. (Cl. 221—79.)



In an elongated handle for a fountain brush comprising a cylinder of single thickness having a smooth exterior surface and provided on its interior surface with screw threads, a piston having threads on its periphery engaging with said screw threads of the cylinder, a swivelled cap on the end of said cylinder, a square stem carried by said cap and slidably extending through a square hole in the center of said piston, and a dispensing nozzle on the other end of said cylinder as to which nozzle said cap is rotatable to actuate the piston along said stem.

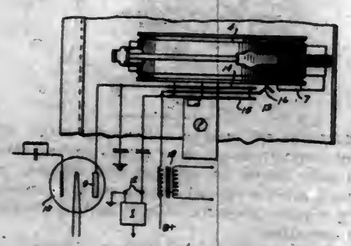
1,756,812. METHOD AND APPARATUS FOR EXTRACTING CASTINGS FROM MOLDS. LOUIS A. CAMEROTA, Burlington, N. J., assignor to Walter Wood, Philadelphia, Pa. Filed June 5, 1928. Serial No. 282,909. 9 Claims. (Cl. 22—1.)

3. An apparatus for extracting a casting from a closed cylindrical flask lined with a mold, comprising mechanical means for moving the casting through the flask, said means carrying nozzles for directing a fluid jet into the mold.



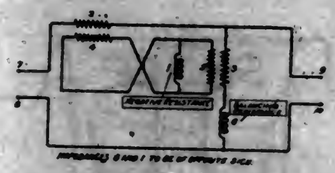
1,756,813. METHOD OF AND APPARATUS FOR MAKING HOLLOW BLOWN GLASSWARE. ROBERT W. CANFIELD, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed May 19, 1925. Serial No. 31,315. 42 Claims. (Cl. 49—9.)

3. Apparatus for making hollow glassware, comprising a parison support mounted to rotate upon a permanently vertical axis, means for rotating said support, means for reheating a parison carried by said support, and means for applying blowing pressure to said parison during the reheating operation.



19. Apparatus for making hollow glassware, comprising a parison mold; a pressing and blowing plunger mounted to rotate on a permanently vertical axis for forming a parison in said mold, said plunger embodying a tubular member having an air passage therein, and a central member adapted to close said air passages when in pressing position; and means for elevating said central member at the conclusion of the pressing operation to open said passage and admit blowing air to said parison.

1,756,814. HEDDLE-HANDLING MECHANISM. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 14, 1924, Serial No. 692,645. Renewed Aug. 23, 1928. 30 Claims. (Cl. 28—46.)



1. A mechanism adapted to operate upon a group of steel heddles each having an offset near its upper end, the heddles alternating in position, with the outer sides of the offsets in contact, so as to form a series of spaces E in the horizontal plane of the offsets and a series of spaces F below the series of offsets, said mechanism comprising an abutment finger adapted to engage the foremost heddle, a second finger adapted and arranged to enter the space F behind the foremost heddle and push it along, a third finger adapted and arranged to enter the space E behind the second heddle and push it along, the abutment finger and the third finger being overlapped and arranged to reciprocate as a unit into and out of engagement with the heddles, means to press the group of heddles against the abutment finger or the third finger, means forming a guideway for the heddles below the series of openings E, said fingers operating above said guideway, and means acting below said guideway and arranged to engage a heddle which has been pushed along by the second or third finger to separate it farther from the remainder of the group.

1,756,815. AUTOMATICALLY-OPERATED PICK-UP SWITCH. WILLIAM F. COTTER, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Sept. 11, 1928. Serial No. 305,289. 11 Claims. (Cl. 179—100.4.)

1. The combination with a radio receiver having a tunable circuit connected to an audio-frequency amplifying circuit, of a phonograph pickup circuit, and a switch arranged to be operated by the tuning means to disconnect said tunable circuit from said amplifier and connect said pickup to said amplifier.

1,756,816. IMPEDANCE VARIATION COMPENSATOR CIRCUITS. MIHRAN M. DOLMAGE, Washington, D. C. Filed Feb. 18, 1920. Serial No. 358,870. 15 Claims. (Cl. 179—170.)

1. Means for compensating varying loads comprising a local circuit, a constant compensating impedance therein having resistance and reactance components of opposite sign to the corresponding impedance components of the generating source, and means for connecting said local circuit to the varying load and to the generating source.

1,756,817. CHEMICAL PRODUCT AND PROCESS FOR MAKING SAME. CARLETON ELLIS and JOSEPH V. MEIGS, Montclair, N. J., assignors, by mesne assignments, to Carleton Ellis, Montclair, N. J. Filed July 28, 1919, Serial No. 313,820. Renewed July 22, 1929. 26 Claims. (Cl. 260—20.)

1. The process of making a pheno sulfur reaction product which consists in maintaining a phenolic body in a fluid condition and adding thereto successive small portions of sulfur halide, the amount of the phenolic body being proportional to the range of 185 and 470 parts of sulfur chloride per 300 parts of C_6H_5OH.

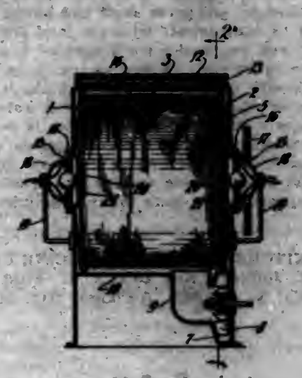
23. A rubbery sulphur plastic containing at least 50% of combined sulphur.

1,756,818. CHEMICAL PRODUCT AND PROCESS OF PRODUCING SAME. CARLETON ELLIS and JOSEPH V. MEIGS, Montclair, N. J.; said Meigs assignor, by mesne assignments, to said Ellis. Filed Sept. 2, 1919, Serial No. 321,183. Renewed July 22, 1929. 29 Claims. (Cl. 260—200.)

1. The process of making a colloidal, plastic product which consists in contacting an inorganic chloride of a metalloid element, in admixture with a diluent, with a substance comprising a phenolic body capable of reacting upon such chloride to resinification the ratio of the weight of such chloride to that of the phenolic body being not less than the molecular ratio of 71 : 94.

1,756,819. RESINOUS PRODUCT, SHELLAC SUBSTITUTE, ETC., AND PROCESS OF MAKING SAME. CARLETON ELLIS and JOSEPH V. MEIGS, Montclair, N. J.; said Meigs assignor, by mesne assignments, to said Ellis. Filed Dec. 15, 1919, Serial No. 344,871. Renewed July 22, 1929. 13 Claims. (Cl. 260—20.)

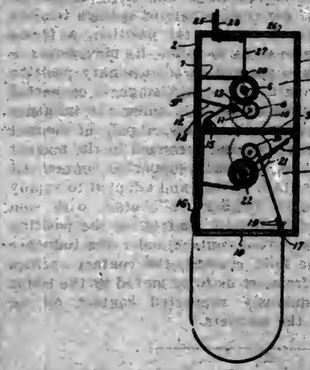
1. The process of producing resin which comprises maintaining a body comprising a phenolic substance dispersed or extended by an aqueous dispersing or extending medium, bringing into contact with said extending substance a quantity of sulphur halide greater than the amount of the phenolic substance, and sufficient to convert substantially the entire amount of said phenolic substance into a solid resin and separating said resin from the extending medium and thereafter bleaching the resin.



13. A well bleached resinous material derived from a phenolic body having more than 6 carbon atoms and a sulphidising reagent, such resinous material containing combined sulphur as a component, such resinous material being free from bad odor and taste, to permit its use as a component of chewing gum.

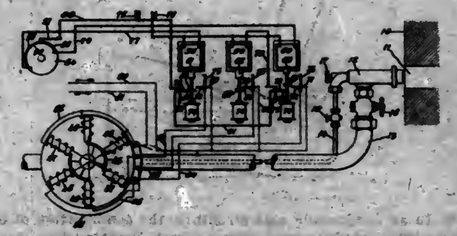
1,756,820. SPIKE-TOOTH HARROW. CONRAD GAUDATS, Mansfield, Ohio. Filed Aug. 15, 1929. Serial No. 386,039. 4 Claims. (Cl. 55—8.)

1. In a harrow, a main frame, an auxiliary frame, ground wheels carried by the auxiliary frame, supporting bars mounted for reciprocation transverse the main frame, means for connecting the relatively opposite ends of alternate bars in unit pairs, a shaft extending longitudinally of and carried by the main frame, a crank in said shaft for each unit pair of bars, connections between the cranks and the unit pairs of bars, and means for operating the shaft.



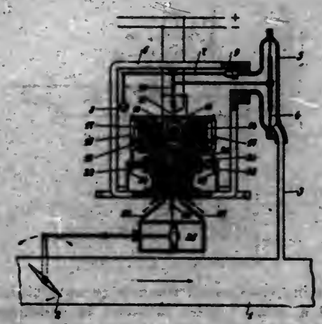
1,756,821. METHOD OF AND MACHINE FOR DRYING AND BLEACHING LAUNDRY. CHRISTOPHER GROSS, Oak Park, Ill., assignor of one-half to Herman G. Grosse, Oak Park, Ill. Filed Mar. 15, 1929. Serial No. 347,247. 3 Claims. (Cl. 34—5.)

1. A laundry drying and bleaching machine comprising a horizontal work-holding cylinder having a foraminous cylindrical wall, means for rotating the cylinder to tumble the laundry therein, means for forcing heated air through the cylinder past the laundry, and means at the axis of the cylinder, at opposite ends of the latter, for projecting ultra-violet rays across the interior of the cylinder from one end to the other.



1,756,822. SANITARY ROLL-TOWEL CABINET. EDWARD T. HAILS, Montgomery, Ala., assignor to Super San Towel Cabinet Company, Montgomery, Ala., a Corporation of Aalabama. Filed Feb. 16, 1923. Serial No. 619,462. 1 Claim. (Cl. 312—38.)

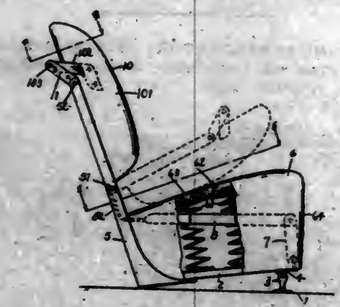
A towel cabinet having inclined slots therein, a support for a clean towel supply, a roll adapted for frictional contact with a towel web, and the cabinet having an opening through which said towel web may be drawn, and means for preventing a towel user from causing an overthrow of toweling from said supply, said means including a guide roll having its upper surface above the lower surface of said friction roll, said guide roll having journals pivoted in said inclined slots, the construction being such that a hard sudden pull on said towel web will cause said guide



roll to move along said slots toward said friction roll and cooperate therewith to grip the towel between the said rolls.

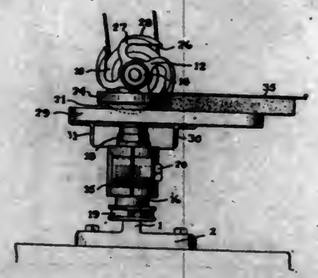
1,756,823. HEAT REGULATOR. FLOYD E. HARRIS, Flint, Mich. Filed Nov. 16, 1922. Serial No. 601,426. 12 Claims. (Cl. 236—76.)

1. In combination, a heat treating furnace, a burner for supplying fuel to said furnace, a conduit for supplying fuel to said burner, a conduit for supplying air to said burner, a valve shaft, valves on said shaft for controlling the supply of air and fuel to said burner, and means for preventing the temperature of said furnace from rising above a predetermined point, said means including mechanism for operating said valves and thermally controlled means for operating said mechanism.



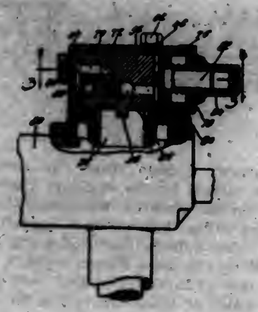
1,756,824. DEVICE FOR REGULATING FLOW OF FLUIDS. FRIEDRICH HASENMANN, Essen-Ruhr, Germany. Filed Oct. 30, 1929. Serial No. 403,647. 3 Claims. (Cl. 50—10.)

1. A device of the character described for regulating flow of fluids, comprising a throttle arranged in the fluid



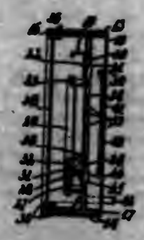
conduit, a hydraulic piston controlling said throttle, a slide valve adapted to admit liquid to either side of the piston according to its movement in one or the other direction from a neutral position, a pair of springs tending to maintain the valve in its neutral position, a frame carried by the slide valve so as to follow its movements, a pair of electromagnets supported in a stationary position within said frame, armatures for said magnets connected to the frame and adapted to move it under the influence of the magnets in opposite directions, a pair of contact springs carried by said frame and arranged in the magnet circuits one in each, a pendulously supported contact arranged between said contact springs and adapted to supply current to the respective magnets on contact with said contact springs, and a diaphragm controlling the position of said pendulously supported contact under the influence of the pressure in the fluid conduit, the contact springs being arranged in the frame so as to be moved by the latter away from the pendulously supported contact on an energization of one of the magnets.

1,756,825. AUTOMOBILE SEAT CONSTRUCTION. CARL F. HESS, Comstock Park, Mich. Filed Sept. 8, 1927. Serial No. 218,224. 9 Claims. (Cl. 155—53.)



9. In an automobile seat structure, the combination of a seat bottom, deep spring cushion with flexible sides, upright posts at each front corner within the cushion casing, oblique members pivoted to the upper end thereof and extending outwardly into hinge members at each side, an independent seat back adapted to move up and down connected to said hinge members at the rear of said oblique members, and back supporting columns containing rule joints opposite the hinge at the lower part of said back, coacting as specified.

1,756,826. TRIMMING MACHINE. PENROSE R. HOOPES, Hartford, Conn., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 2, 1923. Serial No. 655,183. 22 Claims. (Cl. 164—70.)

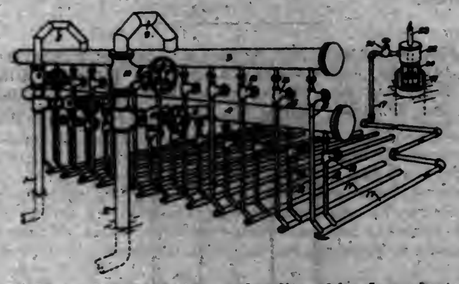


1. A cutting mechanism comprising an annular cutting flange and a rotary cutter mounted in shearing relation thereto, said cutter having a shearing edge, all points of which lie in the surface of a sphere whose center lies in the axis of rotation of said cutter.

1,756,827. BRAKE. BRYAN E. HOUSE, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 2, 1924. Serial No. 729,801. 6 Claims. (Cl. 188—152.)

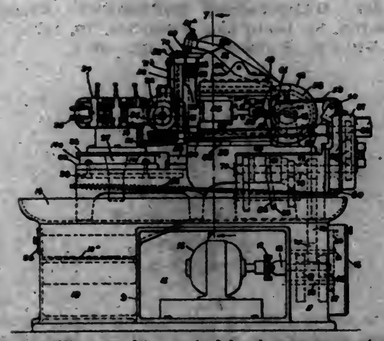
1. In vehicle steering mechanism of the class described and in combination with a casing having a cross shaft operatively connected with the front wheels of the vehicle, and a steering wheel shaft for operating said cross shaft; a valve casing secured to said first mentioned casing and having an inlet port, and two outlet ports located one upon either side of said inlet port; an oscillating valve member operated by said cross shaft and having an inlet port adapted to communicate with the inlet port of said valve casing, and two outlet ports adapted to communicate with the outlet ports of said casing; a cylinder associated with said valve casing and with the interior of which either of the outlet ports of said valve casing may communicate when said valve member is moved into its extreme positions; a spring-pressed piston operating in said cylinder; a conduit leading from said cylinder to the inlet port of said valve casing; and a check valve in said conduit and which opens toward said inlet port.

1,756,828. KITCHENETTE AND MEDICINE CABINET. CHARLES E. JOHNSON, New York, N. Y. Filed Mar. 30, 1929. Serial No. 351,385. 5 Claims. (Cl. 312—172.)



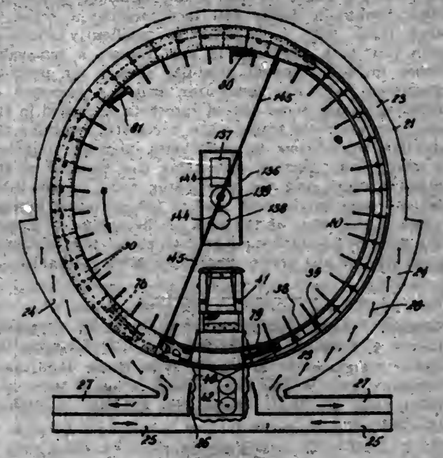
1. A device of the class described, comprising a frame having a flat rear, parallel forwardly extending sides integral with the rear, supplementary sides integral with the front edges of said sides and extending rearwards on the inner sides thereof, and top and bottom flanges extending inwards from the said rear and the forwardly extending sides and arranged for forming grooves to receive glass plates in cooperation with the ends of the supplementary sides, glass plates engaged in the grooves, display racks supported by the supplementary sides, and glass doors for sliding across the front ends of the forwardly extending sides.

1,756,829. COAT LINING. BENJAMIN KAPLAN and LEO ROSENBERG, New York, N. Y. Filed Dec. 16, 1929. Serial No. 414,385. 6 Claims. (Cl. 2—278.)



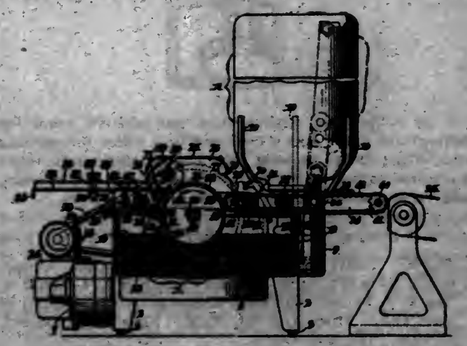
1. In combination with a coat or other garment, a lining secured in place along the sides and top so as to be free along its bottom edge, and weights attached along said bottom edge to hold the lining straight while the garment is being worn.

1,756,830. ELEVATED CENTRAL HEADER FOR GAS LIFTS. HARRY C. MARSHALL, Arcadia, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a Corporation of California. Filed July 18, 1927. Serial No. 206,685. 5 Claims. (Cl. 103—10.)



1. In gas lift apparatus, a plurality of headers adapted to carry different gas pressures, said headers being elevated from the ground level and spaced, a plurality of manifolds arising from approximately the ground level to said headers, a plurality of tubing connections arising from approximately the ground level to said headers, and valves disposed between said headers and said manifolds and connections, whereby all parts are exposed for convenient access.

1,756,831. MILLING MACHINE. NEWMAN M. MARSILIUS, Bridgeport, Conn., assignor, by mesne assignments, to The Producto Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 17, 1927. Serial No. 192,002. 6 Claims. (Cl. 90—16.)

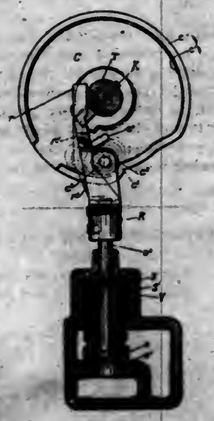


1. In a milling machine, a bed having ways, a standard positioned thereon and also provided with ways, a reciprocatory carriage having ways slidably mounted in the ways of the bed and standard, a vertically movable cutter slide mounted in the carriage, means for reciprocating the carriage, means for operating the cutter slide, a cutter shaft and cutters thereon carried in the slide, driving connection for the cutter shaft, said driving connection including a worm and worm gear, a splined shaft carrying the worm, said worm gear on the cutter shaft, flexible joints in said splined shaft, driving means for said shaft, a clutch mechanism interposed between the driving means and said cutter shaft, and change gears also interposed between said driving means and cutter shaft.

1,756,832. AMUSEMENT RIDE. HYLA F. MAYNES, North Tonawanda, N. Y., assignor of one-half to Emma C. Maynes, North Tonawanda, N. Y. Filed Sept. 20, 1928. Serial No. 307,249. 30 Claims. (Cl. 104—63.)

1. An amusement ride comprising the combination of an endless track, a car movable over the track, a cable for pulling the car, a driving sheave for the cable, a pneumatic cable clutch carried by the car, means for supplying air to hold the clutch in cable-gripping position, means for automatically cutting off the supply of air as the car passes the driving sheave to release the clutch, and means for automatically turning it on again after the driving sheave has been passed.

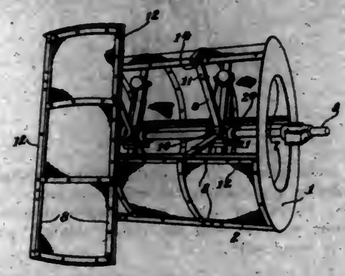
1,756,833. ADHESIVE-APPLYING MACHINE. CHARLES S. PRICE, Bethlehem, Pa., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa., a Corporation of Maryland. Filed Sept. 14, 1928. Serial No. 306,086. 17 Claims. (Cl. 91—51.)



1. The combination in an adhesive-applying machine, of a container for the adhesive; a rotatable applicator re-

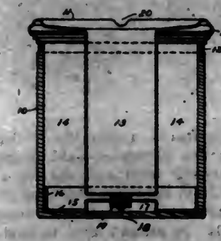
movably journaled in the container; a co-operative relatively-adjustable distributor; and a frame sustaining feeding-in, stripping and receiving means, fulcrumed to the container with capacity for limited movement; said frame in one position securing the applicator and distributor means in operative location, and, when in another position, permitting their free removal.

17. The combination in an adhesive-applying machine, of a container for the adhesive, said container having a filler pocket with removable angled-rods determining tripod support for a fountain whereby the level of adhesive in the container is maintained constant; a cover with a pin and snap flanges adapted to respectively engage one of the angled-rod sockets and the outer wall of the filler pocket to close in the latter when the fountain is not used; a rotatable applicator drum removably journaled in the container; a friction-driven spring-influenced distributor roll co-operative with and adjustable relative to the applicator drum; a frame pivoted to the container, a non-contacting feeding-in driver roll incorporating a series of spaced disks with a co-operative resiliently-influenced driven roll, both journaled in said frame; a removable stripper including spaced pawl-like fingers for point-on impingement with the applicator drum; a conveyor of paralleling chains about spaced sprockets journaled in the frame; the aforesaid frame when horizontal retaining the respective mechanisms in co-ordinate operative relation, but when swung vertical permitting free removal of the applicator drum and the distributor roll; a removable cover snapping on the back wall of the container serving to close in the space at the back of the applicator drum; and a removable member adapted to shield the feeding-in and stripper means and to guard the drive mechanism.



1,756,834. AUXILIARY VALVE-CLOSING MEANS. EDWIN A. ROBERTSON, Lake Wawasee, Ind., assignor, by mesne assignments, to The Wayne Home Equipment Company, Fort Wayne, Ind., a Corporation of Maryland. Filed Sept. 10, 1927. Serial No. 218,783. 8 Claims. (Cl. 251—39.)

1. In combination with a valve, non-positive means for closing said valve and a cam and cam roller for opening said valve; means on said cam against which said roller is adapted to bear in certain positions of the cam pressing said valve toward closing position.

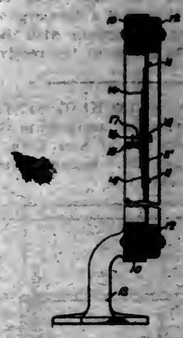


1,756,835. FERTILIZER-SCREEN VIBRATOR. AUGUSTUS J. SACKETT, Anne Arundel County, Md., assignor to The A. J. Sackett and Sons Company, a Corporation of Maryland. Filed Apr. 16, 1929. Serial No. 355,462. 1 Claim. (Cl. 209—382.)

The combination in a fertilizer screening machine of a rotating cylinder having walls of foraminous material, the cylinder having a central shaft and radiating spokes supporting the foraminous material, a flange surrounding the shaft on each side of the spokes of one set and a plurality of swinging pendulumlike weights each located between two adjacent spokes, a pair of arms supporting each of said weights, one on each side of the spokes and immediately

adjacent the same, each said arm being pivotally mounted at one end on one said flange whereby each weight is permitted to swing in the plane of the spokes from one spoke to the next causing each weight to vibrate from one spoke to the other as the screen rotates, coming in contact with each of said spokes alternately and vibrating the screen.

1,756,836. SMOKER'S ARTICLE. DOMINICK SALVATI, Brooklyn, and HERMAN LE QUORNIK, Richmond Hill, N. Y.; said Le Quornik assignor to said Salvati. Filed Dec. 19, 1928. Serial No. 327,086. 2 Claims. (Cl. 312—78.)



1. In a device of the class described, a jar, a cover for said jar, an ash receiver extending downwardly from said cover and into the jar, a compartment for storing cigars or cigarettes being formed between the inside of the jar and the outside of the ash receiver, and a disc attached to the bottom of the ash receiver upon which the cigars or cigarettes are supported.

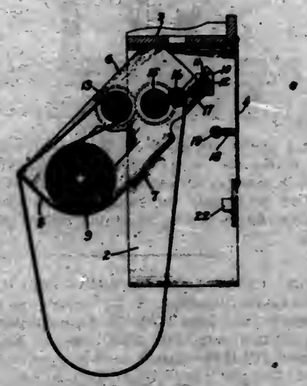
1,756,837. HAIR-WAVING EQUIPMENT. WILLIAM G. SHELTON, St. Louis, Mo. Filed Nov. 19, 1928. Serial No. 320,825. 8 Claims. (Cl. 132—36.)

1. In a clamp for a hair waving device, a pair of clamping jaws each comprising a channel-shaped metal element and a rubber covering stretched over said element, the channel of one of said jaws facing the channel of the other of said jaws whereby the portions of the rubber covering stretched across said channels are opposed to each other and may yield inwardly of their respective jaws.

1,756,838. SOUND-REPRODUCING APPARATUS. LE ROY W. STAUNTON, New York, N. Y., assignor of one-half to Stephen Bourne, New York, N. Y. Filed July 3, 1926. Serial No. 120,414. 6 Claims. (Cl. 181—31.)

1. In sound-reproducing apparatus, the combination with a substantially non-resonant support, of a diaphragm mounted in a state of relatively high permanent internal stress on said support, said diaphragm being a composite laminated structure comprising superposed layers of sheet material, the successive layers to be adhesively secured and of successively decreasing diameters toward the centre, and means arranged to vibrate said diaphragm, whereby vibrations are produced in said diaphragm of sufficient amplitude for reproducing sound of normal audibility directly in the surrounding free air independently of resonators.

1,756,839. TOWEL CABINET. FRANK M. STEINER, Minneapolis, Minn., and WALTER S. GRAVES, Kansas City, Mo., assignors to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 5, 1922, Serial No. 565,802. Renewed Apr. 28, 1929. 9 Claims. (Cl. 312—38.)

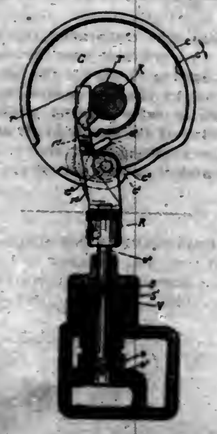


1. A towel cabinet comprising a casing having an opening in its upper walls for access to the clean towel, a feed roll above and adjacent said openings and over which the web of clean towel is delivered, and a plurality of towel compartments in the rear of and beneath said feed roll, one of said compartments being adapted to contain the roll of towel from which the web is conducted over said feed roll, and the other compartment being adapted to contain a reserve towel roll to be placed in said first compartment when the roll therein is exhausted said second compartment being accessible only through the first compartment whereby all of the first roll of toweling must be removed from said first compartment before the second roll can be used.

5. A towel holder comprising a support for the clean towel, a feed roll over which the clean towel is fed, a dog for normally locking said feed roll against revolution, said dog having a pin thereon, a slide having a recess to receive said pin and actuated by the finger of the user for moving said dog to its releasing position, said dog having means actuated by said roll for positively returning said dog to its locking position after the initial movement of said roll, means for guiding said slide upwardly out of engagement with the pin on said dog when inward pressure is applied to said slide, and a spring normally tending to return said slide to its engaging position with said dog when pressure of the user thereon is released.

8. A towel cabinet having an open top and means therein to support a supply of clean towel, the upper front portion of the said cabinet having an opening therein merging into said top opening through which the user may reach the clean towel web, a feed roll in the upper front portion of said cabinet having a roughened surface over which the clean web may be stretched from the towel supply to depend in the rear of and adjacent said front opening, a cover for said top opening, the said cover having a downwardly extending front portion shielding said roll, whereby when the said cover is raised the clean towel web may be drawn up and stretched to form a loop of the desired length at the front of the cabinet while out of contact with said roll to facilitate loading the cabinet.

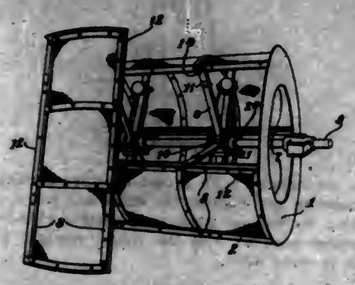
1,756,840. TOWEL CABINET. FRANK G. STEINER, Chicago, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 15, 1926, Serial No. 94,807. Renewed June 7, 1929. 7 Claims. (Cl. 312—38.)



6. A towel cabinet having mechanism for feeding clean toweling into position of use and thereafter drawing the used portion of said toweling into the cabinet, a frame in which said mechanism is mounted, means associated with the cabinet for permitting said frame to be shifted to form a space between the said mechanism and a wall of said cabinet to facilitate threading a portion of said toweling over parts of said mechanism, a shield separating the soiled and clean portions of said toweling, and means for moving said shield when said frame is shifted.

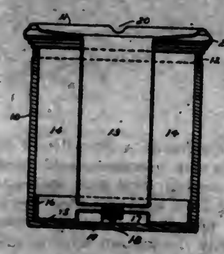
movably journaled in the container; a co-operative relatively-adjustable distributor; and a frame sustaining feeding-in, stripping and receiving means, fulcrumed to the container with capacity for limited movement; said frame in one position securing the applicator and distributor means in operative location, and, when in another position, permitting their free removal.

17. The combination in an adhesive-applying machine, of a container for the adhesive, said container having a filler pocket with removable angled-rods determining tripod support for a fountain whereby the level of adhesive in the container is maintained constant; a cover with a pin and snap flanges adapted to respectively engage one of the angled-rod sockets and the outer wall of the filler pocket to close in the latter when the fountain is not used; a rotatable applicator drum removably journaled in the container; a friction-driven spring-influenced distributor roll co-operative with and adjustable relative to the applicator drum; a frame pivoted to the container, a non-contacting feeding-in driver roll incorporating a series of spaced disks with a co-operative resiliently-influenced driven roll, both journaled in said frame; a removable stripper including spaced pawl-like fingers for point-on impingement with the applicator drum; a conveyor of paralleling chains about spaced sprockets journaled in the frame; the aforesaid frame when horisontal retaining the respective mechanisms in co-ordinate operative relation, but when swung vertical permitting free removal of the applicator drum and the distributor roll; a removable cover snapping on the back wall of the container serving to close in the space at the back of the applicator drum; and a removable member adapted to shield the feeding-in and stripper means and to guard the drive mechanism.



1,756,834. AUXILIARY VALVE-CLOSING MEANS. EDWIN A. ROBERTSON, Lake Wawasee, Ind., assignor, by mesne assignments, to The Wayne Home Equipment Company, Fort Wayne, Ind., a Corporation of Maryland. Filed Sept. 10, 1927. Serial No. 218,783. 3 Claims. (Cl. 251—39.)

1. In combination with a valve, non-positive means for closing said valve and a cam and cam roller for opening said valve; means on said cam against which said roller is adapted to bear in certain positions of the cam pressing said valve toward closing position.



1,756,835. FERTILIZER-SCREEN VIBRATOR. AUGUSTUS J. SACKETT, Anne Arundel County, Md., assignor to The A. J. Sackett and Sons Company, a Corporation of Maryland. Filed Apr. 16, 1929. Serial No. 355,462. 1 Claim. (Cl. 209—382.)

The combination in a fertilizer screening machine of a rotating cylinder having walls of foraminous material, the cylinder having a central shaft and radiating spokes supporting the foraminous material, a flange surrounding the shaft on each side of the spokes of one set and a plurality of swinging pendulumlike weights each located between two adjacent spokes, a pair of arms supporting each of said weights, one on each side of the spokes and immediately

adjacent the same, each said arm being pivotally mounted at one end on one said flange whereby each weight is permitted to swing in the plane of the spokes from one spoke to the next causing each weight to vibrate from one spoke to the other as the screen rotates, coming in contact with each of said spokes alternately and vibrating the screen.

1,756,836. SMOKER'S ARTICLE. DOMINICK SALVATI, Brooklyn, and HERMAN LE QUORNIK, Richmond Hill, N. Y.; said Le Quornik assignor to said Salvati. Filed Dec. 19, 1928. Serial No. 327,086. 2 Claims. (Cl. 312—78.)

1. In a device of the class described, a jar, a cover for said jar, an ash receiver extending downwardly from said cover and into the jar, a compartment for storing cigars or cigarettes being formed between the inside of the jar and the outside of the ash receiver, and a disc attached to the bottom of the ash receiver upon which the cigars or cigarettes are supported.

1,756,837. HAIR-WAVING EQUIPMENT. WILLIAM G. SHELTON, St. Louis, Mo. Filed Nov. 19, 1928. Serial No. 320,325. 8 Claims. (Cl. 132—36.)

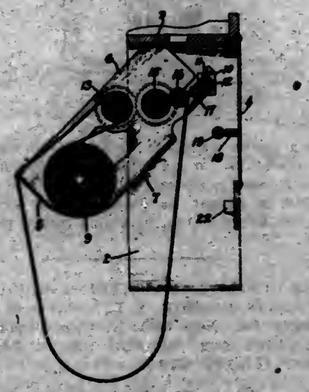
1. In a clamp for a hair waving device, a pair of clamping jaws each comprising a channel-shaped metal element

and a rubber covering stretched over said element, the channel of one of said jaws facing the channel of the other of said jaws whereby the portions of the rubber covering stretched across said channels are opposed to each other and may yield inwardly of their respective jaws.

1,756,838. SOUND-REPRODUCING APPARATUS. LE ROY W. STAUNTON, New York, N. Y., assignor of one-half to Stephen Bourne, New York, N. Y. Filed July 3, 1926. Serial No. 120,414. 6 Claims. (Cl. 181—31.)

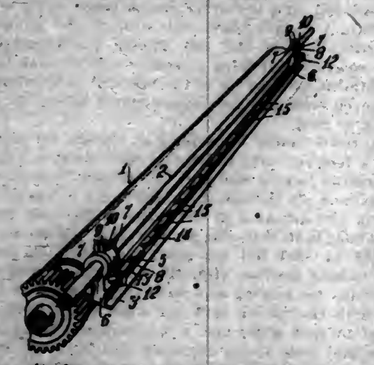
1. In sound-reproducing apparatus, the combination with a substantially non-resonant support, of a diaphragm mounted in a state of relatively high permanent internal stress on said support, said diaphragm being a composite laminated structure comprising superposed layers of sheet material, the successive layers to be adhesively secured and of successively decreasing diameters toward the centre, and means arranged to vibrate said diaphragm, whereby vibrations are produced in said diaphragm of sufficient amplitude for reproducing sound of normal audibility directly in the surrounding free air independently of resonators.

1,756,839. TOWEL CABINET. FRANK M. STEINER, Minneapolis, Minn., and WALTER S. GRAVES, Kansas City, Mo., assignors to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 5, 1922, Serial No. 565,802. Renewed Apr. 28, 1929. 9 Claims. (Cl. 312—38.)



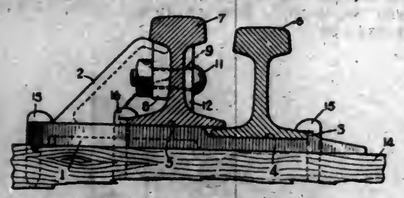
1. A towel cabinet comprising a casing having an opening in its upper walls for access to the clean towel, a feed roll above and adjacent said openings and over which the web of clean towel is delivered, and a plurality of towel compartments in the rear of and beneath said feed roll, one of said compartments being adapted to contain the roll of towel from which the web is conducted over said feed roll, and the other compartment being adapted to contain a reserve towel roll to be placed in said first compartment when the roll therein is exhausted said second compartment being accessible only through the first compartment whereby all of the first roll of toweling must be removed from said first compartment before the second roll can be used.

5. A towel holder comprising a support for the clean towel, a feed roll over which the clean towel is fed, a dog for normally locking said feed roll against revolution, said dog having a pin thereon, a slide having a recess to receive said pin and actuated by the finger of the user for moving said dog to its releasing position, said dog having means actuated by said roll for positively returning said dog to its locking position after the initial movement of said roll, means for guiding said slide upwardly out of engagement with the pin on said dog when inward pressure is applied to said slide, and a spring normally tending to return said slide to its engaging position with said dog when pressure of the user thereon is released.



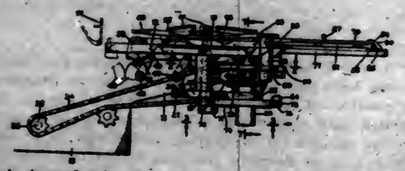
8. A towel cabinet having an open top and means therein to support a supply of clean towel, the upper front portion of the said cabinet having an opening therein merging into said top opening through which the user may reach the clean towel web, a feed roll in the upper front portion of said cabinet having a roughened surface over which the clean web may be stretched from the towel supply to depend in the rear of and adjacent said front opening, a cover for said top opening, the said cover having a downwardly extending front portion shielding said roll, whereby when the said cover is raised the clean towel web may be drawn up and stretched to form a loop of the desired length at the front of the cabinet while out of contact with said roll to facilitate loading the cabinet.

1,756,840. TOWEL CABINET. FRANK G. STEINER, Chicago, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Mar. 15, 1926, Serial No. 94,807. Renewed June 7, 1929. 7 Claims. (Cl. 312—38.)



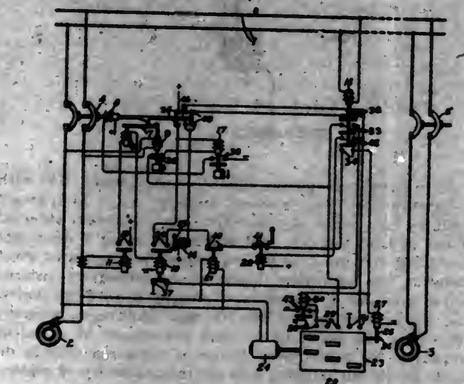
6. A towel cabinet having mechanism for feeding clean toweling into position of use and thereafter drawing the used portion of said toweling into the cabinet, a frame in which said mechanism is mounted, means associated with the cabinet for permitting said frame to be shifted to form a space between the said mechanism and a wall of said cabinet to facilitate threading a portion of said toweling over parts of said mechanism, a shield separating the soiled and clean portions of said toweling, and means for moving said shield when said frame is shifted.

1,756,841. ROLL WIPER OR CLEANER FOR PRINTING PRESSES AND SIMILAR MACHINES. GEORGE ULLRING, Chicago, Ill. Filed Sept. 1, 1928. Serial No. 303,398. 2 Claims. (Cl. 101—425.)



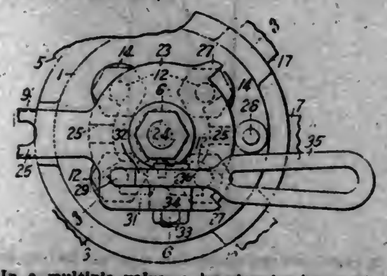
1. An attachment of the kind specified, including a substantially inflexible inverted T-bar having a side flange adapted to be disposed with one edge opposed to a roll to be wiped, a flexible wiping strip mounted on said flange, hangers mounted on the ends of said bar and adapted to receive a supporting rod disposed parallel and adjacent to the said roll, clamp collars associated with said hangers and adapted to be rigidly associated with said rod, set-screws engaging said clamp collars and said hangers for adjusting the position of the bar with respect to the said roll, said bar adapted to be normally disposed at an incline to present a trough between its middle flange and the above named side flange thereof for receiving matter wiped from said roll, there being a drain opening in said middle flange.

1,756,842. GUARD-RAIL BRACE. ALONZO H. WESTON, Yonkers, N. Y., assignor to American Chain Company, Inc., a Corporation of New York. Filed Jan. 21, 1929. Serial No. 333,856. 9 Claims. (Cl. 238—20.)



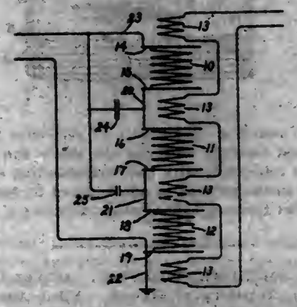
9. In a guard rail brace of the type described, a guard rail, a traffic rail, a tie plate, said tie plate being provided with seats so formed as to elevate one rail above the other and to permit the flange of the elevated rail to overlap the flange of the remaining rail to prevent tipping thereof.

1,756,843. CIGAR-TRANSFERRING MACHINE. HENRY H. WHEELER, Brooklyn, N. Y., assignor to General Cigar Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1928. Serial No. 303,001. 5 Claims. (Cl. 198—210.)



1. A transferring machine adapted to receive cigars from a foiling machine and to supply the same to a banding machine, said transferring machine comprising, in combination, a base, a turret rotatively mounted thereon, a plurality of arms extending radially from said turret, a plurality of fingers carried by said turret, one of said fingers being provided for each of said arms, said fingers being pivotally mounted, resilient means for pressing each of said fingers in contact with a cigar carried by a corresponding arm during rotation of said turret, means for advancing cigars successively onto said turret arms, each successive cigar being advanced upon the arm of said turret which is at a receiving station at the time of actuation of said cigar advancing means, automatic means for causing step-by-step rotation of said turret, an ejector carried by each arm, means for releasing a finger from contacting relation with the cigar held thereby, and means for actuating an ejector at a discharge station, said last named means having connections with the means for advancing cigars onto the turret at the receiving station

1,756,844. AUTOMATIC SWITCHING SYSTEM. ARVID E. ANDERSON, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1928, Serial No. 293,629. Renewed Feb. 27, 1930. 14 Claims. (Cl. 171—118.)



1. In combination, a load circuit, a source of current disconnected from said circuit, a switch for connecting said source of said load circuit, means responsive to the voltage of said circuit normally arranged to effect the immediate closing of said switch when the voltage of said load circuit decreases below a predetermined value while said switch is open, means responsive to an overload on said source for effecting the opening of said switch, and means controlled by said overload responsive means for rendering said voltage responsive means inoperative to effect the immediate closing of said switch when said load circuit becomes deenergized due to said switch being opened in response to an overload on said circuit.

1,756,845. MULTIPLE VALVE. JOHN B. AUFULDISH, Dayton, Ohio, assignor to The Multiple Valve and Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 28, 1927. Serial No. 171,476. 21 Claims. (Cl. 277—20.)

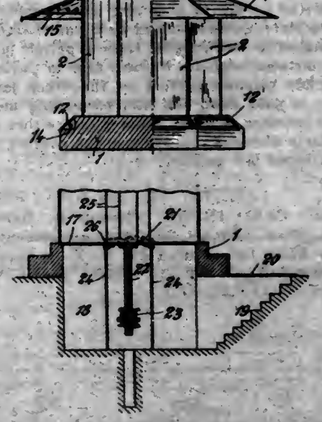
10. In a multiple valve, a housing having a plurality of passageways, two pairs of valves for controlling the flow of fluid through said passageways, an actuating device having means for first opening and closing one pair of valves and then opening and closing the other pair of valves, and separately operable means or simultaneously opening one valve of each pair of valves independently of the other valves.

1,756,846. ELECTRICAL INDUCTION APPARATUS. LOUIS F. BLUME, Pittsfield, Mass., and WILLIAM O. DWYER, Kingston, Ontario, Canada, assignors to General Electric Company, a Corporation of New York. Filed Apr. 22, 1929. Serial No. 356,088. 3 Claims. (Cl. 175—356.)

1. Electrical induction apparatus having winding turns connected in series between a grounded terminal and a high voltage terminal, an electrostatic shield adjacent part of said turns near the high voltage terminal and electrically connected to said high voltage terminal, an electrostatic shield adjacent another part of said turns nearer said grounded terminal, and an electrical connection including a condenser between said latter shield and said high voltage terminal.

1,756,847. AUTOMATIC PISTOL. VICTOR BOURTH, Boulogne sur Seine, France. Filed Oct. 24, 1927, Serial No. 228,460, and in Belgium Oct. 29, 1926. 8 Claims. (Cl. 42—3.)

1. An automatic pistol comprising a cylindrical back portion continuing the barrel and having two longitudinal grooves formed in the sides thereof, a plug closing the end of said cylinder remote from the barrel, a cylindrical block slidably mounted in said cylindrical portion and comprising wings corresponding with said grooves, projections and cartridge extracting blades, a firing pin at the centre of said block, a shutter member on the upper part of said block and a screw securing said member to the block, said member being also of cylindrical form, a notch in the lower part of said block, a finger pivoted in said notch, an indent in said block and a retaining beak adapted to engage in said indent.



1,756,848. TRAIN-ORDER DEVICE. WILLIAM T. BOYD, Glendale, Ky. Filed Jan. 14, 1929. Serial No. 332,404. 7 Claims. (Cl. 258—2.)

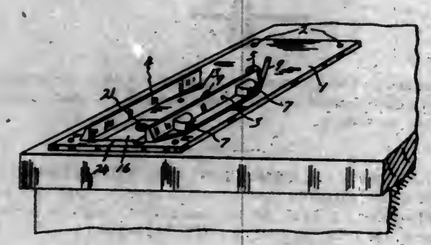
1. A train order holder comprising a standard, an arm extending at rightangles therefrom, a hoop holding member having a part rotatably arranged in the arm, means for yieldingly holding said part against movement, a tubular hoop holder, a shaft depending therefrom and rotatably

arranged in the arm and spring means within the arm and engaging the shaft for yieldingly holding the shaft against rotary movement.

1,756,849. EXHIBITION AND ADVERTISEMENT STAND. MARIUS ANDERSEN BRAASTAD, Oslo, Norway. Filed Oct. 3, 1927, Serial No. 223,815, and in Norway Aug. 18, 1927. 5 Claims. (Cl. 312—100.)

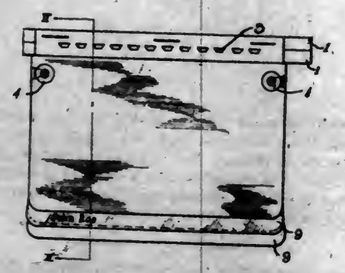
1. An exhibition-stand comprising a frame work forming a housing and a roof and built up of glass panels, a chamber below the housing, a floor separating the interior of the housing from the chamber, and means whereby a portion of the floor is adapted to be lowered into said lower chamber and again raised to normal position.

1,756,850. EMERGENCY GOVERNING MECHANISM FOR ELASTIC-FLUID TURBINES AND THE LIKE. REED J. CAUGHEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 24, 1927. Serial No. 201,249. 5 Claims. (Cl. 264—17.)



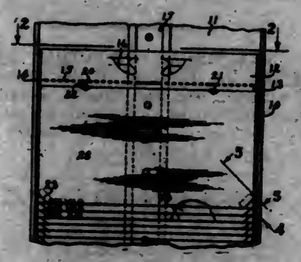
1. The combination with a shaft, of an emergency governor comprising an eccentrically mounted weight, a radi-

ally extending spring which normally holds the weight from movement, a movable support for the inner end of such spring, said support normally holding the spring under



a predetermined compression, and means for effecting movement of said support to decrease the compression of said spring whereby the governor may operate under the action of centrifugal force at a lower speed.

1,756,851. WOODWORKER'S TOOL. JAMES E. CLEMENT, New Baltimore, Mich. Filed May 31, 1928. Serial No. 281,809. 4 Claims. (Cl. 144—307.)



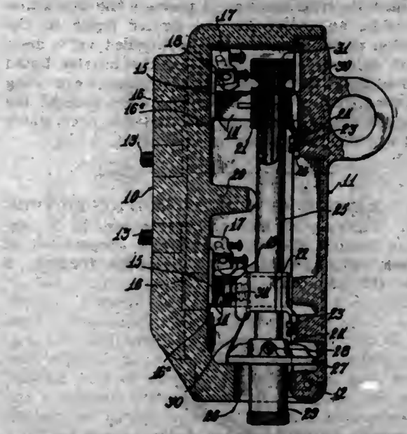
1. A work holder comprising a plate formed with a pair of spaced, parallel, elongated slots, and with a third slot occupying an acutely angular relation to the first mentioned slots, a pair of co-acting jaw members mounted upon said plate, guide members upon one of said jaw members engaging in said parallel slots to permit movement of the jaw member with its contact face in parallel planes, and a guide member carried by the other jaw member, engaging in said third slot and permitting movement of such jaw member with its contact face either parallel to or angularly disposed relatively to the contact face of the first-mentioned jaw member.

1,756,852. CARD INDEX. GEORGE H. DAWSON, Cambridge, Mass., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 16, 1925. Serial No. 69,357. 9 Claims. (Cl. 129—16.7.)

1. In a card index system, a plurality of card holders, each comprising a spacing bar and an extended hinge member, said hinge member having a pair of parallel hinge joints, a card removably mounted on said hinge member between said hinge joints and a transparent strip attached to said hinge member below said hinge joints.

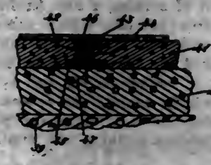
1,756,853. INDEX OR FILE. WILLIAM H. DAY, East Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 5, 1924. Serial No. 690,755. 26 Claims. (Cl. 129—16.7.)

8. In an index or file, a pair of reference members in superimposed relation, with the side edges and a marginal edge of one coinciding with the corresponding edges of the other, and means secured to one adapted to detachably retain the other thereon, said means comprising a wire staple.



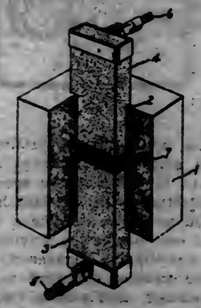
1,756,854. AMUSEMENT DEVICE. AUGUST DE FREITAS, Honolulu, Territory of Hawaii. Filed Apr. 19, 1929. Serial No. 356,461. 1 Claim. (Cl. 272—30.)

In an amusement device a circular elevated base, a disk arranged parallel to the base slightly above the latter, anti-friction elements depending from the underface of the disk and having rolling contact with the base, a circular flange depending from the edge of the disk and overlying the outer edge of the base, a vertical post extending centrally through the base and disk, means for securing the disk to the post, a bearing for rotatably supporting the lower end of the post, and passenger carrying beams pivotally supported on the post above the disk.



1,756,855. EXPULSION FUSE. JOHN F. DOHERWARDT, South Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed June 12, 1929. Serial No. 370,258. 14 Claims. (Cl. 200—127.)

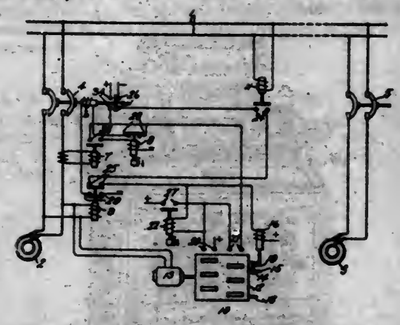
1. A device of the type described, comprising in combination a fuse box, a line terminal in said box, a second line terminal in said box in spaced relation to said first named terminal, a tube of insulating material extending from said first named terminal to said second terminal and having an opening therefrom at a point beyond said second terminal, a barrier surrounding said tube and extending outwardly from its face at a point between said opening and said



second terminal, and a fuse link connected with said first named terminal and extending therefrom through the tube and turned backwardly about said barrier and connected at its turned-back portion with said second terminal.

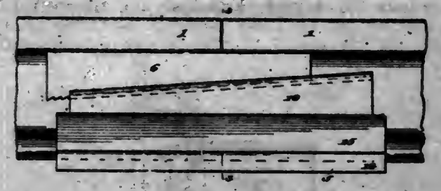
1,756,856. TERRAZZO-FLOORING DIVIDING STRIP. PASQUALE GALASSI, New York, N. Y. Filed Jan. 18, 1928. Serial No. 247,620. 3 Claims. (Cl. 94—17.)

1. As a new article of manufacture, a preformed floor strip for terrazzo floors or the like for dividing the floor composition into panels conforming to a desired design, comprising an individual unitary straight strip comprising cementitious material including anti-slip aggregate to present an anti-slip surface, adapted to meet an adjoining strip of the same construction at any angle necessary to produce the desired design in the floor.



1,756,857. HARD-METAL COMPOSITION AND METHOD OF MAKING THE SAME. EMERY G. GILSON, Colonie, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 28, 1927, Serial No. 187,328. Renewed June 11, 1929. 18 Claims. (Cl. 29—160.5.)

1. The method of producing a metallic structure consisting largely of tungsten but containing appreciable amounts of carbon and an element of the iron group, which comprises mixing powdered tungsten, carbon and an element of the iron group, and applying pressure thereto at the sintering temperature of the mixture.



5. The method of forming a metallic structure consisting largely of tungsten but containing appreciable amounts of carbon and cobalt, which comprises mixing powdered tungsten, carbon and cobalt in the desired proportions, heating the powdered materials to the sintering temperature of the mixture, and applying pressure thereto.

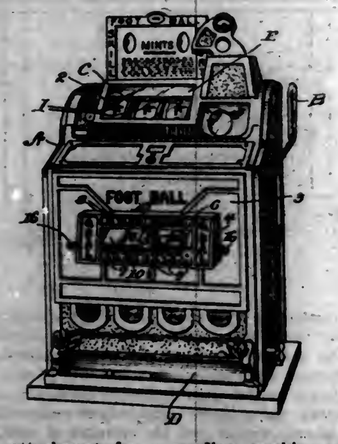
1,756,858. AUTOMATIC SWITCHING SYSTEM. WILLIAM N. GITTINGS, Springfield, Pa., assignor to General Electric Company, a Corporation of New York. Filed Aug. 10, 1928. Serial No. 298,694. 3 Claims. (Cl. 171—118.)

1. In combination, a source of current, a load circuit, a switch for connecting said source to said circuit, means for closing said switch including a timing device which when operated is arranged to effect the closing of said switch after a predetermined time interval, a starting circuit for said timing device, and means responsive to the position of said switch and the voltages of said load circuit and of said source for controlling said starting circuit so that the operation of said timing device is initiated automatically only when the switch is open, the voltage of the source is above a predetermined value and the load circuit voltage is below a predetermined value.

1,756,859. RAILWAY RAIL JOINT. SEPTIMUS H. GRIFFITHS, Wheeling, W. Va. Filed Nov. 9, 1929. Serial No. 406,074. 8 Claims. (Cl. 238—208.)

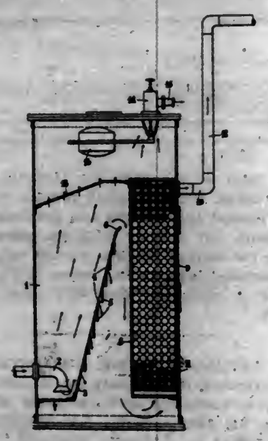
1. A rail joint of the character described, comprising track rails formed with a slotted portion at each end, a base plate disposed beneath the end portions of the rails, an upper splice bar formed with an upward extension fitted within the slotted portion of each rail, and a lower splice bar disposed beneath the upper splice bar, each of said splice bars being provided with oppositely inclined locking faces.

1,756,860. APPARATUS FOR PRODUCING SOUND. EMILE C. GUEDON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 31, 1928. Serial No. 303,207. 5 Claims. (Cl. 179—100.41.)



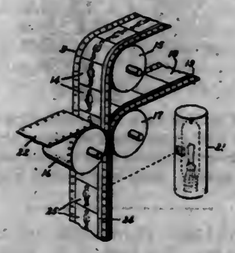
1. In a sound producing device arranged to be moved into different operating positions, a movable armature ar-

ranged to be unaffected by the weight of said device in one of said positions and to be affected by said weight in an-



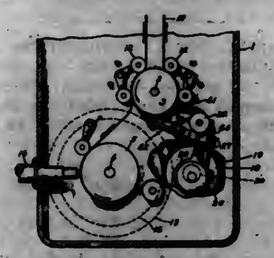
other of said positions, and means for neutralizing the effect of said weight on said armature in said last mentioned position.

1,756,861. GAME ATTACHMENT FOR COIN MACHINES. HARRY H. HOKE, Jr., Washington, D. C. Filed Jan. 29, 1930. Serial No. 424,890. 3 Claims. (Cl. 116—120.)



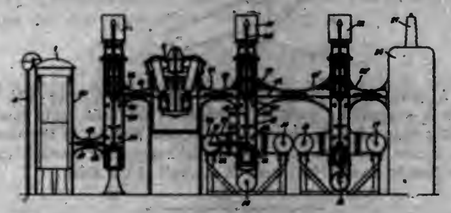
1. An attachment for a vending machine which delivers varying numbers of objects, comprising hand operated means for moving a marker certain distances according to the number of tokens delivered by the machine.

1,756,862. SEPARATOR FOR THE TREATMENT OF MIXTURES OF MUTUALLY-INSOLUBLE LIQUIDS. HASTINGS JOHN HOLFORD, London, England, assignor to Harvey Holford Separators, Limited, London, England. Filed Jan. 30, 1929, Serial No. 336,279, and in Great Britain Feb. 4, 1928. 3 Claims. (Cl. 210—54.)



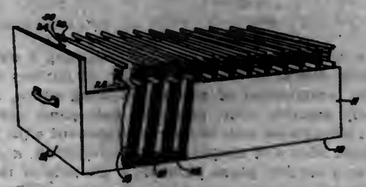
1. A separator for the treatment of mutually insoluble liquids, such for instance as oil and water, comprising a vessel, a perforated diaphragm dividing the same into an upper and lower section, an inlet for the mixture to be treated adjacent to the base of the vessel, a partition extending from a point adjacent to the base of the vessel in an upward direction adapted to promote the separation of the liquids, an outlet for the lighter liquid in the upper section of the vessel, a float-controlled valve associated with said outlet, an outlet for the heavier liquid below and adjacent to the diaphragm, a passage extending to said outlet from a point adjacent to the base of the vessel and packing material in said passage over which the liquid will flow on its way to said outlet.

1,756,863. METHOD OF MAKING MOTION-PICTURE FILMS. CHARLES A. HOXIE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 2, 1926. Serial No. 152,248. 3 Claims. (Cl. 88—16.2.)



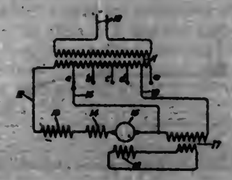
2. The method of making a film having moving picture and sound records thereon which comprises making a picture record on a film which is particularly adapted by reason of its speed for the making of the original picture record, making a sound record on a five-grained film which is particularly adapted by reason of its structure for recording sound, and printing the picture and sound records thus made on a third film similar to the sound record film.

1,756,864. FILM-DRIVING APPARATUS. CHARLES A. HOXIE, Alplaus, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 19, 1929. Serial No. 356,536. 10 Claims. (Cl. 271—23.)



1. Film driving apparatus comprising a plurality of driving members arranged to engage a film at spaced points, and means for varying the speed of one of said members in accordance with the length of film between the members, said means comprising a driven wheel connected with said one member, a driving wheel having a resilient face in non-slipping engagement with said driven wheel, a movable member arranged to engage the film between said members, and means responsive to movement of the movable member for varying the pressure of the driving wheel against the driven wheel.

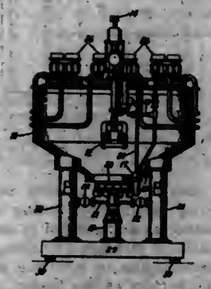
1,756,865. HIGH-POTENTIAL SWITCHING STATION. HERMAN J. H. HUBER, Upper Darby, Pa., and HENRY TRENCHAM, Ruislip, England, assignors to General Electric Company, a Corporation of New York. Filed June 21, 1926. Serial No. 117,319. 4 Claims. (Cl. 175—298.)



1. In a polyphase switching station comprising a source having a grounded neutral and current limiting means therein, a metal-clad unit comprising a set of bus bars each individually and centrally mounted in a separate grounded metallic pipe, a phase connection to each bus bar, separate main and disconnecting switches for controlling each of said phase connections, each switch having a separate enclosing grounded casing and each phase connection having separate metallic enclosures connecting the switch casings and the bus bar enclosure of the corresponding phase, an insulating oil contained in said casings and enclosures, and flexible connections in the enclosures for the phase connections, said enclosures and flexible connections being constructed to form oil-tight intercommunicating passages for the insulating oil.

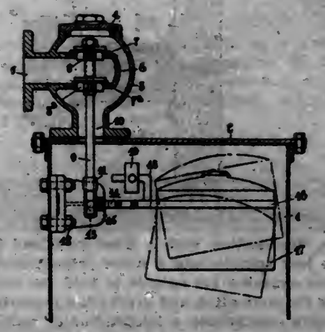
1,756,866. FILING DEVICE. LE ROI E. HUTCHINGS, Buffalo, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed May 11, 1927. Serial No. 190,504. 8 Claims. (Cl. 129—16.)

7. A filing unit for dividing a file drawer into a plurality of pockets, comprising a plurality of partition members, and means hingedly connected to the bottoms of said partition members adjustably securing said members in pocket-forming relation and permitting relative movement between said members on said hinged connections.



1,756,867. CONTROL SYSTEM FOR ALTERNATING-CURRENT COMMUTATOR MACHINES. FELIX KONN, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Feb. 4, 1929. Serial No. 337,210. 6 Claims. (Cl. 171—228.)

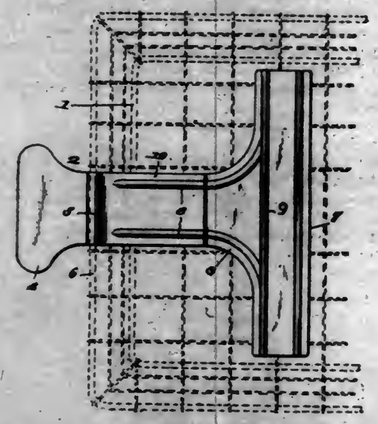
1. An arrangement for improving the commutation of alternating current single phase series motor comprising in combination with such a motor and a source of alternating current supply, a transformer having its primary energised from the source of supply for said motor, an inductive commutating pole field winding for said motor connected in series with the secondary of said transformer, and means for varying the strength of said commutating pole field winding inversely as the voltage applied to the motor during starting.



3. An arrangement for improving the commutation of alternating current single phase motors, comprising in combination with such a motor and a source of alternating current supply two motor connections, one of which is adjustable for varying the voltage applied to the motor, a transformer having one side of its primary connected to the alternating current supply by a stationary connection, the other side being connected through said motor adjustable connection, a commutating pole field winding for said motor connected in series with the secondary of said transformer, said motor adjustable connection being so arranged that as the voltage impressed on the motor is increased the voltage of the commutating pole field winding is decreased.

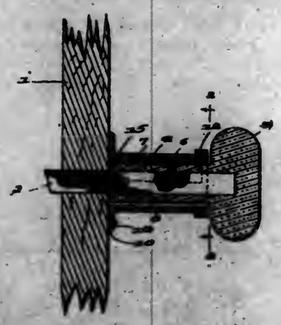
1,756,868. MERCURY-ARC RECTIFIER. CHRISTIAN KRÄMER, Berlin-Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 16, 1928, Serial No. 262,279, and in Germany July 23, 1927. 3 Claims. (Cl. 250—27.5.)

1. An electric discharge device comprising an evacuated container and electrodes sealed therein, a hollow support for said container, a plurality of vacuum pumps adapted to evacuate said container, said support being arranged to form a chamber connected between said pumps.



1,756,869. TRAP AND SEPARATOR FOR IMMISCIBLE LIQUIDS. JAMES BORROWMAN MACLEAN, London, England. Filed Jan. 28, 1928, Serial No. 250,808, and in Great Britain Mar. 26, 1927. 1 Claim. (Cl. 210—54.)

A trap or separator for immiscible liquids, such for instance as oil and water, comprising a chamber to which the liquids to be separated are supplied, a discharge passage for the lighter liquid adjacent to the top of the chamber, a double-heat valve including a body having

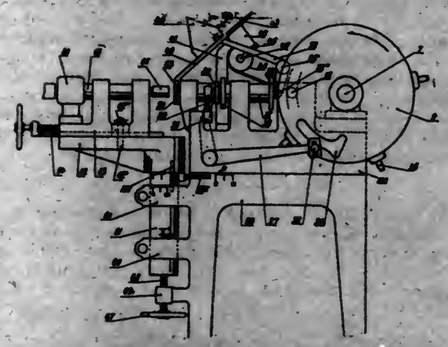


valve seatings therein associated with said discharge passage, a moving valve element in said body, a stem extending from said moving valve elements freely into the chamber, a lever in the chamber, a connection between the aforesaid stem and the lever, and a float connected to said lever adapted to sink in the lighter liquid to open the valve and to rise in the heavier liquid and thereby close the valve.

1,756,870. DESK-BASKET LIFTER. HENRY A. MAY, San Diego, Calif. Filed Sept. 7, 1929. Serial No. 391,093. 6 Claims. (Cl. 294—7.)

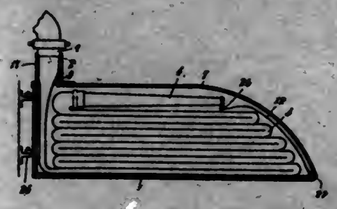
1. A lifter for desk trays or baskets and the like comprising an operating member, extending outwardly from the edge of the basket a saddle fitted to said edge to turn thereon, and an inclined member extending inwardly from the saddle and terminating in a lifting head adapted to normally lie in the bottom of the basket.

1,756,871. DOORKNOB ATTACHMENT. MARTIN MCDONALD, Washington, D. C. Filed May 14, 1929. Serial No. 362,928. 3 Claims. (Cl. 292—351.)



1. The combination with a door knob and its tubular shank, a lock spindle, and a screw extending through the shank and engaging the spindle to hold the knob thereon, of means for concealing and preventing looseness and loss of the screw, comprising a longitudinally split sleeve embracing the shank and covering the head of the screw, that end of the sleeve opposite the knob having an outstanding peripheral flange for connection with the door, and one of the sleeve members being provided with a keeper located next to the knob and embracing the corresponding end of the other sleeve member.

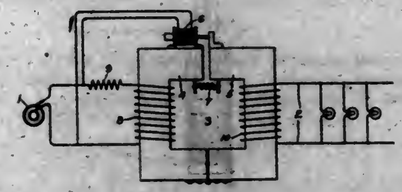
1,756,872. SHOE-SHANK SUPPORTER. JOHN R. MCGRAIL, Lynn, Mass. Filed Sept. 25, 1929. Serial No. 395,119. 1 Claim. (Cl. 36—76.)



A shank support for a shoe comprising a head and a shank supporting portion of resilient material, said head being adapted to be inserted in the heel portion of the shoe to secure the same and the shank supporting portion extending to a point just back of the ball of the shoe.

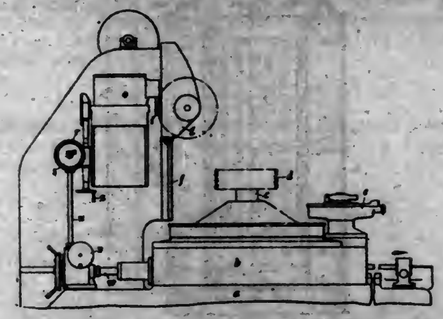
1,756,873. AUTOMATIC MACHINE FOR MILLING ORNAMENTAL GROOVES IN BUTTONS AND THE LIKE. ALAIN GEORGES LUC GABRIEL MARIE MICHE DE MALLERAY, Langeais, France. Filed Dec. 22, 1925, Serial No. 77,076, and in France Dec. 24, 1924. 6 Claims. (Cl. 79—7.)

1. In an automatic machine for producing a number of angularly displaced ornamental cuts in buttons and the like the combination of a button-holding chuck, a longitudinally movable slide, means to hold same against rotation; a rotatable slide sliding in alignment with the first mentioned slide and adapted to hold the chuck, a cam disposed in a vertical plane parallel to the axis of the slides and adapted to rotate round its horizontal axis perpendicular to the axis of the slides, means whereby the cam gives the slides a to and fro movement, means whereby the cam gives the rotatable slide an angular movement between the cuts, means for driving the cam and means for preventing the rotation of the rotatable slide during each cut.



1,756,874. PROTECTIVE CLOSURE OR CONTAINER FOR HOSE AND THE LIKE. ARCHIBALD VASSAL HALE MONRO, Wellington, New Zealand. Filed Aug. 10, 1928, Serial No. 298,848, and in Australia Sept. 23, 1927. 4 Claims. (Cl. 299—77.)

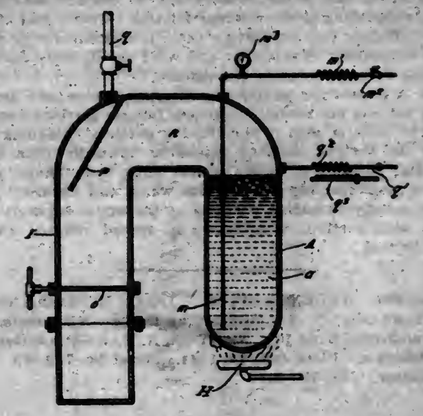
1. A protective carrier of the character described, including in combination a hose, a container for receiving the hose, a lid for the container, means for temporarily



sealing the edge of the lid to the container, and a flexible element having its inner end connected to the hose and its medial portion arranged about the edges of the lid and beneath the sealing means with its opposite extremity extended to a point exteriorly of the container so that when a pull is exerted thereon the sealing means will be severed and the hose drawn from the container.

1,756,875. REGULATING SYSTEM. VINCENT M. MONTSINGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1926. Serial No. 97,445. 2 Claims. (Cl. 171—119.)

1. In a regulating system, a variable voltage source of alternating current, a load circuit, a transformer having a primary winding connected across said source and a secondary winding connected across said load circuit, an impedance connected in series with said primary winding, and means responsive to the voltage of said source for varying the reluctance of the magnetic circuit of said transformer.

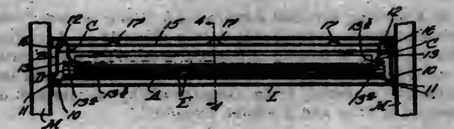


1,756,876. MACHINE FOR GRINDING OR CUTTING TOOTHED GEAR WHEELS OR OTHER ANALOGOUS OBJECTS. ARTHUR HITCHCOCK ORCUTT and JOHN WILDSMITH SHARRY, Birmingham, England, assignors to The Gear Grinding Company Limited, Birmingham, England. Filed Jan. 16, 1929, Serial No. 332,964, and in Great Britain Jan. 24, 1928. 2 Claims. (Cl. 51—52.)

1. In machines for grinding toothed gear wheels or similar objects, the combination comprising a rotary grinding wheel, a reciprocatory slide on which the said wheel is mounted, a work carrying slide movable in a direction at right angles to the direction of motion of the slide carrying the grinding wheel, means for imparting feed movements to the work carrying slide, a trimming tool, a slide carrying the trimming tool, means for imparting feed movements of the slide carrying the trimming tool, and means for correlating the two feed movements, substantially as described.

1,756,877. PROCESS OF PRODUCING LAMPBLACK. AUGUSTE JEAN PARIS, Jr., Bradford, Pa. Original application filed May 3, 1915, Serial No. 25,403. Divided and this application filed Oct. 4, 1921. Serial No. 505,333. 4 Claims. (Cl. 134—60.)

4. The process of making lampblack by the separation of the carbon in the form of lampblack from the hydrogen in natural gas, or other suitable hydrocarbon gases, which consists in forming lampblack by passing such gas through a chamber containing a column of molten metal at a point

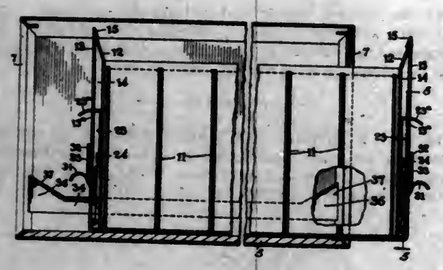


below the surface thereof and in intimate and direct contact with said molten metal, allowing said lampblack to deposit on the surface of said molten metal, and causing said lampblack to pass out of said chamber.

1,756,878. ELECTRIC DISCHARGE DEVICE. JOHN E. POTTER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 10, 1927. Serial No. 239,040. 2 Claims. (Cl. 173—324.)

1. A resilient contact for use in connection with electric devices, said contact being formed from a metal plate, the plate being cut along four parallel lines transverse an axis of the plate, said cuts extending alternately to the opposite edges of the plate with respect to said axis, the inner ends of said cuts stopping short of the edges of the plate, the metal of the plate between the two outermost cuts being raised, the raised portion comprising three bands, two of said bands sloping with respect to and one of said bands not sloping with respect to the non-raised portion.

1,756,879. INDEX OR RECORD DEVICE. JAMES H. RAND, Jr., Tonawanda, and LOUIS C. BROECKER, Buffalo, N. Y., assignors, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1924. Serial No. 690,284. 5 Claims. (Cl. 129—16.)



1. In a tray or slide formed of sheet-metal and adapted to be slidably moved in and out of a cabinet having spaced tray-supporting parts between which the trays are adapted to slide, the top portions of a tray extending adjacent the supporting parts for the tray next above, parts on said tray for maintaining record devices thereon, and a hinged cover member on said tray adapted to extend over and protect the record matter on one of said record devices,

and relatively small, upwardly extending parts on said cover member adapted to engage the tray-supporting parts for the next upwardly adjacent tray to maintain the body portion of said cover member out of contact with said tray-supporting parts, whereby friction between said cover and adjacent tray-supporting parts is reduced during sliding movements of said tray and wear on the body portion of the cover member is prevented.

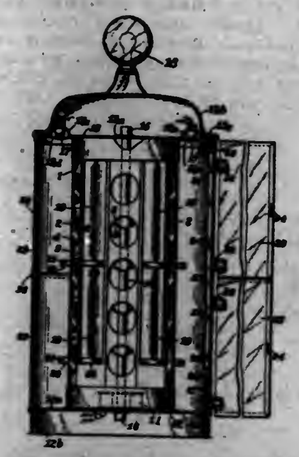
4. A drawer for an index or file, having a bottom generally flat and horizontally disposed, tubular portions formed at the sides of said bottom having portions extending below the bottom, portions extending upwardly from said tubular portions to form the side walls, said tubular portions projecting beyond said side walls, and inwardly and downwardly extending portions at the upper edges of the side wall portions terminating in spaced relation above the bottom.

1,756,880. INDEX DEVICE. JAMES H. RAND, North Tonawanda, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed June 14, 1924. Serial No. 719,982. 11 Claims. (Cl. 45—2.)

11. An index cabinet comprising a casing, a drawer adapted to slide therein to open and closed positions, a latch mechanism mounted on each end of the drawer, and a pair of shoulders formed on the casing at opposite ends, one cooperating with one latch to hold the drawer in closed position and also cooperating with the other latch to serve as a stop when the drawer is in an open position to prevent complete withdrawal of the drawer from the casing.

1,756,881. PACKING MATERIAL. HUGO REINZ, Berlin-Spandau, Germany. Filed Jan. 5, 1929, Serial No. 330,460, and in Germany Oct. 3, 1928. 4 Claims. (Cl. 154—45.5.)

4. A packing material comprising a closely woven asbestos-metal fabric impregnated with a phenolic condensation product and a sheathing of impermeable material intimately united therewith to form an inseparable whole, said impermeable material being constituted by a mixture of asbestos, a filler and a binder therefor.

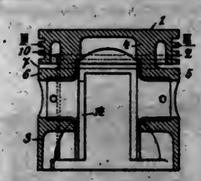


1,756,882. FILAMENT-TENSIONING MEANS. WALTER I. RELYEA, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1928. Serial No. 305,499. 5 Claims. (Cl. 250—27.5.)

1. The combination of an evacuated envelope containing a filament, means for supporting the filament under tension, said means comprising a pair of uprights arranged remotely on opposite sides of the filament, a member spanning said uprights, a mechanical connection between said

member and the filament and springs held under compression positioned between each end of said member and the adjacent upright whereby the spring tensioning devices are removed from the region of the filament.

1,756,883. ARTICLE SUPPORT. ROY K. RUSSELL, Warren, Pa. Filed Apr. 19, 1929. Serial No. 356,527. 4 Claims. (Cl. 211—74.)

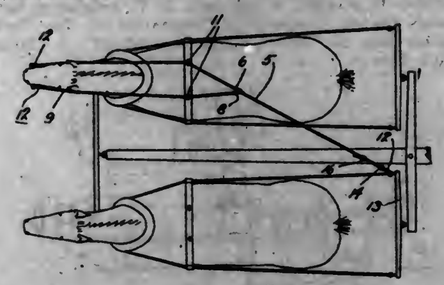


1. A support and display device for articles such as bottles, comprising a body portion having a wall with apertures through said wall and article receptacles extending inwardly from said apertures, and inclining inwardly and downwardly to support the articles in inclined position, said walls having vertical channeled portions therein and shelves in said channels for supporting articles in upright position.

1,756,884. PISTON FOR INTERNAL-COMBUSTION ENGINES. CHARLES SCHAEFFER, Paris, France, assignor to Société Anonyme des Anciens Etablissements Panhard & Levassor, Paris, France. Filed May 2, 1929, Serial No. 359,947, and in France May 19, 1928. 1 Claim. (Cl. 74—108.)

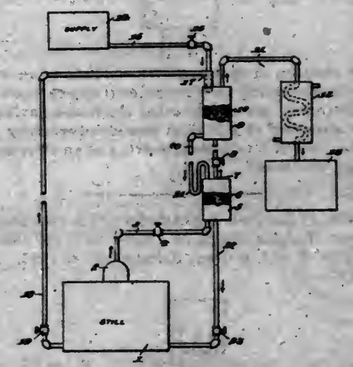
In a piston for internal combustion engines consisting of a metal having a great coefficient of expansion, cross

members of a metal having a small coefficient of expansion, these being fitted at one end into the peripheral part



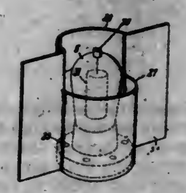
of the piston and a flange adapted for insertion into the hole in the boss of the piston adapted to receive the axle of the piston rod end.

1,756,885. CARD HOLDER. JOHN V. SCHAFER, Bronson, Mich., assignor to Bronson Reel Company, Bronson, Mich., a Corporation of Michigan. Filed July 18, 1929. Serial No. 379,181. 2 Claims. (Cl. 41—46.)



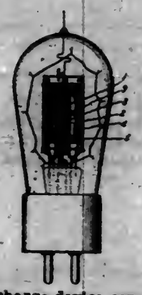
1. As a new article of manufacture, a card holder comprising two substantially complete turns of closely and spirally wound spring wire and a base to which the wire is spot welded at the ends of the wire, the turns of the wire being substantially perpendicular to the base, the portions of the adjacent faces of the two turns of wire that are most remote from the base being substantially in a single plane to avoid the warping of a card inserted between said face portions.

1,756,886. HARNESS. LEO SCHROEDER, Le Mars, Iowa. Filed June 22, 1929. Serial No. 372,942. 1 Claim. (Cl. 54—16.)



A device of the class described for making a fast horse and a slow horse walk evenly comprising an elongated cable, a substantially V-shaped plate having longitudinal slots in the end portions thereof through which an intermediate portion of the elongated cable passes, a substantially semi-ovate ring on one end of the relatively short cable engaged with the plate and having its flat side disposed in the crotch portion of said plate, snap fasteners on the forward ends of the cables, a snap fastener on the rear end of the elongated cable for adjustably securing said rear end to a base and including an eye through which the cable slidably extends, and means for securing said cable in adjusted position comprising a substantially V-shaped plate mounted on said cable and having transversely extending slots adjacent its opposite ends for the passage of an intermediate portion of the cable and adapted to slidably receive the rear end portion of said cable and maintain the same in frictional engagement with the adjacent intermediate portion thereof, said cable being looped through the eyes on the last mentioned V-shaped plate.

1,756,887. OIL-CRACKING PROCESS. ALFRED SCHWARZ, Montclair, N. J., assignor to Petroleum Sand Products Corporation, a Corporation of Delaware. Filed Feb. 25, 1924. Serial No. 694,905. 4 Claims. (Cl. 196—55.)

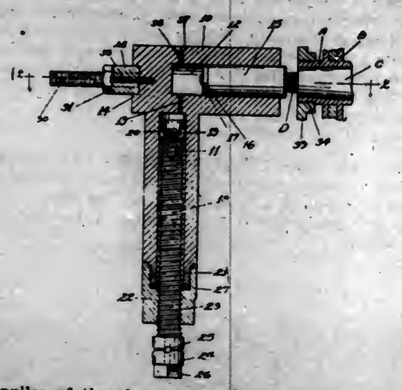


3. The process of producing lower boiling oils from higher boiling oils which comprises distilling the latter at a cracking temperature and under superatmospheric pressure in a cracking zone, removing vapors from said zone, reducing the pressure on said vapors and passing the same under the reduced pressure into a mass of subdivided solid particles, condensing a portion of said vapors in said mass whereby the condensate is held therein in minutely subdivided form over an extended area, passing further quantities of vapors from said cracking zone under reduced pressure into said mass for intimate contact with said condensate, and introducing into said mass of subdivided solid particles hot oil from the cracking zone for contact with the vapors therein.

1,756,888. CONDUCTIVE SCREEN AND SHIELD. EUGENE O. SELBY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1928. Serial No. 321,708. 7 Claims. (Cl. 250—27.5.)

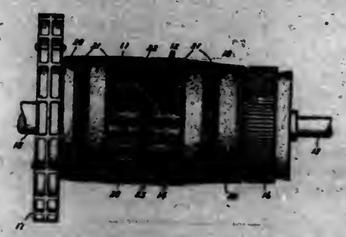
3. In a conductive screen for electric discharge apparatus, a partition cut along its length and bent on either side of the cut in opposite directions to form recesses substantially equal and semi-cylindrical in form.

1,756,889. ELECTRON-DISCHARGE APPARATUS. HARRY C. THOMPSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 14, 1927. Serial No. 240,044. 4 Claims. (Cl. 250—27.5.)



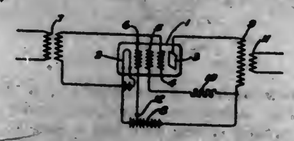
1. An electron discharge device comprising an evacuated receptacle containing an electron emitting cathode and two other electrodes, one of said other electrodes having formed thereon a coating of a lithium compound whereby the electrode thus coated is capable of serving as an efficient emitter of impact electrones.

1,756,890. PLUG FOR TOBACCO PIPES. RICHARD HUGH TICKELL, London, England. Filed Nov. 19, 1928, Serial No. 320,470, and in Great Britain Dec. 6, 1927. 1 Claim. (Cl. 131—12.)



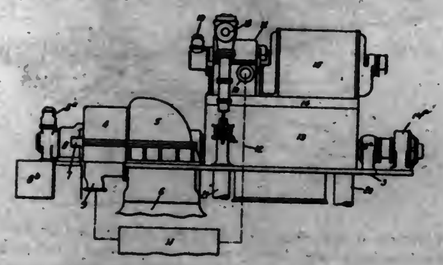
An absorbent, removable spacing plug for insertion in the bowl of the tobacco pipe, comprising a dentated, perforated disc of substantially non-absorbent material coated with absorbent material.

1,756,891. WHEEL, PULLEY, AND GEAR PULLER. CHARLES TILSNER, Oglesby, Ill. Filed Apr. 29, 1929. Serial No. 358,951. 1 Claim. (Cl. 29—86.)



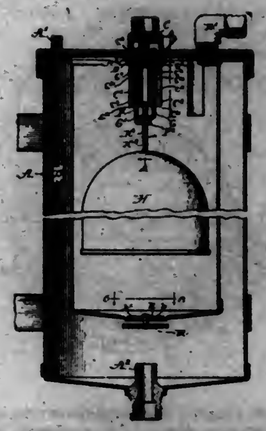
A puller of the character described comprising a substantially L-shaped body having its arms formed with bores communicating through a relatively small passage, a piston slidably mounted within one bore and adapted to engage against a shaft or axle from which an element is to be removed, a screw extending into the other bore and carrying a piston slidable therein, a cap threadedly engaged with the screw and engaging against the body, a member adapted to be engaged with the element to be removed from the shaft or spindle, a member disposed against the body substantially in alignment with the first named piston, and means connecting said first and second named members.

1,756,892. ELECTRICAL WINDING. HARRY W. TURNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 22, 1928. Serial No. 279,695. 8 Claims. (Cl. 171—206.)



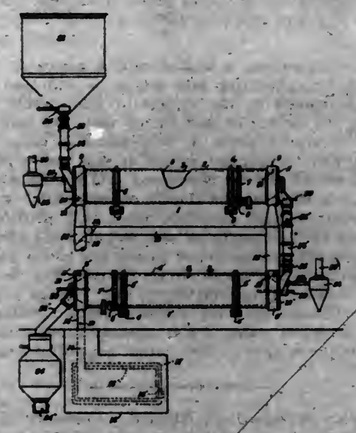
6. A rotatable armature for electric machines comprising a core having longitudinal recesses, a plurality of conductor coils disposed in said recesses and having their end turns projecting beyond the ends thereof, and an insulating, heat conducting, plastic putty comprising approximately 60% asphaltum and approximately 40% soapstone packed into intimate contact with said coils within said recesses and in and about said end turns.

1,756,893. ELECTRON-DISCHARGE APPARATUS. JOHN C. WARNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 1, 1925. Serial No. 40,883. 9 Claims. (Cl. 250—27.)



1. An electron discharge device comprising an electron emitting cathode, an anode, a control grid located between cathode and anode, a space charge grid located between the cathode and control grid, and means whereby the efficiency of the device is increased comprising means for increasing the impedance of the electron path between the cathode and the space charge grid.

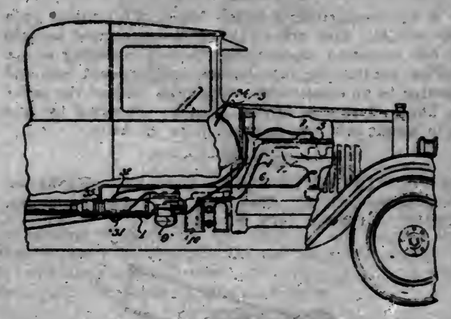
1,756,894. TURBO-GENERATOR INSTALLATION. GLENN B. WARREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 23, 1929. Serial No. 365,415. 3 Claims. (Cl. 290—4.)



1. A turbine generator installation comprising a low pressure turbine and a generator driven thereby, a foundation therefor, a high pressure turbine and a generator driven thereby which are supported wholly by the firstnamed generator and are both axially displaced from the low pressure turbine unit by such an amount that the casing of the latter may be opened without disturbing the high pressure unit, and conduit means for supplying motive fluid to the turbine units.

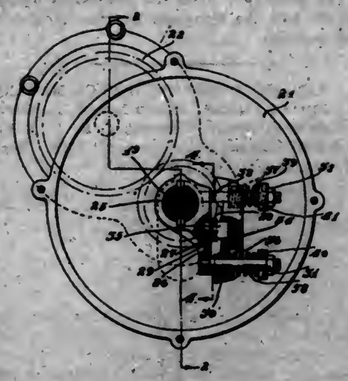
1,756,895. VACUUM TANK. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 27, 1926, Serial No. 131,861. Renewed Apr. 18, 1929. 6 Claims. (Cl. 103—236.)

1. In a vacuum fuel feeding structure in combination with a vacuum chamber having a separable cover forming the top of the chamber, a unitary fitting removably secured in said cover intruding through the same and having longitudinally extended atmosphere and suction passages, each opening both within and outside of the chamber, said fitting being externally adapted for connection of the suction passage with a source of suction; a float in said chamber, valves in said passages seating respectively against suction outflow and against atmosphere inflow, independent stems carrying said valves respectively positively both in seating and in unseating directions, both stems extending from said unitary fitting inwardly with respect to the chamber, and having means for engagement respectively by the float at a predetermined limit of the rise and a predetermined limit of the fall of the float.



1,756,896. COAL BALL AND PROCESS OF MANUFACTURING THE SAME. CLARENCE B. WISNER, Canton, Ohio, assignor, by mesne assignments, to Coal Process Corporation, Dover, Del., a Corporation of Delaware. Filed Aug. 7, 1926. Serial No. 127,942. 22 Claims. (Cl. 202—9.)

1. The method of making carbonized coal balls which includes the initial step of heating coal from fifteen to forty-five minutes in the presence of air to just below the temperature at which the eduction of hydrocarbon vapor begins, for tempering and restricting the binding element to form balls of desired size, strength and weight, and then carbonizing the coal while tumbling it in a closed container so as to form such balls.

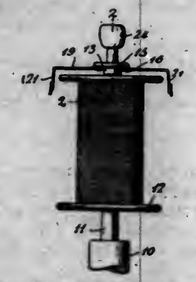


22. A carbonized-coal ball having substantially the density, strength and weight of the residue at the thermal end point of the expanding stage of carbonization of the coal.

1,756,897. METHOD AND APPARATUS FOR UTILIZING EXHAUST GASES OF INTERNAL-COMBUSTION ENGINES. JACOB BILSKY, now, by change of name, John Gregory Billings, Chicago, Ill. Filed Jan. 16, 1928. Serial No. 247,036. 16 Claims. (Cl. 123—119.)

1. The process of utilizing the exhaust gases from an internal combustion engine, which comprises filtering said gases to remove sulphur-containing compounds and returning a portion of the gases for re-combustion in said engine.

1,756,898. BALANCING DEVICE. ALEXANDER J. BOCZ, Detroit, Mich. Filed Aug. 16, 1926. Serial No. 129,379. 8 Claims. (Cl. 74—6.)



2. A balancer attached to a rotating part to be balanced comprising a revolving member rockable universally, and yieldable means limiting the rocking of said member.

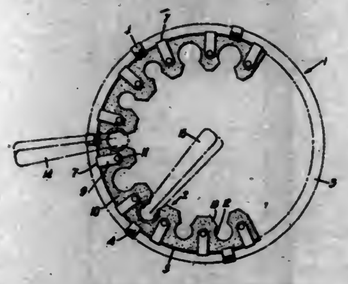
1,756,899. FLYER FOR SPINNING AND LIKE MACHINES. PETER DAUGHET, Wilkes-Barre, HENRY FREY, Kingston, and JOHN J. DUNLAVY, Plymouth, Pa. Filed Mar. 24, 1928. Serial No. 264,387. 10 Claims. (Cl. 118—57.)

1. A flyer comprising a body adapted for rotation on a bobbin spindle and having an under surface, a cap secured

to said under surface and having flyer arm-retaining lugs contiguous to said surface, and a flyer arm supported by said lugs.

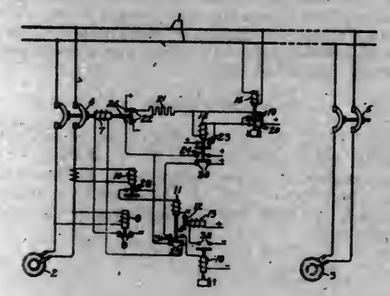
2. A flyer comprising a body adapted for rotation on a bobbin spindle, flyer-arm-retaining means carried by said body and including opposed lugs thereon extending in one direction, another lug intermediate said opposed lugs and projecting in an opposite direction from that of the latter lugs, and a flyer arm having portions supported by said lugs to mount said arm in position on the body.

1,756,900. CIGARETTE CASE. ANTHONY L. KONDYSAR, Poughkeepsie, N. Y. Filed Dec. 11, 1928. Serial No. 325,183. 4 Claims. (Cl. 206—41.)



1. A cigarette case of the class described comprising a box like structure, a hinged lid therefor having a projection at its free end, an ejector element slidably mounted in the box like structure, means associated with the element normally holding the same inwardly of the box like structure and permitting the same to be moved manually therefrom, said element having a keeper structure surrounding the projection when the member is disposed inwardly of the box like structure for thus locking the lid in a closed position.

1,756,901. TIE LINER AND METHOD OF MAKING THE SAME. JOHN V. MOORE, Pawtucket, R. I., assignor to Moore Fabric Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed June 18, 1928. Serial No. 286,432. 4 Claims. (Cl. 139—384.)

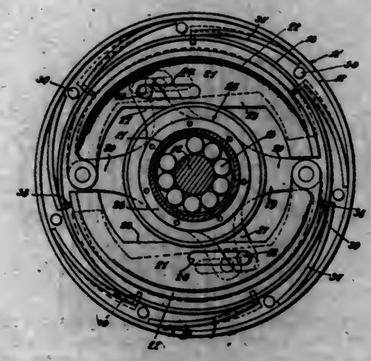


1. An integral woven tie liner having a narrow band portion and broader end portions, and having two full selvage edge portions, the middle and selvage portions being of integral increased thickness and being separated by material of less thickness.

1,756,902. GOLF-CLUB CARRIERS. EDWARD C. BOYCE, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,625. 8 Claims. (Cl. 150—1.5.)

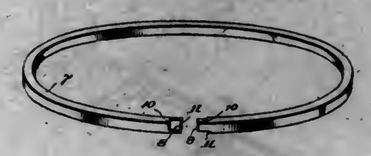
1. A club rack adapted for attachment to golf bags, said rack including a series of non-abrasive, resilient, shaft-receiving jaws and being sufficiently flexible to conform readily to bags of different sizes, and means for securing the rack detachably in the mouth of a bag.

1,756,903. AUTOMATIC SWITCHING SYSTEM. ROGER A. FULLER, Philadelphia, Pa., assignor to General Electric Company, a Corporation of New York. Filed Aug. 29, 1928. Serial No. 302,841. 5 Claims. (Cl. 171—118.)



1. In combination, a load circuit, a source of current, a switch for connecting said source to said load circuit, means controlled by the voltage of said circuit for the effecting the closing of said switch when the load circuit voltage decreases below a predetermined value, means controlled by the current output of said source for opening said switch and for preventing said voltage controlled means from effecting the closing of said switch when the load circuit voltage decreases below said predetermined value due to the opening of said switch being effected by said current output controlled means, and means controlled by the voltage of said load circuit for restoring the control of the closing of the switch to said voltage controlled means whenever the load circuit voltage remains above a predetermined value for a predetermined time after the operation of said current output controlled means.

1,756,904. HYDRAULIC BRAKE. CLARENCE E. JACK, Newburgh, N. Y. Filed Jan. 12, 1929. Serial No. 332,039. 6 Claims. (Cl. 188—90.)

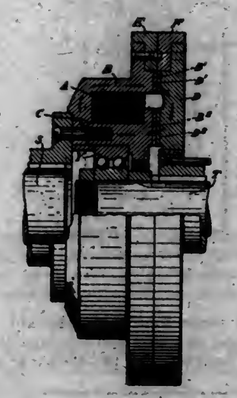


1. A hydraulic device including a rotatable drum housing adapted to be filled with a fluid, expandible brake shoes

for engagement with the inner peripheral wall of said drum housing, and resilient vane members extending in-

wardly from the peripheral wall for engagement by said brake shoes during their expanding movement prior to contact of said brake shoes with the peripheral wall.

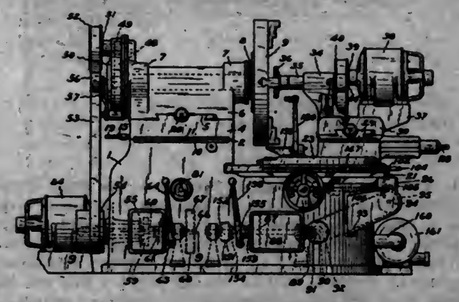
1,756,905. PISTON RING. ALLEN W. MORTON, Baltimore, Md., assignor to The American Hammered Piston Ring Company, Baltimore, Md., a Corporation of Maryland. Filed Oct. 11, 1929. Serial No. 398,983. 5 Claims. (Cl. 74—109.)



3. A piston ring having a diagonally stepped joint, the legs of said joint having cooperating plane surfaces which define a plane intersecting a plane face of the ring at an angle to a tangent to the peripheral surface of the ring at the joint, said angle being such that its natural sine is substantially equal to the ratio of the length of a leg to the ring diameter.

1,756,906. MATERIAL FOR USE IN TREATMENT OF LIQUIDS. CASIMIR A. MIKETTA, Los Angeles, Calif., assignor, by mesne assignments, to Celite Corporation, New York, N. Y., a Corporation of New York. Filed May 3, 1926, Serial No. 106,562. Renewed Sept. 18, 1929. 18 Claims. (Cl. 210—208.)

1. A divided material comprising not more than 25% by weight of particles smaller in average dimension than an assumed unit of dimension, not more than 15% by weight of particles larger in average dimension than five times such unit, the remainder being composed of particles of from 1 to 5 unit dimensions.

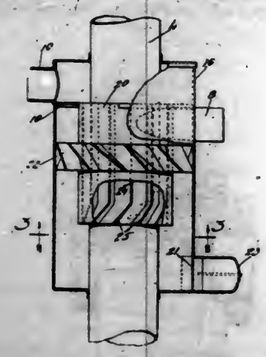


1,756,907. ELECTROMAGNETIC CLUTCH. CLARENCE Q. PAYNE, Stamford, Conn., assignor of one-fourth to J. Goodwin Hall, New York, N. Y. Filed June 9, 1928. Serial No. 284,171. 8 Claims. (Cl. 192—84.)

8. An electromagnetic engaging device comprising a bipolar electromagnet and an armature having contact engaging surfaces made up of separate areas rigidly connected, part of said areas comprising the bipolar areas having a series of groove-edges so disposed that those of the opposing surfaces will respectively coincide with each other throughout their lengths and register when brought

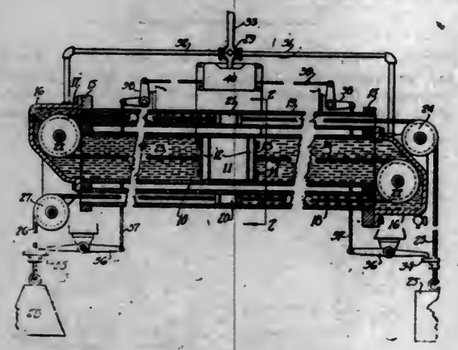
into contact engagement, and part of said areas being pressure areas independent of the magnetic circuit of said electromagnet and means for bringing said surfaces into contact engagement with each other.

1,756,908. GRINDING MACHINE. WILLIAM J. BAUMBERGER, Davenport, Iowa, assignor to Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Feb. 6, 1928. Serial No. 252,115. 10 Claims. (Cl. 51—33.)



7. In a grinding machine, a work spindle, a grinder spindle, an oscillatory support for one of said spindles, mechanism for oscillating said support, and a driving mechanism common to the work spindle and oscillating mechanism, said driving mechanism including a change speed mechanism adjustable to simultaneously varying the speed of rotation of the work spindle and the speed of oscillation of the support in relatively small increments over a relatively wide range of speeds.

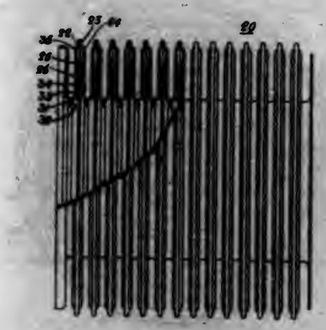
1,756,909. AIR CLEANER. LEROY V. CRAM, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 13, 1925. Serial No. 30,037. 13 Claims. (Cl. 183—87.)



2. An air cleaner comprising a cylindrical casing, an air outlet for said casing, an air inlet for said casing, said

inlet being tangentially arranged to produce a whirling motion of the air stream and an engine heated conduit

passing centrally through said casing, said casing being provided in the end opposite said air inlet with an aperture in its outer periphery for the discharge of dust.

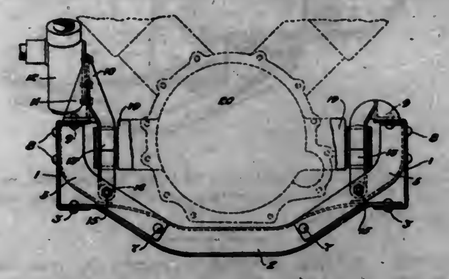


1,756,910. SERVO-MOTOR. CHARLES H. FULLER, Los Angeles, Calif., assignor of one-fourth to C. P. Bollman, Glendale, Calif. Filed Oct. 20, 1927. Serial No. 227,876. 2 Claims. (Cl. 121—38.)

1. A servo-motor having, in combination, a main cylinder provided with a piston; an auxiliary cylinder at each side of said main cylinder each of which is provided with a piston; a housing covering one end of said main cylinder and adjacent end of an auxiliary cylinder, said housing having a sheave therein around which a line can be passed from the main cylinder to the auxiliary cylinder; the other end of said main cylinder has a similar housing connecting same with the second auxiliary cylinder having a sheave therein over which a line can be passed from the main cylinder into the auxiliary cylinder; a line passing through said main cylinder and secured to the piston thereof having its ends passing through the auxiliary cylinders and secured to the pistons thereof; and means for admitting fluid to either end of said main cylinder including means for cutting off the supply of fluid when the main piston reaches the extreme end of travel.

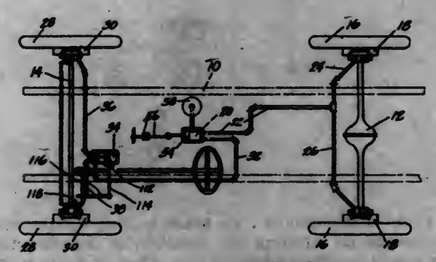
1,756,911. METALLIC BELLOWS. CHARLES L. LEE, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 3, 1925. Serial No. 73,067. 6 Claims. (Cl. 137—156.5.)

1. A metallic bellows in the form of a tube with circumferential corrugations, the tops of the ridges and the bottoms of the grooves of the corrugations being curved upon arcs of circles of different radii, and the ratio of the radius of the bottom of the groove to the radius of the top



of the ridge being in the neighborhood of the ratio of the diameter of the outer circle of the tube forming the tops of said ridges to the diameter of the inner circle of the tube forming the bottoms of the grooves.

1,756,912. SASH-POSITION-INDICATING DEVICE. WILLIAM ROY, Irvington on Hudson, N. Y., assignor to Lord & Burnham Company, Irvington on Hudson, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 173,050. 7 Claims. (Cl. 116—124.)



1. In sash operating mechanism an indicator adapted to show the position of the sash at an operating station distant from the sash, comprising in combination a sleeve, a shaft therein, means permitting endwise adjustment of the shaft, means for rotating said shaft to control the sash position, a threaded portion on said shaft, an indicator frame detachably mounted on the sleeve, an arcuate indicator disc detachably and rotatably supported on the frame, said disc having teeth in the periphery thereof adapted to mesh with the threads of the sash, an indicator pointer movable with the disc and indicator limit blocks adjustable in the frame.

1,756,913. FRAME CONSTRUCTION. ERIC OLIN SCHJOLIN, Birmingham, Mich., assignor to Yellow Truck & Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Jan. 9, 1928. Serial No. 245,398. 12 Claims. (Cl. 180—64.)

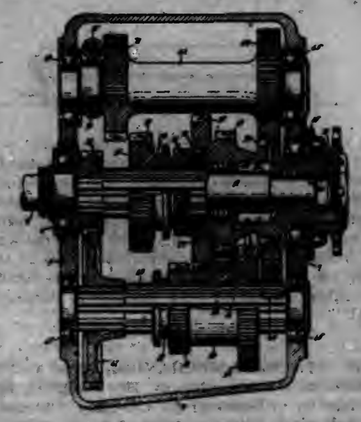
1. In a motor vehicle chassis frame, the combination of a pair of angularly disposed frame members and a steering column supporting bracket secured to both of said members.

1,756,914. BRAKE. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 5, 1924. Serial No. 704,419. 7 Claims. (Cl. 188—152.)

2. In vehicle brake mechanism and in combination with a dirigible front wheel having a brake, a fluid operated device associated with said brake to apply it, and steering mechanism for moving said wheel to steer the vehicle; a conduit through which fluid under pressure is supplied to said fluid operated device to apply the brake; a normally open valve associated with said conduit and so arranged as to prevent flow therein toward said fluid operated brake applying device when the valve is closed; a cylinder arranged between said valve and said brake applying device and with the interior of which the conduit aforesaid is in permanently open communication; a piston operating in said cylinder; means carried by said piston and engaging said valve to hold it open when the piston is in its innermost position; means for holding said piston in its innermost position in said cylinder; and means operated by the steering mechanism of the vehicle for releasing the piston from said holding means when said front wheel is moved to a predetermined extent, so that the piston may move outwardly in said cylinder.

1,756,915. INERTIA-FORCE BALANCER WITH SINGLE ECCENTRIC WEIGHT. CHARLES R. SHORT, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 1, 1926. Serial No. 91,504. 1 Claim. (Cl. 74—38.)

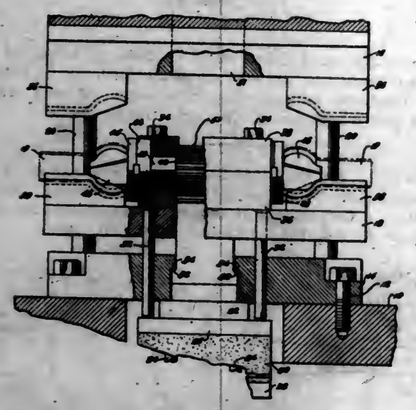
Means to balance the secondary inertia forces of a motor having a crank shaft, comprising a timing gear casing, timing gears therein, a small crank shaft journalled in the said casing, an eccentrically weighted pinion on the crank pin of said small crank shaft, a fixed internal gear carried by the casing and engaged by the pinion, a



gear on the small crank shaft in mesh with one of the timing gears, the proportions being such as to provide two complete reciprocating movements of said weight for a single rotation of the engine crank shaft.

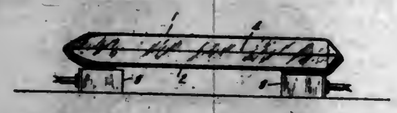
1,756,916. MUFFLER. SAMUEL A. STRANAHAN, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 24, 1927. Serial No. 163,155. 6 Claims. (Cl. 137—160.)

1. A muffler comprising a casing, means in said casing for breaking up the stream of exhaust gases into a plurality of smaller streams, means for concentrating them into a single stream, a tube for discharging said single stream, and a vacuum chamber surrounding said tube for the purpose of reducing the sound of the discharge.



1,756,917. FOUR-SPEED TRANSMISSION. PERRY L. TENNEY, Muncie, Ind., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 15, 1927. Serial No. 199,002. 5 Claims. (Cl. 74—58.)

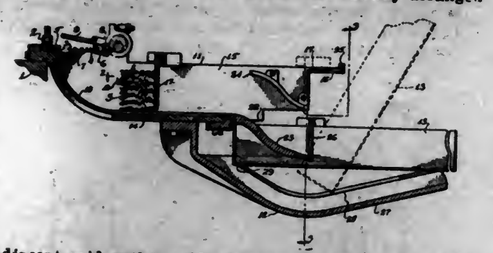
3. In a transmission mechanism, a driving shaft, an aligned driven shaft, two parallel counter shafts through



either of which the driving shaft may drive the driven shaft, the first one of said counter shafts being in constant geared engagement with the driving shaft, the second one of said counter shafts being in constant geared engagement with the driven shaft, shiftable means to effect a drive engagement between each counter shaft and that one of the aligned shafts with which it is not in constant driving engagement.

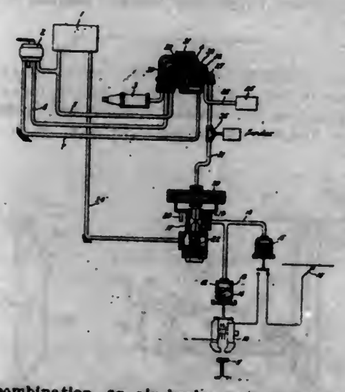
1,756,918. FLASH-SHEARING MACHINE. HERMAN TORMYN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 1, 1927. Serial No. 209,794. 10 Claims. (Cl. 77—1.)

1. A machine for removing the flash from a metallic work comprising a support, a driven section movable relative to said support and carrying a rotatable cutter, a die on the driven section adapted to position said work adjacent said cutter, means for resiliently holding said section in predetermined position, a reciprocable driving element adapted to move said section against said resilient means, and means operable by movement of said driven section for rotating said cutter.



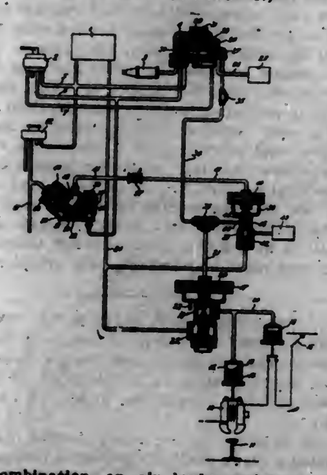
1,756,919. SPECIAL CONTAINER. LOGAN A. BECKER and JOHN M. MUNSON, Lakewood, Ohio, assignors to The Dobeckmun Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 10, 1929. Serial No. 369,690. 2 Claims. (Cl. 131—11.)

1. A sealed package for cigars comprising a tubular wrapper having upper and lower surfaces and plicated sides and composed of transparent sheet cellulose material having a fusible waterproof coating thereon and a sealed end comprising the inwardly tucked plicated sides forming together with the upper and lower surfaces of the wrapper a closure having a plurality of superposed plies of the sheet material, the plies being held together by the fused waterproof coating located between contiguous surfaces of the material.



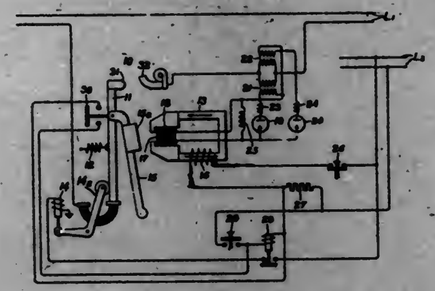
1,756,920. STACKING MECHANISM. PAUL A. GOLLNICK, and GEORGE HARRED, Chicago, Ill., assignors, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1928. Serial No. 314,913. 4 Claims. (Cl. 271—87.)

1. In a device of the class described, a horizontal guideway adapted to support cards edgewise, said guideway having an outlet adjacent one end thereof, a tray support located below said outlet, and an inclined runway arranged



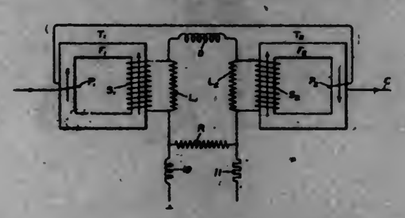
adjacent said outlet, said runway being spaced from said support to permit the insertion of a tray between said support and runway.

1,756,921. BRAKE SYSTEM. CHARLES A. IVES and GEORGE MACLOSKIE, Erie, Pa., assignors to General Electric Company, a Corporation of New York. Filed Sept. 28, 1926. Serial No. 138,159. 11 Claims. (Cl. 303—3.)



1. In combination, an air brake system, a track brake, and means for effecting the operation of the track brake for a predetermined length of time when an application of the brake system is made.

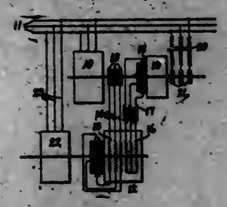
1,756,922. BRAKE SYSTEM. CHARLES A. IVES, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Sept. 28, 1926. Serial No. 138,160. 22 Claims. (Cl. 303—3.)



1. In combination, an air brake system comprising a straight air pipe, a magnetic track brake, and means responsive to a predetermined pressure in said straight air pipe for effecting the energisation of said magnetic track brake.

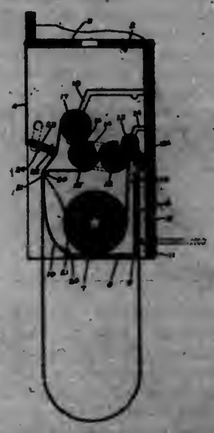
1,756,923. ELECTRORESPONSIVE DEVICE. JACOB W. MCNAIRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 22, 1925. Serial No. 38,631. 16 Claims. (Cl. 175—294.)

4. In an alternating current electroresponsive device, means for producing a direct current varying in accordance with the alternating current, the combination of a movable member, and electromagnetic means responsive to the rate of change of the direct current and arranged to cause movement of the said member upon an increase in the current to one value when the rate of increase of the current is below a predetermined value and to cause movement of the said member upon an increase in the current to a lower value when the rate of increase of the current is above said predetermined value.



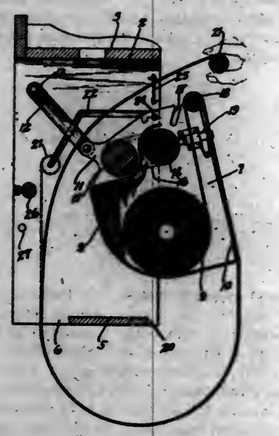
1,756,924. UNIDIRECTIONAL ELECTRICAL INDUCTIVE APPARATUS AND SYSTEM. JACOB W. MCNAIRY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 18, 1926. Serial No. 89,247. 31 Claims. (Cl. 175—294.)

1. An inductive device comprising magnetic means having a plurality of normally magnetized magnetic flux paths, an energizing circuit and a local circuit inductively interlinked through each of said plurality of normally magnetized magnetic flux paths with the relation between the initial magnetisation of each flux path and the inductive coupling of the circuits therewith such that a unidirectional current is induced in the local circuit upon a predetermined flow of current in either direction in the energizing circuit.



1,756,925. SYSTEM OF SPEED CONTROL FOR INDUCTION MOTORS. ERICH REIMANN, Charlottenburg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Jan. 3, 1929, Serial No. 330,061, and in Germany May 15, 1928. 4 Claims. (Cl. 172—274.)

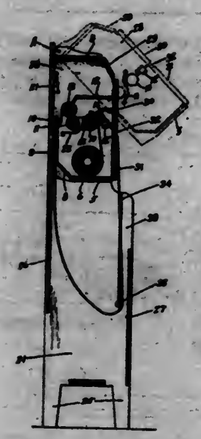
1. A speed control system for induction motors comprising in combination with a wound secondary induction motor a commutator machine connected in cascade therewith, means for supplying said commutator machine with a substantially constant excitation of such magnitude that when acting alone it causes saturation of said commutator machine and the operation of said induction machine above synchronism, and means for supplying said commutator machine with an excitation that varies as the load on the induction motor and which opposes the substantially constant excitation.



2. A speed control system for induction motors comprising in combination with a wound secondary induction motor a commutator machine connected in cascade therewith, means for supplying said commutator machine with a substantially constant excitation of such magnitude as to cause said induction machine to operate above synchronism, and means for supplying said commutator machine with an excitation that varies as the load on the induction motor and which opposes the substantially constant excitation, said substantially constant excitation being sufficient to cause saturation of the commutator machine at no load on the induction motor.

1,756,926. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Nov. 29, 1926. Serial No. 151,472. 7 Claims. (Cl. 312—38.)

1. A towel cabinet comprising a casing, a plate in the lower portion thereof, for supporting a bolt of clean towel, clean and soiled towel feed rolls mounted in said casing having a driving connection between them, the web of clean towel being stretched to contact with said clean towel feed roll and depending therefrom below said casing, a guard plate interposed between said feed rolls and extending backwardly below said soiled towel feed roll, a shield extending from the rear portion of said guard plate downwardly to said bolt supporting plate and separating said bolt from the rear of said casing, said shield being flexible to allow convenient access of the hand to the space in said casing in the rear of said bolt, and a soiled towel take-up roll whereon the bolt of towel is wound for contact with said soiled towel feed roll.



1,756,927. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 28, 1927. Serial No. 164,276. 3 Claims. (Cl. 312—38.)

1. A towel cabinet comprising a casing, a frame therein, comparatively long links pivotally connecting said frame with said casing, said links allowing said frame to be drawn forwardly to a position partially outside of said casing, to provide a gap or space in the rear of said casing, a soiled towel take up roll in the rearward upper portion of said casing delivery and take up feed rolls mounted in said frame, the delivery roll being mounted in front of the take up feed roll and having a driving connection between them, said rolls having surfaces adapted to cling or adhere to a towel web, a pinch roll between which and said delivery feed roll the clean towel web may be stretched for driving contact with said delivery feed roll, said frame having outwardly opening slots in which said pinch roll normally rests the loose end of the clean web adapted to be stretched downwardly to form a loop, a gap or opening provided in the rear of said casing by the forward movement of the frame providing a passage through which the hand of the attendant may be inserted when said frame is swung forwardly, said take up roll being removable from said cabinet for convenience in winding the loose end of the web thereon, said cabinet having guides wherein said take up roll is inserted for contact of the towel web thereon with said take up feed roll.

1,756,928. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah. Filed Feb. 14, 1927. Serial No. 168,021. 3 Claims. (Cl. 312—38.)

1. A towel cabinet comprising a casing having its upper rear portion connected by horizontal pivots to an upright support and adapted to swing outwardly thereon to a loading position inclined to the vertical, delivery and takeup feed rolls mounted in said casing and having a driving connection between them and provided with peripheral surfaces adapted to adhere to a towel web, a pinch roll mounted in said casing and around which a web of clean towel may be stretched for contact with said delivery feed roll, the loose end of said web depending in position to be grasped by the user, the tilted position of said casing exposing its open back for the convenient passing upwardly of the loose end of the towel web, a takeup roll mounted in said casing and whereon the end of the web

is wound for winding contact with the surface of said takeup feed roll, and means for holding said casing in its inclined loading position.

1,756,929. ELECTRIC FIXTURE. HENRY T. PAIST, Philadelphia, Pa., assignor, by mesne assignments, to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 24, 1925, Serial No. 58,461. Renewed Sept. 14, 1929. 7 Claims. (Cl. 240—52.)

1. An electric lamp socket comprising a laterally recessed insulating base, a screw shell socket contact arranged at one face of the base, a supporting bracket having attaching means arranged at the opposite face of the base, a wire terminal extending from said screw shell contact into a lateral recess in the base, a second wire terminal insulated from the attaching means of the supporting bracket, and means, related to the center contact, for engaging said second wire terminal to secure all of said parts to the base.
